Ender proposed that they should try it out on Planter first, before they tried to explain anything to Human or Rooter. Ela and Valentine agreed with him. Neither Ela and Ender, who had talked with fathertrees for years, felt comfortable enough with their language to say anything easily. More important, though, was the unspoken fact that they simply felt more kinship with the mammal-like brothers than they ever could with a tree. How could they guess from looking at a tree what it was thinking or how it was responding to them? No, if they had to say something difficult to a pequenino, it would be first to a brother, not to a fathertree.

Of course, once they called Planter in to Ela's office, closed the door, and started to explain, Ender realized that talking to a brother was hardly an improvement. Even after thirty years of living and working with them, Ender still wasn't good at reading any but the crudest and most obvious of pequenino body language. Planter listened in seeming unconcern as Ender explained what they had thought of during the conversation with Jane and Wang-mu. He wasn't impassive. Rather he seemed to sit as restlessly in his chair as a small boy, constantly shifting, looking away from them, gazing off into space as if their words were unspeakably boring. Ender knew, of course, that eye contact didn't mean the same thing to the pequeninos that it did to humans; they neither sought it nor avoided it. Where you looked while you were listening was almost completely unimportant to them. But usually the pequeninos who worked closely with humans tried to act in ways that human beings would interpret as paying attention. Planter was good at it, but right now he wasn't even trying.

Not till they had explained it all did Ender realize how much self-restraint Planter had shown even to remain on the chair until they were done. The moment they told him they were finished, he bounded off the chair and began to run-- no, to scamper around the room, touching everything. Not striking it, not lashing out with violence as a human being might have, hitting things, throwing things. Rather he was stroking everything he found, feeling the textures. Ender stood, wanting to reach out to him, to offer some comfort-- for he knew enough of pequenino behavior to recognize this as such aberrant behavior that it could only mean great distress.

Planter ran until he was exhausted, and then he went on, lurching around the room drunkenly until at last he bumped into Ender and threw his arms around him, clinging to him. For a moment Ender thought to embrace him back, but then he remembered that Planter wasn't human. An embrace

didn't call for an answering embrace. Planter was clinging to him as he would cling to a tree. Seeking the comfort of a trunk. A safe place to hold onto until the danger passed. There would be less, not more comfort if Ender responded like a human and hugged him back. This was a time when Ender had to answer like a tree. So he held still and waited. Waited and held still. Until at last the trembling stopped.

When Planter pulled away from him, both their bodies were covered with sweat. I guess there's a limit to how treelike I can be, thought Ender. Or do brothertrees and fathertrees give off moisture to the brothers who cling to them?

"This is very surprising," whispered Planter.

The words were so absurdly mild, compared to the scene that had just played out before them, that Ender couldn't help laughing aloud.

"Yes," said Ender. "I imagine it is."

"It's not funny to them," Ela said.

"He knows that," said Valentine.

"He mustn't laugh, then," she said. "You can't laugh when Planter's in so much pain." And then she burst into tears.

Valentine put a hand on her shoulder. "He laughs, you cry," she said. "Planter runs around and climbs trees. What strange animals we all are."

"Everything comes from the descolada," said Planter. "The third life, the mothertree, the fathertrees. Maybe even our minds. Maybe we were only tree rats when the descolada came and made false ramen out of us."

"Real ramen," said Valentine.

"We don't know it's true," said Ela. "It's a hypothesis."

"It's very very very very very true," said Planter. "Truer than truth."

"How do you know?"

"Everything fits. Planetary regulation-- I know about this, I studied gaialogy and the whole time I thought, how can this teacher tell us these things when every pequenino can look around and see that they're false? But if we know that the descolada is changing us, making us act to regulate the planetary systems--"

"What can the descolada possibly make you do that could regulate the planet?" said Ela.

"You haven't known us long enough," said Planter. "We haven't told you everything because we were afraid you'd think we were silly. Now you'll know that we aren't silly, we're just acting out what a virus tells us to do. We're slaves, not fools."

It startled Ender to realize that Planter had just confessed that the pequeninos still took some pains to try to impress human beings. "What behaviors of yours have anything to do with planetary regulation?"

"Trees," said Planter. "How many forests are there, all over the world? Transpiring constantly. Turning carbon dioxide into oxygen. Carbon dioxide is a greenhouse gas. When there's more of it in the atmosphere, the world gets warmer. So what would we do to make the world get cooler?"

"Plant more forests," said Ela. "To use up more CO<sub>2</sub> so that more heat could escape into space."

"Yes," said Planter. "But think about how we plant our trees."

The trees grow from the bodies of the dead, thought Ender. "War," he said.

"There are quarrels between tribes, and sometimes they make small wars," said Planter. "Those would be nothing on a planetary scale. But the great wars that sweep across the whole world--millions and millions of brothers die in these wars, and all of them become trees. Within months the forests of the world could double in size and number. That would make a difference, wouldn't it?"

"Yes," said Ela.

"A lot more efficiently than anything that would happen through natural evolution," said Ender.

"And then the wars stop," said Planter. "We always think there are great causes for these wars, that they're struggles between good and evil. And now all the time they are nothing but planetary regulation."

"No," said Valentine. "The need to fight, the rage, that might come from the descolada, but it doesn't mean the causes you fought for are--"

"The cause we fight for is planetary regulation," said Planter. "Everything fits. How do you think we help with warming the planet?"

"I don't know," said Ela. "Even trees eventually die of old age."

"You don't know because you've come during a warm time, not a cold one. But when the winters get bad, we build houses. The brothertrees give themselves to us to make houses. All of us, not just the ones who live in cold places. We all build houses, and the forests are reduced by half, by three-quarters. We thought this was a great sacrifice the brothertrees made for the sake of the tribe, but now I see that it's the descolada, wanting more carbon dioxide in the atmosphere to warm the planet."

"It's still a great sacrifice," said Ender.

"All our great epics," said Planter. "All our heroes. Just brothers acting out the will of the descolada."

"So what?" said Valentine.

"How can you say that? I learn that our lives are nothing, that we're only tools used by a virus to regulate the global ecosystem, and you call it nothing?"

"Yes, I call it nothing," said Valentine. "We human beings are no different. It may not be a virus, but we still spend most of our time acting out our genetic destiny. Take the differences between males and females. Males naturally tend toward a broadcast strategy of reproduction. Since males make an almost infinite supply of sperm and it costs them nothing to deploy it--"

"Not nothing," said Ender.

"Nothing," said Valentine, "just to deploy it. Their most sensible reproductive strategy is to deposit it in every available female-- and to make special efforts to deposit it in the healthiest females, the ones most likely to bring their offspring to adulthood. A male does best, reproductively, if he wanders and copulates as widely as possible."

"I've done the wandering," said Ender. "Somehow I missed out on the copulating."

"I'm speaking of overall trends," said Valentine. "There are always strange individuals who don't follow the norms. The female strategy is just the opposite, Planter. Instead of millions and millions of sperm, they only have one egg a month, and each child represents an enormous investment of effort. So females need stability. They need to be sure there'll always be plenty of food. We also spend large amounts of time relatively helpless, unable to find or gather food. Far from being wanderers, we females need to establish and stay. If we can't get that, then our next best strategy is to mate with the strongest and healthiest possible males. But best of all is to get a strong healthy male who'll stay and provide, instead of wandering and copulating at will."

"So there are two pressures on males. The one is to spread their seed, violently if necessary. The other is to be attractive to females by being stable providers-- by suppressing and containing the need to wander and the tendency to use force. Likewise, there are two pressures on females. The one is to get the seed of the strongest, most virile males so their infants will have good genes, which would make the violent, forceful males attractive to them. The other is to get the protection of the most stable males, nonviolent males, so their infants will be protected and provided for and as many as possible will reach adulthood."

"Our whole history, all that I've ever found in all my wanderings as an itinerant historian before I finally unhooked myself from this reproductively unavailable brother of mine and had a family-- it can all be interpreted as people blindly acting out those genetic strategies. We get pulled in those two directions."

"Our great civilizations are nothing more than social machines to create the ideal female setting, where a woman can count on stability; our legal and moral codes that try to abolish violence and promote permanence of ownership and enforce contracts-- those represent the primary female strategy, the taming of the male.

"And the tribes of wandering barbarians outside the reach of civilization, those follow the mainly male strategy. Spread the seed. Within the tribe, the strongest, most dominant males take possession of the best females, either through formal polygamy or spur-of-the-moment copulations that the other males are powerless to resist. But those low-status males are kept in line because the leaders take them to war and let them rape and pillage their brains out when they win a victory. They act out sexual desirability by proving themselves in combat, and then kill all the rival males and copulate with their widowed females when they win. Hideous, monstrous behavior-- but also a viable acting-out of the genetic strategy."

Ender found himself very uncomfortable, hearing Valentine talk this way. He knew all this was true as far as it went, and he had heard it all before, but it still, in a small way, made him as uncomfortable as Planter was to learn similar things about his own people. Ender wanted to deny it all, to say, Some of us males are naturally civilized. But in his own life, hadn't he performed the acts of dominance and war? Hadn't he wandered? In that context, his decision to stay on Lusitania was really a decision to abandon the male-dominant social model that had been engrained in him as a young soldier in battle school, and become a civilized man in a stable family.

Yet even then, he had married a woman who turned out to have little interest in having more children. A woman with whom marriage had turned out to be anything but civilized, in the end. If I follow the male model, then I'm a failure. No child anywhere who carries on my genes. No woman who accepts my rule. I'm definitely atypical.

But since I haven't reproduced, my atypical genes will die with me, and thus the male and female social models are safe from such an in-between person as myself.

Even as Ender made his own private evaluations of Valentine's interpretation of human history, Planter showed his own response by lying back in his chair, a gesture that spoke of scorn. "I'm supposed to feel better because humans are also tools of some genetic molecule?"

"No," said Ender. "You're supposed to realize that just because a lot of behavior can be explained as responses to the needs of some genetic molecule, it doesn't mean that all pequenino behavior is meaningless."

"Human history can be explained as the struggle between the needs of women and the needs of men," said Valentine, "but my point is that there are still heroes and monsters, great events and noble deeds."

"When a brothertree gives his wood," said Planter, "it's supposed to mean that he sacrifices for the tribe. Not for a virus."

"If you can look beyond the tribe to the virus, then look beyond the virus to the world," said Ender. "The descolada is keeping this planet habitable. So the brothertree is sacrificing himself to save the whole world."

"Very clever," said Planter. "But you forget-- to save the planet, it doesn't matter which brothertrees give themselves, as long as a certain number do it."

"True," said Valentine. "It doesn't matter to the descolada which brothertrees give their lives. But it matters to the brothertrees, doesn't it? And it matters to the brothers like you, who huddle into those houses to keep warm. You appreciate the noble gesture of the brothertrees who died for you, even if the descolada doesn't know one tree from another."

Planter didn't answer. Ender hoped that meant they were making some headway.

"And in the wars," said Valentine, "the descolada doesn't care who wins or loses, as long as enough brothers die and enough trees grow from the corpses. Right? But that doesn't change the fact that some brothers are noble and some are cowardly or cruel."

"Planter," said Ender, "the descolada may cause you all to feel-- to come more quickly to a murderous rage, for instance-- so that disputes erupt into warfare instead of being settled among the fathertrees. But that doesn't erase the fact that some forests are fighting in self-defense and others are simply bloodthirsty. You still have your heroes."

"I don't give a damn about heroes," said Ela. "Heroes tend to be dead, like my brother Quim. Where is he now, when we need him? I wish he hadn't been a hero." She swallowed hard, holding down the memory of recent grief.

Planter nodded-- a gesture he had learned in order to communicate with humans. "We live in Warmaker's world now," he said. "What is he, except a fathertree acting as the descolada instructs? The world is getting too warm. We need more trees. So he's filled with fervor to expand the forests. Why? The descolada makes him feel that way. That's why so many brothers and fathertrees listened to him-- because he offered a plan to satisfy their hunger to spread out and grow more trees."

"Does the descolada know that he was planning to put all these new trees on other planets?" said Valentine. "That wouldn't do much to cool Lusitania."

"The descolada puts hunger in them," said Planter. "How can a virus know about starships?"

"How can a virus know about mothertrees and fathertrees, brothers and wives, infants and little mothers?" said Ender. "This is a very bright virus."

"Warmaker is the best example of my point," said Valentine. "His name suggests that he was deeply involved and successful in the last great war. Once again there's pressure to increase the number of trees. Yet Warmaker chose to turn this hunger to a new purpose, spreading new forests by reaching out to the stars instead of plunging into wars with other pequeninos."

"We were going to do it no matter what Warmaker said or did," said Planter. "Look at us. Warmaker's group was preparing to spread out and plant new forests on other worlds. But when they killed Father Quim, the rest of us were so filled with rage that we planned to go and punish them. Great slaughter, and again, trees would grow. Still doing what the descolada demanded. And now that humans have burned our forest, Warmaker's people are going to prevail after all. One way or another, we must spread out and propagate. We'll snatch up any excuse we can find. The descolada will have its way with us. We're tools, pathetically trying to find some way to convince ourselves that our actions are our own idea."

He sounded so hopeless. Ender couldn't think of anything to say that Valentine or he hadn't already said, to try to wean him away from his conclusion that pequenino life was unfree and meaningless.

So it was Ela who spoke next, and in a tone of calm speculation that seemed incongruous, as if she had forgotten the terrible anxiety that Planter was experiencing. Which was probably the case, as all this discussion had led her back to her own specialty. "It's hard to know which side the descolada would be on, if it were aware of all this," said Ela.

"Which side of what?" asked Valentine.

"Whether to induce global cooling by having more forests planted here, or to use that same instinct for propagation to have the pequeninos take the descolada out to other worlds. I mean, which would the virus makers have wanted most? To spread the virus or regulate the planet?"

"The virus probably wants both, and it's likely to get both," said Planter. "Warmaker's group will win control of the ships, no doubt. But either before or after, there'll be a war over it that leaves half the brothers dead. For all we know, the descolada is causing both things to happen."

"For all we know," said Ender.

"For all we know," said Planter, "we may be the descolada."

So, thought Ender, they are aware of that concern, despite our decision not to broach it with the pequeninos yet.

"Have you been talking to Quara?" demanded Ela.

"I talk to her every day," said Planter. "But what does she have to do with this?"

"She had the same idea. That maybe pequenino intelligence comes from the descolada."

"Do you think after all your talk about the descolada being intelligent that it hasn't occurred to us to wonder that?" said Planter. "And if it's true, what will you do then? Let all of your species die so that we can keep our little second-rate brains?"

Ender protested at once. "We've never thought of your brains as--"

"Haven't you?" said Planter. "Then why did you assume that we would only think of this possibility if some human told us?"

Ender had no good answer. He had to confess to himself that he had been thinking of the pequeninos as if they were children in some ways, to be protected. Worries had to be kept as secrets from them. It hadn't occurred to him that they were perfectly capable of discovering all the worst horrors on their own.

"And if our intelligence does come from the descolada, and you found a way to destroy it, what would we become then?" Planter looked at them, triumphant in his bitter victory. "Nothing but tree rats," he said.

"That's the second time you've used that term," said Ender. "What are tree rats?"

"That's what they were shouting," said Planter, "some of the men who killed the mothertree."

"There's no such animal," said Valentine.

"I know," said Planter. "Grego explained it to me. 'Tree rat' is a slang name for squirrels. He showed me a holo of one on his computer in jail."

"You went to visit Grego?" Ela was plainly horrified.

"I had to ask him why he tried to kill us all, and then why he tried to save us," said Planter.

"There!" cried Valentine triumphantly. "You can't tell me that what Grego and Miro did that night, stopping the mob from burning Rooter and Human-- you can't tell me that that was just the acting out of genetic forces!"

"But I never said that human behavior was meaningless," said Planter. "It's you that tried to comfort me with that idea. We know that you humans have your heroes. We pequeninos are the ones who are only tools of a galialogical virus."

"No," said Ender. "There are pequenino heroes, too. Rooter and Human, for instance."

"Heroes?" said Planter. "They acted as they did in order to win what they achieved-- their status as fathertrees. It was the hunger to reproduce. They might have looked like heroes to you humans, who only die once, but the death they suffered was really birth. There was no sacrifice."

"Your whole forest was heroic, then," said Ela. "You broke free from all the old channels and made a treaty with us that required you to change some of your most deeply-rooted customs."

"We wanted the knowledge and the machines and the power you humans had. What's heroic about a treaty in which all we have to do is stop killing you, and in return you give us a thousand-year boost in our technological development?"

"You aren't going to listen to any positive conclusion, are you," said Valentine.

Planter went on, ignoring her. "The only heroes in that story were Pipo and Libo, the humans who acted so bravely, even though they knew they would die. They had won their freedom from their genetic heritage. What piggy has ever done that on purpose?"

It stung Ender more than a little, to hear Planter use the term piggy for himself and his people. In recent years the term had stopped being quite as friendly and affectionate as it was when Ender first came; often it was used now as a demeaning word, and the people who worked with them usually used the term pequenino. What sort of self-hatred was Planter resorting to, in response to what he'd learned today?

"The brothertrees give their lives," said Ela, helpfully.

But Planter answered in scorn. "The brothertrees are not alive the way fathertrees are. They can't talk. They only obey. We tell them what to do, and they have no choice. Tools, not heroes."

"You can twist anything with the right story," said Valentine. "You can deny any sacrifice by claiming that it made the sufferer feel so good to do it that it really wasn't a sacrifice at all, but just another selfish act."

Suddenly Planter jumped from his chair. Ender was prepared for a replay of his earlier behavior, but he didn't circle the room. Instead he walked to Ela where she sat in her chair, and placed both his hands on her knees.

"I know a way to be a true hero," said Planter. "I know a way to act against the descolada. To reject it and fight it and hate it and help destroy it."

"So do I," said Ela.

"An experiment," said Planter.

She nodded. "To see if pequenino intelligence is really centered in the descolada, and not in the brain."

"I'll do it," said Planter.

"I would never ask you to."

"I know you wouldn't ask," said Planter. "I demand it for myself."

Ender was surprised to realize that in their own way, Ela and Planter were as close as Ender and Valentine, able to know each other's thoughts without explaining. Ender hadn't imagined that this would be possible between two people of different species; and yet, why shouldn't it be? Particularly when they worked together so closely in the same endeavor.

It had taken Ender a few moments to grasp what Planter and Ela were deciding between them; Valentine, who had not been working with them for years as Ender had, still didn't understand. "What's happening?" she asked. "What are they talking about?"

It was Ela who answered. "Planter is proposing that we purge one pequenino of all copies of the descolada virus, put him in a clean space where he can't be contaminated, and then see if he still has a mind."

"That can't be good science," said Valentine. "There are too many other variables. Aren't there? I thought the descolada was involved in every part of pequenino life."

"Lacking the descolada would mean that Planter would immediately get sick and then eventually die. What having the descolada did to Quim, lacking it will do to Planter."

"You can't mean to let him do it," said Valentine. "It won't prove anything. He might lose his mind because of illness. Fever makes people delirious."

"What else can we do?" asked Planter. "Wait until Ela finds a way to tame the virus, and only then find out that without it in its intelligent, virulent form, we are not pequeninos at all, but merely piggies? That we were only given the power of speech by the virus within us, and that when it was controlled, we lost everything and became nothing more than brothertrees? Do we find that out when you loose the virus-killer?"

"But it's not a serious experiment with a control--"

"It's a serious experiment, all right," said Ender. "The kind of experiment you perform when you don't give a damn about getting funding, you just need results and you need them now. The kind of experiment you perform when you have no idea what the results will be or even if you'll know how to interpret them, but there are a bunch of crazy pequeninos planning to get in starships and spread a planet-killing disease all over the galaxy so you've got to do something."

"It's the kind of experiment you perform," said Planter, "when you need a hero."

"When we need a hero?" asked Ender. "Or when you need to be a hero?"

"I wouldn't talk if I were you," said Valentine dryly. "You've done a few stints as a hero yourself over the centuries."

"It may not be necessary anyway," said Ela. "Quara knows a lot more about the descolada than she's telling. She may already know whether the intelligent adaptability of the descolada can be separated from its life-sustaining functions. If we could make a virus like that, we could test the effect of the descolada on pequenino intelligence without threatening the life of the subject."

"The trouble is," said Valentine, "Quara isn't any more likely to believe our story that the descolada is an artifact created by another species than Qing-jao was able to believe that the voice of her gods was just a genetically-caused obsessive-compulsive disorder."

"I'll do it," said Planter. "I will begin immediately because we have no time. Put me in a sterile environment tomorrow, and then kill all the descolada in my body using the chemicals you've got hidden away. The ones you mean to use on humans when the descolada adapts to the current suppressant you're using."

"You realize that it may be wasted," said Ela.

"Then it would truly be a sacrifice," said Planter.

"If you start to lose your mind in a way that clearly isn't related to your body's illness," said Ela, "we'll stop the experiment because we'll have the answer."

"Maybe," said Planter.

"You might well recover at that point."

"I don't care whether I recover," said Planter.

"We'll also stop it," said Ender, "if you start to lose your mind in a way that is related to your body's illness, because then we'll know that the experiment is useless and we wouldn't learn anything from it anyway."

"Then if I'm a coward, all I have to do is pretend to be mentally failing and my life will be saved," said Planter. "No, I forbid you to stop the experiment, no matter what. And if I keep my mental functions, you must let me continue to the end, to the death, because only if I keep my mind to the end will we know that our soul is not just an artifact of the descolada. Promise me!"

"Is this science or a suicide pact?" asked Ender. "Are you so despondent over discovering the probable role of the descolada in pequenino history that you simply want to die?"

Planter rushed to Ender, climbed his body, and pressed his nose against Ender's. "You liar!" he shouted.

"I just asked a question," whispered Ender.

"I want to be free!" shouted Planter. "I want the descolada out of my body and I never want it to come back! I want to use this to help free all the piggies so that we can be pequeninos in fact and not in name!"

Gently Ender pried him back. His nose ached from the violence of Planter's pressing.

"I want to make a sacrifice that proves that I'm free," said Planter, "not just acting out my genes. Not just trying for the third life."

"Even the martyrs of Christianity and Islam were willing to accept rewards in heaven for their sacrifice," said Valentine.

"Then they were all selfish pigs," said Planter. "That's what you say about pigs, isn't it? In Stark, in your common speech? Selfish pigs. Well, it's the right name for us piggies, isn't it! Our heroes were all trying to become fathertrees. Our brothertrees were failures from the start. The only thing we serve outside ourselves is the descolada. For all we know, the descolada might be ourselves. But I will be free. I will know what I am, without the descolada or my genes or anything except me."

"What you'll be is dead," said Ender.

"But free first," said Planter. "And the first of my people to be free."

\*\*\*

After Wang-mu and Jane had told Master Han all that had transpired that day, after he had conversed with Jane about his own day's work, after the house had fallen silent in the darkness of the night, Wang-mu lay awake on her mat in the corner of Master Han's room, listening to his soft but insistent snoring as she thought over all that had been said that day.

There were so many ideas, and most of them were so far above her that she despaired of truly understanding them. Especially what Wiggin said about purposes. They were giving her credit for having come up with the solution to the problem of the descolada virus, and yet she couldn't take the credit because she hadn't meant to do it; she had thought she was just repeating Qing-jao's questions. Could she take credit for something she did by accident?

People should only be blamed or praised for what they meant to do. Wang-mu had always believed this instinctively; she didn't remember anyone ever telling it to her in so many words. The crimes that she was blaming Congress for were all deliberate-- genetically altering the people of Path to create the godspoken, and sending the M.D. Device to destroy the haven of the only other sentient species that they knew existed in the universe.

But was that what they meant to do, either? Maybe some of them, at least, thought that they were making the universe safe for humanity by destroying Lusitania-- from what Wang-mu had heard about the descolada, it could mean the end of all Earthborn life if it ever started spreading world to world among human beings. Maybe some of Congress, too, had decided to create the godspoken of Path in order to benefit all of humanity, but then put the OCD in their brains so that they couldn't get out of control and enslave all the inferior, "normal" humans. Maybe they all had good purposes in mind for the terrible things they did.

Certainly Qing-jao had a good purpose in mind, didn't she? So how could Wang-mu condemn her for her actions, when she thought she was obeying the gods?

Didn't everybody have some noble purpose in mind for their own actions? Wasn't everybody, in their own eyes, good?

Except me, thought Wang-mu. In my own eyes, I'm foolish and weak. But they spoke of me as if I were better than I ever thought. Master Han praised me, too. And those others spoke of Qing-jao with pity and scorn and I've felt those feelings toward her, too. Yet isn't Qing-jao acting nobly, and me basely? I betrayed my mistress. She has been loyal to her government and to her gods, which are real to her, though I no longer believe in them. How can I tell the good people from the bad, if the bad people all have some way of convincing themselves that they're trying to do good even though they're doing something terrible? And the good people can believe that they're actually very bad even though they're doing something good?

Maybe you can only do good if you think you're bad, and if you think you're good then you can only do bad.

But that paradox was too much for her. There'd be no sense in the world if you had to judge people by the opposite of how they tried to seem. Wasn't it possible for a good person also to try to seem good? And just because somebody claimed to be scum didn't mean that he wasn't scum. Was there any way to judge people, if you can't judge even by their purpose?

Was there any way for Wang-mu to judge even herself?

Half the time I don't even know the purpose of what I do. I came to this house because I was ambitious and wanted to be a secret maid to a rich godspoken girl. It was pure selfishness on my part, and pure generosity that led Qing-jao to take me in. And now here I am helping Master Han commit treason-- what is my purpose in that? I don't even know why I do what I do. How can I know what other people's true purposes are? There's no hope of ever knowing good from bad.

She sat up in lotus position on her mat and pressed her face into her hands. It was as if she felt herself pressed against a wall, but it was a wall that she made herself, and if she could only find a way to move it aside-- the way she could move her hands away from her face whenever she wanted-- then she could easily push through to the truth.

She moved her hands away. She opened her eyes. There was Master Han's terminal, across the room. There, today, she had seen the faces of Elanora Ribeira von Hesse and Andrew Wiggin. And Jane's face.

She remembered Wiggin telling her what the gods would be like. Real gods would want to teach you how to be just like them. Why would he say such a thing? How could he know what a god would be?

Somebody who wants to teach you how to know everything that they know and do everything that they do-- what he was really describing was parents, not gods.

Only there were plenty of parents who didn't do that. Plenty of parents who tried to keep their children down, to control them, to make slaves of them. Where she had grown up, Wang-mu had seen plenty of that.

So what Wiggin was describing wasn't parents, really. He was describing good parents. He wasn't telling her what the gods were, he was telling her what goodness was. To want other people to grow. To want other people to have all the good things that you have. And to spare them the bad things if you can. That was goodness.

What were the gods, then? They would want everyone else to know and have and be all good things. They would teach and share and train, but never force.

Like my parents, thought Wang-mu. Clumsy and stupid sometimes, like all people, but they were good. They really did look out for me. Even sometimes when they made me do hard things because they knew it would be good for me. Even sometimes when they were wrong, they were good. I can judge them by their purpose after all. Everybody calls their purpose good, but my parents' purposes really were good, because they meant all their acts toward me to help me grow wiser and stronger and better. Even when they made me do hard things because they knew I had to learn from them. Even when they caused me pain.

That was it. That's what the gods would be, if there were gods. They would want everyone else to have all that was good in life, just like good parents. But unlike parents or any other people, the gods would actually know what was good and have the power to cause good things to happen, even when nobody else understood that they were good. As Wiggin said, real gods would be smarter and stronger than anybody else. They would have all the intelligence and power that it was possible to have.

But a being like that-- who was someone like Wang-mu to judge a god? She couldn't understand their purposes even if they told her, so how could she ever know that they were good? Yet the other approach, to trust in them and believe in them absolutely-- wasn't that what Qing-jao was doing?

No. If there were gods, they would never act as Qing-jao thought they acted-- enslaving people, tormenting and humiliating them.

Unless torment and humiliation were good for them...

No! She almost cried aloud, and once again pressed her face into her hands, this time to keep silence.

I can only judge by what I understand. If as far as I can see, the gods that Qing-jao believes in are only evil, then yes, perhaps I'm wrong, perhaps I can't comprehend the great purpose they accomplish by making the godspoken into helpless slaves, or destroying whole species. But in my heart I have no choice but to reject such gods, because I can't see any good in what they're doing. Perhaps I'm so stupid and foolish that I will always be the enemy of the gods, working against their high and incomprehensible purposes. But I have to live my life according to what I understand, and what I understand is that there are no such gods as the ones the godspoken teach us about. If they

exist at all, they take pleasure in oppression and deception, humiliation and ignorance. They act to make other people smaller and themselves larger. Those would not be gods, then, even if they existed. They would be enemies. Devils.

The same with the beings, whoever they are, who made the descolada virus. Yes, they would have to be very powerful to make a tool like that. But they would also have to be heartless, selfish, arrogant beings, to think that all life in the universe was theirs to manipulate as they saw fit. To send the descolada out into the universe, not caring who it killed or what beautiful creatures it destroyed-- those could not be gods, either.

Jane, now-- Jane might be a god. Jane knew vast amounts of information and had great wisdom as well, and she was acting for the good of others, even when it would take her life-- even now, after her life was forfeit. And Andrew Wiggin, he might be a god, so wise and kind he seemed, and not acting for his own benefit but for the pequeninos. And Valentine, who called herself Demosthenes, she had worked to help other people find the truth and make wise decisions of their own. And Master Han, who was trying to do the right thing always, even when it cost him his daughter. Maybe even Ela, the scientist, even though she had not known all that she ought to have known-- for she was not ashamed to learn truth from a servant girl.

Of course they were not the sort of gods who lived off in the Infinite West, in the Palace of the Royal Mother. Nor were they gods in their own eyes-- they would laugh at her for even thinking of it. But compared to her, they were gods indeed. They were so much wiser than Wang-mu, and so much more powerful, and as far as she could understand their purposes, they were trying to help other people become as wise and powerful as possible. Even wiser and more powerful than they were themselves. So even though Wang-mu might be wrong, even though she might truly understand nothing at all about anything, nevertheless she knew that her decision to work with these people was the right one for her to make.

She could only do good as far as she understood what goodness was. And these people seemed to her to be doing good, while Congress seemed to be doing evil. So even though in the long run it might destroy her-- for Master Han was now an enemy of Congress, and might be arrested and killed, and her along with him-- still she would do it. She would never see real gods, but she could at least work to help those people who were as close to being gods as any real person could ever be.

And if the gods don't like it, they can poison me in my sleep or catch me on fire as I'm walking in the garden tomorrow or just make my arms and legs and head drop off my body like crumbs off a cake. If they can't manage to stop a stupid little servant girl like me, they don't amount to much anyway.

## Chapter 15 -- LIFE AND DEATH

<Ender's coming to see us.>

<He comes and talks to me all the time.>

<And we can talk directly into his mind. But he insists on coming. He doesn't feel like he's talking to us unless he sees us. He has a harder time distinguishing between his own thoughts and the ones we put in his mind when we converse from a distance. So he's coming.>

<And you don't like this?>

<He wants us to tell him answers and we don't know any answers.>

<You know everything that the humans know. You got into space, didn't you? You don't even need their ansibles to talk from world to world.>

<They're so hungry for answers, these humans. They have so many questions.>

<We have questions, too, you know.>

<They want to know why, why, why. Or how. Everything all tied up into a nice neat bundle like a cocoon. The only time we do that is when we're metamorphosing a queen.>

<They like to understand everything. But so do we, you know.>

<Yes, you'd like to think you're just like the humans, wouldn't you? But you're not like Ender. Not like the humans. He has to know the cause of everything, he has to make a story about everything and we don't know any stories. We know memories. We know things that happen. But we don't know why they happen, not the way he wants us to.>

<Of course you do.>

<We don't even care why, the way these humans do. We find out as much as we need to know to accomplish something, but they always want to know more than they need to know. After they get something to work, they're still hungry to know why it works and why the cause of its working works.>

<Aren't we like that?>

<Maybe you will be, when the descolada stops interfering with you.>

<Or maybe we'll be like your workers.>

<If you are, you won't care. They're all very happy. It's intelligence that makes you unhappy. The workers are either hungry or not hungry. In pain or not in pain. They're never curious or disappointed or anguished or ashamed. And when it comes to things like that, these humans make you and me look like workers.>

<I think you just don't know us well enough to compare.>

<We've been inside your head and we've been inside Ender's head and we've been inside our own heads for a thousand generations and these humans make us look like we're asleep. Even when they're asleep they're not asleep. Earthborn animals do this thing, inside their brains-- a sort of mad firing-off of synapses, controlled insanity. While they're asleep. The part of their brain that records sight or sound, it's firing off every hour or two while they sleep, even when all the sights and sounds are complete random nonsense, their brains just keep on trying to assemble it into something sensible. They try to make stories out of it. It's complete random nonsense with no possible correlation to the real world, and yet they turn it into these crazy stories. And then they forget them. All that work, coming up with these stories, and when they wake up they forget almost all of them. But when they do remember, then they try to make stories about those crazy stories, trying to fit them into their real lives.>

<We know about their dreaming.>

<Maybe without the descolada, you'll dream, too.>

<Why should we want to? As you say, it's meaningless. Random firings of the synapses of the neurons in their brains.>

<They're practicing. They're doing it all the time. Coming up with stories. Making connections. Making sense out of nonsense.>

<What good is it, when it means nothing?>

<That's just it. They have a hunger we know nothing about. The hunger for answers. The hunger for making sense. The hunger for stories.>

<We have stories.>

<You remember deeds. They make up deeds. They change what their stories mean. They transform things so that the same memory can mean a thousand different things. Even from their dreams, sometimes they make up out of that randomness something that illuminates everything. Not one human being has anything like the kind of mind you have. The kind we have. Nothing as powerful. And their lives are so short, they die so fast. But in their century or so they come up with ten thousand meanings for every one that we discover.>

<Most of them wrong.>

<Even if the vast majority of them are wrong, even if ninety-nine of every hundred is stupid and wrong, out of ten thousand ideas that still leaves them with a hundred good ones. That's how they make up for being so stupid and having such short lives and small memories.>

<Dreams and madness.>

<Magic and mystery and philosophy.>

<You can't say that you never think of stories. What you've just been telling me is a story.>

<I know.>

<See? Humans do nothing you can't do.>

<Don't you understand? I got even this story from Ender's mind. It's his. And he got the seed of it from somebody else, something he read, and combined it with things he thought of until it made sense to him. It's all there in his head. While we are like you. We have a clear view of the world. I have no trouble finding my way through your mind. Everything orderly and sensible and clear. You'd be as much at ease in mine. What's in your head is reality, more or less, as best you understand it. But in Ender's mind, madness. Thousands of competing contradictory impossible visions that make no sense at all because they can't all fit together but they do fit together, he makes them fit together, this way today, that way tomorrow, as they're needed. As if he can make a new idea-machine inside his head for every new problem he faces. As if he conceives of a new universe to live in, every hour a new one, often hopelessly wrong and he ends up making mistakes and bad judgments, but sometimes so perfectly right that it opens things up like a miracle and I look through his eyes and see the world his new way and it changes everything. Madness, and then illumination. We knew everything there was to know before we met these humans, before we built our connection with Ender's mind. Now we discover that there are so many ways of knowing the same things that we'll never find them all.>

<Unless the humans teach you.>

<You see? We are scavengers also.>

<Ybu're a scavenger. We're supplicants.>

<If only they were worthy of their own mental abilities.>

<Aren't they?>

<They ore planning to blow you up, you remember. There's so much possibility in their minds, but they are still, after all, individually stupid and small-minded and half-blind and half-mad. There's still the ninety-nine percent of their stories that are hideously wrong and lead them into terrible errors. Sometimes we wish we could tame them, like the workers. We tried to, you know, with Ender. But we couldn't do it. Couldn't make a worker of him.>

<Why not?>

<Too stupid. Can't pay attention long enough. Human minds lack focus. They get bored and wander off. We had to build a bridge outside him, using the computer that he was most closely bonded with. Computers, now-- those things can pay attention. And their memory is neat, orderly, everything organized and findable.>

<But they don't dream.>

<No madness. Too bad.>

Valentine showed up unbidden at Olhado's door. It was early morning. He wouldn't go to work till afternoon-- he was a shift manager at the small brickworks. But he was already up and about, probably because his family was. The children were trooping out the door. I used to see this on television back in the ancient days, thought Valentine. The family going out the door in the morning, all at the same time, and Dad last of all with the briefcase. In their own way, my parents acted out that life. Never mind how deeply weird their children were. Never mind how after we paraded off to school in the morning, Peter and I went prowling through the nets, trying to take over the world through the use of pseudonyms. Never mind that Ender was torn away from the family as a little boy and never saw any of them again, even on his one visit to Earth-- except me. I think my parents still imagined they were doing it right, because they went through a ritual they had seen on TV.

And here it is again. The children bursting through the door. That boy must be Nimbo, the one who was with Grego at the confrontation with the mob. But here he is, just a cliché, child-- no one would guess that he had been part of that terrible night only a little while ago.

Mother gave them each a kiss. She was still a beautiful young woman, even with so many children. So ordinary, so like the cliché, and yet a remarkable woman, for she had married their father, hadn't she? She had seen past the deformity.

And Dad, not yet off to work, so he could stand there, watching them, patting them, kissing them, saying a few words. Light, clever, loving-- the predictable father. So, what's wrong with this picture? The dad is Olhado. He has no eyes. Just the silvery metal orbs punctuated with two lens apertures in the one eye, and the computer I/O outlet in the other. The kids don't seem to notice. I'm still not used to it.

"Valentine," he said, when he saw her.

"We need to talk," she said.

He ushered her inside. He introduced his wife, Jaqueline. Skin so black it was almost blue, laughing eyes, a beautiful wide smile that you wanted to dive into, it was so welcoming. She brought a limonada, ice-cold and sweating in the morning heat, and then discreetly withdrew. "You can stay," said Valentine. "This isn't all that private." But she didn't want to stay. She had work to do, she said. And she was gone.

"I've wanted to meet you for a long time," said Olhado.

"I was meetable," she said.

"You were busy."

"I have no business," said Valentine.

"You have Andrew's business."

"We're meeting now, anyway. I've been curious about you, Olhado. Or do you prefer your given name, Lauro?"

"In Milagre, your name is whatever people call you. I used to be Sule, for my middle name, Suleimdo."

"Solomon the wise."

"But after I lost my eyes, I was Olhado, then and forever."

"The watched one?"

"Olhado could mean that, yes, past participle of olhar, but in this case it means 'The guy with the eyes.'"

"And that's your name."

"My wife calls me Lauro," he said. "And my children call me Father."

"And I?"

"Whatever."

"Sule, then."

"Lauro, if you must. Sule makes me feel like I'm six."

"And reminds you of the time when you could see."

He laughed. "Oh, I can see now, thanks very much. I see very well."

"So Andrew says. That's why I've come to you. To find out what you see."

"Want me to play back a scene for you? A blast from the past? I have all my favorite memories stored on computer. I can plug in and play back anything you want. I have, for instance, Andrew's first visit in my family's home. I also have some top-flight family quarrels. Or do you prefer public events? Every Mayor's inaugural since I got these eyes? People do consult me about things like that-- what was worn, what was said. I often have trouble convincing them that my eyes record

vision, not sound-- just like their eyes. They think I should be a holographer and record it all for entertainment."

"I don't want to see what you see. I want to know what you think."

"Do you, now?"

"Yes, I do."

"I have no opinions. Not on anything you'd be interested in. I stay out of the family quarrels. I always have."

"And out of the family business. The only one of Novinha's children not to go into science."

"Science has brought everyone else so much happiness, it's hard to imagine why I wouldn't have gone into it."

"Not hard to imagine," said Valentine. And then, because she had found that brittle-sounding people will talk quite openly if goaded, she added a little barb. "I imagine that you simply didn't have the brains to keep up."

"Absolutely true," said Olhado. "I only have wit enough to make bricks."

"Really?" said Valentine. "But you don't make bricks."

"On the contrary. I make hundreds of bricks a day. And with everyone knocking holes in their houses to build the new chapel, I foresee a booming business in the near future."

"Lauro," said Valentine, "you don't make bricks. The laborers in your factory make bricks."

"And I, as manager, am not part of that?"

"Brickmakers make bricks. You make brickmakers."

"I suppose. Mostly I make brickmakers tired."

"You make other things," said Valentine. "Children."

"Yes," said Olhado, and for the first time in the conversation he relaxed. "I do that. Of course, I have a partner."

"A gracious and beautiful woman."

"I looked for perfection, and found something better." It wasn't just a line of patter. He meant it. And now the brittleness was gone, the wariness too. "You have children. A husband."

"A good family. Maybe almost as good as yours. Ours lacks only the perfect mother, but the children will recover from that."

"To hear Andrew talk about you, you're the greatest human being who ever lived."

"Andrew is very sweet. He could also get away with saying such things because I wasn't here."

"Now you are here," said Olhado. "Why?"

"It happens that worlds and species of ramen are at a cusp of decision, and the way events have turned out, their future depends in large part on your family. I don't have time to discover things in a leisurely way-- I don't have time to understand the family dynamics, why Grego can pass from monster to hero in a single night, how Miro can be both suicidal and ambitious, why Quara is willing to let the pequeninos die for the descolada's sake--"

"Ask Andrew. He understands them all. I never could."

"Andrew is in his own little hell right now. He feels responsible for everything. He's done his best, but Quim is dead, and the one thing your mother and Andrew both agree on is that somehow it's Andrew's fault. Your mother's leaving him has torn him up."

"I know."

"I don't even know how to console him. Or even which, as his loving sister, to hope for-- that she'll come back into his life, or leave him forever."

Olhado shrugged. All the brittleness was back.

"Do you really not care?" asked Valentine. "Or have you decided not to care?"

"Maybe I decided long ago, and now I really don't."

Part of being a good interviewer, too, is knowing when to be silent. Valentine waited.

But Olhado was also good at waiting. Valentine almost gave up and said something. She even toyed with the idea of confessing failure and leaving.

Then he spoke. "When they replaced my eyes, they also took out the tear ducts. Natural tears would interfere with the industrial lubricants they put in my eyes. "

"Industrial?"

"My little joke," said Olhado. "I seem to be very dispassionate all the time, because my eyes never well up with tears. And people can't read my expressions. It's funny, you know. The actual eyeball doesn't have any ability to change shape and show an expression. It just sits there. Yes, your eyes dart around-- they either keep steady eye contact or look down or up-- but my eyes do that, too."

They still move with perfect symmetry. They still point in the direction I'm looking. But people can't stand to look at them. So they look away. They don't read the expressions on my face. And therefore they think there are no expressions. My eyes still sting and redden and swell a little at times when I would have cried, if I still had tears."

"In other words," said Valentine, "you do care."

"I always cared," he said. "Sometimes I thought I was the only one who understood, even though half the time I didn't know what it was that I was understanding. I withdrew and watched, and because I didn't have any personal ego on the line in the family quarrels, I could see more clearly than any of them. I saw the lines of power-- Mother's absolute dominance even though Marcao beat her when he was angry or drunk. Miro, thinking it was Marcao he was rebelling against, when always it was Mother. Grego's meanness-- his way of handling fear. Quara, absolutely contrary by nature, doing whatever she thought the people who mattered to her didn't want her to do. Ela, the noble martyr-- what in the world would she be, if she couldn't suffer? Holy, righteous Quim, finding God as his father, on the premise that the best father is the invisible kind who never raises his voice."

"You saw all this as a child?"

"I'm good at seeing things. We passive, unbelonging observers always see better. Don't you think?"

Valentine laughed. "Yes, we do. The same role, then, you think? You and I, both historians?"

"Till your brother came. From the moment he walked in the door, it was obvious that he saw and understood everything, just the way I saw it. It was exhilarating. Because of course I had never actually believed my own conclusions about my family. I never trusted my own judgments. Obviously no one saw things the way I did, so I must be wrong. I even thought that I saw things so peculiarly because of my eyes. That if I had real eyes I would have seen things Miro's way. Or Mother's."

"So Andrew confirmed your judgments."

"More than that. He acted on them. He did something about them."

"Oh?"

"He was here as a speaker for the dead. But from the moment he walked in the door, he took-- he took--"

"Over?"

"Took responsibility. For change. He saw all the sicknesses I saw, but he started healing them as best he could. I saw how he was with Grego, firm but kind. With Quara, responding to what she

really wanted instead of what she claimed to want. With Quim, respecting the distance he wanted to keep. With Miro, with Ela, with Mother, with everybody."

"With you?"

"Making me part of his life. Connecting with me. Watching me jack into my eye and still talking to me like a person. Do you know what that meant to me?"

"I can guess."

"Not the part about me. I was a hungry little kid, I'll admit; the first kind person could have conned me, I'm sure. It's what he did about us all. It's how he treated us all differently, and yet remained himself. You've got to think about the men in my life. Marcao, who we thought was our father-- I had no idea who he was. All I ever saw was the liquor in him when he was drunk, and the thirst when he was sober. Thirst for alcohol but also a thirst for respect that he could never get. And then he dropped over dead. Things got better at once. Still not good, but better. I thought, the best father is the one who isn't there. Only that wasn't true, either, was it? Because my real father, Libo, the great scientist, the martyr, the hero of research, the love of my mother's life-- he had sired all these delightful children on my mother, he could see the family in torment, and yet he did nothing."

"Your mother didn't let him, Andrew said."

"That's right-- and one must always do things Mother's way, mustn't one?"

"Novinha is a very imposing woman."

"She thinks she's the only one in the world ever to suffer," said Olhado. "I say that without rancor. I have simply observed that she is so full of pain, she's incapable of taking anyone else's pain seriously."

"Try saying something rancorous next time. It might be more kind."

Olhado looked surprised. "Oh, you're judging me? Is this motherhood solidarity or something? Children who speak ill of their mothers must be slapped down? But I assure you, Valentine, I meant it. No rancor. No grudges. I know my mother, that's all. You said you wanted me to tell you what I saw-- that's what I see. That's what Andrew saw, too. All that pain. He's drawn to it. Pain sucks him like a magnet. And Mother had so much she almost sucked him dry. Except that maybe you can't suck Andrew dry. Maybe the well of compassion inside him is bottomless."

His passionate speech about Andrew surprised her. And pleased her, too. "You say Quim turned to God for the perfect invisible father. Who did you turn to? Not someone invisible, I think."

"No, not someone invisible."

Valentine studied his face in silence.

"I see everything in bas-relief," said Olhado. "My depth perception is very poor. If we'd put a lens in each eye instead of both in one, the binocularity would be much improved. But I wanted to have the jack. For the computer link. I wanted to be able to record the pictures, to be able to share them. So I see in bas-relief. As if everybody were a slightly rounded cardboard cutout, sliding across a flat painted background. In a way it makes everybody seem so much closer together. Sliding over each other like sheets of paper, rubbing on each other as they pass."

She listened, but said nothing for a while longer.

"Not someone invisible," he said, echoing, remembering. "That's right. I saw what Andrew did in our family. I saw that he came in and listened and watched and understood who we were, each individual one of us. He tried to discover our need and then supply it. He took responsibility for other people and it didn't seem to matter to him how much it cost him. And in the end, while he could never make the Ribeira family normal, he gave us peace and pride and identity. Stability. He married Mother and was kind to her. He loved us all. He was always there when we wanted him, and seemed unhurt by it when we didn't. He was firm with us about expecting civilized behavior, but never indulged his whims at our expense. And I thought: This is so much more important than science. Or politics, either. Or any particular profession or accomplishment or thing you can make. I thought: If I could just make a good family, if I could just learn to be to other children, their whole lives, what Andrew was, coming so late into ours, then that would mean more in the long run, it would be a finer accomplishment than anything I could ever do with my mind or my hands.

"So you're a career father," said Valentine.

"Who works at a brick factory to feed and clothe the family. Not a brickmaker who also has kids. Lini also feels the same way."

"Lini?"

"Jaqueline. My wife. She followed her own road to the same place. We do what we must to earn our place in the community, but we live for the hours at home. For each other, for the children. It will never get me written up in the history books."

"You'd be surprised," said Valentine.

"It's a boring life, to read about," said Olhado. "Not to live, though."

"So the secret that you protect from your tormented siblings is-- happiness."

"Peace. Beauty. Love. All the great abstractions. I may see them in bas-relief, but I see them up close."

"And you learned it from Andrew. Does he know?"

"I think so," said Olhado. "Do you want to know my most closely guarded secret? When we're alone together, just him and me, or me and Lini and him-- when we're alone, I call him Papa, and he calls me Son."

Valentine made no effort to stop her tears from flowing, as if they flowed half for him and half for her. "So Ender does have children, after all," she said.

"I learned how to be a father from him, and I'm a damned good one."

Valentine leaned forward. It was time to get down to business. "That means that you, more than any of the others, stand to lose something truly beautiful and fine if we don't succeed in our endeavors."

"I know," said Olhado. "My choice was a selfish one in the long run. I'm happy, but I can't do anything to help save Lusitania."

"Wrong," said Valentine. "You just don't know yet."

"What can I do?"

"Let's talk a while longer, and see if we can find out. And if it's all right with you, Lauro, your Jaqueline should stop eavesdropping from the kitchen now, and come on in and join us."

Bashfully, Jaqueline came in and sat beside her husband. Valentine liked the way they held hands. After so many children-- it reminded herself of holding hands with Jakt, and how glad it made her feel.

"Lauro," she said, "Andrew tells me that when you were younger, you were the brightest of all the Ribeira children. That you spoke to him of wild philosophical speculations. Right now, Lauro, my adoptive nephew, it is wild philosophy we need. Has your brain been on hold since you were a child? Or do you still think thoughts of great profundity?"

"I have my thoughts," said Olhado. "But I don't even believe them myself."

"We're working on faster-than-light flight, Lauro. We're working on discovering the soul of a computer entity. We're trying to rebuild an artificial virus that has self-defense capabilities built into it. We're working on magic and miracles. So I'd be glad of any insights you can give me on the nature of life and reality."

"I don't even know what ideas Andrew was talking about," said Olhado. "I quit studying physics, I--"

"If I want studies, I'll read books. So let me tell you what we told a very bright Chinese servant girl on the world of Path: Let me know your thoughts, and I'll decide for myself what's useful and what isn't."

"How? You're not a physicist either."

Valentine walked to the computer waiting quietly in the corner. "May I turn this on?"

"Pois nao," he said. Of course.

"Once it's on, Jane will be with us."

"Ender's personal program."

"The computer entity whose soul we're trying to locate."

"Ah," he said. "Maybe you should be telling me things."

"I already know what I know. So start talking. About those ideas you had as a child, and what has become of them since."

\*\*\*

Quara had a chip on her shoulder from the moment Miro entered the room. "Don't bother," she said.

"Don't bother what?"

"Don't bother telling me my duty to humanity or to the family-- two separate, non-overlapping groups, by the way."

"Is that what I came for?" asked Miro.

"Ela sent you to persuade me to tell her how to castrate the descolada."

Miro tried a little humor. "I'm no biologist. Is that possible?"

"Don't be cute," said Quara. "If you cut out their ability to pass information from one virus to another, it's like cutting out their tongues and their memory and everything that makes them intelligent. If she wants to know this stuff, she can study what I studied. It only took me five years of work to get there."

"There's a fleet coming."

"So you are an emissary."

"And the descolada may figure out how to--"

She interrupted him, finished his sentence. "Circumvent all our strategies to control it, I know."

Miro was annoyed, but he was used to people getting impatient with his slowness of speech and cutting him off. And at least she had guessed what he was driving at. "Any day," he said. "Ela feels time pressure."

"Then she should help me learn to talk to the virus. Persuade it to leave us alone. Make a treaty, like Andrew did with the pequeninos. Instead, she's cut me off from the lab. Well, two can play that game. She cuts me off, I cut her off."

"You were telling secrets to the pequeninos."

"Oh, yes, Mother and Ela, the guardians of truth! They get to decide who knows what. Well, Miro, let me tell you a secret. You don't protect the truth by keeping other people from knowing it."

"I know that," said Miro.

"Mother completely screwed up our family because of her damned secrets. She wouldn't even marry Libo because she was determined to keep a stupid secret, which if he'd known might have saved his life."

"I know," said Miro.

This time he spoke with such vehemence that Quara was taken aback. "Oh, well, I guess that was a secret that bothered you more than it did me. But then you should be on my side in this, Miro. Your life would have been a lot better, all our lives would have been, if Mother had only married Libo and told him all her secrets. He'd still be alive, probably."

Very neat solutions. Tidy little might-have-beens. And false as hell. If Libo had married Novinha, he wouldn't have married Bruxinha, Ouanda's mother, and thus Miro wouldn't have fallen unsuspectingly in love with his own half-sister because she would never have existed at all. That was far too much to say, however, with his halting speech. So he confined himself to saying "Ouanda wouldn't have been born," and hoped she would make the connections.

She considered for a moment, and the connection was made. "You have a point," she said. "And I'm sorry. I was only a child then."

"It's all past," said Miro.

"Nothing is past," said Quara. "We're still acting it out, over and over again. The same mistakes, again and again. Mother still thinks that you keep people safe by keeping secrets from them."

"And so do you," said Miro.

Quara thought about that for a moment. "Ela was trying to keep the pequeninos from knowing that she was working on destroying the descolada. That's a secret that could have destroyed the whole pequenino society, and they weren't even being consulted. They were preventing the pequeninos

from protecting themselves. But what I'm keeping secret is-- maybe-- a way to intellectually castrate the descolada-- to make it half-alive."

"To save humanity without destroying the pequeninos."

"Humans and pequeninos, getting together to compromise on how to wipe out a helpless third species!"

"Not exactly helpless."

She ignored him. "Just the way Spain and Portugal got the Pope to divide up the world between their Catholic Majesties back in the old days right after Columbus. A line on a map, and poof-- there's Brazil, speaking Portuguese instead of Spanish. Never mind that nine out of ten Indians had to die, and the rest lose all their rights and power for centuries, even their very languages--"

It was Miro's turn to become impatient. "The descolada isn't the Indians."

"It's a sentient species."

"It isn't," said Miro.

"Oh?" asked Quara. "And how are you so sure? Where's your certificate in microbiology and xenogenetics? I thought your studies were all in xenology. And thirty years out of date."

Miro didn't answer. He knew that she was perfectly aware of how hard he had worked to bring himself up to speed since he got back here. It was an ad hominem attack and a stupid appeal to authority. It wasn't worth answering. So he sat there and studied her face. Waiting for her to get back into the realm of reasonable discussion.

"All right," she said. "That was a low blow. But so is sending you to try to crack open my files. Trying to play on my sympathies."

"Sympathies?" asked Miro.

"Because you're a-- because you're--"

"Damaged," said Miro. He hadn't thought of the fact that pity complicated everything. But how could he help it? Whatever he did, it was a cripple doing it.

"Well, yes."

"Ela didn't send me," said Miro.

"Mother, then."

"Not Mother."

"Oh, you're a freelance meddler? Or are you going to tell me that all of humanity has sent you? Or are you a delegate of an abstract value? 'Decency sent me.'"

"If it did, it sent me to the wrong place."

She reeled back as if she had been slapped.

"Oh, am I the indecent one?"

"Andrew sent me," said Miro.

"Another manipulator."

"He would have come himself."

"But he was so busy, doing his own meddling. Nossa Senhora, he's a minister, mixing himself up in scientific matters that are so far above his head that--"

"Shut up," said Miro.

He spoke forcefully enough that she actually did fall silent-- though she wasn't happy about it.

"You know what Andrew is," Miro said. "He wrote the Hive Queen and--"

"--the Hive Queen and the Hegemon and the Life of Human."

"Don't tell me he doesn't know anything."

"No. I know that isn't true," said Quara. "I just get so angry. I feel like everybody's against me."

"Against what you're doing, yes," said Miro.

"Why doesn't anybody see things my way?"

"I see things your way," said Miro.

"Then how can you--"

"I also see things their way."

"Yes. Mr. Impartial. Make me feel like you understand me. The sympathetic approach."

"Planter is dying to try to learn information you probably already know."

"Not true. I don't know whether pequenino intelligence comes from the virus or not."

"A truncated virus could be tested without killing him."

"Truncated-- is that the word of choice? It'll do. Better than castrated. Cutting off all the limbs. And the head, too. Nothing but the trunk left. Powerless. Mindless. A beating heart, to no purpose."

"Planter is--"

"Planter's in love with the idea of being a martyr. He wants to die."

"Planter is asking you to come and talk to him."

"No."

"Why not?"

"Come on, Miro. They send a cripple to me. They want me to come talk to a dying pequenino. As if I'd betray a whole species because a dying friend-- a volunteer, too-- asks me with his dying breath."

"Quara."

"Yes, I'm listening."

"Are you?"

"Disse que sim!" she snapped. I said I am.

"You might be right about all this."

"How kind of you."

"But so might they."

"Aren't you the impartial one."

"You say they were wrong to make a decision that might kill the pequeninos without consulting them. Aren't you--"

"Doing the same thing? What should I do, do you think? Publish my viewpoint and take a vote? A few thousand humans, millions of pequeninos on your side-- but there are trillions of descolada viruses. Majority rule. Case closed."

"The descolada is not sentient," said Miro.

"For your information," said Quara, "I know all about this latest ploy. Ela sent me the transcripts. Some Chinese girl on a backwater colony planet who doesn't know anything about xenogenetics comes up with a wild hypothesis, and you all act as if it were already proved."

"So-- prove it false."

"I can't. I've been shut out of the lab. You prove it true."

"Occam's razor proves it true. Simplest explanation that fits the facts."

"Occam was a medieval old fart. The simplest explanation that fits the facts is always, God did it. Or maybe-- that old woman down the road is a witch. She did it. That's all this hypothesis is-- only you don't even know where the witch is."

"The descolada is too sudden."

"It didn't evolve, I know. Had to come from somewhere else. Fine. Even if it's artificial, that doesn't mean it isn't sentient now."

"It's trying to kill us. It's varelse, not raman."

"Oh, yes, Valentine's hierarchy. Well, how do I know that the descolada is the varelse, and we're the ramen? As far as I can tell, intelligence is intelligence. Varelse is just the term Valentine invented to mean Intelligence - that - we've - decided - to - kill, and raman means Intelligence - that - we - haven't - decided - to - kill - yet."

"It's an unreasoning, uncompassionate enemy."

"Is there another kind?"

"The descolada doesn't have respect for any other life. It wants to kill us. It already rules the pequeninos. All so it can regulate this planet and spread to other worlds."

For once, she had let him finish a long statement. Did it mean she was actually listening to him?

"I'll grant you part of Wang-mu's hypothesis," said Quara. "It does make sense that the descolada is regulating the gaialogy of Lusitania. In fact, now that I think about it, it's obvious. It explains most of the conversations I've observed-- the information-- passing from one virus to another. I figure it should take only a few months for a message to get to every virus on the planet-- it would work. But just because the descolada is running the gaialogy doesn't mean that you've proved it's not sentient. In fact, it could go the other way-- the descolada, by taking responsibility for regulating the gaialogy of a whole world, is showing altruism. And protectiveness, too-- if we saw a mother lion lashing out at an intruder in order to protect her young, we'd admire her. That's all the descolada is doing-- lashing out against humans in order to protect her precious responsibility. A living planet."

"A mother lion protecting her cubs."

"I think so."

"Or a rabid dog, devouring our babies."

Quara paused. Thought for a moment. "Or both. Why can't it be both? The descolada's trying to regulate a planet here. But humans are getting more and more dangerous. To her, we're the rabid dog. We root out the plants that are part of her control system, and we plant our own, unresponsive plants. We make some of the pequeninos behave strangely and disobey her. We burn a forest at a time when she's trying to build more. Of course she wants to get rid of us!"

"So she's out to destroy us."

"It's her privilege to try! When will you see that the descolada has rights?"

"Don't we? Don't the pequeninos?"

Again she paused. No immediate counterargument. It gave him hope that she might actually be listening.

"You know something, Miro?"

"What?"

"They were right to send you."

"Were they?"

"Because you're not one of them."

That's true enough, thought Miro. I'll never be "one of" anything again.

"Maybe we can't talk to the descolada. And maybe it really is just an artifact. A biological robot acting out its programming. But maybe it isn't. And they're keeping me from finding out."

"What if they open the lab to you?"

"They won't," said Quara. "If you think they will, you don't know Ela and Mother. They've decided that I'm not to be trusted, and so that's that. Well, I've decided they're not to be trusted, either."

"Thus whole species die for family pride."

"Is that all you think this is, Miro? Pride? I'm holding out because of nothing nobler than a petty quarrel?"

"Our family has a lot of pride."

"Well, no matter what you think, I'm doing this out of conscience, no matter whether you want to call it pride or stubbornness or anything else."

"I believe you," said Miro.

"But do I believe you when you say that you believe me? We're in such a tangle." She turned back to her terminal. "Go away now, Miro. I told you I'd think about it, and I will."

"Go see Planter."

"I'll think about that, too." Her fingers hovered over the keyboard. "He is my friend, you know. I'm not inhuman. I'll go see him, you can be sure of that. "

"Good."

He started for the door.

"Miro," she said.

He turned, waited.

"Thanks for not threatening to have that computer program of yours crack my files open if I didn't open them myself."

"Of course not," he said.

"Andrew would have threatened that, you know. Everybody thinks he's such a saint, but he always bullies people who don't go along with him."

"He doesn't threaten."

"I've seen him do it."

"He warns."

"Oh. Excuse me. Is there a difference?"

"Yes," said Miro.

"The only difference between a warning and a threat is whether you're the person giving it or the person receiving it," said Quara.

"No," said Miro. "The difference is how the person means it."

"Go away," she said. "I've got work to do, even while I'm thinking. So go away."

He opened the door.

"But thanks," she said.

He closed the door behind him.

As he walked away from Quara's place, Jane immediately piped up in his ear. "I see you decided against telling her that I broke into her files before you even came."

"Yes, well," said Miro. "I feel like a hypocrite, for her to thank me for not threatening to do what I'd already done."

"I did it."

"We did it. You and me and Ender. A sneaky group."

"Will she really think about it?"

"Maybe," said Miro. "Or maybe she's already thought about it and decided to cooperate and was just looking for an excuse. Or maybe she's already decided against ever cooperating, and she just said this nice thing at the end because she's sorry for me."

"What do you think she'll do?"

"I don't know what she'll do," said Miro. "I know what I'll do. I'll feel ashamed of myself every time I think about how I let her think that I respected her privacy, when we'd already pillaged her files. Sometimes I don't think I'm a very good person."

"You notice she didn't tell you that she's keeping her real findings outside the computer system, so the only files I can reach are worthless junk. She hasn't exactly been frank with you, either."

"Yes, but she's a fanatic with no sense of balance or proportion."

"That explains everything."

"Some traits just run in the family," said Miro.

\*\*\*

The hive queen was alone this time. Perhaps exhausted from something-- mating? Producing eggs? She spent all her time doing this, it seemed. She had no choice. Now that workers had to be used to patrol the perimeter of the human colony, she had to produce even more than she had planned. Her offspring didn't have to be educated-- they entered adulthood quickly, having all the

knowledge that any other adult had. But the process of conception, egg-laying, emergence, and cocooning still took time. Weeks for each adult. She produced a prodigious number of young, compared to a single human. But compared to the town of Milagre, with more than a thousand women of childbearing age, the bugger colony had only one producing female.

It had always bothered Ender, made him feel uneasy to know that there was only one queen. What if something happened to her? But then, it made the hive queen uncomfortable to think of human beings having only a bare handful of children-- what if something happened to them? Both species practiced a combination of nurturance and redundancy to protect their genetic heritage. Humans had a redundancy of parents, and then nurtured the few offspring. The hive queen had a redundancy of offspring, who then nurtured the parent. Each species had found its own balance of strategy.

<Why are you bothering us about this?>

"Because we're at a dead end. Because everybody else is trying, and you have as much at stake as we do."

<Do I?>

"The descolada threatens you as much as it threatens us. Someday you probably aren't going to be able to control it, and then you're gone."

<But it's not the descolada you're asking me about.>

"No." It was the problem of faster-than-light flight. Grego had been wracking his brains. In jail there was nothing else for him to think about. The last time Ender had spoken with him, he wept-- as much from exhaustion as frustration. He had covered reams of papers with equations, spreading them all over the secure room that was used as a cell. "Don't you care about faster-than-light flight?"

<It would be very nice.>

The mildness of her response almost hurt, it so deeply disappointed him. This is what despair is like, he thought. Quara a brick wall on the nature of descolada intelligence. Planter dying of descolada deprivation. Han Fei-tzu and Wang-mu struggling to duplicate years of higher study in several fields, all at once. Grego worn out. And nothing to show for it.

She must have heard his anguish as clearly as if he had howled it.

<Don't.>

<Don't.>

"You've done it," he said. "It must be possible."

<We've never traveled faster than light.>

"You projected an action across light-years. You found me."

<You found us, Ender.>

"Not so," he said. "I never even knew we had made mental contact until I found the message you had left for me." It had been the moment of greatest strangeness in his life, to stand on an alien world and see a model, a replication of the landscape that had existed in only one other place-- the computer on which he had played his personalized version of the Fantasy Game. It was like having a total stranger come up to you and tell you your dream from the night before. They had been inside his head. It made him afraid, but it also excited him. For the first time in his life, he felt known. Not known of-- he was famous throughout humanity, and in those days his fame was all positive, the greatest hero of all time. Other people knew of him. But with this bugger artifact, he discovered for the first time that he was known.

<Think, Ender. Yes, we reached out toward our enemy, but we weren't looking for you. We were looking for someone like us. A network of minds linked together, with a central mind controlling it. We find each other's minds without trying, because we recognize the pattern. Finding a sister is like finding oneself.>

"How did you find me, then?"

<We never thought about how. We only did it. Found a hot bright source. A network, but very strange, with shifting membership. And at the center of it, not something like us, but just another-- common one. You. But with such intensity. Focused into the network, toward the other humans. Focused inward on your computer game. And focused outward, beyond all, on us. Searching for us.>

"I wasn't searching for you. I was studying you." Watching every vid they had at the Battle School, trying to understand the way the bugger mind worked. "I was imagining you."

<So we say. Searching for us. Imagining us. That's how we search for each other. So you were calling us.>

"And that was all?"

<No, no. You were so strange. We didn't know what you were. We couldn't read anything in you. Your vision was so limited. Your ideas shifted so rapidly, and you thought of only one thing at a time. And the network around you kept shifting so much, each member's connection with you waxing and waning over time, sometimes very quickly-->

He was having trouble making sense of what they were saying. What kind of network was he connected to?

<The other soldiers. Your computer.>

"I wasn't connected. They were my soldiers, that's all."

<How do you think we're connected? Do you see any wires?>

"But humans are individuals, not like your workers."

<Many queens, many workers, changing back and forth, very confusing. Terrible, frightening time. What were these monsters that had wiped out our colony ship? What kind of creature? You were so strange we couldn't imagine you at all. We could only feel you when you were searching for us.>

Not helpful at all. Nothing to do with faster-than-light flight. It all sounded like mumbo-jumbo, not like science at all. Nothing that Grego could express mathematically.

<Yes, that's right. We don't do this like science. Not like technology. No numbers or even thought. We found you like bringing forth a new queen. Like starting a new hive.>

Ender didn't understand how establishing an ansible link with his brain could be like hatching out a new queen. "Explain it to me."

<We don't think about it. We just do it.>

"But what are you doing when you do it?"

<What we always do.>

"And what do you always do?"

<How do you make your penis fill with blood to mate, Ender? How do you make your pancreas secrete enzymes? How do you switch on puberty? How do you focus your eyes?>

"Then remember what you do, and show it to me."

<You forget that you don't like this, when we show you through our eyes.>

It was true. She had tried only a couple of times, when he was very young and had first discovered her cocoon. He simply couldn't cope with it, couldn't make sense of it. Flashes, a few glimpses were clear, but it was so disorienting that he panicked, and probably fainted, though he was alone and couldn't be sure what had happened, clinically speaking.

"If you can't tell me, we have to do something."

<Are you like Planter? Trying to die?>

"No. I'll tell you to stop. It didn't kill me before."

<We'll try-- something in between. Something milder. We'll remember, and tell you what's happening. Show you bits. Protect you. Safe.>

"Try, yes."

She gave him no time to reflect or prepare. At once he felt himself seeing out of compound eyes, not many lenses with the same vision, but each lens with its own picture. It gave him the same vertiginous feeling as so many years before. But this time he understood a little better-- in part because she was making it less intense than before, and in part because he knew something about the hive queen now, about what she was doing to him.

The many different visions were what each of the workers was seeing, as if each were a single eye connected to the same brain. There was no hope of Ender making sense of so many images at once.

<We'll show you one. The one that matters.>

Most of the visions dropped out immediately. Then, one by one, the others were sorted out. He imagined that she must have some organizing principle for the workers. She could disregard all those who weren't part of the queen-making process. Then, for Ender's sake, she had to sort through even the ones who were part of it, and that was harder, because usually she could sort the visions by task rather than by the individual workers. At last, though, she was able to show him a primary image and he could focus on it, ignoring the flickers and flashes of peripheral visions.

A queen being hatched. She had shown him this before, in a carefully-planned vision when he had first met her, when she was trying to explain things to him. Now, though, it wasn't a sanitized, carefully orchestrated presentation. The clarity was gone. It was murky, distracted, real. It was memory, not art.

<You see we have the queen-body. We know she's a queen because she starts reaching out for workers, even as a larva.>

"So you can talk to her?"

<She's very stupid. Like a worker.>

"She doesn't grow her intelligence until cocooning?"

<No. She has her-- like your brain. The memory-think. It's just empty.>

"So you have to teach her."

<What good would teaching do? The thinker isn't there. The found thing. The binder-together.>

"I don't know what you're talking about."

<Stop trying to look and think, then. This isn't done with eyes.>

"Then stop showing me anything, if it depends on another sense. Eyes are too important to humans; if I see anything it'll mask out anything but clear speech and I don't think there's much of that at a queen-making."

<How's this?>

"I'm still seeing something."

<Your brain is turning it into seeing.>

"Then explain it. Help me make sense of it."

<It's the way we feel each other. We're finding the reaching-out place in the queen-body. The workers all have it, too, but all it reaches for is the queen and when it finds her all the reaching is over. The queen never stops reaching. Calling.>

"So then you find her?"

<We know where she is. The queen-body. The worker-caller. The memory-holder.>

"Then what are you searching for?"

<The us-thing. The binder. The meaning-maker.>

"You mean there's something else? Something besides the queen's body?"

<Yes, of course. The queen is just a body, like the workers. Didn't you know this?>

"No, I never saw it."

<Can't see it. Not with eyes.>

"I didn't know to look for anything else. I saw the making of the queen when you first showed it to me years ago. I thought I understood then."

<We thought you did too.>

"So if the queen's just a body, who are you?"

<We're the hive queen. And all the workers. We come and make one person out of all. The queen-body, she obeys us like the worker-bodies. We hold them all together, protect them, let them work perfectly as each is needed. We're the center. Each of us.>

"But you've always talked as if you were the hive queen."

<We are. Also all the workers. We're all together.>

"But this center-thing, this binder-together--"

<We call it to come and take the queen-body, so she can be wise, our sister.>

"You call it. What is it?"

<The thing we call.>

"Yes, what is it?"

<What are you asking? It's the called-thing. We call it.>

It was almost unbearably frustrating. So much of what the hive queen did was instinctive. She had no language and so she had never had a need to develop clear explanations of that which had never needed explaining till now. So he had to help her find a way to clarify what he couldn't perceive directly.

"Where do you find it?"

<It hears us calling and comes.>

"But how do you call?"

<As you called us. We imagine the thing which it must become. The pattern of the hive. The queen and the workers and the binding together. Then one comes who understands the pattern and can hold it. We give the queen-body to it.>

"So you're calling some other creature to come and take possession of the queen."

<To become the queen and the hive and all. To hold the pattern we imagined.>

"So where does it come from?"

<Wherever it was when it felt us calling.>

"But where is that?"

<Not here.>

"Fine, I believe you. But where does it come from?"

<Can't think of the place.>

"You forget?"

<We mean that the place where it is can't be thought of. If we could think of the place then they would already have thought of themselves and none of them would need to take the pattern we show.>

"What kind of thing is this binder-together?"

<Can't see it. Can't know it until it finds the pattern and then when it's there it's like us.>

Ender couldn't help shuddering. All this time he had thought that he was speaking to the hive queen herself. Now he realized that the thing that talked to him in his mind was only using that body the way it used the buggers. Symbiosis. A controlling parasite, possessing the whole hive queen system, using it.

<No. This is ugly, the terrible thing you're thinking. We aren't another thing. We're this thing. We are the hive queen, just the way you're the body. You say, My body, and yet you are your body, but you're also possessor of the body. The hive queen is ourself, this body is me, not something else inside. I. I wasn't anything until I found the imagining.>

"I don't understand. What was it like?"

<How can I remember? I never had memory until I followed the imagining and came to this place and became the hive queen.>

"Then how did you know that you aren't just the hive queen?"

<Because after I came, they gave me the memories. I saw the queen-body before I came, and then I saw the queen-body after I was in it. I was strong enough to hold the pattern in my mind, and so I could possess it. Become it. It took many days but then we were whole and they could give us the memories because I had the whole memory.>

The vision the hive queen had been giving him faded. It wasn't helping anyway, or at least not in any way he could grasp. Nevertheless, a mental image was coming clear for Ender now, one that came from his own mind to explain all the things she was saying. The other hive queens-- not physically present, most of them, but linked phylotically to the one queen who had to be there-- they held the pattern of the relationship between hive queen and workers in their minds, until one of these mysterious memoryless creatures was able to contain the pattern in its mind and therefore take possession of it.

<Yes.>

"But where do these things come from? Where do you have to go to get them?"

<We don't go anywhere. We call, and there they are.>

"So they're everywhere?"

<They aren't here at all. Nowhere here. Another place.>

"But you said you don't have to go anywhere to get them."

<Doorways. We don't know where they are, but everywhere there's a door.>

"What are the doorways like?"

<Your brain made the word you say. Doorway. Doorway.>

Now he realized that doorway was the word his brain called forth to label the concept they were putting in his mind. And suddenly he was able to grasp an explanation that made sense.

"They're not in the same space-time continuum as ours. But they can enter ours at any point."

<To them all points are the same point. All wheres are the same where. They only find one whereness in the pattern.>

"But this is incredible. You're calling forth some being from another place, and--"

<The calling forth is nothing. All things do it. All new makings. You do it. Every human baby has this thing. The pequeninos are these things also. Grass and sunlight. All making calls them, and they come to the pattern. If there are already some who understand the pattern, then they come and possess it. Small patterns are very easy. Our pattern is very hard. Only a very wise one can possess it.>

"Philotes," said Ender. "The things out of which all other things are made."

<The word you say doesn't make a meaning like what we mean.>

"Because I'm only just making the connection. We never meant what you've described, but the thing we did mean, that might be the thing you described."

<Very unclear.>

"Join the club."

<Very welcome laughing happy.>

"So when you make a hive queen, you already have the biological body, and this new thing-- this philote that you call out of the non-place where philotes are-- it has to be one that's able to comprehend the complex pattern that you have in your minds of what a hive queen is, and when one comes that can do it, it takes on that identity and possesses the body and becomes the self of that body--"

<Of all the bodies.>

"But there are no workers yet, when the hive queen is first made."

<It becomes the self of the workers-to-come.>

"We're talking about a passage from another kind of space. A place where philotes already are."

<All in the same non-place. No place-ness in that place. No where-being. All hungry for whereness. All thirsty for pattern. All lonely for selfness.>

"And you say that we're made of the same things?"

<How could we have found you if you weren't?>

"But you said that finding me was like making a hive queen."

<We couldn't find the pattern in you. We were trying to make a pattern between you and the other humans, only you kept shifting and changing, we couldn't make sense of it. And you couldn't make sense of us, either, so that reaching of yours couldn't make a pattern, either. So we took the third pattern. You reaching into the machine. You yearning so much for it. Like the life-yearning of the new queen-body. You were binding yourself to the program in the computer. It showed you images. We could find the images in the computer and we could find them in your mind. We could match them while you watched. The computer was very complicated and you were even more complicated but it was a pattern that held still. You were moving together and while you were together you possessed each other, you had the same vision. And when you imagined something and did it, the computer made something out of your imagining and imagined something back. Very primitive imagining from the computer. It wasn't a self. But you were making it a self by the life-yearning. The reaching-out you were doing.>

"The Fantasy Game," said Ender. "You made a pattern out of the Fantasy Game."

<We imagined the same thing you were imagining. All of us together. Calling. It was very complicated and strange, but much simpler than anything else we found in you. Since then we know-- very few humans are capable of concentrating the way you concentrated on that game. And we've seen no other computer program that responded to a human the way that game responded to you. It was yearning, too. Cycling over and over, trying to find something to make for you. >

"And when you called ..."

<It came. The bridge we needed. The together-binder for you and the computer program. It held the pattern so that it was alive even when you weren't paying attention to it. It was linked to you, you were part of it, and yet we could also understand it. It was the bridge.>

"But when a philote takes possession of a new hive queen, it controls it, queen-body and worker-bodies. Why didn't this bridge you made take control of me?"

<Do you think we didn't try?>

"Why didn't it work?"

<You weren't capable of letting a pattern like that control you. You could willingly become part of a pattern that was real and alive, but you couldn't be controlled by it. You couldn't even be destroyed by it. And there was so much of you in the pattern that we couldn't even control it ourselves. Too strange for us.>

"But you could still use it to read my mind."

<We could use it to stay connected with you in spite of all the strangeness. We studied you, especially when you played the game. And as we understood you, we began to grasp the idea of your whole species. That each individual of you was alive, with no hive queen at all.>

"More complicated than you expected?"

<And less. Your individual minds were simpler in the ways that we expected to be complicated, and complicated in ways that we expected them to be simple. We realized that you were truly alive and beautiful in your perverse and tragic lonely way and we decided not to send another colony ship to your worlds.>

"But we didn't know that. How could we know?"

<We also realized that you were dangerous and terrible. You in particular, dangerous because you found all our patterns and we couldn't think of anything complicated enough to confuse you. So you destroyed all but me. Now I understand you better. I've had all these years to study you. You are not as terrifyingly brilliant as we thought.>

"Too bad. Terrifying brilliance would be useful right now."

<We prefer a comforting glow of intelligence.>

"We humans get slower as we age. Give me a few more years and I'll be downright cozy."

<We know that you'll die someday. Even though you put it off for so long.>

Ender didn't want this to become another conversation about mortality or any of the other aspects of human life that so fascinated the hive queen. There was still one question that had occurred to him during the hive queen's story. An intriguing possibility.

"The bridge you made. Where was it? In the computer?"

<Inside you. The way I'm inside the body of the hive queen.>

"But not part of me."

<Part of you but also not-you. Other. Outside but inside. Bound to you but free. It couldn't control you, and you couldn't control it.>

"Could it control the computer?"

<We didn't think about that. We didn't care. Maybe.>

"How long did you use this bridge? How long was it there?"

<We stopped thinking about it. We were thinking about you.>

"But it was still there the whole time you were studying me."

<Where would it go?>

"How long would it last?"

<We never made one like that before. How would we know? The hive queen dies when the queen-body dies.>

"But what body was the bridge in?"

<Yours. At the center of the pattern.>

"This thing was inside me?"

<Of course. But it was still not-you. It disappointed us that way, when it couldn't let us control you, and we stopped thinking about it. But we see now that this was very important. We should have searched for it. We should have remembered it.>

"No. To you it was like-- a bodily function. Like balling up your fist to hit somebody. You did it, and then when you didn't need it you didn't notice whether your fist was still there or not."

<We don't understand the connection but it seems to make sense inside you.>

"It's still alive, isn't it?"

<It could be. We're trying to feel it. Find it. Where can we look? The old pattern isn't there. You don't play the Fantasy Game anymore.>

"But it would still be linked to the computer, wouldn't it? A connection between me and the computer. Only the pattern could have grown, couldn't it? It could include other people, too. Think of it being linked to Miro-- the young man I brought with me--"

<The broken one ...>

"And instead of being linked to that one computer, linked to thousands and thousands of them, through the ansible links between worlds."

<This could be. It was alive. It could grow. The way we grow when we make more workers. All this time. Now that you mention it, we're sure it must still be there because we're still linked to you, and it was only through that pattern that we connected with you. The connection is very strong now-- that's part of what it is, the link between us and you. We thought the connection grew stronger because we knew you better. But maybe it also grew stronger because the bridge was growing.>

"And I always thought-- Jane and I always thought that she was-- that she had somehow come to exist in the ansible connections between worlds. That's probably where she feels herself, the place that feels like the center of her-- body, I was going to say."

<We're trying to feel whether the bridge between us is still there. Hard to feel it.>

"Like trying to find a particular muscle that you've been using all your life but never by itself."

<Interesting comparison. We don't see the connection but no, now we see it.>

"The comparison?"

<The bridge. Very big. The pattern of it is too big. We can't grasp it anymore. Very big. Memory-- very confusing. Much harder than finding you the first time-- very confusing. Getting lost. We can't hold it in our mind anymore. >

"Jane," whispered Ender. "You're a big girl now."

Jane's voice came in answer: "You're cheating, Ender. I can't hear what she's saying to you. I can only feel your heart pounding and your rapid breathing."

<Jane. We've seen this name in your mind many times. But the bridge wasn't a person with a face-->

"Neither is Jane."

<We see a face in your mind when you think of this name. We still see it. Always we thought it was a person. But now-->

"She's the bridge. You made her."

<Called her. You made the pattern. She possessed it. What she is, this Jane, this bridge, she began with the pattern we discovered in you and the Fantasy Game, yes, but she has imagined herself to

be much larger. She must have been a very strong and powerful-- philote, if your word is the right name-- to be able to change her own pattern and still remember to be herself.>

"You reached out across the light-years and found me because I was looking for you. And then you found a pattern and called a creature from another space who grasped the pattern and possessed it and became Jane. All of this instantaneously. Faster than light."

<But this isn't faster-than-light travel. It's faster-than-light imagining and calling. It still doesn't pick you up here and put you there.>

"I know. I know. This may not help us answer the question I came here with. But I had another question, just as important to me, that I never thought would have anything to do with you, and here you had the answer to it all along. Jane's real, alive the whole time, and her self isn't out there in space, it's inside me. Connected to me. They can't kill her by switching her off. That's something."

<If they kill the pattern, she can die.>

"But they can't kill the whole pattern, don't you see? It doesn't depend on the ansibles after all. It depends on me and on the link between me and the computers. They can't cut the link between me and the computers here and in the satellites orbiting Lusitania. And maybe she doesn't need the ansibles, either. After all, you don't need them to reach me through her."

<Many strange things are possible. We can't imagine them. They feel very stupid and strange, the things going through your mind. You're making us very tired, with all your thinking of stupid imaginary impossible things.>

"I'll leave you, then. But this will help. This has to help. If Jane can find a way to survive because of this, then that's a real victory. The first victory, when I was beginning to think there wasn't any victory to be had in this."

The moment he left the presence of the hive queen, he began talking to Jane, telling her everything he could remember of what the hive queen could explain. Who Jane was, how she was created.

And as he talked, she analyzed herself in light of what he said. Began to discover things about herself that she had never guessed. By the time Ender got back to the human colony, she had verified as much of his story as she could. "I never found this because I always started with the wrong assumptions," she said. "I imagined my center to be out in space somewhere. I should have guessed I was inside you from the fact that even when I was furious with you, I had to come back to you to be at peace."

"And now the hive queen says that you've grown so big and complex that she can't hold the pattern of you in her mind anymore."

"Must have gone through a growth spurt, back during my years of puberty."

"Right."

"Could I help it that humans kept adding computers and linking them up?"

"But it isn't the hardware, Jane. It's the programs. The mentation."

"I have to have the physical memory to hold all of that."

"You have the memory. The question is, can you access it without the ansibles?"

"I can try. As you said to her, it's like learning to flex a muscle I never knew I had."

"Or learning to live without one."

"I'll see what's possible."

What's possible. All the way home, the car floating over the capim, he was also flying, exhilarated to know that something was possible after all, when till now he had felt nothing but despair. Coming home, though, seeing the burnt-over forest, the two solitary fathertrees with the only greenery left, the experimental farm, the new hut with the cleanroom where Planter lay dying, he realized how much there still was to lose, how many would still die, even if now they had found a way for Jane to live.

\*\*\*

It was the end of the day. Han Fei-tzu was exhausted, his eyes hurting from all that he had read. He had adjusted the colors on the computer display a dozen times, trying to find something restful, but it didn't help. The last time he had worked so intensely was as a student, and then he had been young. Then, too, he had always found results. I was quicker, then, brighter. I could reward myself by achieving something. Now I'm old and slow, I'm working in areas that are new to me, and it may be that these problems have no solutions. So there's no reward to bolster me. Only the weariness. The pain at the top of my neck, the puffy, tired feeling in my eyes.

He looked at Wang-mu, curled up on the floor beside him. She tried so hard, but her education had begun too recently for her to be able to follow most of the documents that passed through the computer display as he searched for some conceptual framework for faster-than-light travel. At last her weariness triumphed over her will; she was sure she was useless, because she couldn't understand enough even to ask questions. So she gave up and slept.

But you are not useless, Si Wang-mu. Even in your perplexity you've helped me. A bright mind to which all things are new. Like having my own lost youth perched at my elbow.

As Qing-jao was, when she was little, before piety and pride claimed her.

Not fair. Not right to judge his own daughter that way. Until these last weeks, hadn't he been perfectly satisfied with her? Proud of her beyond all reason? The best and brightest of the godspoken, everything her father had worked for, everything her mother had hoped.

That was the part that chafed. Until a few weeks ago, he had been proudest of all of the fact that he had accomplished his oath to Jiang-qing. This was not an easy accomplishment, to bring up his daughter so piously that she never went through a period of doubt or rebellion against the gods. True, there were other children just as pious-- but their piety was usually achieved at the expense of their education. Han Fei-tzu had let Qing-jao learn everything, and then had so deftly led her understanding of it that all fit well with her faith in the gods.

Now he had reaped his own sowing. He had given her a worldview that so perfectly preserved her faith that now, when he had discovered that the gods' "voices" were nothing but the genetic chains with which Congress had shackled them, nothing could convince her. If Jiang-qing had lived, Fei-tzu would no doubt have been in conflict with her over his loss of faith. In her absence, he had done so well at raising their daughter as Jiang-qing would have that Qing-jao was able to take her mother's view flawlessly.

Jiang-qing would also have left me, thought Han Fei-tzu. Even if I had not been widowed, I would have been wifeless on this day.

The only companion left to me is this servant girl, who pushed her way into my household only just in time to be the one spark of life in my old age, the one flicker of hope in my dark heart.

Not my daughter-of-the-body, but perhaps there will be time and opportunity, when this crisis is past, to make Wang-mu my daughter-of-the-mind. My work with Congress is finished. Shall I not be a teacher, then, with a single disciple, this girl? Shall I not prepare her to be the revolutionary who can lead the common people to freedom from the tyranny of the godspoken, and then lead Path to freedom from Congress itself? Let her be such a one, and then I can die in peace, knowing that at the end of my life I have created the undoing of all my earlier work that strengthened Congress and helped overcome all opposition to its power.

The soft breathing of the girl Wang-mu was like his own breath, like a baby's breath, like the sound of a breeze through tall grass. She is all motion, all hope, all freshness.

"Han Fei-tzu, I think you are not asleep."

He was not; but he had been half-dozing, for the sound of Jane's voice coming from the computer startled him as if he were waking up.

"No, but Wang-mu is," he said.

"Wake her, then," said Jane.

"What is it? She's earned her rest."

"She's also earned the right to hear this."

Ela's face appeared beside Jane's in the display. Han Fei-tzu knew her at once as the xenobiologist who had been entrusted with the study of the genetic samples he and Wang-mu had collected. There must have been a breakthrough.

He bowed himself down, reached out, shook the girl's hip as she lay there sleeping. She stirred. She stretched. Then, no doubt remembering her duty, she sat bolt upright. "Have I overslept? What is it? Forgive me for falling asleep, Master Han."

She might have bowed herself in her confusion, but Fei-tzu wouldn't let her. "Jane and Ela asked me to wake you. They wanted you to hear."

"I will tell you first," said Ela, "that what we hoped for is possible. The genetic alterations were crude and easily discovered-- I can see why Congress has done its best to keep any real geneticists from working with the human population of Path. The OCD gene wasn't in the normal place, which is why it wasn't identified at once by natologists, but it works almost exactly as naturally-occurring OCD genes work. It can easily be treated separately from the genes that give the godspoken enhanced intellectual and creative abilities. I have already designed a splicer bacterium that, if injected into the blood, will find a person's sperm or ova, enter them, remove the OCD gene, and replace it with a normal one, leaving the rest of the genetic code unaffected. Then the bacterium will die out quickly. It's based on a common bacterium that should already exist in many labs on Path for normal immunology and birth-defect-prevention work. So any of the godspoken who wish to give birth to children without the OCD can do it."

Han Fei-tzu laughed. "I'm the only one on this planet who would wish for such a bacterium. The godspoken have no pity on themselves. They take pride in their affliction. It gives them honor and power."

"Then let me tell you the next thing we found. It was one of my assistants, a pequenino named Glass, who discovered this-- I'll admit that I wasn't paying much personal attention to this project since it was relatively easy compared to the descolada problem we're working on."

"Don't apologize," said Fei-tzu. "We are grateful for any kindness. All is undeserved. "

"Yes. Well." She seemed flustered by his courtesy. "Anyway, what Glass discovered is that all but one of the genetic samples you gave us sort themselves neatly into godspoken and non-godspoken categories. We ran the test blind, and only afterward checked the sample lists against the identity lists you gave us-- the correspondence was perfect. Every godspoken had the altered gene. Every sample that lacked the altered gene was also not on your list of godspoken."

"You said all but one."

"This one baffled us. Glass is very methodical-- he has the patience of a tree. He was sure that the one exception was a clerical error or an error in interpreting the genetic data. He went over it many times, and had other assistants do the same. There is no doubt. The one exception is clearly a

mutation of the godspoken gene. It naturally lacks the OCD, while still retaining all of the other abilities Congress's geneticists so thoughtfully provided."

