

1-1 Order of Operations

Warm Up

Problem of the Day

Lesson Presentation

Lesson Quizzes

1-1 Order of Operations

Warm Up

Evaluate in order from left to right.

1. $18 \div 3 + 7$

2. $10^2 \div 4 - 8$

3. $10 + 23 - 8 + 7$

4. $8 \times 2 - 3 + 24$

5. $81 \div 9 \times 3 + 15$

1-1 Order of Operations

Problem of the Day

Classify each statement as true or false. If the statement is false, insert parentheses to make it true.

1. $4 \times 5 + 6 = 44$

2. $24 - 4 \times 2 = 40$

3. $25 \div 5 + 6 \times 3 = 23$

4. $14 - 2^2 \div 2 = 12$

1-1 Order of Operations

Learn to use the order of operations to simplify numerical expressions.

1-1 Order of Operations

Vocabulary

numerical expression
order of operations

1-1 Order of Operations

A **numerical expression** is made up of numbers and operations. When simplifying a numerical expression, rules must be followed so that everyone gets the same answer. That is why mathematicians have agreed upon the **order of operations**.

1-1 Order of Operations

ORDER OF OPERATIONS

- 1.** Perform operations within grouping symbols.
- 2.** Evaluate powers.
- 3.** Multiply and divide in order from left to right.
- 4.** Add and subtract in order from left to right.

1-1 Order of Operations

Additional Example 1A: Using the Order of Operations

Simplify the expression. Use the order of operations to justify your answer.

$$3 + 15 \div 5$$

$$3 + 15 \div 5 \quad \textit{Divide.}$$

$$3 + 3 \quad \textit{Add.}$$

$$6$$

1-1 Order of Operations

Additional Example 1B: Using the Order of Operations

Simplify the expression. Use the order of operations to justify your answer.

$$44 - 14 \div 2 \cdot 4 + 6$$

$$44 - 14 \div 2 \cdot 4 + 6$$

Divide and multiply from left to right.

$$44 - 7 \cdot 4 + 6$$

$$44 - 28 + 6$$

Subtract and add from left to right.

$$16 + 6$$

$$22$$

1-1 Order of Operations

Additional Example 1C: Using the Order of Operations

Simplify the expression. Use the order of operations to justify your answer.

$$3 + 2^3 \cdot 5$$

$$3 + 2^3 \cdot 5$$

Evaluate the power.

$$3 + 8 \cdot 5$$

Multiply.

$$3 + 40$$

Add.

$$43$$

1-1 Order of Operations

Check It Out: Example 1A

Simplify the expression. Use the order of operations to justify your answer.

$$2 + 24 \div 6$$

$$2 + 24 \div 6 \quad \textit{Divide.}$$

$$2 + 4 \quad \textit{Add.}$$

$$6$$

1-1 Order of Operations

Check It Out: Example 1B

Simplify the expression. Use the order of operations to justify your answer.

$$28 - 21 \div 3 \cdot 4 + 5$$

$$28 - 21 \div 3 \cdot 4 + 5$$

Divide and multiply from left to right.

$$28 - 7 \cdot 4 + 5$$

$$28 - 28 + 5$$

Subtract and add from left to right.

$$0 + 5$$

$$5$$

1-1 Order of Operations

Check It Out: Example 1C

Simplify the expression. Use the order of operations to justify your answer.

$$2 + 3^2 \cdot 4$$

$$2 + 3^2 \cdot 4$$

Evaluate the power.

$$2 + 9 \cdot 4$$

Multiply.

$$2 + 36$$

Add.

$$38$$

1-1 Order of Operations

Additional Example 2A: Using the Order of Operations with Grouping Symbols

Simplify the expression.

$$42 - (3 \cdot 4) \div 6$$

$$42 - (3 \cdot 4) \div 6$$

Perform the operation inside the parentheses.

$$42 - 12 \div 6$$

Divide.

$$42 - 2$$

Subtract.

$$40$$

1-1 Order of Operations

Helpful Hint

When an expression has a set of grouping symbols within a second set of grouping symbols, begin with the innermost set.