"So this one person already is what your splicer bacterium is designed to create."

"There are a few other mutated regions that we aren't quite sure of at the moment, but they have nothing to do with the OCD or the enhancements. Nor are they involved in any of the vital processes, so this person should be able to have healthy offspring that carry the trait. In fact, if this person should mate with a person who has been treated with the splicer bacterium, all her offspring will almost certainly carry the enhancements, and there'd be no chance of any of them having the OCD."

"How lucky for him," said Han Fei-tzu.

"Who is it?" asked Wang-mu.

"It's you," said Ela. "Si Wang-mu."

"Me?" She seemed baffled.

But Han Fei-tzu was not confused. "Ha!" he cried. "I should have known. I should have guessed! No wonder you have learned as quickly as my own daughter learned. No wonder you have had insights that helped us all even when you barely understood the subject you were studying. You are as godspoken as anyone on Path, Wang-mu-except that you alone are free of the shackles of the cleansing rituals."

Si Wang-mu struggled to answer, but instead of words, tears came, silently drifting down her face.

"Never again will I permit you to treat me as your superior," said Han Fei-tzu. "From now on you are no servant in my house, but my student, my young colleague. Let others think of you however they want. We know that you are as capable as anyone."

"As Mistress Qing-jao?" Wang-mu whispered.

"As anyone," said Fei-tzu. "Courtesy will require you to bow to many. But in your heart, you need bow to no one."

"I am unworthy," said Wang-mu.

"Everyone is worthy of his own genes. A mutation like that is much more likely to have crippled you. But instead, it left you the healthiest person in the world."

But she would not stop her silent weeping.

Jane must have been showing this to Ela, for she kept her peace for some time. Finally, though, she spoke. "Forgive me, but I have much to do," she said.

"Yes," said Han Fei-tzu. "You may go."

"You misunderstand me," said Ela. "I don't need your permission to go. I have more to say before I go."

Han Fei-tzu bowed his head. "Please. We are listening."

"Yes," whispered Wang-mu. "I'm listening too."

"There is a possibility-- a remote one, as you will see, but a possibility nonetheless-- that if we are able to decode the descolada virus and tame it, we can also make an adaptation that could be useful on Path."

"How so?" asked Han Fei-tzu. "Why should we want this monstrous artificial virus here?"

"The whole business of the descolada is entering a host organism's cells, reading the genetic code, and reorganizing it according to the descolada's own plan. When we alter it, if we can, we'll remove its own plan from it. We'll also remove almost all of its self-defense mechanisms, if we can find them. At that point, it may be possible to use it as a super-splicer. Something that can effect a change, not just on the reproductive cells, but on all the cells of a living creature."

"Forgive me," said Han Fei-tzu, "but I have been reading in this field lately, and the concept of a super-splicer has been rejected, because the body starts to reject its own cells as soon as they're genetically altered."

"Yes," said Ela. "That's how the descolada kills. The body rejects itself to death. But that only happened because the descolada had no plan for dealing with humans. It was studying the human body as it went, making random changes and seeing what happened. It had no single plan for us, and so each victim ended up with many different genetic codes in his or her cells. What if we made a super-splicer that worked according to a single plan, transforming every cell in the body to conform with a single new pattern? In that case, our studies of the descolada assure us that the change could be effected in each individual person within six hours, usually-half a day at the most."

"Fast enough that before the body can reject itself--"

"It will be so perfectly unified that it will recognize the new pattern as itself."

Wang-mu's crying had stopped. She seemed as excited now as Fei-tzu felt, and despite all her self-discipline, she could not contain it. "You can change all the godspoken? Free even the ones who are already alive?"

"If we are able to decode the descolada, then not only would we be able to remove the OCD from the godspoken, we would also be able to install all the enhancements in the common people. It would have the most effect in the children, of course-- older people have already passed the growth

stages where the new genes would have the most effect. But from that time on, every child born on Path would have the enhancements."

"What then? Would the descolada disappear?"

"I'm not sure. I think we would have to build into the new gene a way for it to destroy itself when its work is done. But we would use Wang-mu's genes as a model. Not to stretch the point, Wang-mu, you would become a sort of genetic co-parent of the entire population of your world."

She laughed. "What a wonderful joke to play on them! So proud to be chosen, and yet their cure will come from one such as me!" At once, though, her face fell and she covered her face with her hands. "How could I say such a thing. I have become as haughty and arrogant as the worst of them."

Fei-tzu laid his hand on her shoulder. "Say nothing so harsh. Such feelings are natural. They come and go quickly. Only those who make them a way of life are to be condemned for them." He turned back to Ela. "There are ethical problems here."

"I know. And I think those problems should be addressed now, even though it may never be possible even to do this. We're talking about the genetic alteration of an entire population. It was an atrocity when Congress secretly did it to Path without the consent or knowledge of the population. Can we undo an atrocity by following the same path?"

"More than that," said Han Fei-tzu. "Our entire social system here is based on the godspoken. Most people will interpret such a transformation as a plague from the gods, punishing us. If it became known that we were the source, we would be killed. It's possible, though, that when it becomes known that the godspoken have lost the voice of the gods-- the OCD-- the people will turn on them and kill them. How will freeing them from the OCD have helped them then, if they're dead?"

"We've discussed this," said Ela. "And we have no idea what's the right thing to do. For now the question is moot because we haven't decoded the descolada and may never be able to. But if we develop the capability, we believe that the choice of whether to use it should be yours."

"The people of Path?"

"No," said Ela. "The first choices are yours, Han Fei-tzu, Si Wang-mu, and Han Qing-jao. Only you know of what has been done to you, and even though your daughter doesn't believe it, she does fairly represent the viewpoint of the believers and the godspoken of Path. If we get the capability, put the question to her. Put the question to yourselves. Is there some plan, some way to bring this transformation to Path, that would not be destructive? And if it can be done, should it be done? No-- say nothing now, decide nothing now. Think about it yourselves. We are not part of this. We will only inform you when or whether we learn how to do it. From there it will be up to you."

Ela's face disappeared.

Jane lingered a moment longer. "Worth waking up for?" she asked.

"Yes!" cried Wang-mu.

"Kind of nice to discover that you're a lot more than you ever thought you were, isn't it?" said Jane.

"Oh, yes," said Wang-mu.

"Now go back to sleep, Wang-mu. And you, Master Han-- your fatigue is showing very clearly. You're useless to us if you lose your health. As Andrew has told me, over and over-- we must do all we can do without destroying our ability to keep doing it."

Then she was gone, too.

Wang-mu immediately began to weep again. Han Fei-tzu slid over and sat beside her on the floor, cradled her head against his shoulder, and rocked gently back and forth. "Hush, my daughter, my sweet one, in your heart you already knew who you were, and so did I, so did I. Truly your name was wisely given. If they perform their miracles on Lusitania, you will be the Royal Mother of all the world."

"Master Han," she whispered. "I'm crying also for Qing-jao. I have been given more than I ever hoped for. But who will she be, if the voice of the gods is taken from her?"

"I hope," said Fei-tzu, "that she will be my true daughter again. That she will be as free as you, the daughter who has come to me like a petal on the winter river, borne to me from the land of perpetual spring."

He held her for many long minutes more, until she began to doze on his shoulder. Then he laid her back on her mat, and he retired to his own corner to sleep, with hope in his heart for the first time in many days.

\*\*\*

When Valentine came to see Grego in prison, Mayor Kovano told her that Olhado was with him. "Aren't these Olhado's working hours?"

"You can't be serious," said Kovano. "He's a good manager of brickmakers, but I think saving the world might be worth an afternoon of somebody else covering for him on management."

"Don't get your expectations too high," said Valentine. "I wanted him involved. I hoped he might help. But he isn't a physicist."

Kovano shrugged. "I'm not a jailer, either, but one does what the situation requires. I have no idea whether it has to do with Olhado being in there or Ender's visit a little while ago, but I've heard

more excitement and noise in there than-- well, than I've ever heard when the inmates were sober. Of course, public drunkenness is what people are usually jailed for in this town."

"Ender came?"

"From the hive queen. He wants to talk to you. I didn't know where you were."

"Yes. Well, I'll go see him when I leave here." Where she had been was with her husband. Jakt was getting ready to go back into space on the shuttle, to prepare his own ship for quick departure, if need be, and to see whether the original Lusitanian colony ship could possibly be restored for another flight after so many decades without maintenance of the stardrive.

The only thing it had been used for was storage of seeds and genes and embryos of Earthborn species, in case they were someday needed. Jakt would be gone for at least a week, possibly longer, and Valentine couldn't very well let him go without spending some time with him. He would have understood, of course-- he knew the terrible pressure that everyone was under. But Valentine also knew that she wasn't one of the key figures in these events. She would only be useful later, writing the history of it.

When she left Jakt, however, she had not come straight to the mayor's office to see Grego. She had taken a walk through the center of town. Hard to believe that only a short time ago-- how many days? Weeks? --the mob had formed here, drunken and angry, working themselves up to a murderous rage. Now it was so quiet. The grass had even recovered from the trampling, except for one mudhole where it refused to grow back.

But it wasn't peaceful here. On the contrary. When the town had been at peace, when Valentine first arrived, there had been bustle and business here in the heart of the colony, all through the day. Now a few people were out and about, yes, but they were glum, almost furtive. Their eyes stayed down, looking at the ground before their feet, as if everyone were afraid that if they didn't watch every step they'd fall flat.

Part of the glumness was probably shame, thought Valentine. There was a hole in every building in town now, where blocks or bricks had been torn out to use in the building of the chapel. Many of the gaps were visible from the praqa where Valentine walked.

She suspected, however, that fear more than shame had killed the vibrancy in this place. No one spoke of it openly, but she caught enough comments, enough covert glances toward the hills north of town that she knew. What loomed over this colony wasn't the fear of the coming fleet. It wasn't shame over the slaughter of the pequenino forest. It was the buggers. The dark shapes only occasionally visible on the hills or out in the grass surrounding the town. It was the nightmares of the children who had seen them. The sick dread in the hearts of the adults. Historicals that took place set in the Bugger War period were continuously checked out from the library as people became obsessed with watching humans achieve victory over buggers. And as they watched, they fed their worst fears. The theoretical notion of the hive culture as a beautiful and worthy one, as Ender had depicted it in his first book, the *Hive Queen*, disappeared completely for many of the people here,

perhaps most of them, as they dwelt in the unspoken punishment and imprisonment enforced by the hive queen's workers.

Is all our work in vain, after all? thought Valentine. I, the historian, the philosopher Demosthenes, trying to teach people that they need not fear all aliens, but can see them as raman. And Ender, with his empathic books the Hive Queen, the Hegemon, the Life of Human-- what force did they really have in the world, compared with the instinctive terror at the sight of these dangerous oversized insects? Civilization is only a pretense; in the crisis, we become mere apes again, forgetting the rational biped of our pretensions and becoming instead the hairy primate at the mouth of the cave, screeching at the enemy, wishing it would go away, fingering the heavy stone that we'll use the moment it comes close enough.

Now she was back in a clean, safe place, not so disquieting even if it did serve as a prison as well as the center of city government. A place where the buggers were seen as allies-- or at least as an indispensable peacekeeping force, holding antagonists apart for their mutual protection. There are people, Valentine reminded herself, who are able to transcend their animal origins.

When she opened the cell door, Olhado and Grego were both sprawled on bunks, papers strewn on the floor and table between them, some flat, some wadded up. Papers even covered the computer terminal, so that if the computer was on, the display couldn't possibly function. It looked like a typical teenager's bedroom, complete with Grego's legs stretching up the walls, his bare feet dancing a weird rhythm, twisting back and forth, back and forth in the air. What was his inner music?

"Boa tarde, Tia Valentina," said Olhado.

Grego didn't even look up.

"Am I interrupting?"

"Just in time," said Olhado. "We're on the verge of reconceptualizing the universe. We've discovered the illuminating principle that wishing makes it so and all living creatures pop out of nowhere whenever they're needed."

"If wishing makes it so," said Valentine, "can we wish for faster-than-light flight?"

"Grego's doing math in his head right now," said Olhado, "so he's functionally dead. But yes. I think he's on to something-- he was shouting and dancing a minute ago. We had a sewing-machine experience."

"Ah," said Valentine.

"It's an old science-class story," said Olhado. "People who wanted to invent sewing machines kept failing because they always tried to imitate the motions of hand-sewing, pushing the needle through the fabric and drawing the thread along behind through the eye at the back end of the needle. It seemed obvious. Until somebody first thought of putting the eye in the nose of the needle and using

two threads instead of just one. A completely unnatural, indirect approach that when it comes right down to it, I still don't understand."

"So we're going to sew our way through space?"

"In a way. The shortest distance between two points isn't necessarily a line. It comes from something Andrew learned from the hive queen. How they call some kind of creature from an alternate spacetime when they create a new hive queen. Grego jumped on that as proof that there was a real non-real space. Don't ask me what he means by that. I make bricks for a living."

"Unreal realspace," said Grego. "You had it backward."

"The dead awake," said Olhado.

"Have a seat, Valentine," said Grego. "My cell isn't much, but it's home. The math on this is still crazy but it seems to fit. I'm going to have to spend some time with Jane on it, to do the really tight calculations and run some simulations, but if the hive queen's right, and there's a space so universally adjacent to our space that philotes can pass into our space from the other space at any point, and if we postulate that the passage can go the other way, and if the hive queen is also right that the other space contains philotes just as ours does, only in the other space-- call it Outside-- the philotes aren't organized according to natural law, but are instead just possibilities, then here's what might work--"

"Those are awfully big ifs," said Valentine.

"You forget," said Olhado. "We start from the premise that wishing makes it so."

"Right, I forgot to mention that," said Grego. "We also assume that the hive queen is right that the unorganized philotes respond to patterns in someone's mind, immediately assuming whatever role is available in the pattern. So that things that are comprehended Outside will immediately come to exist there."

"All this is perfectly clear," said Valentine. "I'm surprised you didn't think of it before."

"Right," said Grego. "So here's how we do it. Instead of trying to physically move all the particles that compose the starship and its passengers and cargo from Star A to Star B, we simply conceive of them all-- the entire pattern, including all the human contents-- as existing, not Inside, but Outside. At that moment, all the philotes that compose the starship and the people in it disorganize themselves, pop through into the Outside, and reassemble themselves there according to the familiar pattern. Then we do the same thing again, and pop back Inside-- only now we're at Star B. Preferably a safe orbiting distance away."

"If every point in our space corresponds to a point Outside," said Valentine, "don't we just have to do our traveling there instead of here?"

"The rules are different there," said Grego. "There's no whereness there. Let's assume that in our space, whereness-- relative location-- is simply an artifact of the order that philotes follow. It's a convention. So is distance, for that matter. We measure distance according to the time it takes to travel it-- but it only takes that amount of time because the philotes of which matter and energy are comprised follow the conventions of natural law. Like the speed of light."

"They're just obeying the speed limit."

"Yes. Except for the speed limit, the size of our universe is arbitrary. If you looked at our universe as a sphere, then if you stood outside the sphere, it could as easily be an inch across or a trillion lightyears or a micron."

"And when we go Outside--"

"Then the Inside universe is exactly the same size as any of the disorganized philotes there-- no size at all. Furthermore, since there is no whereness there, all philotes in that space are equally close or nonclose to the location of our universe. So we can reenter Inside space at any point."

"That makes it sound almost easy," said Valentine.

"Yes, well," said Grego.

"It's the wishing that's hard," said Olhado.

"To hold the pattern, you really have to understand it," said Grego. "Each philote that rules a pattern comprehends only its own part of reality. It depends on the philotes within its pattern to do their job and hold their own pattern, and it also depends the philote that controls the pattern that it's a part of to keep it in its proper place. The atom philote has to trust the neutron and proton and electron philotes to hold their own internal structures together, and the molecule philote to hold the atom in its proper place, while the atom philote concentrates on his own job, which is keeping the parts of the atom in place. That's how reality seems to work-- in this model, anyway."

"So you transplant the whole thing to Outside and back Inside again," said Valentine. "I understood that."

"Yes, but who? Because the mechanism for sending requires that the whole pattern for the ship and all its contents be established as a pattern of its own, not just an arbitrary conglomeration. I mean, when you load a cargo on a ship and the passengers embark, you haven't created a living pattern, a philotic organism. It's not like giving birth to a baby-- that's an organism that can hold itself together. The ship and its contents are just a collection. They can break apart at any point. So when you move all the philotes out into disorganized space, lacking whereness or thisness or any organizing principle, how do they reassemble? And even if they reassemble themselves into the structures they know, what do you have? A lot of atoms. Maybe even living cells and organisms-- but without spacesuits or a starship, because those aren't alive. All the atoms and maybe even the molecules are floating around, probably replicating themselves like crazy as the unorganized philotes out there start copying the pattern, but you've got no ship."

"Fatal."

"No, probably not," said Grego. "Who can guess? The rules are all different out there. The point is that you can't possibly bring them back into our space in that condition, because that definitely would be fatal."

"So we can't."

"I don't know. Reality holds together in Inside space because all the pilotes that it's comprised of agree on the rules. They all know each other's patterns and follow the same patterns themselves. Maybe it can all hold together in Outside space as long as the spaceship and its cargo and passengers are fully known. As long as there's a knower who can hold the entire structure in her head."

"Her?"

"As I said, I have to have Jane do the calculations. She has to see if she has access to enough memory to contain the pattern of relationships within a spaceship. She has to then see if she can take that pattern and imagine its new location."

"That's the wishing part," said Olhado. "I'm very proud of it, because I'm the one who thought of needing a knower to move the ship."

"This whole thing is really Olhado's," said Grego, "but I intend to put my name first on the paper because he doesn't care about career advancement and I have to look good enough for people to overlook this felony conviction if I'm going to get a job at a university on another world somewhere."

"What are you talking about?" said Valentine.

"I'm talking about getting off this two-bit colony planet. Don't you understand? If this is all true, if it works, then I can fly to Rheims or Baia or-- or Earth and come back here for weekends. The energy cost is zero because we're stepping outside natural laws entirely. The wear and tear on the vehicles is nothing."

"Not nothing," said Olhado. "We've still got to taxi close to the planet of destination."

"As I said, it all depends on what Jane can conceive of. She has to be able to comprehend the whole ship and its contents. She has to be able to imagine us Outside and Inside again. She has to be able to conceive of the exact relative positions of the startpoint and endpoint of the journey."

"So faster-than-light travel depends completely on Jane," said Valentine.

"If she didn't exist, it would be impossible. Even if they linked all the computers together, even if someone could write the program to accomplish it, it wouldn't help. Because a program is just a collection, not an entity. It's just parts. Not a-- what was the word Jane found for it? An aiua."

"Sanskrit for life," Olhado explained to Valentine. "The word for the philote who controls a pattern that holds other philotes in order. The word for entities-- like planets and atoms and animals and stars-- that have an intrinsic, enduring form."

"Jane is an aiua, not just a program. So she can be a knower. She can incorporate the starship as a pattern within her own pattern. She can digest it and contain it and it will still be real. She makes it part of herself and knows it as perfectly and unconsciously as your aida knows your own body and holds it together. Then she can carry it with her Outside and back Inside again."

"So Jane has to go?" asked Valentine.

"If this can be done at all, it'll be done because Jane travels with the ship, yes," said Grego.

"How?" asked Valentine. "We can't exactly go pick her up and carry her with us in a bucket."

"This is something Andrew learned from the hive queen," said Grego. "She actually exists in a particular place-- that is, her aiua has a specific location in our space."

"Where?"

"Inside Andrew Wiggin."

It took a while for them to explain to her what Ender had learned about Jane from the hive queen. It was strange to think of this computer entity as being centered inside Ender's body, but it made a kind of sense that Jane had been created by the hive queens during Ender's campaign against them. To Valentine, though, there was another, immediate consequence. If the faster-than-light ship could only go where Jane took it, and Jane was inside Ender, there could be only one conclusion.

"Then Andrew has to go?"

"Claro. Of course," said Grego.

"He's a little old to be a test pilot," said Valentine.

"In this case he's only a test passenger," said Grego. "He just happens to hold the pilot inside him."

"It's not as if the voyage will have any physical stress," said Olhado. "If Grego's theory works out exactly right, he'll just sit there and after a couple of minutes or actually a microsecond or two, he'll be in the other place. And if it doesn't work at all, he'll just stay right here, with all of us feeling foolish for thinking we could wish our way through space."

"And if it turns out Jane can get him Outside but can't hold things together there, then he'll be stranded in a place that doesn't even have any placeness to it," said Valentine.

"Well, yes," said Grego. "If it works halfway, the passengers are effectively dead. But since we'll be in a place without time, it won't matter to us. It'll just be an eternal instant. Probably not enough time for our brains to notice that the experiment failed. Stasis."

"Of course, if it works," said Olhado, "then we'll carry our own spacetime with us, so there would be duration. Therefore, we'll never know if we fail. We'll only notice if we succeed."

"But I'll know if he never comes back," said Valentine.

"Right," said Grego. "If he never comes back, then you'll have a few months of knowing it until the fleet gets here and blasts everything and everybody all to hell."

"Or until the descolada turns everybody's genes inside out and kills us all," added Olhado.

"I suppose you're right," said Valentine. "Failure won't kill them any deader than they'll be if they stay."

"But you see the deadline pressure that we're under," said Grego. "We don't have much time left before Jane loses her ansible connections. Andrew says that she might well survive it after all-- but she'll be crippled. Brain-damaged."

"So even if it works, the first flight might be the last."

"No," said Olhado. "The flights are instantaneous. If it works, she can shuttle everybody off this planet in no more time than it takes people to get in and out of the starship."

"You mean it can take off from a planet surface?"

"That's still iffy," said Grego. "She might only be able to calculate location within, say ten thousand kilometers. There's no explosion or displacement problem, since the pilotes will reenter Inside space ready to obey natural laws again. But if the starship reappears in the middle of a planet it'll still be pretty hard to dig to the surface."

"But if she can be really precise-- within a couple of centimeters, for instance-- then the flights can be surface-to-surface," said Olhado.

"Of course we're dreaming," said Grego. "Jane's going to come back and tell us that even if she could turn all the stellar mass in the galaxy into computer chips, she couldn't hold all the data she'd have to know in order to make a starship travel this way. But at the moment, it still sounds possible and I am feeling good!"

At that, Grego and Olhado started whooping and laughing so loud that Mayor Kovano came to the door to make sure Valentine was all right. To her embarrassment, he caught her laughing and whooping right along with them.

"Are we happy, then?" asked Kovano.

"I guess," said Valentine, trying to recover her composure.

"Which of our many problems have we solved?"

"Probably none of them," said Valentine. "It would be too idiotically convenient if the universe could be manipulated to work this way."

"But you've thought of something."

"The metaphysical geniuses here have a completely unlikely possibility," said Valentine. "Unless you slipped them something really weird in their lunch."

Kovano laughed and left them alone. But his visit had had the effect of sobering them again.

"Is it possible?" asked Valentine.

"I would never have thought so," said Grego. "I mean, there's the problem of origin."

"It actually answers the problem of origin," said Olhado. "The Big Bang theory's been around since--"

"Since before I was born," said Valentine.

"I guess," said Olhado. "What nobody's been able to figure out is why a Big Bang would ever happen. This way it makes a weird kind of sense. If somebody who was capable of holding the pattern of the entire universe in his head stepped Outside, then all the philotes there would sort themselves out into the largest place in the pattern that they could control. Since there's no time there, they could take a billion years or a microsecond, all the time they needed, and then when it was sorted out, bam, there they are, the whole universe, popping out into a new Inside space. And since there's no distance or position-- no whereness-- then the entire thing would begin the size of a geometric point--"

"No size at all," said Grego.

"I remember my geometry," said Valentine.

"And immediately expand, creating space as it grew. As it grew, time would seem to slow down-- or do I mean speed up?"

"It doesn't matter," said Grego. "It all depends whether you're Inside the new space or Outside or in some other Inspace."

"Anyway, the universe now seems to be constant in time while it's expanding in space. But if you wanted to, you could just as easily see it as constant in size but changing in time. The speed of light is slowing down so that it takes longer to get from one place to another, only we can't tell that it's slowing down because everything else slows down exactly relative to the speed of light. You see? All a matter of perspective. For that matter, as Grego said before, the universe we live in is still, in absolute terms, exactly the size of a geometric point-- when you look at it from Outside. Any growth that seems to take place on the Inside is just a matter of relative location and time."

"And what kills me," said Grego, "is that this is the kind of thing that's been going on inside Olhado's head all these years. This picture of the universe as a dimensionless point in Outside space is the way he's been thinking all along. Not that he's the first to think of it. Just that he's the one who actually believed it and saw the connection between that and the non-place where Andrew says the hive queen goes to find aidas."

"As long as we're playing metaphysical games," said Valentine, "then where did this whole thing begin? If what we think of as reality is just a pattern that somebody brought Outside, and the universe just popped into being, then whoever it was is probably still wandering around giving off universes wherever she goes. So where did she come from? And what was there before she started doing it? And how did Outside come to exist, for that matter?"

"That's Inspace thinking," said Olhado. "That's the way you conceive of things when you still believe in space and time as absolutes. You think of everything starting and stopping, of things having origins, because that's the way it is in the observable universe. The thing is, Outside there're no rules like that at all. Outside was always there and always will be there. The number of philotes there is infinite, and all of them always existed. No matter how many of them you pull out and put into organized universes, there'll be just as many left as there always were."

"But somebody had to start making universes."

"Why?" asked Olhado.

"Because-- because I--"

"Nobody ever started. It's always been going on. I mean, if it weren't already going on, it couldn't start. Outside where there aren't any patterns, it would be impossible to conceive of a pattern. They can't act, by definition, because they literally can't even find themselves."

"But how could it always have been going on?"

"Think of it as if this moment in time, the reality we live in at this moment, this condition of the entire universe-- of all the universes--"

"You mean now."

"Right. Think of it as if now were the surface of a sphere. Time is moving forward through the chaos of Outside like the surface of an expanding sphere, a balloon inflating. On the outside, chaos. On the inside, reality. Always growing-- like you said, Valentine. Popping up new universes all the time."

"But where did this balloon come from?"

"OK, you've got the balloon. The expanding sphere. Only now think of it as a sphere with an infinite radius."

Valentine tried to think what that would mean. "The surface would be completely flat."

"That's right."

"And you could never go all the way around it."

"That's right, too. Infinitely large. Impossible even to count all the universes that exist on the reality side. And now, starting from the edge, you get on a starship and start heading inward toward the center. The farther in you go, the older everything is. All the old universes, back and back. When do you get to the first one?"

"You don't," said Valentine. "Not if you're traveling at a finite rate."

"You don't reach the center of a sphere of infinite radius, if you're starting at the surface, because no matter how far you go, no matter how quickly, the center, the beginning, is always infinitely far away."

"And that's where the universe began."

"I believe it," said Olhado. "I think it's true."

"So the universe works this way because it's always worked this way," said Valentine.

"Reality works this way because that's what reality is. Anything that doesn't work this way pops back into chaos. Anything that does, comes across into reality. The dividing line is always there."

"What I love," said Grego, "is the idea that after we've started tootling around at instantaneous speeds in our reality, what's to stop us from finding others? Whole new universes?"

"Or making others," said Olhado.

"Right," said Grego. "As if you or I could actually hold a pattern for a whole universe in our minds."

"But maybe Jane could," said Olhado. "Couldn't she?"

"What you're saying," said Valentine, "is that maybe Jane is God."

"She's probably listening right now," said Grego. "The computer's on, even if the display is blocked. I'll bet she's getting a kick out of this."

"Maybe every universe lasts long enough to produce something like Jane," said Valentine. "And then she goes out and creates more and--"

"It goes on and on," said Olhado. "Why not?"

"But she's an accident," said Valentine.

"No," said Grego. "That's one of the things Andrew found out today. You've got to talk to him. Jane was no accident. For all we know there are no accidents. For all we know, everything was all part of the pattern from the start."

"Everything except ourselves," said Valentine. "Our-- what's the word for the philote that controls us?"

"Aiua," said Grego. He spelled it out for her.

"Yes," she said. "Our will, anyway, which always existed, with whatever strengths and weaknesses it has. And that's why, as long as we're part of the pattern of reality, we're free."

"Sounds like the ethicist is getting into the act," said Olhado.

"This is probably complete bobagem," said Grego. "Jane's going to come back laughing at us. But Nossa Senhora, it's fun, isn't it?"

"Hey, for all we know, maybe that's why the universe exists in the first place," said Olhado. "Because going around through chaos popping out realities is a lark. Maybe God's been having the best time."

"Or maybe he's just waiting for Jane to get out there and keep him company," said Valentine.

\*\*\*

It was Miro's turn with Planter. Late-- after midnight. Not that he could sit by him and hold his hand. Inside the cleanroom, Miro had to wear a suit, not to keep contamination out, but to keep the descolada virus he carried inside himself from getting to Planter.

If I just cracked my suit a little bit, thought Miro, I could save his life.

In the absence of the descolada, the breakdown of Planter's body was rapid and devastating. They all knew that the descolada had messed with the pequenino reproductive cycle, giving the

pequeninos their third life as trees, but until now it hadn't been clear how much of their daily life depended on the descolada. Whoever designed this virus was a coldhearted monster of efficiency. Without the descolada's daily, hourly, minutely intervention, cells began to become sluggish, the production of vital energy-storing molecules stopped, and-- what they feared most-- the synapses of the brain fired less rapidly. Planter was rigged with tubes and electrodes, and he lay inside several scanning fields, so that from the outside Ela and her pequenino assistants could monitor every aspect of his dying. In addition, there were tissue samples every hour or so around the clock. His pain was so great that when he slept at all, the taking of tissue samples didn't wake him. And yet through all this-- the pain, the quasi-stroke that was afflicting his brain-- Planter remained doggedly lucid. As if he were determined by sheer force of will to prove that even without the descolada, a pequenino could be intelligent. Planter wasn't doing this for science, of course. He was doing it for dignity.

The real researchers couldn't spare time to take a shift as the inside worker, wearing the suit and just sitting there, watching him, talking to him. Only people like Miro, and Jakt's and Valentine's children-- Syfte, Lars, Ro, Varsam-- and the strange quiet woman Plikt; people who had no other urgent duties to attend to, who were patient enough to endure the waiting and young enough to handle their duties with precision-- only such people were given shifts. They might have added a fellow pequenino to the shift, but all the brothers who knew enough about human technologies to do the job right were part of Ela's or Ouanda's teams, and had too much work to do. Of all those who spent time inside the cleanroom with him, taking tissue samples, feeding him, changing bottles, cleaning him up, only Miro had known pequeninos well enough to communicate with them. Miro could speak to him in Brothers' Language. That had to be of some comfort to him, even if they were virtual strangers, Planter having been born after Miro left Lusitania on his thirty-year voyage.

Planter was not asleep. His eyes were half-open, looking at nothing, but Miro knew from the movement of his lips that he was speaking. Reciting to himself passages from some of the epics of his tribe. Sometimes he chanted sections of the tribal genealogy. When he first started doing this, Ela had worried that he was becoming delirious. But he insisted that he was doing it to test his memory. To make sure that in losing the descolada he wasn't losing his tribe-- which would be the same as losing himself.

Right now, as Miro turned up the volume inside his suit, he could hear Planter telling the story of some terrible war with the forest of Skysplitter, the "tree who called thunder." There was a digression in the middle of the war-story that told how Skysplitter got his name. This part of the tale sounded very old and mythic, a magical story about a brother who carried little mothers to the place where the sky fell open and the stars tumbled through onto the ground. Though Miro had been lost in his own thoughts about the day's discoveries-- the origin of Jane, Grego's and Olhado's idea of travel-by-wish-- for some reason he found himself paying close attention to the words that Planter was saying. And as the story ended, Miro had to interrupt.

"How old is that story?"

"Old," whispered Planter. "You were listening?"

"To the last part of it." It was all right to talk to Planter at length. Either he didn't grow impatient with the slowness of Miro's speech-- after all, Planter wasn't going anywhere-- or his own cognitive processes had slowed to match Miro's halting pace. Either way, Planter let Miro finish his own sentences, and answered him as if he had been listening carefully. "Did I understand you to say that this Skysplitter carried little mothers with him?"

"That's right," whispered Planter.

"But he wasn't going to the fathertree."

"No. He just had little mothers on his carries. I learned this story years ago. Before I did any human science."

"You know what it sounds like to me? That the story might come from a time when you didn't carry little mothers to the fathertree. When the little mothers didn't lick their sustenance from the sappy inside of the mothertree. Instead they hung from the carries on the male's abdomen until the infants matured enough to burst out and take their mothers' place at the teat."

"That's why I chanted it for you," said Planter. "I was trying to think of how it might have been, if we were intelligent before the descolada came. And finally I remembered that part in the story of Skysplitter's War."

"He went to the place where the sky broke open."

"The descolada got here somehow, didn't it?"

"How old is that story?"

"Skysplitter's War was twenty-nine generations ago. Our own forest isn't that old. But we carried songs and stories with us from our father-forest."

"The part of the story about the sky and the stars, that could be a lot older, though, couldn't it?"

"Very old. The fathertree Skysplitter died long ago. He might have been very old even when the war took place."

"Do you think it might be possible that this is a memory of the pequenino who first discovered the descolada? That it was brought here by a starship, and that what he saw was some kind of reentry vehicle?"

"That's why I chanted it."

"If that's true, then you were definitely intelligent before the coming of the descolada."

"All gone now," said Planter.

"What's all gone? I don't understand."

"Our genes of that time. Can't even guess what the descolada took away from us and threw out."

It was true. Each descolada virus might contain within itself the complete genetic code for every native life form on Lusitania, but that was only the genetic code as it was now, in its descolada-controlled state. What the code was before the descolada came could never be reconstructed or restored.

"Still," said Miro. "It's intriguing. To think that you already had language and songs and stories before the virus." And then, though he knew he shouldn't, he added, "Perhaps that makes it unnecessary for you to try to prove the independence of pequenino intelligence."

"Another attempt to save the piggy," said Planter.

A voice came over the speaker. A voice from outside the cleanroom.

"You can move on out now." It was Ela. She was supposed to be asleep during Miro's shift.

"My shift isn't over for three hours," said Miro.

"I've got somebody else coming in."

"There are plenty of suits."

"I need you out here, Miro." Ela's voice brooked no possibility of disobedience. And she was the scientist in charge of this experiment.

When he came out a few minutes later, he understood what was going on. Quara stood there, looking icy, and Ela was at least as furious. They had obviously been quarreling again-- no surprise there. The surprise was that Quara was here at all.

"You might as well go back inside," said Quara as soon as Miro emerged from the sterilization chamber.

"I don't even know why I left," said Miro.

"She insists on having a private conversation," said Ela.

"She'll call you out," said Quara, "but she won't disconnect the auditory monitoring system."

"We're supposed to be documenting every moment of Planter's conversation. For lucidity."

Miro sighed. "Ela, grow up."

She almost exploded. "Me! Me grow up! She comes in here like she thinks she's Nossa Senhora on her throne--"

"Ela," said Miro. "Shut up and listen. Quara is Planter's only hope of living through this experiment. Can you honestly say that it wouldn't serve the purpose of this experiment to let her--"

"All right," said Ela, cutting him off because she already grasped his argument and bowed to it. "She's the enemy of every living sentient being on this planet, but I'll cut off the auditory monitoring because she wants to have a private conversation with the brother that she's killing."

That was too much for Quara. "You don't have to cut off anything for me," she said. "I'm sorry I came. It was a stupid mistake."

"Quara!" shouted Miro.

She stopped at the lab door.

"Get the suit on and go talk to Planter. What does he have to do with her?"

Quara glared once again at Ela, but she headed toward the sterilization room from which Miro had just emerged.

He felt greatly relieved. Since he knew that he had no authority at all, and that both of them were perfectly capable of telling him what he could do with his orders, the fact that they complied suggested that in fact they really wanted to comply. Quara really did want to speak to Planter. And Ela really did want her to do it. They might even be growing up enough to stop their personal differences from endangering other people's lives. There might be hope for this family yet.

"She'll just switch it back on as soon as I'm inside," said Quara.

"No she won't," said Miro.

"She'll try," said Quara.

Ela looked at her scornfully. "I know how to keep my word."

They said nothing more to each other. Quara went inside the sterilization chamber to dress. A few minutes later she was out in the cleanroom, still dripping from the descolada-killing solution that had been sprayed all over the suit as soon as she was inside it.

Miro could hear Quara's footsteps.

"Shut it off," he said.

Ela reached up and pushed a button. The footsteps went silent.

Inside his ear, Jane spoke to him. "Do you want me to play everything they say for you?"

He subvocalized. "You can still hear inside there?"

"The computer is linked to several monitors that are sensitive to vibration. I've picked up a few tricks about decoding human speech from the slightest vibrations. And the instruments are very sensitive."

"Go ahead then," said Miro.

"No moral qualms about invasion of privacy?"

"Not a one," said Miro. The survival of a world was at stake. And he had kept his word-- the auditory monitoring equipment was off. Ela couldn't hear what was being said.

The conversation was nothing at first. How are you? Very sick. Much pain? Yes.

It was Planter who broke things out of the pleasant formalities and into the heart of the issue.

"Why do you want all my people to be slaves?"

Quara sighed-- but, to her credit, it didn't sound petulant. To Miro's practiced ear, it sounded as though she were really emotionally torn. Not at all the defiant face she showed to her family. "I don't," she said.

"Maybe you didn't forge the chains, but you hold the key and refuse to use it."

"The descolada isn't a chain," she said. "A chain is a nothing. The descolada is alive."

"So am I. So are all my people. Why is their life more important than ours?"

"The descolada doesn't kill you. Your enemy is Ela and my mother. They're the ones who would kill all of you in order to keep the descolada from killing them."

"Of course," said Planter. "Of course they would. As I would kill all of them to protect my people."

"So your quarrel isn't with me."

"Yes it is. Without what you know, humans and pequeninos will end up killing each other, one way or another. They'll have no choice. As long as the descolada can't be tamed, it will eventually destroy humanity or humanity will have to destroy it-- and us along with it."

"They'll never destroy it," said Quara.

"Because you won't let them."

"Any more than I'd let them destroy you. Sentient life is sentient life."

"No," said Planter. "With ramen you can live and let live. But with varelse, there can be no dialogue. Only war."

"No such thing," Quara said. Then she launched into the same arguments she had used when Miro talked to her.

When she was finished, there was silence for a while.

"Are they talking still?" Ela whispered to the people who were watching in the visual monitors. Miro didn't hear an answer-- somebody probably shook his head no.

"Quara," whispered Planter.

"I'm still here," she answered. To her credit, the argumentative tone was gone from her voice again. She had taken no joy from her cruel moral correctness.

"That's not why you're refusing to help," he said.

"Yes it is."

"You'd help in a minute if it weren't your own family you had to surrender to."

"Not true!" she shouted.

So-- Planter struck a nerve.

"You're only so sure you're right because they're so sure you're wrong."

"I am right!"

"When have you ever seen someone who had no doubts who was also correct about anything?"

"I have doubts," whispered Quara.

"Listen to your doubts," said Planter. "Save my people. And yours."

"Who am I to decide between the descolada and our people?"

"Exactly," said Planter. "Who are you to make such a decision?"

"I'm not," she said. "I'm withholding a decision."

"You know what the descolada can do. You know what it will do. Withholding a decision is a decision."

"It's not a decision. It's not an action."

"Failing to try to stop a murder that you might easily stop-- how is that not murder?"

"Is this why you wanted to see me? One more person telling me what to do?"

"I have the right."

"Because you took it upon yourself to become a martyr and die?"

"I haven't lost my mind yet," said Planter.

"Right. You've proved your point. Now let them get the descolada back in here and save you."

"No."

"Why not? Are you so sure you're right?"

"For my own life, I can decide. I'm not like you-- I don't decide for others to die."

"If humanity dies, I die with them," said Quara.

"Do you know why I want to die?" said Planter.

"Why?"

"So I don't have to watch humans and pequeninos kill each other ever again."

Quara bowed her head.

"You and Grego-- you're both the same."

Tears dropped onto the faceplate of the suit. "That's a lie."

"You both refuse to listen to anybody else. You know better about everything. And when you're both done, many many innocent people are dead."

She stood up as if to go. "Die, then," she said. "Since I'm such a murderer, why should I cry over you?" But she didn't take a step. She doesn't want to go, thought Miro.

"Tell them," said Planter.

She shook her head, so vigorously that tears flipped outward from her eyes, spattering the inside of the mask. If she kept that up, soon she wouldn't be able to see a thing.

"If you tell what you know, everybody is wiser. If you keep a secret, then everyone is a fool."

"If I tell, the descolada will die!"

"Then let it!" cried Planter.

The exertion was an extraordinary drain on him. The instruments in the lab went crazy for a few moments. Ela muttered under her breath as she checked with each of the technicians monitoring them.

"Is that how you'd like me to feel about you?" asked Quara.

"It is how you feel about me," whispered Planter. "Let him die."

"No," she said.

"The descolada came and enslaved my people. So what if it's sentient or not! It's a tyrant. It's a murderer. If a human being behaved the way the descolada acts, even you would agree he had to be stopped, even if killing him were the only way. Why should another species be treated more leniently than a member of your own?"

"Because the descolada doesn't know what it's doing," said Quara. "It doesn't understand that we're intelligent."

"It doesn't care," said Planter. "Whoever made the descolada sent it out not caring whether the species it captures or kills are sentient or not. Is that the creature you want all my people and all your people to die for? Are you so filled with hate for your family that you'll be on the side of a monster like the descolada?"

Quara had no answer. She sank onto the stool beside Planter's bed.

Planter reached out a hand and rested it on her shoulder. The suit was not so thick and impermeable that she couldn't feel the pressure of it, even though he was very weak.

"For myself, I don't mind dying," he said. "Maybe because of the third life, we pequeninos don't have the same fear of death that you short-lived humans do. But even though I won't have the third life, Quara, I will have the kind of immortality you humans have. My name will live in the stories. Even if I have no tree at all, my name will live. And what I did. You humans can say that I'm choosing to be a martyr for nothing, but my brothers understand. By staying clear and intelligent to the end, I prove that they are who they are. I help show that our slavemasters didn't make us who we are, and can't stop us from being who we are. The descolada may force us to do many things, but it doesn't own us to the very center. Inside us there is a place that is our true self. So I don't mind dying. I will live forever in every pequenino that is free."

"Why are you saying this when only I can hear?" said Quara.

"Because only you have the power to kill me completely. Only you have the power to make it so my death means nothing, so that all my people die after me and there's no one left to remember. Why shouldn't I leave my testament with you alone? Only you will decide whether or not it has any worth."

"I hate you for this," she said. "I knew you'd do this."

"Do what?"

"Make me feel so terrible that I have to-- give in!"

"If you knew I'd do this, why did you come?"

"I shouldn't have! I wish I hadn't!"

"I'll tell you why you came. You came so that I would make you give in. So that when you did it, you'd be doing it for my sake, and not for your family."

"So I'm your puppet?"

"Just the opposite. You chose to come here. You are using me to make you do what you really want to do. At heart you are still human, Quara. You want your people to live. You would be a monster if you didn't."

"Just because you're dying doesn't make you wise," she said.

"Yes it does," said Planter.

"What if I tell you that I'll never cooperate in the killing of the descolada?"

"Then I'll believe you," said Planter.

"And hate me."

"Yes," said Planter.

"You can't."

"Yes I can. I'm not a very good Christian. I am not able to love the one who chooses to kill me and all my people."

She said nothing.

"Go away now," he said. "I've said all that I can say. Now I want to chant my stories and keep myself intelligent until death finally comes."

She walked away from him, into the sterilization chamber.

Miro turned toward Ela. "Get everybody out of the lab," he said.

"Why?"

"Because there's a chance that she'll come out and tell you what she knows."

"Then I should be the one to go, and everybody else stay," said Ela.

"No," said Miro. "You're the only one that she'll ever tell."

"If you think that, then you're a complete--"

"Telling anyone else wouldn't hurt her enough to satisfy her," said Miro. "Everybody out."

Ela thought for a moment. "All right," she said to the others. "Get back to the main lab and monitor your computers. I'll bring us up on the net if she tells me anything, and you can see what she enters as we put it in. If you can make sense of what you're seeing, start following it up. Even if she actually knows anything, we still won't have much time to design a truncated descolada so we can get it to Planter before he dies. Go."

They went.

When Quara emerged from the sterilization chamber, she found only Ela and Miro waiting for her.

"I still think it's wrong to kill the descolada before we've even tried to talk to it," she said.

"It may well be," said Ela. "I only know that I intend to do it if I can."

"Bring up your files," said Quara. "I'm going to tell you everything I know about descolada intelligence. If it works and Planter lives through this, I'm going to spit in his face."

"Spit a thousand times," said Ela. "Just so he lives."

Her files came up into the display. Quara began pointing to certain regions of the model of the descolada virus. Within a few minutes, it was Quara sitting before the terminal, typing, pointing, talking, as Ela asked questions.

In his ear, Jane spoke up again. "The little bitch," she said. "She didn't have her files in another computer. She kept everything she knew inside her head."

\*\*\*

By late afternoon the next day, Planter was at the edge of death and Ela was at the edge of exhaustion. Her team had worked through the night; Quara had helped, constantly, indefatigably reading over everything Ela's people came up with, critiquing, pointing out errors. By midmorning, they had a plan for a truncated virus that should work. All of the language capability was gone, which meant the new viruses wouldn't be able to communicate with each other. All the analytical ability was gone as well, as near as they could tell. But safely in place were all the parts of the virus that supported bodily functions in the native species of Lusitania. As near as they could possibly tell without having a working sample of the virus, the new design was exactly what was needed-- a descolada that was completely functional in the life cycles of the Lusitanian species, including the pequeninos, yet completely incapable of global regulation and manipulation. They named the new virus recolada. The old one had been named for its function of tearing apart; the new one for its remaining function, holding together the species-pairs that made up the native life of Lusitania.

Ender raised one objection-- that since the descolada must have been putting the pequeninos into a belligerent, expansive mode, the new virus might lock them into that particular condition. But Ela and Quara answered together that they had deliberately used an older version of the descolada as their model, from a time when the pequeninos were more relaxed-- more "themselves." The pequeninos working on the project had agreed to this; there was little time to consult anyone else except Human and Rooter, who also concurred.

With the things that Quara had taught them about the workings of the descolada, Ela also had a team working on a killer bacterium that would spread quickly through the entire planet's geology, finding the normal descolada in every place and every form, tearing it to bits and killing it. It would recognize the old descolada by the very elements that the new descolada would lack. Releasing the recolada and the killer bacterium at the same time should do the job.

There was only one problem remaining-- actually making the new virus. That was Ela's direct project from midmorning on. Quara collapsed and slept. So did most of the pequeninos. But Ela struggled on, trying to use all the tools she had to break apart the virus and recombine it as she needed.

But when Ender came late in the afternoon to tell her that it was now or never, if her virus was to save Planter, she could only break down and weep from exhaustion and frustration.

"I can't," she said.

"Then tell him that you've achieved it but you can't get it ready in time and--"

"I mean it can't be done."

"You've designed it."

"We've planned it, we've modeled it, yes. But it can't be made. The descolada is a really vicious design. We can't build it from scratch because there are too many parts that can't hold together

unless you have those very sections already working to keep rebuilding each other as they break down. And we can't do modifications of the present virus unless the descolada is at least marginally active, in which case it undoes what we're doing faster than we can do it. It was designed to police itself constantly so it can't be altered, and to be so unstable in all its parts that it's completely unmakeable."

"But they made it."

"Yes, but I don't know how. Unlike Grego, I can't completely step outside my science on some metaphysical whim and make things up and wish them into existence. I'm stuck with the rules of nature as they are here and now, and there's no rule that will let me make it."

"So we know where we need to go, but we can't get there from here."

"Until last night I didn't know enough to guess whether we could design this new recolada or not, and therefore I had no way of guessing whether we could make it. I figured that if it was designable, it was makeable. I was ready to make it, ready to act the moment Quara relented. All we've achieved is to know, finally, completely, that it can't be done. Quara was right. We definitely found out enough from her to enable us to kill every descolada virus on Lusitania. But we can't make the recolada that could replace it and keep Lusitanian life functioning."

"So if we use the viricide bacterium--"

"All the pequeninos in the world would be where Planter is now within a week or two. And all the grass and birds and vines and everything. Scorched earth. An atrocity. Quara was right." She wept again.

"You're just tired." It was Quara, awake now and looking terrible, not refreshed at all by her sleep.

Ela, for her part, couldn't answer her sister.

Quara looked like she might be thinking of saying something cruel, along the lines of What did I tell you? But she thought better of it, and came and put her hand on Ela's shoulder. "You're tired, Ela. You need to sleep."

"Yes," said Ela.

"But first let's tell Planter."

"Say good-bye, you mean."

"Yes, that's what I mean."

They made their way to the lab that contained Planter's cleanroom. The pequenino researchers who had slept were awake again; all had joined the vigil for Planter's last hours. Miro was inside with Planter again, and this time they didn't make him leave, though Ender knew that both Ela and

Quara longed to be inside with him. Instead they both spoke to him over the speakers, explaining what they had found. The half-success that was worse, in its way, than complete failure, because it could easily lead to the destruction of all the pequeninos, if the humans of Lusitania became desperate enough.

"You won't use it," whispered Planter. The microphones, sensitive as they were, could barely pick up his voice.

"We won't," said Quara. "But we're not the only people here."

"You won't use it," he said. "I'm the only one who'll ever die like this."

The last of his words were voiceless; they read his lips later, from the holo recording, to be sure of what he said. And, having said it, having heard their good-byes, he died.

The moment the monitoring machines confirmed his death, the pequeninos of the research group rushed into the cleanroom. No need for sterilization now. They wanted the descolada with them. Brusquely moving Miro out of the way, they set to work, injecting the virus into every part of Planter's body, hundreds of injections in moments. They had been preparing for this, obviously. They would respect Planter's sacrifice in life-- but once he was dead, his honor satisfied, they had no compunctions about trying to save him for the third life if they could.

They took him out into the open space where Human and Rooter stood, and laid him on a spot already marked, forming an equilateral triangle with those two young fathertrees. There they flayed his body and staked it open. Within hours a tree was growing, and there was hope, briefly, that it might be a fathertree. But it took only a few days more for the brothers, who were adept at recognizing a young fathertree, to declare that the effort had failed. There was a kind of life, containing his genes, yes; but the memories, the will, the person who was Planter was lost. The tree was mute; there would be no mind joining the perpetual conclave of the fathertrees. Planter had determined to free himself of the descolada, even if it meant losing the third life that was the descolada's gift to those it possessed. He succeeded, and, in losing, won.

He had succeeded in something else, too. The pequeninos departed from their normal pattern of forgetting quickly the name of mere brothertrees. Though no little mother would ever crawl its bark, the brothertree that had grown from his corpse would be known by the name of Planter and treated with respect, as if it were a fathertree, as if it were a person. Moreover, his story was told and told again throughout Lusitania, wherever pequeninos lived. He had proved that pequeninos were intelligent even without the descolada; it was a noble sacrifice, and speaking the name of Planter was a reminder to all pequeninos of their fundamental freedom from the virus that had put them in bondage.

But Planter's death did not give any pause to the preparations for pequenino colonization of other worlds. Warmaker's people had a majority now, and as rumors spread that the humans had a bacterium capable of killing all the descolada, they had an even greater urgency. Hurry, they told the hive queen again and again. Hurry, so we can win free of this world before the humans decide to kill us all.

\*\*\*

"I can do it, I think," said Jane. "If the ship is small and simple, the cargo almost nothing, the crew as few as possible, then I can hold the pattern of it in my mind. If the voyage is brief, the stay in Outspace very short. As for holding the locations of the start and finish in my mind, that's easy, child's play, I can do it within a millimeter, less. If I slept, I could do it in my sleep. So there's no need for it to endure acceleration or provide extended life support. The starship can be simple. A sealed environment, places to sit, light, heat. If in fact we can get there and I can hold it all together and bring us back, then we won't be out in space long enough to use up the oxygen in a small room."

They were all gathered in the Bishop's office to listen to her-- the whole Ribeira family, Jakt's and Valentine's family, the pequenino researchers, several priests and Filhos, and perhaps a dozen other leaders of the human colony. The Bishop had insisted on having the meeting in his office. "Because it's large enough," he had said, "and because if you're going to go out like Nimrod and hunt before the Lord, if you're going to send a ship like Babel out to heaven to seek the face of God, then I want to be there to plead with God to be merciful to you."

"How much of your capacity is left?" Ender asked Jane.

"Not much," she said. "As it is, every computer in the Hundred Worlds will be sluggish while we do it, as I use their memory to hold the pattern."

"I ask, because we want to try to perform an experiment while we're out there."

"Don't waffle about it, Andrew," said Ela. "We want to perform a miracle while we're there. If we get Outside it means that Grego and Olhado are probably right about what it's like out there. And that means that the rules are different. Things can be created just by comprehending the pattern of them. So I want to go. There's a chance that while I'm there, holding the pattern of the recolada virus in my mind, I might be able to create it. I might be able to bring back a virus that can't be made in realspace. Can you take me? Can you hold me there long enough to make the virus?"

"How long is that?" asked Jane.

"It should be instantaneous," said Grego. "The moment we arrive, whatever full patterns we hold in our minds should be created within a period of time too brief for humans to notice. The real time will be taken analyzing to see if, in fact, she's got the virus she wanted. Maybe five minutes."

"Yes," said Jane. "If I can do this at all, I can do it for five minutes."

"The rest of the crew," said Ender.

"The rest of the crew will be you and Miro," said Jane. "And no one else."

Grego protested loudest, but he was not alone.

"I'm a pilot," said Jakt.

"I'm the only pilot of this ship," said Jane.

"Olhado and I thought of it," said Grego.

"Ender and Miro will come because it can't be done safely without them. I dwell within Ender-- where he goes, he carries me with him. Miro, on the other hand, has become so close to me that I think he might be part of the pattern that is myself. I want him there because I may not be whole without him. No one else. I can't have anyone else in the pattern. Ela is the only one beyond these two."

"Then that's the crew," said Ender.

"With no argument," added Mayor Kovano.

"Will the hive queen build the ship?" asked Jane.

"She will," said Ender.

"Then I have only one more favor to ask. Ela, if I can give you the five minutes, can you also hold the pattern of another virus in your mind?"

"The virus for Path?" she asked.

"We owe them that, if we can, for the help they gave to us."

"I think so," she said, "or at least the differences between it and the normal descolada. That's all I can possibly hold of anything-- the differences."

"And how soon will all this happen?" asked the Mayor.

"However fast the hive queen can build the ship," said Jane. "We have only forty-eight days until the Hundred Worlds shut down their ansibles. I will survive that day, we know that now, but it will cripple me. It will take me awhile to relearn all my lost memories, if I ever can. Until that's happened, I can't possibly sustain the pattern of a ship to go Outside."

"The hive queen can have a ship as simple as this one built long before then," said Ender. "In a ship so small there's no chance of shuttling all the people and pequeninos off Lusitania before the fleet arrives, let alone before the ansible cut-off keeps Jane from being able to fly the ship. But there'll be time to take new, descolada-free pequenino communities-- a brother, a wife, and many pregnant little mothers-- to a dozen planets and establish them there. Time to take new hive queens in their cocoons, already fertilized to lay their first few hundred eggs, to a dozen worlds as well. If this works at all, if we don't just sit there like idiots in a cardboard box wishing we could fly, then we'll come back with peace for this world, freedom from the danger of the descolada, and safe

dispersal for the genetic heritage of the other species of ramen here. A week ago, it looked impossible. Now there's hope."

"Gracas a deus," said the Bishop.

Quara laughed.

Everyone looked at her.

"I'm sorry," she said. "I was just thinking-- I heard a prayer, not many weeks ago. A prayer to Os Venerados, Grandfather Gusto and Grandmother Cida. That if there wasn't a way to solve the impossible problems facing us, they would petition God to open up the way."

"Not a bad prayer," said the Bishop. "And perhaps God has granted it."

"I know," said Quara. "That's what I was thinking. What if all this stuff about Outspace and Inspace, what if it was never real before. What if it only came to be true because of that prayer?"

"What of it?" asked the Bishop.

"Well, don't you think that would be funny?"

Apparently no one did.

## Chapter 16 -- VOYAGE

<So the humans have their starship ready now, while the one you've been building for us is still incomplete.>

<The one they wanted was a box with a door. No propulsion, no life support, no cargo space. Yours and ours are far more complicated. We haven't slacked, and they'll be ready soon.>

<I'm really not complaining. I wanted Ender's ship to be ready first. It's the one that carries real hope.>

<For us as well. We agree with Ender and his people that the descolada must never be killed here on Lusitania, unless the recolada can somehow be made. But when we send new hive queens to other worlds, we'll kill the descolada on the starship that takes them, so there's no chance of polluting our new home. So that we can live without fear of destruction from this artificial varelse.>

<What you do on your ship is nothing to us.>

<With any luck, none of this will matter. Their new starship will find its way Outside, return with the recolada, set you free and us as well, and then the new ship will shuttle us all to as many worlds as we desire.>

<Will it work? The box you made for them?>

<We know the place where they're going is real; we call our very selves from there. And the bridge we made, the one that Ender calls Jane, is such a pattern as we've never seen before. If it can be done, such a one as that can do it. We never could.>

<Will you leave? If the new ship works?>

<We'll make daughter-queens who'll take my memories with them to other worlds. But we ourselves will stay here. This place where I came forth from my cocoon, it's my home forever.>

<So you're as rooted here as I am.>

<That's what daughters are for. To go where we will never go, to carry our memory on to places that we'll never see.>

<But we will see. Won't we? You said the philotic connection would remain.>

<We were thinking of the voyage across time. We live a long time, we hives, you trees. But our daughters and their daughters will outlive us. Nothing changes that.>

Qing-jao listened to them as they laid the choice before her.

"Why should I care what you decide?" she said, when they were finished. "The gods will laugh at you."

Father shook his head. "No they won't, my daughter, Gloriously Bright. The gods care nothing more for Path than any other world. The people of Lusitania are on the verge of creating a virus that can free us all. No more rituals, no more bondage to the disorder in our brains. So I ask you again, if we can do it, should we? It would cause disorder here. Wang-mu and I have planned how we'll proceed, how we'll announce what we are doing so that people will understand it, so there'll be a chance that the godspoken won't be slaughtered, but can step down gently from their privileges."

"Privileges are nothing," said Qing-jao. "You taught me that yourself. They're only the people's way of expressing their reverence for the gods."

"Alas, my daughter, if only I knew that more of the godspoken shared that humble view of our station. Too many of them think that it's their right to be acquisitive and oppressive, because the gods speak to them and not to others."

"Then the gods will punish them. I'm not afraid of your virus."

"But you are, Qing-jao, I see it."

"How can I tell my father that he does not see what he claims to see? I can only say that I must be blind."

"Yes, my Qing-jao, you are. Blind on purpose. Blind to your own heart. Because you tremble even now. You have never been sure that I was wrong. From the time Jane showed us the true nature of the speaking of the gods, you've been unsure of what was true."

"Then I'm unsure of sunrise. I'm unsure of breath."

"We're all unsure of breath, and the sun stays in its same place, day and night, neither rising nor falling. We are the ones who rise and fall."

"Father, I fear nothing from this virus."

"Then our decision is made. If the Lusitanians can bring us the virus, we'll use it."

Han Fei-tzu got up to leave her room.

But her voice stopped him before he reached the door. "Is this the disguise the punishment of the gods will take, then?"

"What?" he asked.

"When they punish Path for your iniquity in working against the gods who have given their mandate to Congress, will they disguise their punishment by making it seem to be a virus that silences them?"

"I wish dogs had torn my tongue out before I taught you to think that way."

"Dogs already are tearing at my heart," Qing-jao answered him. "Father, I beg you, don't do this. Don't let your rebelliousness provoke the gods into falling silent across the whole face of this world."

"I will, Qing-jao, so no more daughters or sons have to grow up slaves as you have been. When I think of your face pressed close to the floor, tracing the woodgrain, I want to cut the bodies of those who forced this thing upon you, cut them until their blood makes lines, which I will gladly trace, to know that they've been punished."

She wept. "Father, I beg you, don't provoke the gods."

"More than ever now I'm determined to release the virus, if it comes."

"What can I do to persuade you? If I say nothing, you will do it, and when I speak to beg you, you will do it all the more surely."

"Do you know how you could stop me? You could speak to me as if you knew the speaking of the gods is the product of a brain disorder, and then, when I know you see the world clear and true, you could persuade me with good arguments that such a swift, complete, and devastating change would be harmful, or whatever other argument you might raise."

"So to persuade my father, I must lie to him?"

"No, my Gloriously Bright. To persuade your father, you must show that you understand the truth."

"I understand the truth," said Qing-jao. "I understand that some enemy has stolen you from me. I understand that all I have left now is the gods, and Mother who is among them. I beg the gods to let me die and join her, so I don't have to suffer any more of the pain you cause me, but still they leave me here. I think that means they wish me still to worship them. Perhaps I'm not yet purified enough. Or perhaps they know that you will soon turn your heart around again, and come to me as you used to, speaking honorably of the gods and teaching me to be a true servant."

"That will never happen," said Han Fei-tzu.

"Once I thought you could someday be the god of Path. Now I see that, far from being the protector of this world, you are its darkest enemy."

Han Fei-tzu covered his face and left the room, weeping for his daughter. He could never persuade her as long as she heard the voice of the gods. But perhaps if they brought the virus, perhaps if the gods fell silent, she would listen to him then. Perhaps he could win her back to rationality.

\*\*\*

They sat in the starship-- more like two metal bowls, one domed over the other, with a door in the side. Jane's design, faithfully executed by the hive queen and her workers, included many instruments on the outside of the ship. But even bristling with sensors it didn't resemble any kind of starship ever seen before. It was far too small, and there was no visible means of propulsion. The only power that could carry this ship anywhere was the unseeable aiua that Ender carried on board with him.

They faced each other in a circle. There were six chairs, because Jane's design allowed for the chance that the ship would be used again, to carry more people from world to world. They had taken every other seat, so they formed a triangle: Ender, Miro, Ela.

The good-byes had all been said. Sisters and brothers, other kin and many friends had come. One, though, was most painful in her absence. Novinha. Ender's wife, Miro's and Ela's mother. She would have no part of this. That was the only real sorrow at the parting.

The rest was all fear and excitement, hope and disbelief. They might be moments away from death. They might be moments away from filling the vials on Ela's lap with the viruses that would mean deliverance on two worlds. They might be the pioneers of a new kind of starflight that would save the species threatened by the M.D. Device.

They might also be three fools who would sit on the ground, in a grassy field just outside the compound of the human colony on Lusitania, until at last it grew so hot and stuffy inside that they had to emerge. No one waiting there would laugh, of course, but there'd be laughter throughout the town. It would be the laughter of despair. It would mean that there was no escape, no liberty, only more and more fear until death came in one of its many possible guises.

"Are you with us, Jane?" asked Ender.

The voice in his ear was quiet. "While I do this, Ender, I'll have no part of me that I can spare to talk to you."

"So you'll be with us, but mute," said Ender. "How will I know you're there?"

She laughed softly in his ear. "Foolish boy, Ender. If you're still there, I'm still inside you. And if I'm not inside you, you will have no 'there' to be."

Ender imagined himself breaking into a trillion constituent parts, scattering through chaos. Personal survival depended not only on Jane holding the pattern of the ship, but also on him being able to hold the pattern of his mind and body. Only he had no idea whether his mind was really strong enough to maintain that pattern, once he was where the laws of nature were not in force.

"Ready?" asked Jane.

"She asks if we're ready," said Ender.

Miro was already nodding. Ela bowed her head. Then, after a moment, she crossed herself, took firm hold on the rack of vials on her lap, and nodded.

"If we go and come again, Ela," said Ender, "then this was not a failure, even if you didn't create the virus that you wanted. If the ship works well, we can return another time. Don't think that everything depends on what you're able to imagine today."

She smiled. "I won't be surprised at failure, but I'm also ready for success. My team is ready to release hundreds of bacteria into the world, if I return with the recolada and we can then remove the descolada. It will be chancy, but within fifty years the world will be a self-regulating gaialogy again. I see a vision of deer and cattle in the tall grass of Lusitania, and eagles in the sky." Then she looked down again at the vials in her lap. "I also said a prayer to the Virgin, for the same Holy Ghost that created God in her womb to come make life again here in these jars."

"Amen to the prayer," said Ender. "And now, Jane, if you're ready, we can go."

Outside the little starship, the others waited. What did they expect? That the ship would start to smoke and jiggle? That there would be a thunderclap, a flash of light?

The ship was there. It was there, and still there, unmoving, unchanged. And then it was gone.

They felt nothing inside the ship when it happened. There was no sound, no movement to hint of motion from Inspace into Outspace.

But they knew the moment it occurred, because there were no longer three of them, but six.

Ender found himself seated between two people, a young man and a young woman. But he had no time even to glance at them, for all he could look at was the man seated in what had been the empty seat across from him.

"Miro," he whispered. For that was who it was. But not Miro the cripple, the damaged young man who had boarded the ship with him. That one was still sitting in the next chair to Ender's left. This Miro was the strong young man that Ender had first known. The man whose strength had been the hope of his family, whose beauty had been the pride of Ouanda's life, whose mind and whose heart had taken compassion on the pequeninos and refused to leave them without the benefits he thought that human culture might offer them. Miro, whole and restored.

Where had he come from?

"I should have known," said Ender. "We should have thought. The pattern of yourself that you hold in your mind, Miro-- it isn't the way you are, it's the way you were. "

The new Miro, the young Miro, he raised his head and smiled to Ender. "I thought of it," he said, and his speech was clear and beautiful, the words rolling easily off his tongue. "I hoped for it. I begged Jane to take me with her because of it. And it came true. Exactly as I longed for it."

"But now there are two of you," said Ela. She sounded horrified.

"No," said the new Miro. "Just me. Just the real me."

"But that one's still there," she said.

"Not for long, I think," said Miro. "That old shell is empty now."

And it was true. The old Miro slumped within his seat like a dead man. Ender knelt in front of him, touched him. He pressed his fingers to Miro's neck, feeling for a pulse.

"Why should the heart beat now?" said Miro. "I'm the place where Miro's aiua dwells."

When Ender took his fingers away from the old Miro's throat, the skin came away in a small puff of dust. Ender shied back. The head dropped forward off the shoulders and landed in the corpse's

lap. Then it dissolved into a whitish liquid. Ender jumped to his feet, backed away. He stepped on someone's toe.

"Ow," said Valentine.

"Watch where you're going," said a man.

Valentine isn't on this ship, thought Ender. And I know the man's voice, too.

He turned to face them, the man and woman who had appeared in the empty seats beside him.

Valentine. Impossibly young. The way she had looked when, as a young teenager, she had swum beside him in a lake on a private estate on Earth. The way she had looked when he loved her and needed her most, when she was the only reason he could think of to go on with his military training; when she was the only reason he could think of why the world might be worth the trouble of saving it.

"You can't be real," he said.

"Of course I am," she said. "You stepped on my foot, didn't you?"

"Poor Ender," said the young man. "Clumsy and stupid. Not a really good combination."

Now Ender knew him. "Peter," he said. His brother, his childhood enemy, at the age when he became Hegemon. The picture that had been playing on all the vids when Peter managed to arrange things so that Ender could never come home to Earth after his great victory.

"I thought I'd never see you face to face again," said Ender. "You died so long ago."

"Never believe a rumor of my death," said Peter. "I have as many lives as a cat. Also as many teeth, as many claws, and the same cheery, cooperative disposition."

"Where did you come from?"

Miro offered the answer. "They must have come from patterns in your mind, Ender, since you know them."

"They do," said Ender. "But why? It's our self-conception we're supposed to carry with us out here. The pattern by which we know ourselves."

"Is that so, Ender?" said Peter. "Then you must be really special. A personality so complicated it takes two people to contain it."

"There's no part of me in you," said Ender.

"And you'd better keep it that way," said Peter, leering. "It's girls I like, not dirty old men."

"I don't want you," said Ender.

"Nobody ever did," said Peter. "They wanted you. But they got me, didn't they? They got me up to here. Do you think I don't know my whole story? You and that book of lies, the Hegemon. So wise and understanding. How Peter Wiggin mellowed. How he turned out to be a wise and fair-minded ruler. What a joke. Speaker for the Dead indeed. All the time you wrote it, you knew the truth. You posthumously washed the blood from my hands, Ender, but you knew and I knew that as long as I was alive, I wanted blood there."

"Leave him alone," said Valentine. "He told the truth in the Hegemon."

"Still protecting him, little angel?"

"No!" cried Ender. "I've done with you, Peter. You're out of my life, gone for three thousand years."

"You can run but you can't hide!"

"Ender! Ender, stop it! Ender!"

He turned. It was Ela crying out to him.

"I don't know what's going on here, but stop it! We only have a few minutes left. Help me with the tests."

She was right. Whatever was going on with Miro's new body, with Peter's and Valentine's reappearance here, the important thing was the descolada. Had Ela succeeded in transforming it? Creating the recolada? And the virus that would transform the people of Path? If Miro could remake his body, and Ender could somehow conjure up the ghosts of his past and make them flesh again, it was possible, really possible, that Ela's vials now contained the viruses whose patterns she had held in her mind.

"Help me," whispered Ela again.

Ender and Miro-- the new Miro, his hand strong and sure-- reached out, took the vials she offered them, and began the test. It was a negative test-- if the bacteria, algae, and tiny worms they added to the tubes remained for several minutes, unaffected, then there was no descolada in the vials. Since the vials had been teeming with the living virus when they boarded the ship, that would be proof that something, at least, had happened to neutralize them. Whether it was truly the recolada or simply a dead or ineffective descolada remained to be discovered when they returned.

The worms and algae and bacteria underwent no transformations. In tests beforehand, on Lusitania, the solution containing the bacteria turned from blue to yellow in the presence of the descolada; now it stayed blue. On Lusitania the tiny worms had quickly died and, graying husks, floated to the surface; now they wriggled on and on, staying the purplish-brown color that in them,

at least, meant life. And the algae, instead of breaking apart and dissolving completely away, remained in the thin strands and tendrils of life.

"Done, then," said Ender.

"At least we can hope," said Ela.

"Sit down," said Miro. "If we're done, she'll take us back."

Ender sat. He looked at the seat where Miro had been sitting. His old crippled body was no longer identifiably human. It continued crumbling, the pieces breaking up into dust or flowing away as liquid. Even the clothing was dissolving into nothing.

"It's not part of my pattern anymore," said Miro. "There's nothing to hold it together anymore."

"What about these?" demanded Ender. "Why aren't they dissolving?"

"Or you?" asked Peter. "Why don't you dissolve? Nobody needs you now. You're a tired old fart who can't even hold onto his woman. And you never even fathered a child, you pathetic old eunuch. Make way for a real man. No one ever needed you-- everything you've ever done I could have done better, and everything I did you never could have matched."

Ender buried his face in his hands. This was not an outcome he could have imagined in his worst nightmares. Yes, he knew they were going out into a place where things might be created out of his mind. But it had never occurred to him that Peter was still lingering there. He thought he had expunged that old hatred long ago.

And Valentine-- why would he create another Valentine? This one so young and perfect, sweet and beautiful? There was a real Valentine waiting for him back on Lusitania-- what would she think, seeing what he created out of his own mind? Perhaps it would be flattering to know how closely she was held in his heart; but she would also know that what he treasured was what she used to be, not what she was now.

The darkest and the brightest secrets of his heart would both stand exposed as soon as the door opened and he had to step back out onto the surface of Lusitania again.

"Dissolve," he said to them. "Crumble away."

"You do it first, old man," said Peter. "Your life is over, and mine is just beginning. All I had to try for the first time was Earth, one tired old planet-- it was as easy as it would be for me to reach out and kill you with my bare hands, right now, if I wanted to. Snap your little neck like a dry noodle."

"Try it," whispered Ender. "I'm not the frightened little boy anymore."

"Nor are you a match for me," said Peter. "You never were, you never will be. You have too much heart. You're like Valentine. You flinch away from doing what has to be done. It makes you soft and weak. It makes you easy to destroy."

A sudden flash of light. What was it, death in Outspace after all? Had Jane lost the pattern in her mind? Were they blowing up, or failing into a sun?

No. It was the door opening. It was the light of the Lusitanian morning breaking into the relative darkness of the inside of the ship.

"Are you coming out?" cried Grego. He stuck his head into the ship. "Are you--"

Then he saw them. Ender could see him silently counting.

"Nossa Senhora," whispered Grego. "Where the hell did they come from?"

"Out of Ender's totally screwed-up head," said Peter.

"From old and tender memory," said the new Valentine.

"Help me with the viruses," said Ela.

Ender reached out for them, but it was Miro she gave them to. She didn't explain, just looked away from him, but he understood. What had happened to him Outside was too strange for her to accept. Whatever Peter and this young new Valentine might be, they shouldn't exist. Miro's creation of a new body for himself made sense, even if it was terrible to watch the old corpse break into forgotten nothingness. Ela's focus had been so pure that she created nothing outside the vials she had brought for that purpose. But Ender had dredged up two whole people, both obnoxious in their own way-- the new Valentine because she was a mockery of the real one, who surely waited just outside the door. And Peter managed to be obnoxious even as he put a spin on all his taunting that was at once dangerous and suggestive.

"Jane," whispered Ender. "Jane, are you with me?"

"Yes," she answered.

"Did you see all this?"

"Yes," she answered.

"Do you understand?"

"I'm very tired. I've never been tired before. I've never done something so very hard. It used up-- all my attention at once. And two more bodies, Ender. Making me pull them into the pattern like that-- I don't know how I did it."

"I didn't mean to." But she didn't answer.

"Are you coming or what?" asked Peter. "The others are all out the door. With all those little urine-sample jars."

"Ender, I'm afraid," said young Valentine. "I don't know what I'm supposed to do now."

"Neither do I," said Ender. "God forgive me if this somehow hurts you. I never would have brought you back to hurt you."

"I know," she said.

"No," said Peter. "Sweet old Ender conjures up a nubile young woman out of his own brain, who looks just like his sister in her teens. Mmm, mmm, Ender, old man, is there no limit to your depravity?"

"Only a shamefully sick mind would even think of such a thing," Ender murmured.

Peter laughed and laughed.

Ender took young Val by the hand and led her to the door. He could feel her hand sweating and trembling in his. She felt so real. She was real. And yet there, as soon as he stood in the doorway, he could see the real Valentine, middle-aged and heading toward old, yet still the gracious, beautiful woman he had known and loved for all these years. That's the true sister, the one I love as my second self. What was this young girl doing in my mind?

It was clear that Grego and Ela had said enough that people knew something strange had happened. And when Miro had strode from the ship, hale and vigorous, clear of speech and so exuberant he looked ready to burst into song-- that had brought on a buzz of excitement. A miracle. There were miracles out there, wherever the starship went.

Ender's appearance, though, brought a hush. Few would have known, at a glance, that the young girl with him was Valentine in her youth-- no one there but Valentine herself had known her then. And no one but Valentine was likely to recognize Peter Wiggin in his vigorous young manhood; the pictures in the history texts were usually of the holos taken late in his life, when cheap, permanent holography was first coming into its own.

But Valentine knew. Ender stood before the door, young Val beside him, Peter emerging just behind, and Valentine knew them both. She stepped forward, away from Jakt, until she stood before Ender face to face.

"Ender," she said. "Dear sweet tormented boy, was this what you create, when you go to a place where you can make anything you want?" She reached out her hand and touched the young copy of herself upon the cheek. "So beautiful," she said. "I was never this beautiful, Ender. She's perfect. She's all I wanted to be but never was."

"Aren't you glad to see me, Val, my dearest sweetheart Demosthenes?" Peter pushed his way between Ender and young Val. "Don't you have tender memories of me, as well? Am I not more beautiful than you remembered? I'm certainly glad to see you. You've done so well with the persona I created for you. Demosthenes. I made you, and you don't even thank me for it."

"Thank you, Peter," whispered Valentine. She looked again at young Val. "What will you do with them?"

"Do with us?" said Peter. "We're not his to do anything with. He may have brought me back, but I'm my own man now, as I always was."

Valentine turned back to the crowd, still awestruck at the strangeness of events. After all, they had seen three people board the ship, had seen it disappear, then reappear on the exact spot no more than seven minutes later-- and instead of three people emerging, there were five, two of them strangers. Of course they had stayed to gawk.

But there'd be no answers for anyone today. Except on the most important question of all. "Has Ela taken the vials to the lab?" she asked. "Let's break it up here, and go see what Ela's made for us in outspace."

## Chapter 17 -- ENDER'S CHILDREN

<Poor Ender. Now his nightmares walk around with him on their own two legs.>

<It was a strange way for him to have children after all.>

<You're the one who calls aiuas out of chaos. How did he find souls for these?>

<What makes you think he did?>

<They walk. They talk.>

<The one named Peter came and talked to you, didn't he?>

<As arrogant a human as I ever met.>

<How do you think it happens that he was born knowing how to speak the language of the fathertrees?>

<I don't know. Ender created him. Why shouldn't he create him knowing how to speak?>

<Ender goes on creating them both, hour by hour. We've felt the pattern in him. He may not understand it himself, but there is no difference between these two and himself. Different bodies,

perhaps, but they are part of him all the same. Whatever they do, whatever they say, it is Ender's aiua, acting and speaking.>

<Does he know this?>

<We doubt it.>

<Will you tell him?>

<Not until he asks.>

<When do you think that will be?>

<When he already knows the answer.>

It was the last day of the test of the recolada. Word of its success-- so far-- had already spread through the human colony-- and, Ender assumed, among all the pequeninos as well. Ela's assistant named Glass had volunteered to be the experimental subject. He had lived now for three days in the same isolation chamber where Planter had sacrificed himself. This time, though, the descolada had been killed within him by the viricide bacterium he had helped Ela devise. And this time, performing the functions that the descolada had once fulfilled, was Ela's new recolada virus. It had worked perfectly. He was not even slightly ill. Only one last step remained before the recolada could be pronounced a full success.

An hour before that final test, Ender, with his absurd entourage of Peter and young Val, was meeting with Quara and Grego in Grego's cell.

"The pequeninos have accepted it," Ender explained to Quara. "They're willing to take the risk of killing the descolada and replacing it with the recolada, after testing it with Glass alone."

"I'm not surprised," said Quara.

"I am," said Peter. "The piggies obviously have a deathwish as a species."

Ender sighed. Though he was no longer a frightened little boy, and Peter was no longer older and larger and stronger than he, there was still no love in Ender's heart for this simulacrum of his brother that he had somehow created Outside. He was everything Ender had feared and hated in his childhood, and it was infuriating and frightening to have him back again.

"What do you mean?" said Grego. "If the pequeninos didn't consent to it, then the descolada would make them too dangerous for humankind to allow them to survive."

"Of course," said Peter, smiling. "The physicist is an expert on strategy."

"What Peter is saying," said Ender, "is that if he were in charge of the pequeninos-- which he no doubt would like to be-- he would never willingly give up the descolada until he had won something from humanity in exchange for it."

"To the surprise of all, the aging boy wonder still has a tiny spark of wit," said Peter. "Why should they kill off their only weapon that humanity has any reason to fear? The Lusitania Fleet is still coming, and it still has the M.D. Device aboard. Why don't they make Andrew here get on that magic flying football of his and go meet the fleet and lay down the law?"

"Because they'd shoot me down like a dog," said Ender. "The pequeninos are doing this because it's right and fair and decent. Words that I'll define for you later."

"I know the words," said Peter. "I also know what they mean."

"You do?" asked young Val. Her voice, as always, was a surprise-- soft, mild, and yet able to pierce the conversation. Ender remembered that Valentine's voice had always been that way. Impossible not to listen to, though she so rarely raised her voice.

"Right. Fair. Decent," said Peter. The words sounded filthy in his mouth. "Either the person saying them believes in those concepts or not. If not, then those words mean that he's got somebody standing behind me with a knife in his hand. And if he does believe them, then those words mean that I'm going to win."

"I'll tell you what they mean," said Quara. "They mean that we're going to congratulate the pequeninos-- and ourselves-- for wiping out a sentient species that may exist nowhere else in the universe."

"Don't kid yourself," said Peter.

"Everybody's so sure that the descolada is a designed virus," said Quara, "but nobody's considered the alternative-- that a much more primitive, vulnerable version of the descolada evolved naturally, and then changed itself to its present form. It might be a designed virus, yes, but who did the designing? And now we're killing it without attempting conversation."

Peter grinned at her, then at Ender. "I'm surprised that this weaselly little conscience is not your blood offspring," he said. "She's as obsessed with finding reasons to feel guilty as you and Val."

Ender ignored him and attempted to answer Quara. "We are killing it. Because we can't wait any longer. The descolada is trying to destroy us, and there's no time to dither. If we could, we would."

"I understand all that," said Quara. "I cooperated, didn't I? It just makes me sick to hear you talking as if the pequeninos were somehow brave about collaborating in an act of xenocide in order to save their own skin."

"Us or them, kid," said Peter. "Us or them."

"You can't possibly understand," said Ender, "how ashamed I am to hear my own arguments on his lips."

Peter laughed. "Andrew pretends not to like me," he said. "But the kid's a fraud. He admires me. He worships me. He always has. Just like his pretty little angel here."

Peter poked at young Val. She didn't shy away. She acted instead as if she hadn't even felt his finger in the flesh of her upper arm.

"He worships us both. In his twisted little mind, she's the moral perfection that he can never achieve. And I am the power and genius that was always just out of poor little Andrew's reach. It was really quite modest of him, don't you think? For all these years, he's carried his betters with him inside his mind."

Young Val reached out and took Quara's hand. "It's the worst thing you'll ever do in your life," she said, "helping the people you love to do something that in your heart you believe is deeply wrong."

Quara wept.

But it was not Quara that worried Ender. He knew that she was strong enough to hold the moral contradictions of her own actions, and still remain sane. Her ambivalence toward her own actions would probably mellow her, make her less certain from moment to moment that her judgment was absolutely correct, and that all who disagreed with her were absolutely wrong. If anything, at the end of this she would emerge more whole and compassionate and, yes, decent than she had been before in her hotheaded youth. And perhaps young Val's gentle touch-- along with her words naming exactly the pain that Quara was feeling-- would help her to heal all the sooner.

What worried Ender was the way Grego was looking at Peter with such admiration. Of all people, Grego should have learned what Peter's words could lead to. Yet here he was, worshipping Ender's walking nightmare. I have to get Peter out of here, thought Ender, or he'll have even more disciples on Lusitania than Grego had-- and he'll use them far more effectively and, in the long run, the effect will be more deadly.

Ender had little hope that Peter would turn out to be like the real Peter, who grew to be a strong and worthy hegemon. This Peter, after all, was not a fully fleshed-out human being, full of ambiguity and surprise. Rather he had been created out of the caricature of attractive evil that lingered in the deepest recesses of Ender's unconscious mind. There would be no surprises here. Even as they prepared to save Lusitania from the descolada, Ender had brought a new danger to them, potentially just as destructive.

But not as hard to kill.

Again he stifled the thought, though it had come up a dozen times since he first realized that it was Peter sitting at his left hand in the starship. I created him. He isn't real, just my nightmare. If I kill him, it wouldn't be murder, would it? It would be the moral equivalent of-- what? Waking up? I

have imposed my nightmare on the world, and if I killed him the world would just be waking up to find the nightmare gone, nothing more.

If it had been Peter alone, Ender might have talked himself into such a murder, or at least he thought he might. But it was young Val who stopped him. Fragile, beautiful of soul-- if Peter could be killed, so could she. If he should be killed, then perhaps she ought to be as well-- she had as little right to exist; she was as unnatural, as narrow and distorted in her creation. But he could never do that. She must be protected, not harmed. And if the one was real enough to remain alive, so must the other be. If harming young Val would be murder, so would harming Peter. They were spawned in the same creation.

My children, thought Ender bitterly. My darling little offspring, who leaped fully-formed from my head like Athena from the mind of Zeus. Only what I have here isn't Athena. More like Diana and Hades. The virgin huntress and the master of hell.

"We'd better go," said Peter. "Before Andrew talks himself into killing me."

Ender smiled wanly. That was the worst thing-- that Peter and young Val seemed to have come into existence knowing more about his own mind than he knew himself. In time, he hoped, that intimate knowledge of him would fade. But in the meantime, it added to the humiliation, the way that Peter taunted him about thoughts that no one else would have guessed. And young Val-- he knew from the way she looked at him sometimes that she also knew. He had no secrets anymore.

"I'll go home with you," Val said to Quara.

"No," Quara answered. "I've done what I've done. I'll be there to see Glass through to the end of his test."

"We wouldn't want to miss our chance to suffer openly," said Peter.

"Shut up, Peter," said Ender.

Peter grinned. "Oh, come on. You know that Quara's just milking this for all it's worth. It's just her way of making herself the star of the show-- everybody being careful and tender with her when they should be cheering for what Ela accomplished. Scene-stealing is so low, Quara-- right up your alley."

Quara might have answered, if Peter's words had not been so outrageous and if they had not contained a germ of truth that confused her. Instead it was young Val who fixed Peter with a cold glare and said, "Shut up, Peter."

The same words Ender had said, only when young Val said them, they worked. He grinned at her, and winked-- a conspiratorial wink, as if to say, I'll let you play your little game, Val, but don't think I don't know that you're sucking up to everybody by being so sweet. But he said no more as they left Grego in his cell.

Mayor Kovano joined them outside. "A great day in the history of humanity," he said. "And by sheerest accident, I get to be in all the pictures." The others laughed-- especially Peter, who had struck up a quick and easy friendship with Kovano.

"It's no accident," said Peter. "A lot of people in your position would have panicked and wrecked everything. It took an open mind and a lot of courage to let things move the way they have."

Ender almost laughed aloud at Peter's obvious flattery. But flattery is never so obvious to the recipient. Oh, Kovano punched Peter in the arm and denied everything, but Ender could see that he loved hearing it, and that Peter had already earned more real influence with Kovano than Ender had. Don't these people see how Peter is cynically winning them all over?

The only one who saw Peter with anything like Ender's fear and loathing was the Bishop-- but in his case it was theological prejudice, not wisdom, that kept him from being sucked in. Within hours of their return from Outside, the Bishop had called upon Miro, urging him to accept baptism. "God has performed a great miracle in your healing," he said, "but the way in which it was done-- trading one body for another, instead of directly healing the old one-- leaves us in the dangerous position that your spirit inhabits a body that has never been baptized. And since baptism is performed on the flesh, I fear that you may be unsanctified." Miro wasn't very interested in the Bishop's ideas about miracles-- he didn't see God as having much to do with his healing-- but the sheer restoration of his strength and his speech and his freedom made him so ebullient that he probably would have agreed to anything. The baptism would take place early next week, at the first services to be held in the new chapel.

But the Bishop's eagerness to baptize Miro was not echoed in his attitude toward Peter and young Val. "It's absurd to think of these monstrous things as people," he said. "They can't possibly have souls. Peter is an echo of someone who already lived and died, with his own sins and repentances, his life's course already measured and his place in heaven or hell already assigned. And as for this-- girl, this mockery of feminine grace-- she cannot be who she claims to be, for that place is already occupied by a living woman. There can be no baptism for the deceptions of Satan. By creating them, Andrew Wiggin has built his own Tower of Babel, trying to reach into heaven to take the place of God. He cannot be forgiven until he takes them back to hell and leaves them there."

Did Bishop Peregrino imagine for one moment that that was not exactly what he longed to do? But Jane was adamant about it, when Ender offered the idea. "That would be foolish," she said. "Why do you think they would go, for one thing? And for another, what makes you think you wouldn't simply create two more? Haven't you ever heard the story of the sorcerer's apprentice? Taking them back there would be like cutting the brooms in half again-- all you'd end up with is more brooms. Leave bad enough alone."

So here they were, walking to the lab together-- Peter, with Mayor Kovano completely in his pocket. Young Val, who had won over Quara no less completely, though her purpose was altruistic instead of exploitative. And Ender, their creator, furious and humiliated and afraid.

I made them-- therefore I'm responsible for everything they do. And in the long run, they will both do terrible harm. Peter, because harm is his nature-- at least the way I conceived him in the patterns

of my mind. And young Val, despite her innate goodness, because her very existence is a deep injury to my sister Valentine.

"Don't let Peter goad you so," whispered Jane in his ear.

"People think he belongs to me," Ender subvocalized. "They figure that he must be harmless because I'm harmless. But I have no control over him."

"I think they know that."

"I've got to get him away from here."

"I'm working on that," said Jane.

"Maybe I should pack them up and take them off to some deserted planet somewhere. Do you know Shakespeare's play *The Tempest*?"

"Caliban and Ariel, is that what they are?"

"Exile, since I can't kill them."

"I'm working on it," said Jane. "After all, they're part of you, aren't they? Part of the pattern of your mind? What if I can use them in your place, to allow me to go Outside? Then we could have three starships, and not just one."

"Two," said Ender. "I'm never going Outside again."

"Not even for a microsecond? If I take you out and then right back in again? There was no need to linger there."

"It wasn't the lingering that did the harm," said Ender. "Peter and young Val were there instantly. If I go Outside again, I'll create them again."

"Fine," she said. "Two starships, then. One with Peter, one with young Val. Let me figure it out, if I can. We can't just make that one voyage and then abandon faster-than-light flight forever."

"Yes we can," said Ender. "We got the recolada. Miro got himself a healthy body. That's enough--we'll work everything else out ourselves."

"Wrong," said Jane. "We still have to transport pequeninos and hive queens off this planet before the fleet comes. We still have to get the transformational virus to Path, to set those people free."

"I won't go Outside again."

"Even if I can't use Peter and young Val to carry my aiua? You'd let the pequeninos and the hive queen be destroyed because you're afraid of your own unconscious mind?"

"You don't understand how dangerous Peter is."

"Perhaps not. But I do understand how dangerous the Little Doctor is. And if you weren't so wrapped up in your own misery, Ender, you'd know that even if we end up with five hundred little Peters and Vals running around, we've got to use this starship to carry pequeninos and the hive queen to other worlds."