1-1 Order of Operations

Additional Example 2B: Using the Order of Operations with Grouping Symbols

Simplify the expression.

$$[(26 - 4 \cdot 5) + 6]^2$$

$$[(26 - 4 \cdot 5) + 6]^2$$

$$[(26 - 20) + 6]^2$$

$$[6 + 6]^2$$

$$12^2$$

$$144$$

The parentheses are inside the brackets, so perform the operations inside the parentheses first.

1-1 Order of Operations

Check It Out: Example 2A

Simplify the expression.

$$24 - (4 \cdot 5) \div 4$$

$$24 - (4 \cdot 5) \div 4$$

$$24 - 20 \div 4$$

$$24 - 5$$

$$19$$

Perform the operation inside the parentheses.

Divide.

Subtract.

1-1 Order of Operations

Check It Out: Example 2B

Simplify the expression.

$$[(32 - 4 \cdot 4) + 2]^2$$

$$[(32 - 4 \cdot 4) + 2]^2$$

$$[(32 - 16) + 2]^2$$

$$[16 + 2]^2$$

$$18^2$$

$$324$$

The parentheses are inside the brackets, so perform the operations inside the parentheses first.

1-1 Order of Operations

Additional Example 3: *Application*

Sandy runs 4 miles per day. She ran 5 days during the first week of the month. She ran only 3 days each week for the next 3 weeks. Simplify the expression $(5 + 3 \cdot 3) \cdot 4$ to find how many miles she ran last month.

Week	Days
Week 1	5
Week 2	3
Week 3	3
Week 4	3

$$(5 + 3 \cdot 3) \cdot 4$$

Perform the operations in parentheses first.

$$(5 + 9) \cdot 4$$

Add.

$$14 \cdot 4$$

Multiply.

$$56$$

Sandy ran 56 miles last month.

1-1 Order of Operations

Check It Out: Example 3

Jill is learning vocabulary words for a test. From the list, she already knew 30 words. She is learning 4 new words a day for 3 days each week. Evaluate the expression $3 \cdot 4 \cdot 7 + 30$ to find out how many words will she know at the end of seven weeks.

Day	Words
Initially	30
Day 1	4
Day 2	4
Day 3	4

$$(3 \cdot 4 \cdot 7) + 30$$

Perform the operations in parentheses first.

$$(12 \cdot 7) + 30$$

Multiply.

$$84 + 30$$

Add.

$$114$$

Jill will know 114 words at the end of 7 weeks.

Lesson Quizzes

Standard Lesson Quiz

Lesson Quiz for Student Response Systems

1-1 Order of Operations

Lesson Quiz: Part I

Simplify each expression.

1. $27 + 56 \div 7$

2. $9 \cdot 7 - 5$

3. $(28 - 8) \div 4$

4. $136 - 10^2 \div 5$

5. $(9 - 5)^3 \cdot (7 + 1)^2 \div 4$

1-1 Order of Operations

Lesson Quiz: Part II

Evaluate.

6. Denzel paid a basic fee of \$35 per month plus \$2 for each phone call beyond his basic plan. Simplify the expression $35 + 8(2)$ to find how much Denzel paid for a month with 8 calls beyond the basic plan.

1-1 Order of Operations

Lesson Quiz for Student Response Systems

1. Simplify the expression $36 + 63 \div 9$.

A. 11

B. 36

C. 27

D. 43

1-1 Order of Operations

Lesson Quiz for Student Response Systems

2. Simplify the expression $3 \cdot 6 - 12$.

A. 12

B. 36

C. 24

D. 42

1-1 Order of Operations

Lesson Quiz for Student Response Systems

3. Simplify the expression $(36 - 6) \div 15$.

A. 15

B. 10

C. 12

D. 2

1-1 Order of Operations

Lesson Quiz for Student Response Systems

4. Simplify the expression
 $(8 - 3)^3 \cdot (9 + 1)^2 \div 5$.

- A. 1,000
- B. 1,500
- C. 2,000
- D. 2,500

1-1 Order of Operations

Lesson Quiz for Student Response Systems

5. Robert paid a \$200 basic fee plus \$70 a day to get his house painted. Simplify the expression $200 + 90(7)$ to find how much it cost him if it took 9 days to complete the painting.
- A. \$830
 - B. \$1260
 - C. \$1740
 - D. \$2030