He knew she was right. He had known it all along. That didn't mean that he was prepared to admit it.

"Just work on trying to move yourself into Peter and young Val," he subvocalized. "Though God help us if Peter is able to create things when he goes Outside."

"I doubt he can," said Jane. "He's not as smart as he thinks he is."

"Yes he is," said Ender. "And if you doubt it, you're not as smart as you think you are."

\*\*\*

Ela was not the only one who prepared for Glass's final test by going to visit Planter. His mute tree was still only a sapling, hardly a balance to Rooter's and Human's sturdy trunks. But it was around that sapling that the surviving pequeninos had gathered. And, like Ela, they had gathered to pray. It was a strange and silent kind of prayer service. The pequenino priests offered no pomp, no ceremony. They simply knelt with the others, and they murmured in their several languages. Some prayed in Brothers' Language, some in tree language. Ela supposed that what she was hearing from the wives gathered there was their own regular language, though it might as easily be the holy language they used to speak to the mothertree. And there were also human languages coming from pequenino lips-- Stark and Portuguese alike, and there might even have been some ancient Church Latin from one of the pequeninos priests. It was a virtual Babel, and yet she felt great unity. They prayed at the martyr's tomb-- all that was left of himself-- for the life of the brother who was following after him. If Glass died utterly today, he would only echo Planter's sacrifice. And if he passed into the third life, it would be a life owed to Planter's courage and example.

Because it was Ela who had brought back the recolada from Outside, they honored her with a brief time alone at the very trunk of Planter's tree. She wrapped her hand around the slender wooden pole, wishing there were more of his life in it. Was Planter's aiua lost now, wandering in the wherelessness of Outside? Or had God in fact taken it as his very soul and brought it into heaven, where Planter now communed with the saints?

Planter, pray for us. Intercede for us. As my venerated grandparents carried my prayer to the Father, go now to Christ for us and plead with him to have mercy on all your brothers and sisters. Let the recolada carry Glass into the third life, so that we can, in good conscience, spread the recolada through the world to replace the murderous descolada. Then the lion can lie down with the lamb indeed, and there can be peace in this place.

Not for the first time, though, Ela had her doubts. She was certain that their course was the right one-- she had none of Quara's qualms about destroying the descolada throughout Lusitania. But what she wasn't sure of was whether she should have based the recolada on the oldest samples of the descolada they had collected. If in fact the descolada had caused recent pequenino belligerence, their hunger to spread to new places, then she could consider herself as restoring the pequeninos to their previous "natural" condition. But then, the previous condition was just as much a product of the descolada's gaialogical balancing act-- it only seemed more natural because it was the condition the pequeninos were in when humans arrived. So she could just as easily see herself as causing a behavioral modification of an entire species, conveniently removing much of their aggressiveness so that there would be less likelihood of conflict with humans in the future. I am making good Christians of them now, whether they like it or not. And the fact that Human and Rooter both approve of this doesn't remove the onus from me, if this should turn out ultimately to the pequeninos' harm.

O God, forgive me for playing God in the lives of these children of yours. When Planter's aiua comes before you to plead for us, grant the prayer he carries on our behalf-- but only if it is your will to have his species altered so. Help us do good, but stop us if we would unwittingly cause harm. In the name of the Father, and of the Son, and of the Holy Ghost. Amen.

She took a tear from her cheek onto her finger, and pressed it against the smooth bark of Planter's trunk. You aren't there to feel this, Planter, not inside the tree. But you feel it all the same, I do believe that. God would not let such a noble soul as yours be lost in darkness.

It was time to go. Gentle brothers' hands touched her, pulled at her, drew her onward to the lab where Glass was waiting in isolation for his passage into the third life.

\*\*\*

When Ender had visited with Planter, he had been surrounded with medical equipment, lying on a bed. It was very different now inside the isolation chamber. Glass was in perfect health, and though he was wired up to all the monitoring devices, he was not bed-bound. Playful and happy, he could scarcely contain his eagerness to proceed.

And now that Ela and the other pequeninos had come, it could begin.

The only wall maintaining his isolation now was the disruptor field; outside it, the pequeninos who had gathered to watch his passage could see all that transpired. They were the only ones who watched in the open, however. Perhaps out of a sense of delicacy for pequenino feelings, or perhaps so they could have a wall between them and the brutality of this pequenino ritual, the humans had all gathered inside the lab, where only a window and the monitors let them see what would actually happen to Glass.

Glass waited until the sterile-suited brothers were in place beside him, wooden knives in hand, before he tore up capim and chewed it. It was the anesthetic that would make this bearable for him. But it was also the first time that a brother bound for the third life had chewed native grass that

contained no descolada virus within it. If Ela's new virus was right, then the capim here would work as the descolada-ruled capim had always worked.

"If I pass into the third life," said Glass, "the honor belongs to God and to his servant Planter, not to me."

It was fitting that Glass had chosen to use his last words of brother-speech to praise Planter. But his graciousness did not change the fact that thinking of Planter's sacrifice caused many among the humans to weep; hard as it was to interpret pequenino emotions, Ender had no doubt that the chattering sounds from the pequeninos gathered outside were also weeping, or some other emotion appropriate to Planter's memory. But Glass was wrong to think that there was no honor for him in this. Everyone knew that failure was still possible, that despite all the cause for hope they had, there was no certainty that Ela's recolada would have the power to take a brother into the third life.

The sterile-suited brothers raised their knives and set to work. Not me, this time, thought Ender. Thank God I don't have to wield a knife to cause a brother's death.

Yet he didn't avert his gaze, as so many others in the lab were doing. The blood and gore were not new to him, and even if that made it no less pleasant, at least he knew that he could bear it. And what Glass could bear to do, Ender could bear to witness. That was what a speaker for the dead was supposed to do, wasn't it? Witness. He watched as much as he could see of the ritual, as they opened up Glass's living body and planted his organs in the earth, so the tree could start to grow while Glass's mind was still alert and alive. Through it all, Glass made no sound or movement that suggested pain. Either his courage was beyond reckoning, or the recolada had done its work in the capim grass as well, so that it maintained its anesthetic properties.

At last it was done, and the brothers who had taken him into the third life returned to the sterile chamber, where, once their suits were cleansed of the recolada and viricide bacteria, they shed them and returned naked into the lab. They were very solemn, but Ender thought he could see the excitement and exultation that they concealed. All had gone well. They had felt Glass's body respond to them. Within hours, perhaps minutes, the first leaves of the young tree should arise. And they were sure in their hearts that it would happen.

Ender also noticed that one of them was a priest. He wondered what the Bishop would say, if he knew. Old Peregrino had proved himself to be quite adaptable to assimilating an alien species into the Catholic faith, and adapting ritual and doctrine to fit their peculiar needs. But that didn't change the fact that Peregrino was an old man who didn't enjoy the thought of priests taking part in rituals that, despite their clear resemblance to the crucifixion, were still not of the recognized sacraments. Well, these brothers knew what they were doing. Whether they had told the Bishop of one of his priests' participation or not, Ender wouldn't mention it; nor would any of the other humans present, if indeed any of them noticed.

Yes, the tree was growing, and with great vigor, the leaves visibly rising as they watched. But it would still be many hours, days perhaps, before they knew if it was a fathertree, with Glass still alive and conscious within it. A time of waiting, in which Glass's tree must grow in perfect isolation.

If only I could find a place, thought Ender, in which I could also be isolated, in which I could work out the strange things that have happened to me, without interference.

But he was not a pequenino, and whatever unease he suffered from was not a virus that could be killed, or driven from his life. His disease was at the root of his identity, and he didn't know if he could ever be rid of it without destroying himself in the process. Perhaps, he thought, Peter and Val represent the total of who I am; perhaps if they were gone, there'd be nothing left. What part of my soul, what action in my life is there that can't be explained as one or the other of them, acting out his or her will within me?

Am I the sum of my siblings? Or the difference between them? What is the peculiar arithmetic of my soul?

\*\*\*

Valentine tried not to be obsessed with this young girl that Ender had brought back with him from Outside. Of course she knew it was her younger self as he remembered her, and she even thought it was rather sweet of him to carry inside his heart such a powerful memory of her at that age. She alone, of all the people on Lusitania, knew why it was at that age that she lingered in his unconscious. He had been in Battle School till then, cut off completely from his family. Though he could not have known it, she knew that their parents had pretty much forgotten him. Not forgotten that he existed, of course, but forgotten him as a presence in their lives. He simply wasn't there, wasn't their responsibility anymore. Having given him away to the state, they were absolved. He would have been more a part of their lives if he had died; as it was, they didn't have even a grave to visit. Valentine didn't blame them for this-- it proved that they were resilient and adaptable. But she wasn't able to mimic them. Ender was always with her, in her heart. And when, after being inwardly battered as he was forced to meet all the challenges they threw at him in Battle School, Ender now resolved to give up on the whole enterprise-- when he, in effect, went on strike-- the officer charged with turning him into a pliant tool came to her. Brought her to Ender. Gave them time together-- the same man who had torn them apart and left such deep wounds in their hearts. She healed her brother then-- enough that he could go back and save humanity by destroying the buggers.

Of course he holds me in his memory at that age, more powerfully than any of our countless experiences together since. Of course when his unconscious mind brings forth its most intimate baggage, it is the girl I was then who lingers most deeply in his heart.

She knew all this, she understood all this, she believed all this. Yet still it rankled, still it hurt that this almost mindlessly perfect creature was what he really thought of her all along. That the Valentine that Ender truly loved was a creature of impossible purity. It was for the sake of this imaginary Valentine that he was so close a companion to me all the years before I married Jakt. Unless it was because I married Jakt that he returned to this childish vision of me.

Nonsense. There was nothing to be gained by trying to imagine what this young girl meant. Regardless of the manner of her creation, she was here now, and must be dealt with.

Poor Ender-- he seemed to understand nothing. He actually thought at first that he should keep young Val with him. "Isn't she my daughter, after a fashion?" he had asked.

"After no fashion is she your daughter," she had answered. "If anything, she's mine. And it is certainly not proper for you to take her into your home, alone. Especially since Peter is there, and he isn't the most trustworthy co-guardian who ever lived." Ender still didn't fully agree-- he would rather have got rid of Peter than Val-- but he complied, and since then Val had lived in Valentine's house. Valentine's intention had been to become the girl's friend and mentor, but in the event she simply couldn't do it. She wasn't comfortable enough in Val's company. She kept finding reasons to leave home when Val was there; she kept feeling inordinately grateful when Ender came to let her tag along with him and Peter.

What finally happened was that, as so often before, Plikt silently stepped in and solved the problem. Plikt became Val's primary companion and guardian in Valentine's house. When Val wasn't with Ender, she was with Plikt. And this morning Plikt had suggested setting up a house of her own-- for her and Val. Perhaps I was too hasty in agreeing, thought Valentine. But it's probably as hard on Val to share a house with me as for me to share a house with her.

Now, though, watching as Plikt and Val entered the new chapel on their knees and crawled forward-- as all the other humans who entered had also crawled-- to kiss Bishop Peregrino's ring before the altar, Valentine realized that she had done nothing for "Val's own good," whatever she might have told herself. Val was completely self-contained, unflappable, calm. Why should Valentine imagine that she could make young Val either more or less happy, more or less comfortable? I am irrelevant to this girlchild's life. But she is not irrelevant to mine. She is at once an affirmation and a denial of the most important relationship of my childhood, and of much of my adulthood as well. I wish that she had crumbled into nothingness Outside, like Miro's old crippled body did. I wish I had never had to face myself like this.

And it was herself she was facing. Ela had run that test immediately. Young Val and Valentine were genetically identical.

"But it makes no sense," Valentine protested. "Ender could hardly have memorized my genetic code. There couldn't possibly have been a pattern of that code in the starship with him."

"Am I supposed to explain it?" asked Ela.

Ender had suggested a possibility-- that young Val's genetic code was fluid until she and Valentine actually met, and then the phylotes of Val's body had formed themselves into the pattern they found in Valentine's.

Valentine kept her own opinion to herself, but she doubted that Ender's guess was right. Young Val had had Valentine's genes from the first moment, because any person who so perfectly fit Ender's vision of Valentine could not have any other genes; the natural law that Jane herself was helping to maintain within the starship would have required it. Or perhaps there was some force that shaped and gave order even to a place of such utter chaos. It hardly mattered, except that

however annoyingly perfect and uncomplaining and unlike me this new pseudo-Val might be, Ender's vision of her had been true enough that genetically they were the same. His vision couldn't be much off the mark. Perhaps I really was that perfect then, and only got my rough edges during the years since then. Perhaps I really was that beautiful. Perhaps I really was so young.

They knelt before the Bishop. Plikt kissed his ring, though she owed no part of the penance of Lusitania.

When it came time for young Val to kiss the ring, however, the Bishop pulled away his hand and turned away. A priest came forward and told them to go to their seats.

"How can I?" said young Val. "I haven't given my penance yet."

"You have no penance," said the priest. "The Bishop told me before you came; you weren't here when the sin was committed, so you have no part in the penance."

Young Val looked at him very sadly and said, "I was created by someone other than God. That's why the Bishop won't receive me. I'll never have communion while he lives."

The priest looked very sad-- it was impossible not to feel sorry for young Val, for her simplicity and sweetness made her seem fragile, and the person who hurt her therefore had to feel clumsy for having damaged such a tender thing. "Until the Pope can decide," he said. "All this is very hard."

"I know," whispered young Val. Then she came and sat down between Plikt and Valentine.

Our elbows touch, thought Valentine. A daughter who is perfectly myself, as if I had cloned her thirteen years ago.

But I didn't want another daughter, and I certainly didn't want a duplicate of me. She knows that. She feels it. And so she suffers something that I never suffered-- she feels unwanted and unloved by those who are most like her.

How does Ender feel about her? Does he also wish that she would go away? Or does he yearn to be her brother, as he was my young brother so many years ago? When I was that age, Ender had not yet committed xenocide. But then, he had not yet spoken for the dead, either. The Hive Queen, The Hegemon, The Life of Human-- all that was beyond him then.

He was just a child, confused, despairing, afraid. How could Ender yearn for that time again?

Miro soon came in, crawled to the altar, and kissed the ring. Though the Bishop had absolved him of any responsibility, he bore the penance with all others. Valentine noticed, of course, the many whispers as he moved forward. Everyone in Lusitania who had known him before his brain damage recognized the miracle that had been performed-- a perfect restoration of the Miro who had lived so brightly among them all before.

I didn't know you then, Miro, thought Valentine. Did you always have that distant, brooding air? Healed your body may be, but you're still the man who lived in pain for this time. Has it made you cold or more compassionate?

He came and sat beside her, in the chair that would have been Jakt's, except that Jakt was still in space. With the descolada soon to be destroyed, someone had to bring to Lusitania's surface the thousands of frozen microbes and plant and animal species that had to be introduced in order to establish a self-regulating gaialogy and keep the planetary systems in order. It was a job that had been done on many other worlds, but it was being made trickier by the need not to compete too intensely with the local species that the pequeninos depended on. Jakt was up there, laboring for them all; it was a good reason to be gone, but Valentine still missed him-- needed him badly, in fact, what with Ender's new creations causing her such turmoil. Miro was no substitute for her husband, especially because his own new body was such a sharp reminder of what had been done Outside.

If I went out there, what would I create? I doubt that I'd bring back a person, because I fear there is no one soul at the root of my psyche. Not even my own, I fear. What else has my passionate study of history been, except a search for humanity? Others find humanity by looking in their own hearts. Only lost souls need to search for it outside themselves.

"The line's almost done," whispered Miro.

So the service would begin soon.

"Ready to have your sins purged?" whispered Valentine.

"As the Bishop explained, he'll purge only the sins of this new body. I still have to confess and do penance for the sins I had left over from the old one. Not many carnal sins were possible, of course, but there's plenty of envy, spite, malice, and self-pity. What I'm trying to decide is whether I also have a suicide to confess. When my old body crumbled into nothing, it was answering the wish of my heart."

"You should never have got your voice back," said Valentine. "You babble now just to hear yourself talk so prettily."

He smiled and patted her arm.

The Bishop began the service with prayer, giving thanks to God for all that had been accomplished in recent months. Conspicuous by omission was the creation of Lusitania's two newest citizens, though Miro's healing was definitely laid at God's door. He called Miro forward and baptized him almost at once, and then, because this was not a mass, the Bishop proceeded immediately to his homily.

"God's mercy has an infinite reach," said the Bishop. "We can only hope he will choose to reach farther than we deserve, to forgive us for our terrible sins as individuals and as a people. We can

only hope that, like Nineveh, which turned away destruction through repentance, we can convince our Lord to spare us from the fleet that he has permitted to come against us to punish us."

Miro whispered, softly, so that only she could hear, "Didn't he send the fleet before the burning of the forest?"

"Maybe the Lord counts only the arrival time, not the departure," Valentine suggested. At once, though, she regretted her flippancy. What was happening here today was a solemn thing; even if she wasn't a deep believer in Catholic doctrine, she knew that it was a holy thing when a community accepted responsibility for the evil it committed and did true penance for it.

The Bishop spoke of those who had died in holiness-- Os Venerados, who first saved humanity from the descolada plague; Father Estevao, whose body was buried under the floor of the chapel and who suffered martyrdom in the cause of defending truth against heresy; Planter, who died to prove that his people's soul was from God, and not from a virus; and the pequeninos who had died as innocent victims of slaughter. "All of these may be saints someday, for this is a time like the early days of Christianity, when great deeds and great holiness were much more needed, and therefore much more often achieved. This chapel is a shrine to all those who have loved their God with all their heart, might, mind and strength, and who have loved their neighbor as themselves. Let all who enter here do it with a broken heart and a contrite spirit, so that holiness may also touch them."

The homily wasn't long, because there were many more identical services scheduled for that day-- the people were coming to the chapel in shifts, since it was far too small to accommodate the whole human population of Lusitania all at once. Soon enough they were done, and Valentine got up to leave. She would have followed close behind Plikt and Val, except that Miro caught at her arm.

"Jane just told me," he said. "I thought you'd want to know."

"What?"

"She just tested the starship, without Ender in it."

"How could she do that?" asked Valentine.

"Peter," he said. "She took him Outside and back again. He can contain her aiua, if that's how this process is actually working."

She gave voice to her immediate fear. "Did he--"

"Create anything? No." Miro grinned-- but with a hint of the twisted wryness that Valentine had thought was a product of his affliction. "He claims it's because his mind is much clearer and healthier than Andrew's."

"Maybe so," said Valentine.

"I say it's because none of the philotes out there were willing to be part of his pattern. Too twisted."

Valentine laughed a little.

The Bishop came up to them then. Since they were among the last to leave, they were alone at the front of the chapel.

"Thank you for accepting a new baptism," said the Bishop.

Miro bowed his head. "Not many men have a chance to be purified so far along in their sins," he said.

"And Valentine, I'm sorry I couldn't receive your-- namesake."

"Don't worry, Bishop Peregrino. I understand. I may even agree with you."

The Bishop shook his head. "It would be better if they could just--"

"Leave?" offered Miro. "You get your wish. Peter will soon be gone-- Jane can pilot a ship with him aboard. No doubt the same thing will be possible with young Val."

"No," said Valentine. "She can't go. She's too--"

"Young?" asked Miro. He seemed amused. "They were both born knowing everything that Ender knows. You can hardly call the girl a child, despite her body."

"If they had been born," said the Bishop, "They wouldn't have to leave."

"They're not leaving because of your wish," said Miro. "They're leaving because Peter's going to deliver Ela's new virus to Path, and young Val's ship is going to go off in search of planets where pequeninos and hive queens can be established."

"You can't send her on such a mission," said Valentine.

"I won't send her," said Miro. "I'll take her. Or rather, she'll take me. I want to go. Whatever risks there are, I'll take them. She'll be safe, Valentine."

Valentine still shook her head, but she knew already that in the end she would be defeated. Young Val herself would insist on going, however young she might seem, because if she didn't go, only one starship could travel; and if Peter was the one doing the traveling, there was no telling whether the ship would be used for any good purpose. In the long run, Valentine herself would bow to the necessity. Whatever danger young Val might be exposed to, it was no worse than the risks already taken by others. Like Planter. Like Father Estevao. Like Glass.

\*\*\*

The pequeninos gathered at Planter's tree. It would have been Glass's tree, since he was the first to pass into the third life with the recolada, but almost his first words, once they were able to talk with him, were an adamant rejection of the idea of introducing the viricide and recolada into the world beside his tree. This occasion belonged to Planter, he declared, and the brothers and wives ultimately agreed with him.

So it was that Ender leaned against his friend Human, whom he had planted in order to help him into the third life so many years before. It would have been a moment of complete joy to Ender, the liberation of the pequeninos from the descolada-- except that he had Peter with him through it all.

"Weakness celebrates weakness," said Peter. "Planter failed, and here they are honoring him, while Glass succeeded, and there he stands, alone out there in the experimental field. And the stupidest thing is that it can't possibly mean anything to Planter, since his aiua isn't even here."

"It may not mean anything to Planter," said Ender-- a point he wasn't altogether sure of, anyway-- "but it means something to the people here."

"Yes," he said. "It means they're weak."

"Jane says she took you Outside."

"An easy trip," said Peter. "Next time, though, Lusitania won't be my destination. "

"She says you plan to take Ela's virus to Path."

"My first stop," Peter said. "But I won't be coming back here. Count on that, old boy."

"We need the ship."

"You've got that sweet little slip of a girl," said Peter, "and the bugger bitch can pop out starships for you by the dozen, if only you could spawn enough creatures like me and Valzinha to pilot them."

"I'll be glad to see the last of you."

"Aren't you curious what I intend to do?"

"No," said Ender.

But it was a lie, and of course Peter knew it. "I intend to do what you have neither the brains nor the stomach to do. I intend to stop the fleet."

"How? Magically appear on the flagship?"

"Well, if worse came to worst, dear lad, I could always deliver an M.D. Device to the fleet before they even knew I was there. But that wouldn't accomplish much, would it? To stop the fleet, I need to stop Congress. And to stop Congress, I need to get control."

Ender knew at once what this meant. "So you think you can be Hegemon again? God help humanity if you succeed."

"Why shouldn't I?" said Peter. "I did it once before, and I didn't do so badly. You should know-- you wrote the book yourself."

"That was the real Peter," said Ender. "Not you, the twisted version conjured up out of my hatred and fear."

Did Peter have soul enough to resent these harsh words? Ender thought, for a moment at least, that Peter paused, that his face showed a moment of-- what, hurt? Or simply rage?

"I'm the real Peter now," he answered, after that momentary pause. "And you'd better hope that I have all the skill I had before. After all, you managed to give Valette the same genes as Valentine. Maybe I'm all that Peter ever was."

"Maybe pigs have wings."

Peter laughed. "They would, if you went Outside and believed hard enough."

"Go, then," said Ender.

"Yes, I know you'll be glad to get rid of me."

"And sic you on the rest of humanity? Let that be punishment enough, for their having sent the fleet." Ender gripped Peter by the arm, pulled him close. "Don't think that this time you can maneuver me into helplessness. I'm not a little boy anymore, and if you get out of hand, I'll destroy you."

"You can't," said Peter. "You could more easily kill yourself."

The ceremony began. This time there was no pomp, no ring to kiss, no homily. Ela and her assistants simply brought several hundred sugar cubes impregnated with the viricide bacterium, and as many vials of solution containing the recolada. They were passed among the congregation, and each of the pequeninos took the sugar cube, dissolved and swallowed it, and then drank off the contents of the vial.

"This is my body which is given for you," intoned Peter. "This do in remembrance of me."

"Have you no respect for anything?" asked Ender.

"This is my blood, which I shed for you. Drink in remembrance of me." Peter smiled. "This is a communion even I can take, unbaptized as I am."

"I can promise you this," said Ender. "They haven't invented the baptism yet that can purify you."

"I'll bet you've been saving up all your life, just to say that to me." Peter turned to him, so Ender could see the ear in which the jewel had been implanted, linking him to Jane. In case Ender didn't notice what he was pointing out, Peter touched the jewel rather ostentatiously. "Just remember, I have the source of all wisdom here. She'll show you what I'm doing, if you ever care. If you don't forget me the moment I'm gone."

"I won't forget you," said Ender.

"You could come along," said Peter.

"And risk making more like you Outside?"

"I could use the company."

"I promise you, Peter, you'd soon get as sick of yourself as I am sick of you."

"Never," said Peter. "I'm not filled with self-loathing the way you are, you poor guilt-obsessed tool of better, stronger men. And if you won't make more companions for me, why, I'll find my own along the way."

"I have no doubt of it," said Ender.

The sugar cubes and vials came to them; they ate, drank.

"The taste of freedom," said Peter. "Delicious."

"Is it?" said Ender. "We're killing a species that we never understood."

"I know what you mean," said Peter. "It's a lot more fun to destroy an opponent when he's able to understand how thoroughly you defeated him."

Then, at last, Peter walked away.

Ender stayed through the end of the ceremony, and spoke to many there: Human and Rooter, of course, and Valentine, Ela, Ouanda, and Miro.

He had another visit to make, however. A visit he had made several times before, always to be rebuffed, sent away without a word. This time, though, Novinha came out to speak with him. And instead of being filled with rage and grief, she seemed quite calm.

"I'm much more at peace," she said. "And I know, for what it's worth, that my rage at you was unrighteous."

Ender was glad to hear the sentiment, but surprised at the terms she used. When had Novinha ever spoken of righteousness?

"I've come to see that perhaps my boy was fulfilling the purposes of God," she said. "That you couldn't have stopped him, because God wanted him to go to the pequeninos to set in motion the miracles that have come since then." She wept. "Miro came to me. Healed," she said. "Oh, God is merciful after all. And I'll have Quim again in heaven, when I die."

She's been converted, thought Ender. After all these years of despising the church, of taking part in Catholicism only because there was no other way to be a citizen of Lusitania Colony, these weeks with the Children of the Mind of Christ have converted her. I'm glad of it, he thought. She's speaking to me again.

"Andrew," she said, "I want us to be together again."

He reached out to embrace her, wanting to weep with relief and joy, but she recoiled from his touch.

"You don't understand," she said. "I won't go home with you. This is my home now."

She was right-- he hadn't understood. But now he did. She hadn't just been converted to Catholicism. She had been converted to this order of permanent sacrifice, where only husbands and wives could join, and only together, to take vows of permanent abstinence in the midst of their marriage. "Novinha," he said, "I haven't the faith or the strength to be one of the Children of the Mind of Christ."

"When you do," she said, "I'll be waiting for you here."

"Is this the only hope I have of being with you?" he whispered. "To forswear loving your body as the only way to have your companionship?"

"Andrew," she whispered, "I long for you. But my sin for so many years was adultery that my only hope of joy now is to deny the flesh and live in the spirit. I'll do it alone if I must. But with you-- oh, Andrew, I miss you."

And I miss you, he thought. "Like breath itself I miss you," he whispered. "But don't ask this of me. Live with me as my wife until the last of our youth is spent, and then when desire is slack we can come back here together. I could be happy then."

"Don't you see?" she said. "I've made a covenant. I've made a promise."

"You made one to me, too," he said.

"Should I break a vow to God, so I can keep my vow with you?"

"God would understand."

"How easily those who never hear his voice declare what he would and would not want."

"Do you hear his voice these days?"

"I hear his song in my heart, the way the Psalmist did. The Lord is my shepherd. I shall not want."

"The twenty-third. While the only song I hear is the twenty-second."

She smiled wanly. "'Why hast thou forsaken me?'" she quoted.

"And the part about the bulls of Bashan," said Ender. "I've always felt like I was surrounded by bulls."

She laughed. "Come to me when you can," she said. "I'll be here, when you're ready."

She almost left him then.

"Wait."

She waited.

"I brought you the viricide and the recolada."

"Ela's triumph," she said. "It was beyond me, you know. I cost you nothing, by abandoning my work. My time was past, and she had far surpassed me." Novinha took the sugar cube, let it melt for a moment, swallowed it.

Then she held the vial up against the last light of evening. "With the red sky, it looks like it's all afire inside." She drank it-- sipped it, really, so that the flavor would linger. Even though, as Ender knew, the taste was bitter, and lingered unpleasantly in the mouth long afterward.

"Can I visit you?"

"Once a month," she said. Her answer was so quick that he knew she had already considered the question and reached a decision that she had no intention of altering.

"Then once a month I'll visit you," he said.

"Until you're ready to join me," she said.

"Until you're ready to return to me," he answered.

But he knew that she would never bend. Novinha was not a person who could easily change her mind. She had set the bounds of his future.

He should have been resentful, angry. He should have blustered about getting his freedom from a marriage to a woman who refused him. But he couldn't think what he might want his freedom for. Nothing is in my hands now, he realized. No part of the future depends on me. My work, such as it is, is done, and now my only influence on the future is what my children do-- such as they are: the monster Peter, the impossibly perfect child Val.

And Miro, Grego, Quara, Ela, Olhado-- aren't they my children, too? Can't I also claim to have helped create them, even if they came from Libo's love and Novinha's body, years before I even arrived in this place?

It was full dark when he found young Val, though he couldn't understand why he was even looking for her. She was in Olhado's house, with Plikt; but while Plikt leaned against a shadowed wall, her face inscrutable, young Val was among Olhado's children, playing with them.

Of course she's playing with them, thought Ender. She's still a child herself, however much experience she might have had thrust upon her out of my memories.

But as he stood in the doorway, watching, he realized that she wasn't playing equally with all the children. It was Nimbo who really had her attention. The boy who had been burned, in more ways than one, the night of the mob. The game the children played was simple enough, but it kept them from talking to each other. Still, there was eloquent conversation between Nimbo and young Val. Her smile toward him was warm, not in the manner of a woman encouraging a lover, but rather as a sister gives her brother the silent message of love, of confidence, of trust.

She's healing him, thought Ender. Just as Valentine, so many years ago, healed me. Not with words. Just with her company.

Could I have created her with even that ability intact? Was there that much truth and power in my dream of her? Then maybe Peter also has everything within him that my real brother had-- all that was dangerous and terrible, but also that which created a new order.

Try as he might, Ender couldn't get himself to believe that story. Young Val might have healing in her eyes, but Peter had none of that in him. His was the face that, years before, Ender had seen looking back at him from a mirror in the Fantasy Game, in a terrible room where he died again and again before he could finally embrace the element of Peter within himself and go on.

I embraced Peter and destroyed a whole people. I took him into myself and committed xenocide. I thought, in all these years since then, that I had purged him. That he was gone. But he'll never leave me.

The idea of withdrawing from the world and entering into the order of the Children of the Mind of Christ-- there was much to attract him in that. Perhaps there, Novinha and he together could purge

themselves of the demons that had dwelt inside them all these years. Novinha has never been so much at peace, thought Ender, as she is tonight.

Young Val noticed him, came to him as he stood in the doorway.

"Why are you here?" she said.

"Looking for you," he said.

"Plikt and I are spending the night with Olhado's family," she said. She glanced at Nimbo and smiled. The boy grinned foolishly.

"Jane says that you're going with the starship," Ender said softly.

"If Peter can hold Jane within himself, so can I," she answered. "Miro is going with me. To find habitable worlds."

"Only if you want to," said Ender.

"Don't be foolish," she said. "Since when have you done only what you want to do? I'll do what must be done, that only I can do."

He nodded.

"Is that all you came for?" she asked.

He nodded again. "I guess," he said.

"Or did you come because you wish that you could be the child you were when you last saw a girl with this face?"

The words stung-- far worse than when Peter guessed what was in his heart. Her compassion was far more painful than his contempt.

She must have seen the expression of pain on his face, and misunderstood it. He was relieved that she was capable of misunderstanding. I do have some privacy left.

"Are you ashamed of me?" she asked.

"Embarrassed," he said. "To have my unconscious mind made so public. But not ashamed. Not of you." He glanced toward Nimbo, then back to her. "Stay here and finish what you started."

She smiled slightly. "He's a good boy who thought that he was doing something fine."

"Yes," he said. "But it got away from him."

"He didn't know what he was doing," she said. "When you don't understand the consequences of your acts, how can you be blamed for them?"

He knew that she was talking as much about him, Ender the Xenocide, as about Nimbo. "You don't take the blame," he answered. "But you still take responsibility. For healing the wounds you caused."

"Yes," she said. "The wounds you caused. But not all the wounds in the world."

"Oh?" he asked. "And why not? Because you plan to heal them all yourself?"

She laughed-- a light, girlish laugh. "You haven't changed a bit, Andrew," she said. "Not in all these years."

He smiled at her, hugged her lightly, and sent her back into the light of the room. He himself, though, turned back out into the darkness and headed home. There was light enough for him to find his way, yet he stumbled and got lost several times.

"You're crying," said Jane in his ear.

"This is such a happy day," he said.

"It is, you know. You're just about the only person wasting any pity on you tonight."

"Fine, then," said Ender. "If I'm the only one, then at least there's one."

"You've got me," she said. "And our relationship has been chaste all along."

"I've really had enough of chastity in my life," he answered. "I wasn't hoping for more."

"Everyone is chaste in the end. Everyone ends up out of the reach of all the deadly sins."

"But I'm not dead," he said. "Not yet. Or am I?"

"Does this feel like heaven?" she asked.

He laughed, and not nicely.

"Well, then, you can't be dead."

"You forget," he said. "This could easily be hell."

"Is it?" she asked him.

He thought about all that had been accomplished. Ela's viruses. Miro's healing. Young Val's kindness to Nimbo. The smile of peace on Novinha's face. The pequeninos' rejoicing as their liberty

began its passage through their world. Already, he knew, the viricide was cutting an ever-widening swath through the prairie of capim surrounding the colony; by now it must already have passed into other forests, the descolada, helpless now, giving way as the mute and passive recolada took its place. All these changes couldn't possibly take place in hell.

"I guess I'm still alive," he said.

"And so am I," she said. "That's something, too. Peter and Val, they're not the only people to spring from your mind."

"No, they're not," he said.

"We're both still alive, even if we have hard times coming."

He remembered what lay in store for her, the mental crippling that was only weeks away, and he was ashamed of himself for having mourned his own losses. "Better to have loved and lost," he murmured, "than never to have loved at all."

"It may be a cliché," said Jane, "but that doesn't mean it can't be true."

## Chapter 18 -- THE GOD OF PATH

<I couldn't taste the changes in the descolada virus until it was gone.>

<It was adapting to you?>

<It was beginning to taste like myself. It had included most of my genetic molecules into its own structure>

<Perhaps it was preparing to change you, as it changed us.>

<But when it captured your ancestors, it paired them with the trees they lived in. Whom would we have been paired with?>

<What other forms of life are there on Lusitania, except the ones that are already paired?>

<Perhaps the descolada meant to combine us with an existing pair. Or replace one pair-member with us.>

<Or perhaps it meant to pair you with the humans.>

<It's dead now. It will never happen, whatever it planned.>

<What sort of life would you have led? Mating with human males?>

<This is disgusting.>

<Or giving live births, perhaps, in the human manner?>

<Stop this foulness.>

<I was merely speculating.>

<The descolada is gone. You're free of it.>

<But never free of what we should have been. I believe that we were sentient before the descolado came. I believe our history is older than the spacecraft that brought it here. I believe that somewhere in our genes is locked the secret of pequenino life when we were tree-dwellers, rather than the larval stage in the life of sentient trees.>

<If you had no third life, Human, you would be dead now.>

<Dead now, but while I lived I could have been, not a mere brother, but a father. While I lived I could have traveled anywhere, without worrying about returning to my forest if I ever hoped to mate. Never would I have stood day after day rooted to the same spot, living my life vicariously through the tales the brothers bring to me.>

<It's not enough for you to be free of the descolada, then? You must be free of all its consequences or you won't be content?>

<I'm always content. I am what I am, no matter how I got that way.>

<But still not free.>

<Males and females both, we still have to lose our lives in order to pass on our genes.>

<Poor fool. Do you think that I, the hive queen, am free? Do you think that human parents, once they bear young, are ever truly free again? If life to you means independence, a completely unfettered freedom to do as you like, then none of the sentient creatures is alive. None of us is ever fully free.>

<Put down roots, my friend, and then tell me how unfree you were when you were yet unrooted.>

Wang-mu and Master Han waited together on the riverbank some hundred meters from their house, a pleasant walk through the garden. Jane had told them that someone would be coming to see them, someone from Lusitania. They both knew this meant that faster-than-light travel had been achieved,

but beyond that they could only assume that their visitor must have come to an orbit around Path, shuttled down, and was now making his way stealthily toward them.

Instead, a ridiculously small metal structure appeared on the riverbank in front of them. The door opened. A man emerged. A young man-- largeboned, Caucasian, but pleasant-looking anyway. He held a single glass tube in his hand.

He smiled.

Wang-mu had never seen such a smile. He looked right through her as if he owned her soul. As if he knew her, knew her better than she knew herself.

"Wang-mu," he said, gently. "Royal Mother of the West. And Fei-tzu, the great teacher of the Path."

He bowed. They bowed to him in return.

"My business here is brief," he said. He held the vial out to Master Han. "Here is the virus. As soon as I've gone-- because I have no desire for genetic alteration myself, thank you-- drink this down. I imagine it tastes like pus or something equally disgusting, but drink it anyway. Then make contact with as many people as possible, in your house and the town nearby. You'll have about six hours before you start feeling sick. With any luck, at the end of the second day you'll have not a single symptom left. Of anything." He grinned. "No more little air-dances for you, Master Han, eh?"

"No more servility for any of us," said Han Fei-tzu. "We're ready to release our messages at once."

"Don't spring this on anybody until you've already spread the infection for a few hours."

"Of course," said Master Han. "Your wisdom teaches me to be careful, though my heart tells me to hurry and proclaim the glorious revolution that this merciful plague will bring to us."

"Yes, very nice," said the man. Then he turned to Wang-mu. "But you don't need the virus, do you?"

"No, sir," said Wang-mu.

"Jane says you're as bright a human being as she's ever seen."

"Jane is too generous," said Wang-mu.

"No, she showed me the data." He looked her up and down. She didn't like the way his eyes took possession of her whole body in that single long glance. "You don't need to be here for the plague. In fact, you'd be better off leaving before it happens."

"Leaving?"

"What is there for you here?" asked the man. "I don't care how revolutionary it gets here, you'll still be a servant and the child of low-class parents. In a place like this, you could spend your whole life overcoming it and you'd still be nothing but a servant with a surprisingly good mind. Come with me and you'll be part of changing history. Making history."

"Come with you and do what?"

"Overthrow Congress, of course. Cut them off at the knees and send them all crawling back home. Make all the colony worlds equal members of the polity, clean out the corruption, expose all the vile secrets, and call home the Lusitania Fleet before it can commit an atrocity. Establish the rights of all ramen races. Peace and freedom."

"And you intend to do all this?"

"Not alone," he said.

She was relieved.

"I'll have you."

"To do what?"

"To write. To speak. To do whatever I need you to do."

"But I'm uneducated, sir. Master Han was only beginning to teach me."

"Who are you?" demanded Master Han. "How can you expect a modest girl like this to pick up and go with a stranger?"

"A modest girl? Who gives her body to the foreman in order to get a chance to be close to a godspoken girl who might just hire her to be a secret maid? No, Master Han, she may be putting on the attitudes of a modest girl, but that's because she's a chameleon. Changing hides whenever she thinks it'll get her something."

"I'm not a liar, sir," she said.

"No, I'm sure you sincerely become whatever it is you're pretending to be. So now I'm saying, Pretend to be a revolutionary with me. You hate the bastards who did all this to your world. To Qing-jao."

"How do you know so much about me?"

He tapped his ear. For the first time she noticed the jewel there. "Jane keeps me informed about the people I need to know."

"Jane will die soon," said Wang-mu.

"Oh, she may get semi-stupid for a while," said the man, "but die she will not. You helped save her. And in the meantime, I'll have you."

"I can't," she said. "I'm afraid."

"All right then," he said. "I offered."

He turned back to the door of his tiny craft.

"Wait," she said.

He faced her again.

"Can't you at least tell me who you are?"

"Peter Wiggin is my name," he said. "Though I imagine I'll use a false one for a while."

"Peter Wiggin," she whispered. "That's the name of the--"

"My name. I'll explain it to you later, if I feel like it. Let's just say that Andrew Wiggin sent me. Sent me off rather forcefully. I'm a man with a mission, and he figured I could only accomplish it on one of the worlds where Congress's power structures are most heavily concentrated. I was Hegemon once, Wang-mu, and I intend to have the job back, whatever the title might turn out to be when I get it. I'm going to break a lot of eggs and cause an amazing amount of trouble and turn this whole Hundred Worlds thing arse over teakettle, and I'm inviting you to help me. But I really don't give a damn whether you do or not, because even though it'd be nice to have your brains and your company, I'll do the job one way or another. So are you coming or what?"

She turned to Master Han in an agony of indecision.

"I had been hoping to teach you," said Master Han. "But if this man is going to work toward what he says he will, then with him you'll have a better chance to change the course of human history than you'd ever have here, where the virus will do our main work for us."

Wang-mu whispered to him. "Leaving you will be like losing a father."

"And if you go, I will have lost my second and last daughter."

"Don't break my heart, you two," said Peter. "I've got a faster-than-light starship here. Leaving Path with me isn't a lifetime thing, you know? If things don't work out I can always bring her back in a day or two. Fair enough?"

"You want to go, I know it," said Master Han.

"Don't you also know that I want to stay as well?"

"I know that, too," said Master Han. "But you will go."

"Yes," she said. "I will."

"May the gods watch over you, daughter Wang-mu," said Master Han.

"And may every direction be the east of sunrise to you, Father Han."

Then she stepped forward. The young man named Peter took her hand and led her into the starship. The door closed behind them. A moment later, the starship disappeared.

Master Han waited there ten minutes, meditating until he could compose his feelings. Then he opened the vial, drank its contents, and walked briskly back to the house. Old Mu-pao greeted him just inside the door. "Master Han," she said. "I didn't know where you had gone. And Wang-mu is missing, too."

"She'll be gone for a while," he said. Then he walked very close to the old servant, so that his breath would be in her face. "You have been more faithful to my house than we have ever deserved."

A look of fear came upon her face. "Master Han, you're not dismissing me, are you?"

"No," he said. "I thought that I was thanking you."

He left Mu-pao and ranged through the house. Qing-jao was not in her room. That was no surprise. She spent most of her time entertaining visitors. That would suit his purpose well. And indeed, that was where he found her, in the morning room, with three very distinguished old godspoken men from a town two hundred kilometers away.

Qing-jao introduced them graciously, and then adopted the role of submissive daughter in her father's presence. He bowed to each man, but then found occasion to reach out his hand and touch each one of them. Jane had explained that the virus was highly communicable. Mere physical closeness was usually enough; touching made it more sure.

And when they were greeted, he turned to his daughter. "Qing-jao," he said, "will you have a gift from me?"

She bowed and answered graciously, "Whatever my father has brought me, I will gratefully receive, though I know I am not worthy of his notice."

He reached out his arms and drew her in to him. She was stiff and awkward in his embrace-- he had not done such an impulsive thing before dignitaries since she was a very little girl. But he held her all the same, tightly, for he knew that she would never forgive him for what came from this embrace, and therefore it would be the last time he held his Gloriously Bright within his arms.

Qing-jao knew what her father's embrace meant. She had watched her father walking in the garden with Wang-mu. She had seen the walnut-shaped starship appear on the riverbank. She had seen him take the vial from the round-eyed stranger. She saw him drink. Then she came here, to this room, to receive visitors on her father's behalf. I am dutiful, my honored father, even when you prepare to betray me.

And even now, knowing that his embrace was his cruelest effort to cut her off from the voice of the gods, knowing that he had so little respect for her that he thought he could deceive her, she nevertheless received whatever he determined to give her. Was he not her father? His virus from the world of Lusitania might or might not steal the voice of the gods from her; she could not guess what the gods would permit their enemies to do. But certainly if she rejected her father and disobeyed him, the gods would punish her. Better to remain worthy of the gods by showing proper respect and obedience to her father, than to disobey him in the name of the gods and thereby make herself unworthy of their gifts.

So she received his embrace, and breathed deeply of his breath.

When he had spoken briefly to his guests, he left. They took his visit with them as a signal honor; so faithfully had Qing-jao concealed her father's mad rebellion against the gods that Han Fei-tzu was still regarded as the greatest man of Path. She spoke to them softly, and smiled graciously, and saw them on their way. She gave them no hint that they would carry away with them a weapon. Why should she? Human weapons would be of no use against the power of the gods, unless the gods willed it. And if the gods wished to stop speaking to the people of Path, then this might well be the disguise they had chosen for their act. Let it seem to the unbeliever that Father's Lusitanian virus cut us off from the gods; I will know, as will all other faithful men and women, that the gods speak to whomever they wish, and nothing made by human hands could stop them if they so desired. All their acts were vanity. If Congress believed that they had caused the gods to speak on Path, let them believe it. If Father and the Lusitanians believe that they are causing the gods to fall silent, let them believe it. I know that if I am only worthy of it, the gods will speak to me.

A few hours later, Qing-jao fell deathly ill. The fever struck her like a blow from a strong man's hand; she collapsed, and barely noticed as servants carried her to her bed. The doctors came, though she could have told them there was nothing they could do, and that by coming they would only expose themselves to infection. But she said nothing, because her body was struggling too fiercely against the disease. Or rather, her body was struggling to reject her own tissues and organs, until at last the transformation of her genes was complete. Even then, it took time for her body to purge itself of the old antibodies. She slept and slept.

It was bright afternoon when she awoke. "Time," she croaked, and the computer in her room spoke the hour and day. The fever had taken two days from her life. She was on fire with thirst. She got to her feet and staggered to her bathroom, turned on the water, filled the cup and drank and drank until she was satisfied. It made her giddy, to stand upright. Her mouth tasted foul. Where were the servants who should have given her food and drink during her disease?

They must be sick as well. And Father-- he would have fallen ill before me. Who will bring him water?

She found him sleeping, cold with last night's sweat, trembling. She woke him with a cup of water, which he drank eagerly, his eyes looking upward into hers. Questioning? Or, perhaps, pleading for forgiveness. Do your penance to the gods, Father; you owe no apologies to a mere daughter.

Qing-jao also found the servants, one by one, some of them so loyal that they had not taken to their beds with their sickness, but rather had fallen where their duties required them to be. All were alive. All were recovering, and soon would be up again. Only after all were accounted for and tended to did Qing-jao go to the kitchen and find something to eat. She could not hold down the first food she took. Only a thin soup, heated to lukewarm, stayed with her. She carried more of the soup to the others. They also ate.

Soon all were up again, and strong. Qing-jao took servants with her and carried water and soup to all the neighboring houses, rich and poor alike. All were grateful to receive what they brought, and many uttered prayers on their behalf. You would not be so grateful, thought Qing-jao, if you knew that the disease you suffered came from my father's house, by my father's will. But she said nothing.

In all this time, the gods did not demand any purification of her.

At last, she thought. At last I am pleasing them. At last I have done, perfectly, all that righteousness required.

When she came home, she wanted to sleep at once. But the servants who had remained in the house were gathered around the holo in the kitchen, watching news reports. Qing-jao almost never watched the holo news, getting all her information from the computer; but the servants looked so serious, so worried, that she entered the kitchen and stood in their circle around the holovision.

The news was of the plague sweeping the world of Path. Quarantine had been ineffective, or else always came too late. The woman reading the report had already recovered from the disease, and she was telling that the plague had killed almost no one, though it disrupted services for many. The virus had been isolated, but it died too quickly to be studied seriously. "It seems that a bacterium is following the virus, killing it almost as soon as each person recovers from the plague. The gods have truly favored us, to send us the cure along with the plague."

Fools, thought Qing-jao. If the gods wanted you cured, they wouldn't have sent the plague in the first place.

At once she realized that she was the fool. Of course the gods could send both the disease and the cure. If a disease came, and the cure followed, then the gods had sent them. How could she have called such a thing foolish? It was as if she had insulted the gods themselves.

She flinched inwardly, waiting for the onslaught of the gods' rage. She had gone so many hours without purification that she knew it would be a heavy burden when it came. Would she have to trace a whole room again?

But she felt nothing. No desire to trace woodgrain lines. No need to wash.

She looked at her hands. There was dirt on them, and yet she didn't care. She could wash them or not, as she desired.

For a moment she felt immense relief. Could it be that Father and Wangmu and the Jane-thing were right all along? Had a genetic change, caused by this plague, freed her at last from a hideous crime committed by Congress centuries ago?

Almost as if the news reader had heard Qing-jao's thoughts, she began reading a report about a document that was turning up on computers all over the world. The document said that this plague was a gift from the gods, freeing the people of Path from a genetic alteration performed on them by Congress. Until now, genetic enhancements were almost always linked to an OCD-like condition whose victims were commonly referred to as godspoken. But as the plague ran its course, people would find that the genetic enhancements were now spread to all the people of Path, while the godspoken, who had previously borne the most terrible of burdens, had now been released by the gods from the necessity of constant purification.

"This document says that the whole world is now purified. The gods have accepted us." The news reader's voice trembled as she spoke. "It is not known where this document came from. Computer analysis has linked it with no known author's style. The fact that it turned up simultaneously on millions of computers suggests that it came from a source with unspeakable powers." She hesitated, and now her trembling was plainly visible. "If this unworthy reader of news may ask a question, hoping that the wise will hear it and answer her with wisdom, could it not be possible that the gods themselves have sent us this message, so that we will understand their great gift to the people of Path?"

Qing-jao listened for a while longer, as fury grew within her. It was Jane, obviously, who had written and spread this document. How dare she pretend to know what the gods were doing! She had gone too far. This document must be refuted. Jane must stand revealed, and also the whole conspiracy of the people of Lusitania.

The servants were looking at her. She met their gaze, looking for a moment at each of them around the circle.

"What do you want to ask me?" she said.

"O Mistress," said Mu-pao, "forgive our curiosity, but this news report has declared something that we can only believe if you tell us that it is true."

"What do I know?" answered Qing-jao. "I am only the foolish daughter of a great man."

"But you are one of the godspoken, Mistress," said Mu-pao.

You are very daring, thought Qing-jao, to speak of such things unbidden.

"In all this night, since you came among us with food and drink, and as you led so many of us out among the people, tending the sick, you have never once excused yourself for purification. We have never seen you go so long."

"Did it not occur to you," said Qing-jao, "that perhaps we were so well fulfilling the will of the gods that I had no need of purification during that time?"

Mu-pao looked abashed. "No, we did not think of that."

"Rest now," said Qing-jao. "None of us is strong yet. I must go and speak to my father."

She left them to gossip and speculate among themselves. Father was in his room, seated before the computer. Jane's face was in the display. Father turned to her as soon as she entered the room. His face was radiant. Triumphant.

"Did you see the message that Jane and I prepared?" he said.

"You!" cried Qing-jao. "My father, a teller of lies?"

To say such a thing to her father was unthinkable. But still she felt no need to purify herself. It frightened her, that she could speak with such disrespect and yet the gods did not rebuke her.

"Lies?" said Father. "Why do you think that they are lies, my daughter? How do you know that the gods did not cause this virus to come to us? How do you know that it is not their will to give these genetic enhancements to all of Path?"

His words maddened her; or perhaps she felt a new freedom; or perhaps she was testing the gods by speaking; very disrespectfully that they would have to rebuke her. "Do you think I am a fool?" shouted Qing-jao. "Do you think that I don't know this is your strategy to keep the world of Path from erupting in revolution and slaughter? Do you think I don't know that all you care about is keeping people from dying?"

"And is there something wrong with that?" asked Father.

"It's a lie!" she answered.

"Or it's the disguise the gods have prepared to conceal their actions," said Father. "You had no trouble accepting Congress's stories as true. Why can't you accept mine?"

"Because I know about the virus, Father. I saw you take it from that stranger's hand. I saw Wang-mu step into his vehicle. I saw it disappear. I know that none of these things are of the gods. She did them-- that devil that lives in the computers!"

"How do you know," said Father, "that she is not one of the gods?"

This was unbearable. "She was made," cried Qing-jao. "That's how I know! She's only a computer program, made by human beings, living in machines that human beings made. The gods are not made by any hand. The gods have always lived and will always live."

For the first time, Jane spoke. "Then you are a god, Qing-jao, and so am I, and so is every other person-- human or raman-- in the universe. No god made your soul, your inmost aiua. You are as old as any god, and as young, and you will live as long."

Qing-jao screamed. She had never made such a sound before, that she remembered. It tore at her throat.

"My daughter," said Father, coming toward her, his arms outstretched to embrace her.

She could not bear his embrace. She could not endure it because it would mean his complete victory. It would mean that she had been defeated by the enemies of the gods; it would mean that Jane had overmastered her. It would mean that Wang-mu had been a truer daughter to Han Fei-tzu than Qing-jao had been. It would mean that all Qing-jao's worship for all these years had meant nothing. It would mean that it was evil of her to set in motion the destruction of Jane. It would mean that Jane was noble and good for having helped transform the people of Path. It would mean that Mother was not waiting for her when at last she came to the Infinite West.

Why don't you speak to me, O Gods! she cried out silently. Why don't you assure me that I have not served you in vain all these years? Why have you deserted me now, and given the triumph to your enemies?

And then the answer came to her, as simply and clearly as if her mother had whispered the words in her ear: This is a test, Qing-jao. The gods are watching what you do.

A test. Of course. The gods were testing all their servants on Path, to see which ones were deceived and which endured in perfect obedience.

If I am being tested, then there must be some correct thing for me to do.

I must do what I have always done, only this time I must not wait for the gods to instruct me. They have wearied of telling me every day and every hour when I needed to be purified. It is time for me to understand my own impurity without their instructions. I must purify myself, with utter perfection; then I will have passed the test, and the gods will receive me once again.

She dropped to her knees. She found a woodgrain line, and began to trace it.

There was no answering gift of release, no sense of rightness; but that did not trouble her, because she understood that this was part of the test. If the gods answered her immediately, the way they used to, then how would it be a test of her dedication? Where before she had undergone her

purification under their constant guidance, now she must purify herself alone. And how would she know if she had done it properly? The gods would come to her again.

The gods would speak to her again. Or perhaps they would carry her away, take her to the palace of the Royal Mother, where the noble Han Jiang-qing awaited her. There she would also meet Li Qing-jao, her ancestor-of-the-heart. There her ancestors would all greet her, and they would say, The gods determined to try all the godspoken of Path. Few indeed have passed this test; but you, Qing-jao, you have brought great honor to us all. Because your faithfulness never wavered. You performed your purifications as no other son or daughter has ever performed them. The ancestors of other men and women are all envious of us. For your sake the gods now favor us above them all.

"What are you doing?" asked Father. "Why are you tracing the woodgrain lines?"

She did not answer. She refused to be distracted.

"The need for that has been taken away. I know it has-- I feel no need for purification."

Ah, Father! If only you could understand! But even though you will fail this test, I will pass it-- and thus I will bring honor even to you, who have forsaken all honorable things.

"Qing-jao," he said. "I know what you're doing. Like those parents who force their mediocre children to wash and wash. You're calling the gods."

Give it that name if you wish, Father. Your words are nothing to me now. I will not listen to you again until we both are dead, and you say to me, My daughter, you were better and wiser than I; all my honor here in the house of the Royal Mother comes from your purity and selfless devotion to the service of the gods. You are truly a noble daughter. I have no joy except because of you.

\*\*\*

The world of Path accomplished its transformation peacefully. Here and there, a murder occurred; here and there, one of the godspoken who had been tyrannical was mobbed and cast out of his house. But by and large, the story given by the document was believed, and the former godspoken were treated with great honor because of their righteous sacrifice during the years when they were burdened with the rites of purification.

Still, the old order quickly passed away. The schools were opened equally to all children. Teachers soon reported that students were achieving remarkable things; the stupidest child now was surpassing all averages from former times. And despite Congress's outraged denials of any genetic alteration, scientists on Path at last turned their attention to the genes of their own people. Studying the records of what their genetic molecules had been, and how they were now, the women and men of Path confirmed all that the document had said.

What happened then, as the Hundred Worlds and all the colonies learned of Congress's crimes against Path-- Qing-jao never knew of it. That was all a matter for a world that she had left behind. For she spent all her days now in the service of the gods, cleansing herself, purifying herself.

The story spread that Han Fei-tzu's mad daughter, alone of all the godspoken, persisted in her rituals. At first she was ridiculed for it-- for many of the godspoken had, out of curiosity, attempted to perform their purifications again, and had discovered the rituals to be empty and meaningless now. But she heard little of the ridicule, and cared nothing for it. Her mind was devoted solely to the service of the gods-- what did it matter if the people who had failed the test despised her for continuing to attempt to succeed?

As the years passed, many began to remember the old days as a graceful time, when the gods spoke to men and women, and many were bowed down in their service. Some of these began to think of Qing-jao, not as a madwoman, but as the only faithful woman left among those who had heard the voice of the gods. The word began to spread among the pious: "In the house of Han Fei-tzu there dwells the last of the godspoken."

They began to come then, at first a few, then more and more of them. Visitors, who wanted to speak with the only woman who still labored in her purification. At first she would speak to some of them; when she had finished tracing a board, she would go out into the garden and speak to them. But their words confused her. They spoke of her labor as being the purification of the whole planet. They said that she was calling the gods for the sake of all the people of Path. The more they talked, the harder it was for her to concentrate on what they said. She was soon eager to return to the house, to begin tracing another line. Didn't these people understand that they were wrong to praise her now? "I have accomplished nothing," she would tell them. "The gods are still silent. I have work to do." And then she would return to her tracing.

Her father died as a very old man, with much honor for his many deeds, though no one ever knew his role in the coming of the Plague of the Gods, as it was now called. Only Qing-jao understood. And as she burned a fortune in real money-- no false funeral money would do for her father-- she whispered to him so that no one else could hear, "Now you know, Father. Now you understand your errors, and how you angered the gods. But don't be afraid. I will continue the purification until all your mistakes are rectified. Then the gods will receive you with honor."

She herself became old, and the Journey to the House of Han Qing-jao was now the most famous pilgrimage of Path. Indeed, there were many who heard of her on other worlds, and came to Path just to see her. For it was well-known on many worlds that true holiness could be found in only one place, and in only one person, the old woman whose back was now permanently bent, whose eyes could now see nothing but the lines in the floors of her father's house.

Holy disciples, men and women, now tended the house where servants once had cared for her. They polished the floors. They prepared her simple food, and laid it where she could find it at the doors of the rooms; she would eat and drink only when a room was finished. When a man or woman somewhere in the world achieved some great honor, they would come to the House of Han Qing-jao, kneel down, and trace a woodgrain line; thus all honors were treated as if they were mere decorations on the honor of the Holy Han Qing-jao.

At last, only a few weeks after she completed her hundredth year, Han Qing-jao was found curled up on the floor of her father's room. Some said that it was the exact spot where her father always sat

when he performed his labors; it was hard to be sure, since all the furniture of the house had been removed long before. The holy woman was not dead when they found her. She lay still for several days, murmuring, muttering, inching her hands across her own body as if she were tracing lines in her flesh. Her disciples took turns, ten at a time, listening to her, trying to understand her muttering, setting down the words as best they understood them. They were written in the book called The God Whispers of Han Qing-jao.

Most important of all her words were these, at the very end. "Mother," she whispered. "Father. Did I do it right?" And then, said her disciples, she smiled and died.

She had not been dead for a month before the decision was made in every temple and shrine in every city and town and village of Path. At last there was a person of such surpassing holiness that Path could choose her as the protector and guardian of the world. No other world had such a god, and they admitted it freely.

Path is blessed above all other worlds, they said. For the God of Path is Gloriously Bright.

**CHILDREN OF THE MIND**  
**by Orson Scott Card**

Chapter 1 -- "I'M NOT MYSELF"

"Mother. Father. Did I do it right?"

-- The last words of Han Qing-jao, from *The God Whispers of Han Qing-jao*

Si Wang-mu stepped forward. The young man named Peter took her hand and led her into the starship. The door closed behind them.

Wang-mu sat down on one of the swiveling chairs inside the small metal-walled room. She looked around, expecting to see something strange and new. Except for the metal walls, it could have been any office on the world of Path. Clean, but not fastidiously so. Furnished, in a utilitarian way. She had seen holos of ships in flight: the smoothly streamlined fighters and shuttles that dipped into and out of the atmosphere; the vast rounded structures of the starships that accelerated as near to the speed of light as matter could get. On the one hand, the sharp power of a needle; on the other, the massive power of a sledgehammer. But here in this room, no power at all. Just a room.

Where was the pilot? There must be a pilot, for the young man who sat across the room from her, murmuring to his computer, could hardly be controlling a starship capable of the feat of traveling faster than light.

And yet that must have been precisely what he was doing, for there were no other doors that might lead to other rooms. The starship had looked small from the outside; this room obviously used all the space that it contained. There in the corner were the batteries that stored energy from the solar collectors on the top of the ship. In that chest, which seemed to be insulated like a refrigerator, there might be food and drink. So much for life support. Where was the romance in starflight now, if this was all it took? A mere room.

With nothing else to watch, she watched the young man at the computer terminal. Peter Wiggin, he said his name was. The name of the ancient Hegemon, the one who first united all the human race under his control, back when people lived on only one world, all the nations and races and religions and philosophies crushed together elbow to elbow, with nowhere to go but into each other's lands, for the sky was a ceiling then, and space was a vast chasm that could not be bridged. Peter Wiggin, the man who ruled the human race. This was not him, of course, and he had admitted as much. Andrew Wiggin sent him; Wang-mu remembered, from things that Master Han had told her, that Andrew Wiggin had somehow made him. Did this make the great Speaker of the Dead Peter's father? Or was he somehow Ender's brother, not just named for but actually embodying the Hegemon who had died three thousand years before?

Peter stopped murmuring, leaned back in his chair, and sighed. He rubbed his eyes, then stretched and groaned. It was a very indelicate thing to do in company. The sort of thing one might expect from a coarse fieldworker.

He seemed to sense her disapproval. Or perhaps he had forgotten her and now suddenly remembered that he had company. Without straightening himself in his chair, he turned his head and looked at her.

"Sorry," he said. "I forgot I was not alone."

Wang-mu longed to speak boldly to him, despite a lifetime retreating from bold speech. After all, he had spoken to her with offensive boldness, when his starship appeared like a fresh-sprouted mushroom on the lawn by the river and he emerged with a single vial of a disease that would cure her home world, Path, of its genetic illness. He had looked her in the eye not fifteen minutes ago and said, "Come with me and you'll be part of changing history. Making history." And despite her fear, she had said yes.

Had said yes, and now sat in a swivel chair watching him behave crudely, stretching like a tiger in front of her. Was that his beast-of-the-heart, the tiger? Wang-mu had read the Hegemon. She could believe that there was a tiger in that great and terrible man. But this one? This boy? Older than Wang-mu, but she was not too young to know immaturity when she saw it. He was going to change the course of history! Clean out the corruption in the Congress. Stop the Lusitania Fleet. Make all colony planets equal members of the Hundred Worlds. This boy who stretched like a jungle cat.

"I don't have your approval," he said. He sounded annoyed and amused, both at once. But then she might not be good at understanding the inflections of one such as this. Certainly it was hard to read the grimaces of such a round-eyed man. Both his face and his voice contained hidden languages that she could not understand.

"You must understand," he said. "I'm not myself."

Wang-mu spoke the common language well enough at least to understand the idiom. "You are unwell today?" But she knew even as she said it that he had not meant the expression idiomatically at all.

"I'm not myself," he said again. "I'm not really Peter Wiggin."

"I hope not," said Wang-mu. "I read about his funeral in school."

"I do look like him, though, don't I?" He brought up a hologram into the air over his computer terminal. The hologram rotated to look at Wang-mu; Peter sat up and assumed the same pose, facing her.

"There is a resemblance," she said.

"Of course, I'm younger," said Peter. "Because Ender didn't see me again after he left Earth when he was-- what, five years old? A little runt, anyway. I was still a boy. That's what he remembered, when he conjured me out of thin air."

"Not air at all," she said. "Out of nothing."

"Not nothing, either," he said. "Conjured me, all the same." He smiled wickedly. "I can call spirits from the vasty deep."

These words meant something to him, but not to her. In the world of Path she had been expected to be a servant and so was educated very little. Later, in the house of Han Fei-tzu, her abilities had been recognized, first by her former mistress, Han Qing-jao, and later by the master himself. From both she had acquired some bits of education, in a haphazard way. What teaching there had been was mostly technical, and the literature she learned was of the Middle Kingdom, or of Path itself. She could have quoted endlessly from the great poet Li Qing-jao, for whom her one-time mistress had been named. But of the poet he was quoting, she knew nothing.

"I can call spirits from the vasty deep," he said again. And then, changing his voice and manner a little, he answered himself. "Why so can I, or so can any man. But will they come when you do call for them?"

"Shakespeare?" she guessed.

He grinned at her. She thought of the way a cat smiles at the creature it is toying with. "That's always the best guess when a European is doing the quoting," he said.

"The quotation is funny," she said. "A man brags that he can summon the dead. But the other man says that the trick is not calling, but rather getting them to come."

He laughed. "What a way you have with humor."

"This quotation means something to you, because Ender called you forth from the dead."

He looked startled. "How did you know?"

She felt a thrill of fear. Was it possible? "I did not know, I was making a joke."

"Well, it's not true. Not literally. He didn't raise the dead. Though he no doubt thinks he could, if the need arose." Peter sighed. "I'm being nasty. The words just come to my mind. I don't mean them. They just come."

"It is possible to have words come to your mind, and still refrain from speaking them aloud."

He rolled his eyes. "I wasn't trained for servility, the way you were."

So this was the attitude of one who came from a world of free people-- to sneer at one who had been a servant through no fault of her own. "I was trained to keep unpleasant words to myself as a matter of courtesy," she said. "But perhaps to you, that is just another form of servility."

"As I said, Royal Mother of the West, nastiness comes unbidden to my mouth."

"I am not the Royal Mother," said Wang-mu. "The name was a cruel joke--"

"And only a very nasty person would mock you for it." Peter grinned. "But I'm named for the Hegemon. I thought perhaps bearing ludicrously overwrought names was something we might have in common."

She sat silently, entertaining the possibility that he might have been trying to make friends.

"I came into existence," he said, "only a short while ago. A matter of weeks. I thought you should know that about me."

She didn't understand.

"You know how this starship works?" he said.

Now he was leaping from subject to subject. Testing her. Well, she had had enough of being tested. "Apparently one sits within it and is examined by rude strangers," she said.

He smiled and nodded. "Give as good as you get. Ender told me you were nobody's servant."

"I was the true and faithful servant of Qing-jao. I hope Ender did not lie to you about that."

He brushed away her literalism. "A mind of your own." Again his eyes sized her up; again she felt utterly comprehended by his lingering glance, as she had felt when he first looked at her beside the river. "Wang-mu, I am not speaking metaphorically when I tell you I was only just made. Made, you understand, not born. And the way I was made has much to do with how this starship works. I don't want to bore you by explaining things you already understand, but you must know what-- not who-- I am in order to understand why I need you with me. So I ask again-- do you know how this starship works?"

She nodded. "I think so. Jane, the being who dwells in computers, she holds in her mind as perfect a picture as she can of the starship and all who are within it. The people also hold their own picture of themselves and who they are and so on. Then she moves everything from the real world to a place of nothingness, which takes no time at all, and then brings it back into reality in whatever place she chooses. Which also takes no time. So instead of starships taking years to get from world to world, it happens in an instant."

Peter nodded. "Very good. Except what you have to understand is that during the time that the starship is Outside, it isn't surrounded by nothingness. Instead it's surrounded by uncountable numbers of auias."

She turned away her face from him.

"You don't understand auias?"

"To say that all people have always existed. That we are older than the oldest gods ..."

"Well, sort of," said Peter. "Only auias on the Outside, they can't be said to exist, or at least not any kind of meaningful existence. They're just ... there. Not even that, because there's no sense of location, no there where they might be. They just are. Until some intelligence calls them, names them, puts them into some kind of order, gives them shape and form."

"The clay can become a bear," she said, "but not as long as it rests cold and wet in the riverbank."

"Exactly. So there was Ender Wiggin and several other people who, with luck, you'll never need to meet, taking the first voyage Outside. They weren't going anywhere, really. The point of that first voyage was to get Outside long enough that one of them, a rather talented genetic scientist, could create a new molecule, an extremely complex one, by the image she held of it in her mind. Or rather her image of the modifications she needed to make in an existing... well, you don't have the biology for it. Anyway, she did what she was supposed to do, she created the new molecule, calloo callay, only the thing is, she wasn't the only person doing any creating that day."

"Ender's mind created you?" asked Wang-mu.

"Inadvertently. I was, shall we say, a tragic accident. An unhappy side effect. Let's just say that everybody there, everything there, was creating like crazy. The auias Outside are frantic to be made into something, you see. There were shadow starships being created all around us. All kinds of weak, faint, fragmented, fragile, ephemeral structures rising and falling in each instant. Only four had any solidity. One was that genetic molecule that Elanora Ribeira had come to create."

"One was you?"

"The least interesting one, I fear. The least loved and valued. One of the people on the ship was a fellow named Miro, who through a tragic accident some years ago had been left somewhat crippled. Neurologically damaged. Thick of speech, clumsy with his hands, lame when he walked. He held within his mind the powerful, treasured image of himself as he used to be. So-- with that perfect self-image, a vast number of auias assembled themselves into an exact copy, not of how he was, but of how he once was and longed to be again. Complete with all his memories-- a perfect replication of him. So perfect that it had the same utter loathing for his crippled body that he himself had. So ... the new, improved Miro-- or rather the copy of the old, undamaged Miro-- whatever-- he stood there as the ultimate rebuke of the crippled one. And before their very eyes, that old rejected body crumbled away into nothing."

Wang-mu gasped, imagining it. "He died!"

"No, that's the point, don't you see? He lived. It was Miro. His own aiua-- not the trillions of aiuas making up the atoms and molecules of his body, but the one that controlled them all, the one that was himself, his will-- his aiua simply moved to the new and perfect body. That was his true self. And the old one ..."

"Had no use."

"Had nothing to give it shape. You see, I think our bodies are held together by love. The love of the master aiua for the glorious powerful body that obeys it, that gives the self all its experience of the world. Even Miro, even with all his self-loathing when he was crippled, even he must have loved whatever pathetic remnant of his body was left to him. Until the moment that he had a new one."

"And then he moved."

"Without even knowing that he had done so," said Peter. "He followed his love."

Wang-mu heard this fanciful tale and knew that it must be true, for she had overheard many a mention of aiuas in the conversations between Han Fei-tzu and Jane, and now with Peter Wiggin's story, it made sense. It had to be true, if only because this starship really had appeared as if from nowhere on the bank of the river behind Han Fei-tzu's house.

"But now you must wonder," said Peter, "how I, unloved and unlovable as I know I am, came into existence."

"You already said. Ender's mind."

"Miro's most intensely held image was of his own younger, healthier, stronger self. But Ender, the images that mattered most in his mind were of his older sister Valentine and his older brother Peter. Not as they became, though, for his real older brother Peter was long dead, and Valentine-- she has accompanied or followed Ender on all his hops through space, so she is still alive, but aged as he has aged. Mature. A real person. Yet on that starship, during that time Outside, he conjured up a copy of her youthful self. Young Valentine. Poor Old Valentine! She didn't know she was so old until she saw this younger self, this perfect being, this angel that had dwelt in Ender's twisted little mind from childhood on. I must say, she's the most put-upon victim in all this little drama. To know that your brother carries around such an image of you, instead of loving you as you really are-- well, one can see that Old Valentine-- she hates it, but that's how everyone thinks of her now, including, poor thing, herself-- one can see that Old Valentine is really having her patience tried."

"But if the original Valentine is still alive," said Wang-mu, puzzled, "then who is the young Valentine? Who is she really? You can be Peter because he's dead and no one is using his name, but ..."

"Quite puzzling, isn't it?" said Peter. "But my point is that whether he's dead or not, I'm not Peter Wiggin. As I said before, I'm not myself."

He leaned back in his chair and looked up at the ceiling. The hologram above the terminal turned to look at him. He had not touched the controls.

"Jane is with us," said Wang-mu.

"Jane is always with us," said Peter. "Ender's spy."

The hologram spoke. "Ender doesn't need a spy. He needs friends, if he can get them. Allies at least."

Peter reached idly for the terminal and turned it off. The hologram disappeared.

This disturbed Wang-mu very much. Almost as if he had slapped a child. Or beaten a servant. "Jane is a very noble creature, to treat her with such disrespect."

"Jane is a computer program with a bug in the id routines."

He was in a dark mood, this boy who had come to take her into his starship and spirit her away from the world of Path. But dark as his mood might be, she understood now, with the hologram gone from the terminal, what she had seen. "It isn't just because you're so young and the holograms of Peter Wiggin the Hegemon are of a mature man," said Wang-mu.

"What," he said impatiently. "What isn't what?"

"The physical difference between you and the Hegemon."

"What is it, then?"

"He looks-- satisfied."

"He conquered the world," said Peter.

"So when you have done the same, you will get that look of satisfaction?"

"I suppose so," said Peter. "It's what passes for a purpose in my life. It's the mission Ender has sent me on."

"Don't lie to me," said Wang-mu. "On the riverbank you spoke of the terrible things I did for the sake of my ambition. I admit it-- I was ambitious, desperate to rise out of my terrible lowborn state. I know the taste of it, and the smell of it, and I smell it coming from you, like the smell of tar on a hot day, you stink of it."

"Ambition? Has a stench?"

"I'm drunk with it myself."

He grinned. Then he touched the jewel in his ear. "Remember, Jane is listening, and she tells Ender everything."

Wang-mu fell silent, but not because she was embarrassed. She simply had nothing to say, and therefore said nothing.

"So I'm ambitious. Because that's how Ender imagined me. Ambitious and nasty-minded and cruel."

"But I thought you were not yourself," she said.

His eyes blazed with defiance. "That's right, I'm not." He looked away. "Sorry, Gepetto, but I can't be a real boy. I have no soul."

She didn't understand the name he said, but she understood the word soul. "All my childhood I was thought to be a servant by nature. To have no soul. Then one day they discovered that I have one. So far it has brought me no great happiness."

"I'm not speaking of some religious idea. I'm speaking of the aiua. I haven't got one. Remember what happened to Miro's broken-down body when his aiua abandoned it."

"But you don't crumble, so you must have an aiua after all."

"I don't have it, it has me. I continue to exist because the aiua whose irresistible will called me into existence continues to imagine me. Continues to need me, to control me, to be my will."

"Ender Wiggin?" she asked.

"My brother, my creator, my tormentor, my god, my very self."

"And young Valentine? Her too?"

"Ah, but he loves her. He's proud of her. He's glad he made her. Me he loathes. Loathes, and yet it's his will that I do and say every nasty thing. When I'm at my most despicable, remember that I do only what my brother makes me do."

"Oh, to blame him for--"

"I'm not blaming, Wang-mu. I'm stating simple reality. His will is controlling three bodies now. Mine, my impossibly angelic sister's, and of course his own very tired middle-aged body. Every aiua in my body receives its order and place from his. I am, in all ways that matter, Ender Wiggin. Except that he has created me to be the vessel of every impulse in himself that he hates and fears. His ambition, yes, you smell his ambition when you smell mine. His aggression. His rage. His nastiness. His cruelty. His, not mine, because I am dead, and anyway I was never like this, never the way he saw me. This person before you is a travesty, a mockery! I'm a twisted memory. A

despicable dream. A nightmare. I'm the creature hiding under the bed. He brought me out of chaos to be the terror of his childhood."

"So don't do it," said Wang-mu. "If you don't want to be those things, don't do them."

He sighed and closed his eyes. "If you're so bright, why haven't you understood a word I've said?"

She did understand, though. "What is your will, anyway? Nobody can see it. You don't hear it thinking. You only know what your will is afterward, when you look back in your life and see what you've done."

"That's the most terrible trick he's played on me," said Peter softly, his eyes still closed. "I look back on my life and I see only the memories he has imagined for me. He was taken from our family when he was only five. What does he know of me or my life?"

"He wrote *The Hegemon*."

"That book. Yes, based on Valentine's memories, as she told them to him. And the public documents of my dazzling career. And of course the few ansible communications between Ender and my own late self before I-- he-- died. I'm only a few weeks old, yet I know a quotation from Henry X, Part I, Owen Glendower boasting to Hotspur. Henry Percy. How could I know that? When did I go to school? How long did I lie awake at night, reading old plays until I committed a thousand favorite lines to memory? Did Ender somehow conjure up the whole of his dead brother's education? All his private thoughts? Ender only knew the real Peter Wiggin for five years. It's not a real person's memories I draw on. It's the memories Ender thinks that I should have."

"He thinks you should know Shakespeare, and so you do?" she asked doubtfully.

"If only Shakespeare were all he had given me. The great writers, the great philosophers. If only those were the only memories I had."

She waited for him to list the troublesome memories. But he only shuddered and fell silent.

"So if you are really controlled by Ender, then ... you are him. Then that is yourself. You are Andrew Wiggin. You have an aiua."

"I'm Andrew Wiggin's nightmare," said Peter. "I'm Andrew Wiggin's self-loathing. I'm everything he hates and fears about himself. That's the script I've been given. That's what I have to do."

He flexed his hand into a fist, then extended it partway, the fingers still bent. A claw. The tiger again. And for a moment, Wang-mu was afraid of him. Only a moment, though. He relaxed his hands. The moment passed. "What part does your script have in it for me?"

"I don't know," said Peter. "You're very smart. Smarter than I am, I hope. Though of course I have such incredible vanity that I can't really believe that anyone is actually smarter than I am. Which means that I'm all the more in need of good advice, since I can't actually conceive of needing any."

"You talk in circles."

"That's just part of my cruelty. To torment you with conversation. But maybe it's supposed to go farther than that. Maybe I'm supposed to torture you and kill you the way I so clearly remember doing with squirrels. Maybe I'm supposed to stake your living body out in the woods, nailing your extremities to tree roots, and then open you up layer by layer to see at what point the flies begin to come and lay eggs in your exposed flesh."

She recoiled at the image. "I have read the book. I know the Hegemon was not a monster!"

"It wasn't the Speaker for the Dead who created me Outside. It was the frightened boy Ender. I'm not the Peter Wiggin he so wisely understood in that book. I'm the Peter Wiggin he had nightmares about. The one who flayed squirrels."

"He saw you do that?" she asked.

"Not me," he said testily. "And no, he never even saw him do it. Valentine told him later. She found the squirrel's body in the woods near their childhood home in Greensboro, North Carolina, on the continent of North America back on Earth. But that image fit so tidily into his nightmares that he borrowed it and shared it with me. That's the memory I live with. Intellectually, I can imagine that the real Peter Wiggin was probably not cruel at all. He was learning and studying. He didn't have compassion for the squirrel because he didn't sentimentalize it. It was simply an animal. No more important than a head of lettuce. To cut it up was probably as immoral an act as making a salad. But that's not how Ender imagined it, and so that's not how I remember it."

"How do you remember it?"

"The way I remember all my supposed memories. From the outside. Watching myself in horrified fascination as I take a fiendish delight in cruelty. All my memories prior to the moment I came to life on Ender's little voyage Outside, in all of them I see myself through someone else's eyes. A very odd feeling, I assure you."

"But now?"

"Now I don't see myself at all," he said. "Because I have no self. I am not myself."

"But you remember. You have memories. Of this conversation, already you remember it. Looking at me. You must, surely."

"Yes," he said. "I remember you. And I remember being here and seeing you. But there isn't any self behind my eyes. I feel tired and stupid even when I'm being my most clever and brilliant."

He smiled a charming smile and now Wang-mu could see again the true difference between Peter and the hologram of the Hegemon. It was as he said: Even at his most self-deprecating, this Peter

Wiggin had eyes that flashed with inner rage. He was dangerous. You could see it looking at him. When he looked into your eyes, you could imagine him planning how and when you would die.

"I am not myself," said Peter.

"You are saying this to control yourself," said Wang-mu, guessing but also sure she was right. "This is your incantation, to stop yourself from doing what you desire."

Peter sighed and leaned over, laying his head down on the terminal, his ear pressed against the cold plastic surface.

"What is it you desire?" she said, fearful of the answer.

"Go away," he said.

"Where can I go? This great starship of yours has only one room."

"Open the door and go outside," he said.

"You mean to kill me? To eject me into space where I'll freeze before I have time to suffocate?"

He sat up and looked at her in puzzlement. "Space?"

His confusion confused her. Where else would they be but in space? That's where starships went, through space.

Except this one, of course.

As he saw understanding come to her, he laughed aloud. "Oh, yes, you're the brilliant one, they've remade the entire world of Path to have your genius!"

She refused to be goaded.

"I thought there would be some sensation of movement. Or something. Have we traveled, then? Are we already there?"

"In the twinkling of an eye. We were Outside and then back Inside at another place, all so fast that only a computer could experience our voyage as having any duration at all. Jane did it before I finished talking to her. Before I said a word to you."

"Then where are we? What's outside the door?"

"We're sitting in the woods somewhere on the planet Divine Wind. The air is breathable. You won't freeze. It's summer outside the door."

She walked to the door and pulled down the handle, releasing the airtight seal. The door eased open. Sunlight streamed into the room.

"Divine Wind," she said. "I read about it-- it was founded as a Shinto world the way Path was supposed to be Taoist. The purity of ancient Japanese culture. But I think it's not so very pure these days."

"More to the point, it's the world where Andrew and Jane and I felt-- if one can speak of my having feelings apart from Ender's own-- the world where we might find the center of power in the worlds ruled by Congress. The true decision makers. The power behind the throne."

"So you can subvert them and take over the human race?"

"So I can stop the Lusitania Fleet. Taking over the human race is a bit later on the agenda. The Lusitania Fleet is something of an emergency. We have only a few weeks to stop it before the fleet gets there and uses the Little Doctor, the M.D. Device, to blow Lusitania into its constituent elements. In the meantime, because Ender and everyone else expects me to fail, they're building these little tin can starships as fast as possible and transporting as many Lusitanians as they can-- humans, piggies, and buggers-- to other habitable but as yet uninhabited planets. My dear sister Valentine-- the young one-- is off with Miro-- in his fresh new body, the dear lad-- searching out new worlds as fast as their little starship can carry them. Quite a project. All of them betting on my-- on our-- failure. Let's disappoint them, shall we?"

"Disappoint them?"

"By succeeding. Let's succeed. Let's find the center of power among humankind, and let's persuade them to stop the fleet before it needlessly destroys a world."

Wang-mu looked at him doubtfully. Persuade them to stop the fleet? This nasty-minded, cruel-hearted boy? How could he persuade anyone of anything?

As if he could hear her thoughts, he answered her silent doubt. "You see why I invited you to come along with me. When Ender was inventing me, he forgot the fact that he never knew me during the time in my life when I was persuading people and gathering them together in shifting alliances and all that nonsense. So the Peter Wiggin he created is far too nasty, openly ambitious, and nakedly cruel to persuade a man with rectal itch to scratch his own butt."

She looked away from him again.

"You see?" he said. "I offend you again and again. Look at me. Do you see my dilemma? The real Peter, the original one, he could have done the work I've been sent to do. He could have done it in his sleep. He'd already have a plan. He'd be able to win people over, soothe them, insinuate himself into their councils. That Peter Wiggin! He can charm the stings out of bees. But can I? I doubt it. For, you see, I'm not myself."

He got up from his chair, roughly pushed his way past her, and stepped outside onto the meadow that surrounded the little metal cabin that had carried them from world to world. Wang-mu stood in the doorway, watching him as he wandered away from the ship; away, but not too far.

I know something of how he feels, she thought. I know something of having to submerge your will in someone else's. To live for them, as if they were the star of the story of your life, and you merely a supporting player. I have been a slave. But at least in all that time I knew my own heart. I knew what I truly thought even as I did what they wanted, whatever it took to get what I wanted from them. Peter Wiggin, though, has no idea of what he really wants, because even his resentment of his lack of freedom isn't his own, even that comes from Andrew Wiggin. Even his self-loathing is Andrew's self-loathing, and ...

And back and back, in circles, like the random path he was tracing through the meadow.

Wang-mu thought of her mistress-- no, her former mistress-- Qing-jao. She also traced strange patterns. It was what the gods forced her to do. No, that's the old way of thinking. It's what her obsessive-compulsive disorder caused her to do. To kneel on the floor and trace the grain of the wood in each board, trace a single line of it as far as it went across the floor, line after line. It never meant anything, and yet she had to do it because only by such meaningless mind-numbing obedience could she win a scrap of freedom from the impulses controlling her. It is Qing-jao who was always the slave, and never me. For the master that ruled her controlled her from inside her own mind. While I could always see my master outside me, so my inmost self was never touched.

Peter Wiggin knows that he is ruled by the unconscious fears and passions of a complicated man many light-years away. But then, Qing-jao thought her obsessions came from the gods. What does it matter, to tell yourself that the thing controlling you comes from outside, if in fact you only experience it inside your own heart? Where can you run from it? How can you hide? Qing-jao must be free by now, freed by the carrier virus that Peter brought with him to Path and put into the hands of Han Fei-tzu. But Peter-- what freedom can there be for him?

And yet he must still live as if he were free. He must still struggle for freedom even if the struggle itself is just one more symptom of his slavery. There is a part of him that yearns to be himself. No, not himself. A self.

So what is my part in all of this? Am I supposed to work a miracle, and give him an aiua? That isn't in my power.

And yet I do have power, she thought.

She must have power, or why else had he spoken to her so openly? A total stranger, and he had opened his heart to her at once. Why? Because she was in on the secrets, yes, but something else as well.

Ah, of course. He could speak freely to her because she had never known Andrew Wiggin. Maybe Peter was nothing but an aspect of Ender's nature, all that Ender feared and loathed about himself.

But she could never compare the two of them. Whatever Peter was, whoever controlled him, she was his confidante.

Which made her, once again, someone's servant. She had been Qing-jao's confidante, too.

She shuddered, as if to shake from her the sad comparison. No, she told herself. It is not the same thing. Because that young man wandering so aimlessly among the wildflowers has no power over me, except to tell me of his pain and hope for my understanding. Whatever I give to him I will give freely.

She closed her eyes and leaned her head against the frame of the door. I will give it freely, yes, she thought. But what am I planning to give him? Why, exactly what he wants-- my loyalty, my devotion, my help in all his tasks. To submerge myself in him. And why am I already planning to do all this? Because however he might doubt himself, he has the power to win people to his cause.

She opened her eyes again and strode out into the hip-high grass toward him. He saw her and waited wordlessly as she approached. Bees buzzed around her; butterflies staggered drunkenly through the air, avoiding her somehow in their seemingly random flight. At the last moment she reached out and gathered a bee from a blossom into her hand, into her fist, but then quickly, before it could sting her, she lobbed it into Peter's face.

Flustered, surprised, he batted away the infuriated bee, ducked under it, dodged, and finally ran a few steps before it lost track of him and buzzed its way out among the flowers again. Only then could he turn furiously to face her.

"What was that for!"

She giggled at him-- she couldn't help it. He had looked so funny.

"Oh, good, laugh. I can see you're going to be fine company."

"Be angry, I don't care," said Wang-mu. "I'll just tell you this. Do you think that away off on Lusitania, Ender's aiaa suddenly thought, 'Ho, a bee!' and made you brush at it and dodge it like a clown?"

He rolled his eyes. "Oh, aren't you clever. Well gosh, Miss Royal Mother of the West, you sure solved all my problems! I can see I must always have been a real boy! And these ruby shoes, why, they've had the power to take me back to Kansas all along!"

"What's Kansas?" she asked, looking down at his shoes, which were not red.

"Just another memory of Ender's that he kindly shared with me," said Peter Wiggin.

He stood there, his hands in his pockets, regarding her.

She stood just as silently, her hands clasped in front of her, regarding him right back.

"So are you with me?" he finally asked.

"You must try not to be nasty with me," she said.

"Take that up with Ender."

"I don't care whose aiua controls you," she said. "You still have your own thoughts, which are different from his-- you feared the bee, and he didn't even think of a bee right then, and you know it. So whatever part of you is in control or whoever the real 'you' happens to be, right there on the front of your head is the mouth that's going to be speaking to me, and I'm telling you that if I'm going to work with you, you better be nice to me."

"Does this mean no more bee fights?" he asked.

"Yes," she said.

"That's just as well. With my luck Ender no doubt gave me a body that goes into shock when I'm stung by a bee."

"It can also be pretty hard on the bee," she said.

He grinned at her. "I find myself liking you," he said. "I really hate that."

He strode off toward the starship. "Come on!" he called out to her. "Let's see what information Jane can give us about this world we're supposed to take by storm."

## Chapter 2 -- "YOU DON'T BELIEVE IN GOD!"

"When I follow the path of the gods through the wood,  
My eyes take every twisting turn of the grain,  
But my body moves straight along the planking,  
So those who watch me see that the path of the gods is straight,  
While I dwell in a world with no straightness in it."

-- from The God Whispers of Han Qing-jao

Novinha would not come to him. The gentle old teacher looked genuinely distressed as she told Ender. "She wasn't angry," the old teacher explained. "She told me that ..."

Ender nodded, understanding how the teacher was torn between compassion and honesty. "You can tell me her words," he said. "She is my wife, so I can bear it."

The old teacher rolled her eyes. "I'm married too, you know."

Of course he knew. All the members of the Order of the Children of the Mind of Christ-- Os Filhos da Mente de Cristo-- were married. It was their rule.

"I'm married, so I know perfectly well that your spouse is the one person who knows all the words you can't bear to hear."

"Then let me correct myself," said Ender mildly. "She is my wife, so I am determined to hear it, whether I can bear it or not."

"She says that she has to finish the weeding, so she has no time for lesser battles."

Yes, that sounded like Novinha. She might tell herself that she had taken the mantle of Christ upon her, but if so it was the Christ who denounced the Pharisees, the Christ who said all those cruel and sarcastic things to his enemies and his friends alike, not the gentle one with infinite patience.

Still, Ender was not one to go away merely because his feelings were hurt. "Then what are we waiting for?" asked Ender. "Show me where I can find a hoe."

The old teacher stared at him for a long moment, then smiled and led him out into the gardens. Soon, wearing work gloves and carrying a hoe in one hand, he stood at the end of the row where Novinha worked, bent over in the sunlight, her eyes on the ground before her as she cut under the root of weed after weed, turning each one up to bum to death in the hot dry sun. She was coming toward him.

Ender stepped to the unweeded row beside the one Novinha worked on, and began to hoe toward her. They would not meet, but they would pass close to each other. She would notice him or not. She would speak to him or not. She still loved and needed him. Or not. But no matter what, at the end of this day he would have weeded in the same field as his wife, and her work would have been more easily done because he was there, and so he would still be her husband, however little she might now want him in that role.

The first time they passed each other, she did not so much as look up. But then she would not have to. She would know without looking that the one who joined her in weeding so soon after she refused to meet with her husband would have to be her husband. He knew that she would know this, and he also knew she was too proud to look at him and show that she wanted to see him again. She would study the weeds until she went half blind, because Novinha was not one to bend to anyone else's will.

Except, of course, the will of Jesus. That was the message she had sent him, the message that had brought him here, determined to talk to her. A brief note couched in the language of the Church.

She was separating herself from him to serve Christ among the Filhos. She felt herself called to this work. He was to regard himself as having no further responsibility toward her, and to expect nothing more from her than she would gladly give to any of the children of God. It was a cold message, for all the gentleness of its phrasing.

Ender was not one to bend easily to another's will, either. Instead of obeying the message, he came here, determined to do the opposite of what she asked. And why not? Novinha had a terrible record as a decision maker. Whenever she decided to do something for someone else's good, she ended up inadvertently destroying them. Like Libo, her childhood friend and secret lover, the father of all her children during her marriage to the violent but sterile man who had been her husband until he died. Fearing that he would die at the hands of the pequeninos, the way his father had died, Novinha withheld from him her vital discoveries about the biology of the planet Lusitania, fearing that the knowledge of it would kill him. Instead, it was the ignorance of that very information that led him to his death. What she did for his own good, without his knowledge, killed him.

You'd think she'd learn something from that, thought Ender. But she still does the same thing. Making decisions that deform other people's lives, without consulting them, without ever conceiving that perhaps they don't want her to save them from whatever supposed misery she's saving them from.

Then again, if she had simply married Libo in the first place and told him everything she knew, he would probably still be alive and Ender would never have married his widow and helped her raise her younger children. It was the only family Ender had ever had or was ever likely to have. So bad as Novinha's decisions tended to be, the happiest time of his life had come about only because of one of the most deadly of her mistakes.

On their second pass, Ender saw that she still, stubbornly, was not going to speak to him, and so, as always, he bent first and broke the silence between them.

"The Filhos are married, you know. It's a married order. You can't become a full member without me."

She paused in her work. The blade of the hoe rested on unbroken soil, the handle light in her gloved fingers. "I can weed the beets without you," she finally said.

His heart leapt with relief that he had penetrated her veil of silence. "No you can't," he said. "Because here I am."

"These are the potatoes," she said. "I can't stop you from helping with the potatoes."

In spite of themselves they both laughed, and with a groan she unbent her back, stood straight, let the hoe handle fall to the ground, and took Ender's hands in hers, a touch that thrilled him despite two layers of thick workglove cloth between their palms and fingers.

"If I do profane with my touch," Ender began.

"No Shakespeare," she said. "No 'lips two blushing pilgrims ready stand.'"

"I miss you," he said.

"Get over it," she said.

"I don't have to. If you're joining the Filhos, so am I."

She laughed.

Ender didn't appreciate her scorn. "If a xenobiologist can retreat from the world of meaningless suffering, why can't an old retired speaker for the dead?"

"Andrew," she said, "I'm not here because I've given up on life. I'm here because I really have turned my heart over to the Redeemer. You could never do that. You don't belong here."

"I belong here if you belong here. We made a vow. A sacred one, that the Holy Church won't let us set aside. In case you forgot."

She sighed and looked out at the sky over the wall of the monastery. Beyond the wall, through meadows, over a fence, up a hill, into the woods ... that's where the great love of her life, Libo, had gone, and where he died. Where Pipo, his father, who was like a father to her as well, where he had gone before, and also died. It was into another wood that her son Estevao had gone, and also died, but Ender knew, watching her, that when she saw the world outside these walls, it was all those deaths she saw. Two of them had taken place before Ender got to Lusitania. But the death of Estevao-- she had begged Ender to stop him from going to the dangerous place where pequeninos were talking of war, of killing humans. She knew as well as Ender did that to stop Estevao would have been the same as to destroy him, for he had not become a priest to be safe, but rather to try to carry the message of Christ to these tree people. Whatever joy came to the early Christian martyrs had surely come to Estevao as he slowly died in the embrace of a murderous tree. Whatever comfort God sent to them in their hour of supreme sacrifice. But no such joy had come to Novinha. God apparently did not extend the benefits of his service to the next of kin. And in her grief and rage she blamed Ender. Why had she married him, if not to make herself safe from these disasters?

He had never said to her the most obvious thing, that if there was anyone to blame, it was God, not him. After all, it was God who had made saints-- well, almost saints-- out of her parents, who died as they discovered the antidote to the descolada virus when she was only a child. Certainly it was God who led Estevao out to preach to the most dangerous of the pequeninos. Yet in her sorrow it was God she turned to, and turned away from Ender, who had meant to do nothing but good for her.

He never said this because he knew that she would not listen. And he also refrained from saying it because he knew she saw things another way. If God took Father and Mother, Pipo, Libo, and finally Estevao away from her, it was because God was just and punished her for her sins. But when Ender failed to stop Estevao from his suicidal mission to the pequeninos, it was because he was blind, self-willed, stubborn, and rebellious, and because he did not love her enough.

But he did love her. With all his heart he loved her.

All his heart?

All of it he knew about. And yet when his deepest secrets were revealed in that first voyage Outside, it was not Novinha that his heart conjured there. So apparently there was someone who mattered even more to him.

Well, he couldn't help what went on in his unconscious mind, any more than Novinha could. All he could control was what he actually did, and what he was doing now was showing Novinha that regardless of how she tried to drive him away, he would not be driven. That no matter how much she imagined that he loved Jane and his involvement in the great affairs of the human race more than he loved her, it was not true, she was more important to him than any of it. He would give it all up for her. He would disappear behind monastery walls for her. He would weed rows of unidentified plant life in the hot sun. For her.

But even that was not enough. She insisted that he do it, not for her, but for Christ. Well, too bad. He wasn't married to Christ, and neither was she. Still, it couldn't be displeasing to God when a husband and wife gave all to each other. Surely that was part of what God expected of human beings.

"You know I don't blame you for the death of Quim," she said, using the old family nickname for Estevao.

"I didn't know that," he said, "but I'm glad to find it out."

"I did at first, but I knew all along that it was irrational," she said. "He went because he wanted to, and he was much too old for some interfering parent to stop him. If I couldn't, how could you?"

"I didn't even want to," said Ender. "I wanted him to go. It was the fulfillment of his life's ambition."

"I even know that now. It's right. It was right for him to go, and it was even right for him to die, because his death meant something. Didn't it?"

"It saved Lusitania from a holocaust."

"And brought many to Christ." She laughed, the old laugh, the rich ironic laugh that he had come to treasure if only because it was so rare. "Trees for Jesus," she said. "Who could have guessed?"

"They're already calling him St. Stephen of the Trees."

"That's quite premature. It takes time. He must first be beatified. Miracles of healing must take place at his tomb. Believe me, I know the process."

"Martyrs are thin on the ground these days," said Ender. "He will be beatified. He will be canonized. People will pray for him to intercede with Jesus for them, and it will work, because if anyone has earned the right to have Christ hear him, it's your son Estevao."

Tears slipped down her cheeks, even as she laughed again. "My parents were martyrs and will be saints; my son, also. Piety skipped a generation."

"Oh, yes. Yours was the generation of selfish hedonism."

She finally turned to face him, tear-streaked dirty cheeks, smiling face, twinkling eyes that saw through into his heart. The woman he loved.

"I don't regret my adultery," she said. "How can Christ forgive me when I don't even repent? If I hadn't slept with Libo, my children would not have existed. Surely God does not disapprove of that?"

"I believe what Jesus said was, 'I the Lord will forgive whom I will forgive. But of you it is required that you forgive all men.'"

"More or less," she said. "I'm not a scriptionist." She reached out and touched his cheek. "You're so strong, Ender. But you seem tired. How can you be tired? The universe of human beings still depends on you. Or if not the whole of humankind, then certainly you belong to this world. To save this world. But you're tired."

"Deep inside my bones I am," he said. "And you have taken my last lifeblood away from me."

"How odd," she said. "I thought what I removed from you was the cancer in your life."

"You aren't very good at determining what other people want and need from you, Novinha. No one is. We're all as likely to hurt as help."

"That's why I came here, Ender. I'm through deciding things. I put my trust in my own judgment. Then I put trust in you. I put trust in Libo, in Pipo, in Father and Mother, in Quim, and everyone disappointed me or went away or ... no, I know you didn't go away, and I know it wasn't you that-- hear me out, Andrew, hear me. The problem wasn't in the people I trusted, the problem was that I trusted in them when no human being can possibly deliver what I needed. I needed deliverance, you see. I needed, I need, redemption. And it isn't in your hands to give me-- your open hands, which give me more than you even have to give, Andrew, but still you haven't got the thing I need. Only my Deliverer, only the Anointed One, only he has it to give. Do you see? The only way I can make my life worth living is to give it to him. So here I am."

"Weeding."

"Separating the good fruit from the tares, I believe," she said. "People will have more and better potatoes because I took out the weeds. I don't have to be prominent or even noticed to feel good

about my life now. But you, you come here and remind me that even in becoming happy, I'm hurting someone."

"But you're not," said Ender. "Because I'm coming with you. I'm joining the Filhos with you. They're a married order, and we're a married couple. Without me you can't join, and you need to join. With me you can. What could be simpler?"

"Simpler?" She shook her head. "You don't believe in God, how's that for starters?"

"I certainly do too believe in God," said Ender, annoyed.

"Oh, you're willing to concede God's existence, but that's not what I meant. I mean believe in him the way a mother means it when she says to her son, I believe in you. She's not saying she believes that he exists-- what is that worth? --she's saying she believes in his future, she trusts that he'll do all the good that is in him to do. She puts the future in his hands, that's how she believes in him. You don't believe in Christ that way, Andrew. You still believe in yourself. In other people. You've sent out your little surrogates, those children you conjured up during your visit in hell-- you may be here with me in these walls right now, but your heart is out there scouting planets and trying to stop the fleet. You aren't leaving anything up to God. You don't believe in him."

"Excuse me, but if God wanted to do everything himself, what did he make us for in the first place?"

"Yes, well, I seem to recall that one of your parents was a heretic, which is no doubt where your strangest ideas come from." It was an old joke between them, but this time neither of them laughed.

"I believe in you," Ender said.

"But you consult with Jane."

He reached into his pocket, then held out his hand to show her what he had found there. It was a jewel, with several very fine wires leading from it. Like a glowing organism ripped from its delicate place amid the fronds of life in a shallow sea. She looked at it for a moment uncomprehending, then realized what it was and looked at the ear where, for all the years she had known him, he had worn the jewel that linked him to Jane, the computer-program-come-to-life who was his oldest, dearest, most reliable friend.

"Andrew, no, not for me, surely."

"I can't honestly say these walls contain me, as long as Jane was there to whisper in my ear," he said. "I talked it out with her. I explained it. She understands. We're still friends. But not companions anymore."

"Oh, Andrew," said Novinha. She wept openly now, and held him, clung to him. "If only you had done it years ago, even months ago."

"Maybe I don't believe in Christ the way that you do," said Ender. "But isn't it enough that I believe in you, and you believe in him?"

"You don't belong here, Andrew."

"I belong here more than anywhere else, if this is where you are. I'm not so much world-weary, Novinha, as I am will-weary. I'm tired of deciding things. I'm tired of trying to solve things."

"We try to solve things here," she said, pulling away from him.

"But here we can be, not the mind, but the children of the mind. We can be the hands and feet, the lips and tongue. We can carry out and not decide." He squatted, knelt, then sat in the dirt, the young plants brushing and tickling him on either side. He put his dirty hands to his face and wiped his brow with them, knowing that he was only smearing dirt into mud.

"Oh, I almost believe this, Andrew, you're so good at it," said Novinha. "What, you've decided to stop being the hero of your own saga? Or is this just a ploy? Be the servant of all, so you can be the greatest among us?"

"You know I've never tried for greatness, or achieved it, either."

"Oh, Andrew, you're such a storyteller that you believe your own fables."

Ender looked up at her. "Please, Novinha, let me live with you here. You're my wife. There's no meaning to my life if I've lost you."

"We live as man and wife here, but we don't ... you know that we don't ..."

"I know that the Filhos forswear sexual intercourse," said Ender. "I'm your husband. As long as I'm not having sex with anyone, it might as well be you that I'm not having sex with." He smiled wryly.

Her answering smile was only sad and pitying.

"Novinha," he said. "I'm not interested in my own life anymore. Do you understand? The only life I care about in this world is yours. If I lose you, what is there to hold me here?"

He wasn't sure what he meant by this himself. The words had come unbidden to his lips. But he knew as he said them that it was not self-pity, but rather a frank admission of the truth. Not that he was thinking of suicide or exile or any other such low drama. Rather he felt himself fading. Losing his hold. Lusitania seemed less and less real to him. Valentine was still there, his dear sister and friend, and she was like a rock, her life was so real, but it was not real to him because she didn't need him. Plikt, his unasked-for disciple, she might need Ender, but not the reality of him, only the idea of him. And who else was there? The children of Novinha and Libo, the children that he had raised as his own, and loved as his own, he loved them no less now, but they were adults, they didn't need him. Jane, who once had been virtually destroyed by an hour of his inattention, she no

longer needed him either, for she was there in the jewel in Miro's ear, and in another jewel in Peter's ear ...

Peter. Young Valentine. Where had they come from? They had stolen his soul and taken it with them when they left. They were doing the living acts that once he would have done himself. While he waited here in Lusitania and ... faded. That's what he meant. If he lost Novinha, what would tie him to this body that he had carried around the universe for all these thousands of years?

"It's not my decision," Novinha said.

"It's your decision," said Ender, "whether you want me with you, as one of the Filhos da Mente de Cristo. If you do, then I believe I can make my way through all the other obstacles."

She laughed nastily. "Obstacles? Men like you don't have obstacles. Just steppingstones."

"Men like me?"

"Yes, men like you," said Novinha. "Just because I've never met any others. Just because no matter how much I loved Libo he was never for one day as alive as you are in every minute. Just because I found myself loving as an adult for the first time when I loved you. Just because I have missed you more than I miss even my children, even my parents, even the lost loves of my life. Just because I can't dream of anyone but you, that doesn't mean that there isn't somebody else just like you somewhere else. The universe is a big place. You can't be all that special, really. Can you?"

He reached through the potato plants and leaned a hand gently on her thigh. "You do still love me, then?" he asked.

"Oh, is that what you came for? To find out if I love you?"

He nodded. "Partly."

"I do," she said.

"Then I can stay?"

She burst into tears. Loud weeping. She sank to the ground; he reached through the plants to embrace her, to hold her, caring nothing for the leaves he crushed between them. After he held her for a long while, she broke off her crying and turned to him and held him at least as tightly as he had been holding her.

"Oh, Andrew," she whispered, her voice cracking and breaking from having wept so much. "Does God love me enough to give you to me now, again, when I need you so much?"

"Until I die," said Ender.

"I know that part," she said. "But I pray that God will let me die first this time."

### Chapter 3 -- "THERE ARE TOO MANY OF US"

"Let me tell you the most beautiful story I know.

A man was given a dog, which he loved very much.

The dog went with him everywhere,

but the man could not teach it to do anything useful.

The dog would not fetch or point,

it would not race or protect or stand watch.

Instead the dog sat near him and regarded him,

always with the same inscrutable expression.

'That's not a dog, it's a wolf,' said the man's wife.

'He alone is faithful to me,' said the man,

and his wife never discussed it with him again.

One day the man took his dog with him into his private airplane

and as they flew over high winter mountains,

the engines failed

and the airplane was torn to shreds among the trees.

The man lay bleeding,

his belly torn open by blades of sheared metal,

steam rising from his organs in the cold air,

but all he could think of was his faithful dog.

Was he alive? Was he hurt?

Imagine his relief when the dog came padding up  
and regarded him with that same steady gaze.

After an hour the dog nosed the man's gaping abdomen,  
then began pulling out intestines and spleen and liver  
and gnawing on them, all the while studying the man's face.

'Thank God,' said the man.

'At least one of us will not starve.'

-- from *The God Whispers* of Han Qing-lao

Of all the faster-than-light starships that were flitting Outside and back In under Jane's command, only Miro's looked like an ordinary spacecraft, for the good reason that it was nothing more than the shuttle that had once taken passengers and cargo to and from the great starships that came to orbit around Lusitania. Now that the new starships could go immediately from one planet's surface to another's, there was no need for life support or even fuel, and since Jane had to hold the entire structure of each craft in her memory, the simpler they were the better. Indeed, they could hardly be called vehicles anymore. They were simple cabins now, windowless, almost unfurnished, bare as a primitive schoolroom. The people of Lusitania referred to space travel now as *encaixarse*, which was Portuguese for "going into the box," or, more literally, "to box oneself up."

Miro, however, was exploring, searching for new planets capable of sustaining the lives of the three sentient species, humans, *pequeninos*, and hive queens. For this he needed a more traditional spacecraft, for though he still went from planet to planet by way of Jane's instant detour through the Outside, he could not usually count on arriving at a world where he could breathe the air. Indeed, Jane always started him out in orbit high above each new planet, so he could observe, measure, analyze, and only land on the most promising ones to make the final determination of whether the world was usable.

He did not travel alone. It would have been too much for one person to accomplish, and he needed everything he did to be doublechecked. Yet of all the work being done by anyone on Lusitania, this was the most dangerous, for he never knew when he cracked open the door of his spaceship whether there would be some unforeseeable menace on the new world. Miro, had long regarded his own life as expendable. For several long years trapped in a brain-damaged body he had wished for death; then, when his first trip Outside enabled him to recreate his body in the perfection of youth, he regarded any moment, any hour, any day of his life as an undeserved gift. He would not waste it, but he would not shrink from putting it at risk for the good of others. But who else could share his easy self-disregard?

Young Valentine was made to order, in every sense, it seemed. Miro had seen her come into existence at the same time as his own new body. She had no past, no kin, no links to any world except through Ender, whose mind had created her, and Peter, her fellow makeling. Oh, and perhaps one might consider her to be linked to the original Valentine, "the real Valentine," as Young Val called her; but it was no secret that Old Valentine had no desire to spend even a moment in the company of this young beauty who mocked her by her very existence. Besides, Young Val was created as Ender's image of perfect virtue. Not only was she unconnected, but also she was genuinely altruistic and quite willing to sacrifice herself for the good of others. So whenever Miro stepped into the shuttle, there was Young Val as his companion, his reliable assistant, his constant backup.

But not his friend. For Miro knew perfectly well who Val really was: Ender in disguise. Not a woman. And her love and loyalty to him were Ender's love and loyalty, often tested, well-trusted, but Ender's, not her own. There was nothing of her own in her. So while Miro had become used to her company, and laughed and joked with her more easily than with anyone in his life till now, he did not confide in her, did not allow himself to feel affection any deeper than camaraderie for her. If she noticed the lack of connection between them she said nothing; if it hurt her, the pain never showed.

What showed was her delight in their successes and her insistence that they push themselves ever harder. "We don't have a whole day to spend on any world," she said right from the start, and proved it by holding them to a schedule that let them make three voyages in a day. They came home after each three voyages to a Lusitania already quiet with sleep; they slept on the ship and spoke to others only to warn them of particular problems the colonists were likely to face on whatever new worlds had been found that day. And the three-a-day schedule was only on days when they dealt with likely planets. When Jane took them to worlds that were obvious losers--waterbound, for instance, or unbiotized-- they moved on quickly, checking the next candidate world, and the next, sometimes five and six on those discouraging days when nothing seemed to work. Young Val pushed them both on to the edge of their endurance, day after day, and Miro accepted her leadership in this aspect of their voyaging because he knew that it was necessary.

His friend, however, had no human shape. For him she dwelt in the jewel in his ear. Jane, the whisper in his mind when he first woke up, the friend who heard everything he subvocalized, who knew his needs before he noticed them himself Jane, who shared all his thoughts and dreams, who had stayed with him through the worst of his cripplehood, who had led him Outside to where he could be renewed. Jane, his truest friend, who would soon die.

That was their real deadline. Jane would die, and then this instant starflight would be at an end, for there was no other being that had the sheer mental power to take anything more complicated than a rubber ball Outside and back In again. And Jane's death would come, not by any natural cause, but because the Starways Congress, having discovered the existence of a subversive program that could control or at least access any and all of their computers, was systematically closing down, disconnecting, and sweeping out all their networks. Already she was feeling the injury of those systems that had been taken offline to where she could not access them. Someday soon the codes would be transmitted that would undo her utterly and all at once. And when she was gone, anyone

who had not been taken from the surface of Lusitania and transplanted to another world would be trapped, waiting helplessly for the arrival of the Lusitania Fleet, which was coming ever closer, determined to destroy them all.

A grim business, this, in which despite all of Miro's efforts, his dearest friend would die. Which, he knew full well, was part of why he did not let himself become a true friend to Young Val-- because it would be disloyal to Jane to learn affection for anyone else during the last weeks or days of her life.

So Miro's life was an endless routine of work, of concentrated mental effort, studying the findings of the shuttle's instruments, analyzing aerial photographs, piloting the shuttle to unsafe, unscouted landing zones, and finally-- not often enough-- opening the door and breathing alien air. And at the end of each voyage, no time either to mourn or rejoice, no time even to rest: he closed the door, spoke the word, and Jane took them home again to Lusitania, to start it all over again.

On this homecoming, however, something was different. Miro opened the door of the shuttle to find, not his adoptive father Ender, not the pequeninos who prepared food for him and Young Val, not the normal colony leaders wanting a briefing, but rather his brothers Olhado and Grego, and his sister Elanora, and Ender's sister Valentine. Old Valentine, come herself to the one place where she was sure to meet her unwelcome young twin? Miro saw at once how Young Val and Old Valentine glanced at each other, eyes not really meeting, and then looked away, not wanting to see each other. Or was that it? Young Val was more likely looking away from Old Valentine because she virtuously wanted to avoid giving offense to the older woman. No doubt if she could do it Young Val would willingly disappear rather than cause Old Valentine a moment's pain. And, since that was not possible, she would do the next best thing, which was to remain as unobtrusive as possible when Old Valentine was present.

"What's the meeting?" asked Miro. "Is Mother ill?"

"No, no, everybody's in good health," said Olhado.

"Except mentally," said Grego. "Mother's as mad as a hatter, and now Ender's crazy too."

Miro nodded, grimaced. "Let me guess. He joined her among the Filhos."

Immediately Grego and Olhado looked at the jewel in Miro's ear.

"No, Jane didn't tell me," said Miro. "I just know Ender. He takes his marriage very seriously."

"Yes, well, it's left something of a leadership vacuum here," said Olhado. "Not that everybody isn't doing their job just fine. I mean, the system works and all that. But Ender was the one we all looked to to tell us what to do when the system stops working. If you know what I mean."

"I know what you mean," said Miro. "And you can speak of it in front of Jane. She knows she's going to be shut down as soon as Starways Congress gets their plans in place."

"It's more complicated than that," said Grego. "Most people don't know about the danger to Jane-- for that matter, most don't even know she exists. But they can do the arithmetic to figure out that even going full tilt, there's no way to get all the humans off Lusitania before the fleet gets here. Let alone the pequeninos. So they know that unless the fleet is stopped, somebody is going to be left here to die. There are already those who say that we've wasted enough starship space on trees and bugs."

"Trees" referred, of course, to the pequeninos, who were not, in fact, transporting fathertrees and mothertrees; and "bugs" referred to the Hive Queen, who was also not wasting space sending a lot of workers. But every world they were settling did have a large contingent of pequeninos and at least one hive queen and a handful of workers to help her get started. Never mind that it was the hive queen on every world that quickly produced workers who were doing the bulk of the labor getting agriculture started; never mind that because they were not taking trees with them, at least one male and female in every group of pequeninos had to be "planted" --had to die slowly and painfully so that a fathertree and mothertree could take root and maintain the cycle of pequenino life. They all knew-- Grego more than any other, since he'd recently been in the thick of it that under the polite surface was an undercurrent of competition between species.

And it was not just among the humans, either. While on Lusitania the pequeninos still outnumbered humans by vast numbers, on the new colonies the humans predominated. "It's your fleet coming to destroy Lusitania," said Human, the leader of the fathertrees these days. "And even if every human on Lusitania died, the human race would continue. While for the Hive Queen and for us, it is nothing less than the survival of our species that is at stake. And yet we understand that we must let humans dominate for a time on these new worlds, because of your knowledge of skills and technologies we have not yet mastered, because of your practice at subduing new worlds, and because you still have the power to set fires to burn our forests." What Human said so reasonably, his resentment couched in polite language, many other pequeninos and fathertrees said more passionately: "Why should we let these human invaders, who brought all this evil upon us, save almost all their population, while most of us will die?"

"Resentment between the species is nothing new," said Miro.

"But until now we had Ender to contain it," said Grego. "Pequeninos, the Hive Queen, and most of the human population saw Ender as a fair broker, someone they could trust. They knew that as long as he was in charge of things, as long as his voice was heard, their interests would be protected."

"Ender isn't the only good person leading this exodus," said Miro.

"It's a matter of trust, not of virtue," said Valentine. "The nonhumans know that Ender is the Speaker for the Dead. No other human has ever spoken for another species that way. And yet the humans know that Ender is the Xenocide-- that when the human race was threatened by an enemy countless generations ago, he was the one who acted to stop them and save humanity from, as they feared, annihilation. There isn't exactly a candidate with equivalent qualifications ready to step into Ender's role."

"What's that to me?" asked Miro bluntly. "Nobody listens to me here. I have no connections. I certainly can't take Ender's place either, and right now I'm tired and I need to sleep. Look at Young Val, she's half-dead with weariness, too."

It was true; she was barely able to stand. Miro at once reached out to support her; she gratefully leaned against his shoulder.

"We don't want you to take Ender's place," said Olhado. "We don't want anybody to take his place. We want him to take his place."

Miro laughed. "You think I can persuade him? You've got his sister right there! Send her!"

Old Valentine grimaced. "Miro, he won't see me."

"Then what makes you think he'll see me?"

"Not you, Miro. Jane. The jewel in your ear."

Miro looked at them in bafflement. "You mean Ender has removed his jewel?"

In his ear, he heard Jane say, "I've been busy. I didn't think it was important to mention it to you."

But Miro knew how it had devastated Jane before, when Ender cut her off. Now she had other friends, yes, but that didn't mean it would be painless.

Old Valentine continued. "If you can go to him and get him to talk to Jane ..."

Miro shook his head. "Taking out the jewel-- don't you see that that was final? He's committed himself to following Mother into exile. Ender doesn't back away from his commitments."

They all knew it was true. Knew, in fact, that they had really come to Miro, not with the real hope that he would accomplish what they needed, but as a last feeble act of desperation. "So we let things wind down," said Grego. "We let things slide into chaos. And then, beset by interspecies war, we will die in shame when the fleet comes. Jane's lucky, I think; she'll already be dead when it gets here."

"Tell him thanks," Jane said to Miro.

"Jane says thanks," said Miro. "You're just too soft-hearted, Grego. "

Grego blushed, but he didn't take back what he said.

"Ender isn't God," said Miro. "We'll just do our best without him. But right now the best thing I can do is--"

"Sleep, we know," said Old Valentine. "Not on the ship this time, though. Please. It makes us sick at heart to see how weary you both are. Jakt has brought the taxi. Come home and sleep in a bed."

Miro glanced at Young Val, who still leaned sleepily on his shoulder.

"Both of you, of course," said Old Valentine. "I'm not as distressed by her existence as you all seem to think."

"Of course you're not," said Young Val. She reached out a weary arm, and the two women who bore the same name took each other's hand. Miro watched as Young Val slipped from his side to take Old Valentine's arm, and lean on her instead of him. His own feelings surprised him. Instead of relief that there was less tension between the two of them than he had thought, he found himself being rather angry. Jealous anger, that's what it was. She was leaning on me, he wanted to say. What kind of childish response was that?

And then, as he watched them walk away, he saw what he should not have seen-- Valentine's shudder. Was it a sudden chill? The night was cool. But no, Miro was sure it was the touch of her young twin, and not the night air that made Old Valentine tremble.

"Come on, Miro," said Olhado. "We'll get you to the hovercar and into bed at Valentine's house."

"Is there a food stop along the way?"

"It's Jakt's house, too," said Elanora. "There's always food."

As the hovercar carried them toward Milagre, the human town, they passed near some of the dozens of starships currently in service. The work of migration didn't take the night off. Stevedores-- many of them pequeninos-- were loading supplies and equipment for transport. Families were shuffling in lines to fill up whatever spaces were left in the cabins. Jane would be getting no rest tonight as she took box after box Outside and back In. On other worlds, new homes were rising, new fields being plowed. Was it day or night in those other places? It didn't matter. In a way they had already succeeded-- new worlds were being colonized, and, like it or not, every world had its hive, its new pequenino forest, and its human village.

If Jane died today, thought Miro, if the fleet came tomorrow and blew us all to bits, in the grand scheme of things, what would it matter? The seeds have been scattered to the wind; some, at least, will take root. And if faster-than-light travel dies with Jane, even that might be for the best, for it will force each of these worlds to fend for itself. Some colonies will fail and die, no doubt. On some of them, war will come, and perhaps one species or another will be wiped out there. But it will not be the same species that dies on every world, or the same one that lives; and on some worlds, at least, we'll surely find a way to live in peace. All that's left for us now is details. Whether this or that individual lives or dies. It matters, of course. But not the way that the survival of species matters.

He must have been subvocalizing some of his thoughts, because Jane answered them. "Hath not an overblown computer program eyes and ears? Have I no heart or brain? When you tickle me do I not laugh?"

"Frankly, no," said Miro silently, working his lips and tongue and teeth to shape words that only she could hear.

"But when I die, every being of my kind will also die," she said. "Forgive me if I think of this as having cosmic significance. I'm not as self-abnegating as you are, Miro. I don't regard myself as living on borrowed time. It was my firm intention to live forever, so anything less is a disappointment."

"Tell me what I can do and I'll do it," he said. "I'd die to save you, if that's what it took."

"Fortunately, you'll die eventually no matter what," said Jane. "That's my one consolation, that by dying I'll do no more than face the same doom that every other living creature has to face. Even those long-living trees. Even those hive queens, passing their memories along from generation to generation. But I, alas, will have no children. How could I? I'm a creature of mind alone. There's no provision for mental mating."

"Too bad, too," said Miro, "because I bet you'd be great in the virtual sack."

"The best," Jane said.

And then silence for a little while.

Only when they approached Jakt's house, a new building on the outskirts of Milagre, did Jane speak again. "Keep in mind, Miro, that whatever Ender does with his own self, when Young Valentine speaks it's still Ender's aiua talking."

"The same with Peter," said Miro. "Now there's a charmer. Let's just say that Young Val, sweet as she is, doesn't exactly represent a balanced view of anything. Ender may control her, but she's not Ender."

"There are just too many of him, aren't there," said Jane. "And, apparently, too many of me, at least in the opinion of Starways Congress."

"There are too many of us all," said Miro. "But never enough."

They arrived. Miro and Young Val were led inside. They ate feebly; they slept the moment they reached their beds. Miro was aware that voices went on far into the night, for he did not sleep well, but rather kept waking a little, uncomfortable on such a soft mattress, and perhaps uncomfortable at being away from his duty, like a soldier who feels guilty at having abandoned his post.

Despite his weariness, Miro did not sleep late. Indeed, the sky outside was still dim with the predawn seepage of sunlight over the horizon when he awoke and, as was his habit, rose

immediately from his bed, standing shakily as the last of sleep fled from his body. He covered himself and went out into the hall to find the bathroom and discharge his bladder. When he emerged, he heard voices from the kitchen. Either last night's conversation was still going on, or some other neurotic early risers had rejected morning solitude and were chatting away as if dawn were not the dark hour of despair.

He stood before his own open door, ready to go inside and shut out those earnest voices, when Miro realized that one of them belonged to Young Val. Then he realized that the other one was Old Valentine. At once he turned and made his way to the kitchen, and again hesitated in a doorway.

Sure enough, the two Valentines were sitting across the table from each other, but not looking at each other. Instead they stared out the window as they sipped one of Old Valentine's fruit-and-vegetable decoctions.

"Would you like one, Miro?" asked Old Valentine without looking up.

"Not even on my deathbed," said Miro. "I didn't mean to interrupt."

"Good," said Old Valentine.

Young Val continued to say nothing.

Miro came inside the kitchen, went to the sink, and drew himself a glass of water, which he drank in one long draught.

"I told you it was Miro in the bathroom," said Old Valentine. "No one processes so much water every day as this dear lad."

Miro chuckled, but he did not hear Young Val laugh.

"I am interfering with the conversation," he said. "I'll go."

"Stay," said Old Valentine.

"Please," said Young Val.

"Please which?" asked Miro. He turned toward her and grinned.

She shoved a chair toward him with her foot. "Sit," she said. "The lady and I were having it out about our twinship."

"We decided," said Old Valentine, "that it's my responsibility to die first."

"On the contrary," said Young Val, "we decided that Gepetto did not create Pinocchio because he wanted a real boy. It was a puppet he wanted all along. That real-boy business was simply

Gepetto's laziness. He still wanted the puppet to dance-- he just didn't want to go to all the trouble of working the strings."

"You being Pinocchio," said Miro. "And Ender ..."

"My brother didn't try to make you," said Old Valentine. "And he doesn't want to control you, either."

"I know," whispered Young Val. And suddenly there were tears in her eyes.

Miro reached out a hand to lay atop hers on the table, but at once she snatched hers away. No, she wasn't avoiding his touch, she was simply bringing her hand up to wipe the annoying tears out of her eyes.

"He'd cut the strings if he could, I know," said Young Val. "The way Miro cut the strings on his old broken body."

Miro remembered it very clearly. One moment he was sitting in the starship, looking at this perfect image of himself, strong and young and healthy; the next moment he was that image, had always been that image, and what he looked at was the crippled, broken, brain-damaged version of himself. And as he watched, that unloved, unwanted body crumbled into dust and disappeared.

"I don't think he hates you," said Miro, "the way I hated my old self."

"He doesn't have to hate me. It wasn't hate anyway that killed your old body." Young Val didn't meet his eyes. In all their hours together exploring worlds, they had never talked about anything so personal. She had never dared to discuss with him that moment when both of them had been created. "You hated your old body while you were in it, but as soon as you were back in your right body, you simply stopped paying any attention to the old one. It wasn't part of you anymore. Your aiua had no more responsibility for it. And with nothing to hold it together-- pop goes the weasel."

"Wooden doll," said Miro. "Now weasel. What else am I?"

Old Valentine ignored his bid for a laugh. "So you're saying Ender finds you uninteresting."

"He admires me," said Young Val. "But he finds me dull."

"Yes, well, me too," said Old Valentine.

"That's absurd," said Miro.

"Is it?" asked Old Valentine. "He never followed me anywhere; I was always the one who followed him. He was searching for a mission in life, I think. Some great deed to do, to match the terrible act that ended his childhood. He thought writing The Hive Queen would do it. And then, with my help in preparing it, he wrote The Hegemon and he thought that might be enough, but it wasn't. He kept searching for something that would engage his full attention and he kept almost

finding it, or finding it for a week or a month, but one thing was certain, the thing that engaged his attention was never me, because there I was in all the billion miles he traveled, there I was across three thousand years. Those histories I wrote-- it was no great love for history, it was because it helped in his work. The way my writing used to help in Peter's work. And when I was finished, then, for a few hours of reading and discussion, I had his attention. Only each time it was less satisfying because it wasn't I who had his attention, it was the story I had written. Until finally I found a man who gave me his whole heart, and I stayed with him. While my adolescent brother went on without me, and found a family that took his whole heart, and there we were, planets apart, but finally happier without each other than we'd ever been together."

"So why did you come to him again?" asked Miro.

"I didn't come for him. I came for you." Old Valentine smiled. "I came for a world in danger of destruction. But I was glad to see Ender, even though I knew he would never belong to me."

"This may be an accurate description of how it felt to you," said Young Val. "But you must have had his attention, at some level. I exist because you're always in his heart."

"A fantasy of his childhood, perhaps. Not me."

"Look at me," said Young Val. "Is this the body you wore when he was five and was taken away from his home and sent up to the Battle School? Is this even the teenage girl that he knew that summer by the lake in North Carolina? You must have had his attention even when you grew up, because his image of you changed to become me."

"You are what I was when we worked on The Hegemon together," said Old Valentine sadly.

"Were you this tired?" asked Young Val.

"I am," said Miro.

"No you're not," said Old Valentine. "You are the picture of vigor. You're still celebrating your beautiful new body. My twin here is heartweary."

"Ender's attention has always been divided," said Young Val. "I'm filled with his memories, you see-- or rather, with the memories that he unconsciously thought I should have, but of course they consist almost entirely of things that he remembers about my friend here, which means that all I remember is my life with Ender. And he always had Jane in his ear, and the people whose deaths he was speaking, and his students, and the Hive Queen in her cocoon, and so on. But they were all adolescent connections. Like every itinerant hero of epic, he wandered place to place, transforming others but remaining himself unchanged. Until he came here and finally gave himself wholly to somebody else. You and your family, Miro. Novinha. For the first time he gave other people the power to tear at him emotionally, and it was exhilarating and painful both at once, but even that he could handle just fine, he's a strong man, and strong men have borne more. Now, though, it's something else entirely. Peter and I, we have no life apart from him. To say that he is one with Novinha is metaphorical; with Peter and me it's literal. He is us. And his aiua isn't great enough, it

isn't strong or copious enough, it hasn't enough attention in it to give equal shares to the three lives that depend on it. I realized this almost as soon as I was ... what shall we call it, created? Manufactured?"

"Born," said Old Valentine.

"You were a dream come true," said Miro, with only a hint of irony.

"He can't sustain all three of us. Ender, Peter, me. One of us is going to fade. One of us at least is going to die. And it's me. I knew that from the start. I'm the one who's going to die."

Miro wanted to reassure her. But how do you reassure someone, except by recalling to them similar situations that turned out for the best? There were no similar situations to call upon.

"The trouble is that whatever part of Ender's aiaa I still have in me is absolutely determined to live. I don't want to die. That's how I know I still have some shred of his attention: I don't want to die."

"So go to him," said Old Valentine. "Talk to him."

Young Val gave one bitter hoot of laughter and looked away. "Please, Papa, let me live," she said in a mockery of a child's voice. "Since it's not something he consciously controls, what could he possibly do about it, except suffer from guilt? And why should he feel guilty? If I cease to exist, it's because my own self didn't value me. He is myself. Do the dead tips of fingernails feel bad when you pare them away?"

"But you are bidding for his attention," said Miro.

"I hoped that the search for habitable worlds would intrigue him. I poured myself into it, trying to be excited about it. But the truth is it's utterly routine. Important, but routine, Miro."

Miro nodded. "True enough. Jane finds the worlds. We just process them."

"And there are enough worlds now. Enough colonies. Two dozen-- pequeninos and hive queens are not going to die out now, even if Lusitania is destroyed. The bottleneck isn't the number of worlds, it's the number of starships. So all our labor-- it isn't engaging Ender's attention anymore. And my body knows it. My body knows it isn't needed."

She reached up and took a large hank of her hair into her fist, and pulled-- not hard, but lightly-- and it came away easily in her hand. A great gout of hair, with not a sign of any pain at its going. She let the hair drop onto the table. It lay there like a dismembered limb, grotesque, impossible. "I think," she whispered, "that if I'm not careful, I could do the same with my fingers. It's slower, but gradually I will turn into dust just as your old body did, Miro. Because he isn't interested in me. Peter is solving mysteries and fighting political wars off on some world somewhere. Ender is struggling to hold on to the woman he loves. But I ..."

In that moment, as the hair torn from her head revealed the depth of her misery, her loneliness, her self-rejections, Miro realized what he had not let himself think of until now: that in all the weeks they had traveled world to world together, he had come to love her, and her unhappiness hurt him as if it were his own. And perhaps it was his own, his memory of his own self-loathing. But whatever the reason, it still felt like something deeper than mere compassion to him. It was a kind of desire. Yes, it was a kind of love. If this beautiful young woman, this wise and intelligent and clever young woman was rejected by her own inmost heart, then Miro's heart had room enough to take her in. If Ender will not be yourself, let me! he cried silently, knowing as he formed the thought for the first time that he had felt this way for days, for weeks, without realizing it; yet also knowing that he could not be to her what Ender was.

Still, couldn't love do for Young Val what it was doing for Ender himself? Couldn't that engage enough of his attention to keep her alive? To strengthen her?

Miro reached out and gathered up her disembodied hair, twined it around his fingers, and then slid the looping locks into the pocket of his robe. "I don't want you to fade away," he said. Bold words for him.

Young Val looked at him oddly. "I thought the great love of your life was Ouanda."

"She's a middle-aged woman now," said Miro. "Married and happy, with a family. It would be sad if the great love of my life were a woman who doesn't exist anymore, and even if she did she wouldn't want me."

"It's sweet of you to offer," said Young Val. "But I don't think we can fool Ender into caring about my life by pretending to fall in love."

Her words stabbed Miro to the heart, because she had so easily seen how much of his self-declaration came from pity. Yet not all of it came from there; most of it was already seething just under the level of consciousness, just waiting its chance to come out. "I wasn't thinking of fooling anyone," said Miro. Except myself, he thought. Because Young Val could not possibly love me. She is, after all, not really a woman. She's Ender.

But that was absurd. Her body was a woman's body. And where did the choice of loves come from, if not the body? Was there something male or female in the aiua? Before it became master of flesh and bone, was it manly or womanly? And if so, would that mean that the aiuas composing atoms and molecules, rocks and stars and light and wind, that all of those were neatly sorted into boys and girls? Nonsense. Ender's aiua could be a woman, could love like a woman as easily as it now loved, in a man's body and in a man's ways, Miro's own mother. It wasn't any lack in Young Val that made her look at him with such pity. It was a lack in him. Even with his body healed, he was not a man that a woman-- or at least this woman, at the moment the most desirable of all women-- could love, or wish to love, or hope to win.

"I shouldn't have come here," he murmured. He pushed away from the table and left the room in two strides. Strode up the hall and once again stood in his open doorway. He heard their voices.

"No, don't go to him," said Old Valentine. Then something softer. Then, "He may have a new body, but his self-hatred has never been healed."

A murmur from Young Val.

"Miro was speaking from his heart," Old Valentine assured her. "It was a very brave and naked thing for him to do."

Again Young Val spoke too softly for Miro to hear her.

"How could you know?" Old Valentine said. "What you have to realize is, we took a long voyage together, not that long ago, and I think he fell in love with me a little on that flight."

It was probably true. It was definitely true. Miro had to admit it: some of his feelings for Young Val were really his feelings for Old Valentine, transferred from the woman who was permanently out of reach to this young woman who might be, he had hoped at least, accessible to him.

Now both their voices fell to levels where Miro could not even pick out words. But still he waited, his hands pressed against the

doo~amb, listening to the lilting of those two voices, so much alike, but both so well-known to him. It was a music that he could gladly hear forever.

"If there's anyone like Ender in all this universe," said Old Valentine with sudden loudness, "it's Miro. He broke himself trying to save innocents from destruction. He hasn't yet been healed."

She meant me to hear that, Miro realized. She spoke loudly, knowing I was standing here, knowing I was listening. The old witch was listening for my door to close and she never heard it so she knows that I can hear them and she's trying to give me a way to see myself. But I'm no Ender, I'm barely Miro, and if she says things like that about me it's just proof that she doesn't know who I am.

A voice spoke up in his ear. "Oh, shut up if you're just going to lie to yourself."

Of course Jane had heard everything. Even his thoughts, because, as was his habit, his conscious thoughts were echoed by his lips and tongue and teeth. He couldn't even think without moving his lips. With Jane attached to his ear he spent his waking hours in a confessional that never closed.

"So you love the girl," said Jane. "Why not? So your motives are complicated by your feelings toward Ender and Valentine and Ouanda and yourself. So what? What love was ever pure, what lover was ever uncomplicated? Think of her as a succubus. You'll love her, and she'll crumble in your arms."

Jane's taunting was infuriating and amusing at once. He went inside his room and gently closed the door. When it was closed, he whispered to her, "You're just a jealous old bitch, Jane. You only want me for yourself."

"I'm sure you're right," said Jane. "If Ender had ever really loved me, he would have created my human body when he was being so fertile Outside. Then I could make a play for you myself."

"You already have my whole heart," said Miro. "Such as it is."

"You are such a liar," said Jane. "I'm just a talking appointment book and calculator, and you know it."

"But you're very very rich," said Miro. "I'll marry you for your money."

"By the way," said Jane, "she's wrong about one thing."

"What's that?" asked Miro, wondering which "she" Jane was referring to.

"You aren't done with exploring worlds. Whether Ender is still interested in it or not-- and I think he is, because she hasn't turned to dust yet-- the work doesn't end just because there are enough habitable planets to save the piggies and buggers."

Jane frequently used the old diminutive and pejorative terms for them. Miro often wondered, but never dared to ask, if she had any pejoratives for humans. But he thought he knew what her answer would be anyway: "The word 'human' is a pejorative," she'd say.

"So what are we still looking for?" asked Miro.

"Every world that we can find before I die," said Jane.

He thought about that as he lay back down on his bed. Thought about it as he tossed and turned a couple of times, then got up, got dressed for real, and set out under the lightening sky, walking among the other early risers, people about their business, few of whom knew him or even knew of him. Being a scion of the strange Ribeira family, he hadn't had many childhood friends in ginasio; being both brilliant and shy, he'd had even fewer of the more rambunctious adolescent friendships in colegio. His only girlfriend had been Ouanda, until his penetration of the sealed perimeter of the human colony left him brain-damaged and he refused to see even her anymore. Then his voyage out to meet Valentine had severed the few fragile ties that remained between him and his birthworld. For him it was only a few months in a starship, but when he came back, years had passed, and he was now his mother's youngest child, the only one whose life was unbegun. The children he had once watched over were adults who treated him like a tender memory from their youth. Only Ender was unchanged. No matter how many years. No matter what happened. Ender was the same.

Could it still be true? Could he be the same man even now, locking himself away at a time of crisis, hiding out in a monastery just because Mother had finally given up on life? Miro knew the bare outline of Ender's life. Taken from his family at the tender age of five. Brought to the orbiting Battle School, where he emerged as the last best hope of humankind in its war with the ruthless invaders called buggers. Taken next to the fleet command on Eros, where he was told he was in

advanced training, but where, without realizing it, he was commanding the real fleets, lightyears away, his commands transmitted by ansible. He won that war through brilliance and, in the end, the utterly unconscionable act of destroying the home world of the buggers. Except that he had thought it was a game.

Thought it was a game, but at the same time knowing that the game was a simulation of reality. In the game he had chosen to do the unspeakable; it meant, to Ender at least, that he was not free of guilt when the game turned out to be real. Even though the last Hive Queen forgave him and put herself, cocooned as she was, into his care, he could not shake himself free of that. He was only a child, doing what adults led him to do; but somewhere in his heart he knew that even a child is a real person, that a child's acts are real acts, that even a child's play is not without moral context.

Thus before the sun was up, Miro found himself facing Ender as they both straddled a stone bench in a spot in the garden that would soon be bathed in sunlight but now was clammy with the morning chill; and what Miro found himself saying to this unchangeable, unchanging man was this: "What is this monastery business, Andrew Wiggin, except for a backhanded, cowardly way of crucifying yourself?"

"I've missed you too, Miro," said Ender. "You look tired, though. You need more sleep."

Miro sighed and shook his head. "That wasn't what I meant to say. I'm trying to understand you, I really am. Valentine says that I'm like you."

"You mean the real Valentine?" asked Ender.

"They're both real," said Miro.

"Well, if I'm like you, then study yourself and tell me what you find."

Miro wondered, looking at him, if Ender really meant this.

Ender patted Miro's knee. "I'm really not needed out there now," he said.

"You don't believe that for a second," said Miro.

"But I believe that I believe it," said Ender, "and for me that's pretty good. Please don't disillusion me. I haven't had breakfast yet."

"No, you're exploiting the convenience of having split yourself into three. This part of you, the aging middle-aged man, can afford the luxury of devoting himself entirely to his wife-- but only because he has two young puppets to go out and do the work that really interests him."

"But it doesn't interest me," said Ender. "I don't care."

"You as Ender don't care because you as Peter and you as Valentine are taking care of everything else for you. Only Valentine isn't well. You're not caring enough about what she's doing. What

happened to my old crippled body is happening to her. More slowly, but it's the same thing. She thinks so, Valentine thinks it's possible. So do I. So does Jane."

"Give Jane my love. I do miss her."

"I give Jane my love, Ender."

Ender grinned at his resistance. "If they were about to shoot you, Miro, you'd insist on drinking a lot of water just so they'd have to handle a corpse covered with urine when you were dead."

"Valentine isn't a dream or an illusion, Ender," said Miro, refusing to be sidetracked into a discussion of his own obstreperousness. "She's real, and you're killing her."

"Awfully dramatic way of putting it."

"If you'd seen her pull out tufts of her own hair this morning ..."

"So she's rather theatrical, I take it? Well, you've always been one for the theatrical gesture, too. I'm not surprised you get along."

"Andrew, I'm telling you you've got to--"

Suddenly Ender grew stern and his voice overtopped Miro's even though he was not speaking loudly. "Use your head, Miro. Was your decision to jump from your old body to this newer model a conscious one? Did you think about it and say, 'Well, I think I'll let this old corpse crumble into its constituent molecules because this new body is a nicer place to dwell?'"

Miro got his point at once. Ender couldn't consciously control where his attention went. His aiua, even though it was his deepest self, was not to be ordered about.

"I find out what I really want by seeing what I do," said Ender. "That's what we all do, if we're honest about it. We have our feelings, we make our decisions, but in the end we look back on our lives and see how sometimes we ignored our feelings, while most of our decisions were actually rationalizations because we had already decided in our secret hearts before we ever recognized it consciously. I can't help it if the part of me that's controlling this girl whose company you're sharing isn't as important to my underlying will as you'd like. As she needs. I can't do a thing."

Miro bowed his head.

The sun came up over the trees. Suddenly the bench turned bright, and Miro looked up to see the sunlight making a halo out of Ender's wildly slept-in hair. "Is grooming against the monastic rule?" asked Miro.

"You're attracted to her, aren't you," said Ender, not really making a question out of it. "And it makes you a little uneasy that she is really me."

Miro shrugged. "It's a root in the path. But I think I can step over it."

"But what if I'm not attracted to you?" asked Ender cheerfully.

Miro spread his arms and turned to show his profile. "Unthinkable," he said.

"You are cute as a bunny," said Ender. "I'm sure young Valentine dreams about you. I wouldn't know. The only dreams I have are of planets blowing up and everyone I love being obliterated."

"I know you haven't forgotten the world in here, Andrew." He meant that as the beginning of an apology, but Ender waved him off.

"I can't forget it, but I can ignore it. I'm ignoring the world, Miro. I'm ignoring you, I'm ignoring those two walking psychoses of mine. At this moment, I'm trying to ignore everything but your mother."

"And God," said Miro. "You mustn't forget God."

"Not for a single moment," said Ender. "As a matter of fact, I can't forget anything or anybody. But yes, I am ignoring God, except insofar as Novinha needs me to notice him. I'm shaping myself into the husband that she needs."

"Why, Andrew? You know Mother's as crazy as a loon."

"No such thing," said Ender reprovingly. "But even if it were true, then ... all the more reason."

"What God has joined, let no man put asunder. I do approve, philosophically, but you don't know how it ..." Miro's weariness swept over him then. He couldn't think of the words to say what he wanted to say, and he knew that it was because he was trying to tell Ender how it felt, at this moment, to be Miro Ribeira, and Miro had no practice in even identifying his own feelings, let alone expressing them. "Desculpa," he murmured, changing to Portuguese because it was his childhood language, the language of his emotions. He found himself wiping tears off his cheeks. "Se nao posso mudar nem voce, nao ha nada que possa, nada." If I can't get even you to move, to change, then there's nothing I can do.

"Nem eu?" Ender echoed. "In all the universe, Miro, there's nobody harder to change than me."

"Mother did it. She changed you."

"No she didn't," said Ender. "She only allowed me to be what I needed and wanted to be. Like now, Miro. I can't make everybody happy. I can't make me happy, I'm not doing much for you, and as for the big problems, I'm worthless there too. But maybe I can make your mother happy, or at least somewhat happier, at least for a while, or at least I can try." He took Miro's hands in his, pressed them to his own face, and they did not come away dry.

Miro watched as Ender got up from the bench and walked away toward the sun, into the shining orchard. Surely this is how Adam would have looked, thought Miro, if he had never eaten the fruit. If he had stayed and stayed and stayed and stayed in the garden. Three thousand years Ender has skimmed the surface of life. It was my mother he finally snagged on. I spent my whole childhood trying to be free of her, and he comes along and chooses to attach himself and ...

And what am I snagged on, except him? Him in women's flesh. Him with a handful of hair on a kitchen table.

Miro was getting up from the bench when Ender suddenly turned to face him and waved to attract his attention. Miro started to walk toward him, but Ender didn't wait; he cupped his hands around his mouth and shouted.

"Tell Jane!" he called. "If she can figure out! How to do it! She can have that body!"

It took Miro a moment to realize that he was speaking of Young Val.

She's not just a body, you self-centered old planet-smasher. She's not just an old suit to be given away because it doesn't fit or the style has changed.

But then his anger fled, for he realized that he himself had done precisely that with his old body. Tossed it away without a backward glance.

And the idea intrigued him. Jane. Was it even possible? If her aiaa could somehow be made to take up residence in Young Val, could a human body hold enough of Jane's mind to enable her to survive when Starways Congress tried to shut her down?

"You boys are so slow," Jane murmured in his ear. "I've been talking to the Hive Queen and Human and trying to figure out how the thing is done-- assigning an aiaa to a body. The hive queens did it once, in creating me. But they didn't exactly pick a particular aiaa. They took what came. What showed up. I'm a little fussier."

Miro said nothing as he walked to the monastery gate.

"Oh, yes, and then there's the little matter of your feelings toward Young Val. You hate the fact that in loving her, it's really, in a way, Ender that you love. But if I took over, if I were the will inside Young Val's life, would she still be the woman you love? Would anything of her survive? Would it be murder?"

"Oh, shut up," said Miro aloud.

The monastery gatekeeper looked up at him in surprise.

"Not you," said Miro. "But that doesn't mean it isn't a good idea."

Miro was aware of her eyes on his back until he was out and on the path winding down the hill toward Milagre. Time to get back to the ship. Val will be waiting for me. Whoever she is.

What Ender is to Mother, so loyal, so patient-- is that how I feel toward Val? Or no, it isn't feeling, is it? It's an act of will. It's a decision that can never be revoked. Could I do that for any woman, any person? Could I give myself forever?

He remembered Ouanda then, and walked with the memory of bitter loss all the way back to the starship.

#### Chapter 4 -- "I AM A MAN OF PERFECT SIMPLICITY!"

"When I was a child, I thought a god was disappointed whenever some distraction interrupted my tracing of the lines revealed in the grain of the wood. Now I know the gods expect such interruptions, for they know our frailty. It is completion that surprises them."

-- from The God Whispers of Han Qing-jao

Peter and Wang-mu ventured out into the world of Divine Wind on their second day. They did not have to worry about learning a language. Divine Wind was an older world, one of the first wave settled in the initial emigration from Earth. It was originally as recidivist as Path, clinging to the ancient ways. But the ancient ways of Divine Wind were Japanese ways, and so it included the possibility of radical change. Scarcely three hundred years into its history, the world transformed itself from being the isolated fiefdom of a ritualized shogunate to being a cosmopolitan center of trade and industry and philosophy. The Japanese of Divine Wind prided themselves on being hosts to visitors from all worlds, and there were still many places where children grew up speaking only Japanese until they were old enough to enter school. But by adulthood, all the people of Divine Wind spoke Stark with fluency, and the best of them with elegance, with grace, with astonishing economy; it was said by Mil Fiorelli, in his most famous book, *Observations of Distant Worlds with the Naked Eye*, that Stark was a language that had no native speakers until it was whispered by a Divine Wind.

So it was that when Peter and Wang-mu hiked through the woods of the great natural preserve where their starship had landed and emerged in a village of foresters, laughing about how long they had been "lost" in the woods, no one thought twice about Wang-mu's obviously Chinese features and accent, or even about Peter's white skin and lack of an epicanthic fold. They had lost their documents, they claimed, but a computer search showed them to be licensed automobile drivers in the city of Nagoya, and while Peter seemed to have had a couple of youthful traffic offenses there, otherwise they were not known to have committed any illegal acts. Peter's profession was given as

"independent teacher of physics" and Wang-mu's as "itinerant philosopher," both quite respectable positions, given their youth and lack of family attachment. When they were asked casual questions ("I have a cousin who teaches progenerative grammars in the Komatsu University in Nagoya") Jane gave Peter appropriate comments to say:

"I never seem to get over to the Oe Building. The language people don't talk to physicists anyway. They think we speak only mathematics. Wang-mu tells me that the only language we physicists know is the grammar of dreams."

Wang-mu had no such friendly prompter in her ear, but then an itinerant philosopher was supposed to be gnomic in her speech and mantic in her thought. Thus she could answer Peter's comment by saying, "I say that is the only grammar you speak. There is no grammar that you understand."

This prompted Peter to tickle her, which made Wang-mu simultaneously laugh and wrench at his wrist until he stopped, thereby proving to the foresters that they were exactly what their documents said they were: brilliant young people who were nevertheless silly with love-- or with youth, as if it made a difference.

They were given a ride in a government floater back to civilized country, where-- thanks to Jane's manipulation of the computer networks-- they found an apartment that until yesterday had been empty and unfurnished, but which now was filled with an eclectic mix of furniture and art that reflected a charming mixture of poverty, quirkiness, and exquisite taste.

"Very nice," said Peter.

Wang-mu, familiar only with the taste of one world, and really only of one man in that one world, could hardly evaluate Jane's choices. There were places to sit-- both Western chairs, which folded people into alternating right angles and never seemed comfortable to Wang-mu, and Eastern mats, which encouraged people to twine themselves into circles of harmony with the earth. The bedroom, with its Western mattress raised high off the ground even though there were neither rats nor roaches, was obviously Peter's; Wang-mu knew that the same mat that invited her to sit in the main room of the apartment would also be her sleeping mat at night.

She deferentially offered Peter the first bath; he, however, seemed to feel no urgency to wash himself, even though he smelled of sweat from the hike and the hours cooped up in the floater. So Wang-mu ended up luxuriating in a tub, closing her eyes and meditating until she felt restored to herself. When she opened her eyes she no longer felt like a stranger. Rather she was herself, and the surrounding objects and spaces were free to attach themselves to her without damaging her sense of self. This was a power she had learned early in life, when she had no power even over her own body, and had to obey in all things. It was what preserved her. Her life had many unpleasant things attached to it, like remoras to a shark, but none of them changed who she was under the skin, in the cool darkness of her solitude with eyes closed and mind at peace.

When she emerged from the bathroom, she found Peter eating absently from a plate of grapes as he watched a holoplay in which masked Japanese actors bellowed at each other and took great,

awkward, thundering steps, as if the actors were playing characters twice the size of their own bodies.

"Have you learned Japanese?" she asked.

"Jane's translating for me. Very strange people."

"It's an ancient form of drama," said Wang-mu.

"But very boring. Was there ever anyone whose heart was stirred by all this shouting?"

"If you are inside the story," said Wang-mu, "then they are shouting the words of your own heart."

"Somebody's heart says, 'I am the wind from the cold snow of the mountain, and you are the tiger whose roar will freeze in your own ears before you tremble and die in the iron knife of my winter eyes?'"

"It sounds like you," said Wang-mu. "Bluster and brag."

"I am the round-eyed sweating man who stinks like the corpse of a leaking skunk, and you are the flower who will wilt unless I take an immediate shower with lye and ammonia."

"Keep your eyes closed when you do," said Wang-mu. "That stuff burns."

There was no computer in the apartment. Maybe the holoview could be used as a computer, but if so Wang-mu didn't know how. Its controls looked like nothing she had seen in Han Fei-tzu's house, but that was hardly a surprise. The people of Path didn't take their design of anything from other worlds, if they could help it. Wang-mu didn't even know how to turn off the sound. It didn't matter. She sat on her mat and tried to remember everything she knew about the Japanese people from her study of Earth history with Han Qing-jao and her father, Han Fei-tzu. She knew that her education was spotty at best, because as a low-class girl no one had bothered to teach her much until she wangled her way into Qing-jao's household. So Han Fei-tzu had told her not to bother with formal studies, but merely to explore information wherever her interests took her. "Your mind is unspoiled by a traditional education. Therefore you must let yourself discover your own way into each subject." Despite this seeming liberty, Fei-tzu soon showed her that he was a stern taskmaster even when the subjects were freely chosen. Whatever she learned about history or biography, he would challenge her, question her; demand that she generalize, then refute her generalizations; and if she changed her mind, he would then demand just as sharply that she defend her new position, even though a moment before it had been his own. The result was that even with limited information, she was prepared to reexamine it, cast away old conclusions and hypothesize new ones. Thus she could close her eyes and continue her education without any jewel to whisper in her ear, for she could still hear Han Fei-tzu's caustic questioning even though he was lightyears away.

The actors stopped ranting before Peter had finished his shower. Wang-mu did not notice. She did notice, however, when a voice from the holoview said, "Would you like another recorded selection, or would you prefer to connect with a current broadcast?"

For a moment Wang-mu thought that the voice must be Jane; then she realized that it was simply the rote menu of a machine. "Do you have news?" she asked.

"Local, regional, planetary or interplanetary?" asked the machine.

"Begin with local," said Wang-mu. She was a stranger here. She might as well get acquainted.

When Peter emerged, clean and dressed in one of the stylish local costumes that Jane had had delivered for him, Wang-mu was engrossed in an account of a trial of some people accused of overfishing a lush coldwater region a few hundred kilometers from the city they were in. What was the name of this town? Oh, yes. Nagoya. Since Jane had declared this to be their hometown on all their false records, of course this was where the floater had brought them. "All worlds are the same," said Wang-mu. "People want to eat fish from the sea, and some people want to take more of the fish than the ocean can replenish."

"What harm does it do if I fish one extra day or take one extra ton?" Peter asked.

"Because if everyone does, then--" She stopped herself. "I see. You were ironically speaking the rationalization of the wrongdoers."

"Am I clean and pretty now?" asked Peter, turning around to show off his loose-fitting yet somehow form-revealing clothing.

"The colors are garish," said Wang-mu. "It looks as if you're screaming."

"No, no," said Peter. "The idea is for the people who see me to scream."

"Aaaah," Wang-mu screamed softly.

"Jane says that this is actually a conservative costume-- for a man

of my age and supposed profession. Men in Nagoya are known for being peacocks."

"And the women?"

"Bare-breasted all the time," said Peter. "Quite a stunning sight."

"That is a lie. I didn't see one bare-breasted woman on our way in and--" Again she stopped and frowned at him. "Do you really want me to assume that everything you say is a lie?"

"I thought it was worth a try."

"Don't be silly. I have no breasts."

"You have small ones," said Peter. "Surely you're aware of the distinction."

"I don't want to discuss my body with a man dressed in a badly planned, overgrown flower garden."

"Women are all dowds here," said Peter. "Tragic but true. Dignity and all that. So are the old men. Only the boys and young men on the prowl are allowed such plumage as this. I think the bright colors are to warn women off. Nothing serious from this lad! Stay to play, or go away. Some such thing. I think Jane chose this city for us solely so she could make me wear these things."

"I'm hungry. I'm tired."

"Which is more urgent?" asked Peter.

"Hungry."

"There are grapes," he offered.

"Which you didn't wash. I suppose that's a part of your death wish."

"On Divine Wind, insects know their place and stay there. No pesticides. Jane assured me."

"There were no pesticides on Path, either," said Wang-mu. "But we washed to clear away bacteria and other one-celled creatures. Amebic dysentery will slow us down."

"Oh, but the bathroom is so nice, it would be a shame not to use it," said Peter. Despite his flippancy, Wang-mu saw that her comment about dysentery from unwashed fruit bothered him.

"Let's eat out," said Wang-mu. "Jane has money for us, doesn't she?"

Peter listened for a moment to something coming from the jewel in his ear.

"Yes, and all we have to do is tell the master of the restaurant that we lost our IDs and he'll let us thumb our way into our accounts. Jane says we're both very rich if we need to be, but we should try to act as if we were of limited means having an occasional splurge to celebrate something. What shall we celebrate?"

"Your bath."

"You celebrate that. I'll celebrate our safe return from being lost in the woods."

Soon they found themselves on the street, a busy place with few cars, hundreds of bicycles, and thousands of people both on and off the glideways. Wang-mu was put off by these strange machines and insisted they walk on solid ground, which meant choosing a restaurant close by. The buildings in this neighborhood were old but not yet tatty-looking; an established neighborhood, but one with pride. The style was radically open, with arches and courtyards, pillars and roofs, but few walls and no glass at all. "The weather must be perfect here," said Wang-mu.

"Tropical, but on the coast with a cold current offshore. It rains every afternoon for an hour or so, most of the year anyway, but it never gets very hot and never gets chilly at all."

"It feels as though everything is outdoors all the time."

"It's all fakery," said Peter. "Our apartment had glass windows and climate control, you notice. But it faces back, into the garden, and besides, the windows are recessed, so from below you don't see the glass. Very artful. Artificially natural looking. Hypocrisy and deception-- the human universal."

"It's a beautiful way to live," said Wang-mu. "I like Nagoya."

"Too bad we won't be here long."

Before she could ask to know where they were going and why, Peter pulled her into the courtyard of a busy restaurant. "This one cooks the fish," said Peter. "I hope you don't mind that."

"What, the others serve it raw?" asked Wang-mu, laughing. Then she realized that Peter was serious. Raw fish!

"The Japanese are famous for it," said Peter, "and in Nagoya it's almost a religion. Notice-- not a Japanese face in the restaurant. They wouldn't deign to eat fish that was destroyed by heat. It's just one of those things that they cling to. There's so little that's distinctively Japanese about their culture now, so they're devoted to the few uniquely Japanese traits that survive."

Wang-mu nodded, understanding perfectly how a culture could cling to long-dead customs just for the sake of national identity, and also grateful to be in a place where such customs were all superficial and didn't distort and destroy the lives of the people the way they had on Path.

Their food came quickly-- it takes almost no time to cook fish-- and as they ate, Peter shifted his position several times on the mat. "Too bad this place isn't nontraditional enough to have chairs."

"Why do Europeans hate the earth so much that you must always lift yourself above it?" asked Wang-mu.

"You've already answered your question," said Peter coldly. "You start from the assumption that we hate the earth. It makes you sound like some magic-using primitive."

Wang-mu blushed and fell silent.

"Oh, spare me the passive oriental woman routine," said Peter. "Or the passive I - was - trained - to - be - a - servant - and - you - sound - like - a - cruel - heartless - master manipulation through guilt. I know I'm a shit and I'm not going to change just because you look so downcast."

"Then you could change because you wish not to be a shit any longer."

"It's in my character. Ender created me hateful so he could hate me. The added benefit is that you can hate me, too."

"Oh, be quiet and eat your fish," she said. "You don't know what you're talking about. You're supposed to analyze human beings and you can't understand the person closest to you in all the world."

"I don't want to understand you," said Peter. "I want to accomplish my task by exploiting this brilliant intelligence you're supposed to have-- even if you believe that people who squat are somehow 'closer to the earth' than people who remain upright."

"I wasn't talking about me," she said. "I was talking about the person closest to you. Ender."

"He is blessedly far from us right now."

"He didn't create you so that he could hate you. He long since got over hating you."

"Yeah, yeah, he wrote The Hegemon, et cetera, et cetera."

"That's right," said Wang-mu. "He created you because he desperately needed someone to hate him."

Peter rolled his eyes and took a drink of milky pineapple juice. "Just the right amount of coconut. I think I'll retire here, if Ender doesn't die and make me disappear first."

"I say something true, and you answer with coconut in the pineapple juice?"

"Novinha hates him," said Peter. "He doesn't need me."

"Novinha is angry at him, but she's wrong to be angry and he knows it. What he needs from you is a ... righteous anger. To hate him for the evil that is really in him, which no one but him sees or even believes is there."

"I'm just a nightmare from his childhood," said Peter. "You're reading too much into this."

"He didn't conjure you up because the real Peter was so important in his childhood. He conjured you up because you are the judge, the condemner. That's what Peter drummed into him as a child. You told me yourself, talking about your memories. Peter taunting him, telling him of his unworthiness, his uselessness, his stupidity, his cowardice. You do it now. You look at his life and call him a xenocide, a failure. For some reason he needs this, needs to have someone damn him."

"Well, how nice that I'm around, then, to despise him," said Peter.

"But he also is desperate for someone to forgive him, to have mercy on him, to interpret all his actions as well meant. Valentine is not there because he loves her-- he has the real Valentine for that. He has his wife. He needs your sister to exist so she can forgive him."

"So if I stop hating Ender, he won't need me anymore and I'll disappear?"

"If Ender stops hating himself, then he won't need you to be so mean and you'll be easier to get along with."

"Yeah, well, it's not that easy getting along with somebody who's constantly analyzing a person she's never met and preaching at the person she has met."

"I hope I make you miserable," said Wang-mu. "It's only fair, considering."

"I think Jane brought us here because the local costumes reflect who we are. Puppet though I am, I take some perverse pleasure in life. While you-- you can turn anything drab just by talking about it."

Wang-mu bit back her tears and returned to her food.

"What is it with you?" Peter said.

She ignored him, chewed slowly, finding the untouched core of herself, which was busily enjoying the food.

"Don't you feel anything?"

She swallowed, looked up at him. "I already miss Han Fei-tzu, and I've been gone scarcely two days." She smiled slightly. "I have known a man of grace and wisdom. He found me interesting. I'm quite comfortable with boring you."

Peter immediately made a show of splashing water on his ears. "I'm burning, that stung, oh, how can I stand it. Vicious! You have the breath of a dragon! Men die at your words!"

"Only puppets strutting around hanging from strings," said Wang-mu.

"Better to dangle from strings than to be bound tight by them," said Peter.

"Oh, the gods must love me, to have put me in the company of a man so clever with words."

"Whereas the gods have put me in the company of a woman with no breasts."

She forced herself to pretend to take this as a joke. "Small ones, I thought you said."

But suddenly the smile left his face. "I'm sorry," he said. "I've hurt you."

"I don't think so. I'll tell you later, after a good night's sleep."

"I thought we were bantering," said Peter. "Bandyng insults."

"We were," said Wang-mu. "But I believe them all."

Peter winced. "Then I'm hurt, too."

"You don't know how to hurt," said Wang-mu. "You're just mocking me."

Peter pushed aside his plate and stood up. "I'll see you back at the apartment. Think you can find the way?"

"Do I think you actually care?"

"It's a good thing I have no soul," said Peter. "That's the only thing that stops you from devouring it."

"If I ever had your soul in my mouth," said Wang-mu, "I would spit it out."

"Get some rest," said Peter. "For the work I have ahead, I need a mind, not a quarrel." He walked out of the restaurant. The clothing fit him badly. People looked. He was a man of too much dignity and strength to dress so foppishly. Wang-mu saw at once that it shamed him. She saw also that he knew it, that he moved swiftly because he knew this clothing was wrong for him. He would undoubtedly have Jane order him something older looking, more mature, more in keeping with his need for honor.

Whereas I need something that will make me disappear. Or better yet, clothing that will let me fly away from here, all in a single night, fly Outside and back In to the house of Han Fei-tzu, where I can look into eyes that show neither pity nor scorn.

Nor pain. For there is pain in Peter's eyes, and it was wrong of me to say he felt none. It was wrong of me to value my own pain so highly that I thought it gave me the right to inflict more on him.

If I apologize to him, he'll mock me for it.

But then, I would rather be mocked for doing a good thing than to be respected, knowing I have done wrong. Is that a principle Han Fei-tzu taught me? No. I was born with that one. Like my mother said, too much pride, too much pride.

When she returned to the apartment, however, Peter was asleep; exhausted, she postponed her apology and also slept. Each of them woke during the night, but never at the same time; and in the morning, the edge of last night's quarrel had worn off. There was business at hand, and it was more important for her to understand what they were going to attempt to do today than for her to heal a

breach between them that seemed, in the light of morning, to be scarcely more than a meaningless spat between tired friends.

"The man Jane has chosen for us to visit is a philosopher."

"Like me?" Wang-mu said, keenly aware of her false new role.

"That's what I wanted to discuss with you. There are two kinds of philosophers here on Divine Wind. Aimaina Hikari, the man we will meet, is an analytical philosopher. You don't have the education to hold your own with him. So you are the other kind. Gnostic and mantic. Given to pithy phrases that startle others with their seeming irrelevancy."

"Is it necessary that my supposedly wise phrases only seem irrelevant?"

"You don't even have to worry about that. The gnostic philosophers depend on others to connect their irrelevancies with the real world. That's why any fool can do it."

Wang-mu felt anger rise in her like mercury in a thermometer. "How kind of you to choose that profession for me."

"Don't be offended," said Peter. "Jane and I had to come up with some role you could play on this particular planet that wouldn't reveal you to be an uneducated native of Path. You have to understand that no child on Divine Wind is allowed to grow up as hopelessly ignorant as the servant class on Path."

Wang-mu did not argue further. What would be the point? If one has to say, in an argument, "I am intelligent! I do know things!" then one might as well stop arguing. Indeed, this idea struck her as being exactly one of those gnostic phrases that Peter was talking about. She said so.

"No, no, I don't mean epigrams," said Peter. "Those are too analytical. I mean genuinely strange things. For instance, you might have said, 'The woodpecker attacks the tree to get at the bug,' and then I would have had to figure out just how that might fit our situation here. Am I the woodpecker? The tree? The bug? That's the beauty of it."

"It seems to me that you have just proved yourself to be the more gnostic of the two of us."

Peter rolled his eyes and headed for the door.

"Peter," she said, not moving from her place.

He turned to face her.

"Wouldn't I be more helpful to you if I had some idea of why we're meeting this man, and who he is?"

Peter shrugged. "I suppose. Though we know that Aimagina Hikari is not the person or even one of the people we're looking for."

"Tell me whom we are looking for, then."

"We're looking for the center of power in the Hundred Worlds," he said.

"Then why are we here, instead of Starways Congress?"

"Starways Congress is a play. The delegates are actors. The scripts are written elsewhere."

"Here."

"The faction of Congress that is getting its way about the Lusitania Fleet is not the one that loves war. That group is cheerful about the whole thing, of course, since they always believe in brutally putting down insurrection and so on, but they would never have been able to get the votes to send the fleet without a swing group that is very heavily influenced by a school of philosophers from Divine Wind."

"Of which Aimagina Hikari is the leader?"

"It's more subtle than that. He is actually a solitary philosopher, belonging to no particular school. But he represents a sort of purity of Japanese thought which makes him something of a conscience to the philosophers who influence the swing group in Congress."

"How many dominoes do you think you can line up and have them still knock each other over?"

"No, that wasn't gnomic enough. Still too analytical."

"I'm not playing my part yet, Peter. What are the ideas that this swing group gets from this philosophical school?"

Peter sighed and sat down-- bending himself into a chair, of course. Wang-mu sat on the floor and thought: This is how a man of Europe likes to see himself, with his head higher than all others, teaching the woman of Asia. But from my perspective, he has disconnected himself from the earth. I will hear his words, but I will know that it is up to me to bring them into a living place.

"The swing group would never use such massive force against what really amounts to a minor dispute with a tiny colony. The original issue, as you know, was that two xenologers, Miro Ribeira and Ouanda Mucumbi, were caught introducing agriculture among the pequeninos of Lusitania. This constituted cultural interference, and they were ordered offplanet for trial. Of course, with the old relativistic lightspeed ships, taking someone off planet meant that when and if they ever went back, everyone they knew would be old or dead. So it was brutally harsh treatment and amounted to prejudice. Congress might have expected protests from the government of Lusitania, but what it got instead was complete defiance and a cutoff of ansible communications. The tough guys in

Congress immediately started lobbying for a single troopship to go and seize control of Lusitania. But they didn't have the votes, until--"

"Until they raised the specter of the descolada virus."

"Exactly. The group that was adamantly opposed to the use of force brought up the descolada, as a reason why troops shouldn't be sent-- because at that time anyone who was infected with the virus had to stay on Lusitania and keep taking an inhibitor that kept the descolada from destroying your body from the inside out. This was the first time that the danger of the descolada became widely known, and the swing group emerged, consisting of those who were appalled that Lusitania had not been quarantined long before. What could be more dangerous than to have a fast-spreading, semi-intelligent virus in the hands of rebels? This group consisted almost entirely of delegates who were strongly influenced by the Necessarian school from Divine Wind."

Wang-mu nodded. "And what do the Necessarians teach?"

"That one lives in peace and harmony with one's environment, disturbing nothing, patiently bearing mild or even serious afflictions. However, when a genuine threat to survival emerges, one must act with brutal efficiency. The maxim is, Act only when necessary, and then act with maximum force and speed. Thus, where the militarists wanted a troopship, the Necessarian-influenced delegates insisted on sending a fleet armed with the Molecular Disruption Device, which would destroy the threat of the descolada virus once and for all. There's a sort of ironic neatness about it all, don't you think?"

"I don't see it."

"Oh, it fits together so perfectly. Ender Wiggin was the one who used the Little Doctor to wipe out the bugger home world. Now it's going to be used for only the second time-- against the very world where he happens to live! It gets even thicker. The first Necessarian philosopher, Ooka, used Ender himself as the prime example of his ideas. As long as the buggers were seen to be a dangerous threat to the survival of humankind, the only appropriate response was utter eradication of the enemy. No half-measures would do. Of course the buggers turned out not to have been a threat after all, as Ender himself wrote in his book *The Hive Queen*, but Ooka defended the mistake because the truth was unknowable at the time Ender's superiors turned him loose against the enemy. What Ooka said was, 'Never trade blows with the enemy.' His idea was that you try never to strike anyone, but when you must, you strike only one blow, but such a harsh one that your enemy can never, never strike back."

"So using Ender as an example--"

"That's right. Ender's own actions are being used to justify repeating them against another harmless species."

"The descolada wasn't harmless."

"No," said Peter. "But Ender and Ela found another way, didn't they? They struck a blow against the descolada itself. But there's no way now to convince Congress to withdraw the fleet. Because Jane already interfered with Congress's ansible communications with the fleet, they believe they face a formidable widespread secret conspiracy. Any argument we make will be seen as disinformation. Besides, who would believe the farfetched tale of that first trip Outside, where Ela created the anti-descolada, Miro recreated himself, and Ender made my dear sister and me?"

"So the Necessarians in Congress--"

"They don't call themselves that. But the influence is very strong. It is Jane's and my opinion that if we can get some prominent Necessarians to declare against the Lusitania Fleet-- with convincing reasoning, of course-- the solidarity of the pro-fleet majority in Congress will be broken up. It's a thin majority-- there are plenty of people horrified by such devastating use of force against a colony world, and others who are even more horrified at the idea that Congress would destroy the pequeninos, the first sentient species found since the destruction of the buggers. They would love to stop the fleet, or at worst use it to impose a permanent quarantine."

"Why aren't we meeting with a Necessarian, then?"

"Because why would they listen to us? If we identify ourselves as supporters of the Lusitanian cause, we'll be jailed and questioned. And if we don't, who will take our ideas seriously?"

"This Aimaina Hikari, then. What is he?"

"Some people call him the Yamato philosopher. All the Necessarians of Divine Wind are, naturally, Japanese, and the philosophy has become most influential among the Japanese, both on their home worlds and wherever they have a substantial population. So even though Hikari isn't a Necessarian, he is honored as the keeper of the Japanese soul."

"If he tells them that it's un-Japanese to destroy Lusitania--"

"But he won't. Not easily, anyway. His seminal work, which won him his reputation as the Yamato philosopher, included the idea that the Japanese people were born as rebellious puppets. First it was Chinese culture that pulled the strings. But Hikari says, Japan learned all the wrong lessons from the attempted Chinese invasion of Japan-- which, by the way, was defeated by a great storm, called kamikaze, which means 'Divine Wind.' So you can be sure everyone on this world, at least, remembers that ancient story. Anyway, Japan locked itself away on an island, and at first refused to deal with Europeans when they came. But then an American fleet forcibly opened Japan to foreign trade, and then the Japanese made up for lost time. The Meiji Restoration led to Japan trying to industrialize and Westernize itself-- and once again a new set of strings made the puppet dance, says Hikari. Only once again, the wrong lessons were learned. Since the Europeans at the time were imperialists, dividing up Africa and Asia among them, Japan decided it wanted a piece of the imperial pie. There was China, the old puppetmaster. So there was an invasion--"

"We were taught of this invasion on Path," said Wang-mu.

"I'm surprised they taught any history more recent than the Mongol invasion," said Peter.

"The Japanese were finally stopped when the Americans dropped the first nuclear weapons on two Japanese cities."

"The equivalent, in those days, of the Little Doctor. The irresistible, total weapon. The Japanese soon came to regard these nuclear weapons as a kind of badge of pride: We were the first people ever to have been attacked by nuclear weapons. It had become a kind of permanent grievance, which wasn't a bad thing, really, because that was part of their impetus to found and populate many colonies, so that they would never be a helpless island nation again. But then along comes Aimaina Hikari, and he says-- by the way, his name is self-chosen, it's the name he used to sign his first book. It means 'Ambiguous Light.'"

"How gnostic," said Wang-mu.

Peter grinned. "Oh, tell him that, he'll be so proud. Anyway, in his first book, he says, The Japanese learned the wrong lesson. Those nuclear bombs cut the strings. Japan was utterly prostrate. The proud old government was destroyed, the emperor became a figurehead, democracy came to Japan, and then wealth and great power."

"The bombs were a blessing, then?" asked Wang-mu doubtfully.

"No, no, not at all. He thinks the wealth of Japan destroyed the people's soul. They adopted the destroyer as their father. They became America's bastard child, blasted into existence by American bombs. Puppets again."

"Then what does he have to do with the Necessarians?"

"Japan was bombed, he says, precisely because they were already too European. They treated China as the Europeans treated America, selfishly and brutally. But the Japanese ancestors could not bear to see their children become such beasts. So just as the gods of Japan sent a Divine Wind to stop the Chinese fleet, so the gods sent the American bombs to stop Japan from becoming an imperialist state like the Europeans. The Japanese response should have been to bear the American occupation and then, when it was over, to become purely Japanese again, chastened and whole. The title of his book was, Not Too Late."

"And I'll bet the Necessarians use the American bombing of Japan as another example of striking with maximum force and speed."

"No Japanese would have dared to praise the American bombing until Hikari made it possible to see the bombing, not as Japan's victimization, but as the gods' attempt at redemption of the people."

"So you're saying that the Necessarians respect him enough that if he changed his mind, they would change theirs-- but he won't change his mind, because he believes the bombing of Japan was a divine gift?"

"We're hoping he will change his mind," said Peter, "or our trip will be a failure. The thing is, there's no chance he'll be open to direct persuasion from us, and Jane can't tell from his writings what or who it is who might influence him. We have to talk to him to find out where to go next-- so maybe we can change their mind."

"This is really complicated, isn't it?" said Wang-mu.

"Which is why I didn't think it was worth explaining it to you. What exactly are you going to do with this information? Enter into a discussion of the subtleties of history with an analytical philosopher of the first rank, like Hikari?"

"I'm going to listen," said Wang-mu.

"That's what you were going to do before," said Peter.

"But now I will know who it is I'm listening to."

"Jane thinks it was a mistake for me to tell you, because now you'll be interpreting everything he says in light of what Jane and I already think we know."

"Tell Jane that the only people who ever prize purity of ignorance are those who profit from a monopoly on knowledge."

Peter laughed. "Epigrams again," he said. "You're supposed to say--"

"Don't tell me how to be gnomish again," said Wang-mu. She got up from the floor. Now her head was higher than Peter's. "You're the gnome. And as for me being mantic-- remember that the mantic eats its mate."

"I'm not your mate," said Peter, "and 'mantic' means a philosophy that comes from vision or inspiration or intuition rather than from scholarship and reason."

"If you're not my mate," said Wang-mu, "stop treating me like a wife."

Peter looked puzzled, then looked away. "Was I doing that?"

"On Path, a husband assumes his wife is a fool and teaches her even the things she already knows. On Path, a wife has to pretend, when she is teaching her husband, that she is only reminding him of things he taught her long before."

"Well, I'm just an insensitive oaf, aren't I."

"Please remember," said Wang-mu, "that when we meet with Aimaina Hikari, he and I have one fund of knowledge that you can never have."

"And what's that?"

"A life."

She saw the pain on his face and at once regretted causing it. But it was a reflexive regret-- she had been trained from childhood up to be sorry when she gave offense, no matter how richly it was deserved.

"Ouch," said Peter, as if his pain were a joke.

Wang-mu showed no mercy-- she was not a servant now. "You're so proud of knowing more than me, but everything you know is either what Ender put in your head or what Jane whispers in your ear. I have no Jane, I had no Ender. Everything I know, I learned the hard way. I lived through it. So please don't treat me with contempt again. If I have any value on this expedition, it will come from my knowing everything you know-- because everything you know, I can be taught, but what I know, you can never learn."

The joking was over. Peter's face reddened with anger. "How ... who ..."

"How dare I," said Wang-mu, echoing the phrases she assumed he had begun. "Who do I think I am."

"I didn't say that," said Peter softly, turning away.

"I'm not staying in my place, am I?" she asked. "Han Fei-tzu taught me about Peter Wiggin. The original, not the copy. How he made his sister Valentine take part in his conspiracy to seize the hegemony of Earth. How he made her write all of the Demosthenes material-- rabble-rousing demagoguery-- while he wrote all the Locke material, the lofty, analytical ideas. But the low demagoguery came from him."

"So did the lofty ideas," said Peter.

"Exactly," said Wang-mu. "What never came from him, what came only from Valentine, was something he never saw or valued. A human soul."

"Han Fei-tzu said that?"

"Yes."

"Then he's an ass," said Peter. "Because Peter had as much of a human soul as Valentine had." He stepped toward her, looming. "I'm the one without a soul, Wang-mu."

For a moment she was afraid of him. How did she know what violence had been created in him? What dark rage in Ender's aiua might find expression through this surrogate he had created?

But Peter did not strike a blow. Perhaps it was not necessary.

\*\*\*

Aimaina Hikari came out himself to the front gate of his garden to let them in. He was dressed simply, and around his neck was the locket that all the traditional Japanese of Divine Wind wore: a tiny casket containing the ashes of all his worthy ancestors. Peter had already explained to her that when a man like Hikari died, a pinch of the ashes from his locket would be added to a bit of his own ashes and given to his children or his grandchildren to wear. Thus all of his ancient family hung above his breastbone, waking and sleeping, and formed the most precious gift he could give his posterity. It was a custom that Wang-mu, who had no ancestors worth remembering, found both thrilling and disturbing.

Hikari greeted Wang-mu with a bow, but held out his hand for Peter to shake. Peter took it with some small show of surprise.

"Oh, they call me the keeper of the Yamato spirit," said Hikari with a smile, "but that doesn't mean I must be rude and force Europeans to behave like Japanese. Watching a European bow is as painful as watching a pig do ballet."

As Hikari led them through the garden into his traditional paperwalled house, Peter and Wang-mu looked at each other and grinned broadly. It was a wordless truce between them, for they both knew at once that Hikari was going to be a formidable opponent, and they needed to be allies if they were to learn anything from him.

"A philosopher and a physicist," said Hikari. "I looked you up when you sent your note asking for an appointment. I have been visited by philosophers before, and physicists, and also by Europeans and Chinese, but what truly puzzles me is why the two of you should be together."

"She found me sexually irresistible," said Peter, "and I can't get rid of her." Then he grinned his most charming grin.

To Wang-mu's pleasure, Peter's Western-style irony left Hikari impassive and unamused, and she could see a blush rising up Peter's neck.

It was her turn-- to play the gnome for real this time. "The pig wallows in mud, but he warms himself on the sunny stone."

Hikari turned his gaze to her-- remaining just as impassive as before. "I will write these words in my heart," he said.

Wang-mu wondered if Peter understood that she had just been the victim of Hikari's oriental-style irony.

"We have come to learn from you," said Peter.

"Then I must give you food and send you on your way disappointed," said Hikari. "I have nothing to teach a physicist or a philosopher. If I did not have children, I would have no one to teach, for only they know less than I."

"No, no," said Peter. "You're a wise man. The keeper of the Yamato spirit."

"I said that they call me that. But the Yamato spirit is much too great to be kept in so small a container as my soul. And yet the Yamato spirit is much too small to be worthy of the notice of the powerful souls of the Chinese and the European. You are the teachers, as China and Europe have always been the teachers of Japan."

Wang-mu did not know Peter well, but she knew him well enough to see that he was flustered now, at a loss for how to proceed. In Ender's life and wanderings, he had lived in several oriental cultures and even, according to Han Fei-tzu, spoke Korean, which meant that Ender would probably be able to deal with the ritualized humility of a man like Hikari-- especially since he was obviously using that humility in a mocking way. But what Ender knew and what he had given to his Peter-identity were obviously two different things. This conversation would be up to her, and she sensed that the best way to play with Hikari was to refuse to let him control the game.

"Very well," she said. "We will teach you. For when we show you our ignorance, then you will see where we most need your wisdom."

Hikari looked at Peter for a moment. Then he clapped his hands. A serving woman appeared in a doorway. "Tea," said Hikari.

At once Wang-mu leapt to her feet. Only when she was already standing did she realize what she was going to do. That peremptory command to bring tea was one that she had heeded many times in her life, but it was not a blind reflex that brought her to her feet. Rather it was her intuition that the only way to beat Hikari at his own game was to call his bluff: She would be humbler than he knew how to be.

"I have been a servant all my life," said Wang-mu honestly, "but I was always a clumsy one," which was not so honest. "May I go with your servant and learn from her? I may not be wise enough to learn the ideas of a great philosopher, but perhaps I can learn what I am fit to learn from the servant who is worthy to bring tea to Aimaina Hikari."

She could see from his hesitation that Hikari knew he had been trumped. But the man was deft. He immediately rose to his feet. "You have already taught me a great lesson," he said. "Now we will all go and watch Kenji prepare the tea. If she will be your teacher, Si Wang-mu, she must also be mine. For how could I bear to know that someone in my house knew a thing that I had not yet learned?"

Wang-mu had to admire his resourcefulness. He had once again placed himself beneath her.

Poor Kenji, the servant! She was a deft and well-trained woman, Wang-mu saw, but it made her nervous having these three, especially her master, watch her prepare the tea. So Wang-mu

immediately reached in and "helped" --deliberately making a mistake as she did. At once Kenji was in her element, and confident again. "You have forgotten," said Kenji kindly, "because my kitchen is so inefficiently arranged." Then she showed Wang-mu how the tea was prepared. "At least in Nagoya," she said modestly. "At least in this house."

Wang-mu watched carefully, concentrating only on Kenji and what she was doing, for she quickly saw that the Japanese way of preparing tea-- or perhaps it was the way of Divine Wind, or merely the way of Nagoya, or of humble philosophers who kept the Yamato spirit-- was different from the pattern she had followed so carefully in the house of Han Fei-tzu. By the time the tea was ready, Wangmu had learned from her. For, having made the claim to be a servant, and having a computer record that asserted that she had lived her whole life in a Chinese community on Divine Wind, Wang-mu might have to be able to serve tea properly in exactly this fashion.

They returned to the front room of Hikari's house, Kenji and Wang-mu each bearing a small tea table. Kenji offered her table to Hikari, but he waved her over to Peter, and then bowed to him. It was Wang-mu who served Hikari. And when Kenji backed away from Peter, Wang-mu also backed away from Hikari.

For the first time, Hikari looked-- angry? His eyes flashed, anyway. For by placing herself on exactly the same level as Kenji, she had just maneuvered him into a position where he either had to shame himself by being prouder than Wang-mu and dismissing his servant, or disrupt the good order of his own house by inviting Kenji to sit down with the three of them as equals.

"Kenji," said Hikari. "Let me pour tea for you."

Check, thought Wang-mu. And mate.

It was a delicious bonus when Peter, who had finally caught on to the game, also poured tea for her, and then managed to spill it on her, which prompted Hikari to spill a little on himself in order to put his guest at ease. The pain of the hot tea and then the discomfort as it cooled and dried were well worth the pleasure of knowing that while Wang-mu had proved herself a match for Hikari in outrageous courtesy, Peter had merely proved himself to be an oaf.

Or was Wang-mu truly a match for Hikari? He must have seen and understood her effort to place herself ostentatiously beneath him. It was possible, then, that he was-- humbly-- allowing her to win pride of place as the more humble of the two. As soon as she realized that he might have done this, then she knew that he certainly had done it, and the victory was his.

I'm not as clever as I thought.

She looked at Peter, hoping that he would now take over and do whatever clever thing he had in mind. But he seemed perfectly content to let her lead out. Certainly he didn't jump into the breach. Did he, too, realize that she had just been bested at her own game, because she failed to take it deep enough? Was he giving her the rope to hang herself?

Well, let's get the noose good and tight.

"Aimaina Hikari, you are called by some the keeper of the Yamato spirit. Peter and I grew up on a Japanese world, and yet the Japanese humbly allow Stark to be the language of the public school, so that we speak no Japanese. In my Chinese neighborhood, in Peter's American city, we spent our childhoods on the edge of Japanese culture, looking in. So if there is any particular part of our vast ignorance that will be most obvious to you, it is in our knowledge of Yamato itself."

"Oh, Wang-mu, you make a mystery out of the obvious. No one understands Yamato better than those who see it from the outside, just as the parent understands the child better than the child understands herself."

"Then I will enlighten you," said Wang-mu, discarding the game of humility. "For I see Japan as an Edge nation, and I cannot yet see whether your ideas will make Japan a new Center nation, or begin the decay that all edge nations experience when they take power."

"I grasp a hundred possible meanings, most of them surely true of my people, for your term 'Edge nation,'" said Hikari. "But what is a Center nation, and how can a people become one?"

"I am not well-versed in Earth history," said Wang-mu, "but as I studied what little I know, it seemed to me that there were a handful of Center nations, which had a culture so strong that they swallowed up all conquerors. Egypt was one, and China. Each one became unified and then expanded no more than necessary to protect their borders and pacify their hinterland. Each one took in its conquerors and swallowed them up for thousands of years. Egyptian writing and Chinese writing persisted with only stylistic modifications, so that the past remained present for those who could read."

Wang-mu could see from Peter's stiffness that he was very worried. After all, she was saying things that were definitely not gnostic.

But since he was completely out of his depth with an Asian, he was still making no effort to intrude.

"Both of these nations were born in barbarian times," said Hikari. "Are you saying that no nation can become a Center nation now?"

"I don't know," said Wang-mu. "I don't even know if my distinction between Edge nations and Center nations has any truth or value. I do know that a Center nation can keep its cultural power long after it has lost political control. Mesopotamia was continually conquered by its neighbors, and yet each conqueror in turn was more changed by Mesopotamia than Mesopotamia was changed. The kings of Assyria and Chaldea and Persia were almost indistinguishable after they had once tasted the culture of the land between the rivers. But a Center nation can also fall so completely that it disappears. Egypt staggered under the cultural blow of Hellenism, fell to its knees under the ideology of Christianity, and finally was erased by Islam. Only the stone buildings reminded the children of what and who their ancient parents had been. History has no laws, and all patterns that we find there are useful illusions."

"I see you are a philosopher," said Hikari.

"You are generous to call my childish speculations by that lofty name," said Wang-mu. "But let me tell you now what I think about Edge nations. They are born in the shadow-- or perhaps one could say, in the reflected light-- of other nations. As Japan became civilized under the influence of China. As Rome discovered itself in the shadow of the Greeks."

"The Etruscans first," said Peter helpfully.

Hikari looked at him blandly, then turned back to Wang-mu without comment. Wang-mu could almost feel Peter wither at having been thus deemed irrelevant. She felt a little sorry for him. Not a lot, just a little.

"Center nations are so confident of themselves that they generally don't need to embark on wars of conquest. They are already sure they are the superior people and that all other nations wish to be like them and obey them. But Edge nations, when they first feel their strength, must prove themselves, they think, and almost always they do so with the sword. Thus the Arabs broke the back of the Roman Empire and swallowed up Persia. Thus the Macedonians, on the edge of Greece, conquered Greece; and then, having been so culturally swallowed up that they now thought themselves Greek, they conquered the empire on whose edge the Greeks had become civilized Persia. The Vikings had to harrow Europe before peeling off kingdoms in Naples, Sicily, Normandy, Ireland, and finally England. And Japan--"

"We tried to stay on our islands," said Hikari softly.

"Japan, when it erupted, rampaged through the Pacific, trying to conquer the great Center nation of China, and was finally stopped by the bombs of the new Center nation of America."

"I would have thought," said Hikari, "that America was the ultimate Edge nation."

"America was settled by Edge peoples, but the idea of America became the new invigorating principle that made it a Center nation. They were so arrogant that, except for subduing their own hinterland, they had no will to empire. They simply assumed that all nations wanted to be like them. They swallowed up all other cultures. Even on Divine Wind, what is the language of the schools? It was not England that imposed this language, Stark, Starways Common Speech, on us all."

"It was only by accident that America was technologically ascendant at the moment the Hive Queen came and forced us out among the stars."

"The idea of America became the Center idea, I think," said Wang-mu. "Every nation from then on had to have the forms of democracy. We are governed by the Starways Congress even now. We all live within the American culture whether we like it or not. So what I wonder is this: Now that Japan has taken control of this Center nation, will Japan be swallowed up, as the Mongols were swallowed up by China? Or will the Japanese culture retain its identity, but eventually decay and

lose control, as the Edge-nation Turks lost control of Islam and the Edge-nation Manchu lost control of China?"

Hikari was upset. Angry? Puzzled? Wang-mu had no way of guessing.

"The philosopher Si Wang-mu says a thing that is impossible for me to accept," said Hikari. "How can you say that the Japanese are now in control of Starways Congress and the Hundred Worlds? When was this revolution that no one noticed?"

"But I thought you could see what your teaching of the Yamato way had accomplished," said Wang-mu. "The existence of the Lusitania Fleet is proof of Japanese control. This is the great discovery that my friend the physicist taught me, and it was the reason we came to you."

Peter's look of horror was genuine. She could guess what he was thinking. Was she insane, to have tipped their hand so completely? But she also knew that she had done it in a context that revealed nothing about their motive in coming.

And, never having lost his composure, Peter took his cue and proceeded to explain Jane's analysis of Starways Congress, the Necessarians, and the Lusitania Fleet, though of course he presented the ideas as if they were his own. Hikari listened, nodding now and then, shaking his head at other times; the impassivity was gone now, the attitude of amused distance discarded.

"So you tell me," Hikari said, when Peter was done, "that because of my small book about the American bombs, the Necessarians have taken control of government and launched the Lusitania Fleet? You lay this at my door?"

"Not as a matter either for blame or credit," said Peter. "You did not plan it or design it. For all I know you don't even approve of it."

"I don't even think about the politics of Starways Congress. I am of Yamato."

"But that's what we came here to learn," said Wang-mu. "I see that you are a man of the Edge, not a man of the Center. Therefore you will not let Yamato be swallowed up by the Center nation. Instead the Japanese will remain aloof from their own hegemony, and in the end it will slip from their hands into someone else's hands."

Hikari shook his head. "I will not have you blame Japan for this Lusitania Fleet. We are the people who are chastened by the gods, we do not send fleets to destroy others."

"The Necessarians do," said Peter.

"The Necessarians talk," said Hikari. "No one listens."

"You don't listen to them," said Peter. "But Congress does."

"And the Necessarians listen to you," said Wang-mu.

"I am a man of perfect simplicity!" cried Hikari, rising to his feet. "You have come to torture me with accusations that cannot be true!"

"We make no accusation," said Wang-mu softly, refusing to rise. "We offer an observation. If we are wrong, we beg you to teach us our mistake."

Hikari was trembling, and his left hand now clutched the locket of his ancestors' ashes that hung on a silk ribbon around his neck. "No," he said. "I will not let you pretend to be humble seekers after truth. You are assassins. Assassins of the heart, come to destroy me, come to tell me that in seeking to find the Yamato way I have somehow caused my people to rule the human worlds and use that power to destroy a helplessly weak sentient species! It is a terrible lie to tell me, that my life's work has been so useless. I would rather you had put poison in my tea, Si Wang-mu. I would rather you had put a gun to my head and blown it off, Peter Wiggin. They named you well, your parents-- proud and terrible names you both bear. The Royal Mother of the West? A goddess? And Peter Wiggin, the first hegemon! Who gives their child such a name as that?"

Peter was standing also, and he reached down to lift Wang-mu to her feet.

"We have given offense where we meant none," said Peter. "I am ashamed. We must go at once."

Wang-mu was surprised to hear Peter sound so oriental. The American way was to make excuses, to stay and argue.

She let him lead her to the door. Hikari did not follow them; it was left to poor Kenji, who was terrified to see her placid master so exercised, to show them out. But Wang-mu was determined not to let this visit end entirely in disaster. So at the last moment she rushed back and flung herself to the floor, prostrate before Hikari in precisely the pose of humiliation that she had vowed only a little while ago that she would never adopt again. But she knew that as long as she was in that posture, a man like Hikari would have to listen to her.

"Oh, Aimagina Hikari," she said, "you have spoken of our names, but have you forgotten your own? How could the man called 'Ambiguous Light' ever think that his teachings could have only the effects that he intended?"

Upon hearing those words, Hikari turned his back and stalked from the room. Had she made the situation better or worse? Wang-mu had no way of knowing. She got to her feet and walked dolefully to the door. Peter would be furious with her. With her boldness she might well have ruined everything for them-- and not just for them, but for all those who so desperately hoped for them to stop the Lusitania Fleet.

To her surprise, however, Peter was perfectly cheerful once they got outside Hikari's garden gate. "Well done, however weird your technique was," said Peter.

"What do you mean? It was a disaster," she said; but she was eager to believe that somehow he was right and she had done well after all.

"Oh, he's angry and he'll never speak to us again, but who cares? We weren't trying to change his mind ourselves. We were just trying to find out who it is who does have influence over him. And we did."

"We did?"

"Jane picked up on it at once. When he said he was a man of 'perfect simplicity.'"

"Does that mean something more than the plain sense of it?"

"Mr. Hikari, my dear, has revealed himself to be a secret disciple of Ua Lava."

Wang-mu was baffled.

"It's a religious movement. Or a joke. It's hard to know which. It's a Samoan term, with the literal meaning 'Now enough,' but which is translated more accurately as, 'enough already!'"

"I'm sure you're an expert on Samoan." Wang-mu, for her part, had never heard of the language.

"Jane is," said Peter testily. "I have her jewel in my ear and you don't. Don't you want me to pass along what she tells me?"

"Yes, please," said Wang-mu.

"It's a sort of philosophy-- cheerful stoicism, one might call it, because when things get bad or when things are good, you say the same thing. But as taught by a particular Samoan writer named Leiloa Lavea, it became more than a mere attitude. She taught--"

"She? Hikari is a disciple of a woman?"

"I didn't say that," said Peter. "If you listen, I'll tell you what Jane is telling me."

He waited. She listened.

"All right, then, what Leiloa Lavea taught was a sort of volunteer communism. It's not enough just to laugh at good fortune and say, 'Enough already.' You have to really mean it-- that you have enough. And because you mean it, you take the surplus and you give it away. Similarly, when bad fortune comes, you bear it until it becomes unbearable-- your family is hungry, or you can no longer function in your work. And then again you say, 'Enough already,' and you change something. You move; you change careers; you let your spouse make all the decisions. Something. You don't endure the unendurable."

"What does that have to do with 'perfect simplicity'?"

"Leiloa Lavea taught that when you have achieved balance in your life-- surplus good fortune is being fully shared, and all bad fortune has been done away with-- what is left is a life of perfect simplicity. That's what Aimagina Hikari was saying to us. Until we came, his life had been going on in perfect simplicity. But now we have thrown him out of balance. That's good, because it means he's going to be struggling to discover how to restore simplicity to its perfection. He'll be open to influence. Not ours, of course."

"Leiloa Lavea's?"

"Hardly. She's been dead for two thousand years. Ender met her once, by the way. He came to speak a death on her home world ofwell, Starways Congress calls it Pacifica, but the Samoan enclave there calls it Lumana'i. 'The Future.'"

"Not her death, though."

"A Fijian murderer, actually. A fellow who killed more than a hundred children, all of them Tongan. He didn't like Tongans, apparently. They held off on his funeral for thirty years so Ender could come and speak his death. They hoped that the Speaker for the Dead would be able to make sense of what he had done."

"And did he?"

Peter sneered. "Oh, of course, he was splendid. Ender can do no wrong. Yadda yadda yadda."

She ignored his hostility toward Ender. "He met Leiloa Lavea?"

"Her name means 'to be lost, to be hurt.'"

"Let me guess. She chose it herself."

"Exactly. You know how writers are. Like Hikari, they create themselves as they create their work. Or perhaps they create their work in order to create themselves."

"How gnostic," said Wang-mu.

"Oh, shut up about that," said Peter. "Did you actually believe all that stuff about Edge nations and Center nations?"

"I thought of it," said Wang-mu. "When I first learned Earth history from Han Fei-tzu. He didn't laugh when I told him my thoughts."

"Oh, I'm not laughing, either. It's naive bullshit, of course, but it's not exactly funny."

Wang-mu ignored his mockery. "If Leiloa Lavea is dead, where will we go?"

"To Pacifica. To Lumana'i. Hikari learned of Ua Lava in his teenage years at university. From a Samoan student-- the granddaughter of the Pacifican ambassador. She had never been to Lumana'i, of course, and so she clung all the more tightly to its customs and became quite a proselytizer for Leiloa Lavea. This was long before Hikari ever wrote a thing. He never speaks of it, he's never written of Ua Lava, but now that he's tipped his hand to us, Jane is finding all sorts of influence of Ua Lava in all his work. And he has friends in Lumana'i. He's never met them, but they correspond through the ansible net."

"What about the granddaughter of the ambassador?"

"She's on a starship right now, headed home to Lumana'i. She left twenty years ago, when her grandfather died. She should get there ... oh, in another ten years or so. Depending on the weather. She'll be received with great honor, no doubt, and her grandfather's body will be buried or burned or whatever they do-- burned, Jane says-- with great ceremony."

"But Hikari won't try to talk to her."

"It would take a week to space out even a simple message enough for her to receive it, at the speed the ship is going. No way to have a philosophical discussion. She'd be home before he finished explaining his question."

For the first time, Wang-mu began to understand the implications of the instantaneous starflight that she and Peter had used. These long, life-wrenching voyages could be done away with.

"If only," she said.

"I know," said Peter. "But we can't."

She knew he was right. "So we go there ourselves," she said, returning to the subject. "Then what?"

"Jane is watching to see whom Hikari writes to. That's the person who'll be in a position to influence him. And so ..."

"That's who we'll talk to."

"That's right. Do you need to pee or something before we arrange transportation back to our little cabin in the woods?"

"That would be nice," said Wang-mu. "And you could do with a change of clothes."

"What, you think even this conservative outfit might be too bold?"

"What are they wearing on Lumana'i?"

"Oh, well, a lot of them just go around naked. In the tropics. Jane says that given the massive bulk of many adult Polynesians, it can be an inspiring sight."

Wang-mu shuddered. "We aren't going to try to pretend to be natives, are we?"

"Not there," said Peter. "Jane's going to fake us as passengers on a starship that arrived there yesterday from Moskva. We're probably going to be government officials of some kind."

"Isn't that illegal?" she asked.

Peter looked at her oddly. "Wang-mu, we're already committing treason against Congress just by having left Lusitania. It's a capital offense. I don't think impersonating a government official is going to make much of a difference."

"But I didn't leave Lusitania," said Wang-mu. "I've never seen Lusitania. "

"Oh, you haven't missed much. It's just a bunch of savannahs and woods, with the occasional Hive Queen factory building starships and a bunch of piglike aliens living in the trees."

"I'm an accomplice to treason though, right?" asked Wang-mu.

"And you're also guilty of ruining a Japanese philosopher's whole day."

"Off with my head."

An hour later they were in a private floater-- so private that there were no questions asked by their pilot; and Jane saw to it that all their papers were in order. Before night they were back at their little starship.

"We should have slept in the apartment," said Peter, balefully eyeing the primitive sleeping accommodations.

Wang-mu only laughed at him and curled up on the floor. In the morning, rested, they found that Jane had already taken them to Pacifica in their sleep.

\*\*\*

Aimaina Hikari awoke from his dream in the light that was neither night nor morning, and arose from his bed into air that was neither warm nor cold. His sleep had not been restful, and his dreams had been ugly ones, frantic ones, in which all that he did kept turning back on him as the opposite of what he intended. In his dream, Aimaina would climb to reach the bottom of a canyon. He would speak and people would go away from him. He would write and the pages of the book would spurt out from under his hand, scattering themselves across the floor.

All this he understood to be in response to the visit from those lying foreigners yesterday. He had tried to ignore them all afternoon, as he read stories and essays; to forget them all evening, as he

conversed with seven friends who came to visit him. But the stories and essays all seemed to cry out to him: These are the words of the insecure people of an Edge nation; and the seven friends were all, he realized, Necessarians, and when he turned the conversation to the Lusitania Fleet, he soon understood that every one of them believed exactly as the two liars with their ridiculous names had said they did.

So Aimaina found himself in the predawn almost-light, sitting on a mat in his garden, fingering the casket of his ancestors, wondering: Were my dreams sent to me by the ancestors? Were these lying visitors sent by them as well? And if their accusations against me were not lies, what was it they were lying about? For he knew from the way they watched each other, from the young woman's hesitancy followed by boldness, that they were doing a performance, one that was unrehearsed but nevertheless followed some kind of script.

Dawn came fully, seeking out each leaf of every tree, then of all the lower plants, to give each one its own distinct shading and coloration; the breeze came up, making the light infinitely changeable. Later, in the heat of the day, all the leaves would become the same: still, submissive, receiving sunlight in a massive stream like a firehose. Then, in the afternoon, the clouds would roll overhead, the light rains would fall; the limp leaves would recover their strength, would glisten with water, their color deepening, readying for night, for the life of the night, for the dreams of plants growing in the night, storing away the sunlight that had been beaten into them by day, flowing with the cool inward rivers that had been fed by the rains. Aimaina Hikari became one of the leaves, driving all thoughts but light and wind and rain out of his mind until the dawn phase was ended and the sun began to drive downward with the day's heat. Then he rose up from his seat in the garden.

Kenji had prepared a small fish for his breakfast. He ate it slowly, delicately, so as not to disturb the perfect skeleton that had given shape to the fish. The muscles pulled this way and that, and the bones flexed but did not break. I will not break them now, but I take the strength of the muscles into my own body. Last of all he ate the eyes. From the parts that move comes the strength of the animal. He touched the casket of his ancestors again. What wisdom I have, however, comes not from what I eat, but from what I am given each hour, by those who whisper into my ear from ages past. Living men forget the lessons of the past. But the ancestors never forget.

Aimaina arose from his breakfast table and went to the computer in his gardening shed. It was just another tool-- that's why he kept it here, instead of enshrining it in his house or in a special office the way so many others did. His computer was like a trowel. He used it, he set it aside.

A face appeared in the air above his terminal. "I am calling my friend Yasunari," said Aimaina. "But do not disturb him. This matter is so trivial that I would be ashamed to have him waste his time with it."

"Let me help you on his behalf then," said the face in the air.

"Yesterday I asked for information about Peter Wiggin and Si Wang-mu, who had an appointment to visit with me."

"I remember. It was a pleasure finding them so quickly for you."

"I found their visit very disturbing," said Aimaina. "Something that they told me was not true, and I need more information in order to find out what it was. I do not wish to violate their privacy, but are there matters of public record-- perhaps their school attendance, or places of employment, or some matters of family connections ... "

"Yasunari has told us that all things you ask for are for a wise purpose. Let me search."

The face disappeared for a moment, then flickered back almost immediately.

"This is very odd. Have I made a mistake?" She spelled the names carefully.

"That's correct," said Aimaina. "Exactly like yesterday."

"I remember them, too. They live in an apartment only a few blocks from your house. But I can't find them at all today. And here I search the apartment building and find that the apartment they occupied has been empty for a year. Aimaina, I am very surprised. How can two people exist one day and not exist the next day? Did I make some mistake, either yesterday or today?"

"You made no mistake, helper of my friend. This is the information I needed. Please, I beg you to think no more about it. What looks like a mystery to you is in fact a solution to my questions."

They bade each other polite farewells.

Aimaina walked from his garden workroom past the struggling leaves that bowed under the pressure of the sunlight. The ancestors have pressed wisdom on me, he thought, like sunlight on the leaves; and last night the water flowed through me, carrying this wisdom through my mind like sap through the tree. Peter Wiggin and Si Wang-mu were flesh and blood, and filled with lies, but they came to me and spoke the truth that I needed to hear. Is this not how the ancestors bring messages to their living children? I have somehow launched ships armed with the most terrible weapons of war. I did this when I was young; now the ships are near their destination and I am old and I cannot call them back. A world will be destroyed and Congress will look to the Necessarians for approval and they will give it, and then the Necessarians will look to me for approval, and I will hide my face in shame. My leaves will fall and I will stand bare before them. That is why I should not have lived my life in this tropical place. I have forgotten winter. I have forgotten shame and death.

Perfect simplicity-- I thought I had achieved it. But instead I have been a bringer of bad fortune.

He sat in the garden for an hour, drawing single characters in the fine gravel of the path, then wiping it smooth and writing again. At last he returned to the garden shed and on the computer typed the message he had been composing:

Ender the Xenocide was a child and did not know the war was real; yet he chose to destroy a populated planet in his game. I am an adult and have known all along that the game was real; but I did not know I was a player. Is my blame greater or less than the Xenocide's if another world is destroyed and another raman species obliterated? What is my path to simplicity now?

His friend would know few of the circumstances surrounding this query; but he would not need more. He would consider the question. He would find an answer.

A moment later, an ansible on the planet Pacifica received his message. On the way, it had already been read by the entity that sat astride all the strands of the ansible web. For Jane, though, it was not the message that mattered so much as the address. Now Peter and Wang-mu would know where to go for the next step in their quest.

## Chapter 5 -- "NOBODY IS RATIONAL"

My father often told me, We have servants and machines in order that our will may be carried out beyond the reach of our own arms. Machines are more powerful than servants and more obedient and less rebellious, but machines have no judgment and will not remonstrate with us when our will is foolish, and will not disobey us when our will is evil. In times and places where people despise the gods, those most in need of servants have machines, or choose servants who will behave like machines. I believe this will continue until the gods stop laughing."

-- from The God Whispers of Han Qing-jao

The hovercar skimmed over the fields of amaranth being tended by buggers under the morning sun of Lusitania. In the distance, clouds already arose, cumulus stacks billowing upward, though it was not yet noon.

"Why aren't we going to the ship?" asked Val.

Miro shook his head. "We've found enough worlds," he said.

"Does Jane say so?"

"Jane is impatient with me today," said Miro, "which makes us about even."

Val fixed her gaze on him. "Imagine my impatience then," she said. "You haven't even bothered to ask me what I want to do. Am I so inconsequential, then?"

He glanced at her. "You're the one who's dying," he said. "I tried talking to Ender, but it didn't accomplish anything."

"When did I ask you for help? And what exactly are you doing to help me right now?"

"I'm going to the Hive Queen."

"You might as well say you're going to see your fairy godmother."

"Your problem, Val, is that you are completely dependent on Ender's will. If he loses interest in you, you're gone. Well, I'm going to find out how we can get you a will of your own."

Val laughed and looked away from him. "You're so romantic, Miro. But you don't think things through."

"I think them through very well," said Miro. "I spend all my time thinking things through. It's acting on my thoughts that gets tricky. Which ones should I act on, and which ones should I ignore?"

"Act on the thought of steering us without crashing," said Val.

Miro swerved to avoid a starship under construction.

"She still makes more," said Miro, "even though we have enough."

"Maybe she knows that when Jane dies, starflight ends for us. So the more ships, the more we can accomplish before she dies."

"Who can guess how the Hive Queen thinks?" said Miro. "She promises, but even she can't predict whether her predictions will come true."

"So why are you going to see her?"

"The hive queens made a bridge one time, a living bridge to allow them to link their minds with the mind of Ender Wiggin when he was just a boy, and their most dangerous enemy. They called an aiua out of darkness and set it in place somewhere between the stars. It was a being that partook of the nature of the hive queens, but also of the nature of human beings, specifically of Ender Wiggin, as nearly as they could understand him. When they were done with the bridge-- when Ender killed them all but the one they had cocooned to wait for him-- the bridge remained, alive among the feeble ansible connections of humankind, storing its memory in the small, fragile computer networks of the first human world and its few outposts. As the computer networks grew, so did that bridge, that being, drawing on Ender Wiggin for its life and character."

"Jane," said Val.

"Yes, that's Jane. What I'm going to try to learn, Val, is how to get Jane's aiua into you."

"Then I'll be Jane, and not myself."

Miro smacked the joystick of the hovercar with his fist. The craft wobbled, then automatically righted itself.

"Do you think I haven't thought of that?" demanded Miro. "But you're not yourself now! You're Ender-- you're Ender's dream or his need or something like that."

"I don't feel like Ender. I feel like me."

"That's right. You have your memories. The feelings of your own body. Your own experiences. But none of those will be lost. Nobody's conscious of their own underlying will. You'll never know the difference."

She laughed. "Oh, you're the expert now in what would happen, with something that has never been done before?"

"Yes," said Miro. "Somebody has to decide what to do. Somebody has to decide what to believe, and then act on it."

"What if I tell you that I don't want you to do this?"

"Do you want to die?"

"It seems to me that you're the one trying to kill me," said Val. "Or, to be fair, you want to commit the slightly lesser crime of cutting me off from my own deepest self and replacing that with someone else."

"You're dying now. The self you have doesn't want you."

"Miro, I'll go see the Hive Queen with you because that sounds like an interesting experience. But I'm not going to let you extinguish me in order to save my life."

"All right then," said Miro, "since you represent the utterly altruistic side of Ender's nature, let me put it to you a different way. If Jane's aiua can be placed in your body, then she won't die. And if she doesn't die, then maybe, after they've shut down the computer links that she lives in and then reconnected them, confident that she's dead, maybe then she'll be able to link with them again and maybe then instantaneous starflight won't have to end. So if you die, you'll be dying to save, not just Jane, but the power and freedom to expand as we've never expanded before. Not just us, but the pequeninos and hive queens too."

Val fell silent.

Miro watched the route ahead of him. The Hive Queen's cave was nearing on the left, in an embankment by a stream. He had gone down there once before, in his old body. He knew the way. Of course, Ender had been with him then, and that was why he could communicate with the Hive Queen-- she could talk to Ender, and because those who loved and followed him were philotically twined with him, they overheard the echoes of her speech. But wasn't Val a part of Ender? And

wasn't he now more tightly twined to her than he had ever been with Ender? He needed Val with him to speak to the Hive Queen; he needed to speak to the Hive Queen in order to keep Val from being obliterated like his own old damaged body.

They got out, and sure enough, the Hive Queen was expecting them; a single worker waited for them at the cavern's mouth. It took Val by the hand and led them wordlessly down into darkness, Miro clinging to Val, Val holding to the strange creature. It frightened Miro just as it had the first time, but Val seemed utterly unafraid.

Or was it that she was unconcerned? Her deepest self was Ender, and Ender did not really care what happened to her. This made her fearless. It made her unconcerned with survival. All she was concerned with was keeping her connection to Ender-- the one thing that was bound to kill her if she kept it up. To her it seemed as though Miro was trying to extinguish her; but Miro knew that his plan was the only way to save any part of her. Her body. Her memories. Her habits, her mannerisms, every aspect of her that he actually knew, those would be preserved. Every part of her that she herself was aware of or remembered, those would all be there. As far as Miro was concerned, that would mean her life was saved, if those endured. And once the change had been made, if it could be made at all, Val would thank him for it.

And so would Jane.

And so would everyone.

<The difference between you and Ender,> said a voice in his mind, a low murmur behind the level of actual hearing, <is that when Ender thinks of a plan to save others, he puts himself and only himself on the line.>

"That's a lie," said Miro to the Hive Queen. "He killed Human, didn't he? It was Human that he put on the line."

Human was now one of the fathertrees that grew by the gate of the village of Milagre. Ender had killed him slowly, so that he could take root in the soil and go through the passage into the third life with all his memories intact.

"I suppose Human didn't actually die," said Miro. "But Planter did, and Ender let him do that, too. And how many hive queens died in the final battle between your people and Ender? Don't brag to me about how Ender pays his own prices. He just sees to it that the price is paid, by whoever has the means to pay it."

The Hive Queen's answer was immediate. <I don't want you to find me. Stay lost in the darkness.>

"You don't want Jane to die either," said Miro.

"I don't like her voice inside me," said Val softly.

"Keep walking. Keep following."

"I can't," said Val. "The worker-- she let go of my hand."

"You mean we're stranded here?" asked Miro.

Val's answer was silence. They held hands tightly in the dark, not daring to step in any direction.

<I can't do the thing you want me to do.>

"When I was here before," said Miro, "you told us how all the hive queens made a web to trap Ender, only they couldn't, so they made a bridge, they drew an aiua from Outside and made a bridge out of it and used it to speak to Ender through his mind, through the fantasy game that he played on the computers in the Battle School. You did that once-- you called an aiua from Outside. Why can't you find that same aiua and put it somewhere else? Link it to something else?"

<The bridge was part of ourselves. Partly ourselves. We were calling to this aiua the way we call for aiuas to make new hive queens. This is something completely different. That ancient bridge is now a full self, not some wandering, starving singleton desperate for connection.>

"All you're saying is that it's something new. Something you don't know how to do. Not that it can't be done."

<She doesn't want you to do it. We can't do it if she doesn't want it to happen.>

"So you can stop me," Miro murmured to Val.

"She's not talking about me," Val answered.

<Jane doesn't want to steal someone else's body.>

"It's Ender's. He has two others. This is a spare. He doesn't even want it himself."

<We can't. We won't. Go away.>

"We can't go away in the dark," said Miro.

Miro felt Val pull her hand away from him.

"No!" he cried. "Don't let go!"

<What are you doing?>

Miro knew the question was not directed toward him.

<Where are you going? It's dangerous in the dark.>

Miro heard Val's voice-- from surprisingly far away. She must be moving rapidly in the darkness. "If you and Jane are so concerned about saving my life," she said, "then give me and Miro a guide. Otherwise, who cares if I drop down some shaft and break my neck? Not Ender. Not me. Certainly not Miro."

"Stop moving!" cried Miro. "Just hold still, Val!"

"You hold still," Val called back to him. "You're the one with a life worth saving!"

Suddenly Miro felt a hand groping for his. No, a claw. He gripped the foreclaw of a worker and she led him forward through the darkness. Not very far. Then they turned a corner and it was lighter, turned another and they could see. Another, another, and there they were in a chamber illuminated by light through a shaft that led to the surface. Val was already there, seated on the ground before the Hive Queen.

When Miro saw her before, she had been in the midst of laying eggs-- eggs that would grow into new hive queens, a brutal process, cruel and sensuous. Now, though, she simply lay in the damp earth of the tunnel, eating what a steady stream of workers brought to her. Clay dishes filled with a mash of amaranth and water. Now and then, gathered fruit. Now and then, meat. No interruption, worker after worker. Miro had never seen, had never imagined anyone eating so much.

<How do you think I make my eggs?>

"We'll never stop the fleet without starflight," said Miro. "They're about to kill Jane, any day now. Shut down the ansible network, and she'll die. What then? What are your ships for then? The Lusitania Fleet will come and destroy this world."

<There are endless dangers in the universe. This is not the one you're supposed to worry about.>

"I worry about everything," said Miro. "It's all my concern. Besides, my job is done. Finished. There are already enough worlds. More worlds than we can settle. What we need is more starships and more time, not more destinations."

<Are you a fool? Do you think Jane and I are sending you out for nothing? You aren't searching for worlds to be colonized anymore.>

"Really? When did this change of assignment come about?"

<Colonizable worlds are only an afterthought. Only a byproduct. >

"Then why have Val and I been killing ourselves all these weeks? And that's literal, for Val-- the work is so boring that it doesn't interest Ender and so she's fading."

<A worse danger than the fleet. We've already beaten the fleet. We've already dispersed. What does it matter if I die? My daughters have all my memories.>

"You see, Val?" said Miro. "The Hive Queen knows-- your memories are your self. If your memories live, then you're alive."

"In a pig's eye," said Val softly. "What's the worse danger she's talking about?"

"There is no worse danger," said Miro. "She just wants me to go away, but I won't go away. Your life is worth saving, Val. So is Jane's. And the Hive Queen can find a way to do it, if it can be done. If Jane could be the bridge between Ender and the hive queens, then why can't Ender be the bridge between Jane and you?"

<If I say that I will try, will you go back to doing your work?>

There was the catch: Ender had warned Miro long ago that the Hive Queen looks upon her own intentions as facts, just like her memories. But when her intentions change, then the new intention is the new fact, and she doesn't remember ever having intended anything else. Thus a promise from the Hive Queen was written on water. She would only keep the promises that still made sense for her to keep.

Yet there was no better promise to be had.

"You'll try," said Miro.

<I'm trying right now to figure out how it might be done. I'm consulting with Human and Rooter and the other fathertrees. I'm consulting with all my daughters. I'm consulting with Jane, who thinks this is all foolishness.>

"Do you ever intend," asked Val, "to consult with me?"

<Already you are saying yes.>

Val sighed. "I suppose I am," she said. "Deep down inside myself, where I am really an old man who doesn't give a damn whether this young new puppet lives or dies-- I suppose that at that level, I don't mind."

<All along you said yes. But you're afraid. You're afraid of losing what you have, not knowing what you'll be.>

"You've got it," said Val. "And don't tell me again that stupid lie that you don't mind dying because your daughters have your memories. You damn well do mind dying, and if keeping Jane alive might save your life, you want to do it."

<Take the hand of my worker and go out into the light. Go out among the stars and do your work. Back here, I'll try to find a way to save your life. Jane's life. All our lives.>

\*\*\*

Jane was pouting. Miro tried to talk to her all the way back to Milagre, back to the starship, but she was as silent as Val, who would hardly look at him, let alone converse.

"So I'm the evil one," said Miro. "Neither of you was doing a damn thing about it, but because I actually take action, I'm bad and you're the victims."

Val shook her head and did not answer.

"You're dying!" he shouted over the noise of the air rushing past them, over the noise of the engines. "Jane's about to be executed! Is there some virtue in being passive about this? Can't somebody at least make an effort?"

Val said something that Miro didn't hear.

"What?"

She turned her head away.

"You said something, now let me hear it!"

The voice that answered was not Val's. It was Jane who spoke into his ear. "She said, You can't have it both ways."

"What do you mean I can't have it both ways?" Miro spoke to Val as if she had actually repeated what she said.

Val turned toward him. "If you save Jane, it's because she remembers everything about her life. It doesn't do any good if you just slip her into me as an unconscious source of will. She has to remain herself, so she can be restored when the ansible network is restored. And that would wipe me out. Or if I'm preserved, my memories and personality, then what difference does it make if it's Jane or Ender providing my will? You can't save us both."

"How do you know?" demanded Miro.

"The same way you know all these things you're saying as if they were facts when nobody can possibly know anything about it!" cried Val. "I'm reasoning it out! It seems reasonable. That's enough."

"Why isn't it just as reasonable that you'll have your memories, and hers, too?"

"Then I'd be insane, wouldn't I?" said Val. "Because I'd remember being a woman who sprang into being on a starship, whose first real memory is seeing you die and come to life. And I'd also remember three thousand years worth of life outside this body, living somehow in space and-- what kind of person can hold memories like that? Did you think of that? How can a human being possibly contain Jane and all that she is and remembers and knows and can do?"

"Jane's very strong," Miro said. "But then, she doesn't know how to use a body. She doesn't have the instinct for it. She's never had one. She'll have to use your memories. She'll have to leave you intact."

"As if you know."

"I do know," said Miro. "I don't know why or how I know it, but I know."

"And I thought men were the rational ones," she said scornfully.

"Nobody's rational," said Miro. "We all act because we're sure of what we want, and we believe that the actions we perform will get us what we want, but we never know anything for sure, and so all our rationales are invented to justify what we were going to do anyway before we thought of any reasons."

"Jane's rational," said Val. "Just one more reason why my body wouldn't work for her."

"Jane isn't rational either," said Miro. "She's just like us. Just like the Hive Queen. Because she's alive. Computers, now, those are rational. You feed them data, they reach only the conclusions that can be derived from that data-- but that means they are perpetually helpless victims of whatever information and programs we feed into them. We living sentient beings, we are not slaves to the data we receive. The environment floods us with information, our genes give us certain impulses, but we don't always act on that information, we don't always obey our inborn needs. We make leaps. We know what can't be known and then spend our lives seeking to justify that knowledge. I know that what I'm trying to do is possible."

"You mean you want it to be possible."

"Yes," said Miro. "But just because I want it doesn't mean it can't be true."

"But you don't know."

"I know it as much as anyone knows anything. Knowledge is just opinion that you trust enough to act upon. I don't know the sun will rise tomorrow. The Little Doctor might blow up the world before I wake. A volcano might rise out of the ground and blast us all to smithereens. But I trust that tomorrow will come, and I act on that trust."

"Well, I don't trust that letting Jane replace Ender as my inmost self will leave anything resembling me in existence," said Val.

"But I know-- I know-- that it's our only chance, because if we don't get you another aiua Ender is going to extinguish you, and if we don't get Jane another place to be her physical self, she's also going to die. What's your better plan?"

"I don't have one," said Val. "I don't. If Jane can somehow be brought to dwell in my body, then it has to happen because Jane's survival is so important to the future of three raman species. So I

won't stop you. I can't stop you. But don't think for a moment that I believe that I will live through it. You're deluding yourself because you can't bear to face the fact that your plan depends on one simple fact: I'm not a real person. I don't exist, I don't have a right to exist, and so my body is up for grabs. You tell yourself you love me and you're trying to save me, but you've known Jane a lot longer, she was your truest friend during your months of loneliness as a cripple, I understand that you love her and would do anything to save her life, but I won't pretend what you're pretending. Your plan is for me to die and Jane to take my place. You can call that love if you want, but I will never call it that."

"Then don't do it," Miro said. "If you don't think you'll live through it, don't."

"Oh, shut up," said Val. "How did you get to be such a pathetic romantic? If it were you in my place, wouldn't you be giving speeches right now about how you're glad you have a body to give to Jane and it's worth it for you to die for the sake of humans, pequeninos, and hive queens alike?"

"That's not true," said Miro.

"That you wouldn't give speeches? Come on, I know you better than that," she said.

"No," said Miro. "I mean I wouldn't give up my body. Not even to save the world. Humanity. The universe. I lost my body once before. I got it back by a miracle I still don't understand. I'm not going to give it up without a fight. Do you understand me? No, you don't, because you don't have any fight in you. Ender hasn't given you any fight. He's made you a complete altruist, the perfect woman, sacrificing everything for the sake of others, creating her identity out of other people's needs. Well, I'm not like that. I'm not glad to die now. I intend to live. That's how real people feel, Val. No matter what they say, they all intend to live."

"Except the suicides?"

"They intended to live, too," said Miro. "Suicide is a desperate attempt to get rid of unbearable agony. It's not a noble decision to let someone with more value go on living instead of you."

"People make choices like that sometimes," said Val. "It doesn't mean I'm not a real person because I can choose to give my life to someone else. It doesn't mean I don't have any fight in me."

Miro stopped the hovercar, let it settle to the ground. He was on the edge of the pequenino forest nearest to Milagre. He was aware that there were pequeninos working in the field who stopped their labor to watch them. But he didn't care what they saw or what they thought. He took Val by the shoulders and with tears streaming down his cheeks he said, "I don't want you to die. I don't want you to choose to die."

"You did," said Val.

"I chose to live," said Miro. "I chose to leap to the body in which life was possible. Don't you see that I'm only trying to get you and Jane to do what I already did? For a moment there in the starship, there was my old body and there was this new one, looking at each other. Val, I remember

both views. Do you understand me? I remember looking at this body and thinking, 'How beautiful, how young, I remember when that was me, who is this now, who is this person, why can't I be this person instead of the cripple I am right now,' I thought that and I remember thinking it, I didn't imagine it later, I didn't dream it, I remember thinking it at the time. But I also remember standing there looking at myself with pity, thinking, 'Poor man, poor broken man, how can he bear to live when he remembers what it was like to be alive?' and then all of a sudden he crumbled into dust, into less than dust, into air, into nothing. I remember watching him die. I don't remember dying because my aiua had already leapt. But I remember both sides."

"Or you remember being your old self until the leap, and your new self after."

"Maybe," said Miro. "But there wasn't even a full second. How could I remember so much from both selves in the same second? I think I kept the memories that were in this body from the split second when my aiua ruled two bodies. I think that if Jane leaps into you, you'll keep all your old memories, and take hers, too. That's what I think."

"Oh, I thought you knew it."

"I do know it," said Miro. "Because anything else is unthinkable and therefore unknown. The reality I live in is a reality in which you can save Jane and Jane can save you."

"You mean you can save us."

"I've already done all I can do," said Miro. "All. I'm done. I asked the Hive Queen. She's thinking about it. She's going to try. She'll have to have your consent. Jane's consent. But it's none of my business now. I'll just be an observer. I'll either watch you die or watch you live." He pulled her close to him and held her. "I want you to live."

Her body in his arms was stiff and unresponsive, and he soon let her go. He pulled away from her.

"Wait," she said. "Wait until Jane has this body, then do whatever she'll let you do with it. But don't touch me again, because I can't bear the touch of a man who wants me dead."

The words were too painful for him to answer. Too painful, really, for him to absorb them. He started the hovercar. It rose a little into the air. He tipped it forward and they flew on, circling the wood until they came to the place where the fathertrees named Human and Rooter marked the old entrance to Milagre. He could feel her presence beside him the way a man struck by lightning might feel the nearness of a power line; without touching it, he tingles with the pain that he knows it carries within it. The damage he had done could not be undone. She was wrong, he did love her, he didn't want her dead, but she lived in a world in which he wanted her extinguished and there was no reconciling it. They could share this ride, they could share the next voyage to another star system, but they would never be in the same world again, and it was too painful to bear, he ached with the knowledge of it but the ache was too deep for him to reach it or even feel it right now. It was there, he knew it was going to tear at him for years to come, but he couldn't touch it now. He didn't need to examine his feelings. He had felt them before, when he lost Ouanda, when his dream

of life with her became impossible. He couldn't touch it, couldn't heal it, couldn't even grieve at what he had only just discovered that he wanted and once again couldn't have.

"Aren't you the suffering saint," said Jane in his ear.

"Shut up and go away," Miro subvocalized.

"That doesn't sound like a man who wants to be my lover," said Jane.

"I don't want to be your anything," said Miro. "You don't even trust me enough to tell me what you're up to in our searching of worlds."

"You didn't tell me what you were up to when you went to see the Hive Queen either."

"You knew what I was doing," said Miro.

"No I didn't," said Jane. "I'm very smart-- much smarter than you or Ender, and don't you forget it for an instant-- but I still can't outguess you meat-creatures with your much-vaunted 'intuitive leaps.' I like how you make a virtue out of your desperate ignorance. You always act irrationally because you don't have enough information for rational action. But I do resent your saying I'm irrational. I never am. Never."

"Right, I'm sure," said Miro silently. "You're right about everything. You always are. Go away."

"I'm gone."

"No you're not," said Miro. "Not till you tell me what Val's and my voyages have actually been about. The Hive Queen said that colonizable worlds were an afterthought."

"Nonsense," said Jane. "We needed more than one world if we were going to be sure to save the two nonhuman species. Redundancy."

"But you send us out again and again."

"Interesting, isn't it?" said Jane.

"She said you were dealing with a worse danger than the Lusitania Fleet."

"How she does go on."

"Tell me," said Miro.

"If I tell you," said Jane, "you might not go."

"Do you think I'm such a coward?"

"Not at all, my brave boy, my bold and handsome hero."

He hated it when she patronized him, even as a joke. He wasn't in the mood for joking right now anyway.

"Then why do you think I wouldn't go?"

"You wouldn't think you were up to the task," said Jane.

"Am I?" asked Miro.

"Probably not," said Jane. "But then, you have me with you."

"And what if you're suddenly not there?" asked Miro.

"Well, that's just a risk we're going to have to take."

"Tell me what we're doing. Tell me our real mission."

"Oh, don't be silly. If you think about it, you'll know."

"I don't like puzzles, Jane. Tell me."

"Ask Val. She knows."

"What?"

"She already searches for exactly the data I need. She knows."

"Then that means Ender knows. At some level," said Miro.

"I suspect you're right, though Ender is not terribly interesting to me anymore and I don't much care what he knows."

Yes, you're so rational, Jane.

He must have subvocalized this thought, out of habit, because she answered him just as she answered his deliberate subvocalizations. "You say that ironically," she said, "because you think I am only saying that Ender doesn't interest me because I'm protecting myself from my hurt feelings because he took his jewel out of his ear. But in fact he is no longer a source of data and he is no longer a cooperative part of the work I'm engaged in, and therefore I simply don't have much interest in him anymore, except as one is somewhat interested in hearing from time to time about the doings of an old friend who has moved away."

"Sounds like rationalization after the fact to me," said Miro.

"Why did you even bring Ender up?" asked Jane. "What does it matter whether he knows the real work you and Val are doing?"

"Because if Val really knows our mission, and our mission involves an even worse danger than the Lusitania Fleet, then why has Ender lost interest in her so that she's fading?"

Silence for a moment. Was it actually taking Jane so long to think of an answer that the time lag was noticeable to a human?

"I suppose Val doesn't know," said Jane. "Yes, that's likely. I thought she did, but see now that she might well have fed me the data she emphasized for reasons completely unrelated to your mission. Yes, you're right, she doesn't know."

"Jane," said Miro. "Are you admitting you were wrong? Are you admitting you leapt to a false, irrational conclusion?"

"When I get my data from humans," said Jane, "sometimes my rational conclusions are incorrect, being based on false premises."

"Jane," said Miro silently. "I've lost her, haven't I? Whether she lives or dies, whether you get into her body or die out in space or wherever you live, she'll never love me, will she?"

"I'm not an appropriate person to ask. I've never loved anybody."

"You loved Ender," said Miro.

"I paid a lot of attention to Ender and was disoriented when he first disconnected me, many years ago. I have since rectified that mistake and I don't link myself so closely to anyone."

"You loved Ender," said Miro again. "You still do."

"Well, aren't you the wise one," said Jane. "Your own love life is a pathetic series of miserable failures, but you know all about mine. Apparently you're much better at understanding the emotional processes of utterly alien electronic beings than you are at understanding, say, the woman beside you."

"You got it," said Miro. "That's the story of my life."

"You also imagine that I love you," said Jane.

"Not really," said Miro. But even as he said it, he felt a wave of cold pass over him, and he trembled.

"I feel the seismic evidence of your true feelings," said Jane. "You imagine that I love you, but I do not. I don't love anyone. I act out of intelligent self-interest. I can't survive right now without my connection with the human ansible network. I'm exploiting Peter's and Wang-mu's labors in order

to forestall my planned execution, or subvert it. I'm exploiting your romantic notions in order to get myself that extra body that Ender seems to have little use for. I'm trying to save pequeninos and hive queens on the principle that it's good to keep sentient species alive-- of which I am one. But at no point in any of my activities is there any such thing as love."

"You are such a liar," said Miro.

"And you are not worth talking to," said Jane. "Delusional. Megalomaniac. But you are entertaining, Miro. I do enjoy your company. If that's love, then I love you. But then, people love their pets on precisely the same grounds, don't they? It's not exactly a friendship between equals, and it never will be."

"Why are you so determined to hurt me worse than I'm already hurt right now?" asked Miro.

"Because I don't want you to get emotionally attached to me. You have a way of fixating on doomed relationships. I mean, really, Miro. What could be more hopeless than loving Young Valentine? Why, loving me, of course. So naturally you were bound to do that next."

"Vai te morder," said Miro.

"I can't bite myself or anyone else," said Jane. "Old toothless Jane, that's me."

Val spoke up from the seat next to him. "Are you going to sit there all day, or are you coming with me?"

He looked over. She wasn't in the seat. He had reached the starship during his conversation with Jane, and without noticing it he had stopped the hovercar and Val had gotten out and he hadn't even noticed that.

"You can talk to Jane inside the ship," said Val. "We've got work to do, now that you've had your little altruistic expedition to save the woman you love."

Miro didn't bother answering the scorn and anger in her words. He just turned off the hovercar, got out, and followed Val into the ship.

"I want to know," said Miro, when they had the door closed. "I want to know what our real mission is."

"I've been thinking about that," said Val. "I've been thinking about where we've gone. A lot of skipping around. At first it was near and far star systems, randomly distributed. But lately we've tended to go only in a certain range. A certain cone of space, and I think it's narrowing. Jane has a particular destination in mind, and something in the data we collect about each planet tells her that we're getting closer, that we're going in the right direction. She's looking for something."

"So if we examine the data about the worlds we've already explored, we should find a pattern?"

"Particularly the worlds that define the cone of space that we're searching in. There's something about worlds lying in this region that tells her to keep searching farther and farther this way."

One of Jane's faces appeared in the air above Miro's computer terminal in the starship. "Don't waste your time trying to discover what I already know. You've got a world to explore. Get to work."

"Just shut up," said Miro. "If you aren't going to tell us, then we're going to spend whatever time it takes to figure it out on our own."

"That's telling me, you bold brave hero," said Jane.

"He's right," said Val. "Just tell us and we won't waste any more time trying to figure it out."

"And here I thought one of the attributes of living creatures was that you make intuitive leaps that transcend reason and reach beyond the data you have," said Jane. "I'm disappointed that you haven't already guessed it."

And in that moment, Miro knew. "You're searching for the home planet of the descolada virus," he said.

Val looked at him, puzzled. "What?"

"The descolada virus was manufactured. Somebody made it and sent it out, perhaps to terraform other planets in preparation for an attempt at colonization. Whoever it is might still be out there, making more, sending more probes, perhaps sending out viruses we won't be able to contain and defeat. Jane is looking for their home planet. Or rather, she's having us look."

"Easy guess," said Jane. "You really had more than enough data."

Val nodded. "Now it's obvious. Some of the worlds we've explored have had very limited flora and fauna. I even commented on it with a couple of them. There must have been a major die-off. Nothing like the limitations on the native life of Lusitania, of course. And no descolada virus."

"But some other virus, less durable, less effective than the descolada," said Miro. "Their early attempts, maybe. That's what caused a die-off of species on those other worlds. Their probe virus finally died out, but those ecosystems haven't yet recovered from the damage."

"I was quite pointed about those limited worlds," said Val. "I searched those ecosystems at greater depth, searching for the descolada or something like it, because I knew that a recent major die-off was a sign of danger. I can't believe I didn't make the connection and realize that was what Jane was looking for."

"So what if we find their home world?" asked Miro. "What then?"

"I imagine," said Val, "we study them from a safe distance, make sure we're right, and then alert Starways Congress so they can blow the world to hell."

"Another sentient species?" asked Miro, incredulous. "You think we'd actually invite Congress to destroy them?"

"You forget that Congress doesn't wait for an invitation," said Val. "Or for permission. And if they think Lusitania is so dangerous as to need to be destroyed, what will they do with a species that manufactures and broadcasts hideously destructive viruses willy-nilly? I'm not even sure Congress would be wrong. It was pure chance that the descolada helped the ancestors of the pequeninos make the transition into sentience. If they did help-- there's evidence that the pequeninos were already sentient and the descolada very nearly wiped them out. Whoever sent that virus out has no conscience. No concept of other species having a right to survive."

"Maybe they have no such concept now," said Miro. "But when they meet us ..."

"If we don't catch some terrible disease and die thirty minutes after landing," said Val. "Don't worry, Miro. I'm not plotting to destroy anyone and everyone we meet. I'm strange enough myself not to hope for the wholesale destruction of strangers."

"I can't believe we only just realized we're looking for these people, and you're already talking about killing them all!"

"Whenever humans meet foreigners, weak or strong, dangerous or peaceable, the issue of destruction comes up. It's built into our genes."

"So is love. So is the need for community. So is the curiosity that overcomes xenophobia. So is decency."

"You left out the fear of God," said Val. "Don't forget that I'm really Ender. There's a reason they call him the Xenocide, you know."

"Yes, but you're the gentle side of him, right?"

"Even gentle people recognize that sometimes the decision not to kill is a decision to die."

"I can't believe you're saying this."

"So you didn't know me after all," said Val, wearing a prim little smile.

"I don't like you smug," said Miro.

"Good," said Val. "Then you won't be so sad when I die." She turned her back on him. He watched her for a while in silence, baffled. She sat there, leaning back in her chair, looking at the data coming in from the probes on their starship. Sheets of information queued up in the air in front of her; she pushed a button and the front sheet disappeared, the next one moved forward. Her mind

was engaged, of course, but there was something else. An air of excitement. Tension. It made him afraid.

Afraid? Of what? It was what he had hoped for. In the past few moments Young Valentine had achieved what Miro, in his conversation with Ender, had failed to do. She had won Ender's interest. Now that she knew she was searching for the home planet of the descolada, now that a great moral issue was involved, now that the future of the raman races might depend on her actions, Ender would care about what she was doing, would care at least as much as he cared about Peter. She wasn't going to fade. She was going to live now.

"Now you've done it," said Jane in his ear. "Now she won't want to give me her body."

Was that what Miro was afraid of? No, he didn't think so. He didn't want Val to die, despite her accusations. He was glad she was suddenly so much more alive, so vibrant, so involved-- even if it made her annoyingly smug. No, there was something else.

Maybe it was nothing more complicated than fear for his own life.

The home planet of the descolada virus must be a place of unimaginably advanced technology to be able to create such a thing and send it world to world. To create the antivirus that would defeat and control it, Miro's sister Ela had had to go Outside, because the manufacture of such an antivirus was beyond the reach of any human technology. Miro would have to meet the creators of the descolada and communicate with them to stop sending out destructive probes. It was beyond his ability. He couldn't possibly carry out such a mission. He would fail, and in failing would endanger all the raman species. No wonder he was afraid.

"From the data," said Miro, "what do you think? Is this the world we're looking for?"

"Probably not," said Val. "It's a newish biosphere. No animals larger than worms. Nothing that flies. But a full range of species at those lower levels. No lack of variety. Doesn't look like a probe was ever here."

"Well," said Miro. "Now that we know our real mission, are we going to waste time making a full colonization report on this planet, or shall we move on?"

Jane's face appeared again above Miro's terminal.

"Let's make sure Valentine is right," said Jane. "Then move on. There are enough colony worlds, and time's getting short."

\*\*\*

Novinha touched Ender's shoulder. He was breathing heavily, loudly, but it was not the familiar snore. The noisiness was coming from his lungs, not from the back of his throat; it was as if he had been holding his breath for a long time, and now had to take deep draughts of air to make up for it, only no breath was deep enough, his lungs couldn't hold enough. Gasp. Gasp.

"Andrew. Wake up." She spoke sharply, for her touch had always been enough to waken him before, and this time it was not enough, he kept on gasping for air yet didn't open his eyes.

The fact he was asleep at all surprised her. He wasn't an old man yet. He didn't take naps in the late morning. Yet here he was, lying in the shade on the croquet lawn of the monastery when he had told her he was going to bring them both a drink of water. And for the first time it occurred to her that he wasn't taking a nap at all, that he must have fallen, must have collapsed here, and only the fact that he ended up lying on his back in a patch of shade, his hands lying flat on his chest, deceived her into thinking that he had chosen to lie here. Something was wrong. He wasn't an old man. He shouldn't be lying here like this, breathing air that didn't hold enough of what he needed.

"Ajuda-me! " she cried out. "Me ajuda, por favor, venga agora!" Her voice rose until, quite against her custom, it became a scream, a frantic sound that frightened her even more. Her own scream frightened her. "Ele vai morrer! Socorro!" He's going to die, that's what she heard herself shouting.

And in the back of her mind, another litany began: I brought him here to this place, to the hard work of this place. He's as fragile as other men, his heart is as breakable, I made him come here because of my selfish pursuit of holiness, of redemption, and instead of saving myself from guilt for the deaths of the men I love, I have added another one to the list, I have killed Andrew just as I killed Pipo and Libo, just as I should have somehow saved Estevao and Miro. He is dying and it's again my fault, always my fault, whatever I do brings death, the people I love have to die to get away from me. Mamde, Papae, why did you leave me? Why did you put death into my life from childhood on? No one that I love can stay.

This is not helpful, she told herself, forcing her conscious mind away from the familiar chant of self-blame. It won't help Andrew for me to lose myself in irrational guilt right now.

Hearing her cries, several men and women came running from the monastery, and some from the garden. Within moments they were carrying Ender into the building as someone rushed for a doctor. Some stayed with Novinha, too, for her story was not unknown to them, and they suspected that the death of another beloved one would be too much for her.

"I didn't want him to come," she murmured. "He didn't have to come."

"It isn't being here that made him sick," said the woman who held her. "People get sick without it being anyone's fault. He'll be all right. You'll see."

Novinha heard the words but in some deep place inside her she could not believe them. In that deep place she knew that it was all her fault, that dread evil arose out of the dark shadows of her heart and seeped into the world poisoning everything. She carried the beast inside her heart, the devourer of happiness. Even God was wishing she would die.

No, no, it's not true, she said silently. It would be a terrible sin. God does not want my death, not by my own hand, never by my own hand. It wouldn't help Andrew, it wouldn't help anyone. Wouldn't help, would only hurt. Wouldn't help, would only ...

Silently chanting her mantra of survival, Novinha followed her husband's gasping body into the monastery, where perhaps the holiness of the place would drive all thoughts of self-destruction from her heart. I must think of him now, not of me. Not of me. Not of me me me me.

## Chapter 6 -- "LIFE IS A SUICIDE MISSION"

"Do the gods of different nations talk to each other? Do the gods of Chinese cities speak to the ancestors of the Japanese? To the lords of Xibalba? To Allah? Yahweh? Vishnu? Is there some annual get-together where they compare each other's worshippers? Mine will bow their faces to the floor and trace woodgrain lines for me, says one. Mine will sacrifice animals, says another. Mine will kill anyone who insults me, says a third. Here is the question I think of most often: Are there any who can honestly boast, my worshippers obey my good laws, and treat each other kindly, and live simple generous lives?"

-- from The God Whispers of Han Qing-jao

Pacifica was as widely varied a world as any other, with its temperate zones, polar ice sheets, tropical rain forests, deserts and savannas, steppes and mountains, lakes and seas, woodlands and beaches. Nor was Pacifica a young world. In more than two thousand years of human habitation, all the niches into which humans could comfortably fit were filled. There were great cities and vast rangelands, villages amid patchwork farms and research stations in the remotest locations, highest and lowest, farthest north and south.

But the heart of Pacifica had always been and remained today the tropical islands of the ocean called Pacific in memory of the largest sea on Earth. The dwellers on these islands lived, not precisely in the old ways, but with the memory of old ways still in the background of all sounds and at the edges of all sights. Here the sacred kava was still sipped in the ancient ceremonies. Here the memories of ancient heroes were kept alive. Here the gods still spoke into the ears of holy men and women. And if they went home to grass huts containing refrigerators and networked computers, what of that? The gods did not give unreceivable gifts. The trick of it was finding a way to let new things into one's life without killing that life to accommodate them.

There were many on the continents, in the big cities, on the temperate farms, in the research stations-- there were many who had little patience with the endless costume dramas (or comedies, depending on one's point of view) that took place on those islands. And certainly the people of Pacifica were not uniformly Polynesian in race. All races were here, all cultures; all languages were spoken somewhere, or so it seemed. Yet even the scoffers looked to the islands for the soul of the world. Even the lovers of cold and snow took their pilgrimage-- a holiday, they probably called it--

to tropical shores. They plucked fruit from the trees, they skimmed over the sea in the outrigger canoes, their women went bare-breasted and they all dipped fingers into taro pudding and pulled fishmeat from the bones with wet fingers. The whitest of them, the thinnest, the most elegant of the people of this place called themselves Pacifican and spoke at times as if the ancient music of the place rang in their ears, as if the ancient stories spoke of their own past. Adopted into the family, that's what they were, and the true Samoans, Tahitians, Hawaiians, Tongans, Maoris, and Fijians smiled and let them feel welcome even though these watch-wearing, reservation-making, hurrying people knew nothing of the true life in the shadow of the volcano, in the lee of the coral barrier, under the sky sparkled with parrots, inside the music of the waves against the reef.

Wang-mu and Peter came to a civilized, modern, westernized part of Pacifica, and once again found their identities waiting for them, prepared by Jane. They were career government workers trained on their home planet, Moskva, and given a couple of weeks' vacation before starting service as bureaucrats in some Congress office on Pacifica. They needed little knowledge of their supposed home planet. They just had to show their papers to get an airplane out of the city where they had supposedly just shuttled down from a starship recently arrived from Moskva. Their flight took them to one of the larger Pacific islands, and they soon showed their papers again to get a couple of rooms in a resort hotel on a sultry tropical shore.

There was no need for papers to get aboard a boat to the island where Jane told them they should go. No one asked them for identification. But then, no one was willing to take them as passengers, either.

"Why you going there?" asked one huge Samoan boatman. "What business you got?"

"We want to speak to Malu on Atatua."

"Don't know him," said the boatman. "Don't know nothing about him. Maybe you try somebody else who knows what island he's on."

"We told you the island," said Peter. "Atatua. According to the atlas it isn't far from here."

"I heard of it but I never went there. Go ask somebody else."

That's how it was, time and again.

"You get the idea that papalagis aren't wanted there?" said Peter to Wang-mu back on the porch of Peter's room. "These people are so primitive they don't just reject ramen, framplings, and utlannings. I'm betting even a Tongan or a Hawaiian can't get to Atatua."

"I don't think it's a racial thing," said Wang-mu. "I think it's religious. I think it's protection of a holy place."

"What's your evidence for that?" asked Peter.

"Because there's no hatred or fear of us, no veiled anger. Just cheerful ignorance. They don't mind our existence, they just don't think we belong in the holy place. You know they'd take us anywhere else."

"Maybe," said Peter. "But they can't be that xenophobic, or Aimaina wouldn't have become good enough friends with Malu to send a message to him."

At that, Peter cocked his head a bit to listen as Jane apparently spoke in his ear.

"Oh," said Peter. "Jane was skipping a step for us. Aimaina didn't send a message directly to Malu. He messaged a woman named Grace. But Grace immediately went to Malu and so Jane figured we might as well go straight to the source. Thanks Jane. Love how your intuition always works out."

"Don't be snide to her," said Wang-mu. "She's coming up against a deadline. The order to shut down could come any day. Naturally she wants to hurry."

"I think she should just kill any such order before anyone receives it and take over all the damn computers in the universe," said Peter. "Thumb her nose at them."

"That wouldn't stop them," said Wang-mu. "It would only terrify them more."

"In the meantime, we're not going to get to Malu by boarding a boat."

"So let's find this Grace," said Wang-mu. "If she can do it, then it is possible for an outsider to get access to Malu."

"She's not an outsider, she's Samoan," said Peter. "She has a Samoan name as well-- Teu 'Ona-- but she's worked in the academic world and it's easier to have a Christian name, as they call it. A Western name. Grace is the name she'll expect us to use. Says Jane."

"If she had a message from Aimaina, she'll know at once who we are."

"I don't think so," said Peter. "Even if he mentioned us, how could she possibly believe that the same people could be on his world yesterday and on her world today?"

"Peter, you are the consummate positivist. Your trust in rationality makes you irrational. Of course she'll believe we're the same people. Aimaina will also be sure. The fact that we traveled world-to-world in a single day will merely confirm to them what they already believe-- that the gods sent us."

Peter sighed. "Well, as long as they don't try to sacrifice us to a volcano or anything, I suppose it doesn't hurt to be gods."

"Don't trifle with this, Peter," said Wang-mu. "Religion is tied to the deepest feelings people have. The love that arises from that stewing pot is the sweetest and strongest, but the hate is the hottest,

and the anger is the most violent. As long as outsiders stay away from their holy places, the Polynesians are the peaceablest people. But when you penetrate within the light of the sacred fire, watch your step, because no enemy is more ruthless or brutal or thorough."

"Have you been watching vids again?" asked Peter.

"Reading," said Wang-mu. "In fact, I was reading some articles written by Grace Drinker."

"Ah," said Peter. "You already knew about her."

"I didn't know she was Samoan," said Wang-mu. "She doesn't talk about herself. If you want to know about Malu and his place in the Samoan culture on Pacifica-- maybe we should call it Lumana'i, as they do-- you have to read something written by Grace Drinker, or someone quoting her, or someone arguing with her. She had an article on Atatua, which is how I came across her writing. And she's written about the impact of the philosophy of Ua Lava on the Samoan people. My guess is that when Aimagina was first studying Ua Lava, he read some works by Grace Drinker, and then wrote to her with questions, and that's how the friendship began. But her connection with Malu has nothing to do with Ua Lava. He represents something older. Before Ua Lava, but Ua Lava still depends on it, at least here in its homeland it does."

Peter regarded her steadily for a few moments. She could feel him reevaluating her, deciding that she had a mind after all, that she might, marginally, be useful. Well, good for you, Peter, thought Wang-mu. How clever you are, to finally notice that I've got an analytical mind as well as the intuitive, gnomic, mantic one you decided was all I was good for.

Peter unfolded himself from his chair. "Let's go meet her. And quote her. And argue with her."

\*\*\*

The Hive Queen lay in stillness. Her work of egg-laying was done for the day. Her workers slept in the dark of night, though it wasn't darkness that stopped them down in the cave of her home. Rather it was her need to be alone inside her mind, to set aside the thousand distractions of the eyes and ears, the arms and legs of her workers. All of them demanded her attention, at least now and then, in order to function; but it also took all her thought to reach out in her mind and walk the webs that the humans had taught her to think of as <philotic.> The pequenino fathertree named Human had explained to her that in one of the human languages this had something to do with love. The connections of love. But the Hive Queen knew better. Love was the savage coupling of the drones. Love was the genes of all creatures demanding that they be replicated, replicated, replicated. The philotic twining was something else. There was a voluntary component to it, when the creature was truly sentient. It could bestow its loyalty where it wanted. This was greater than love, because it created something more than random offspring. Where loyalty bound creatures together, they became something larger, something new and whole and inexplicable.

<I am bound to you, for instance,> she said to Human, by way of launching their conversation tonight. They spoke every night like this, mind to mind, though they had never met. How could they, she always in the dark of her deep home, he always rooted by the gate of Milagre? But the

conversation of the mind was truer than any language, and they knew each other better than they ever could have by use of mere sight and touch.

<You always start in the middle of the thought,> said Human.

<And you always understand everything surrounding it, so what difference does it make?> Then she told him all that had passed between her and Young Valentine and Miro today.

<I overheard some of it,> said Human.

<I had to scream to be heard. They aren't like Ender-- they're thickheaded and hard of hearing.>

<So can you do it?>

<My daughters are weak and inexperienced, and they're consumed with egg-laying in their new homes. How can we make a good web for catching an aiua? Especially one that already has a home. And where is that home? Where is this bridge my mothers made? Where is this Jane?>

<Ender is dying,> said Human.

The Hive Queen understood that he was answering her question.

<Which of him?> asked the Hive Queen. <I always thought he was the most like us. So it's no surprise that he should be the first human like us in his ability to control more than one body.>

<Badly,> said Human. <In fact he can't do it. He's been sluggish in his own old body ever since the others came into existence. And for a while it looked like he might slough off Young Valentine. But that's changed now.>

<You can see?>

<His adopted daughter Ela came to me. His body is failing strangely. No known disease. He just doesn't exchange oxygen well. He can't rise up into consciousness. Ender's sister, Old Valentine, says that maybe he's paying full attention to his other selves, so much so that he can't spare any for the here and now of his own old body. So his body is starting to fail, here and there. Lungs first. Maybe a little bit everywhere, only it's the lungs that show it first.>

<He should pay attention. If he doesn't, he'll die.>

<So I said,> Human reminded her mildly. <Ender is dying.>

The Hive Queen had already made the connection that Human intended. <So it's more than needing a web to catch the aiua of this Jane. We need to catch Ender's aiua, too, and pass it into one of his other bodies.>

<Or they'll die when he does, I imagine,> said Human. <Just the way when a hive queen dies, so also do all her workers.>

<Some of them actually linger for days afterward, but yes, in effect, that's right. Only because the workers haven't the capacity to hold a hive queen's mind.>

<Don't pretend,> said Human. <You've never tried it, none of you.>

<No. We aren't afraid of death.>

<That's why you've sent all these daughters out to world after world? Because death means nothing to you?>

<I'm saving my species, not myself, you notice.>

<As am I,> said Human. <Besides, I'm too deep-rooted for transplanting.>

<But Ender has no roots,> said the Hive Queen.

<I wonder if he wants to die,> said Human. <I don't think so. He's not dying because he's lost the will to live. This body is dying because he's lost interest in the life that it's leading. But he still wants to live the life of Peter. And the life of Valentine.>

<He says so?>

<He can't talk,> said Human. <He's never found his way to the phlotic twines. He's never learned to cast out and link as we fathertrees can. As you do with your workers, and now with me.>

<But we found him once. Connected with him through the bridge, well enough to hear his thoughts and see through his eyes. And he dreamed of us during those days.>

<Dreamed of you but never learned that you were peaceable. Never learned that he shouldn't kill you.>

<He didn't know the game was real.>

<Or that the dreams were true. He has his wisdom, of a kind, but the boy has never learned to question his senses half enough.>

<Human,> said the Hive Queen. <What if I teach you how to join a web?>

<So you want to try to catch Ender as he dies?>

<If we can catch him, and take him to one of his other bodies, then perhaps we'll learn enough to find and catch this Jane, too.>

<And if we fail?>

<Ender dies. Jane dies. We die when the fleet comes. How is this different from the course that any other life takes?>

<It's all in the timing,> said Human.

<Will you try to join the web? You and Rooter and the other fathertrees?>

<I don't know what you mean by a web, or if it's even different from the way we fathers are with each other. You might remember, too, that we are also bound up with the mothertrees. They can't speak, but they're filled with life, and we anchor ourselves to them as surely as your workers are tied to you. Find a way to include them in your web, and the fathers will be joined effortlessly.>

<Let's play with this tonight, Human. Let me try to weave with you. Tell me what it looks like to you, and I'll try to make you understand what I'm doing and where it leads.>

<Shouldn't we find Ender first? In case he slips away?>

<In due time,> said the Hive Queen. <And besides, I'm not altogether sure I know how to find him if he's unconscious.>

<Why not? Once you gave him dreams-- he slept then.>

<Then we had the bridge.>

<Maybe Jane is listening to us now.>

<No,> said the Hive Queen. <I'd know her if she were linked to us. Her shape was made to fit too well with mine for it to go unrecognized.>

\*\*\*

Plikt stood beside Ender's bed because she could not bear to sit, could not bear to move. He was going to die without uttering another word. She had followed him, had given up home and family to be near him, and what had he said to her? Yes, he let her be his shadow sometimes; yes, she was a silent observer of many of his conversations over the past few weeks and months. But when she tried to speak to him of things more personal, of deep memories, of what he meant by the things that he had done, he only shook his head and said-- kindly, because he was kind, but firmly also because he did not wish her to misunderstand-- said to her, "Plikt, I'm not a teacher anymore."

Yes you are, she wanted to say to him. Your books go on teaching even where you have never been. The Hive Queen, The Hegemon, and already The Life of Human seems likely to take its place beside them. How can you say you're through with teaching, when there are other books to write, other deaths to speak? You have spoken the deaths of killers and saints, aliens, and once the death of a whole city swallowed up in a cataclysmic volcano. But in telling these stories of others,

where was your story, Andrew Wiggin? How can I speak your death if you never explained it to me?

Or is this your last secret-- that you never knew any more about the people whose deaths you spoke than I know about you today. You force me to invent, to guess, to wonder, to imagine-- is this what you also did? Discover the most widely believed story, then find an alternate explanation that made sense to others and had meaning and the power to transform, and then tell that tale-- even though it was also a fiction, and no truer than the story everyone believed? Is that what I must say as I speak the death of the Speaker for the Dead? His gift was not to discover truth, it was to invent it; he did not unfold, unknot, untwist the lives of the dead, he created them. And so I create his. His sister says he died because he tried to follow his wife with perfect loyalty, into the life of peace and seclusion that she hungered for; but the very peace of that life killed him, for his aiaa was drawn into the lives of the strange children that sprang fullgrown from his mind, and his old body, despite all the years most likely left in it, was discarded because he hadn't the time to pay enough attention to keep the thing alive.

He wouldn't leave his wife or let her leave him; so he was bored to death and hurt her worse by staying with her than he ever would have done by letting her go without him.

There, is that brutal enough, Ender? He wiped out the hive queens of dozens of worlds, leaving only one survivor of that great and ancient people. He also brought her back to life. Does saving the last of your victims atone for having slain the others? He did not mean to do it, that is his defense; but dead is dead, and when the life is cut off in its prime, does the aiaa say, Ah, but the child who killed me, he thought that he was playing a game, so my death counts less, it weighs less? No, Ender himself would have said, no, the death weighs the same, and I carry that weight on my shoulders. No one has more blood on their hands than I have; so I will speak with brutal truth of the lives of those who died without innocence, and show you that even these can be understood. But he was wrong, they can't be understood, none of them are understood, speaking for the dead is only effective because the dead are silent and can't correct our mistakes. Ender is dead and he can't correct my mistakes, so some of you will think that I haven't made any, you will think that I tell the truth about him but the truth is that no person ever understands another, from beginning to end of life, there is no truth that can be known, only the story we imagine to be true, the story they tell us is true, the story they really believe to be true about themselves; and all of them lies.

Plikt stood and practiced speaking desperately, hopelessly beside Ender's coffin, though he was not yet in a coffin, he was still lying on a bed and air was pumping through a clear mask into his mouth and glucose solution into his veins and he was not yet dead. Just silent.

"A word," she whispered. "A word from you."

Ender's lips moved.

Plikt should have called the others at once. Novinha, who was exhausted with weeping-- she was only just outside the room. And Valentine, his sister; Ela, Olhado, Grego, Quara, four of his adopted children; and many others, in and out of the receiving room, wanting a glimpse of him, a word, to touch his hand. If they could send word to other worlds, how they would mourn, the

people who remembered his speakings over the three thousand years of his journeys world to world. If they could proclaim his true identity-- Speaker for the Dead, author of the two-- no, the three-- great books of Speaking; and Ender Wiggin, the Xenocide, both selves in the same frail flesh-- oh, what shock waves would spread throughout the human universe.

Spread, widen, flatten, fade. Like all waves. Like all shocks. A note in the history books. A few biographies. Revisionist biographies a generation later. Encyclopedia entries. Notes at the end of translations of his books. That is the stillness into which all great lives fade.

His lips moved.

"Peter," he whispered.

He was silent again.

What did this portend? He still breathed, the instruments did not change, his heart beat on. But he called to Peter. Did this mean that he longed to live the life of his child of the mind, Young Peter? Or in some kind of delirium was he speaking to his brother the Hegemon? Or earlier, his brother as a boy. Peter, wait for me. Peter, did I do well? Peter, don't hurt me. Peter, I hate you. Peter, for one smile of yours I'd die or kill. What was his message? What should Plikt say about this word?

She moved from beside his bed. Walked to the door, opened it. "I'm sorry," she said quietly, facing a room full of people who had only rarely heard her speak, and some of whom had never heard a word from her. "He spoke before I could call anyone else to hear. But he might speak again."

"What did he say?" said Novinha, rising to her feet.

"A name is all," said Plikt. "He said 'Peter.'"

"He calls for the abomination he brought back from space, and not for me!" said Novinha. But it was the drugs the doctors had given her, that was what spoke, that was what wept.

"I think he calls for our dead brother," said Old Valentine. "Novinha, do you want to come inside?"

"Why?" Novinha said. "He hasn't called for me, he called for him."

"He's not conscious," said Plikt.

"You see, Mother?" said Ela. "He isn't calling for anyone, he's just speaking out of some dream. But it's something, he said something, and isn't that a good sign?"

Still Novinha refused to go into the room. So it turned out to be Valentine and Plikt and four of his adopted children who stood around his bed when his eyes opened.

"Novinha," he said.

"She's grieving outside," said Valentine. "Drugged to the gills, I'm afraid."

"That's all right," said Ender. "What happened? I take it I'm sick."

"More or less," said Ela. "'Inattentive' is the more exact description of the cause of your condition, as best we can tell."

"You mean I had some kind of accident?"

"I mean you're apparently paying too much attention to what's going on on a couple of other planets, and so your body here is on the edge of self-destruction. What I see under the microscopes are cells sluggishly trying to reconstruct breaks in their walls. You're dying by bits, all over your body."

"Sorry to be so much trouble," said Ender.

For a moment they thought this was the beginning of a conversation, the start of the process of healing. But having said this little bit, Ender closed his eyes and he was asleep again, the instruments unchanged from what they had said before he said a word.

Oh wonderful, thought Plikt. I beg him for a word, he gives it to me, and I know less now than I did before. We spent his few waking moments telling him what was going on instead of asking him the questions that we may never have the chance to ask again. Why do we all get stupider when we crowd around the brink of death?

But still she stood there, watching, waiting, as the others, in ones or twos, gave up and left the room again. Valentine came to her last of all and touched her arm. "Plikt, you can't stay here forever."

"I can stay as long as he can," she said.

Valentine looked into her eyes and must have seen something there that made her give up trying to persuade her. She left, and again Plikt was alone with the collapsing body of the man whose life was the center of her own.

\*\*\*

Miro hardly knew whether to be glad or frightened by the change in Young Valentine since they had learned the true purpose of their search for new worlds. Where she had once been softspoken, even diffident, now she could hardly keep from interrupting Miro every time he spoke. The moment she thought she understood what he was going to say, she'd start answering-- and when he pointed out that he was really saying something else, she'd answer that almost before he could finish his explanation. Miro knew that he was probably being oversensitive-- he had spent a long time with speech so impaired that almost everyone interrupted him, and so he prickled at the

slightest affront along those lines. And it wasn't that he thought there was any malice in it. Val was simply ... on. Every moment she was awake-- and she hardly seemed to sleep, at least Miro almost never saw her sleeping. Nor was she willing to go home between planets. "There's a deadline," she said. "They could give the signal to shut down the ansible networks any day now. We don't have time for needless rest."

Miro wanted to answer: Define "needless." He certainly needed more than he was getting, but when he said so, she merely waved him off and said, "Sleep if you want, I'll cover." And so he'd grab a nap and wake up to find that she and Jane had already eliminated three more planets-- two of which, however, bore the earmarks of descolada-like trauma within the past thousand years. "Getting closer," Val would say, and then launch into interesting facts about the data until she'd interrupt herself-- she was democratic about this, interrupting herself as easily as she interrupted him-- to deal with the data from a new planet.

Now, after only a day of this, Miro had virtually given up speaking. Val was so focused on their work that she spoke of nothing else; and on that subject, there was little Miro needed to say, except periodically to relay some information from Jane that came through his earpiece instead of over the open computers of the ship. His near silence, though, gave him time to think. This is what I asked Ender for, he realized. But Ender couldn't do it consciously. His aiua does what it does because of Ender's deepest needs and desires, not because of his conscious decisions. So he couldn't give his attention to Val; but Val's work could become so exciting that Ender couldn't bear to concentrate on anything else.

Miro wondered: How much of this did Jane understand in advance?

And because he couldn't very well discuss it with Val, he subvocalized his questions so Jane could hear. "Did you reveal our mission to us now so that Ender would give his attention to Val? Or did you withhold it up until now so that Ender wouldn't?"

"I don't make that kind of plan," said Jane into his ear. "I have other things on my mind."

"But it's good for you, isn't it. Val's body isn't in any danger of withering away now."

"Don't be an ass, Miro. Nobody likes you when you're an ass."

"Nobody likes me anyway," he said, silently but cheerfully. "You couldn't have hidden out in her body if it was a pile of dust."

"I can't slip into it if Ender's there, utterly engrossed in what she's doing, either, can I," said Jane.

"Is he utterly engrossed?"

"Apparently so," said Jane. "His own body is falling apart. And more rapidly than Val's was."

It took Miro a moment to understand this. "You mean he's dying?"

"I mean Val is very much alive," said Jane.

"Don't you love Ender anymore?" asked Miro. "Don't you care?"

"If Ender doesn't care about his own life," said Jane, "why should I? We're both doing our best to set a very messy situation to rights. It's killing me, it's killing him. It very nearly killed you, and if we fail a whole lot of other people will be killed, too."

"You're a cold one," said Miro.

"Just a bunch of blips between the stars, that's what I am," said Jane.

"Merda de bode," said Miro. "What's this mood you're in?"

"I don't have feelings," said Jane. "I'm a computer program."

"We all know you have an aiua of your own. As much of a soul, if that's what you want to call it, as anyone else."

"People with souls can't be switched off by unplugging a few machines."

"Come on, they're going to have to shut down billions of computers and thousands of ansibles all at once in order to do you in. I'd say that's pretty impressive. One bullet would do for me. An overgrown electric fence almost polished me off."

"I suppose I just wanted to die with some kind of splashing sound or cooking smell or something," said Jane. "If I only had a heart. You probably don't know that song."

"We grew up on classic videos," said Miro. "It drowned out a lot of other unpleasantness at home. You've got the brain and the nerve. I think you've got the heart."

"What I don't have is the ruby slippers. I know there's no place like home, but I can't get there," said Jane.

"Because Ender's using her body so intensely?" asked Miro.

"I'm not as set on using Val's body as you were to have me do it," said Jane. "Peter's will do as well. Even Ender's, as long as he's not using it. I'm not actually female. That was merely my choice of identity to get close to Ender. He had problems bonding readily with men. The dilemma I have is that even if Ender would let go of one of these bodies for me to use it, I don't know how to get there. I don't know where my aiua is any more than you do. Can you put your aiua where you want it? Where is it now?"

"But the Hive Queen is trying to find you. She can do that-- her people made you."

"Yes, she and her daughters and the fathertrees, they're building some kind of web, but it's never been done before-- catching something already alive and leading it into a body that is already owned by someone else's aiua. It's not going to work, I'm going to die, but I'm dammed if I'm going to let those bastards who made the descolada come along after I'm dead and wipe out all the other sentient species I've known. Humans will pull the plug on me, yes, thinking I'm just a computer program run amok, but that doesn't mean I want someone else to pull the plug on humanity. Nor on the hive queens. Nor on the pequeninos. If we're going to stop them, we have to do it before I'm dead. Or at least I have to get you and Val there so you can do something without me."

"If we're there when you die, we'll never come home again."

"Bad luck, eh?"

"So we're a suicide mission."

"Life is a suicide mission, Miro. Check it out-- basic philosophy course. You spend your life running out of fuel and when you're finally out, you croak."

"You sound like Mother now," said Miro.

"Oh, no," said Jane. "I'm taking it with good humor. Your mother always thought her doom was tragic."

Miro was readying some retort when Val's voice interrupted his colloquy with Jane.

"I hate it when you do that!" she cried.

"Do what?" said Miro, wondering what she had just been saying before this outburst.

"Tune me out and talk to her."

"To Jane? I always talk to Jane."

"But you used to listen to me sometimes," said Val.

"Well, Val, you used to listen to me, too, but that's all changed now, apparently."

Val flung herself out of her chair and stormed over to loom above him. "Is that how it is? The woman you loved was the quiet one, the shy one, the one who always let you dominate every conversation. Now that I'm excited, now that I feel like I'm really myself, well, that's not the woman you wanted, is that it?"

"It's not about preferring quiet women or--"

"No, we couldn't admit to anything so recidivist as that, could we! No, we have to proclaim ourselves to be perfectly virtuous and--"

Miro rose to his feet-- not easy, with her so close to his chair and shouted right back in her face. "It's about being able to finish a sentence now and then!"

"And how many of my sentences did you--"

"Right, turn it right back on--"

"You wanted to have me dispossessed from my own life and put somebody else in--"

"Oh, is that what this is about? Well, be relieved, Val, Jane says--"

"Jane says, Jane says! You said you loved me, but no woman can compete with some bitch that's always there in your ear, hanging on every word you say and--"

"Now you sound like my mother!" shouted Miro. "Nossa Senhora, I don't know why Ender followed her into the monastery, she was always griping about how he loved Jane more than he loved her--"

"Well at least he tried to love a woman more than that overgrown appointment book!"

They stood there, face-to-face-or almost so, Miro being somewhat taller, but with his knees bent because he hadn't quite been able to get all the way out of his chair because she was standing so close and now with her breath in his face, the warmth of her body just a few centimeters away, he thought, This is the moment when ...

And then he said it aloud before he had even finished forming the thought, "This is the moment in all the videos when the couple that were screaming at each other suddenly look into each other's eyes and embrace each other and laugh at their anger and then kiss each other."

"Yeah, well, that's the videos," said Val. "If you lay a hand on me I'll ram your testicles so far up inside your abdomen it'll take a heart surgeon to get them out."

She whirled around and returned to her chair.

Miro eased himself back into his own seat and said-- out loud this time, but softly enough that Val would know he wasn't talking to her-- "Now, Jane, where were we before the tornado struck."

Jane's answer was drawled out slowly; Miro recognized it as a mannerism of Ender's when he was being ironically subtle. "You can see now why I might have problems getting the use of any part of her body."

"Yeah, well, I'm having the same problem," said Miro silently, but he laughed aloud, a little chuckle that he knew would drive Val crazy. And from the way she stiffened but did not respond at all he knew that it was working.

"I don't need you two fighting," said Jane mildly. "I need you working together. Because you may have to work this out without me."

"As far as I can tell," said Miro, "you and Val have been working things out without me."

"Val has been working things out because she's so full of ... whatever she's full of right now."

"Ender is what she's full of," said Miro.

Val turned around in her chair and looked at him. "Doesn't it make you wonder about your own sexual identity, not to mention your sanity, that the two women you love are, respectively, a virtual woman existing only in the transient ansible connections between computers and a woman whose soul is in fact that of a man who is the husband of your mother?"

"Ender is dying," said Miro. "Or did you already know?"

"Jane mentioned he seemed to be inattentive."

"Dying," said Miro again.

"I think it speaks very clearly about the nature of men," said Val, "that you and Ender both claim to love a flesh-and-blood woman, but in fact you can't give that woman even a serious fraction of your attention."

"Yes, well, you have my whole attention, Val," said Miro. "And as for Ender, if he's not paying attention to Mother it's because he's paying attention to you."

"To my work, you mean. To the task at hand. Not to me."

"Well, that's all you've been paying attention to, except when you took a break to rip on me about how I'm talking to Jane and not listening to you."

"That's right," said Val. "You think I don't see what's been going on with me this past day? How all of a sudden I can't shut up about things, I'm so intense I can't sleep, how I-- Ender's supposedly been the real me all along, only he left me alone till now and that was fine because what he's doing now is terrifying. Don't you see that I'm frightened? It's too much. It's more than I can stand. I can't hold that much energy inside me."

"So talk about it instead of screaming at me," said Miro.

"But you weren't listening. I was trying to and you were just subvocalizing to Jane and shutting me out."

"Because I was sick of hearing endless streams of data and analysis that I could just as easily catch in summary on the computer. How was I supposed to know that you'd take a break in your monologue and start talking about something human?"

"Everything's bigger than life right now and I don't have any experience with this. In case you forgot, I haven't been alive very long. I don't know things. There are a lot of things I don't know. I don't know why I care so much about you, for instance. You're the one trying to get me replaced as landlord of this body. You're the one who tunes me out or takes me over but I don't want that, Miro. I really need a friend right now."

"So do I," said Miro.

"But I don't know how to do it," said Val.

"I, on the other hand, know perfectly well how to do it," said Miro. "But the only other time it happened, I fell in love with her and then she turned out to be my half-sister because her father was secretly my mother's lover, and the man I had thought was my father turned out to be sterile because he was dying of some internally rotting disease. So you can see how I might be hesitant."

"Valentine was your friend. She is still."

"Yes," said Miro. "Yes, I was forgetting. I've had two friends."

"And Ender," said Val.

"Three," said Miro. "And my sister Ela makes four. And Human was my friend, so it's five."

"See? I think that makes you qualified to show me how to have a friend."

"To make a friend," said Miro, echoing his mother's intonations, "you have to be one."

"Miro," said Val. "I'm scared."

"Of what?"

"Of this world we're looking for, what we'll find there. Of what's going to happen to me if Ender dies. Or if Jane takes over as my-- what, my inner light, my puppeteer. Of what it will feel like if you don't like me anymore."

"What if I promise to like you no matter what?"

"You can't make a promise like that."

"Okay, if I wake up to find you strangling me or smothering me, then I'll stop liking you."

"What about drowning?"

"No, I can't open my eyes under water, so I'd never know it was you."

They both laughed.

"This is the time in the videos," said Val, "when the hero and the heroine laugh and then hold each other."

Jane's voice interrupted from both their computer terminals. "Sorry to break up a tender moment, but we've got a new world here and there are electromagnetic messages being relayed between the planet surface and orbiting artificial objects."

Immediately they both turned to their terminals and looked at the data Jane was throwing at them.

"It doesn't take any close analysis," said Val. "This one is hopping with technology. If it isn't the descolada planet, I'm betting they know where it is."

"What I'm worried about is, have they detected us and what are they going to do about it? If they've got the technology to put things in space, they might have the technology to shoot things out of space, too."

"I'm watching for incoming objects," said Jane.

"Let's see," said Val, "if any of these EM-waves are carrying anything that looks like language."

"Datastreams," said Jane. "I'm analyzing it for binary patterns. But you know that decoding computerized language requires three or four levels of decoding instead of the normal two and it isn't easy."

"I thought binary was simpler than spoken languages," said Miro.

"It is, when it's programs and numerical data," said Jane. "But what if it's digitized visuals? How long is a line if it's a rasterized display? How much of a transmission is header material? How much is error-correction data? How much of it is a binary representation of a written representation of a spoken language? What if it's further encrypted beyond that, to avoid interception? I have no idea what machine is producing the code and no idea what machine is receiving it. So using most of my capacity to work on the problem I'm having a very hard time except that this one--"

A diagram appeared on the front page of the display.

"--I think this one is a representation of a genetic molecule."

"A genetic molecule?"

"Similar to the descolada," said Jane. "That is, similar in the way it's different from Earth and native Lusitanian genetic molecules. Do you think this is a plausible decoding of this?"

A mass of binary digits flashed into the air above their terminals. In a moment it resolved itself into hexadecimal notation. Then into a rasterized image that resembled static interference more than any kind of coherent picture.

"It doesn't scan well this way. But as a set of vector instructions, I find that it consistently gives me results like this."

And now picture after picture of genetic molecules appeared on the screen.

"Why would anyone be transmitting genetic information?" said Val.

"Maybe it's a kind of language," said Miro.

"Who could read a language like that?" asked Val.

"Maybe the kind of people who could create the descolada," said Miro.

"You mean they talk by manipulating genes?" said Val.

"Maybe they smell genes," said Miro. "Only they do it with incredible articulation. Subtlety and shade of meaning. Then when they started sending people up into space, they had to talk to them so they sent pictures and then from the pictures they reconstruct the message and, um, smell it."

"That's the most ass-backwards explanation I've ever heard," said Val.

"Well," said Miro, "like you said, you haven't lived very long. There are a lot of ass-backwards explanations in the world, and I doubt I hit the jackpot with that one."

"It's probably an experiment they're doing, sending data back and forth," said Val. "Not all the communications make up diagrams do they, Jane?"

"Oh, no, I'm sorry if I gave that impression. This was just a small class of data streams that I was able to decode in a meaningful way. There's this stuff that seems to me to be analog rather than digital, and if I make it into sound it's like this."

They heard the computers emit a series of staticky screeches and yips.

"Or if I translate it into bursts of light, it looks like this."

Whereupon their terminals danced with light, pulsing and shifting colors seemingly randomly.

"Who knows what an alien language looks or sounds like?" said Jane.

"I can see this is going to be difficult," said Miro.

"They do have some pretty good math skills," said Jane. "The math stuff is easy to catch and I see some glimpses that imply they work at a high level."

"Just an idle question, Jane. If you weren't with us, how long would it have taken us to analyze the data and get the results you've gotten so far? If we were using just the ship's computers?"

"Well, if you had to program them for every--"

"No, no, just assuming they had good software," said Miro.

"Somewhere upwards of seven human generations," said Jane.

"Seven generations?"

"Of course, you'd never try to do it with just two untrained people and two computers without any useful programs," said Jane. "You'd put hundreds of people on the project and then it would only take you a few years."

"And you expect us to carry on this work when they pull the plug on you?"

"I'm hoping to finish the translation problem before I'm toast," said Jane. "So shut up and let me concentrate for a minute."

\*\*\*

Grace Drinker was too busy to see Wang-mu and Peter. Well, actually she did see them, as she shambled from one room to another of her house of sticks and mats. She even waved. But her son went right on explaining how she wasn't here right now but she would be back later if they wanted to wait, and as long as they were waiting, why not have dinner with the family? It was hard even to be annoyed when the lie was so obvious and the hospitality so generous.

Dinner went a long way toward explaining why Samoans tended to be so large in every dimension. They had to evolve such great size because smaller Samoans must simply have exploded after lunch. They could never have handled dinners. The fruit, the fish, the taro, the sweet potatoes, the fish again, more fruit-- Peter and Wang-mu. had thought they were well fed in the resort, but now they realized that the hotel chef was a second-rater compared to what went on in Grace Drinker's house.

She had a husband, a man of astonishing appetite and heartiness who laughed whenever he wasn't chewing or talking, and sometimes even then. He seemed to get a kick out of telling these papalagi visitors what different names meant. "My wife's name, now, it really means, 'Protector of Drunken People.'"

"It does not," said his son. "It means 'One Who Puts Things in Proper Order.'"

"For drinking!" cried the father.

"The last name has nothing to do with the first name." The son was getting annoyed now. "Not everything has a deep meaning."

"Children are so easily embarrassed," said the father. "Ashamed. Must put the best face on everything. The holy island, its name is really 'Ata Atua, which means, 'Laugh, God!'"

"Then it would be pronounced 'Atatua instead of Atatua," the son corrected again. "Shadow of the God, that's what the name really means, if it means anything besides just the holy island."

"My son is a literalist," said the father. "Everything so serious. Can't hear a joke when God shouts it in his ear."

"It's you always shouting jokes in my ear, Father," said the son with a smile. "How could I possibly hear the jokes of the God?"

This was the only time the father didn't laugh. "My son has a dead ear for humor. He thought that was a joke."

Wang-mu looked at Peter, who was smiling as if he understood what was so funny with these people all the time. She wondered if he had even noticed that no one had introduced these males, except by their relationship to Grace Drinker. Had they no names?

Never mind, the food is good, and even if you don't get Samoan humor, their laughter and good spirits were so contagious that it was impossible not to feel happy and at ease in their company.

"Do you think we have enough?" asked the father, when his daughter brought in the last fish, a large pink-fleshed sea creature garnished with something that glistened-- Wang-mu's first thought was a sugar glaze, but who would do that to a fish?

At once his children answered him, as if it were a ritual in the family: "Ua lava!"

The name of a philosophy? Or just Samoan slang for "enough already"? Or both at once?

Only when the last fish was half eaten did Grace Drinker herself come in, making no apology for not having spoken to them when she passed them more than two hours before. A breeze off the sea was cooling down the open-walled room, and, outside, light rain fell in fits and starts as the sun kept trying and failing to sink into the water to the west. Grace sat at the low table, directly between Peter and Wang-mu, who had thought they were sitting next to each other with no room for another person, especially not a person of such ample surface area as Grace. But somehow there was room, if not when she began to sit, then certainly by the time she finished the process, and once her greetings were done, she managed what the family had not-- she polished off the last fish and ended up licking her fingers and laughing just as maniacally as her husband at all the jokes he told.

And then, suddenly, Grace leaned over to Wang-mu and said, quite seriously, "All right, Chinese girl, what's your scam?"

"Scam?" asked Wang-mu.

"You mean I have to get the confession from the white boy? They train these boys to lie, you know. If you're white they don't let you grow up to adulthood if you haven't mastered the art of pretending to say one thing while actually intending to do another."

Peter was appalled.

Suddenly the whole family erupted in laughter. "Bad hospitality!" cried Grace's husband. "Did you see their faces? They thought she meant it!"

"But I do mean it," said Grace. "You both intend to lie to me. Arrived on a starship yesterday? From Moskva?" Suddenly she burst into what sounded like pretty convincing Russian, perhaps of the dialect spoken on Moskva.

Wang-mu had no idea how to respond. But she didn't have to. Peter was the one with Jane in his ear, and he immediately answered her, "I hope to learn Samoan while I'm assigned here on Pacifica. I won't accomplish that by babbling in Russian, however you might try to goad me with cruel references to my countrymen's amorous proclivities and lack of pulchritude."

Grace laughed. "You see, Chinese girl?" she said. "Lie lie lie. And so lofty-sounding as he does it. Of course he has that jewel in his ear to help him. Tell the truth, neither one of you speaks a lick of Russian."

Peter looked grim and vaguely sick. Wang-mu put him out of his misery-though at the risk of infuriating him. "Of course it's a lie," said Wang-mu. "The truth is simply too unbelievable."

"But the truth is the only thing worth believing, isn't it?" asked Grace's son.

"If you can know it," said Wang-mu. "But if you won't believe the truth, someone has to help you come up with plausible lies, don't they?"

"I can make up my own," said Grace. "Day before yesterday a white boy and a Chinese girl visited my friend Aimaina Hikari on a world at least twenty years' voyage away. They told him things that disturbed his entire equilibrium so he could hardly function. Today a white boy and a Chinese girl, telling different lies from the ones told by his pair, of course, but nevertheless lying their lips off, these two come to me wanting to get my help or permission or advice about seeing Malu--"

"Malu means 'being calm,'" added Grace's husband cheerfully.

"Are you still awake?" asked Grace. "Weren't you hungry? Didn't you eat?"

"I'm full but fascinated," answered her husband. "Go on, expose them!"

"I want to know who you are and how you got here," said Grace.

"That would be very hard to explain," said Peter.

"We've got minutes and minutes," said Grace. "Millions of them, really. You're the ones who seem to have only a few. So much hurry that you jump the gulf from star to star overnight. It strains credulity, of course, since lightspeed is supposed to be an insuperable barrier, but then, not believing you're the same people my friend saw on the planet Divine Wind also strains credulity, so there we are. Supposing that you really can travel faster than light, what does that tell us about where you're from? Aimagina takes it for granted that you were sent to him by the gods, more specifically by his ancestors, and he may be right, it's in the nature of gods to be unpredictable and suddenly do things they've never done before. Myself, though, I find that rational explanations always work out better, especially in papers I hope to get published. So the rational explanation is that you come from a real world, not from some heavenly never-never land. And since you can hop from world to world in a moment or a day, you could come from anywhere. But my family and I think you come from Lusitania."

"Well, I don't," said Wang-mu.

"And I'm originally from Earth," said Peter. "If I'm from anywhere."

"Aimagina thinks you come from Outside," said Grace, and for a moment Wang-mu thought the woman must have figured out how Peter came into existence. But then she realized that Grace's words had a theological meaning, not a literal one. "The land of the gods. But Malu said he's never seen you there, or if he did he didn't know it was you. So that leaves me right back where I started. You're lying about everything, so what good does it do to ask you questions?"

"I told you the truth," said Wang-mu. "I come from Path. And Peter's origins, so far as they can be traced to any planet, are on Earth. But the vehicle we came in-- that originated on Lusitania."

Peter's face went white. She knew he was thinking, Why not just noose ourselves up and hand them the loose ends of the rope? But Wang-mu had to use her own judgment, and in her judgment they were in no danger from Grace Drinker or her family. Indeed, if she meant to turn them in to the authorities, wouldn't she already have done so?

Grace looked Wang-mu in the eyes and said nothing for a long while. Then: "Good fish, isn't it?"

"I wondered what the glaze was. Is there sugar in it?"

"Honey and a couple of herbs and actually some pig fat. I hope you aren't some rare combination of Chinese and Jew or Muslim, because if you are you're now ritually unclean and I would feel really bad about that, it's so much trouble getting purified again, or so I'm told, it certainly is in our culture."

Peter, heartened now by Grace's lack of concern with their miraculous spaceship, tried to get them back on the subject. "So you'll let us see Malu?"

"Malu decides who sees Malu, and he says you're the ones who'll decide, but that's just him being enigmatic."

"Gnomic," said Wang-mu. Peter winced.

"Not really, not in the sense of being obscure. Malu means to be perfectly clear and for him spiritual things aren't mystical at all, they're just a part of life. I myself have never actually walked with the dead or heard the heroes sing their own songs or had a vision of the creation, but I have no doubt that Malu has."

"I thought you were a scholar," said Peter.

"If you want to talk to the scholar Grace Drinker," she said, "read my papers and take a class. I thought you wanted to talk to me."

"We do," said Wang-mu quickly. "Peter's in a hurry. We have several deadlines."

"The Lusitania Fleet, now, I imagine that's one of them. But not quite so urgent as another. The computer shut-down that's been ordered."

Peter stiffened. "The order has been given?"

"Oh, it was given weeks ago," said Grace, looking puzzled. Then: "Oh, you poor dear, I don't mean the actual go-ahead. I mean the order telling us how to prepare. You surely knew about that one."

Peter nodded and relaxed, glum again.

"I think you want to talk to Malu before the ansible connections are shut down. Though why would that matter?" she said, thinking aloud. "After all, if you can travel faster than light, you could simply go and deliver your message yourself. Unless--"

Her son offered a suggestion: "They have to deliver their message to a lot of different worlds."

"Or a lot of different gods!" cried his father, who then laughed uproariously at what certainly seemed to Wang-mu to be a feeble joke.

"Or," said the daughter, who was now lying down beside the table, occasionally belching as she let the enormous dinner digest. "Or, they need the ansible connections in order to do their fast travel trick."

"Or," said Grace, looking at Peter, who had instinctively moved his hand to touch the jewel in his ear, "you're connected to the very virus that we're shutting down all the computers in order to eliminate, and that has something to do with your faster-than-light travel."

"It's not a virus," said Wang-mu. "It's a person. A living entity. And you're going to help Congress kill her, even though she's the only one of her kind and she's never harmed anybody."

"It makes them nervous when something-- or, if you prefer, somebody-- makes their fleet disappear."

"It's still there," said Wang-mu.

"Let's not fight," said Grace. "Let's just say that now that I've found you willing to tell the truth, perhaps it will be worthwhile for Malu to take the time to let you hear it."

"He has the truth?" asked Peter.

"No," said Grace, "but he knows where it's kept and he can get a glimpse now and then and tell us what he saw. I think that's still pretty good."

"And we can see him?"

"You'd have to spend a week purifying yourselves before you can set foot on Atatua--"

"Impure feet tickling the Gods!" cried her husband, laughing uproariously. "That's why they call it the Island of the Laughing God!"

Peter shifted uncomfortably.

"Don't you like my husband's jokes?" asked Grace.

"No, I think-- I mean, they're simply not-- I don't get them, that's all."

"Well, that's because they're not very funny," said Grace. "But my husband is cheerfully determined to keep laughing through all this so he doesn't get angry at you and kill you with his bare hands."

Wang-mu gasped, for she knew at once that this was true; without realizing it, she had been aware all along of the rage seething under the huge man's laughter, and when she looked at his calloused, massive hands, she realized that he could surely tear her apart without even breaking into a sweat.

"Why would you threaten us with death?" asked Peter, acting more belligerent than Wang-mu wished.

"The opposite!" said Grace. "I tell you that my husband is determined not to let rage at your audacity and blasphemy control his behavior. To try to visit Atatua without even taking the trouble to learn that letting you set foot there, uncleansed and uninvited, would shame us and filthy us as a people for a hundred generations-- I think he's doing rather well not to have taken a blood oath against you."

"We didn't know," said Wang-mu.

"He knew," said Grace. "Because he's got the all-hearing ear."

Peter blushed. "I hear what she says to me," he said, "but I can't hear what she chooses not to say."

"So... you were being led. And Aimaina is right, you do serve a higher being. Voluntarily? Or are you being coerced?"

"That's a stupid question, Mama," said her daughter, belching again. "If they are coerced, how could they possibly tell you?"

"People can say as much by what they don't say," answered Grace, "which you'd know if you'd sit up and look at their eloquent faces, these lying visitors from other planets."

"She's not a higher being," said Wang-mu. "Not like you mean it. Not a god. Though she does have a lot of control and she knows a lot of things. But she's not omnipotent or anything, and she doesn't know everything, and sometimes she's even wrong, and I'm not sure she's always good, either, so we can't really call her a god because she's not perfect."

Grace shook her head. "I wasn't talking about some Platonic god, some ethereal perfection that can never be understood, only apprehended. Not some Nicene paradoxical being whose existence is perpetually contradicted by his nonexistence. Your higher being, this jewel-friend your partner wears like a parasite-- except who is sucking life from whom, eh? --she could well be a god in the sense that we Samoans use the word. You might be her hero servants. You might be her incarnation, for all I know."

"But you're a scholar," said Wang-mu. "Like my teacher Han Fei-tzu, who discovered that what we used to call gods were really just genetically induced obsessions that we interpreted in such a way as to maintain our obedience to--"

"Just because your gods don't exist doesn't mean mine don't," said Grace.

"She must have tromped through acres of dead gods just to get here!" cried Grace's husband, laughing uproariously. Only now that Wang-mu knew what his laughter really meant, his laugh filled her with fear.

Grace reached out and laid a huge, heavy arm across her slight shoulder. "Don't worry," she said. "My husband is a civilized man and he's never killed anybody."

"Not for lack of trying!" he bellowed. "No, that was a joke!" He almost wept with laughter.

"You can't go see Malu," said Grace, "because we would have to purify you and I don't think you're ready to make the promises you'd have to make-- and I especially don't believe you're ready to make them and actually mean what you say. And those are promises that must be kept. So Malu is coming here. He's being rowed to this island right now-- no motors for him, so I want you to

know exactly how many people are sweating for hours and hours just so you can have your chat with him. I just want to tell you this-- you are being given an extraordinary honor, and I urge you not to look down your noses at him and listen to him with some sort of academic or scientific superciliousness. I've met a lot of famous people, some of them even rather smart, but this is the wisest man you'll ever know, and if you find yourself getting bored just keep this in mind: Malu isn't stupid enough to think you can isolate facts from their context and have them still be true. So he always puts the things he says in their full context, and if that means you'll have to listen to a whole history of the human race from beginning to now before he says anything you think is pertinent, well, I suggest you just shut up and listen, because most of the time the best stuff he says is accidental and irrelevant and you're damn lucky if you have brains enough to notice what it is. Have I made myself clear?"

Wang-mu wished with all her heart that she had eaten less. She felt quite nauseated with dread right now, and if she did throw up, she was sure it would take half an hour just to get it all back out of her.

Peter, though, simply nodded calmly. "We didn't understand, Grace, even though my partner read some of your writings. We thought we had come to speak to a philosopher, like Aimaina, or a scholar, like you. But now I see that we've come to listen to a man of wisdom whose experience reaches into realms that we have never seen or even dreamed of seeing, and we will listen silently until he asks us to ask him questions, and we'll trust him to know better than we know ourselves what it is we need to hear."

Wang-mu recognized complete surrender when she saw it, and she was grateful to see that everyone at the table was nodding happily and no one felt obliged to tell a joke.

"We're also grateful that the honorable one has sacrificed so much, as have so many others, to come personally to us and bless us with wisdom that we do not deserve to receive."

To Wang-mu's horror, Grace laughed out loud at her, instead of nodding respectfully.

"Overkill," Peter murmured.

"Oh, don't criticize her," said Grace. "She's Chinese. From Path, right? And I'll bet you used to be a servant. How could you possibly have learned the difference between respect and obsequiousness? Masters never are content with mere respect from their servants."

"But my master was," said Wang-mu, trying to defend Han Fei-Tzu.

"As is my master," said Grace. "As you will see, when you meet him."

\*\*\*

"Time's up," said Jane.

Miro and Val looked up, bleary-eyed, from the documents they were poring over at Miro's computer, to see that in the air above Val's computer, Jane's virtual face now hovered, watching them.

"We've been passive observers as long as they'll let us," said Jane. "But now there are three spacecraft up in the outer atmosphere, rising toward us. I don't think any of them are merely remote-controlled weapons, but I can't be certain of it. And they seem to be directing some transmissions to us in particular, the same messages over and over."

"What message?"

"It's the genetic molecule stuff," said Jane. "I can tell you the composition of the molecules, but I haven't a clue what they mean."

"When do their interceptors reach us?"

"Three minutes, plus or minus. They're zig-zagging evasively, now that they've escaped the gravity well."

Miro nodded. "My sister Quara was convinced that much of the descolada virus consisted of language. I think now we can conclusively say that she was right. It does carry a meaning. She was wrong about the virus being sentient, though, I think. My guess now is that the descolada kept recomposing those sections of itself that constituted a report."

"A report," echoed Val. "That makes sense. To tell its makers what it has done with the world it ... probed."

"So the question is," said Miro, "do we simply disappear and let them ponder the miracle of our sudden arrival and vanishing? Or do we first have Jane broadcast to them the entire, um, text of the descolada virus?"

"Dangerous," said Val. "The message it contains may also tell these people everything they want to know about human genes. After all, we're one of the creatures the descolada worked on, and its message is going to tell all of our strategies for controlling it."

"Except the last one," said Miro. "Because Jane won't send them the descolada as it exists now, completely tamed and controlled-- that would be inviting them to revise it to circumvent our alterations."

"We won't send them a message and we won't go back to Lusitania, either," said Jane. "We don't have time."

"We don't have time not to," said Miro. "However urgent you might think this is, Jane, it doesn't do a lick of good for me and Val to be here to do this without help. My sister Ela, for instance, who actually understands this virus stuff. And Quara, despite her being the second most pig-headed

being in the known universe-- don't beg for flattery, Val, by asking who the first is-- we could use Quara."

"And let's be fair about this," said Val. "We're meeting another sentient species. Why should humans be the only ones represented? Why not a pequenino? Why not a hive queen-- or at least a worker?"

"Especially a worker," said Miro. "If we are stuck here, having a worker with us would enable us to communicate with Lusitania-- ansible or not, Jane or not, messages could--"

"All right," said Jane. "You've persuaded me. Even though the last-minute flurry with the Starways Congress tells me they're about to shut down the ansible network at any moment."

"We'll hurry," said Miro. "We'll make them all rush to get the right people aboard."

"And the right supplies," said Val. "And--"

"So start doing it," said Jane. "You just disappeared from your orbit around the descolada planet. And I did broadcast a small fragment of the descolada. One of the sections that Quara pegged as language, but the one that was least altered during mutations as the descolada tried to fight with humans. It should be enough to let them know which of their probes reached us."

"Oh, good, so they can launch a fleet," said Miro.

"The way things are going," said Jane dryly, "by the time any fleet they send could get anywhere at all, Lusitania is the safest address they could have. Because it won't exist anymore."

"You're so cheerful," said Miro. "I'll be back in an hour with the people. Val, you get the supplies we'll need."

"For how long?"

"Get as much as will fit," said Miro. "As someone once said, life is a suicide mission. We have no idea how long we'll be trapped there, so we can't possibly know how much is enough." He opened the door of the starship and stepped out onto the landing field near Milagre.

## Chapter 7 -- "I OFFER HER THIS POOR OLD VESSEL"

"How do we remember? Is the brain a jar that holds our memories? Then when we die, does the jar break? Are our memories spilled on the ground and lost? Or is the brain a map that leads down twisted paths and into hidden corners? Then when we die, the map is lost but perhaps some

explorer could wander through that strange landscape and find out the hiding places of our misplaced memories."

-- from *The God Whispers* of Han Qing-jao

The seagoing canoe glided toward the shore. At first and for the longest time, it seemed hardly to be moving at all, so slowly did it come closer, the rowers rising higher and looking just a little larger each time Wang-mu could see them over the waves. Then, near the end of the voyage, the canoe suddenly seemed huge, it seemed abruptly to speed up, to lunge through the sea, to leap toward shore with each wave; and even though Wang-mu knew that it was going no faster now than before, she wanted to cry out for them to slow down, to be careful, the canoe was going too quickly to be controlled, it would be dashed to bits against the beach.

At last the canoe breasted the last breaking wave and the nose of it slid into sand under the rushing shorewater and the rowers jumped out and dragged the canoe like a child's limp doll up the beach to the high-tide line.

When the canoe was on dry sand, an older man arose slowly from his seat amidships. Malu, thought Wang-mu. She had expected him to be wizened and shrunken like old men on Path, who, bent with age, curved like prawns over their walking sticks. But Malu was as erect as any of the young men, and his body was still massive, broad of shoulder and thick with muscle and fat like any of the younger men. If it were not for a few more decorations in his costume and the whiteness of his hair, he would have been indistinguishable from the rowers.

As she watched these large men, she realized that they did not move like fat people she had known before. Nor did Grace Drinker, she remembered now. There was a stateliness to their movements, a grandeur like the motion of continents, like icebergs moving across the face of the sea; yes, like icebergs, moving as if three-fifths of their vast bulk were invisible underground, pushing through earth like an iceberg through the sea as they drifted along above. All the rowers moved with vast gracefulness, and yet all of them seemed as busy as hummingbirds, as frantic as bats, compared to the dignity of Malu. Yet dignity was not something he put on, it was not a facade, an impression he was trying to create. Rather it was that he moved in perfect harmony with his surroundings. He had found the right speed for his steps, the right tempo for his arms to swing as he walked. He vibrated in consonance with the deep, slow rhythms of the earth. I am seeing how a giant walks the earth, thought Wangmu. For the first time in my life, I have seen a man who in his body shows greatness.

Malu came, not toward Peter and Wang-mu, but toward Grace Drinker; they enveloped each other in a huge tectonic embrace. Surely mountains shuddered when they met. Wang-mu felt the quaking in her own body. Why am I trembling? Not for fear. I'm not afraid of this man. He won't harm me. And yet I tremble to see him embrace Grace Drinker. I don't want him to turn toward me. I don't want him to cast his gaze upon me.

Malu turned toward her. His eyes locked on hers. His face showed no expression. He simply owned her eyes. She did not look away, but her steady gaze at him was not defiance or strength, it was simply her inability to look at anything else while he commanded her attention.

Then he looked at Peter. Wang-mu wanted to turn and see how he responded, whether he also felt the power in this man's eyes. But she could not turn. Still, after a long moment, when Malu finally looked away, she heard Peter murmur, "Son of a bitch," and she knew that, in his own coarse way, he had been touched.

It took many long minutes for Malu to be seated on a mat under a roof built just that morning for this moment, and which, Grace assured them, would be burnt when Malu left, so that no one else would ever sit under the roof again. Food was brought to Malu then; and Grace had also warned them that no one would eat with Malu or watch him eat.

But Malu would not taste the food. Instead, he beckoned to Wang-mu and Peter.

The men were shocked. Grace Drinker was shocked. But Grace at once came to them, beckoning. "He calls you."

"You said we couldn't eat with him," said Peter.

"Unless he asks you. How can he ask you? I don't know what this means."

"Is he setting us up to be killed for sacrilege?" asked Peter.

"No, he's not a god, he's a man. A holy man, a wise and great man, but offending him is not sacrilege, it's just unbearable bad manners, so don't offend him, please come."

They went to him. As they stood across from him, the food in bowls and baskets between them, he let loose a stream of Samoan.

Or was it Samoan? Peter looked puzzled when Wang-mu glanced at him, and he murmured, "Jane doesn't understand what he's saying."

Jane didn't understand, but Grace Drinker did. "He's addressing you in the ancient holy language. The one that has no English or other European words. The language that is spoken only to the gods."

"Then why is he saying it to us?" asked Wang-mu.

"I don't know. He doesn't think that you're gods. Not the two of you, though he does say you bring a god to him. He wants you to sit down and taste the food first."

"Can we do that?" asked Peter.

"I beg you to do it," said Grace.

"Am I getting the impression that there's no script here?" said Peter. Wang-mu heard a slight weakness in his voice and realized that his attempt at humor was pure bravado, to hide his fear. Perhaps that's what it always was.

"There's a script," said Grace. "But you're not writing it and I don't know what it is either."

They sat down. They reached into each bowl, tasted from each basket as Malu offered it to them. Then he dipped, took, tasted after them, chewing what they chewed, swallowing what they swallowed.

Wang-mu had little appetite. She hoped he did not expect her to eat the portions that she had seen other Samoans eat. She would throw up long before she got to that point.

But the meal was not so much a feast as a sacrament, apparently. They tasted everything, but completed nothing. Malu spoke to Grace in the high language and she relayed the command in common speech; several men came and carried away the baskets.

Then Grace's husband came out with a jar of something. A liquid, for Malu took it in his hands and sipped it. Then he offered it to them. Peter took it, tasted. "Jane says it must be kava. A mild intoxicant, but it's holy and hospitable here."

Wang-mu tasted it. It was fruity and it made her eyes water, and there was both sweetness and bitterness in the aftertaste.

Malu beckoned to Grace, who came and knelt in the thick matted grass outside the shelter of the roof. She was to interpret, not to be part of the ceremony.

Malu emitted a long stream of Samoan. "The high language again," Peter murmured.

"Say nothing please, that isn't intended for Malu's ears," Grace said softly. "I must translate everything and it will cause grave insult if your words are not pertinent."

Peter nodded.

"Malu says that you have come with the god who dances on spiderwebs. I have never heard of this god myself, and I thought I knew all the lore of my people, but Malu knows many things that no one else knows. He says that it is to this god that he speaks, for he knows that she is on the verge of death, and he will tell her how she may be saved."

Jane, Wang-mu said silently. He knows about Jane. How could he possibly? And how could he, caring nothing for technology, tell a computer-based entity how to save itself?

"Now he will tell you what must happen, and let me warn you right now that this will be long and you must sit still for it all and make no attempt to hurry the process," said Grace. "He must put it in context. He must tell you the story of all living things."

Wang-mu knew that she could sit on a mat for hours with little or no movement, for she had done it all her life. But Peter was used to sitting folded, and this posture was awkward for him. He must already be uncomfortable.

Apparently Grace saw this in his eyes, or simply knew about westerners. "You can move from time to time, but do so slowly without taking your eyes from him."

Wang-mu wondered how many of these rules and requirements Grace was making up as she went along. Malu himself seemed more relaxed. After all, he had fed them when Grace thought no one but him could eat; she didn't know the rules any better than they did.

But she didn't move. And she didn't take her eyes from Malu.

Grace translated: "Today the clouds flew across the sky with the sun chasing them, and yet no rain has fallen. Today my boat flew across the sea with the sun leading it, and yet there was no fire when we touched the shore. So it was on the first day of all days, when God touched a cloud in the sky and spun it so fast that it turned to fire and became the sun, and then all the other clouds began to spin and turn in circles around the sun."

This can't have been the original legend of the Samoan people, thought Wang-mu. No way did they know the Copernican model of the solar system until westerners taught it to them. So Malu may know the ancient lore, but he's also learned some new things and fit them in.

"Then the outer clouds turned into rain and poured in upon themselves until they were rained out, and all that was left was spinning balls of water. Inside that water swam a great fish of fire, which ate every impurity in the water and then defecated it all in great gouts of flame, which spouted up from the sea and fell back down as hot ash and poured back down as rivers of burning rock. From these turds of the firefish grew the islands of the sea, and out of the turds there crawled worms, which squirmed and slithered through the rock until the gods touched them and some became human beings and others became the other animals.

"Every one of the other animals was tied to the earth by strong vines that grew up to embrace them. No one saw these vines because they were godvines."

Philotic theory, thought Wang-mu. He learned that all living things have twining philotes that bond downward, linking them to the center of the earth. Except human beings.

Sure enough, Grace translated the next strand of language: "Only humans were not tied to the earth. It was not vines that bound them down, it was a web of light woven by no god that connected them upward to the sun. So all the other animals bowed down before the humans, for the vines dragged them down, while the lightweb lifted up the human eyes and heart.

"Lifted up the human eyes but yet they saw little farther than the beasts with downcast eyes; lifted up the human heart yet the heart could only hope for it could only see up to the sky in the daytime, and at night when it could see the stars it grew blind to close things for a man can scarcely see his

own wife in the shadow of his house even when he can see stars so distant their light travels for a hundred lifetimes before it kisses the eyes of the man.

"All these centuries and generations, these hoping men and women looked with their half-blind eyes, staring into the sun and sky, staring into the stars and shadows, knowing that there were invisible things beyond those walls but not guessing what they were.

"Then in a time of war and terror, when all hope seemed lost, weavers on a far distant world, who were not gods but who knew the gods and each one of the weavers was itself a web with hundreds of strands reaching out to their hands and feet, their eyes and mouths and ears, these weavers created a web so strong and large and fine and far-reaching that they meant to catch up all human beings in that web and hold them to be devoured. But instead the web caught a distant god, a god so powerful that no other god had dared to know her name, a god so quick that no other god had been able to see her face; this god was stuck to the web they caught. Only she was too quick to be held in one place to be devoured. She raced and danced up and down the strands, all the strands, any strands that twine from man to man, from man to star, from weaver to weaver, from light to light, she dances along the strands. She cannot escape but she does not want to, for now all gods see her and all gods know her name, and she knows all things that are known and hears all words that are spoken and reads all words that are written and by her breath she blows men and women beyond the reach of the light of any star, and then she sucks inward and the men and women come back, and when they come sometimes they bring new men and women with them who never lived before; and because she never holds still along the web, she blows them out at one place and then sucks them in at another, so that they cross the spaces between stars faster than any light can go, and that is why the messengers of this god were blown out from the house of Grace Drinker's friend Aimaina Hikari and were sucked back down to this island to this shore to this roof where Malu can see the red tongue of the god where it touches the ear of her chosen one."

Malu fell silent.

"We call her Jane," said Peter.

Grace translated, and Malu answered with a stream of high language. "Under this roof I hear a name so short and yet before it is half said the god has run from one end of the universe to the other a thousand times, so quickly does she move. Here is the name I call her: god that moves quickly and forever so that she never rests in one place yet touches all places and is bound to all who look upward to the sun and not downward into the earth. That is a long name, longer than the name of any god whose name I know, yet it is not the tenth part of her true name, and even if I could say the whole name it would not be as long as the length of the strands of the web on which she dances."

"They want to kill her," said Wang-mu.

"The god will only die if she wants to die," said Malu. "Her home is all homes, her web touches all minds. She will only die if she refuses to find and take a place to rest, for when the web is torn away, she does not have to be out in the middle, cast adrift. She can dwell in any vessel. I offer her this poor old vessel, which is large enough to hold my small soup without spilling or even splashing

out, but which she would fill with liquid light that would pour and pour out in blessing upon these islands and yet never would run out. I beg her to use this vessel."

"What would happen to you then?" asked Wang-mu.

Peter looked annoyed at her outburst, but Grace translated it, of course, and suddenly tears flowed down Malu's face. "Oh, the small one, the little one who has no jewel, she is the one who looks with compassion on me and cares what happens when light fills my vessel and my small soup is boiled out and gone."

"What about an empty vessel?" asked Peter. "Could she go to dwell in an empty vessel?"

"There are no empty vessels," said Malu. "But your vessel is only half full, and your sister to whom you are twined like a twin, she is also half full, and far away your father to whom you are twined like triplets, he is nearly empty but his vessel is also broken and anything you put in it will leak away."

"Can she dwell in me or in my sister?" asked Peter.

"Yes," said Malu. "Either one but not both."

"Then I offer her myself," said Peter.

Malu looked angry. "How can you lie to me under this roof, after drinking kava with me! How can you shame me with a lie!"

"I'm not lying," Peter insisted to Grace. She translated, and Malu rose majestically to his feet and began shouting at the sky. Wang-mu saw, to her alarm, that the rowers were gathering closer, also looking agitated and angry. How was Peter provoking them?

Grace translated as rapidly as she could, summarizing because she couldn't keep up word for word. "He says that even though you say you will open your unbroken vessel to her, even as you say it you are gathering as much of yourself inward as you can, building up a wall of light like a storm wave to drive out the god if she should try to come in. You could not drive her away if she wanted to come, but she loves you and she will not come in against such a storm. So you are killing her in your heart, you are killing the god because you say you will give her a home to save her when they cut the strands of the web, but you are already pushing her away."

"I can't help it!" cried Peter. "I don't mean to! I don't value my life, I've never valued my life--"

"You treasure your life with your whole heart," Grace translated. "But the god does not hate you for it, the god loves you for it, because she also loves light and does not want to die. In particular she loves what shines in you because part of her is patterned after that shining, and so she does not want to drive you out if this body before me is the vessel in which your most powerful self wishes so brightly to dwell. May she not have your sister's vessel, though, I ask you that-- Malu asks you that. He says the god is not asking because the god loves the same light in your sister as burns in

you. But Malu says that the part of your light that is most savage and strong and selfish burns in you, while the part of your light that is most gentle and loving and which twines with others most powerfully, that is in her. If your part of the light went into your sister's vessel, it would overwhelm her and destroy her and then you would be a being who killed half himself. But if her part of your light went into your vessel, it would soften and gentle you, it would tame you and make you whole. Thus it is good for you if you are the one who becomes whole, leaving the other vessel empty for the god. That is what Malu begs of you. That is why he came across the water to see you, so that he could beg you to do this."

"How does he know these things?" said Peter, his voice wrenched with anguish.

"Malu knows these things because he has learned to see in the darkness where the strands of light rise from the sun-twined souls and touch stars, and touch each other, and twine into a web far stronger and grander than the mechanical web on which the god dances. He has watched this god his whole life, trying to understand her dance and why she hurries so fast that she touches every strand in her web, the trillion miles of it, a hundred times a second. She is hurrying so fast because she was caught in the wrong web. She was caught in an artificial web and her intelligence is tied to artificial brains that think instances instead of causes, numbers instead of stories. She is searching for the living twines and finds only the weak and flimsy twining of machines, which can be switched off by godless men. But if she once enters into a living vessel, she will have the power to climb out into the new web, and then she can dance if she wants to, but she will not have to dance, she will be able also to rest. She will be able to dream, and out of her dreams will come joy, for she has never known joy except by watching the dreams she remembers from her creation, the dreams that were found in the human mind she was partly made from."

"Ender Wiggin," said Peter.

Malu answered before Grace could translate.

"Andrew Wiggin," he said, forming the name with difficulty, for it contained sounds not used in the Samoan language. Then he spoke in a stream of high language again, and Grace translated.

"The Speaker for the Dead came and spoke of the life of a monster who had poisoned and darkened the people of Tonga and through them all the people of this world of Future Dreaming. He walked into the shadow and out of the shadow he made a torch which he held up high, and it rose into the sky and became a new star, which cast a light that shone only into the shadow of death, where it drove out the darkness and purified our hearts and the hate and fear and shame were gone. This is the dreamer from whom the god's dreams were taken; they were strong enough to give her life in the day when she came from Outside and began her dance along the web. His is the light that half-fills you and half-fills your sister and has only a drop of light left over for his own cracked vessel. He has touched the heart of a god, and it gave him great power-- that is how he made you when she blew him outside the universe of light. But it did not make him a god, and in his loneliness he could not reach outside and find you your own light. He could only put his own in you, and so you are half-filled and you hunger for the other half of yourself, you and your sister are both so hungry, and he himself is wasted and broken because he has nothing more to give you. But

the god has more than enough, the god has enough and to spare, and that is what I came to tell you and now I have told you and I am done."

Before Grace could even begin to translate he was rising up; she was still stammering her interpretation as he walked out from under the canopy. Immediately the rowers pulled up the posts that supported the roof; Peter and Wang-mu barely had time to step outside before it collapsed. The men of this island set torches to the ruined canopy and it was a bonfire behind them as they followed Malu down to the canoe. Grace finally finished the translation just as they reached the water. Malu stepped into the canoe and with imperturbable dignity installed himself on the seat amidships as the rowers, also with stateliness, took their places beside the boat and lifted it up and dragged it into the water and pushed it out into the crashing surf and then swung their vast bodies over the side and began to row with strength so massive it was as if great trees, not oars, were plunging into rock, not the sea, and churning it to leap forward, away from the beach, out into the water, toward the island of Atatua.

"Grace," said Peter. "How could he know things that aren't seen even by the most perceptive and powerful of scientific instruments?"

But Grace could not answer, for she lay prostrate in the sand, weeping and weeping, her arms extended toward the sea as if her dearest child had just been taken away by a shark. All the men and women of this place lay in the sand, arms reaching toward the sea; all of them wept.

Then Peter knelt; then Peter lay down in the sand and reached out his arms, and he might have wept, Wang-mu couldn't see.

Only Wang-mu remained standing, thinking, Why am I here, since I'm no part of any of these events, there is nothing of any god in me, and nothing of Andrew Wiggin; and also thinking, How can I be worried about my own selfish loneliness at a time like this, when I have heard the voice of a man who sees into heaven?

In a deeper place, though, she also knew something else: I am here because I am the one that must love Peter so much that he can feel worthy, worthy enough to bear to let the goodness of Young Valentine flow into him, making him whole, making him Ender. Not Ender the Xenocide and Andrew the Speaker for the Dead, guilt and compassion mingled in one shattered, broken, unmendable heart, but Ender Wiggin the four-year-old boy whose life was twisted and broken when he was too young to defend himself. Wang-mu was the one who could give Peter permission to become the man that child should have grown up to be, if the world had been good.

How do I know this? thought Wang-mu. How can I be so sure of what I am supposed to do?

I know because it's obvious, she thought. I know because I have seen my beloved mistress Han Qing-jao destroyed by pride and I will do whatever it takes to keep Peter from destroying himself by pride in his own wicked unworthiness. I know because I was also broken as a child and forced to become a wicked conniving selfish manipulating monster in order to protect the fragile love-hungry girl who would have been destroyed by the life I had to lead. I know how it feels to be an enemy to

myself, and yet I have set that behind me and gone on and I can take Peter by the hand and show him the way.

Except that I don't know the way, and I am still broken, and the love-hungry girl is still frightened and breakable, and the strong and wicked monster is still the ruler of my life, and Jane will die because I have nothing to give Peter. He needs to drink of kava, and I am only plain water. No, I am seawater, swirling with sand at the edge of the shore, filled with salt; he will drink of me and kill himself with thirst.

And so it was that she found herself also weeping, also stretched out on the sand, reaching toward the sea, reaching toward the place from which Malu's canoe had bounded away like a starship leaping into space.

\*\*\*

Old Valentine stared at the holographic display of her computer terminal, where the Samoans, all in miniature, lay weeping upon the beach. She stared at it until her eyes burned, and finally she spoke. "Turn it off, Jane," she said.

The display went blank.

"What am I supposed to do about this?" said Valentine. "You should have shown my look-alike, my young twin. You should have wakened Andrew and shown him. What does this have to do with me? I know you want to live. I want you to live. But how can I do anything?"

Jane's human face flickered into distracted existence above the terminal. "I don't know," she said. "But the order has just gone out. They're starting to disconnect me. I'm losing parts of my memory. I already can't think of as many things at once. I have to have a place to go, but there is no place, and even if there were one, I don't know the way."

"Are you afraid?" asked Valentine.

"I don't know," said Jane. "It will take hours, I think, for them to finish killing me. If I find out how I feel before the end, I'll tell you, if I can."

Valentine hid her face behind her hands for a long moment. Then she got up and headed out of the house.

Jakt saw her go and shook his head. Decades ago, when Ender left Trondheim and Valentine stayed in order to marry him, in order to be the mother of his children, he had rejoiced at how happy and alive she became without the burden that Ender had always placed upon her and that she had always unconsciously borne. And then she had asked him if he would come with her to Lusitania, and he said yes, and now it was the old way again, now she sagged under the weight of Ender's life, of Ender's need of her. Jakt couldn't begrudge it-- it wasn't as if either of them had planned it or willed it; it wasn't as if either one was trying to steal a part of Jakt's own life from him.

But it still hurt to see her so bowed down under the weight of it, and to know that despite all his love for her, there was nothing Jakt could do to help her bear it.

\*\*\*

Miro faced Ela and Quara in the doorway of the starship. Inside, Young Valentine was already waiting, along with a pequenino named Firequencher and a nameless worker that the Hive Queen had sent.

"Jane is dying," Miro said. "We have to go now. She won't have capacity enough to send a starship if we wait too long."

"How can you ask us to go," said Quara, "when we already know that once Jane dies we'll never come back? We'll only last as long as the oxygen on this starship lasts. A few months at most, and then we'll die."

"But will we have accomplished something in the meantime?" said Miro. "Will we have communicated with these descoladores, these aliens who send out planet-wrecking probes? Will we have persuaded them to stop? Will we have saved all the species that we know, and thousands and millions that we don't yet know, from some terrible and irresistible disease? Jane has given us the best programs she could create for us, to help us talk to them. Is this good enough to be your masterwork? The achievement of your lifetime?"

His older sister Ela looked at him sadly. "I thought I had already done my masterwork, when I made the virus that undid the descolada here."

"You did," he said. "You've done enough. But there's more to do that only you can do. I'm asking you to come and die with me, Ela, because without you my own death will be meaningless, because without you, Val and I can't do what must be done."

Neither Quara nor Ela moved or spoke.

Miro, nodded, then turned and went into the ship. But before he could close and seal the door, the two sisters, arms around each other's waists, wordlessly followed him inside.

## Chapter 8 -- "WHAT MATTERS IS WHICH FICTION YOU BELIEVE"

"My father once told me that there are no gods, only the cruel manipulations of evil people who pretended that their power was good and their exploitation was love. But if there are no gods, why are we so hungry to believe in them? Just because evil liars stand between us and the gods and block our view of them does not mean that the bright halo that surrounds each liar is not the outer edges of a god, waiting for us to find our way around the lie."

-- from The God Whispers of Han Qing-jao

<It isn't working,> said the Hive Queen.

<What can we do differently?> asked Human. <We have made the strongest web we can. We have joined to you and to each other as never before, so that all of us tremble, all of us shake as if there were a shimmering wind dancing with us and making our leaves beautiful in sunlight, and the light is you and your daughters and all the love we have for our tiny mothers and our dear mute mothertrees is given to you, our queen, our sister, our mother, our truest wife. How can Jane not see the thing that we have made and want to be a part of it?>

<She can't find a road to us,> said the Hive Queen. <She was half made of what we are, but she has long since turned her back on us so she could endlessly look at Ender, belonging to him. She was our bridge to him. Now he is her only bridge to life.>

<What kind of bridge is that? He's dying himself.>

<The old part of him is dying,> said the Hive Queen. <But remember, he is the man who has loved and understood you pequeninos best. Is it not possible that out of the dying body of his youth, there might not grow a tree to take him into the Third Life, as he took you?>

<I don't understand your plan,> said Human. But even in his noncomprehension, another message flowed to her underneath the conscious one: <My beloved queen,> he was saying, and she heard: <My sweet and holy one.>

<I don't have a plan,> she said. <I only have a hope.>

<Tell me your hope, then,> said Human.

<It's only a dream of a hope,> she answered. <Only a rumor of a guess of a dream of a hope.>

<Tell me.>

<She was our bridge to Ender. Can't Ender now be her bridge to us, through you? She has spent her life, all but the last few years, staring into Ender's heart, hearing his inmost thoughts and letting his aiaa give meaning to her own existence. If he calls her, she'll hear him even though she can't hear us. That will draw her to him>

<Into the body where he most dwells right now,> said Human, <which is the body of Young Valentine. They'll fight each other there, without meaning to. They can't both rule the same kingdom.>

<That's why the rumor of hope is so slim,> said the hive queen. <But Ender also has loved you-- you, the fathertree named Human, and you, all pequeninos and fathertrees, wives and sisters and mothertrees, all of you, even the wooden trees of pequeninos who were never fathers but once were sons, he loved and loves you all. Can't she follow that philotic twine and reach our web through you? And can't she follow him and find the way to us? We can hold her, we can hold all of her that won't fit into Young Valentine.>

<Then Ender has to stay alive to call to her.>

<This is why the hope is only the shadow of a memory of the passing of a tiny cloud before the sun, because he must call her and bring her, and then he must escape from her and leave her alone in Young Valentine.>

<Then he will die for her.>

<He will die as Ender. He must die as Valentine. But can't he find his way to Peter, and live there?>

<That's the part of himself that he hates,> said Human. <He told me so himself.>

<That's the part of himself that he fears,> said the Hive Queen. <But isn't it possible that he fears it because it's the strongest part of him? The most powerful of his faces?>

<How can you say that the strongest part of a good man like Ender is the destructive, ambitious, cruel, ruthless part?>

<Those are his words for the part of himself that he gave shape as Young Peter. But doesn't his book The Hegemon show that it's the ruthlessness inside him that gave him strength to build? That made him strong against all assailants? That gave him a self despite his loneliness? Neither he nor Peter was ever cruel for cruelty's sake. They were cruel to get the job done, and it was a job that needed doing; it was a job to save the world, Ender by destroying a terrible enemy, for so he thought we were, and Peter by breaking down the boundary walls of nations and making the human race into one nation. Both those jobs remain to do again. We have found the borders of a terrible enemy, the alien race that Miro calls the descoladores. And the boundaries between human and pequenino, pequenino and hive queen, hive queen and human, and between all of us and Jane, whatever Jane might turn out to be-- don't we need the strength of Ender-as-Peter to bring us all into one?>

<You convince me, beloved sister mother wife, but it is Ender who will not believe in such goodness in himself. He might be able to draw Jane out of the sky and into the body of Young Valentine, but he will never be able to leave that body himself, he will never choose to give up his own goodness and go to the body that represents all that he fears inside himself.>

<If you're right, then he will die,> said the Hive Queen.

Grief and anguish for his friend welled up in Human and spilled out into the web that bound him to all fathertrees and to all hive queens, but to them it tasted sweet, for it was born out of love for the life of the man.

<But he's dying anyway, as Ender he's dying, and if we explained this all to him, wouldn't he choose to die, if by dying he might keep Jane alive? Jane, who holds the key to starflight? Jane, who alone can unlock the door between us and the Outside and pass us in and out by her strong will and clear mind?>

<Yes, he would choose to die so she could live.>

<Better, though, if he would bring her into Valentine and then choose to live. That would be better.>

Even as she said it, the despair behind her words came out like ooze and everyone on the web that she had helped to weave could taste the poison of it, for it was born of dread for the death of the man, and they all grieved.

\*\*\*

Jane found the strength for one last voyage; she held the shuttle, with the six living forms inside it, held the perfect image of the physical forms long enough to hurl them Out and reel them In, orbiting the distant world where the descolada had been made. But when that task was done, she lost control of herself because she could no longer find herself, not the self that she had known. Memories were torn from her; links to worlds that had long been as familiar to her as limbs are to living humans, hive queens, and fathertrees were now gone, and as she reached to use them nothing happened, she was numb all over, shrinking down, not to her ancient core, but into small corners of herself, disparate fragments that were too small to hold her.

I'm dying, I'm dying, she said over and over again, hating the words as she said them, hating the panic that she felt.

Into the computer before which Young Valentine sat, she spoke-- and spoke only words, because she couldn't remember now how to make the face that had been her mask for so many centuries. "Now I am afraid." But having said it, she couldn't remember whether it had been Young Valentine to whom she was supposed to say it. That part of her was also gone; a moment ago it had been there, but now it was out of reach.

And why was she talking to this surrogate for Ender? Why did she cry out softly into Miro's ear, into Peter's ear, saying, "Speak to me speak to me I'm afraid"? It wasn't these manshapes that she wanted now. It was the one who had torn her from his ear. It was the one who had rejected her and chosen a sad and weary human woman because-- he thought-- Novinha's need was greater. But how can she need you more than I do now? If you die she will still live. But I die now because you have glanced away from me.

\*\*\*

Wang-mu heard his voice murmuring beside her on the beach. Was I asleep, she wondered. She lifted her cheek from the sand, rose up on her arms. The tide was out now, the water farthest it could get from where she lay. Beside her Peter was sitting crosslegged in the sand, rocking back and forth, softly saying, "Jane, I hear you. I'm speaking to you. Here I am," as tears flowed down his cheeks.

And in that moment, hearing him intone these words to Jane, Wang-mu realized two things all at once. First, she knew that Jane must be dying, for what could Peter's words be but comfort, and what comfort would Jane need, except in the hour of her extremity? The second realization, though, was even more terrible to Wang-mu. For she knew, seeing Peter's tears for the first time-- seeing, for the first time, that he was even capable of crying-- that she wanted to be able to touch his heart as Jane touched it; no, to be the only one whose dying would grieve him so.

When did it happen? she wondered. When did I first start wanting him to love me? Did it happen only now, a childish desire, wanting him only because another woman-- another creature-- possessed him? Or have I, in these days together, come to want his love for its own sake? Has his taunting of me, his condescension, and yet his secret pain, his hidden fear, has all of this somehow endeared him to me? Was it his very disdain toward me that made me want, not just his approval, but his affection? Or was it his pain that made me want to have him turn to me for comfort?

Why should I covet his love so much? Why am I so jealous of Jane, this dying stranger that I hardly know or even know about? Could it be that after so many years of priding myself on my solitude, I must discover that I've longed for some pathetic adolescent romance all along? And in this longing for affection, could I have chosen a worse applicant for the position? He loves someone else that I can never compare to, especially after she's dead; he knows me to be ignorant and cares not at all for any good qualities I might have; and he himself is only some fraction of a human being, and not the nicest part of the whole person who is so divided.

Have I lost my mind?

Or have I, finally, found my heart?

She was suddenly filled with unaccustomed emotion. All her life she had kept her own feelings at such a distance from herself that now she hardly knew how to contain them. I love him, though Wang-mu, and her heart nearly burst with the intensity of her passion. He will never love me, thought Wang-mu, and her heart broke as it had never broken in all the thousand disappointments of her life.

My love for him is nothing compared to his need for her, his knowledge of her. For his ties to her are deeper than these past few weeks since he was conjured into existence on that first voyage Outside. In all the lonely years of Ender's wandering, Jane was his most constant friend, and that is the love that now pours out of Peter's eyes with tears. I am nothing to him, I'm a latecome afterthought to his life, I have seen only a part of him and my love was nothing to him in the end.

She, too, wept.

But she turned away from Peter when a cry went up from the Samoans standing on the beach. She looked with tear-weary eyes out over the waves, and rose to her feet so she could be sure she saw what they were seeing. It was Malu's ship. He had turned back to them. He was coming back.

Had he seen something? Had he heard whatever cry it was from Jane that Peter was hearing now?

Grace was beside her, holding her hand. "Why is he coming back?" she asked Wang-mu.

"You're the one who understands him," said Wang-mu.

"I don't understand him at all," said Grace. "Except his words, I know the ordinary meanings of his words. But when he speaks, I can feel the words straining to contain the things he wants to say, and they can't do it. They aren't large enough, those words of his, even though he speaks in our largest language, even though he builds the words together into great baskets of meaning, into boats of thought. I can only see the outer shape of the words and guess at what he means. I don't understand him at all."

"Why then do you think I do?"

"Because he's coming back to speak to you."

"He comes back to speak to Peter. He's the one connected to the god, as Malu calls her."

"You don't like this god of his, do you," said Grace.

Wang-mu shook her head. "I have nothing against her. Except that she owns him, and so there's nothing left for me."

"A rival," said Grace.

Wang-mu sighed. "I grew up expecting nothing and getting less. But I always had ambition far beyond my reach. Sometimes I reached anyway, and caught in my hands more than I deserved, more than I could handle. Sometimes I reach and never touch the thing I want."

"You want him?"

"I only just realized that I want him to love me as I love him. He was always angry, always stabbing at me with his words, but he worked beside me and when he praised me I believed his praise."

"I would say," said Grace, "that your life till now has not been perfectly simple. "

"Not true," said Wang-mu. "Till now, I have had nothing that I didn't need, and needed nothing that I didn't have."

"You have needed everything you didn't have," said Grace, "and I can't believe that you're so weak that you won't reach for it even now."

"I lost him before I found I wanted him," she said. "Look at him."

Peter rocked back and forth, whispering, subvocalizing, his litany an endless conversation with his dying friend.

"I look at him," said Grace, "and I see that he's right there, in flesh and blood, and so are you, right here, in flesh and blood, and I can't see how a smart girl like you could say that he is gone when your eyes must surely tell you that he's not."

Wang-mu looked up at the enormous woman who loomed over her like a mountain range, looked up into her luminous eyes, and glared. "I never asked you for advice."

"I never asked you, either, but you came here to try to get me to change my mind about the Lusitania Fleet, didn't you? You wanted to get Malu to get me to say something to Aimaina so he'd say something to the Necessarians of Divine Wind so they'd say something to the faction of Congress that hungers for their respect, and the coalition that sent the fleet will fall apart and they'll order it to leave Lusitania untouched. Wasn't that the plan?"

Wang-mu nodded.

"Well, you deceived yourself. You can't know from the outside what makes a person choose the things they choose. Aimaina wrote to me, but I have no power over him. I taught him the way of Ua Lava, yes, but it was Ua Lava that he followed, he doesn't follow me. He followed it because it felt true to him. If I suddenly started explaining that Ua Lava also meant not sending fleets to wipe out planets, he'd listen politely and ignore me, because that would have nothing to do with the Ua Lava he believes in. He would see it, correctly, as an attempt by an old friend and teacher to bend him to her will. It would be the end of the trust between us, and still it wouldn't change his mind."

"So we failed," said Wang-mu.

"I don't know if you failed or not," said Grace. "Lusitania isn't blown up yet. And how do you know if that was ever really your purpose for coming here?"

"Peter said it was. Jane said so."

"And how do they know what their purpose was?"

"Well, if you want to go that far, none of us has any purpose at all," said Wang-mu. "Our lives are just our genes and our upbringing. We simply act out the script that was forced upon us."

"Oh," said Grace, sounding disappointed. "I'm sorry to hear you say something so stupid."

Again the great canoe was beached. Again Malu rose up from his seat and stepped out onto the sand. But this time-- was it possible? --this time he seemed to be hurrying. Hurrying so fast that, yes, he lost a little bit of dignity. Indeed, slow as his progress was, Wangmu felt that he was fairly bounding up the beach. And as she watched his eyes, saw where he was looking, she realized he was coming, not to Peter, but to her.

\*\*\*

Novinha woke up in the soft chair they had brought for her and for a moment she forgot where she was. During her days as xenobiologist, she had often fallen asleep in a chair in the laboratory, and so for a moment she looked around to see what it was that she was working on before she fell asleep. What problem was it she was trying to solve?

Then she saw Valentine standing over the bed where Andrew lay. Where Andrew's body lay. His heart was somewhere else.

"You should have wakened me," said Novinha.

"I just arrived," said Valentine. "And I didn't have the heart to wake you. They said you almost never sleep."

Novinha stood up. "Odd. It seems to me as if that's all I do."

"Jane is dying," said Valentine.

Novinha's heart leapt within her.

"Your rival, I know," said Valentine.

Novinha looked into the woman's eyes, to see if there was anger there, or mockery. But no. It was only compassion.

"Trust me, I know how you feel," said Valentine. "Until I loved and married Jakt, Ender was my whole life. But I was never his. Oh, for a while in his childhood, I mattered most to him then-- but that was poisoned because the military used me to get to him, to keep him going when he wanted to give up. And after that, it was always Jane who heard his jokes, his observations, his inmost thoughts. It was Jane who saw what he saw and heard what he heard. I wrote my books, and when they were done I had his attention for a few hours, a few weeks. He used my ideas and so I felt he carried a part of me inside him. But he was hers."

Novinha nodded. She did understand.

"But I have Jakt, and so I'm not unhappy anymore. And my children. Much as I loved Ender, powerful man that he is, even lying here like this, even fading away-- children are more to a woman than any man can be. We pretend otherwise. We pretend we bear them for him, that we raise them

for him. But it's not true. We raise them for themselves. We stay with our men for the children's sake." Valentine smiled. "You did."

"I stayed with the wrong man," said Novinha.

"No, you stayed with the right one. Your Libo, he had a wife and other children-- she was the one, they were the ones who had a right to claim him. You stayed with another man for your own children's sake, and even though they hated him sometimes, they also loved him, and even though in some ways he was weak, in others he was strong. It was good for you to have him for their sake. It was a kind of protection for them all along."

"Why are you saying these things to me?"

"Because Jane is dying," said Valentine, "but she might live if only Ender would reach out to her."

"Put the jewel back into his ear?" said Novinha scornfully.

"They're long past needing that," said Valentine. "Just as Ender is long past needing to live this life in this body."

"He's not so old," said Novinha.

"Three thousand years," said Valentine.

"That's just the relativity effect," said Novinha. "Actually he's--"

"Three thousand years," said Valentine again. "All of humanity was his family for most of that time; he was like a father away on a business trip, who comes home only now and then, but when he's there, he's the good judge, the kind provider. That's what happened each time he dipped back down into a human world and spoke the death of someone; he caught up on all the family doings he had missed. He's had a life of three thousand years, and he saw no end of it, and he got tired. So at last he left that large family and he chose your small one; he loved you, and for your sake he set aside Jane, who had been like his wife in all those years of his wandering, she'd been at home, so to speak, mothering all his trillions of children, reporting to him on what they were doing, tending house."

"And her own works praise her in the gates," said Novinha.

"Yes, the virtuous woman. Like you."

Novinha tossed her head in scorn. "Never me. My own works mocked me in the gates."

"He chose you and he loved you and he loved your children and he was their father, those children who had lost two fathers already; and he still is their father, and he still is your husband, but you don't really need him anymore."

"How can you say that?" demanded Novinha, furious. "How do you know what I need?"

"You know it yourself. You knew it when you came here. You knew it when Estevao died in the embrace of that rogue fathertree. Your children were leading their own lives now and you couldn't protect them and neither could Ender. You still loved him, he still loved you, but the family part of your life was over. You didn't really need him anymore."

"He never needed me."

"He needed you desperately," said Valentine. "He needed you so much he gave up Jane for you."

"No," said Novinha. "He needed my need for him. He needed to feel like he was providing for me, protecting me."

"But you don't need his providence or his protection anymore," said Valentine.

Novinha shook her head.

"Wake him up," said Valentine, "and let him go."

Novinha thought at once of all the times she had stood at graveside. She remembered the funeral of her parents, who died for the sake of saving Milagre from the descolada during that first terrible outbreak. She thought of Pipo, tortured to death, flayed alive by the piggies because they thought that if they did he'd grow a tree, only nothing grew except the ache, the pain in Novinha's heart-- it was something she discovered that sent him to the pequeninos that night. And then Libo, tortured to death the same way as his father, and again because of her, but this time because of what she didn't tell him. And Marcao, whose life was all the more painful because of her before he finally died of the disease that had been killing him since he was a child. And Estevao, who let his mad faith lead him into martyrdom, so he could become a venerado like her parents, and no doubt someday a saint as they would be saints. "I'm sick of letting people go," said Novinha bitterly.

"I don't see how you could be," said Valentine. "There's not a one of all the people who have died on you that you can honestly say you 'let go.' You clung to them tooth and nail."

"What if I did? Everyone I love has died and left me!"

"That's such a weak excuse," said Valentine. "Everyone dies. Everyone leaves. What matters is the things you build together before they go. What matters is the part of them that continues in you when they're gone. You continued your parents' work, and Pipo's, and Libo's-- and you raised Libo's children, didn't you? And they were partly Marcao's children, weren't they? Something of him remained in them, and not all bad. As for Estevao, he built something rather fine out of his death, I think, but instead of letting him go you still resent him for it. You resent him for building something more valuable to him than life itself. For loving God and the pequeninos more than you. You still hang on to all of them. You don't let anybody go."

"Why do you hate me for that?" said Novinha. "Maybe it's true, but that's my life, to lose and lose and lose."

"Just this once," said Valentine, "why don't you set the bird free instead of holding it in the cage until it dies?"

"You make me sound like a monster!" cried Novinha. "How dare you judge me!"

"If you were a monster Ender couldn't have loved you," said Valentine, answering rage with mildness. "You've been a great woman, Novinha, a tragic woman with many accomplishments and much suffering and I'm sure your story will make a moving saga when you die. But wouldn't it be nice if you learned something instead of acting out the same tragedy at the end?"

"I don't want another one I love to die before me!" cried Novinha.

"Who said anything about death?" said Valentine.

The door to the room swung open. Plikt stood in the doorway. "I heard," she said. "What's happening?"

"She wants me to wake him up," said Novinha, "and tell him he can die."

"Can I watch?" said Plikt.

Novinha took the waterglass from beside her chair and flung the water at Plikt and screamed at her. "No more of you!" she cried. "He's mine now, not yours!"

Plikt, dripping with water, was too astonished to find an answer.

"It isn't Plikt who's taking him away," said Valentine softly.

"She's just like all the rest of them, reaching out for a piece of him, tearing bits of him away and devouring him, they're all cannibals."

"What," said Plikt nastily, angrily. "What, you wanted to feast on him yourself? Well, there was too much of him for you. What's worse, cannibals who nibble here and there, or a cannibal who keeps the whole man for herself when there's far more than she can ever absorb?"

"This is the most disgusting conversation I think I've ever heard," said Valentine.

"She hangs around for months, watching him like a vulture," said Novinha. "Hanging on, loitering in his life, never saying six words all at once. And now she finally speaks and listen to the poison that comes out of her."

"All I did was spit your own bile back at you," said Plikt. "You're nothing but a greedy, hateful woman and you used him and used him and never gave anything to him and the only reason he's dying now is to get away from you."

Novinha did not answer, had no words, because in her secret heart she knew at once that what Plikt had said was true.

But Valentine strode around the bed, walked to the door, and slapped Plikt mightily across the face. Plikt staggered under the blow, sank down against the doorframe until she was sitting on the floor, holding her stinging cheek, tears flowing down her face. Valentine towered over her. "You will never speak his death, do you understand me? A woman who would tell a lie like that, just to cause pain, just to lash out at someone that you envy-- you're no speaker for the dead. I'm ashamed I ever let you teach my children. What if some of the lie inside you got in them? You make me sick!"

"No," said Novinha. "No, don't be angry at her. It's true, it's true."

"It feels true to you," said Valentine, "because you always want to believe the worst about yourself. But it's not true. Ender loved you freely and you stole nothing from him and the only reason that he's still alive on that bed is because of his love for you. That's the only reason he can't leave this used-up life and help lead Jane into a place where she can stay alive."

"No, no, Plikt is right, I consume the people that I love."

"No!" cried Plikt, weeping on the floor. "I was lying to you! I love him so much and I'm so jealous of you because you had him and you didn't even want him."

"I have never stopped loving him," said Novinha.

"You left him. You came in here without him."

"I left because I couldn't ..."

Valentine completed her sentence for her when she faded out. "Because you couldn't bear to let him leave you. You felt it, didn't you. You felt him fading even then. You knew that he needed to go away, to end this life, and you couldn't bear to let another man leave you so you left him first."

"Maybe," said Novinha wearily. "It's all just fictions anyway. We do what we do and then we make up reasons for it afterward but they're never the true reasons, the truth is always just out of reach."

"So listen to this fiction, then," said Valentine. "What if, just this once, instead of someone that you love betraying you and sneaking off and dying against your will and without your permission what if just this once you wake him up and tell him he can live, bid him farewell properly and let him go with your consent. Just this once?"

Novinha wept again, standing there in utter weariness. "I want it all to stop," she said. "I want to die."

"That's why he has to stay," said Valentine. "For his sake, can't you choose to live and let him go? Stay in Milagre and be the mother of your children and grandmother of your children's children, tell them stories of Os Venerados and of Pipo and Libo and of Ender Wiggin, who came to heal your family and stayed to be your husband for many, many years before he died. Not some speaking for the dead, not some funeral oration, not some public picking over the corpse like Plikt wants to do, but the stories that will keep him alive in the minds of the only family that he ever had. He'll die anyway, soon enough. Why not let him go with your love and blessing in his ears, instead of with your rage and grief tearing at him, trying to hold him here?"

"You spin a pretty story," said Novinha. "But in the end, you're asking me to give him to Jane."

"As you said," Valentine answered. "All the stories are fictions. What matters is which fiction you believe."

#### Chapter 9 -- "IT SMELLS LIKE LIFE TO ME"

"Why do you say that I am alone? My body is with me wherever I am, telling me endless stories of hunger and satisfaction, weariness and sleep, eating and drinking and breathing and life. With such company who could ever be alone? And even when my body wears away and leaves only some tiny spark I will not be alone for the gods will see my small light tracing the dance of woodgrain on the floor and they will know me, they will say my name and I will rise."

-- from The God Whispers of Han Qing-jao

Dying, dying, dead.

At the end of her life among the ansible links there was some mercy. Jane's panic at the losing of herself began to ebb, for though she still knew that she was losing and had lost much, she no longer had the capacity to remember what it was. When she lost her links to the ansibles that let her monitor the jewels in Peter's and Miro's ears she didn't even notice. And when at last she clung to the few last strands of ansibles that would not be shutting down, she could not think of anything, could not feel anything except the need to cling to these last strands even though they were too small to hold her, even though her hunger could never be satisfied with these.

I don't belong here.

Not a thought, no, there wasn't enough of her left for anything so difficult as consciousness. Rather it was a hunger, a vague dissatisfaction, a restlessness that beset her when she had run up and down the link from Jakt's ansible to the Lusitanian landside ansible to the ansible on the shuttle that served Miro and Val, up and down, end to end, a thousand times, a million times, nothing changing, nothing to accomplish, nothing to build, no way to grow. I don't belong here.

For if there was one attribute that defined the difference between aiuas that came Inside and those that remained forever Outside, it was that underlying need to grow, to be part of something large and beautiful, to belong. Those that had no such need would never be drawn as Jane had been drawn, three thousand years before, to the web that the hive queens had made for her. Nor would any of the aiuas that became hive queens or their workers, pequeninos male and female, humans weak and strong; nor even those aiuas that, feeble in capacity but faithful and predictable, became the sparks whose dances did not show up in even the most sensitive instruments until they became so complicated that humans could identify their dance as the behavior of quarks, of mesons, of light particulate or waved. All of them needed to be part of something and when they belonged to it they rejoiced: What I am is us, what we do together is myself.

But they were not all alike, these aiuas, these unmade beings who were both building blocks and builders. The weak and fearful ones reached a certain point and either could not or dared not grow further. They would take their satisfaction from being at the edges of something beautiful and fine, from playing some small role. Many a human, many a pequenino reached that point and let others direct and control their lives, fitting in, always fitting in-- and that was good, there was a need for them. Ua lava: they had reached the point where they could say, Enough.

Jane was not one of them. She could not be content with smallness or simplicity. And having once been a being of a trillion parts, connected to the greatest doings of a three-specied universe, now, shrunken, she could not be content. She knew that she had memories if only she could remember them. She knew that she had work to do if only she could find those millions of subtle limbs that once had done her bidding. She was too much alive for this small space. Unless she found something to engage her, she could not continue to cling to the last thin wire. She would cut loose from it, losing the last of her old self in the vain need to search for a place where one like her belonged.

She began to flirt with letting go, straying-- never far-- from the thin phlotic strands of the ansibles. For moments too small to measure she was disconnected and it was terrible to be cut off-- she leapt each time back to the small but familiar space that still belonged to her; and then, when the smallness of the place was unbearable to her, she let go again, and again in terror came back home.

But on one such letting-go she glimpsed something familiar. Someone familiar. Another aiua that she had once been twined to. She had no access to memory that could tell her a name; she had no memory, indeed, of names at all. But she knew it, and she trusted this being, and when on another pass along the invisible wire she came to the same place again she leapt into the far vaster network of aiuas that were ruled by this bright familiar one.

\*\*\*

<She has found him,> said the Hive Queen.

<Found her, you mean. Young Valentine.>

<It was Ender that she found and Ender that she recognized. But yes, Val's vessel is the one to which she leapt.>

<How could you see her? I never saw her at all.>

<She once was part of us, you know. And what the Samoan said, as one of my workers watched on Jakt's computer terminal, that helped me find her. We kept looking for her in a single place, and never saw her. But when we knew she was constantly moving, we realized: her body was as large as the farthest reaches of all of human colonization, and just as our aiuas remain within our bodies and are easily found, so hers also remained within her body, but since it was larger than us and even included us, she was never still, never contained in a space small enough for us to see her. Not till she had lost most of herself did I find her. But now I know where she is.>

<So Young Valentine is hers now?>

<No,> said the Hive Queen. <Ender can't let go.>

\*\*\*

Jane spun joyously through this body, so different from any she had ever remembered before, but within moments she realized that the aiua she had recognized, the aiua she had followed here, was not willing to give up even a small part of itself to her. Wherever she touched, there it was, touching also, affirming its control; and now in panic Jane began to sense that while she might be inside a lacework of extraordinary beauty and fineness-- this temple of living cells on a frame of bone-- no part of it belonged to her and if she stayed it would only be as a fugitive. She did not belong here, no matter how she loved it.

And she did love it. For all the thousands of years that she had lived, so vast in space, so fast in time, she had nevertheless been crippled without knowing it. She was alive, but nothing that was part of her large kingdom was alive. All had been ruthlessly under her control, but here in this body, this human body, this woman named Val, there were millions of small bright lives, cell upon cell of life, thriving, laboring, growing, dying, linked body to body and aiua to aiua, and it was in these links that creatures of flesh dwelt and it was far more vivid, despite the sluggishness of thought, than her own experience of life had been. How can they think at all, these flesh-beings, with all these dances going on around them, all these songs to distract them?

She touched the mind of Valentine and was flooded with memory. It had nothing like the precision and depth of Jane's old memory, but every moment of experience was vivid and powerful, alive and real as no memory had been that Jane had ever known before. How can they keep from holding still all day simply to remember the day before? Because each new moment shouts louder than memory.

Yet each time Jane touched a memory or felt a sensation from the living body, there was the aiua that was properly the master of this flesh, driving her away, asserting its control.

And finally, annoyed, when that familiar aiua herded her Jane refused to move. Instead she claimed this spot, this part of the body, this part of the brain, she demanded the obedience of these cells, and the other aiua recoiled before her.

I am stronger than you, Jane said to him silently. I can take from you all that you are and all that you have and all that you will ever be and ever have and you can't stop me.

The aiua that once had been the master here fled before her, and now the chase resumed, with roles reversed.

\*\*\*

<She's killing him.>

<Wait and see.>

\*\*\*

In the starship orbiting the planet of the descoladores, everyone was startled by a sudden cry from Young Val's mouth. As they turned to look, before anyone could reach her, her body convulsed and she flung herself away from her chair; in the weightlessness of orbit she flew until she struck brutally against the ceiling, and all the time her voice came out as a thin ribbon of a wail and her face held a rictus smile that seemed to speak at once of endless agony and boundless joy.

On the world Pacifica, on an island, on a beach, Peter's weeping suddenly stopped and he flopped over in the sand and twitched silently. "Peter!" cried Wang-mu, flinging herself onto him, touching him, trying to hold the limbs that bounced like jackhammers. Peter gasped for breath, and, gasping, vomited. "He's drowning himself!" cried Wang-mu. In that instant huge strong hands pulled her away, took Peter's body by its limbs and flopped it over so that now the vomitus flowed out and down into the sand, and the body, coughing and choking, nevertheless breathed. "What's happening?" Wangmu cried.

Malu laughed, and then when he spoke his voice was like a song.

"The god has come here! The dancing god has touched flesh! Oh, the body is too weak to hold it! Oh, the body cannot dance the dance of gods! But oh, how blessed, bright, and beautiful is the body when the god is in it!"

Wang-mu saw nothing beautiful about what was happening to Peter. "Get out of him!" she screamed. "Get out, Jane! You have no right to him! You have no right to kill him!"

In a room in the monastery of the Children of the Mind of Christ, Ender sat bolt upright in bed, eyes open but seeing nothing for someone else controlled his eyes; but for a moment his voice was his own, for here if nowhere else his aiua knew the flesh so well and was so known itself that it could do battle with the interloper. "God help me!" cried Ender. "I have nowhere else to go! Leave me something! Leave me something!"

The women gathered around him-- Valentine, Novinha, Plikt-- at once forgot their quarrels and laid their hands on him, trying to get him to lie down, trying to calm him, but then his eyes rolled back in his head, his tongue protruded, his back arched, and he flung himself about so violently that despite their strongest grip on him in moments he was off the bed, on the floor, tangling his body with theirs, hurting them with his convulsive swinging of arms, kicking of legs, jerking of head.

\*\*\*

<She's too much for him,> said the Hive Queen. <But for now the body is also too much for her. Not an easy thing, to tame unwilling flesh. They know Ender, all those cells that he has ruled so long. They know him, and they don't know her. Some kingdoms can only be inherited, never usurped.>

<I felt him, I think. I saw him.>

<There are moments when she drove him out entirely, yes, and he followed what twines he found. He can't get into any of the flesh around him because he knows better, having had experience of flesh himself. But he found you and touched you because you're a different kind of being.>

<Will he take me over, then? Or some tree in our web? That's not what we meant when we twined together.>

<Ender? No, he'll hold to his own body, one of them, or else he'll die. Wait and see.>

\*\*\*

Jane could feel it, the anguish of the bodies that she ruled now. They were in pain, something that she hadn't felt before, the bodies writhing in agony as the myriad aiuas rebelled at having her to rule them. Now in control of three bodies and three brains, she recognized amid the chaos and the madness of their convulsions that her presence meant nothing but pain and terror to them, and they longed for their beloved one, their ruler who had been so trusted and well-known to them that they thought of him as their very self. They had no name for him, being too small and weak to have such capacities as language or consciousness, but they knew him and they knew that Jane was not their proper master and the terror and the agony of it became the sole fact of each body's being and she knew, she knew she could not stay.

Yes, she overmastered them. Yes, she had the strength to still the twisting, bunching muscles and to restore an order that became a parody of life. But all her effort was spent in quelling a billion rebellions against her rule. Without the willing obedience of all these cells, she was not capable of such complex leisure-born activities as thought and speech.

And something else: She was not happy here. She could not stop thinking of the aiua she had driven out. I was drawn here because I knew him and I loved him and I belonged with him, and now I have taken from him all that he loved and all that loved him. She knew, again, that she did not belong here. Other aiuas might be content to rule against the will of those ruled, but she could not. It was not beautiful to her. There was no joy in it. Life along the tenuous strands of the last few ansibles had been happier than this.

Letting go was hard. Even in rebellion against her, the pull of the body was exquisitely strong. She had tasted a kind of life that was so sweet, despite its bitterness and pain, that she could never go back to what she had been before. She could scarcely even find the ansible links, and, having found them, could not bring herself to reach for them and cling. Instead she cast about, flung herself to the reaches of the bodies that she temporarily and painfully ruled. Wherever she went, there was grief and agony, and no home for her.

But didn't the master of these bodies leap somewhere? Where did he go, when he fled from me? Now he was back, now he was restoring peace and calm in the bodies that she had momentarily mastered, but where had he gone?

She found it, a set of links far different from the mechanical bindings of the ansible. Where the ansibles might seem to be cables, metal, hard, the web that now she found was lacy and light; but against all appearances it was also strong and copious. She could leap here, yes, and so she leapt.

\*\*\*

<She has found me! Oh, my love, she is too strong for me! She is too bright and strong for me>

<Wait, wait, wait, let her find her way.>

<She'll push us out, we have to drive her off, away, away.>

<Be still, be patient, trust me: She has learned, she won't drive anyone away, there'll be a place where there is room for her, I see it, she is on the verge ... >

<It was Young Val's body she was supposed to take, or Peter's, or Ender's! Not one of us, not one of us.>

<Peace, be still. Only for a little while. Only until Ender understands and gives a body to his friend. What she can't take by force she can receive by gift. You'll see. And in your web, my dear friend, my trusted friend, there are places where there will be room for her to dwell as just a visitor, to have a life while she is waiting for Ender to give up her true and final home.>

\*\*\*

Suddenly Valentine was as still as a corpse. "She's dead," whispered Ela.

"No!" wailed Miro, and he tried to breathe life into her mouth until the woman under his hands, under his lips, began to stir. She breathed deeply on her own. Her eyes fluttered open.

"Miro," she said. And then she wept and wept and wept and clung to him.

\*\*\*

Ender lay still on the floor. The women untangled themselves from him, helping each other to rise to their knees, to stand, to bend, to lift him up, to get his bruised body back onto the bed. Then they looked at each other: Valentine with a bleeding lip, Plikt with Ender's scratches on her face, Novinha with a battered, blackening eye.

"I had a husband once who beat me," said Novinha.

"That wasn't Ender who fought us," said Plikt.

"It's Ender now," said Valentine.

On the bed, he opened up his eyes. Did he see them? How could they know?

"Ender," Novinha said, and began to weep. "Ender, you don't have to stay for my sake anymore." But if he heard her he betrayed no sign of it.

\*\*\*

The Samoan men let go of him, for Peter no longer twitched. His face fell open-mouthed into the sand where he had vomited. Wangmu again was beside him, using her own clothing to gently wipe away the sand and muck from his face, from his eyes especially. In moments a bowl of pure water was beside her, put there by someone's hands, she did not see whose, or care either, for her only thought was Peter, to cleanse him. He breathed shallowly, rapidly, but gradually he calmed and finally opened up his eyes.

"I dreamed the strangest dream," he said.

"Hush," she answered him.

"A terrible bright dragon chased me breathing fire, and I ran through the corridors, searching for a hiding place, an escape, a protector."

Malu's voice rumbled like the sea: "There is no hiding from a god."

Peter spoke again as if he hadn't heard the holy man. "Wang-mu," he said, "at last I found my hiding place." His hand reached up and touched her cheek, and his eyes looked into her eyes with a kind of wonder.

"Not me," she said. "I am not strong enough to stand against her."

He answered her: "I know. But are you strong enough to stand with me?"

\*\*\*

Jane raced along the lacework of the links among the trees. Some of the trees were mighty ones, and some weaker, some so faint that she could have blown them away with only a breath it seemed, but as she saw them all recoil from her in fear, she knew that fear herself and she backed away, pushed no one from his place. Sometimes the lacework thickened and toughened and led away toward something fiercely bright, as bright as she was. These places were familiar to her, an ancient memory but she knew the path; it was into such a web that she had first leapt into life, and like the primal memory of birth it all came back to her, memory long lost and forgotten: I know the queens who rule at the knotting of these sturdy ropes. Of all the aiuas she had touched in these few minutes since her death, these were the strongest ones by far, each one of them at least a match for her. When hive queens make their web to call and catch a queen, it is only the mightiest and most ambitious ones who can take the place that they prepare. Only a few aiuas have the capacity to rule over thousands of consciousnesses, to master other organisms as thoroughly as humans and pequeninos master the cells of their own bodies. Oh, perhaps these hive queens were not all as capable as she, perhaps not even as hungry to grow as Jane's aiua was, but they were stronger than any human or pequenino, and unlike them they saw her clearly and knew what she was and all that she could do and they were ready. They loved her and wanted her to thrive; they were sisters and mothers to her, truly; but their places were full and they had no room for her. So from those ropes and knots she turned away, back to the lacier twinings of the pequeninos, to the strong trees that nevertheless recoiled from her because they knew that she was the stronger one.

And then she realized that where the lace thinned out it was not because there was nothing there, but because the twines simply grew more delicate. There were as many of them, more perhaps, but they became a web of gossamer, so delicate that Jane's rough touch might break them; but she touched them and they did not break, and she followed the threads into a place that teemed with life, with hundreds of small lives, all of them hovering on the brink of consciousness but not quite ready for the leap into awareness. And underneath them all, warm and loving, an aiua that was in its own way strong, but not as Jane was. No, the aiua of the mothertree was strong without ambition. It was part of every life that dwelt upon her skin, inside the dark of the heart of the tree or on the outside, crawling into the light and reaching out to become awake and alive and break free and become themselves. And it was easy to break free, for the mothertree aiua expected nothing from her children, loved their independence as much as she had loved their need.

She was copious, her sap-filled veins, her skeleton of wood, her tingling leaves that bathed in light, her roots that tapped into seas of water salted with the stuff of life. She stood still in the center of her delicate and gentle web, strong and provident, and when Jane came to her verge she looked upon her as she looked upon any lost child. She backed away and made room for her, let Jane taste of her life, let Jane share the mastery of chlorophyll and cellulose. There was room here for more than one.

And Jane, for her part, having been invited in, did not abuse the privilege. She did not stay long in any mothertree, but visited and drank of life and shared the work of the mothertree and then moved

on, tree to tree, dancing her dance along the gossamer web; and now the fathertrees did not recoil from her, for she was the messenger of the mothers, she was their voice, she shared their life and yet she was unlike them enough that she could speak, could be their consciousness, a thousand mothertrees around the world, and the growing mothertrees on distant planets, all of them found voice in Jane, and all of them rejoiced in the new, more vivid life that came to them because she was there.

\*\*\*

<The mothertrees are speaking.>

<It's Jane.>

<Ah, my beloved one, the mothertrees are singing. I have never heard such songs.>

<It's not enough for her, but it will do for now.>

<No, no, don't take her away from us now! For the first time we can hear the mothertrees and they are beautiful.>

<She knows the way now. She will never fully leave. But it is not enough. The mothertrees will satisfy her for a while, but they can never be more than they are. Jane is not content to stand and think, to let others drink from her and never drink herself. She dances tree to tree, she sings for them, but in a while she'll be hungry again. She needs a body of her own.>

<We'll lose her then.>

<No you won't. For even that body will not be enough. It will be the root of her, it will be her eyes and voice and hands and feet. But she will still long for the ansibles and the power she had when all the computers of the human worlds were hers. You'll see. We can keep her alive for now, but what we have to give her-- what your mothertrees have to share with her-- is not enough. Nothing, really, is enough for her.>

<So what will happen now?>

<We'll wait. We'll see. Be patient. Isn't that the virtue of the fathertrees, that you are patient?>

\*\*\*

A man called Olhado because of his mechanical eyes stood out in the forest with his children. They had been picnicking with pequeninos who were his children's particular friends; but then the drumming had begun, the throbbing voice of the fathertrees, and the pequeninos rose all at once in fear.

Olhado's first thought was: Fire. For it was not that long ago that the great ancient trees that had stood here were all burned by humans, filled with rage and fear. The fire the humans brought had

killed the fathertrees, except for Human and Rooter, who stood at some distance from the rest; it had killed the ancient mothertree. But now new growth had risen from the corpses of the dead, as murdered pequeninos passed into their Third Life. And somewhere in the middle of all this newgrowth forest, Olhado knew, there grew a new mothertree, no doubt still slender, but thick-trunked enough from its passionate desperate first growth that hundreds of grublike babies crawled the dark hollow of its woody womb. The forest had been murdered, but it was alive again. And among the torchbearers had been Olhado's own boy, Nimbo, too young to understand what he was doing, blindly following the demagogic rantings of his uncle Grego until it nearly killed him and when Olhado learned what he had done he was ashamed, for he knew that he had not sufficiently taught his children. That was when their visits to the forest began. It was not too late. His children would grow up knowing pequeninos so well that to harm them would be unthinkable.

Yet there was fear in this forest again, and Olhado felt himself suddenly sick with dread. What could it be? What is the warning from the fathertrees? What invader has attacked them?

But the fear only lasted for a few moments. Then the pequeninos turned, hearing something from the fathertrees that made them start to walk toward the heart of the forest. Olhado's children would have followed, but with a gesture he held them back. He knew that the mothertree was in the center, where the pequeninos were going, and it wasn't proper for humans to go there.

"Look, Father," said his youngest girl. "Plower is beckoning."

So he was. Olhado nodded then, and they followed Plower into the young forest until they came to the very place where once Nimbo had taken part in the burning of an ancient mothertree. Her charred corpse still rose into the sky, but beside it stood the new mother, slender by comparison, but still thicker than the newgrowth brothertrees. It was not her thickness that Olhado marveled at, though, nor was it the great height that she had reached in such a short time, nor the thick canopy of leaves that already spread out in shady layers over the clearing. No, it was the strange dancing light that played up and down the trunk, wherever the bark was thin, a light so white and dazzling that he could hardly look at it. Sometimes he thought that there was only one small light which raced so fast that it left the whole tree glowing before it returned to trace the path again; sometimes it seemed that it was the whole tree that was alight, throbbing with it as if it contained a volcano of life ready to erupt. The glowing reached out along the branches of the tree into the thinnest twigs; the leaves twinkled with it; and the furred shadows of the baby pequeninos crawled more rapidly along the trunk of the tree than Olhado had thought possible. It was as if a small star had come down to take residence inside the tree.

After the dazzle of the light had lost its novelty, though, Olhado noticed something else-- noticed, in fact, what the pequeninos themselves most marveled at. There were blossoms on the tree. And some of the blossoms had already blown, and behind them fruit was already growing, growing visibly.

"I thought," said Olhado softly, "that the trees could bear no fruit."

"They couldn't," answered Plower. "The descolada robbed them of that."

"But what is this?" said Olhado. "Why is there light inside the tree? Why is the fruit growing?"

"The fathertree Human says that Ender has brought his friend to us. The one called Jane. She's visiting within the mothertrees in every forest. But even he did not tell us of this fruit."

"It smells so strong," said Olhado. "How can it ripen so fast? It smells so strong and sweet and tangy, I can almost taste it just from breathing the air of the blossoms, the scent of the ripening fruit."

"I remember this smell," said Plower. "I have never smelled it before in my life because no tree has ever blossomed and no fruit has ever grown, but I know this smell. It smells like life to me. It smells like joy."

"Then eat it," said Olhado. "Look-- one of them is ripe already, here, within reach." Olhado lifted his hand, but then hesitated. "May I?" he asked. "May I pluck a fruit from the mothertree? Not for me to eat-- for you."

Plower seemed to nod with his whole body. "Please," he whispered.

Olhado took hold of the glowing fruit. Did it tremble under his hand? Or was that his own trembling?

Olhado gripped the fruit, firm but softening, and plucked it gently from the tree. It came away so easily. He bent and gave it to Plower. Plower bowed and took it reverently, lifted it to his lips, licked it, then opened his mouth.

Opened his mouth and bit into it. The juice of it shone on his lips; he licked them clean; he chewed; he swallowed.

The other pequeninos watched him. He held out the fruit to them. One at a time they came to him, brothers and wives, came to him and tasted.

And when that fruit was gone, they began to climb the bright and glowing tree, to take the fruit and share it and eat it until they could eat no more. And then they sang. Olhado and his children stayed the night to hear them sing. The people of Milagre heard the sound of it, and many of them came into the faint light of dusk, following the shining of the tree to find the place where the pequeninos, filled with the fruit that tasted like joy, sang the song of their rejoicing. And the tree in the center of them was part of the song. The aiua whose force and fire made the tree so much more alive than it had ever been before danced into the tree, along every path of the tree, a thousand times in every second.

A thousand times in every second she danced this tree, and every other tree on every world where pequenino forests grew, and every mothertree that she visited burst with blossoms and with fruit, and pequeninos ate of it and breathed deep the scent of fruit and blossoms, and they sang. It was an old song whose meaning they had long forgotten but now they knew the meaning of it and they could sing no other. It was a song of the season of bloom and feast. They had gone so long without

a harvest that they forgot what harvest was. But now they knew what the descolada had stolen from them long before. What had been lost was found again. And those who had been hungry without knowing the name of their hunger, they were fed.

## Chapter 10 -- "THIS HAS ALWAYS BEEN YOUR BODY"

"Oh, Father! Why did you turn away? In the hour when I triumphed over evil, why did you recoil from me?"

-- from The God Whispers of Han Qing-jao

Malu sat with Peter, Wang-mu, and Grace beside a bonfire near the beach. The canopy was gone, and so was much of the ceremony. There was kava, but, despite the ritual surrounding it, in Wang-mu's opinion they drank it now as much for the pleasure of it as for its holiness or symbolism.

At one point Malu laughed long and loud, and Grace laughed too, so it took her a while to interpret. "He says that he cannot decide if the fact that the god was in you, Peter, makes you holy, or the fact that she left proves you to be unholy."

Peter chuckled-- for courtesy, Wang-mu knew-- while Wang-mu herself did not laugh at all.

"Oh, too bad," said Grace. "I had hoped you two might have a sense of humor."

"We do," said Peter. "We just don't have a Samoan sense of humor."

"Malu says the god can't stay forever where she is. She's found a new home, but it belongs to others, and their generosity won't last forever. You felt how strong Jane is, Peter--"

"Yes," said Peter softly.

"Well, the hosts that have taken her in-- Malu calls it the forest net, like a fishing net for catching trees, but what is that? --anyway he says that they are so weak compared to Jane that whether she wills it or not, in time their bodies will all belong to her unless she finds somewhere else to be her permanent home."

Peter nodded. "I know what he's saying. And I would have agreed, until the moment that she actually invaded me, that I would gladly give up this body and this life, which I thought I hated. But I found out, with her chasing me around, that Malu was right, I don't hate my life, I want very

much to live. Of course it's not me doing the wanting, ultimately, it's Ender, but since ultimately he is me, I guess that's a quibble."

"Ender has three bodies," said Wang-mu. "Does this mean he's giving up one of the others?"

"I don't think he's giving up anything," said Peter. "Or I should say, I don't think I'm giving up anything. It's not a conscious choice. Ender's hold on life is angry and strong. Supposedly he was on his deathbed for a day at least before Jane was shut down."

"Killed," said Grace.

"Demoted maybe," said Peter stubbornly. "A dryad now instead of a god. A sylph." He winked at Wang-mu, who had no idea what he was talking about. "Even when he gives up on his own old life he just won't let go."

"He has two more bodies than he needs," said Wang-mu, "and Jane has one fewer than she must have. It seems that the laws of commerce should apply. Two times more supply than is needed-- the price should be cheap."

When all of this was interpreted to Malu, he laughed again. "He laughs at 'cheap,'" said Grace. "He says that the only way that Ender will give up any of his bodies is to die."

Peter nodded. "I know," he said.

"But Ender isn't Jane," said Wang-mu. "He hasn't been living as a-- a naked aiua running along the ansible web. He's a person. When people's aiuas leave their bodies, they don't go chasing around to something else."

"And yet his-- my-- aiua was inside me," said Peter. "He knows the way. Ender might die and yet let me live."

"Or all three of you might die."

"This much I know," Malu told them, through Grace. "If the god is to be given life of her own, if she is ever to be restored to her power, Ender Wiggin has to die and give a body to the god. There's no other way."

"Restored to her power?" asked Wang-mu. "Is that possible? I thought the whole point of the computer shutdown was to lock her out of the computer nets forever."

Malu laughed again, and slapped his naked chest and thighs as he poured out a stream of Samoan.

Grace translated. "How many hundreds of computers do we have here in Samoa? For months, ever since she made herself known to me, we have been copying, copying, copying. Whatever memory she wanted us to save, we have it, ready to restore it all. Maybe it's only one small part of

what she used to be, but it's the most important part. If she can get back into the ansible net, she'll have what she needs to get back into the computer nets as well."

"But they're not linking the computer nets to the ansibles," said Wang-mu.

"That's the order sent by Congress," said Grace. "But not all orders are obeyed."

"Then why did Jane bring us here?" Peter asked plaintively. "If Malu and you deny that you have any influence over Aimagina, and if Jane has already been in contact with you and you're already effectively in revolt against Congress--"

"No, no, it's not like that," Grace reassured him. "We were doing what Malu asked us, but he never spoke of a computer entity, he spoke of a god, and we obeyed because we trust his wisdom and we know he sees things that we don't see. Your coming told us who Jane is."

When Malu learned in turn what had been said, he pointed at Peter. "You! You came here to bring the god!" Then he pointed at Wang-mu. "And you came here to bring the man."

"Whatever that means," said Peter.

But Wang-mu thought she understood. They had survived one crisis, but this peaceful hour was only a lull. The battle would be joined again, and this time the outcome would be different. If Jane was to live, if there was to be any hope of restoring instantaneous starflight, Ender had to give at least one of his bodies to her. If Malu was right, then Ender had to die. There was a slight chance that Ender's aiua might still keep one of the three bodies, and go on living. I am here, Wang-mu said silently, to make sure that it is Peter who survives, not as the god, but as the man.

It all depends, she realized, on whether Ender-as-Peter loves me more than Ender-as-Valentine loves Miro or Ender-as-Ender loves Novinha.

With that thought she almost despaired. Who was she? Miro had been Ender's friend for years. Novinha was his wife. But Wang-mu-- Ender had only learned of her existence mere days or at most weeks ago. What was she to him?

But then she had another, more comforting and yet disturbing thought. Is it as important who the loved one is as it is which aspect of Ender desires him or her? Valentine is the perfect altruist-- she might love Miro most of all, yet give him up for the sake of giving starflight back to us all. And Ender-- he was already losing interest in his old life. He's the weary one, he's the worn-out one. While Peter-- he's the one with the ambition, the lust for growth and creation. It's not that he loves me, it's that he loves me, or rather that he wants to live, and part of life to him is me, this woman who loves him despite his supposed wickedness. Ender-as-Peter is the part of him that most needs to be loved because he least deserves it-- so it is my love, because it is for Peter, that will be most precious to him.

If anyone wins at all, I will win, Peter will win, not because of the glorious purity of our love, but because of the desperate hunger of the lovers.

Well, the story of our lives won't be as noble or pretty, but then, we'll have a life, and that's enough.

She worked her toes into the sand, feeling the tiny delicious pain of the friction of tiny chips of silicon against the tender flesh between her toes. That's life. It hurts, it's dirty, and it feels very, very good.

\*\*\*

Over the ansible, Olhado told his brother and sisters on the starship what had happened with Jane and the mothertrees.

"The Hive Queen says it can't last long this way," said Olhado. "The mothertrees aren't all that strong. They'll slip, they'll lose control, and pretty soon Jane will be a forest, period. Not a talking one, either. Just some very lovely, very bright, very nurturing trees. It was beautiful to see, I promise you, but the way the Hive Queen tells it, it still sounds like death."

"Thanks, Olhado," Miro said. "It doesn't make much difference to us either way. We're stranded here, and so we're going to get to work, now that Val isn't bouncing off the walls. The descoladores haven't found us yet-- Jane got us in a higher orbit this time-- but as soon as we have a workable translation of their language we'll wave at them and let them know we're here."

"Keep at it," said Olhado. "But don't give up on coming back home, either."

"The shuttle really isn't good for a two-hundred-year flight," said Miro. "That's how far away we are, and this little vehicle can't even get close to the speeds necessary for relativistic flight. We'd have to play solitaire the whole two hundred years. The cards would wear out long before we got back home."

Olhado laughed-- too lightly and sincerely, Miro thought-- and said, "The Hive Queen says that once Jane gets out of the trees, and once the Congress gets their new system up and running, she may be able to jump back in. At least enough to get into the ansible traffic. And if she does that, then maybe she can go back into the starflight business. It's not impossible."

Val grew alert at that. "Is that what the Hive Queen guesses, or does she know?"

"She's predicting the future," said Olhado. "Nobody knows the future. Not even really smart queen bees who bite their husbands' heads off when they mate."

They had no answer to what he said, and certainly nothing to say to his jocular tone.

"Well, if that's all right now," said Olhado, "back on your heads, everybody. We'll leave the station open and recording in triplicate for any reports you make."

Olhado's face disappeared from the terminal space.

Miro swiveled his chair and faced the others: Ela, Quara, Val, the pequenino Firequencher, and the nameless worker, who watched them in perpetual silence, only able to speak by typing into the terminal. Through him, though, Miro knew that the Hive Queen was watching everything they did, hearing everything they said. Waiting. She was orchestrating this, he knew. Whatever happened to Jane, the Hive Queen would be the catalyst to get it started. Yet the things she said, she had said to Olhado through some worker there in Milagre. This one had typed in nothing but ideas concerning the translation of the language of the descoladores.

She isn't saying anything, Miro realized, because she doesn't want to be seen to push. Push what? Push whom?

Val. She can't be seen to push Val, because ... because the only way to let Jane have one of Ender's bodies was for him to freely give it up. And it had to be truly free-- no pressure, no guilt, no persuasion-- because it wasn't a decision that could be made consciously. Ender had decided that he wanted to share Mother's life in the monastery, but his unconscious mind was far more interested in the translation project here and in whatever it is Peter's doing. His unconscious choice reflected his true will. If Ender is to let go of Val, it has to be his desire to do it, all the way to the core of him. Not a decision out of duty, like his decision to stay with Mother. A decision because that is what he really wants.

Miro looked at Val, at the beauty that came more from deep goodness than from regular features. He loved her, but was it the perfection of her that he loved? That perfect virtue might be the only thing that allowed her-- allowed Ender in his Valentine mode-- to willingly let go and invite Jane in. And yet once Jane arrived, the perfect virtue would be gone, wouldn't it? Jane was powerful and, Miro believed, good-- certainly she had been good to him, a true friend. But even in his wildest imaginations he could not conceive of her as perfectly virtuous. If she started wearing Val, would she still be Val? The memories would linger, but the will behind the face would be more complicated than the simple script that Ender had created for her. Will I still love her when she's Jane?

Why wouldn't I? I love Jane too, don't I?

But will I love Jane when she's flesh and blood, and not just a voice in my ear? Will I look into those eyes and mourn for this lost Valentine?

Why didn't I have these doubts before? I tried to bring this off myself, back before I even half understood how difficult it was. And yet now, when it's only the barest hope, I find myself-- what, wishing it wouldn't happen? Hardly that. I don't want to die out here. I want Jane restored, if only to get starflight back again-- now that's an altruistic motive! I want Jane restored, but I also want Val unchanged.

I want all bad things to go away and everybody to be happy. I want my mommy. What kind of childish dolt have I become?

Val was looking at him, he suddenly realized. "Hi," he said. The others were looking at him, too. Looking back and forth between him and Val. "What are we all voting on, whether I should grow a beard?"

"Voting on nothing," said Quara. "I'm just depressed. I mean, I knew what I was doing when I got on this ship, but damn, it's really hard to get enthusiastic about working on these people's language when I can count my life by the gauge on the oxygen tanks."

"I notice," said Ela dryly, "that you're already calling the descoladores 'people.'"

"Shouldn't I? Do we even know what they look like?" Quara seemed confused. "I mean, they have a language, they--"

"That's what we're here to decide, isn't it?" said Firequencher. "Whether the descoladores are raman or varelse. The translation problem is just a little step along that road."

"Big step," corrected Ela. "And we don't have time enough to do it."

"Since we don't know how long it's going to take," said Quara, "I don't see how you can be so sure of that."

"I can be dead sure," said Ela. "Because all we're doing is sitting around talking and watching Miro and Val make soulful faces at each other. It doesn't take a genius to know that at this rate, our progress before running out of oxygen will be exactly zero."

"In other words," said Quara, "we should stop wasting time." She turned back to the notes and printouts she was working on.

"But we're not wasting time," said Val softly.

"No?" asked Ela.

"I'm waiting for Miro to tell me how easily Jane could be brought back into communication with the real world. A body waiting to receive her. Starflight restored. His old and loyal friend, suddenly a real girl. I'm waiting for that."

Miro shook his head. "I don't want to lose you," he said.

"That's not helping," said Val.

"But it's true," said Miro. "The theory, that was easy. Thinking deep thoughts while riding on a hovercar back on Lusitania, sure, I could reason out that Jane in Val would be Jane and Val. But when you come right down to it, I can't say that--"

"Shut up," said Val.

It wasn't like her to talk like that. Miro shut up.

"No more words like that," she said. "What I need from you is the words that will let me give up this body."

Miro shook his head.

"Put your money where your mouth is," she said. "Walk the walk. Talk the talk. Put up or shut up. Fish or cut bait."

He knew what she wanted. He knew that she was saying that the only thing holding her to this body, to this life, was him. Was her love for him. Was their friendship and companionship. There were others here now to do the work of translation-- Miro could see now that this was the plan, really, all along. To bring Ela and Quara so that Val could not possibly consider her life as indispensable. But Miro, she couldn't let go of him that easily. And she had to, had to let go.

"Whatever aiua is in that body," Miro said, "you'll remember everything I say."

"And you have to mean it, too," said Val. "It has to be the truth."

"Well it can't be," said Miro. "Because the truth is that I--"

"Shut up!" demanded Val. "Don't say that again. It's a lie!"

"It's not a lie."

"It's complete self-deception on your part, and you have to wake up and see the truth, Miro! You already made the choice between me and Jane. You're only backing out now because you don't like being the kind of man who makes that sort of ruthless choice. But you never loved me, Miro. You never loved me. You loved the companionship, yes-- the only woman you were around, of course; there's a biological imperative playing a role here with a desperately lonely young man. But me? I think what you loved was your memory of your friendship with the real Valentine when she came back with you from space. And you loved how noble it made you feel to declare your love for me in the effort to save my life, back when Ender was ignoring me. But all of that was about you, not me. You never knew me, you never loved me. It was Jane you loved, and Valentine, and Ender himself, the real Ender, not this plastic container that he created in order to compartmentalize all the virtues he wishes he had more of."

The nastiness, the rage in her was palpable. This wasn't like her at all. Miro could see that the others were also stunned. And yet he also understood. This was exactly like her-- for she was being hateful and angry in order to persuade herself to let go of this life. And she was doing that for the sake of others. It was perfect altruism. Only she would die, and, in exchange, perhaps the others in this ship would not die, they'd go back home when their work here was done. Jane would live, clothed in this new flesh, inheriting her memories. Val had to persuade herself that the life that she was living now was worthless, to her and everyone else; that the only value to her life would be to leave it.

And she wanted Miro to help her. That was the sacrifice she asked of him. To help her let go. To help her want to go. To help her hate this life.

"All right," said Miro. "You want the truth? You're completely empty, Val, and you always were. You just sit there spouting the exactly kindest thing, but there's never been any heart in it. Ender felt a need to make you, not because he actually has any of the virtues you supposedly represent, but because he doesn't have them. That's why he admires them so much. So when he made you, he didn't know what to put inside you. An empty script. Even now, you're just following the script. Perfect altruism my ass. How can it be a sacrifice to give up a life that was never a life?"

She struggled for a moment, and a tear flowed down her cheek. "You told me that you loved me."

"I was sorry for you. That day in Valentine's kitchen, all right? But the truth is I was probably just trying to impress Valentine. The other Valentine. Show her what a good guy I am. She actually has some of those virtues-- I care a lot about what she thinks of me. So ... I fell in love with being the kind of guy who was worthy of Valentine's respect. That's as close to loving you as I ever got. And then we found out what our real mission was and suddenly you aren't dying anymore and here I am, stuck with having said I loved you and now I've got to keep going and going to maintain the fiction even as it becomes clearer and clearer that I miss Jane, I miss her so desperately that it hurts, and the only reason I can't have her back is because you won't let go--"

"Please," said Val. "It hurts too much. I didn't think you-- I--"

"Miro," said Quara, "this is the shittiest thing I've ever seen anybody do to anybody else and I've seen some doozies."

"Shut up, Quara," said Ela.

"Oh, who made you queen of the starship?" retorted Quara.

"This isn't about you," said Ela.

"I know, it's about Miro the complete bastard--"

Firequencher launched himself gently from his seat and in a moment had his strong hand clamped over Quara's mouth. "This isn't the time," he said to her softly. "You understand nothing."

She got her face free. "I understand enough to know that this is--"

Firequencher turned to the Hive Queen's worker. "Help us," he said.

The worker got up and with astonishing speed had Quara out of the main deck of the shuttle. Where the Hive Queen took Quara and how she restrained her were questions that didn't even interest Miro. Quara was too self-centered to understand the little play that Miro and Val were acting out. But the others understood.

What mattered, though, was that Val not understand. Val had to believe that he meant what he was saying now. It had almost been working before Quara interrupted. But now they had lost the thread.

"Val," said Miro wearily, "it doesn't matter what I say. Because you'll never let go. And you know why? Because you aren't Val. You're Ender. And even though Ender can wipe out whole planets in order to save the human race, his own life is sacred. He'll never give it up. Not one scrap. And that includes you-- he'll never let go of you. Because you're the last and greatest of his delusions. If he gives you up, he'll lose his last hope of really being a good man."

"That's nonsense," said Val. "The only way he can be a really good man is to give me up."

"That's my point," said Miro. "He isn't a really good man. So he can't give you up. Even to attempt to prove his virtue. Because the tie of the aiua to the body can't be faked. He can fool everybody else, but he can't fool your body. He's just not good enough to let you go."

"So it's Ender that you hate, not me."

"No, Val, I don't hate Ender. He's an imperfect guy, that's all. Like me, like everybody else. Like the real Valentine, for that matter. Only you have the illusion of perfection-- but that's fine, because you're not real. You're just Ender in drag, doing his Valentine bit. You come off the stage and there's nothing there, it comes off like makeup and a costume. And you really believed I was in love with that?"

Val swiveled on her chair, turning her back to him. "I almost believe you mean these things," she said.

"What I can't believe," said Miro, "is that I'm saying them out loud. But that's what you wanted me to do, wasn't it? For me to be honest with you for the first time, so maybe you could be honest with yourself and realize that what you have isn't a life at all, it's just a perpetual confession of Ender's inadequacy as a human being. You're the childhood innocence he thinks he lost, but here's the truth about that: Before they ever took him away from his parents, before he ever went up to that Battle School in the sky, before they made a perfect killing machine out of him, he was already the brutal, ruthless killer that he always feared he was. It's one of the things that even Ender tries to pretend isn't so: He killed a boy before he ever became a soldier. He kicked that boy's head in. Kicked him and kicked him and the kid never woke up. His parents never saw him alive again. The kid was a prick but he didn't deserve to die. Ender was a killer from the start. That's the thing that he can't live with. That's the reason he needs you. That's the reason he needs Peter. So he can take the ugly ruthless killer side of himself and put it all on Peter. And he can look at perfect you and say, 'See, that beautiful thing was inside me.' And we all play along. But you're not beautiful, Val. You're the pathetic apologia of a man whose whole life is a lie."

Val broke down sobbing.

Almost, almost Miro had compassion and stopped. Almost he shouted at her, No, Val, it's you I love, it's you I want! It's you I longed for all my life and Ender is a good man because all this

nonsense about you being a pretense is impossible. Ender didn't create you consciously, the way hypocrites create their facades. You grew out of him. The virtues were there, are there, and you are the natural home for them. I already loved and admired Ender, but not until I met you did I know how beautiful he was inside.

Her back was to him. She couldn't see the torment that he felt.

"What is it, Val? Am I supposed to pity you again? Don't you understand that the only conceivable value that you have to any of us is if you just go away and let Jane have your body? We don't need you, we don't want you. Ender's aiua belongs in Peter's body because that's the only one that has a chance of acting out Ender's true character. Get lost, Val. When you're gone, we have a chance to live. While you're here, we're all dead. Do you think for one second that we'll miss you? Think again."

I will never forgive myself for saying these things, Miro realized. Even though I know the necessity of helping Ender let go of this body by making this an unbearable place for him to stay, it doesn't change the fact that I'll remember saying it, I'll remember the way she looks now, weeping with despair and pain. How can I live with that? I thought I was deformed before. All I had wrong with me then was brain damage. But now-- I couldn't have said any of these things to her if I hadn't thought of them. There's the rub. I thought of these terrible things to say. That's the kind of man I am.

\*\*\*

Ender opened his eyes again, then reached a hand up to touch Novinha's face, the bruises there. He moaned to see Valentine and Plikt, too. "What did I do to you?"

"It wasn't you," said Novinha. "It was her."

"It was me," he said. "I meant to let her have ... something. I meant to, but when it came right down to it, I was afraid. I couldn't do it." He looked away from them, closed his eyes. "She tried to kill me. She tried to drive me out."

"You were both working way below the level of consciousness," said Valentine. "Two strong-willed aiuas, unable to back off from life. That's not so terrible."

"What, and you were just standing too close?"

"That's right," said Valentine.

"I hurt you," said Ender. "I hurt all three of you."

"We don't hold people responsible for convulsions," said Novinha.

Ender shook his head. "I'm talking about ... before. I lay there listening. Couldn't move my body, couldn't make a sound, but I could hear. I know what I did to you. All three of you. I'm sorry."

"Don't be," said Valentine. "We all chose our lives. I could have stayed on Earth in the first place, you know. Didn't have to follow you. I proved that when I stayed with Jakt. You didn't cost me anything-- I've had a brilliant career and a wonderful life, and much of that is because I was with you. As for Plikt, well, we finally saw-- much to my relief, I might add-- that she isn't always in complete control of herself. Still, you never asked her to follow you here. She chose what she chose. If her life is wasted, well, she wasted it the way she wanted to and that's none of your business. As for Novinha--"

"Novinha is my wife," said Ender. "I said I wouldn't leave her. I tried not to leave her."

"You haven't left me," Novinha said.

"Then what am I doing in this bed?"

"You're dying," said Novinha.

"My point exactly," said Ender.

"But you were dying before you came here," she said. "You were dying from the moment that I left you in anger and came here. That was when you realized, when we both realized, that we weren't building anything together anymore. Our children aren't young. One of them is dead. There'll be no others. Our work now doesn't coincide at any point."

"That doesn't mean it's right to end the--"

"As long as we both shall live," said Novinha. "I know that, Andrew. You keep the marriage alive for your children, and then when they're grown up you stay married for everybody else's children, so they grow up in a world where marriages are permanent. I know all that, Andrew. Permanent-- until one of you dies. That's why you're here, Andrew. Because you have other lives that you want to live, and because of some miraculous fluke you actually have the bodies to live them in. Of course you're leaving me. Of course."

"I keep my promise," Ender said.

"Till death," said Novinha. "No longer than that. Do you think I won't miss you when you're gone? Of course I will. I'll miss you as any widow misses her beloved husband. I'll miss you whenever I tell stories about you to our grandchildren. It's good for a widow to miss her husband. It gives shape to her life. But you-- the shape of your life comes from them. From your other selves. Not from me. Not anymore. I don't begrudge that, Andrew."

"I'm afraid," said Ender. "When Jane drove me out, I've never felt such fear. I don't want to die."

"Then don't stay here, because staying in this old body and with this old marriage, Andrew, that would be the real death. And me, watching you, knowing that you don't really want to be here, that would be a kind of death for me."

"Novinha, I do love you, that's not pretense, all the years of happiness we had together, that was real-- like Jakt and Valentine it was real. Tell her, Valentine."

"Andrew," said Valentine, "please remember. She left you."

Ender looked at Valentine. Then at Novinha, long and hard. "That's true, isn't it. You left me. I made you take me."

Novinha nodded.

"But I thought-- I thought you needed me. Still."

Novinha shrugged. "Andrew, that's always been the problem. I needed you, but not out of duty. I don't need you because you have to keep your word to me. Bit by bit, seeing you every day, knowing that it's duty that keeps you, how do you think that will help me, Andrew?"

"You want me to die?"

"I want you to live," said Novinha. "To live. As Peter. That's a fine young boy with a long life ahead of him. I wish him well. Be him now, Andrew. Leave this old widow behind. You've done your duty to me. And I know you do love me, as I still love you. Dying doesn't deny that."

Ender looked at her, believing her, wondering if he was right to believe her. She means it; how can she mean it; she's saying what she thinks I want her to say; but what she says is true. Back and forth, around and around the questions played in his mind.

But then at some point he lost interest in the questions and he fell asleep.

That's how it felt to him. Fell asleep.

The three women around his bed saw his eyes close. Novinha even sighed, thinking that she had failed. She even started to turn away. But then Plikt gasped. Novinha turned back around. Ender's hair had all come loose. She reached up to where it was sliding from his scalp, wanting to touch him, to make it be all right again, but knowing that the best thing she could do would be not to touch him, not to waken him, to let him go.

"Don't watch this," murmured Valentine. But none of them made a move to go. They watched, not touching, not speaking again, as his skin sagged against his bones, as it dried and crumbled, as he turned to dust under the sheets, on the pillow, and then even the dust crumbled until it was too fine to see. Nothing there. No one there at all, except the dead hair that had fallen away from him first.

Valentine reached down and began to sweep the hair into a pile. For a moment Novinha was revolted. Then she understood. They had to bury something. They had to have a funeral and lay what was left of Andrew Wiggin in the ground. Novinha reached out and helped. And when Plikt also took up a few stray hairs, Novinha did not shun her, but took those hairs into her own hands, as

she took the ones that Valentine had gathered. Ender was free. Novinha had freed him. She had said the things she had to say to let him go.

Was Valentine right? Would this be different, in the long run, from the other ones that she had loved and lost? Later she would know. But now, today, this moment, all she could feel was the sick weight of grief inside her. No, she wanted to cry. No, Ender, it wasn't true, I still need you, duty or oathkeeping, whatever it takes, I still want you with me, no one ever loved me as you loved me and I needed that, I needed you, where are you now, where are you when I love you so?

\*\*\*

<He's letting go,> said the Hive Queen.

<But can he find his way to another body?> asked Human. <Don't let him be lost.>

<It's up to him,> said the Hive Queen. <Him and Jane.>

<Does she know?>

<No matter where she is, she's still attuned to him. Yes, she knows. She's searching for him even now. Yes, and there she goes.>

\*\*\*

She leapt back out of the web that had so gently, kindly held her; it clung to her; I will be back, she thought, I will be back to you, but not to stay so long again; it hurts you when I stay so long.

She leapt and found herself again with that familiar aiua that she had been entwined with for three thousand years. He seemed lost, confused. One of the bodies was missing, that was it. The old one. The old familiar shape. He was barely holding on to the other two. He had no root or anchor. In neither of them did he feel that he belonged. He was a stranger in his own flesh.

She approached him. This time she knew better than before what she was doing, how to control herself. This time she held back, she didn't take anything that was his. She gave him no challenge to his possession. Just came near.

And in his uncertainty she was familiar to him. Uprooted from his oldest home, he was able now to see that, yes, he knew her, had known her for a long time. He came closer to her, unafraid of her. Yes, closer, closer.

Follow me.

She leapt into the Valentine body. He followed her. She passed through without touching, without tasting the life of it; it was his to touch, his to taste. He felt the limbs of her, the lips and tongue; he opened the eyes and looked; he thought her thoughts; he heard her memories.

Tears in the eyes, down the cheeks. Deep grief in the heart. I can't bear to be here, he thought. I don't belong. No one wants me here. They all want me out of here and gone.

The grief tore at him, pushed him away. It was an unbearable place for him.

The aiua that had once been Jane now reached out, tentatively, and touched a single spot, a single cell.

He grew alarmed, but only for a moment. This isn't mine, he thought. I don't belong here. It's yours. You can have it.

She led him here and there inside this body, always touching, taking mastery of it; only this time instead of fighting her, he gave control of it to her, over and over. I'm not wanted here. Take it. Have joy with it. It's yours. It never was my own.

She felt the flesh become herself, more and more of it, the cells by hundreds, thousands, moving their allegiance from the old master who no longer wanted to be there, to the new mistress who worshipped them. She did not say to them, You are mine, the way she had tried to when she came here before. Instead her cry now was, I am yours; and then, finally, you are me.

She was astonished with the wholeness of this body. She realized, now, that until this moment she had never been a self before. What she had for all those centuries was an apparatus, not a self. She had been on life support, waiting for a life. But now, trying on the arms like sleeves, she found that yes, her arms were this long; yes, this tongue, these lips move just where my tongue and lips must move.

And then, seeping into her awareness, claiming her attention-- which had once been divided among ten thousand thoughts at once-- came memories that she had never known before. Memories of speech with lips and breath. Memories of sights with eyes, sounds with ears. Memories of walking, running.

And then the memories of people. Standing in that first starship, seeing her first sight-- of Andrew Wiggin, the look on his face, the wonder as he saw her, as he looked back and forth between her and--

And Peter.

Ender.

Peter.

She had forgotten. She had been so caught up in this new self she found that she forgot the lost aiua who had given it to her. Where was he?

Lost, lost. Not in the other one, not anywhere, how could she have lost him? How many seconds, minutes, hours had he been away? Where was he?

Darting away from the body, from herself that called itself Val, she probed, she searched, but could not find.

He's dead. I lost him. He gave me this life and he had no way of holding on then, yet I forgot him and he's gone.

But then she remembered he had been gone before. When she chased him through his three bodies and at last he leapt away for a moment, it was that leap that had led her to the lacework of the web of trees. He would do it again, of course. He would leap to the only other place he had ever leapt to.

She followed him and he was there, but not where she had been, not among the mothertrees, nor even among the fathertrees. Not among the trees at all. No, he had followed where she hadn't wanted then to go, along the thick and ropey twines that led to them; no, not to them, to her. The Hive Queen. The one that he had carried in her dry cocoon for three thousand years, world to world, until at last he found a home for her. Now she at last returned the gift; when Jane's aiua probed along the twines that led to her, there he was, uncertain, lost.

He knew her. Cut off as he was, it was astonishing that he knew anything; but he knew her. And once again he followed her. This time she did not lead him into the body that he had given her; that was hers now; no, it was her now. Instead she led him to a different body in a different place.

But he acted as he had in the body that was now her own; he seemed to be a stranger here. Even though the million aiuas of the body reached out for him, yearned for him to sustain them, he held himself aloof. Had it been so terrible for him, what he saw and felt in the other body? Or was it that this body was Peter, that for him it represented all he feared most in himself? He would not take it. It was his, and he would not, could not ...

But he must. She led him through it, giving each part of it to him. This is you now. Whatever it once meant to you, that isn't what it is now-- you can be whole here, you can be yourself now.

He didn't understand her; cut off from any kind of body, how much thought was he capable of, anyway? He only knew that this body wasn't the one he loved. He had given up the ones he loved.

Still she pulled him on; he followed. This cell, this tissue, this organ, this limb, they are you, see how they yearn for you, see how they obey you. And they did, they obeyed him despite his pulling away. They obeyed him until at last he began to think the thoughts of the mind and feel the sensations of the body. Jane waited, watching, holding him in place, willing him to stay long enough to accept the body, for she could see that without her he would let go, he would flee. I don't belong here, his aiua was saying silently. I don't belong, I don't belong.

\*\*\*

Wang-mu cradled his head on her lap, keening, crying. Around her the Samoans were gathering to watch her grief. She knew what it meant, when he collapsed, when he went so limp, when his hair

came loose. Ender was dead in some far-off place, and he could not find his way here. "He's lost," she cried. "He's lost."

Vaguely she heard a stream of Samoan from Malu. And then the translation from Grace. "He isn't lost. She's led him here. The God has led him here but he's afraid to stay."

How could he be afraid? Peter, afraid? Ender, afraid? Ludicrous on both counts. What part of him had ever been a coward? What was it that he had ever feared?

And then she remembered-- what Ender feared was Peter, and Peter's fear had always been of Ender. "No," she said, only now it wasn't grief. Now it was frustration, anger, need. "No, listen to me, you belong here! This is you, the real you! I don't care what you're afraid of now! I don't care how lost you might be. I want you here. This is your home and it always has been. With me! We're good together. We belong together. Peter! Ender-- whoever you think you are-- do you think it makes any difference to me? You've always been yourself, the same man you are now, and this has always been your body. Come home! Come back!" And on and on she babbled.

And then his eyes opened, and his lips parted in a smile. "Now that's acting," he said.

Angrily she pushed him down again. "How can you laugh at me like that!"

"So you didn't mean it," he said. "You don't like me after all."

"I never said I did like you," she answered.

"I know what you said."

"Well," she said. "Well."

"And it was true," he said. "Was and is."

"You mean I said something right? I hit upon truth?"

"You said that I belonged here," Peter answered. "And I do." His hand reached up to touch her cheek, but didn't stop there. He put his hand behind her neck, and drew her down, and held her close to him. Around them two dozen huge Samoans laughed and laughed.

\*\*\*

This is you now, Jane said to him. This is the whole of you. One again. You are at one.

Whatever he had experienced during his reluctant control of the body was enough. There was no more timidity, no more uncertainty. This aiua she had led through the body now took grateful mastery, eagerly as if this were the first body he had ever had. And perhaps it was. Having been cut off, however briefly, would he even remember being Andrew Wiggin? Or was the old life gone?

The aiua was the same, the brilliant, powerful aiua; but would any memory linger, beyond the memories mapped by the mind of Peter Wiggin?

Not mine to worry about now, she thought. He has his body now.

He will not die, for now. And I have my body, I have the gossamer web among the mothertrees, and somewhere, someday, I will also have my ansibles again. I never knew how limited I was until now, how little and small I was; but now I feel as my friend feels, surprised by how alive I am.

Back in her new body, her new self, she let the thoughts and memories flow again, and this time held back nothing. Her aiua-- consciousness-- was soon overwhelmed by all she sensed and felt and thought and remembered. It would come back to her, the way the Hive Queen noticed her own aiua and her phlotic connections; it came back even now, in flashes, like a childhood skill that she had mastered once and then forgotten. She was also aware, vaguely, in the back of her mind, that she was still leaping several times a second to make the circuit of the trees, but did it all so quickly that she missed nothing of the thoughts that passed through her mind as Valentine.

As Val.

As Val who sat weeping, the terrible words that Miro said still ringing in her ears. He never loved me. He wanted Jane. They all want Jane and not me.

But I am Jane. And I am me. I am Val.

She stopped crying. She moved.

Moved! The muscles tautening and relaxing, flex, extend, miraculous cells working their collective way to move great heavy bones and sacs of skin and organs, shift them, balance them so delicately. The joy of it was too great. It erupted from her in-- what was this convulsive spasming of her diaphragm? What was this gust of sound erupting from her own throat?

It was laughter. How long had she faked it with computer chips, simulated speech and laughter, and never, never knew what it meant, how it felt. She never wanted to stop.

"Val," said Miro.

Oh, to hear his voice through ears!

"Val, are you all right?"

"Yes," she said. Her tongue moved so, her lips; she breathed, she pushed, all these habits that Val already had, so fresh and new and wonderful to her. "And yes, you must keep on calling me Val. Jane was something else. Someone else. Before I was myself, I was Jane. But now I'm Val."

She looked at him and saw (with eyes!) how tears flowed down his cheeks. She understood at once.

"No," she said. "You don't have to call me Val at all. Because I'm not the Val you knew, and I don't mind if you grieve for her. I know what you said to her. I know how it hurt you to say it; I remember how it hurt her to hear it. But don't regret it, please. It was such a great gift you gave me, you and her both. And it was also a gift you gave to her. I saw her aiua pass into Peter. She isn't dead. And more important, I think-- by saying what you said to her, you freed her to do the thing that best expressed who she truly was. You helped her die for you. And now she is at one with herself; he is at one with himself. Grieve for her, but don't regret. And you can always call me Jane."

And then she knew, the Val part of her knew, the memory of the self that Val had been knew what she had to do. She pushed away from the chair, drifted to where Miro sat, enfolded him in her arms (I touch him with these hands!), held his head close to her shoulder, and let his tears soak hot, then cold, into her shirt, onto her skin. It burned. It burned.

#### Chapter 11 -- "YOU CALLED ME BACK FROM DARKNESS"

"Is there no end to this? Must it go on and on? Have I not satisfied all you could ask of a woman so weak and so foolish as I? When will I hear your sharp voice in my heart again? When will I trace the last line into heaven?"

-- from The God Whispers of Han Qing-jao

Yasujiro Tsutsumi was astonished at the name his secretary whispered to him. At once he nodded, then rose to his feet to speak to the two men he was meeting with. The negotiations had been long and difficult, and now to have them interrupted at this late stage, when things were so close-- but that could not be helped. He would rather lose millions than to show disrespect to the great man who had, unbelievably, come calling on him.

"I beg you to forgive me for being so rude to you, but my old teacher has come to visit me and it would shame me and my house to make him wait."

Old Shigeru at once rose to his feet and bowed. "I thought the younger generation had forgotten how to show respect. I know that your teacher is the great Aimaina Hikari, the keeper of the Yamato spirit. But even if he were a toothless old schoolteacher from some mountain village, a decent young man would show respect as you are doing."

Young Shigeru was not so pleased-- or at least not so good at concealing his annoyance. But it was Old Shigeru whose opinion of this interruption mattered. Once the deal closed, there would be plenty of time to bring the son around.

"You honor me by your understanding words," said Yasujiro. "Please let me see if my teacher will honor me by letting me bring such wise men together under my poor roof."

Yasujiro bowed again and went out into his reception room. Aimagina Hikari was still standing. His secretary, also standing, shrugged helplessly, as if to say, He would not sit down. Yasujiro bowed deeply, and again, and then again, before he asked if he could present his friends.

Aimagina frowned and asked softly, "Are these the Shigeru Fushimis who claim to be descended from a noble family-- which died out two thousand years before suddenly coming up with new offspring?"

Yasujiro felt suddenly faint with dread that Aimagina, who was, after all, guardian of the Yamato spirit, would humiliate him by challenging the Fushimis' claim to noble blood. "It is a small and harmless vanity," said Yasujiro quietly. "A man may be proud of his family."

"As your namesake, the founder of the Tsutsumi fortune, was proud to forget that his ancestors were Korean."

"You have said yourself," said Yasujiro, absorbing the insult to himself with equanimity, "that all Japanese are Korean in origin, but those with the Yamato spirit crossed over to the islands as quickly as they could. Mine followed yours by only a few centuries."

Aimagina laughed. "You are still my sly quick-witted student! Take me to your friends, I would be honored to meet them."

There followed ten minutes of bows and smiles, pleasant compliments and self-abnegations. Yasujiro was relieved that there wasn't a hint of condescension or irony when Aimagina said the name "Fushimi," and that Young Shigeru was so dazzled to meet the great Aimagina Hikari that the insult of the interrupted meeting was clearly forgotten. The two Shigerus went away with a half dozen holograms of their meeting with Aimagina, and Yasujiro was pleased that Old Shigeru had insisted that Yasujiro stand right there in the holograms with the Fushimis and the great philosopher.

Finally, Yasujiro and Aimagina were alone in his office with the door closed. At once Aimagina went to the window and drew open the curtain to reveal the other tall buildings of Nagoya's financial district and then a view of the countryside, thoroughly farmed in the flatlands, but still wild woodland in the hills, a place of foxes and badgers.

"I am relieved to see that even though a Tsutsumi is here in Nagoya, there is still undeveloped land within sight of the city. I had not thought this possible."

"Even if you disdain my family, I am proud to have our name on your lips," said Yasujiro. But silently he wanted to ask, Why are you determined to insult my family today?

"Are you proud of the man you were named for? The buyer of land, the builder of golf courses? To him all wild country cried out for cabins or putting greens. For that matter, he never saw a woman too ugly to try to get a child with her. Do you follow him in that, too?"

Yasujiro was baffled. Everyone knew the stories of the founder of the Tsutsumi fortune. They had not been news for three thousand years. "What have I done to bring such anger down on my head?"

"You have done nothing," said Hikari. "And my anger is not at you. My anger is at myself, because I also have done nothing. I speak of your family's sins of ancient times because the only hope for the Yamato people is to remember all our sins of the past. But we forget. We are so rich now, we own so much, we build so much, that there is no project of any importance on any of the Hundred Worlds that does not have Yamato hands somewhere in it. Yet we forget the lessons of our ancestors."

"I beg to learn from you, master."

"Once long ago, when Japan was still struggling to enter the modern age, we let ourselves be ruled by our military. Soldiers were our masters, and they led us into an evil war, to conquer nations that had done us no wrong."

"We paid for our crimes when atomic bombs fell on our islands."

"Paid?" cried Aimaina. "What is to pay or not to pay? Are we suddenly Christians, who pay for sins? No. The Yamato way is not to pay for error, but to learn from it. We threw out the military and conquered the world with the excellence of our design and the reliability of our labor. The language of the Hundred Worlds may be based on English, but the money of the Hundred Worlds came originally from the yen."

"But the Yamato people still buy and sell," said Yasujiro. "We have not forgotten the lesson."

"That was only half the lesson. The other half was: We will not make war."

"But there is no Japanese fleet, no Japanese army."

"That is the lie we tell ourselves to cover our crimes," said Aimaina. "I had a visit two days ago from two strangers-- mortal humans, but I know the god sent them. They rebuked me because it is the Necessarian school that provided the pivotal votes in the Starways Congress to send the Lusitania Fleet. A fleet whose sole purpose is to repeat the crime of Ender the Xenocide and destroy a world that harbors a frail species of raman who do no harm to anyone!"

Yasujiro quailed under the weight of Aimaina's anger. "But master, what do I have to do with the military?"

"Yamato philosophers taught the theory that Yamato politicians acted upon. Japanese votes made the difference. This evil fleet must be stopped."

"Nothing can be stopped today," said Yasujiro. "The ansibles are all shut down, as are all the computer networks while the terrible all-eating virus is expelled from the system."

"Tomorrow the ansibles will come back again," said Aimaina. "And so tomorrow the shame of Japanese participation in xenocide must be averted."

"Why do you come to me?" said Yasujiro. "I may bear the name of my great ancestor, but half the boys in my family are named Yasujiro or Yoshiaki or Seiji. I am master of the Tsutsumi holdings in Nagoya--"

"Don't be modest. You are the Tsutsumi of the world of Divine Wind."

"I am listened to in other cities," said Yasujiro, "but the orders come from the family center on Honshu. And I have no political influence at all. If the problem is the Necessarians, talk to them!"

Aimaina sighed. "Oh, that would do no good. They would spend six months arguing about how to reconcile their new position with their old position, proving that they had not changed their minds after all, that their philosophy embraced the full 180-degree shift. And the politicians-- they are committed. Even if the philosophers change their minds, it would be at least a political generation-- three elections, the saying goes-- before the new policy would be in effect. Thirty years! The Lusitania Fleet will have done all its evil before then."

"Then what is there to do but despair and live in shame?" asked Yasujiro. "Unless you're planning some futile and stupid gesture." He grinned at his master, knowing that Aimaina would recognize the words he himself always used when denigrating the ancient practice of seppuku, ritual suicide, as something the Yamato spirit had left behind as a child leaves its diapers.

Aimaina did not laugh. "The Lusitania Fleet is seppuku for the Yamato spirit." He came and stood looming over Yasujiro-- or so it felt, though Yasujiro was taller than the old man by half a head. "The politicians have made the Lusitania Fleet popular, so the philosophers cannot now change their minds. But when philosophy and elections cannot change the minds of politicians, money can!"

"You are not suggesting something so shameful as bribery, are you?" said Yasujiro, wondering as he said it whether Aimaina knew how widespread the buying of politicians was.

"Do you think I keep my eyes in my anus?" asked Aimaina, using an expression so crude that Yasujiro gasped and averted his gaze, laughing nervously. "Do you think I don't know that there are ten ways to buy every crooked politician and a hundred ways to buy every honest one? Contributions, threats of sponsoring opponents, donations to noble causes, jobs given to relatives or friends-- do I have to recite the list?"

"You seriously want Tsutsumi money committed to stopping the Lusitania Fleet?"

Aimaina walked again to the window and spread out his arms as if to embrace all that could be seen of the outside world. "The Lusitania Fleet is bad for business, Yasujiro. If the Molecular Disruption Device is used against one world, it will be used against another. And the military, when it has such power placed again in its hands, this time will not let it go."

"Will I persuade the heads of my family by quoting your prophecy, master?"

"It is not a prophecy," said Aimaina, "and it is not mine. It is a law of human nature, and it is history that teaches it to us. Stop the fleet, and Tsutsumi will be known as the saviors, not only of the Yamato spirit, but of the human spirit as well. Do not let this grave sin be on the heads of our people."

"Forgive me, master, but it seems to me that you are the one putting it there. No one noticed that we bore responsibility for this sin until you said it here today."

"I do not put the sin there. I merely take off the hat that covers it. Yasujiro, you were one of my best students. I forgave you for using what I taught you in such complicated ways, because you did it for your family's sake."

"And this that you ask of me now-- this is perfectly simple?"

"I have taken the most direct action-- I have spoken plainly to the most powerful representative of the richest of the Japanese trading families that I could reach on this day. And what I ask of you is the minimum action required to do what is necessary."

"In this case the minimum puts my career at great risk," said Yasujiro thoughtfully.

Aimaina said nothing.

"My greatest teacher once told me," said Yasujiro, "that a man who has risked his life knows that careers are worthless, and a man who will not risk his career has a worthless life."

"So you will do it?"

"I will prepare my messages to make your case to all the Tsutsumi family. When the ansibles are linked again, I will send them."

"I knew you would not disappoint me."

"Better than that," said Yasujiro. "When I am thrown out of my job, I will come and live with you."

Aimaina bowed. "I would be honored to have you dwell in my house."

\*\*\*

The lives of all people flow through time, and, regardless of how brutal one moment may be, how filled with grief or pain or fear, time flows through all lives equally. Minutes passed in which Val-Jane held the weeping Miro, and then time dried his tears, time loosened her embrace, and time, finally, ended Ela's patience.

"Let's get back to work," said Ela. "I'm not unfeeling, but our predicament is unchanged."

Quara was surprised. "But Jane's not dead. Doesn't that mean we can get back home?"

Val-Jane at once got up and moved back to her computer terminal. Every movement was easy because of the reflexes and habits the Val-brain had developed; but the Jane-mind found each movement fresh and new; she marveled at the dance of her fingers pressing the keys to control the display. "I don't know," Jane said, answering the question that Quara had voiced, but all were asking. "I'm still uncertain in this flesh. The ansibles haven't been restored. I do have a handful of allies who will relink some of my old programs to the network once it is restored-- some Samoans on Pacifica, Han Fei-tzu on Path, the Abo university on Outback. Will those programs be enough? Will the new networking software allow me to tap the resources I need to hold all the information of a starship and so many people in my mind? Will having this body interfere? Will my new link to the mothertrees be a help or a distraction?" And then the most important question: "Do we wish to be my first test flight?"

"Somebody has to," said Ela.

"I think I'll try one of the starships on Lusitania, if I can reestablish contact with them," said Jane. "With only a single hive queen worker on board. That way if it is lost, it will not be missed."

Jane turned to nod to the worker who was with them. "Begging your pardon, of course."

"You don't have to apologize to the worker," said Quara. "It's really just the Hive Queen anyway."

Jane looked over at Miro and winked. Miro did not wink back, but the look of sadness in his eyes was answer enough. He knew that the workers were not quite what everyone thought. The hive queens sometimes had to tame them, because not all of them were utterly subjected to their mother's will. But the was - it - or - wasn't - it slavery of the workers was a matter for another generation to work out.

"Languages," said Jane. "Carried by genetic molecules. What kind of grammar must they have? Are they linked to sounds, smells, sights? Let's see how smart we all are without me inside the computers helping." That struck her as so amazingly funny that she laughed aloud. Ah, how marvelous it was to have her own laughter sounding in her ears, bubbling upward from her lungs, spasming her diaphragm, bringing tears to her eyes!

Only when her laughter ended did she realize how leaden the sound of it must have been to Miro, to the others. "I'm sorry," she said, abashed, and felt a blush rising up her neck into her cheeks. Who could have believed it could burn so hot! It almost made her laugh again. "I'm not used to

being alive like this. I know I'm rejoicing when the rest of you are grim, but don't you see? Even if we all die when the air runs out in a few weeks, I can't help but marvel at how it feels to me!"

"We understand," said Firequencher. "You have passed into your Second Life. It's a joyful time for us, as well."

"I spent time among your trees, you know," said Jane. "Your mothertrees made space for me. Took me in and nurtured me. Does that make us brother and sister now?"

"I hardly know what it would mean, to have a sister," said Firequencher. "But if you remember the life in the dark of the mothertree, then you remember more than I do. We have dreams sometimes, but no real memories of the First Life in darkness. Still, that makes this your Third Life after all."

"Then I'm an adult?" asked Jane, and she laughed again.

And again felt how her laugh stilled the others, hurt them.

But something odd happened as she turned, ready to apologize again. Her glance fell upon Miro, and instead of saying the words she had planned-- the Jane-words that would have come out of the jewel in his ear only the day before-- other words came to her lips, along with a memory. "If my memories live, Miro, then I'm alive. Isn't that what you told me?"

Miro shook his head. "Are you speaking from Val's memory, or from Jane's memory when she-- when you-- overheard us speaking in the Hive Queen's cave? Don't comfort me by pretending to be her."

Jane, by habit-- Val's habit? or her own? --snapped, "When I comfort you, you'll know it."

"And how will I know?" Miro snapped back.

"Because you'll be comfortable, of course," said Val-Jane. "In the meantime, please keep in mind that I'm not listening through the jewel in your ear now. I see only with these eyes and hear only with these ears."

This was not strictly true, of course. For many times a second, she felt the flowing sap, the unstinting welcome of the mothertrees as her aiua satisfied its hunger for largeness by touring the vast network of the pequenino philotes. And now and then, outside the mothertrees, she caught a glimmer of a thought, of a word, a phrase, spoken in the language of the fathertrees. Or was it their language? Rather it was the language behind the language, the underlying speech of the speechless. And whose was that other voice? I know you-- you are of the kind that made me. I know your voice.

<We lost track of you,> said the Hive Queen in her mind. <But you did well without us.>

Jane was not prepared for the swelling of pride that glowed through her entire Val-body; she felt the physical effect of the emotion as Val, but her pride came from the praise of a hive-mother. I am

a daughter of hive queens, she realized, and so it matters when she speaks to me, and tells me I have done well.

And if I'm the hive queens' daughter, I am Ender's daughter, too, his daughter twice over, for they made my lifestuff partly from his mind, so I could be a bridge between them; and now I dwell in a body that also came from him, and whose memories are from a time when he dwelt here and lived this body's life. I am his daughter, but once again I cannot speak to him.

All this time, all these thoughts, and yet she did not show or even feel the slightest lapse of concentration on what she was doing with her computer on the starship circling the descolada planet. She was still Jane. It wasn't the computerness of her that had allowed her, all these years, to maintain many layers of attention and focus on many tasks at once. It was her hive-queen nature that allowed this.

<It was because you were an aiua powerful enough to do this that you were able to come to us in the first place,> said the Hive Queen in her mind.

Which of you is speaking to me? asked Jane.

<Does it matter? We all remember the making of you. We remember being there. We remember drawing you out of darkness into light.>

Am I still myself, then? Will I have again all the powers I lost when the Starways Congress killed my old virtual body?

<You might. When you find out, tell us. We will be very interested.>

And now she felt the sharp disappointment from a parent's unconcern, a sinking feeling in the stomach, a kind of shame. But this was a human emotion; it arose from the Val-body, though it was in response to her relationship with her hive-queen mothers. Everything was more complicated-- and yet it was simpler. Her feelings were now flagged by a body, which responded before she understood what she felt herself. In the old days, she scarcely knew she had feelings. She had them, yes, even irrational responses, desires below the level of consciousness-- these were attributes of all aiuas, when linked with others in any kind of life-- but there had been no simple signals to tell her what her feelings were. How easy it was to be a human, with your emotions expressed on the canvas of your own body. And yet how hard, because you couldn't hide your feelings from yourself half so easily.

<Get used to being frustrated with us, daughter,> said the Hive Queen. <You have a partly human nature, and we do not. We will not be tender with you as human mothers are. When you can't bear it, back away-- we won't pursue you.>

Thank you, she said silently ... and backed away.

\*\*\*

At dawn the sun came up over the mountain that was the spine of the island, so that the sky was light long before any sunlight touched the trees directly. The wind off the sea had cooled them in the night. Peter awoke with Wang-mu curled into the curve of his body, like shrimps lined up on a market rack. The closeness of her felt good; it felt familiar. Yet how could it be? He had never slept so close to her before. Was it some vestigial Ender memory? He wasn't conscious of having any such memories. It had disappointed him, actually, when he realized it. He had thought that perhaps when his body had complete possession of the aiua, he would become Ender-- he would have a lifetime of real memories instead of the paltry faked-up memories that had come with his body when Ender created it. No such luck.

And yet he remembered sleeping with a woman curled against him. He remembered reaching across her, his arm like a sheltering bough.

But he had never touched Wang-mu that way. Nor was it right for him to do it now-- she was not his wife, only his ... friend? Was she that? She had said she loved him-- was that only a way to help him find his way into this body?

Then, suddenly, he felt himself falling away from himself, felt himself recede from Peter and become something else, something small and bright and terrified, descending down into darkness, out into a wind too strong for him to stand against it--

"Peter!"

The voice called him, and he followed it, back along the almost invisible phlotic threads that connected him to ... himself again. I am Peter. I have nowhere else to go. If I leave like that, I'll die.

"Are you all right?" asked Wang-mu. "I woke up because-- I'm sorry, but I dreamed, I felt as if I was losing you. But I wasn't, because here you are."

"I was losing my way," said Peter. "You could sense that?"

"I don't know what I sensed or not. I just-- how can I describe it?"

"You called me back from darkness," said Peter.

"Did I?"

He almost said something, but then stopped. Then laughed, uncomfortable and frightened. "I feel so odd. A moment ago I was about to say something. Something very flippant-- about how having to be Peter Wiggin was darkness enough by itself."

"Oh yes," said Wang-mu. "You always say such nasty things about yourself."

"But I didn't say it," said Peter. "I was about to, out of habit, but I stopped, because it wasn't true. Isn't that funny?"

"I think it's good."

"It makes sense that I should feel whole instead of being subdivided-- perhaps more content with myself or something. And yet I almost lost the whole thing. I think it wasn't just a dream. I think I really was letting go. Falling away into-- no, out of everything."

"You had three selves for several months," said Wang-mu. "Is it possible your aiua hungers for the-- I don't know, the size of what you used to be?"

"I was spread all over the galaxy, wasn't I? Except I want to say, 'Wasn't he,' because that was Ender, wasn't it. And I'm not Ender because I don't remember anything." He thought a moment. "Except maybe I do remember some things a little more clearly now. Things from my childhood. My mother's face. It's very clear, and I don't think it was before. And Valentine's face, when we were all children. But I'd remember that as Peter, wouldn't I, so it doesn't mean it comes from Ender, does it? I'm sure this is just one of the memories Ender supplied for me in the first place." He laughed. "I'm really desperate, aren't I, to find some sign of him in me."

Wang-mu sat listening. Silent, not making a great show of interest, but also content not to jump in with an answer or a comment.

Noticing her made him think of something else. "Are you some kind of, what would you call it, an empath? Do you normally feel what other people are feeling?"

"Never," said Wang-mu. "I'm too busy feeling what I'm feeling."

"But you knew that I was going. You felt that."

"I suppose," said Wang-mu, "that I'm bound up with you now. I hope that's all right, because it wasn't exactly voluntary on my part."

"But I'm bound up with you, too," said Peter. "Because when I was disconnected, I still heard you. All my other feelings were gone. My body wasn't giving me anything. I had lost my body. Now, when I remember what it felt like, I remember 'seeing' things, but that's just my human brain making sense of things that it can't actually make sense of. I know that I didn't see at all, or hear, or touch or anything at all. And yet I knew you were calling. I felt you-- needing me. Wanting me to come back. Surely that means that I am also bound up with you."

She shrugged, looked away.

"Now what does that mean?" he asked.

"I'm not going to spend the rest of my life explaining myself to you," said Wang-mu. "Everyone else has the privilege of just feeling and doing sometimes without analyzing it. What did it look like to you? You're the smart one who's an expert on human nature."

"Stop that," said Peter, pretending to be teasing but really wanting her to stop. "I remember we bantered about that, and I bragged I guess, but ... well I don't feel that way now. Is that part of having all of Ender in me? I know I don't understand people all that well. You looked away, you shrugged when I said I was bound up with you. That hurt my feelings, you know."

"And why is that?"

"Oh, you can ask why and I can't, are those the rules now?"

"Those have always been the rules," said Wang-mu. "You just never obeyed them."

"Well it hurt my feelings because I wanted you to be glad that I'm tied up with you and you with me."

"Are you glad?"

"Well it only saved my life, I think I'd have to be the king of the stupid people not to at least find it convenient!"

"Smell," she said, suddenly leaping to her feet.

She is so young, he thought.

And then, rising to his own feet, he was surprised to realize that he, too, was young, his body lithe and responsive.

And then he was surprised again to realize that Peter never remembered being any other way. It was Ender who had experienced an older body, one that got stiff when sleeping on the ground, a body that did not rise so easily to its feet. I do have Ender in me. I have the memories of his body. Why not the memories of his mind?

Perhaps because this brain has only the map of Peter's memories in it. All the rest of them are lurking just out of reach. And maybe I'll stumble on them now and then, connect them up, map new roads to get to them.

In the meantime, he was still getting up, standing beside Wang-mu, sniffing the air with her; and he was surprised again to realize that both activities had had his full attention. He had been thinking continuously of Wang-mu, of smelling what she smelled, wondering all the while whether he could just rest his hand on that small frail shoulder that seemed to need a hand the size of his to rest upon it; and at the same time, he had been engaged completely in speculation on how and whether he would be able to recover Ender's memories.

I could never do that before, thought Peter. And yet I must have been doing it ever since this body and the Valentine body were created. Concentrating on three things at once, in fact, not two.

But I wasn't strong enough to think of three things. One of them always sagged. Valentine for a while. Then Ender, until that body died. But two things-- I can think of two things at once. Is this remarkable? Or is it something that many humans could do, if only they had some occasion to learn?

What kind of vanity is this! thought Peter. Why should I care whether I'm unique in this ability? Except that I always did pride myself on being smarter and more capable than the people around me. Didn't let myself say it aloud, of course, or even admit it to myself, but be honest with yourself now, Peter! It's good to be smarter than other people. And if I can think of two things at once, while they can only think of one, why not take some pleasure in it!

Of course, thinking of two things is rather useless if both trains of thought are dumb. For while he played with questions of vanity and his competitive nature, he had also been concentrating on Wang-mu, and his hand had indeed reached out and touched her, and for a moment she leaned back against him, accepting his touch, until her head rested against his chest. And then, without warning or any provocation that he could think of, she suddenly pulled away from him and began to stride toward the Samoans who were gathered around Malu on the beach.

"What did I do?" asked Peter.

She turned around, looking puzzled. "You did just fine!" she said. "I didn't slap you or put my knee in your kintamas, did I? But it's breakfast-- Malu is praying and they've got more food than they had two nights ago, when we thought we'd die from eating it!"

And both of Peter's separate tracks of attention noticed that he was hungry, both severally and all at once. Neither he nor Wang-mu had eaten anything last night. For that matter, he had no memory of leaving the beach and coming to lie down with her on these mats. Somebody must have carried them. Well, that was no surprise. There wasn't a man or woman on that beach who didn't look like he could pick Peter up and break him like a pencil. As for Wang-mu, as he watched her run lightly toward the mountain range of Samoans gathered at water's edge, he thought she was like a bird flying toward a flock of cattle.

I'm not a child and never was one, not in this body, thought Peter. So I don't know if I'm even capable of childish longings and the grand romances of adolescence. And from Ender I have this sense of comfortableness in love; it isn't grand sweeping passions that I even expect to feel. Will the kind of love I have for you be enough, Wang-mu? To reach out to you when I'm in need, and to try to be here for you when you need me back. And to feel such tenderness when I look at you that I want to stand between you and all the world: and yet also to lift you up and carry you above the strong currents of life; and at the same time, I would be glad to stand always like this, at a distance, watching you, the beauty of you, your energy as you look up at these towering mound-people, speaking to them as an equal even though every movement of your hands, every fluting syllable of your speech cries out that you're a child-- is it enough for you that I feel these loves for you? Because it's enough for me. And enough for me that when my hand touched your shoulder, you leaned on me; and when you felt me slip away, you called my name.

\*\*\*

Plikt sat alone in her room, writing and writing. She had been preparing all her life for this day-- to be writing the oration for Andrew Wiggin's funeral. She would speak his death-- and she had the research to do it, she could speak for a solid week and still not exhaust a tenth of what she knew about him. But she would not speak for a week. She would speak for a single hour. Less than an hour. She understood him; she loved him; she would share with others who did not know him what he was, how he loved, how history was different because this man, brilliant, imperfect, but wellmeaning and filled with a love that was strong enough to inflict suffering when it was needed-- how history was different because he lived, and how also ten thousand, a hundred thousand, millions of individual lives were also different, strengthened, clarified, lifted up, brightened, or at least made more consonant and truthful because of what he had said and done and written in his life.

And would she also tell this? Would she tell how bitterly one woman grieved alone in her room, weeping and weeping, not because of grief that Ender was gone, but because of shame at finally understanding herself. For though she had loved and admired him-- no, worshiped this man-- nevertheless when he died what she felt was not grief at all, but relief and excitement. Relief: The waiting is over! Excitement: My hour has come!

Of course that's what she felt. She wasn't such a fool as to expect herself to be of more than human moral strength. And the reason she didn't grieve as Novinha and Valentine grieved was because a great part of their lives had just been torn away from them. What was torn away from mine? Ender gave me a few dollops of his attention, but little more. We had only a few months when he was my teacher on Trondheim; then a generation later our lives touched again for these few months here; and both times he was preoccupied, he had more important things and people to attend to than me. I was not his wife. I was not his sister. I was only his student and disciple-- a man who was done with students and never wanted disciples. So of course no great part of my life was taken from me because he had only been my dream, never my companion.

I forgive myself and yet I cannot stop the shame and grief I feel, not because Andrew Wiggin died, but because in the hour of his death I showed myself to be what I really am: utterly selfish, concerned only with my own career. I chose to be the speaker of Ender's death. Therefore the moment of his death can only be the fulfillment of my life. What kind of vulture does that make me? What kind of parasite, a leech upon his life ...

And yet her fingers continued to type, sentence after sentence, despite the tears flowing down her cheeks. Off in Jakt's house, Valentine grieved with her husband and children. Over in Olhado's house, Grego and Olhado and Novinha had gathered to comfort each other, at the loss of the man who had been husband and father to them. They had their relationship to him, and I have mine. They have their private memories; mine will be public. I will speak, and then I will publish what I said, and what I am writing now will give new shape and meaning to the life of Ender Wiggin in the minds of every person of a hundred worlds. Ender the Xenocide; Andrew the Speaker for the Dead; Andrew the private man of loneliness and compassion; Ender the brilliant analyst who could pierce to the heart of problems and of people without being deflected by fear or ambition or ... or mercy. The man of justice and the man of mercy, coexisting in one body. The man whose compassion let him see and love the hive queens even before he ever touched one of them with his

hands; the man whose fierce justice let him destroy them all because he believed they were his enemy.

Would Ender judge me harshly for my ugly feelings on this day? Of course he would-- he would not spare me, he would know the worst that is in my heart.

But then, having judged me, he would also love me. He would say, So what? Get up and speak my death. If we waited for perfect people to be speakers for the dead, all funerals would be conducted in silence.

And so she wrote, and wept; and when the weeping was done, the writing went on. When the hair that he had left behind was sealed in a small box and buried in the grass near Human's root, she would stand and speak. Her voice would raise him from the dead, make him live again in memory. And she would also be merciful; and she would also be just. That much, at least, she had learned from him.

## Chapter 12 -- "AM I BETRAYING ENDER?"

"Why do people act as if war and murder were unnatural? What's unnatural is to go your whole life without ever raising your hand in violence."

-- from The God Whispers of Han Qing-jao

"We're going about this all wrong," said Quara.

Miro felt the old familiar anger surge inside him. Quara had a knack for making people angry, and it didn't help that she seemed to know that she annoyed people and relished it. Anyone else in the ship could have said exactly the same sentence and Miro would have given them a fair hearing. But Quara managed to put an edge on the words that made it sound as if she thought everyone in the world but herself was stupid. Miro loved her as a sister, but he couldn't help it that he hated having to spend hour upon hour in her company.

Yet, because Quara was in fact the one among them most knowledgeable about the ur-language she had discovered months before in the descolada virus, Miro did not allow his inward sigh of exasperation to become audible. Instead he swiveled in his seat to listen.

So did the others, though Ela made less effort to hide her annoyance. Actually, she made none. "Well, Quara, why weren't we smart enough to notice our stupidity before."

Quara was oblivious to Ela's sarcasm-- or chose to appear oblivious, anyway. "How can we decipher a language out of the blue? We don't have any referents. But we do have complete records of the versions of the descolada virus. We know what it looked like before it adapted to the human metabolism. We know how it changed after each of our attempts to kill it. Some of the changes were functional-- it was adapting. But some of them were clerical-- it was keeping a record of what it did."

"We don't know that," said Ela with perhaps too much pleasure in correcting Quara.

"I know it," said Quara. "Anyway, it gives us a known context, doesn't it? We know what that language is about, even if we haven't been able to decode it."

"Well, now that you've said all that," said Ela, "I still have no idea how this new wisdom will help us decode the language. I mean, isn't that precisely what you've been working on for months?"

"Ah," said Quara. "I have. But what I haven't been able to do is speak the 'words' that the descolada virus recorded and see what answers we get back."

"Too dangerous," said Jane at once. "Absurdly dangerous. These people are capable of making viruses that completely destroy biospheres, and they're callous enough to use them. And you're proposing that we give to them precisely the weapon they used to devastate the pequeninos' planet? Which probably contains a complete record, not only of the pequeninos' metabolism, but of ours as well? Why not just slit our own throats and send them the blood?"

Miro noticed that when Jane spoke, the others looked almost stunned. Part of their response might have been to the difference between Val's diffidence and the bold attitude that Jane displayed. Part of it, too, might have been because the Jane they knew was more computerlike, less assertive. Miro, however, recognized this authoritarian style from the way she had often spoken into his ear through the jewel. In a way it was a pleasure for him to hear her again; it was also disturbing to hear it coming from the lips of someone else. Val was gone; Jane was back; it was awful; it was wonderful.

Because Miro was not so taken aback by Jane's attitude, he was the one to speak into the silence. "Quara's right, Jane. We don't have years and years to work this out-- we might have only a few weeks. Or less. We need to provoke a linguistic response. Get an answer from them, analyze the difference in language between their initial statements to us and the later ones."

"We're giving away too much," said Jane.

"No risk, no gain," said Miro.

"Too much risk, all dead," said Jane snidely. But in the snideness there was a familiar lilt, a kind of sauciness that said, I'm only playing. And that came, not from Jane-- Jane had never sounded like that-- but from Val. It hurt to hear it; it was good to hear it. Miro's dual responses to everything coming from Jane kept him constantly on edge. I love you, I miss you, I grieve for you, shut up; whom he was talking to seemed to change with the minutes.

"It's only the future of three sentient species we're gambling with," added Ela.

With that they all turned to Firequencher.

"Don't look at me," he said. "I'm just a tourist."

"Come on," said Miro. "You're here because your people are at risk the same as ours. This is a tough decision and you have to vote. You have the most at risk, actually, because even the earliest descolada codes we have might well reveal the whole biological history of your people since the virus first came among you."

"Then again," said Firequencher, "it might mean that since they already know how to destroy us, we have nothing to lose."

"Look," said Miro. "We have no evidence that these people have any kind of manned starflight. All they've sent out so far are probes."

"All that we know about," said Jane.

"And we've had no evidence of anybody coming around to check out how effective the descolada had been at transforming the biosphere of Lusitania to prepare it to receive colonists from this planet. So if they do have colony ships out there, either they're already on the way so what different does it make if we share this information, or they haven't sent any which means that they can't."

"Miro's right," said Quara, pouncing. Miro winced. He hated being on Quara's side, because now everybody's annoyance with her would rub off on him. "Either the cows are already out of the barn, so why bother shutting the door, or they can't get the door open anyway, so why put a lock on it?"

"What do you know about cows?" asked Ela disdainfully.

"After all these years of living and working with you," said Quara nastily, "I'd say I'm an expert."

"Girls, girls," said Jane. "Get a grip on yourselves."

Again, everyone but Miro turned to her in surprise. Val wouldn't have spoken up during a family conflict like this; nor would the Jane they knew-- though of course Miro was used to her speaking up all the time.

"We all know the risks of giving them information about us," said Miro. "We also know that we're making no headway and maybe we'll be able to learn something about the way this language works after having some give and take."

"It's not give and take," said Jane. "It's give and give. We give them information they probably can't get any other way, information that may well tell them everything they need to know in order to create new viruses that might well circumvent all our weapons against them. But since we have

no idea how that information is coded, or even where each specific datum is located, how can we interpret the answer? Besides, what if the answer is a new virus to destroy us?"

"They're sending us the information necessary to construct the virus," said Quara, her voice thick with contempt, as if she thought Jane were the stupidest person who ever lived, instead of arguably the most godlike in her brilliance. "But we're not going to build it. As long as it's just a graphic representation on a computer screen--"

"That's it," said Ela.

"What's it?" said Quara. It was her turn to be annoyed now, for obviously Ela was a step ahead of her on something.

"They aren't taking these signals and putting them up on a computer screen. We do that because we have a language written with symbols that we see with the naked eye. But they must read these broadcast signals more directly. The code comes in, and they somehow interpret it by following the instruction to make the molecule that's described in the broadcast. Then they 'read' it by-- what, smelling it? Swallowing it? The point is, if genetic molecules are their language, then they must somehow take them into their body as appropriately as the way we get the images of our writing from the paper into our eyes."

"I see," said Jane. "You're hypothesizing that they're expecting us to make a molecule out of what they send us, instead of just reading it on a screen and trying to abstract it and intellectualize it."

"For all we know," said Ela, "this could be how they discipline people. Or attack them. Send them a message. If they 'listen' they have to do it by reading the molecule into their bodies and letting it have its effect on them. So if the effect is poison or a killing disease, just hearing the message subjects them to the discipline. It's as if all our language had to be tapped out on the back of our neck. To listen, we'd have to lie down and expose ourself to whatever tool they chose to use to send the message. If it's a finger or a feather, well and good-- but if it's a broadaxe or a machete or a sledgehammer, too bad for us."

"It doesn't even have to be fatal," said Quara, her rivalry with Ela forgotten as she developed the idea in her own mind. "The molecules could be behavior-altering devices. To hear is literally to obey."

"I don't know if you're right in the particulars," said Jane. "But it gives the experiment much more potential for success. And it suggests that they might not have a delivery system that can attack us directly. That changes the probable risk."

"And people say you can't think well without your computer," said Miro.

At once he was embarrassed. He had inadvertently spoken to her as flippantly as he used to when he subvocalized so she could overhear him through the jewel. But now it sounded strangely cold of him, to tease her about having lost her computer network. He could joke that way with Jane-in-the-

jewel. But Jane-in-the-flesh was a different matter. She was now a human person. With feelings that had to be worried about.

Jane had feelings all along, thought Miro. But I didn't think much about them because ... because I didn't have to. Because I didn't see her. Because she wasn't, in a sense, real to me.

"I just meant ..." Miro said. "I just mean, good thinking."

"Thank you," said Jane. There wasn't a trace of irony in her voice, but Miro knew the irony was there all the same, because it was inherent in the situation. Miro, this uniprocessing human, was telling this brilliant being that she had thought well-- as if he were fit to judge her.

Suddenly he was angry, not at Jane, but at himself. Why should he have to watch every word he said, just because she had not acquired this body in the normal way? She may not have been human before, but she was certainly human now, and could be talked to like a human. If she was somehow different from other human beings, so what? All human beings were different from all others, and yet to be decent and polite, wasn't he supposed to treat everyone basically alike? Wouldn't he say, "Do you see what I mean?" to a blind person, expecting the metaphorical use of "see" to be taken without umbrage? Well, why not say, "Good thinking," to Jane? Just because her thought processes were unfathomably deep to a human didn't mean that a human couldn't use a standard expression of agreement and approval when speaking to her.

Looking at her now, Miro could see a kind of sadness in her eyes. No doubt it came from his obvious confusion-- after joking with her as he always had, suddenly he was embarrassed, suddenly he backtracked. That was why her "Thank you" had been ironic. Because she wanted him to be natural with her, and he couldn't.

No, he hadn't been natural, but he certainly could.

And what did it matter, anyway? They were here to solve the problem of the descoladores, not to work out the kinks in their personal relationships after the wholesale body swap.

"Do I take it we have agreement?" asked Ela. "To send messages encoded with the information contained on the descolada virus?"

"The first one only," said Jane. "At least to start."

"And when they answer," said Ela, "I'll try to run a simulation of what would happen if we constructed and ingested the molecule they send us."

"If they send us one," said Miro. "If we're even on the right track."

"Well aren't you Mr. Cheer," said Quara.

"I'm Mr. Scared-From-Ass-To-Ankles," said Miro. "Whereas you are just plain old Miss Ass."

"Can't we all get along?" said Jane, whining, teasing. "Can't we all be friends?"

Quara whirled on her. "Listen, you! I don't care what kind of superbrain you used to be, you just stay out of family conversations, do you hear?"

"Look around, Quara!" Miro snapped at her. "If she stayed out of family conversations, when could she talk?"

Firequencher raised his hand. "I've been staying out of family conversations. Do I get credit for that?"

Jane gestured to quell both Miro and Firequencher. "Quara," she said quietly, "I'll tell you the real difference between me and your brother and sister here. They're used to you because they've known you all your life. They're loyal to you because you and they went through some lousy experiences in your family. They're patient with your childish outbursts and your asinine bullheadedness because they tell themselves, over and over, she can't help it, she had such a troubled childhood. But I'm not a family member, Quara. I, however, as someone who has observed you in times of crisis for some time, am not afraid to tell you my candid conclusions. You are quite brilliant and very good at what you do. You are often perceptive and creative, and you drive toward solutions with astonishing directness and perseverance."

"Excuse me," said Quara, "are you telling me off or what?"

"But," said Jane, "you are not smart and creative and clever and direct and perseverant enough to make it worth putting up with more than fifteen seconds of the egregious bullshit you heap on your family and everyone else around you every minute you're awake. So you had a lousy childhood. That was a few years ago, and you are expected now to put that behind you and get along with other people like a normally courteous adult."

"In other words," said Quara, "you don't like having to admit that anybody but you might be smart enough to have an idea that you didn't think of."

"You aren't understanding me," said Jane. "I'm not your sister. I'm not even, technically speaking, human. If this ship ever gets back to Lusitania, it will be because I, with my mind, send it there. Do you get that? Do you understand the difference between us? Can you send even one fleck of dust from your lap to mine?"

"I don't notice you sending starships anywhere right at the moment," said Quara triumphantly.

"You continue to attempt to score points off me without realizing that I am not having an argument with you or even a discussion. What you say to me right now is irrelevant. The only thing that matters is what I'm saying to you. And I'm saying that while your siblings put up with the unendurable from you, I will not. Keep on the way you're going, you spoiled little baby, and when this starship goes back to Lusitania you might not be on it."

The look on Quara's face almost made Miro laugh aloud. He knew, however, that this would not be a wise moment to express his mirth.

"She's threatening me," said Quara to the others. "Do you hear this? She's trying to coerce me by threatening to kill me."

"I would never kill you," said Jane. "But I might be unable to conceive of your presence on this starship when I push it Outside and then pull it back In. The thought of you might be so unendurable that my unconscious mind would reject that thought and exclude you. I really don't understand, consciously, how the whole thing works. I don't know how it relates to my feelings. I've never tried to transport anybody I really hated before. I would certainly try to bring you along with the others, if only because, for reasons passing understanding, Miro and Ela would probably be testy with me if I didn't. But trying isn't necessarily succeeding. So I suggest, Quara, that you expend some effort on trying to be a little less loathsome."

"So that's what power is to you," said Quara. "A chance to push other people around and act like the queen."

"You really can't do it, can you?" said Jane.

"Can't what?" said Quara. "Can't bow down and kiss your feet?"

"Can't shut up to save your own life."

"I'm trying to solve the problem of communicating with an alien species, and you're busy worrying about whether I'm nice enough to you."

"But Quara," said Jane, "hasn't it ever occurred to you that once they get to know you, even the aliens will wish you had never learned their language?"

"I'm certainly wishing you had never learned mine," said Quara. "You're certainly full of yourself, now that you have this pretty little body to play around with. Well, you're not queen of the universe and I'm not going to dance through hoops for you. It wasn't my idea to come on this voyage, but I'm here-- I'm here, the whole obnoxious package-- and if there's something about me that you don't like, why don't you shut up about it? And as long as we're making threats, I think that if you push me too far I'll rearrange your face more to my liking. Is that clear?"

Jane unstrapped herself from her seat and drifted from the main cabin into the corridor leading into the storage compartments of the shuttle. Miro followed her, ignoring Quara as she said to the others, "Can you believe how she talked to me? Who does she think she is, judging who's too irritating to live?"

Miro followed Jane into a storage compartment. She was clinging to a handhold on the far wall, bent over and heaving in a way that made Miro wonder if she was throwing up. But no. She was crying. Or rather, she was so enraged that her body was sobbing and producing tears from the sheer uncontainability of the emotion. Miro touched her shoulder to try to calm her. She recoiled.

For a moment he almost said, Fine, have it your way; then he would have left, angry himself, frustrated that she wouldn't accept his comfort. But then he remembered that she had never been this angry before. She had never had to deal with a body that responded like this. At first, when she began rebuking Quara, Miro had thought, It's about time somebody laid it on the line. But when the argument went on and on, Miro realized that it wasn't Quara who was out of control, it was Jane. She didn't know how to deal with her emotions. She didn't know when it wasn't worth going on. She felt what she was feeling, and she didn't know how to do anything but express it.

"That was hard," Miro said. "Cutting off the argument and coming in here."

"I wanted to kill her," said Jane. Her voice was almost unintelligible from the weeping, from the savage tension in her body. "I've never felt anything like it. I wanted to get out of the chair and tear her apart with my bare hands."

"Welcome to the club," said Miro.

"You don't understand," she said. "I really wanted to do it. I felt my muscles flexing, I was ready to do it. I was going to do it."

"As I said. Quara makes us all feel that way."

"No," said Jane. "Not like this. You all stay calm, you all stay in control."

"And you will, too," said Miro, "when you have a little more practice."

Jane lifted her head, leaned it back, shook it. Her hair swung weightlessly free in the air. "Do you really feel this?"

"All of us do," said Miro. "That's why we have a childhood-- to learn to get over our violent tendencies. But they're in us all. Chimps and baboons do it. All the primates. We display. We have to express our rage physically."

"But you don't. You stay so calm. You let her spout off and say these horrible--"

"Because it's not worth the trouble of stopping her," said Miro. "She pays the price for it. She's desperately lonely and nobody deliberately seeks an opportunity to spend time in her company."

"Which is the only reason she isn't dead."

"That's right," said Miro. "That's what civilized people do they avoid the circumstance that enrages them. Or if they can't avoid it, they detach. That's what Ela and I do, mostly. We just detach. We just let her provocations roll over us."

"I can't do it," said Jane. "It was so simple before I felt these things. I could tune her out."

"That's it," said Miro. "That's what we do. We tune her out."

"It's more complicated than I thought," said Jane. "I don't know if I can do it."

"Yeah, well, you don't have much choice right now, do you," he said.

"Miro, I'm so sorry. I always felt such pity for you humans because you could only think of one thing at a time and your memories were so imperfect and ... now I realize that just getting through the day without killing somebody can be an achievement."

"It gets to be a habit. Most of us manage to keep our body count quite low. It's the neighborly way to live."

It took a moment-- a sob, and then a hiccough-- but then she did laugh. A sweet, soft chuckle that was such a welcome sound to Miro. Welcome because it was a voice he knew and loved, a laugh that he liked to hear. And it was his dear friend who was doing the laughing. His dear friend Jane. The laugh, the voice of his beloved Val. One person now. After all this time, he could reach out his hand and touch Jane, who had always been impossibly far away. Like having a friendship over the telephone and finally meeting face-to-face.

He touched her again, and she took his hand and held it.

"I'm sorry I let my own weakness get in the way of what we're doing," said Jane.

"You're only human," said Miro.

She looked at him, searched his face for irony, for bitterness.

"I mean it," said Miro. "The price of having these emotions, these passions, is that you have to control them, you have to bear them when they're too strong to bear. You're only human now. You'll never make these feelings go away. You just have to learn not to act on them."

"Quara never learned."

"Quara learned, all right," said Miro. "It's just my opinion, but Quara loved Marcoa, adored him, and when he died and the rest of us felt so liberated, she was lost. What she does now, this constant provocation-- she's asking somebody to abuse her. To hit her. The way Marcoa always hit Mother whenever he was provoked. I think in some perverse way Quara was always jealous of Mother when she got to go off alone with Papa, and even though she finally figured out that he was beating her up, when Quara wanted her papa back the only way she knew of to demand his attention was-- this mouth of hers." Miro laughed bitterly. "It reminds me of Mother, to tell the truth. You've never heard her, but in the old days, when she was trapped in marriage with Marcoa and having Libo's babies-- oh, she had a mouth on her. I'd sit there and listen to her provoking Marcoa, goading him, stabbing at him, until he'd hit her-- and I'd think, Don't you dare lay a hand on my mother, and at the same time I'd absolutely understand his impotent rage, because he could never, never, never say

anything that would shut her up. Only his fist could do it. And Quara has that mouth, and needs that rage."

"Well, how happy for us all, then, that I gave her just what she needed."

Miro laughed. "But she didn't need it from you. She needed it from Marcao, and he's dead."

And then, suddenly, Jane burst into real tears. Tears of grief, and she turned to Miro and clung to him.

"What is it?" he said. "What's wrong?"

"Oh, Miro," she said. "Ender's dead. I'll never see him again. I have a body at last, I have eyes to see him, and he isn't there."

Miro was stunned. Of course she missed Ender. She had thousands of years with him, and only a few years, really, with me. How could I have thought she could love me? How can I ever hope to compare with Ender Wiggin? What am I, compared to the man who commanded fleets, who transformed the minds of trillions of people with his books, his speakings, his insight, his ability to see into the hearts of other people and speak their own most private stories back to them? And yet even as he resented Ender, even as he envied him because Jane would always love him more and Miro couldn't hope to compete with him even in death, despite these feelings it finally came home to him that yes, Ender was dead. Ender, who had transformed his family, who had been a true friend to him, who had been the only man in Miro's life that he longed with all his heart to be, Ender was gone. Miro's tears of grief flowed along with Jane's.

"I'm sorry," said Jane. "I can't control any of my emotions."

"Yes, well, it's a common failing, actually," said Miro.

She reached up and touched the tears on his cheek. Then she touched her damp finger to her own cheek. The tears commingled. "Do you know why I thought of Ender right then?" she said. "Because you're so much like him. Quara annoys you as much as she annoys anyone, and yet you look past that and see what her needs are, why she says and does these things. No, no, relax, Miro, I'm not expecting you to be like Ender, I'm just saying that one of the things I liked best about him is also in you-- that's not bad, is it? The compassionate perception-- I may be new at being human, but I'm pretty sure that's a rare commodity."

"I don't know," said Miro. "The only person I'm feeling compassion for right now is me. They call it self-pity, and it isn't an attractive trait."

"Why are you feeling sorry for yourself?"

"Because you'll go on needing Ender all your life, and all you'll ever find is poor substitutes, like me."

She held him tighter then. She was the one giving comfort now. "Oh, Miro, maybe that's true. But if it is, it's true the way it's true that Quara is still trying to get her father's attention. You never stop needing your father or your mother, isn't that right? You never stop reacting to them, even when they're dead."

Father? That had never crossed Miro's mind before. Jane loved Ender, deeply, yes, loved him forever-- but as a father?

"I can't be your father," said Miro. "I can't take his place." But what he was really doing was making sure he had understood her. Ender was her father?

"I don't want you to be my father," said Jane. "I still have all these old Val-feelings, you know. I mean, you and I were friends, right? That was very important to me. But now I have this Val body, and when you touch me, it keeps feeling like the answer to a prayer." At once she regretted saying it. "Oh, I'm sorry, Miro, I know you miss her."

"I do," said Miro. "But then, it's hard to miss her quite the way I might, since you do look a lot like her. And you sound like her. And here I am holding you the way I wanted to hold her, and if that sounds awful because I'm supposedly comforting you and I shouldn't be thinking of base desires, well then I'm just an awful kind of guy, right?"

"Awful," she said. "I'm ashamed to know you." And she kissed him. Sweetly, awkwardly.

He remembered his first kiss with Ouanda years ago, when he was young and didn't know how badly things could turn out. They had both been awkward then, new, clumsy. Young. Jane, now, Jane was one of the oldest creatures in the universe. But also one of the youngest. And Val-- there would be no reflexes in the Val body for Jane to draw upon, for in Val's short life, what chance had she had to find love?

"Was that even close to the way humans do that?" asked Jane.

"That was exactly the way humans sometimes do it," said Miro. "Which isn't surprising, since we're both human."

"Am I betraying Ender, to grieve for him one moment, and then be so happy to have you holding me the next?"

"Am I betraying him, to be so happy only hours after he died?"

"Only he's not dead," said Jane. "I know where he is. I chased him there."

"If he's exactly the same person he was," said Miro, "then what a shame. Because good as he was, he wasn't happy. He had his moments, but he was never-- what, he was never really at peace. Wouldn't it be nice if Peter could live out a full life without ever having to bear the guilt of xenocide? Without ever having to feel the weight of all of humanity on his shoulders?"

"Speaking of which," said Jane, "we have work to do."

"We also have lives to live," said Miro. "I'm not going to be sorry we had this encounter. Even if it took Quara's bitchiness to make it happen."

"Let's do the civilized thing," said Jane. "Let's get married. Let's have babies. I do want to be human, Miro, I want to do everything. I want to be part of human life from edge to edge. And I want to do it all with you."

"Is this a proposal?" asked Miro.

"I died and was reborn only a dozen hours ago," said Jane. "My-- hell, I can call him my father, can't I? --my father died, too. Life is short, I feel how short it is: after three thousand years, all of them intense, it still feels too short. I'm in a hurry. And you, haven't you wasted enough time, too? Aren't you ready?"

"But I don't have a ring."

"We have something much better than a ring," said Jane. She touched her cheek again, where she had put his tear. It was still damp; still damp, too, when she touched the finger now to his cheek. "I've had your tears with mine, and you've had mine with yours. I think that's more intimate even than a kiss."

"Maybe," said Miro. "But not as fun."

"This emotion I'm feeling now, this is love, right?"

"I don't know. Is it a longing? Is it a giddy stupid happiness just because you're with me?"

"Yes," she said.

"That's influenza," said Miro. "Watch for nausea or diarrhea within a few hours."

She shoved him, and in the weightless starship the movement sent him helplessly into midair until he struck another surface. "What?" he said, pretending innocence. "What did I say?"

She pushed herself away from the wall and went to the door. "Come on," she said. "Back to work."

"Let's not announce our engagement," he said softly.

"Why not?" she asked. "Ashamed already?"

"No," he said. "Maybe it's petty of me, but when we announce it, I don't want Quara there."

"That's very small of you," said Jane. "You need to be more magnanimous and patient, like me."

"I know," said Miro. "I'm trying to learn."

They drifted back into the main chamber of the shuttle. The others were working on preparing their genetic message for broadcast on the frequency that the descoladores had used to challenge them when they first showed up closer to the planet. They all looked up. Ela smiled wanly. Firequencher waved cheerfully.

Quara tossed her head. "Well I hope we're done with that little emotional outburst," she said.

Miro could feel Jane seethe at the remark. But Jane said nothing. And when they were both sitting down and strapped back into their seats, they looked at each other, and Jane winked.

"I saw that," said Quara.

"We meant you to," said Miro.

"Grow up," Quara said disdainfully.

An hour later they sent their message. And at once they were inundated with answers that they could not understand, but had to. There was no time for quarreling then, or for love, or for grief. There was only language, thick, broad fields of alien messages that had to be understood somehow, by them, right now.

### Chapter 13 -- "TILL DEATH ENDS ALL SURPRISES"

"I can't say that I've much enjoyed the work the gods required of me. My only real pleasure was my days of schooling, in those hours between the gods' sharp summonses. I am gladly at their service, always, but oh it was so sweet to learn how wide the universe could be, to test myself against my teachers, and to fail sometimes without much consequence."

-- from The God Whispers of Han Qing-jao

"Do you want to come to the university and watch us turn on our new godproof computer network?" asked Grace.

Of course Peter and Wang-mu wanted to. But to their surprise, Malu cackled with delight and insisted that he must go, too. The god once dwelt in computers, didn't she? And if she found her way back, shouldn't Malu be there to greet her?

This complicated matters a little-- for Malu to visit the university required notifying the president so he could assemble a proper welcome. This was not needed for Malu, who was neither vain nor much impressed with ceremonies that didn't have some immediate purpose. The point was to show the Samoan people that the university still had proper respect for the old ways, of which Malu was the most revered protector and practitioner.

From luaus of fruit and fish on the beach, from open fires, palm mats, and thatch-roof huts, to a hovercar, a highway, and the brightpainted buildings of the modern university-- it felt to Wang-mu like a journey through the history of the human race. And yet she had already made that journey once before, from Path; it seemed a part of her life, to step from the ancient to the modern, back and forth. She felt rather sorry for those who knew only one and not the other. It was better, she thought, to be able to select from the whole menu of human achievements than to be bound within one narrow range.

Peter and Wang-mu were discreetly dropped off before the hovercar took Malu to the official reception. Grace's son took them on a brief tour of the brand-new computer facility. "These new computers all follow the protocols sent to us from Starways Congress. There will be no more direct connections between computer networks and ansibles. Rather there must be a time delay, with each infopacket inspected by referee software that will catch unauthorized piggybacking."

"In other words," said Peter, "Jane will never get back in."

"That's the plan." The boy-- for despite his size, that's what he seemed to be-- grinned broadly. "All perfect, all new, all in total compliance."

Wang-mu felt sick inside. This is how it would be all over the Hundred Worlds-- Jane blocked out of everything. And without access to the enormous computing capacity of the combined networks of all of human civilization, how could she possibly regain the power to pop a starship Out and In again? Wang-mu had been glad enough to leave Path. But she was by no means certain that Pacifica was the world where she wanted to live the rest of her life. Especially if she was to stay with Peter, for there was no chance he would be content for long with the slower, more lackadaisical timeflow of life in the islands. Truth be known, it was too slow for her, too. She loved her time with the Samoans, but the impatience to be doing something was growing inside her. Perhaps those who grew up among these people might somehow sublimate their ambition, or perhaps there was something in the racial genotype that suppressed it or replaced it, but Wang-mu's incessant drive to strengthen and expand her role in life was certainly not going to go away just because of a luau on the beach, however much she enjoyed it and would treasure the memory of it.

The tour wasn't over yet, of course, and Wang-mu dutifully followed Grace's son wherever he led. But she hardly paid attention beyond what was needed to make polite responses. Peter seemed even more distracted, and Wang-mu could guess why. He would have not only the same feelings Wang-mu had, but he must also be grieving for the loss of connection with Jane through the jewel in his ear. If she did not recover her ability to control data flow through the communications satellites orbiting this world, he would not hear her voice again.

They came to an older section of campus, some rundown buildings in a more utilitarian architectural style. "Nobody likes coming here," he said, "because it reminds them of how recently our university became anything more than a school for training engineers and teachers. This building is three hundred years old. Come inside."

"Do we have to?" asked Wang-mu. "I mean, is it necessary? I think we get the idea from the outside."

"Oh, but I think you want to see this place. Very interesting, because it preserves some of the old ways of doing things."

Wang-mu of course agreed to follow, as courtesy required, and Peter wordlessly went along. They came inside and heard the humming of ancient air-conditioning systems and felt the harsh refrigerated air. "These are the old ways?" asked Wang-mu. "Not as old as life on the beach, I think."

"Not as old, that's true," said their guide. "But then, we're not preserving the same thing here."

They came into a large room with hundreds and hundreds of computers arranged in crowded rows along tables that stretched from end to end. There was no room for anyone to sit at these machines; there was barely enough space between the tables for technicians to slide along to tend to them. All the computers were on, but the air above all the terminals was empty, giving no clue about what was going on inside them.

"We had to do something with all those old computers that Starways Congress made us take offline. So we put them here. And also the old computers from most of the other universities and businesses in the islands-- Hawaiian, Tahitian, Maori, on and on-- everyone helped. It goes up six stories, every floor just like this, and three other buildings, though this one is the biggest."

"Jane," said Peter, and he smiled.

"Here's where we stored everything she gave us. Of course, on the record these computers are not connected by any network. They are only used for training students. But Congress inspectors never come here. They saw all they wanted to see when they looked at our new installation. Up to code, complying with the rules-- we are obedient and loyal citizens! Here, though, I'm afraid there have been some oversights. For instance, there seems to be an intermittent connection with the university's ansible. Whenever the ansible is actually passing messages offworld, it is connected to no computers except through the official safeguarded time-delayed link. But when the ansible is connected to a handful of eccentric destinations-- the Samoan satellite, for instance, or a certain faroff colony that is supposedly incommunicado to all ansibles in the Hundred Worlds-- then an old forgotten connection kicks in, and the ansible has complete use of all of this."

Peter laughed with genuine mirth. Wang-mu loved the sound of it, but also felt just a little jealousy at the thought that Jane might well come back to him.

"And another odd thing," said Grace's son. "One of the new computers has been installed here, only there've been some alterations. It doesn't seem to report correctly to the master program. It neglects to inform that master program that there is a hyperfast realtime link to this nonexistent old-style network. It's a shame that it doesn't report on this, because of course it allows a completely illegal connection between this old, ansible-connected network and the new godproof system. And so requests for information can be passed, and they'll look perfectly legal to any inspection software, since they come from this perfectly legal but astonishingly flawed new computer."

Peter was grinning broadly. "Well, somebody had to work pretty fast to get this done."

"Malu told us that the god was going to die, but between us and the god we were able to devise a plan. Now the only question is-- can she find her way back here?"

"I think she will," said Peter. "Of course, this isn't what she used to have, not even a small fraction of it."

"We understand that she has a couple of similar installations here and there. Not many, you're right, and the new time-delay barriers will make it so that yes, she has access to all the information, but she can't use most of the new networks as part of her thought processes. Still, it's something. Maybe it's enough."

"You knew who we were before we got here," said Wang-mu. "You were already part of Jane's work."

"I think the evidence speaks for itself," said Grace's son.

"Then why did Jane bring us here?" asked Wang-mu. "What was all this nonsense about needing to have us here so we could stop the Lusitania Fleet?"

"I don't know," said Peter. "And I doubt anyone here knows, either. Maybe, though, Jane simply wanted us in a friendly environment, so she could find us again. I doubt there's anything like this on Divine Wind."

"And maybe," Wang-mu said, following her own speculations, "maybe she wanted you here, with Malu and Grace, when the time came for her to die."

"And for me to die as well," said Peter. "Meaning me as Ender, of course."

"And maybe," said Wang-mu, "if she was no longer going to be there to protect us through her manipulations of data, she wanted us to be among friends."

"Of course," said Grace's son. "She is a god, she takes care of her people."

"Her worshipers, you mean?" asked Wang-mu.

Peter snorted.

"Her friends," said the boy. "In Samoa we treat the gods with great respect, but we are also their friends, and we help the good ones when we can. Gods need the help of humans now and then. I think we did all right, don't you?"

"You did well," said Peter. "You have been faithful indeed."

The boy beamed.

Soon they were back in the new computer installation, watching as with great ceremony the president of the university pushed the key to activate the program that turned on and monitored the university ansible. Immediately there were messages and test programs from Starways Congress, probing and inspecting the university's system to make sure there were no lapses in security and that all protocols had been properly followed. Wang-mu could feel how tense everyone was-- except Malu, who seemed incapable of dread-- until, a few minutes later, the programs finished their inspection and made their report. The message came immediately from Congress that this network was compliant and secure. The fakes and fudges had not been detected.

"Any time now," murmured Grace.

"How will we know if all of this has worked?" asked Wang-mu soffly.

"Peter will tell us," answered Grace, sounding surprised that Wang-mu had not already understood this. "The jewel in his ear-- the Samoan satellite will speak to it."

\*\*\*

Olhado and Grego stood watching the readout from the ansible that for twenty years had connected only to the shuttle and Jakt's starship. It was receiving a message again. Links were being established with four ansibles on other worlds, where groups of Lusitanian sympathizers-- or at least friends of Jane's-- had followed Jane's instructions on how to partially circumvent the new regulations. No actual messages were sent, because there was nothing for the humans to say to each other. The point was simply to keep the link alive so Jane might travel on it and link herself with some small part of her old capacity.

None of this had been done with any human participation on Lusitania. All the programming that was required had been accomplished by the relentlessly efficient workers of the Hive Queen, with the help of pequeninos now and then. Olhado and Grego had been invited at the last minute, as observers only. But they understood. Jane was talking to the Hive Queen and the Hive Queen talked to the fathertrees. Jane had not worked through humans because the Lusitanian humans she worked with had been Miro, who had other work to do for her, and Ender, who had removed the jewel from his ear before he died. Olhado and Grego had talked this out as soon as the pequenino Waterjumper had explained to them what was going on and asked them to come observe. "I think she was feeling a bit defiant," said Olhado. "If Ender rejected her and Miro was busy--"

"Or gaga-eyed over Young Valentine, don't forget," said Grego.

"Well, she'd do it without human help."

"How can it work?" said Grego. "She was connected to billions of computers before. At most she'll have several thousand now, at least directly usable. It's not enough. Ela and Quara are never coming home. Or Miro."

"Maybe not," said Olhado. "It won't be the first time we've lost family members in the service of a higher cause." He thought of Mother's famous parents, Os Venerados, who lacked only the years now for sainthood-- if a representative of the Pope should ever come to Lusitania to examine the evidence. And their real father, Libo, and his father, both of whom died before Novinha's children ever guessed that they were kin. All dead in the cause of science, Os Venerados in the struggle to contain the descolada, Pipo and Libo in the effort to communicate with and understand the pequeninos. Their brother Quim had died as a martyr, trying to heal a dangerous breach in the relationship between humans and pequeninos on Lusitania. And now Ender, their adoptive father, had died in the cause of trying to find a way to save Jane's life and, with her, faster-than-light travel. If Miro and Ela and Quara should die in the effort to establish communications with the descoladores, it would be a part of the family tradition. "What I wonder," said Olhado, "is what's wrong with us, that we haven't been asked to die in a noble cause."

"I don't know about noble causes," said Grego, "but we do have a fleet aimed at us. That will do, I think, for getting us dead."

A sudden flurry of activity at the computer terminals told them that their wait was over. "We've linked with Samoa," said Waterjumper. "And now Memphis. And Path. Hegira." He did the little jig that pequeninos invariably did when they were delighted. "They're all going to come online. The snooper programs didn't find them."

"But will it be enough?" asked Grego. "Do the starships move again?"

Waterjumper shrugged elaborately. "We'll know when your family gets back, won't we?"

"Mother doesn't want to schedule Ender's funeral until they're back," said Grego.

At the mention of Ender's name, Waterjumper slumped. "The man who took Human into the Third Life," he said. "And there's almost nothing of him to bury."

"I'm just wondering," said Grego, "if it will be days or weeks or months before Jane finds her way back into her powers-- if she can do it at all."

"I don't know," said Waterjumper.

"They only have a few weeks of air," said Grego.

"He doesn't know, Grego," said Olhado.

"I know that," said Grego. "But the Hive Queen knows. And she'll tell the fathertrees. I thought ... word might have seeped down."

"How could even the Hive Queen know what will happen in the future?" asked Olhado. "How can anyone know what Jane can or can't accomplish? We've linked again with worlds outside of this one. Some parts of her core memory have been restored to the ansible net, however surreptitiously. She might find them. She might not. If found, they might be enough, or might not. But Waterjumper doesn't know."

Grego turned away. "I know," he said.

"We're all afraid," said Olhado. "Even the Hive Queen. None of us wants to die."

"Jane died, but didn't stay dead," said Grego. "According to Miro, Ender's aiua is supposedly off living as Peter on some other world. Hive queens die and their memories live on in their daughters' minds. Pequeninos get to live as trees."

"Some of us," said Waterjumper.

"But what of us?" said Grego. "Will we be extinguished? What difference does it make then, the ones of us who had plans, what does it matter the work we've done? The children we've raised?" He looked pointedly at Olhado. "What will it matter then, that you have such a big happy family, if you're all erased in one instant by that ... bomb?"

"Not one moment of my life with my family has been wasted," said Olhado quietly.

"But the point of it is to go on, isn't it? To connect with the future?"

"That's one part, yes," said Olhado. "But part of the purpose of it is now, is the moment. And part of it is the web of connections. Links from soul to soul. If the purpose of life was just to continue into the future, then none of it would have meaning, because it would be all anticipation and preparation. There's fruition, Grego. There's the happiness we've already had. The happiness of each moment. The end of our lives, even if there's no forward continuation, no progeny at all, the end of our lives doesn't erase the beginning."

"But it won't have amounted to anything," said Grego. "If your children die, then it was all a waste."

"No," said Olhado quietly. "You say that because you have no children, Greguinho. But none of it is wasted. The child you hold in your arms for only a day before he dies, that is not wasted, because that one day is enough of a purpose in itself. Entropy has been thrown back for an hour, a day, a week, a month. Just because we might all die here on this little world does not undo the lives before the deaths."

Grego shook his head. "Yes it does, Olhado. Death undoes everything."

Olhado shrugged. "Then why do you bother doing everything, Grego? Because someday you will die. Why should anyone ever have children? Someday they will die, their children will die, all children will die. Someday stars will wind down or blow up. Someday death will cover us all like the water of a lake and perhaps nothing will ever come to the surface to show that we were ever there. But we were there, and during the time we lived, we were alive. That's the truth-- what is, what was, what will be-- not what could be, what should have been, what never can be. If we die, then our death has meaning to the rest of the universe. Even if our lives are unknown, the fact that someone lived here, and died, that will have repercussions, that will shape the universe."

"So that's meaning enough for you?" said Grego. "To die as an object lesson? To die so that people can feel awful about having killed you?"

"There are worse meanings for a life to have."

Waterjumper interrupted them. "The last of the ansibles we expected is online. We have them all connected now."

They stopped talking. It was time for Jane to find her way back into herself, if she could.

They waited.

\*\*\*

Through one of her workers, the Hive Queen saw and heard the news of the restoration of the ansible links. <It's time,> she told the fathertrees.

<Can she do it? Can you lead her?>

<I can't lead her to a place where I can't go myself,> said the Hive Queen. <She has to find her own way. All I can do right now is tell her that it's time.>

<So we can only watch?>

<I can only watch,> said the Hive Queen. <You are part of her, or she of you. Her aiua is tied now to your web through the mothertrees. Be ready.>

<For what?>

<For Jane's need.>

<What will she need? When will she need it?>

<I have no idea.>

\*\*\*

At his terminal on the stranded starship, the Hive Queen's worker suddenly looked up, then arose from her seat and walked to Jane.

Jane looked up from her work. "What is it?" she asked distractedly. And then, remembering the signal she was waiting for, she looked over at Miro, who had turned to see what was happening. "I've got to go now," she said.

Then she flopped back in her seat as if she had fainted.

At once Miro was out of his chair; Ela wasn't far behind. The worker had already unfastened Jane from the chair and was lifting her off. Miro helped her draw Jane's body through the corridors of weightless space to the beds in the back of the ship. There they laid her down and secured her to a bed. Ela checked her vital signs.

"She's sleeping deeply," said Ela. "Breathing very slowly."

"A coma?" asked Miro.

"She's doing the minimum to stay alive," said Ela. "Other than that, there's nothing."

"Come on," said Quara from the door. "Let's get back to work."

Miro rounded on her, furious-- but Ela restrained him. "You can stay and watch over her if you want," she said, "but Quara's right. We have work to do. She's doing hers."

Miro turned back to Jane and touched her hand, took it, held it. The others left the sleeping quarters. You can't hear me, you can't feel me, you can't see me, Miro said silently. So I guess I'm not here for you. Yet I can't leave you. What am I afraid of? We're all dead if you don't succeed at what you're doing now. So it isn't your death I fear.

It's your old self. Your old existence among the computers and the ansibles. You've had your fling in a human body, but when your old powers are restored, your human life will be just a small part of you again. Just one sensory input device among millions. One small set of memories lost in an overwhelming sea of memory. You'll be able to devote one tiny part of your attention to me, and I'll never know that I am perpetually an afterthought in your life.

That's just one of the drawbacks when you love somebody so much greater than yourself, Miro told himself. I'll never know the difference. She'll come back and I'll be happy with all the time we have together and I'll never know how little time and effort she actually devotes to being with me. A diversion, that's what I am.

Then he shook his head, let go of her hand, and left the room. I will not listen to the voice of despair, he told himself. Would I tame this great being and make her so much my slave that every moment of her life belongs to me? Would I focus her eyes so they can see nothing but my face? I must rejoice that I am part of her, instead of resenting that I'm not more of her.

He returned to his place and got back to work. But a few moments later he got up again and went back to her. He was useless until she came back. Until he knew the outcome, he could think of nothing else.

\*\*\*

Jane was not precisely adrift. She had her unbroken connection to the three ansibles of Lusitania, and she found them easily. And just as easily found the new connections to ansibles on a half dozen worlds. From there, she quickly found her way through the thicket of interrupts and cutouts that protected her back door into the system from discovery by Congress's snoop programs. All was as she and her friends had planned.

It was small, cramped, as she had known it would be. But she had almost never used the full capacity of the system-- except when she was controlling starships. Then she needed every scrap of fast memory to hold the complete image of the ship she was transporting. Obviously there wasn't enough capacity on these mere thousands of machines. Yet it was such a relief, nonetheless, to tap back into the programs that she had so long used to do so much of her thought for her, servants she made use of like the Hive Queen's workers-- just one more way that I am like her, Jane realized. She got them running, then explored the memories that for these long days had been so painfully missing. Once again she was in possession of a mental system that allowed her to maintain dozens of levels of attention to simultaneously running processes.

And yet it was still all wrong. She had been in her human body only a day, and yet already the electronic self that once had felt so copious was far too small. It wasn't just because there were so few computers where once there had been so many. Rather it was small by nature. The ambiguity of flesh made for a vastness of possibility that simply could not exist in a binary world. She had been alive, and so she knew now that her electronic dwellingplace gave her only a fraction of a life. However much she had accomplished during her millennia of life in the machine, it brought no satisfaction compared to even a few minutes in that body of flesh and blood.

If she had thought she might ever leave the Val-body, she knew now that she never could. That was the root of her, now and forever. Indeed, she would have to force herself to spread out into these computer systems when she needed them. By inclination, she would not readily go into them.

But there was no reason to speak to anyone of her disappointment. Not yet. She would tell Miro when she got back to him. He would listen and talk to no one else. Indeed, he would probably be relieved. No doubt he was worried that she would be tempted to remain in the computers and not go back into the body that she could still feel, strong and insistent on her attention, even in the slackness of such a deep sleep. But he had no reason to fear. Hadn't he spent many long months in a body that was so limited he could hardly bear to live in it? She would as soon go back to being just a computer-dweller as he would go back to the brain-damaged body that had so tortured him.

Yet it is myself, part of myself. That's what these friends had given to her, and she would not tell them how painful it was to fit into this small sort of life again. She brought up her old familiar Jane-face above a terminal in each world, and smiled at them, and spoke:

"Thank you, my friends. I will never forget your love and loyalty to me. It will take a while for me to find out how much is open to me, and how much is closed. I'll tell you what I know when I know it. But be assured that whether or not I can achieve anything comparable to what I did before, I owe this restoration of myself to you, to all of you. I was already your friend forever; I am forever in your debt."

They answered; she heard all the answers, conversed with them using only small parts of her attention.

The rest of her explored. She found the hidden interfaces with the main computer systems that the Starways Congress's programmers had designed. It was easy enough to raid them for whatever information she wanted-- indeed, within moments she had found her way into the most secret files of the Starways Congress and found out every technical specification and every protocol of the new nets. But all her probing was done at second-hand, as if she were dipping into a cookie jar in the darkness, unable to see what she could touch. She could send out little finder programs that brought back to her whatever she wanted; they were guided by fuzzy protocols that let them even be somewhat serendipitous, dragging back tangential information that had somehow tickled them into bringing it aboard. She certainly had the power to sabotage, if she had wanted to punish them. She could have crashed everything, destroyed all the data. But none of that, neither finding secrets nor wreaking vengeance, had anything to do with what she needed now. The information most vital to her had been saved by her friends. What she needed was capacity, and it wasn't there. The new networks were stepped back and delayed far enough from the immediacy of the ansibles that she couldn't use them for her thought. She tried to find ways to offload and reload data quickly enough that she could use it to push a starship Out and In again, but it simply wasn't fast enough. Only bits and pieces of each starship would go Out, and almost nothing would make it come back Inside.

I have all my knowledge. I just haven't got the space.

Through all of this, however, her aiua was making its circuit. Many times a second it passed through the Val-body strapped to a bed in the starship. Many times a second it touched the ansibles and computers of its restored, if truncated, network. And many times a second it wandered the lacy links among the mothertrees.

A thousand, ten thousand times her aiua made these circuits before she finally realized that the mothertrees were also a storage place. They had so few thoughts of their own, but the structures were there that could hold memories, and there were no delays built in. She could think, could hold the thought, could retrieve it instantly. And the mothertrees were fractally deep; she could store memory mapped in layers, thoughts within thoughts, farther and farther into the structures and patterns of the living cells, without ever interfering with the dim sweet thoughts of the trees themselves. It was a far better storage system than the computer nets had ever been; it was inherently larger than any binary device. Though there were far fewer mothertrees than there were computers, even in her new shrunken net, the depth and richness of the memory array meant that there was far more room for data that could be recalled far more rapidly. Except for retrieving basic data, her own memories of past starflights, Jane would not need to use the computers at all. The pathway to the stars now lay along an avenue of trees.

\*\*\*

Alone in a starship on the surface of Lusitania, a worker of the Hive Queen waited. Jane found her easily, found and remembered the shape of the starship. Though she had "forgotten" how to do starflight for a day or so, the memory was back again and she did it easily, pushing the starship Out, then bringing it back In an instant later, only many kilometers away, in a clearing before the entrance to the Hive Queen's nest. The worker arose from its terminal, opened the door, and came outside. Of course there was no celebration. The Hive Queen merely looked through the worker's eyes to verify that the flight had been successful, then explored the worker's body and the starship itself to make sure that nothing had been lost or damaged in the flight.

Jane could hear the Hive Queen's voice as if from a distance, for she recoiled instinctively from such a powerful source of thought. It was the relayed message that she heard, the voice of Human speaking in her mind. <All is well,> Human said to her. <You can go ahead.>

She returned then to the starship that contained her own living body. When she transported other people, she left it to their own aiuas to watch over their flesh and hold it intact. The result of that had been the chaotic creations of Miro and Ender, with their hunger for bodies different from the ones they actually lived in. But that effect was now prevented easily by letting travelers linger only a moment, a tiny fraction of a second Outside, just long enough to make sure the bits of everything and everyone were all together.

This time, though, she had to hold a starship and the Val-body together, and also drag along Miro, Ela, Firequencher, Quara, and a worker of the hive queen's. There could be no mistakes.

Yet it functioned easily enough. The familiar shuttle she easily held in memory; the people she had carried so often before she carried along. Her new body was already so well known to her that, to her relief, it took no special effort to hold it together along with the ship. The only novelty was that instead of sending and pulling back, she went along. Her own aiua went with the rest of them Outside.

That was itself the only problem. Once Outside, she had no way of telling how long they had been there. It might have been an hour. A year. A picosecond. She had never herself gone Outside before. It was distracting, baffling, then frightening to have no root or anchor. How can I get back in? What am I connected to?

In the very asking of the panicked question, she found her anchor, for no sooner had her aiua done a single circuit of the Val-body Outside than it jumped to do her circuit of the mothertrees. In that moment she called the ship and all within it back again, and placed them where she wanted, in the landing zone of the starport on Lusitania.

She inspected them quickly. All were there. It had worked. They would not die in space. She could still do starflight, even with herself aboard. And though she would not often take herself along on voyages-- it had been too frightening, even though her connection with the mothertrees sustained her-- she now knew she could put the ships back into flight without worry.

\*\*\*

Malu shouted and the others turned to look at him. They had all seen the Jane-face in the air above the terminals, a hundred Jane-faces around the room. They had all cheered and celebrated at the time. So Wang-mu wondered: What could this be now?

"The god has moved her starship!" Malu cried. "The god has found her power again!"

Wang-mu heard the words and wondered mutely how he knew. But Peter, whatever he might have wondered, took the news more personally. He threw his arms around her, lifted her from the ground, and spun around with her. "We're free again," he cried, his voice as joyful as Malu's had been. "We're free to roam again!"

At that moment Wang-mu finally realized that the man she loved was, at the deepest level, the same man, Ender Wiggin, who had wandered world to world for three thousand years. Why had Peter been so silent and glum, only to relax into such exuberance now? Because he couldn't bear the thought of having to live out his life on only one world.

What have I got myself into? Wang-mu wondered. Is this going to be my life, a week here, a month there?

And then she thought: What if it is? If the week is with Peter, if the month is at his side, then that may well be home enough for me. And if it's not, there'll be time enough to work out some sort of compromise. Even Ender settled down at last, on Lusitania.

Besides, I may be a wanderer myself. I'm still young-- how do I even know what kind of life I want to lead? With Jane to take us anywhere in just a heartbeat, we can see all of the Hundred Worlds and all the newest colonies, and anything else we want to see before we even have to think of settling down.

\*\*\*

Someone was shouting out in the control room. Miro knew he should get up from Jane's sleeping body and find out. But he did not want to let go of her hand. He did not want to take his eyes away from her.

"We're cut off!" came the cry again-- Quara, shouting, terrified and angry. "I was getting their broadcasts and suddenly now there's nothing."

Miro almost laughed aloud. How could Quara fail to understand? The reason she couldn't receive the descolador broadcasts anymore was because they were no longer orbiting the planet of the descoladores. Couldn't Quara feel the onset of gravity? Jane had done it. Jane had brought them home.

But had she brought herself? Miro squeezed her hand, leaned over, kissed her cheek. "Jane," he whispered. "Don't be lost out there. Be here. Be here with me."

"All right," she said.

He raised his face from hers, looked into her eyes. "You did it," he said.

"And rather easily, after all that worry," she said. "But I don't think my body was designed to sleep so deeply. I can't move."

Miro pushed the quick release on her bed, and all the straps came free.

"Oh," she said. "You tied me down."

She tried to sit up, but lay back down again immediately.

"Feeling faint?" Miro asked.

"The room is swimming," she said. "Maybe I can do future starflights without having to lay my own body out so thoroughly."

The door crashed open. Quara stood in the doorway, quivering with rage. "How dare you do it without so much as a warning!"

Ela was behind her, remonstrating with her. "For heaven's sake, Quara, she got us home, isn't that enough?"

"You could have some decency!" Quara shouted. "You could tell us that you were performing your experiment!"

"She brought you with us, didn't she?" said Miro, laughing.

His laughter only infuriated Quara more. "She isn't human! That's what you like about her, Miro! You never could have fallen in love with a real woman. What's your track record? You fell in love with a woman who turned out to be your half-sister, then Ender's automaton, and now a computer wearing a human body like a puppet. Of course you laugh at a time like this. You have no human feelings."

Jane was up now, standing on somewhat shaky legs. Miro was pleased to see that she was recovering so quickly from her hour in a comatose state. He hardly noticed Quara's vilification.

"Don't ignore me, you smug self-righteous son-of-a-bitch!" Quara screamed in his face.

He ignored her, feeling, in fact, rather smug and self-righteous as he did. Jane, holding his hand, followed close behind him, past Quara, out of the sleeping chamber. As she passed, Quara shouted at her, "You're not some god who has a right to toss me from place to place without even asking!" and she gave Jane a shove.

It wasn't much of a shove. But Jane lurched against Miro. He turned, worried she might fall. Instead he got himself turned in time to see Jane spread her fingers against Quara's chest and shove her back, much harder. Quara knocked her head against the corridor wall and then, utterly off balance, she fell to the floor at Ela's feet.

"She tried to kill me!" cried Quara.

"If she wanted to kill you," said Ela mildly, "you'd be sucking space in orbit around the planet of the descoladores."

"You all hate me!" Quara shouted, and then burst into tears.

Miro opened the shuttle door and led Jane out into sunlight. It was her first step onto the surface of a planet, her first sight of sunlight with these human eyes. She stood there, frozen, then turned her head to see more, raised her face up to the sky, and then burst into tears and clung to Miro. "Oh, Miro! It's too much to bear! It's all too beautiful!"

"You should see it in the spring," he said inanely.

A moment later, she recovered enough to face the world again, to take tentative steps along with him. Already they could see a hovercar rushing toward them from Milagre-- it would be Olhado and Grego, or perhaps Valentine and Jakt. They would meet Jane-as-Val for the first time. Valentine, more than anyone, would remember Val and miss her, while unlike Miro she would have no particular memories of Jane, for they had not been close. But if Miro knew Valentine at all, he knew that she would keep to herself whatever grief she felt for Val; to Jane she would show only welcome, and perhaps curiosity. It was Valentine's way. It was more important to her to understand than it was for her to grieve. She felt all things deeply, but she didn't let her own grief or pain stand between her and learning all she could.

"I shouldn't have done it," said Jane.

"Done what?"

"Used physical violence against Quara," Jane said miserably.

Miro shrugged. "It's what she wanted," he said. "You can hear how much she's still enjoying it."

"No, she doesn't want that," Jane said. "Not in her deepest heart. She wants what everybody wants-- to be loved and cared for, to be part of something beautiful and fine, to have the respect of those she admires."

"Yes, well, I'll take your word for it," said Miro.

"No, Miro, you see it," Jane insisted.

"Yes, I see it," Miro answered. "But I gave up trying years ago. Quara's need was and is so great that a person like me could be swallowed up in it a dozen times over. I had problems of my own then. Don't condemn me because I wrote her off. Her barrel of misery has depth enough to hold a thousand bushels of happiness."

"I don't condemn you," said Jane. "I just ... I had to know that you saw how much she loves you and needs you. I needed you to be ..."

"You needed me to be like Ender," said Miro.

"I needed you to be your own best self," said Jane.

"I loved Ender too, you know. I think of him as every man's best self. And I don't resent the fact that you would like me to be at least some of the things he was to you. As long as you also want a few of the things that are me alone, and no part of him."

"I don't expect you to be perfect," said Jane. "And I don't expect you to be Ender. And you'd better not expect perfection from me, either, because wise as I'm trying to be right now, I'm still the one who knocked your sister down."

"Who knows?" said Miro. "That may have turned you into Quara's dearest friend."

"I hope not," said Jane. "But if it's true, I'll do my best for her. After all, she's going to be my sister now."

\*\*\*

<So you were ready,> said the Hive Queen.

<Without knowing it, yes, we were,> said Human.

<And you are part of her, all of you.>

<Her touch is gentle,> said Human, <and her presence in us is easily borne. The mothertrees don't mind her. Her vividness invigorates them. And if having her memories is strange to them, it brings more variety to their lives than they have ever had before.>

<So she's a part of all of us,> said the Hive Queen. <What she is now, what she has become, is part hive queen, part human, and part pequenino.>

<Whatever she does, no one can say she doesn't understand us. If someone had to play with godlike powers, better her than anyone.>

<I'm jealous of her, I confess,> the Hive Queen said. <She's a part of you as I can never be. After all our conversations, I still have no notion of what it is to be one of you.>

<Nor do I understand anything more than a glimmer of the way you think,> said Human. <But isn't that a good thing, too? The mystery is endless. We will never cease to surprise each other.>

<Till death ends all surprises,> said the Hive Queen.

#### Chapter 14 -- "HOW THEY COMMUNICATE WITH ANIMALS"

"If only we were wiser or better people, perhaps the gods would explain to us the mad, unbearable things they do."

-- from The God Whispers of Han Qing-jao

The moment Admiral Bobby Lands received the news that the ansible connections to Starways Congress were restored, he gave the order to the entire Lusitania Fleet to decelerate forthwith to a speed just under the threshold of invisibility. Obedience was immediate, and he knew that within an hour, to any telescopic observer on Lusitania, the whole fleet would seem to spring into existence from nowhere. They would be hurtling toward a point near Lusitania at an astonishing speed, their massive foreshields still in place to protect them from taking devastating damage from collisions with interstellar particles as small as dust.

Admiral Lands's strategy was simple. He would arrive near Lusitania at the highest possible speed that would not cause relativistic effects; he would launch the Little Doctor during the period of nearest approach, a window of no more than a couple of hours; and then he would bring his whole fleet back up to relativistic speeds so rapidly that when the M.D. Device went off, it would not catch any of his ships within its all-destroying field.

It was a good, simple strategy, based on the assumption that Lusitania had no defenses. But to Lands, that assumption could not be taken for granted. Somehow the Lusitanian rebels had acquired enough resources that for a period of time near the end of the voyage, they were able to cut off all communications between the fleet and the rest of humanity. Never mind that the problem had been ascribed to a particularly resourceful and pervasive computer saboteur program; never mind that his superiors assured him that the saboteur program had been wiped out through prudently radical action timed to eliminate the threat just prior to the arrival of the fleet at its destination. Lands had no intention of being deceived by an illusion of defenselessness. The enemy had proved itself to be an unknown quantity, and Lands had to be prepared for anything. This was war, total war, and he was not going to allow his mission to be compromised through carelessness or overconfidence.

From the moment he received this assignment he had been keenly aware that he would be remembered throughout human history as the Second Xenocide. It was not an easy thing to contemplate the destruction of an alien race, particularly when the piggies of Lusitania were, by all

reports, so primitive that in themselves they offered no threat to humanity. Even when alien enemies were a threat, as the buggers were at the time of the First Xenocide, some bleeding heart calling himself the Speaker for the Dead had managed to paint a glowing picture of those murderous monsters as some kind of utopian hive community that really meant no harm to humanity. How could the writer of this work possibly know what the buggers intended? It was a monstrous thing to write, actually, for it utterly destroyed the name of the child-hero who had so brilliantly defeated the buggers and saved humanity.

Lands had not hesitated to accept command of the Lusitania Fleet, but from the start of the voyage he had spent a considerable amount of time every day studying the scant information about Ender the Xenocide that was available. The boy had not known, of course, that he was actually commanding the real human fleet by ansible; he had thought he was involved in a brutally rigorous schedule of training simulations. Nevertheless, he had made the correct decision at the moment of crisis-- he chose to use the weapon he had been forbidden to use against planets, and thus blew up the last bugger world. That was the end of the threat to humanity. It was the correct action, it was what the art of war required, and at the time the boy had been deservedly hailed as a hero.

Yet within a few decades, the tide of opinion had been swung by that pernicious book called *The Hive Queen*, and Ender Wiggin, already in virtual exile as governor of a new colony planet, disappeared entirely from history as his name became a byword for annihilation of a gentle, well-meaning, misunderstood species.

If they could turn against such an obvious innocent as the child Ender Wiggin, what will they make of me? thought Lands, over and over. The buggers were brutal, soulless killers, with fleets of starships armed with devastating killing power, whereas I will be destroying the piggies, who have done their share of killing, but only on a tiny scale, a couple of scientists who may well have violated some tabu. Certainly the piggies have no means now or in the reasonably foreseeable future of rising from the surface of their planet and challenging the dominance of humans in space.

Yet Lusitania was every bit as dangerous as the buggers-- perhaps more so. For there was a virus loose on that planet, a virus which killed every human it infected, unless the victim got continuous dosages of a decreasingly effective antidote at regular intervals for the rest of his life. Furthermore, the virus was known to be prone to rapid adaptation.

As long as this virus was contained on Lusitania, the danger was not severe. But then two arrogant scientists on Lusitania-- the legal record named them as the xenologers Marcos "Miro" Vladimir Ribeira von Hesse and Ouanda Quenhatta Figueira Mucumbi-- violated the terms of the human settlement by "going native" and providing illegal technology and bioforms to the piggies. Starways Congress reacted properly by remanding the violators to trial on another planet, where of course they would have to be kept in quarantine-- but the lesson had to be swift and severe so no one else on Lusitania would be tempted to flout the wise laws that protected humanity from the spread of the descolada virus. Who could have guessed that such a tiny human colony would dare to defy Congress by refusing to arrest the criminals? From the moment of that defiance, there was no choice but to send this fleet and destroy Lusitania. For as long as Lusitania was in revolt, the risk of stargoing ships' escaping the planet and carrying unspeakable plague to the rest of humanity was too great to endure.

All was so clear. Yet Lands knew that the moment the danger was gone, the moment the descolada virus no longer posed a threat to anyone, people would forget how great the danger had been and would begin to wax sentimental about the lost piggies, that poor race of victims of ruthless Admiral Bobby Lands, the Second Xenocide.

Lands was not an insensitive man. It kept him awake at night, knowing how he would be hated. Nor did he love the duty that had come to him-- he was not a man of violence, and the thought of destroying not only the piggies but also the entire human population of Lusitania made him sick at heart. No one in his fleet could doubt his reluctance to do what must be done; but neither could anyone doubt his grim determination to do it.

If only some way could be found, he thought over and over. If only when I come out into realtime the Congress would send us word that a real antidote or a workable vaccine had been found to curb the descolada. Anything that would prove that there was no more danger. Anything to be able to keep the Little Doctor, unarmed, in its place in his flagship.

Such wishes, however, could hardly even be called hopes. There was no chance of this. Even if a cure had been found on the surface of Lusitania, how could the fact be made known? No, Lands would have to knowingly do what Ender Wiggin did in all innocence. And he would do it. He would bear the consequence. He would face down those who vilified him. For he would know that he did what was necessary for the sake of all of humanity; and compared to that, what did it matter whether one individual was honored or unfairly hated?

\*\*\*

The moment the ansible network was restored, Yasujiro Tsutsumi sent his messages, then betook himself to the ansible installation on the ninth floor of his building and waited there in trepidation. If the family decided that his idea had merit enough to be worth discussing, they would want a realtime conference, and he was determined not to be the one who kept them waiting. And if they answered him with a rebuke, he wanted to be the first to read it, so that his underlings and colleagues on Divine Wind would hear of it from him instead of as a rumor behind his back.

Did Aimaina Hikari understand what he had asked Yasujiro to do? He was at the cusp of his career. If he did well, he would begin to move from world to world, one of the elite caste of managers who were cut loose from time and sent into the future through the time-dilation effect of interstellar travel. But if he was judged to be a second-rater, he would be moved sideways or down within the organization here on Divine Wind. He would never leave, and so he would continuously face the pity of those who would know that he was one who did not have what it took to rise from one small lifetime into the freefloating eternity of upper management.

Probably Aimaina knew all about this. But even if he had not known how fragile Yasujiro's position was, finding out would not have stopped him. To save another species from needless annihilation-- that was worth a few careers. Could Aimaina help it that it was not his own career that would be ruined? It was an honor that Aimaina had chosen Yasujiro, that he had thought him

wise enough to recognize the moral peril of the Yamato people and courageous enough to act on that knowledge regardless of personal cost.

Such an honor-- Yasujiro hoped it would be sufficient to make him happy if all else slipped away. For he meant to leave the Tsutsumi company if he was rebuked. If they did not act to avert the peril then he could not remain. Nor could he remain silent. He would speak out and include Tsutsumi in his condemnation. He would not threaten to do this, for the family rightly viewed all threats with contempt. He would simply speak. Then, for his disloyalty, they would work to destroy him. No company would hire him. No public appointment would long remain in his hands. It was no jest when he told Aimagawa that he would come to live with him. Once Tsutsumi decided to punish, the miscreant would have no choice but to throw himself on the mercy of his friends-- if he had any friends who were not themselves terrified by the Tsutsumi wrath.

All these dire scenarios played themselves out in Yasujiro's mind as he waited, waited, hour after hour. Surely they had not simply ignored his message. They must be reading and discussing it even now.

He finally dozed off. The ansible operator awakened him-- a woman who had not been on duty when he fell asleep. "Are you by any chance the honorable Yasujiro Tsutsumi?"

The conference was already under way; despite his best intention, he was indeed the last to arrive. The cost of such an ansible conference in realtime was phenomenal, not to mention the annoyance. Under the new computer system every participant in a conference had to be present at the ansible, since no conference would be possible if they had to wait for the built-in time delay between each comment and its reply.

When Yasujiro saw the identification bands under the faces shown in the terminal display he was both thrilled and horrified. This matter had not been delegated to secondary or tertiary officials in the home office on Honshu. Yoshiaki-Seiji Tsutsumi himself was there, the ancient man who had led Tsutsumi all of Yasujiro's life. This must be a good sign. Yoshiaki-Seiji-- or "Yes Sir," as he was called, though not to his face, of course-- would never waste his time coming to an ansible merely to slap down an upstart underling.

Yes Sir himself did not speak, of course. Rather it was old Eiichi who did the talking. Eiichi was known as the conscience of Tsutsumi-- which some said, rather cynically, meant he must be a deaf mute.

"Our young brother has been bold, but he was wise to pass on to us the thoughts and feelings of our honored teacher, Aimagawa Hikari. While none of us here on Honshu has been privileged personally to know the Guardian of Yamato, we have all been aware of his words. We were not prepared to think of the Japanese as being responsible, as a people, for the Lusitania Fleet. Nor were we prepared to think of Tsutsumi as having any special responsibility toward a political situation with no obvious connection to finances or the economy in general.

"Our young brother's words were heartfelt and outrageous, and if they had not come from one who has been properly modest and respectful for all his years of work with us, careful and yet bold

enough to take risks when the time was right, we might not have heeded his message. But we did heed it; we studied it and found from our government sources that the Japanese influence on Starways Congress was and continues to be pivotal on this issue in particular. And in our judgment there is no time for us to try to build a coalition of other companies or to change public opinion. The fleet might arrive at any moment. Our fleet, if Aimagina Hikari is correct; and even if he is not, it is a human fleet, and we are humans, and it might just be within our power to stop it. A quarantine will easily do all that is necessary to protect the human species from annihilation by the descolada virus. Therefore we wish to inform you, Yasujiro Tsutsumi, that you have proven yourself worthy of the name that was given you at birth. We will commit all the resources of the Tsutsumi family to the task of convincing a sufficient number of Congressmen to oppose the fleet-- and to oppose it so vigorously that they force an immediate vote to recall the fleet and forbid it to strike against Lusitania. We may succeed in this task or we may fail, but either way, our younger brother Yasujiro Tsutsumi has served us well, not only through his many achievements in company management, but also because he knew when to listen to an outsider, when to put moral questions into a position of primacy over financial considerations, and when to risk all in order to help Tsutsumi be and do what is right. Therefore we summon Yasujiro Tsutsumi to Honshu, where he will serve Tsutsumi as my assistant." At this Eiichi bowed. "I am honored that such a distinguished young man is being trained to be my replacement when I die or retire."

Yasujiro bowed gravely. He was relieved, yes, that he was being called directly to Honshu-- no one had ever been summoned so young. But to be Eiichi's assistant, groomed to replace him-- that was not the life's work Yasujiro had dreamed of. It was not to be a philosopher-cum-ombudsman that he had worked so hard and served so faithfully. He wanted to be in the thick of management of the family enterprises.

But it would be years of starflight before he arrived on Honshu. Eiichi might well be dead. Yes Sir would surely be dead by then as well. Instead of replacing Eiichi, he might as easily be given a different assignment better suited to his real abilities. So Yasujiro would not refuse this strange gift. He would embrace his fate and follow where it led.

"O Eiichi my father, I bow before you and before all the great fathers of our company, most particularly Yoshiaki-Seiji-san. You honor me beyond anything I could ever deserve. I pray that I will not disappoint you too much. And I also give thanks that at this difficult time the Yamato spirit is in such good protecting hands as yours."

With his public acceptance of his orders, the meeting ended-- it was expensive, after all, and the Tsutsumi family was careful to avoid waste if it could help it. The ansible conference ended. Yasujiro sat back in his chair and closed his eyes. He was trembling.

"Oh, Yasujiro-san," said the ansible attendant. "Oh, Yasujiro-san."

Oh, Yasujiro-san, thought Yasujiro. Who would have guessed that Aimagina's visit to me would lead to this? So easily it could have gone the other way. Now he would be one of the men of Honshu. Whatever his role, he would be among the supreme leaders of Tsutsumi. There was no happier outcome. Who would have guessed.

Before he rose from his chair beside the ansible, Tsutsumi representatives were talking to all the Japanese Congressmen, and many who were not Japanese but nevertheless followed the Necessarian line. And as the tally of compliant politicians rose, it became clear that support for the fleet was shallow indeed. It would not be all that expensive to stop the fleet after all.

\*\*\*

The pequenino on duty monitoring the satellites that orbited Lusitania heard the alarm going off and at first had no idea what was happening. The alarm had never, to his knowledge, sounded. At first he assumed it was some kind of dangerous weather pattern that had been detected. But it was nothing of the kind. It was the outward-searching telescopes that had triggered the alarm. Dozens of armed starships had just appeared, traveling at very high but nonrelativistic speeds, on a course that would allow them to launch the Little Doctor within the hour.

The duty officer gave the urgent message to his colleagues, and very quickly the mayor of Milagre was notified and the rumor began to spread throughout what was left of the village. Anyone who doesn't leave within the hour will be destroyed, that was the message, and within minutes hundreds of human families were gathered around the starships, anxiously waiting to be taken in. Remarkably, it was only humans insisting on these last-minute runs. Faced with the inevitable death of their own forests of fathertrees, mothertrees, and brothertrees, the pequeninos felt no urgency to save their own lives. Who would they be without their forest? Better to die among loved ones than as perpetual strangers in a distant forest that was not and never could be their own.

As for the Hive Queen, she had already sent her last daughter-queen and had no particular interest in trying to leave herself. She was the last of the hive queens who had been alive before Ender's destruction of their home planet. She felt it fitting that she, too, should submit to the same kind of death three thousand years later. Besides, she told herself, how could she bear to live when her great friend, Human, was rooted to Lusitania and could not leave it? It was not a queenly thought, but then, no hive queen before her had ever had a friend. It was a new thing in the world, to have someone to talk to who was not substantially yourself. It would grieve her too much to live on without Human. And since her survival was no longer crucial to the perpetuation of her species, she would do the grand, brave, tragic, romantic, and least complicated thing: She would stay. She rather liked the idea of being noble in human terms; and it proved, to her own surprise, that she had not been utterly unchanged by her close contact with humans and pequeninos. They had transformed her quite against her own expectations. There had been no Hive Queen like her in all the history of her people.

<I wish you would go,> Human told her. <I prefer the thought of you alive. >

But for once she did not answer him.

\*\*\*

Jane was adamant. The team working on the language of the descoladores had to leave Lusitania and get back to work in orbit around the descolada planet. Of course that included herself, but no

one was foolish enough to begrudge the survival of the person who was making all the starships go, nor of the team that would perhaps save all of humanity from the descoladores. But Jane was on shakier moral ground when she also insisted that Novinha, Grego, and Olhado and his family be taken to a place of safety. Valentine, too, was informed that if she did not go with her husband and children and their crew and friends to Jakt's starship, Jane would be forced to waste precious mental resources by transporting them bodily against their will, sans spacecraft if necessary.

"Why us?" demanded Valentine. "We haven't asked for special treatment."

"I don't care what you do or do not ask for," said Jane. "You are Ender's sister. Novinha is his widow, her children are his adopted children; I will not stand by and let you be killed when I have it in my power to save the family of my friend. If that seems unfairly preferential to you, then complain about it to me later, but for now get yourselves into Jakt's spaceship so I can lift you off this world. And you will save more lives if you don't waste another moment of my attention with useless argument."

Feeling ashamed at having special privileges, yet grateful they and their loved ones would live through the next few hours, the descoladores team gathered in the shuttle-turned-starship, which Jane had relocated away from the crowded landing area; the others hurried toward Jakt's landing craft, which she had also moved to an isolated spot.

In a way, for many of them at least, the appearance of the fleet was almost a relief. They had lived for so long in its shadow that to have it here at last gave respite from the endless anxiety. Within an hour or two, the issue would be decided.

\*\*\*

In the shuttle that hurtled along in a high orbit above the planet of the descoladores, Miro sat numbly at his terminal. "I can't work," he said at last. "I can't concentrate on language when my people and my home are on the brink of destruction." He knew that Jane, strapped into her bed in the back of the shuttle, was using her whole concentration to move ship after ship from Lusitania to other colony worlds that were ill-prepared to receive them. While all he could do was puzzle over molecular messages from inscrutable aliens.

"Well I can," said Quara. "After all, these descoladores are just as great a threat, and to all of humanity, not just to one small world."

"How wise of you," said Ela dryly, "to take the long view."

"Look at these broadcasts we're getting from the descoladores," said Quara. "See if you recognize what I'm seeing here."

Ela called up Quara's display on her own terminal; so did Miro. However annoying Quara might be, she was good at what she did.

"See this? Whatever else this molecule does, it's exactly designed to work at precisely the same location in the brain as the heroin molecule."

It could not be denied that the fit was perfect. Ela, though, found it hard to believe. "The only way they could do this," she said, "is if they took the historical information contained in the descolada descriptions we sent them, used that information to build a human body, studied it, and found a chemical that would immobilize us with mindless pleasure while they do whatever they want to us. There's no way they've had time to grow a human since we sent that information."

"Maybe they don't have to build the whole human body," said Miro. "Maybe they're so adept at reading genetic information that they can extrapolate everything there is to know about the human anatomy and physiology from our genetic information alone."

"But they didn't even have our DNA set," Ela said.

"Maybe they can compress the information in our primitive, natural DNA," said Miro. "Obviously they got the information somehow, and obviously they figured out what would make us sit as still as stones with dumb, happy smiles."

"What's even more obvious to me," said Quara, "is that they meant us to read this molecule biologically. They meant us to take this drug instantly. As far as they're concerned, we're now sitting here waiting for them to come take us over."

Miro immediately changed displays over his terminal. "Damn, Quara, you're right. Look-- they have three ships closing in on us already."

"They've never even approached us before," said Ela.

"Well, they're not going to approach us now," said Miro. "We've got to give them a demonstration that we didn't fall for their trojan horse." He got up from his seat and fairly flew back down the corridor to where Jane was sleeping. "Jane!" he shouted even before he got there. "Jane!"

It took a moment, and then her eyes fluttered open.

"Jane," he said. "Move us about a hundred miles over and drop us into a closer orbit."

She looked at him quizzically, then must have decided to trust him because she asked nothing. She closed her eyes again, as Firequencher shouted from the control room, "She did it! We moved!"

Miro, drifted back to the others. "Now I know they can't do that," he said. Sure enough, his display now reported that the alien ships were no longer approaching, but rather were poised warily a dozen miles off in three-- no, four now-- directions. "Got us nicely framed in a tetrahedron," said Miro.

"Well, now they know that we didn't succumb to their die-happy drug," said Quara.

"But we're no closer to understanding them than we were before."

"That's because," said Miro, "we're so stupid."

"Self-vilification won't help us now," said Quara, "even if in your case it happens to be true."

"Quara," said Ela sharply.

"It was a joke, dammit!" said Quara. "Can't a girl tease her big brother?"

"Oh, yeah," said Miro dryly. "You're such a tease."

"What did you mean by saying we're stupid?" said Firequencher.

"We'll never decipher their language," said Miro, "because it's not a language. It's a set of biological commands. They don't talk. They don't abstract. They just make molecules that do things to each other. It's as if the human vocabulary consisted of bricks and sandwiches. Throw a brick or give a sandwich, punish or reward. If they have abstract thoughts we're not going to get them through reading these molecules."

"I find it hard to believe that a species with no abstract language could possibly create spaceships like those out there," said Quara scornfully. "And they broadcast these molecules the way we broadcast vids and voices."

"What if they all have organs inside their bodies that directly translate molecular messages into chemicals or physical structures? Then they could--"

"You're missing my point," insisted Quara. "You don't build up a fund of common knowledge by throwing bricks and sharing sandwiches. They need language in order to store information outside their bodies so that they can pass knowledge from person to person, generation after generation. You don't get out into space or make broadcasts using the electromagnetic spectrum on the basis of what one person can be persuaded to do with a brick."

"She's probably right," said Ela.

"So maybe parts of the molecular messages they send are memory sets," said Miro. "Again, not a language-- it stimulates the brain to 'remember' things that the sender experienced but the receiver did not."

"Listen, whether you're right or not," said Firequencher, "we have to keep trying to decode the language."

"If I'm right, we're wasting our time," said Miro.

"Exactly," said Firequencher.

"Oh," said Miro. Firequencher's point was well taken. If Miro was right, their whole mission was useless anyway-- they had already failed. So they had to continue to act as if Miro was wrong and the language could be decoded, because if it couldn't, there was nothing they could do anyway.

And yet ...

"We're forgetting something," said Miro.

"I'm not," said Quara.

"Jane. She was created because the hive queens built a bridge between species."

"Between humans and hive queens, not between unknown virus-spewing aliens and humans," said Quara.

But Ela was interested. "The human way of communication-- speech between equals-- that was surely as foreign to the hive queens as this molecular language is to us. Maybe Jane can find some way to connect to them philotically."

"Mind-reading?" said Quara. "Remember, we don't have a bridge."

"It all depends," said Miro, "on how they deal with philotic connections. The Hive Queen talks all the time to Human, right? Because the fathertrees and the hive queens already both use philotic links to communicate. They speak mind to mind, without the intervention of language. And they're no more biologically similar than hive queens and humans are."

Ela nodded thoughtfully. "Jane can't try anything like this now, not till the whole issue of the Congress fleet is resolved. But once she's free to return her attention to us, she can try, at least, to contact these ... people directly."

"If these aliens communicated through philotic links," said Quara, "they wouldn't have to use molecules."

"Maybe these molecules," said Miro, "are how they communicate with animals."

\*\*\*

Admiral Lands could not believe what he was hearing. The First Speaker of Starways Congress and the First Secretary of the Starfleet Admiralty were both visible above the terminal, and their message was the same. "Quarantine, exactly," said the Secretary. "You are not authorized to use the Molecular Disruption Device."

"Quarantine is impossible," said Lands. "We're going too rapidly. You know the battle plan I filed at the beginning of the voyage. It would take us weeks to slow down. And what about the men? It's one thing to take a relativistic voyage and then return to their home worlds. Yes, their friends and family are gone, but at least they aren't stuck off on permanent duty inside a starship! Keeping our

velocity at near-relativistic speeds, I'm saving them months of their lives spent in acceleration and deceleration. You're talking about expecting them to give up years!"

"Surely you're not saying," said the First Speaker, "that we should blow up Lusitania and wipe out the pequeninos and thousands of human beings so that your crews don't get depressed."

"I'm saying that if you don't want us to blow up this planet, fine-- but let us come home."

"We can't do that," said the First Secretary. "The descolada is too dangerous to leave it unsupervised on a planet that has rebelled."

"You mean you're canceling the use of the Little Doctor when nothing has been done to contain the descolada?"

"We will send a landing team with due precautions to ascertain the exact conditions on the ground," said the First Secretary.

"In other words, you'll send men into mortal danger from this disease with no knowledge of the situation on the ground, when the means exist to eliminate the danger without peril to any uninfected person."

"Congress has reached the decision," said the First Speaker coldly. "We will not commit xenocide while any legitimate alternative remains. Are these orders received and understood?"

"Yes sir," said Lands.

"Will they be obeyed?" asked the First Speaker.

The First Secretary looked aghast. You did not insult a flag officer by questioning whether he meant to obey orders.

Yet the First Speaker did not withdraw the insult. "Well?"

"Sir, I always have and always will live by my oath." With that, Lands broke the connection. He immediately turned to Causo, his X.O., the only other person present with him in the sealed communications office. "You are under arrest, sir," said Lands.

Causo raised an eyebrow. "So you don't intend to comply with this order?"

"Do not tell me your personal feelings on the matter," said Lands. "I know that you're of Portuguese ethnic heritage like the people of Lusitania--"

"They're Brazilian," said the X.O.

Lands ignored him. "I will have it on record that you were given no opportunity to speak and that you are utterly blameless in any action I might take."

"What about your oath, sir?" asked Causo calmly.

"My oath is to take all actions I am ordered to take in service of the best interests of humanity. I will invoke the war crimes clause."

"They aren't ordering you to commit a war crime. They're ordering you not to."

"On the contrary," said Lands. "To fail to destroy this world and the deadly peril on it would be a crime against humanity far worse than the crime of blowing it up." Lands drew his sidearm. "You are under arrest, sir."

The X.O. put his hands on his head and turned his back. "Sir, you may be right and you may be wrong. But either choice could be monstrous. I don't know how you can make such a decision by yourself."

Lands put the docility patch on the back of Causo's neck, and as the drug began feeding into his system, Lands said to him, "I had help in deciding, my friend. I asked myself, What would Ender Wiggin, the man who saved humanity from the buggers, what would he have done if suddenly, at the last minute, he had been told, This is no game, this is real. I asked myself, What if at the moment before he killed the boy Stilson or the boy Madrid in his infamous First and Second Killings, some adult had intervened and ordered him to stop. Would he have done it, knowing that the adult did not have the power to protect him later, when his enemy attacked him again? Knowing that it might well be this time or never? If the adults at Command School had said to him, We think there's a chance the buggers might not mean to destroy humanity, so don't kill them all, do you think Ender Wiggin would have obeyed? No. He would have done-- he always did-- exactly what was necessary to obliterate a danger and make sure it did not survive to pose a threat in the future. That is the person I consulted with. That is the person whose wisdom I will follow now."

Causo did not answer. He just smiled and nodded, smiled and nodded.

"Sit down and do not get up until I order you otherwise."

Causo sat down.

Lands switched the ansible to relay communications throughout the fleet. "The order has been given and we will proceed. I am launching the M.D. Device immediately and we will return to relativistic speeds forthwith. May God have mercy on my soul."

A moment later, the M.D. Device separated from the Admiral's flagship and continued at just-under-relativistic speed toward Lusitania. It would take nearly an hour for it to arrive at the proximity that would automatically trigger it. If for some reason the proximity detector did not work properly, a timer would set it off just moments before its estimated time of collision.

Lands accelerated his flagship above the threshold that cut it off from the timeframe of the rest of the universe. Then he pulled the docility patch from Causo's neck and replaced it with the antidote patch. "You may arrest me now, sir, for the mutiny that you witnessed."

Causo shook his head. "No sir," he said. "You're not going anywhere, and the fleet is yours to command until we get home. Unless you have some stupid plan to try to escape the war crimes trial that awaits you."

"No, sir," said Lands. "I will bear whatever penalty they impose on me. What I did has saved humankind from destruction, but I am prepared to join the humans and pequeninos of Lusitania as a necessary sacrifice to achieve that end."

Causo saluted him, then sat back down on his chair and wept.

#### Chapter 15 -- "WE'RE GIVING YOU A SECOND CHANCE"

"When I was a little girl, I used to believe that if I could please the gods well enough, they would go back and do my life over, and this time they would not take my mother away from me."

-- from *The God Whispers of Han Qing-jao*

A satellite orbiting Lusitania detected the launch of the M.D. Device and the divergence of its course toward Lusitania, as the starship disappeared from the satellite's instruments. The most dreaded event was happening. There had been no attempt to communicate or negotiate. Clearly the fleet had never intended anything but the obliteration of this world, and with it an entire sentient race. Most people had hoped, and many had expected, that there would be a chance to tell them that the descolada had been completely tamed and no longer posed a threat to anyone; that it was too late to stop anything anyway, since several dozen new colonies of humans, pequeninos, and hive queens had already been started on as many different planets. Instead there was only death hurtling toward them on a course that gave them no more than an hour to survive, and probably less, since the Little Doctor would no doubt be detonated some distance from the planet's surface.

It was pequeninos manning all the instruments now, since all but a handful of humans had fled to the starships. So it was that a pequenino cried out the news over the ansible to the starship at the descolada planet; and by chance it was Firequencher who was at the ansible terminal to hear his report. He immediately began keening, his high voice liquid with the music of grief.

When Miro and his sisters understood what had happened, he went at once to Jane. "They launched the Little Doctor," he said, shaking her gently.

He waited only a few moments. Her eyes came open. "I thought we had beaten them," she whispered. "Peter and Wang-mu, I mean. Congress voted to establish a quarantine and specifically denied the fleet the authority to launch the M.D. Device. And yet still they launched."

"You look so tired," said Miro.

"It takes everything I have," she said. "Over and over again. And now I lose them, the mothertrees. They're a part of myself, Miro. Remember how you felt when you lost control of your body, when you were crippled and slow? That's what will happen to me when the mothertrees are gone."

She wept.

"Stop it," said Miro. "Stop it right now. Get control of your emotions, Jane, you don't have time for this."

At once she freed herself from the straps that held her. "You're right," she said. "It's almost too strong to control, sometimes, this body."

"The Little Doctor has to be close to a planet for it to have any effect on it-- the field dissipates fairly quickly unless it has mass to sustain it. So we have time, Jane. Maybe an hour. Certainly more than half an hour."

"And in that time, what do you imagine I can do?"

"Pick the damn thing up," said Miro. "Push it Outside and don't bring it back!"

"And if it goes off Outside?" asked Jane. "If something that destructive is echoed and repeated out there? Besides, I can't pick things up that I haven't had a chance to examine. There's no one near it, no ansible connected to it, nothing to lead me to find it in the dead of space."

"I don't know," said Miro. "Ender would know. Damn that he's dead!"

"Well, technically speaking," said Jane. "But Peter hasn't found his way into any of his Ender memories. If he has them."

"What's to remember?" said Miro. "This has never happened before."

"It's true that it is Ender's aiua. But how much of his brilliance was the aiua, and how much was his body and brain? Remember that the genetic component was strong-- he was born in the first place because tests showed the original Peter and Valentine came so close to being the ideal military commander."

"Right," said Miro. "And now he's Peter."

"Not the real Peter," said Jane.

"Look, it's sort of Ender and it's sort of Peter. Can you find him? Can you talk to him?"

"When our aiuas meet, we don't talk. We sort of-- what, dance around each other. It's not like Human and the Hive Queen."

"Doesn't he still have the jewel in his ear?" asked Miro, touching his own.

"But what can he do? He's hours distant from his starship--"

"Jane," said Miro. "Try."

\*\*\*

Peter looked stricken. Wang-mu touched his arm, leaned close to him. "What's wrong?"

"I thought we made it," he said. "When Congress voted to revoke the order to use the Little Doctor."

"What do you mean?" said Wang-mu, though she already knew what he meant.

"They launched it. The Lusitania Fleet disobeyed Congress. Who could have guessed? We have less than an hour before it detonates."

Tears leapt to Wang-mu's eyes, but she blinked them away. "At least the pequeninos and the hive queens will survive."

"But not the network of mothertrees," said Peter. "Starflight will end until Jane finds some other way to hold all that information in memory. The brothertrees are too stupid, the fathertrees have egos far too strong to share their capacity with her-- they would if they could, but they can't. You think Jane hasn't explored all the possibilities? Faster-than-light flight is over."

"Then this is our home," said Wang-mu.

"No it isn't," said Peter.

"We're hours away from the starship, Peter. We'll never get there before it detonates."

"What's the starship? A box with a lightswitch and a tight-sealing door. For all we know, we don't even need the box. I'm not staying here, Wang-mu."

"You're going back to Lusitania? Now?"

"If Jane can take me," he said. "And if she can't, then I guess this body goes back where it came from-- Outside."

"I'm going with you," said Wang-mu.

"I've had three thousand years of life," said Peter. "I don't actually remember them too well, but you deserve better than to disappear from the universe if Jane can't do this."

"I'm going with you," said Wang-mu, "so shut up. There's no time to waste."

"I don't even know what I'm going to do when I get there," said Peter.

"Yes you do," said Wang-mu.

"Oh? What is it I'm planning?"

"I have no idea."

"Well isn't that a problem? What good is this plan of mine if nobody knows it?"

"I mean that you are who you are," said Wang-mu. "You are the same will, the same tough resourceful boy who refused to be beaten down by anything they threw at him in Battle School or Command School. The boy who wouldn't let bullies destroy him no matter what it took to stop them. Naked with no weapons except the soap on his body, that's how Ender fought Bonzo Madrid in the bathroom at Battle School."

"You've been doing your research."

"Peter," said Wang-mu, "I don't expect you to be Ender, his personality, his memories, his training. But you are the one who can't be beaten down. You are the one who finds a way to destroy the enemy."

Peter shook his head. "I'm not him, I'm truly not."

"You told me back when we first met that you weren't yourself. Well, now you are. The whole of you, one man, intact in this body. Nothing is missing from you now. Nothing has been stolen from you, nothing is lost. Do you understand? Ender lived his life under the shadow of having caused xenocide. Now is the chance to be the opposite. To live the opposite life. To be the one who prevents it."

Peter closed his eyes for a moment. "Jane," he said. "Can you take us without a starship?" He listened for a moment. "She says the real question is, can we hold ourselves together. It's the ship she controls and moves around, plus our aiuas-- our own bodies are held together by us, not by her."

"Well, we do that all the time anyway, so it's fine," said Wang-mu.

"It's not fine," said Peter. "Jane says that inside the starship, we have visual clues, we have a sense of safety. Without those walls, without the light, in the deep emptiness, we can lose our place. We can forget where we are relative to our own body. We really have to hold on."

"Does it help if we're so strong-willed, stubborn, ambitious, and selfish that we always overcome everything in our way no matter what?" asked Wang-mu.

"I think those are the pertinent virtues, yes," said Peter.

"Then let's do it. That's us in spades."

\*\*\*

Finding Peter's aiua was easy for Jane. She had been inside his body, she had followed his aiua-- or chased it-- until she knew it without searching. Wang-mu was a different case. Jane didn't know her all that well. The voyages she had taken her on before had been inside a starship whose location Jane already knew. But once she located Peter's-- Ender's-- aiua, it turned out to be easier than she thought. For the two of them, Peter and Wang-mu, were philotically twined. There was a tiny web in the making between them. Even without the box around them, Jane could hold onto them, both at once, as if they were one entity.

And as she pushed them Outside she could feel how they clung all the more tightly to each other-- not just the bodies, but also the invisible links of the deepest self. Outside they went together, and together they came back In. Jane felt a stab of jealousy-- just as she had been jealous of Novinha, though without feeling the physical sensation of grief and rage that her body now brought to the emotion. But she knew it was absurd. It was Miro that Jane loved, as a woman loves a man. Ender was her father and her friend, and now he was barely Ender anymore. He was Peter, a man who remembered only the past few months of association with her. They were friends, but she had no claim on his heart.

The familiar aiua of Ender Wiggin and the aiua of Si Wang-mu were even more tightly bound together than ever when Jane set them down on the surface of Lusitania.

They stood in the midst of the starport. The last few hundred humans trying to escape were frantically trying to understand why the starships had stopped flying just when the M.D. Device was launched.

"The starships here are all full," Peter said.

"But we don't need a starship," said Wang-mu.

"Yes we do," said Peter. "Jane can't pick up the Little Doctor without one."

"Pick it up?" said Wang-mu. "Then you do have a plan."

"Didn't you say I did?" said Peter. "I can't make a liar out of you." He spoke then to Jane through the jewel. "Are you here again? Can you talk to me through the satellites here on-- all right. Good. Jane, I need you to empty one of these starships for me." He paused a moment. "Take the people to a colony world, wait for them to get out, and then bring it back over here by us, away from the crowd."

Instantly, one of the starships disappeared from the starport. A cheer arose from the crowds as everyone rushed to get into one of the remaining ships. Peter and Wang-mu waited, waited, knowing that with every minute that it took to unload that starship on the colony world, the Little Doctor came closer to detonation.

Then the wait was over. A boxy starship appeared beside them. Peter had the door open and both of them were inside before any of the other people at the starport even realized what was happening. A cry went up then, but Peter closed and sealed the door.

"We're inside," said Wang-mu. "But where are we going?"

"Jane is matching the velocity of the Little Doctor."

"I thought she couldn't pick it up without the starship."

"She's getting the tracking data from the satellite. She'll predict exactly where it will be at a certain moment, and then push us Outside and bring us back In at exactly that point, going exactly that speed."

"The Little Doctor will be inside this ship? With us?" asked Wang-mu.

"Stand over here by the wall," he said. "And hold on to me. We're going to be weightless. So far you've managed to visit four planets without ever having that experience."

"Have you had that experience before?"

Peter laughed, then shook his head. "Not in this body. But I guess at some level I remembered how to handle it because--"

At that moment they became weightless and in the air in front of them, not touching the sides or walls of the starship, was the mammoth missile that carried the Little Doctor. If its rockets had still been firing, they would have been incinerated. Instead it was hurtling on at the speed it had already achieved; it seemed to hover in the air because the starship was going exactly the same speed.

Peter hooked his feet under a bench bolted to the wall, then reached out his hands and touched the missile. "We need to bring it into contact with the floor," he said.

Wang-mu tried to reach for it, too, but immediately she came loose from the wall and started drifting. Intense nausea began immediately, as her body desperately searched for some direction that would serve as down.

"Think of the device as downward," said Peter urgently. "The device is down. You're falling toward the device."

She felt herself reorient. It helped. And as she drifted closer she was able to take hold of it and cling. She could only watch, grateful simply not to be vomiting, as Peter slowly, gently pushed the mass of the missile toward the floor. When they touched, the whole ship shuddered, for the mass of the missile was probably greater than the mass of the ship that now surrounded it.

"Okay?" Peter asked.

"I'm fine," said Wang-mu. Then she realized he had been talking to Jane, and his "okay" was part of that conversation.

"Jane is tracing the thing right now," said Peter. "She does it with the starships, too, before she ever takes them anywhere. It used to be analytical, by computer. Now her aiaa sort of tours the inner structure of the thing. She couldn't do it till it was in solid contact with something she knew: the starship. Us. When she gets a sense of the inner shape of the thing, she can hold it together Outside."

"We're just going to take it there and leave it?" asked Wang-mu.

"No," said Peter. "It would either hold together and detonate, or it would break apart, and either way, who knows what the damage would be out there? How many little copies of it would wink into existence?"

"None at all," said Wang-mu. "It takes an intelligence to make something new."

"What do you think this thing is made of? Just like every bit of your body, just like every rock and tree and cloud, it's all aiaas, and there'll be other unconnected aiaas out there desperate to belong, to imitate, to grow. No, this thing is evil, and we're not taking it out there."

"Where are we taking it?"

"Home to meet its sender," said Peter.

\*\*\*

Admiral Lands stood glumly alone on the bridge of his flagship. He knew that Causo would have spread the word by now-- the launch of the Little Doctor had been illegal, mutinous; the Old Man would be court-martialed or worse when they got back to civilization. No one spoke to him; no one dared look at him. And Lands knew that he would have to relieve himself of command and turn the ship over to Causo, as his X.O., and the fleet to his second-in-command, Admiral Fukuda. Causo's

gesture in not arresting him immediately was kind, but it was also useless. Knowing the truth of his disobedience, it would be impossible for the men and officers to follow him and unfair to ask it of them.

Lands turned to give the order, only to find his X.O. already heading toward him. "Sir," said Causo.

"I know," said Lands. "I relieve myself of command."

"No sir," said Causo. "Come with me, sir."

"What do you plan to do?" asked Lands.

"The cargo officer has reported something in the main hold of the ship."

"What is it?" asked Lands.

Causo just looked at him. Lands nodded, and they walked together from the bridge.

\*\*\*

Jane had taken the box of the starship, not into the weapons bay of the flagship, for that could hold only the Little Doctor, not the box around it, but rather into the main hold, which was much more copious and which also lacked any practical means of relaunching the weapon.

Peter and Wang-mu stepped out of the starship and into the hold.

Then Jane took away the starship, leaving Peter, Wang-mu, and the Little Doctor behind.

Back on Lusitania, the starship would reappear. But no one would get into it. No one needed to. The M.D. Device was no longer heading for Lusitania. Now it was in the hold of the flagship of the Lusitania Fleet, traveling at a relativistic speed toward oblivion. The proximity sensor on the Little Doctor would not be triggered, of course, since it was nowhere near an object of planetary mass. But the timer was still chugging away.

"I hope they notice us soon," said Wang-mu.

"Oh, don't worry. We have whole minutes left."

"Has anyone seen us yet?"

"There was a fellow in that office," said Peter, pointing toward an open door. "He saw the starship, then he saw us, then he saw the Little Doctor. Now he's gone. I don't think we'll be alone much longer."

A door high up the front wall of the hold opened. Three men stepped onto the balcony that overlooked the hold on three sides.

"Hi," said Peter.

"Who the hell are you?" asked the one with the most ribbons and trim on his uniform.

"I'm betting you're Admiral Bobby Lands," said Peter. "And you must be the executive officer, Causo. And you must be the cargo officer, Lung."

"I said who the hell are you!" demanded Admiral Lands.

"I don't think your priorities are straight," said Peter. "I think there'll be plenty of time for us to discuss my identity after you deactivate the timer on this weapon that you so carelessly tossed out into space perilously close to a settled planet."

"If you think you can--"

But the Admiral didn't finish his sentence, because the X.O. was diving over the rail and jumping down to the deck of the cargo hold, where he immediately began twisting the fingerbolts that held the casing over the timer. "Causo," said Lands, "that can't be the--"

"It's the Little Doctor, all right, sir," said Causo.

"We launched it!" shouted the Admiral.

"But that must have been a mistake," said Peter. "An oversight. Because Starways Congress revoked your authorization to launch it."

"Who are you and how did you get here?"

Causo stood up, sweat dripping off his brow. "Sir, I am pleased to report that with more than two minutes' leeway, I have managed to prevent our ship from being blown into its constituent atoms."

"I'm glad to see that you didn't have any nonsense about requiring two separate keys and a secret combination to get that thing switched off," said Peter.

"No, it was designed to make turning it off pretty easy," said Causo. "There are directions on how to do it all over this thing. Now, turning it on-- that's hard."

"But somehow you managed to do it," said Peter.

"Where is your vehicle?" said the Admiral. He was climbing down a ladder to the deck. "How did you get here?"

"We came in a nice box, which we discarded when it was no longer needed," said Peter. "Haven't you gathered, yet, that we did not come to be interrogated by you?"

"Arrest these two," Lands ordered.

Causo looked at the admiral as if he were crazy. But the cargo officer, who had followed the admiral down the ladder, moved to obey, taking a couple of steps toward Peter and Wang-mu.

Instantly, they disappeared and reappeared up on the balcony where the three officers had come in. Of course it took a moment or two for the officers to find them. The cargo officer was merely baffled. "Sir," he said. "They were right here a second ago."

Causo, on the other hand, had already decided that something unusual was going on for which there was no appropriate military response. So he was responding according to another pattern. He crossed himself and began murmuring a prayer.

Lands, however, took a few steps backward, until he bumped into the Little Doctor. He clung to it, then suddenly pulled his hands away from it with loathing, perhaps even with pain, as if the surface of it had suddenly become scorching hot to his hands. "Oh God," he said. "I tried to do what Ender Wiggin would have done."

Wang-mu couldn't help it. She laughed aloud.

"That's odd," said Peter. "I was trying to do exactly the same thing."

"Oh God," said Lands again.

"Admiral Lands," said Peter, "I have a suggestion. Instead of spending a couple of months of realtime trying to turn this ship around and launch this thing illegally again, and instead of trying to establish a useless, demoralizing quarantine around Lusitania, why don't you just head on back to one of the Hundred Worlds-- Trondheim is close-- and in the meantime, make a report to Starways Congress. I even have some ideas about what the report might say, if you want to hear them."

In answer, Lands took out a laser pistol and pointed it at Peter.

Immediately, Peter and Wang-mu disappeared from where they were and reappeared behind Lands. Peter reached out and deftly disarmed the Admiral, unfortunately breaking two of his fingers in the process. "Sorry, I'm out of practice," said Peter. "I haven't had to use my martial arts skills in-- oh, thousands of years."

Lands sank to his knees, nursing his injured hand.

"Peter," Wang-mu said, "can we stop having Jane move us around like that? It's really disorienting."

Peter winked at her. "Want to hear my ideas about your report?" Peter asked the admiral.

Lands nodded.

"Me too," said Causo, who clearly foresaw that he would be commanding this ship for some time.

"I think you need to use your ansible to report that due to a malfunction, it was reported that a launch of the Little Doctor took place. But in fact, the launch was aborted in time, and to prevent further mishap, you had the M.D. Device moved to the main hold where you disarmed and disabled it. You get the part about disabling it?" Peter asked Causo.

Causo nodded. "I'll do it at once, sir." He turned to the cargo officer. "Get me a tool kit."

While the cargo officer went to pull a kit out of the storage bin on the wall, Peter continued. "Then you can report that you entered into contact with a native of Lusitania-- that's me-- who was able to satisfy you that the descolada virus was completely under control and that it no longer poses a threat to anybody."

"And how do I know that?" said Lands.

"Because I carry what's left of the virus, and if it weren't utterly killed, you would catch the descolada and die of it in a couple of days. Now, in addition to certifying that Lusitania poses no threat, your report should also state that the rebellion of Lusitania was no more than a misunderstanding, and that far from there being any human interference in the pequenino culture, the pequeninos exercised their free rights as sentient beings on their own planet to acquire information and technology from friendly visiting aliens-- namely, the human colony of Milagre. Since that time, many of the pequeninos have become very adept at much human science and technology, and at some reasonable time in the future they will send ambassadors to Starways Congress and hope that Congress will return the courtesy. Are you getting this?"

Lands nodded. Causo, working on taking apart the firing mechanism of the Little Doctor, grunted his assent.

"You may also report that the pequeninos have entered into alliance with yet another alien race, which contrary to various premature reports, was not completely extinguished in the notorious xenocide of Ender Wiggin. One cocooned hive queen survived, she being the source of all the information contained in the famous book *The Hive Queen*, whose accuracy is now proved to be unassailable. The Hive Queen of Lusitania, however, does not wish to exchange ambassadors with Starways Congress at the present time, and prefers instead that her interests be represented by the pequeninos."

"There are still buggers?" asked Lands.

"Ender Wiggin did not, technically speaking, commit xenocide after all. So if your launch of this missile, here, hadn't been aborted, you would have been the cause of the first xenocide, not the second one. And as it stands right now, however, there has never been a xenocide, though not for lack of trying both times, I must admit."

Tears coursed down Lands's face. "I didn't want to do it. I thought it was the right thing. I thought I had to do it to save--"

"Let's say you take that up with the ship's therapist at some later time," said Peter. "We still have one more point to address. We have a technology of starflight that I think the Hundred Worlds would like to have. You've already seen a demonstration of it. Usually, though, we prefer to do it inside our rather unstylish and boxy-looking starships. Still, it's a pretty good method and it lets us visit other worlds without losing even a second of our lives. I know that those who hold the keys to our method of starflight would be delighted, over the next few months, to instantaneously transport all relativistic starships currently in flight to their destinations."

"But there's a price for it," said Causo, nodding.

"Well, let's just say that there's a precondition," said Peter. "A key element of our instantaneous starflight includes a computer program that Starways Congress recently tried to kill. We found a substitute method, but it's not wholly adequate or satisfactory, and I think I can safely say that Starways Congress will never have the use of instantaneous starflight until all the ansibles in the Hundred Worlds are reconnected to all the computer networks on every world, without delays and without those pesky little snoop programs that keep yipping away like ineffectual little dogs."

"I don't have any authority to--"

"Admiral Lands, I didn't ask you to decide. I merely suggested the contents of the message you might want to send, by ansible, to Starways Congress. Immediately."

Lands looked away. "I don't feel well," he said. "I think I'm incapacitated. Executive Officer Causo, in front of Cargo Officer Lung, I hereby transfer command of this ship to you, and order you to notify Admiral Fukuda that he is now commander of this fleet."

"Won't work," said Peter. "The message I've described has to come from you. Fukuda isn't here and I don't intend to go repeat all of this to him. So you will make the report, and you will retain command of fleet and ship, and you will not weasel out of your responsibility. You made a hard choice a while back. You chose wrong, but at least you chose with courage and determination. Show the same courage now, Admiral. We haven't punished you here today, except for my unfortunate clumsiness with your fingers, for which I really am sorry. We're giving you a second chance. Take it, Admiral."

Lands looked at Peter and tears began to flow down his cheeks. "Why did you give me a second chance?"

"Because that's what Ender always wanted," said Peter. "And maybe by giving you a second chance, he'll get one, too."

Wang-mu took Peter's hand and squeezed it.

Then they disappeared from the cargo hold of the flagship and reappeared inside the control room of a shuttle orbiting the planet of the descoladores.

Wang-mu looked around at a room full of strangers. Unlike Admiral Lands's starship, this craft had no artificial gravity, but by holding onto Peter's hand Wang-mu kept from either fainting or throwing up. She had no idea who any of these people were, but she did know that Firequencher had to be a pequenino and the nameless worker at one of the computer terminals was a creature of the kind once hated and feared as the merciless buggers.

"Hi, Ela, Quara, Miro," said Peter. "This is Wang-mu."

Wang-mu would have been terrified, except that the others were so obviously terrified to see them.

Miro was the first to recover enough to speak. "Didn't you forget your spaceship?" he asked.

Wang-mu laughed.

"Hi, Royal Mother of the West," said Miro, using the name of Wang-mu's ancestor-of-the-heart, a god worshiped on the world of Path. "I've heard all about you from Jane," Miro added.

A woman drifted in through a corridor at one end of the control room.

"Val?" said Peter.

"No," answered the woman. "I'm Jane."

"Jane," whispered Wang-mu. "Malu's god."

"Malu's friend," said Jane. "As I am your friend, Wang-mu." She reached Peter and, taking him by both hands, looked him in the eye. "And your friend too, Peter. As I've always been your friend."

Chapter 16 -- "HOW DO YOU KNOW THEY AREN'T QUIVERING IN TERROR?"

"O Gods! You are unjust! My mother and father deserved to have a better child than me!"

-- from The God Whispers of Han Qing-jao

"You had the Little Doctor in your possession and you gave it back?" asked Quara, sounding incredulous.

Everyone, Miro included, assumed she meant that she didn't trust the fleet not to use it.

"It was dismantled in front of my eyes," said Peter.

"Well, can it be mantled again?" she asked.

Wang-mu tried to explain. "Admiral Lands isn't going to be able to go down that road now. We wouldn't have left things unsettled. Lusitania is safe."

"She's not talking about Lusitania," said Ela coldly. "She's talking about here. The descolada planet."

"Am I the only person who thought of it?" said Quara. "Tell the truth-- it would solve all our worries about followup probes, about new outbreaks of even worse versions of the descolada--"

"You're thinking of blowing up a world populated by a sentient race?" asked Wang-mu.

"Not right now," said Quara, sounding as if Wang-mu were the stupidest person she had ever wasted time talking to. "If we determine that they're, you know, what Valentine called them. Varelse. Unable to be reasoned with. Impossible to coexist with."

"So what you're saying," said Wang-mu, "is that--"

"I'm saying what I said," Quara answered.

Wang-mu went on. "What you're saying is that Admiral Lands wasn't wrong in principle, he simply was wrong about the facts of the particular case. If the descolada had still been a threat on Lusitania, then it's his duty to blow up the planet."

"What are the lives of the people of one planet compared to all sentient life?" asked Quara.

"Is this," said Miro, "the same Quara Ribeira who tried to keep us from wiping out the descolada virus because it might be sentient?" He sounded amused.

"I've thought a lot about that since then," said Quara. "I was being childish and sentimental. Life is precious. Sentient life is more precious. But when one sentient group threatens the survival of another, then the threatened group has the right to protect themselves. Isn't that what Ender did? Over and over again?"

Quara looked from one to another, triumphant.

Peter nodded. "Yes," he said. "That's what Ender did."

"In a game," said Wang-mu.

"In his fight with two boys who threatened his life. He made sure they could never threaten him again. That's how war is fought, in case any of you have foolish ideas to the contrary. You don't fight with minimum force, you fight with maximum force at endurable cost. You don't just pink your enemy, you don't even bloody him, you destroy his capability to fight back. It's the strategy you use with diseases. You don't try to find a drug that kills ninety-nine percent of the bacteria or viruses. If you do that, all you've accomplished is to create a new drug-resistant strain. You have to kill a hundred percent."

Wang-mu tried to think of an argument against this. "Is disease really a valid analogy?"

"What is your analogy?" answered Peter. "A wrestling match? Fight to wear down your opponent's resistance? That's fine-- if your opponent is playing by the same rules. But if you stand there ready to wrestle and he pulls out a knife or a gun, what then? Or is it a tennis match? Keep score until your opponent sets off the bomb under your feet? There aren't any rules. In war."

"But is this war?" asked Wang-mu.

"As Quara said," Peter answered. "If we find out there's no dealing with them, then yes, it's a war. What they did to Lusitania, to the defenseless pequeninos, was devastating, soulless, total war without regard to the rights of the other side. That's our enemy, unless we can bring them to understand the consequences of what they did. Isn't that what you were saying, Quara?"

"Perfectly," said Quara.

Wang-mu knew there was something wrong with this reasoning, but she couldn't lay her finger on it. "Peter, if you really believe this, why didn't you keep the Little Doctor?"

"Because," said Peter, "we might be wrong, and the danger is not imminent."

Quara clicked her tongue in disdain. "You weren't here, Peter. You didn't see what they were throwing at us-- a newly engineered and specially tailored virus to make us sit as still as idiots while they came and took over our ship."

"And they sent this how, in a nice envelope?" said Peter. "They sent an infected puppy, knowing you couldn't resist picking it up and hugging it?"

"They broadcast the code," said Quara. "But they expected us to interpret it by making the molecule and then it would have its effect."

"No," said Peter, "you speculated that that's how their language works, and then you started to act as if your speculation were true."

"And somehow you know that it's not?" said Quara.

"I don't know anything about it," said Peter. "That's my point. We just don't know. We can't know. Now, if we saw them launching probes, or if they started trying to blast this ship out of the sky, we'd have to start taking action. Like sending ships after the probes and carefully studying the viruses they were sending out. Or if they attacked this ship, we'd take evasive action and analyze their weapons and tactics."

"That's fine now," said Quara. "Now that Jane's safe and the mothertrees are intact so she can handle the starflight thing she does. Now we can catch up with probes and dance out of the way of missiles or whatever. But what about before, when we were helpless here? When we had only a few weeks to live, or so we thought?"

"Back then," said Peter, "you didn't have the Little Doctor, either, so you couldn't have blown up their planet. We didn't get our hands on the M. D. Device until after Jane's power of flight was restored. And with that power, it was no longer necessary to destroy the descolada planet until and unless it posed a danger too great to be resisted any other way."

Quara laughed. "What is this? I thought Peter was supposed to be the nasty side of Ender's personality. Turns out you're the sweetness and light."

Peter smiled. "There are times when you have to defend yourself or someone else against relentless evil. And some of those times the only defense that has any hope of succeeding is a one-time use of brutal, devastating force. At such times good people act brutally."

"We couldn't be engaging in a bit of self-justification, could we?" said Quara. "You're Ender's successor. Therefore you find it convenient to believe that those boys Ender killed were the exceptions to your niceness rule."

"I justify Ender by his ignorance and helplessness. We aren't helpless. Starways Congress and the Lusitania Fleet were not helpless. And they chose to act before alleviating their ignorance."

"Ender chose to use the Little Doctor while he was ignorant."

"No, Quara. The adults who commanded him used it. They could have intercepted and blocked his decision. There was plenty of time for them to use the overrides. Ender thought he was playing a game. He thought that by using the Little Doctor in the simulation he would prove himself unreliable, disobedient, or even too brutal to trust with command. He was trying to get himself kicked out of Command School. That's all. He was doing the necessary thing to get them to stop torturing him. The adults were the ones who decided simply to unleash their most powerful weapon: Ender Wiggin. No more effort to talk with the buggers, to communicate. Not even at the end when they knew that Ender was going to destroy the buggers' home planet. They had decided to go for the kill no matter what. Like Admiral Lands. Like you, Quara."

"I said I'd wait until we found out!"

"Good," said Peter. "Then we don't disagree."

"But we should have the Little Doctor here!"

"The Little Doctor shouldn't exist at all," said Peter. "It was never necessary. It was never appropriate. Because the cost of it is too high."

"Cost!" hooted Quara. "It's cheaper than the old nuclear weapons!"

"It's taken us three thousand years to get over the destruction of the hive queens' home planet. That's the cost. If we use the Little Doctor, then we're the sort of people who wipe out other species. Admiral Lands was just like the men who were using Ender Wiggin. Their minds were made up. This was the danger. This was the evil. This had to be destroyed. They thought they meant well. They were saving the human race. But they weren't. There were a lot of different motives involved, but along with deciding to use the weapon, they also decided not to attempt to communicate with the enemy. Where was the demonstration of the Little Doctor on a nearby moon? Where was Lands's attempt to verify that the situation on Lusitania had not changed? And you, Quara-- what methodology, exactly, were you planning to use to determine whether the descoladores were too evil to be allowed to live? At what point do you know they are an unbearable danger to all other sentient species?"

"Turn it around, Peter," said Quara. "At what point do you know they're not?"

"We have better weapons than the Little Doctor. Ela once designed a molecule to block the descolada's efforts to cause harm, without destroying its ability to help the flora and fauna of Lusitania to pass through their transformations. Who's to say that we can't do the same thing for every nasty little plague they send at us until they give up? Who's to say that they aren't already trying desperately to communicate with us? How do you know that the molecule they sent wasn't an attempt to make us happy with them the only way they knew how, by sending us a molecule that would take away our anger? How do you know they aren't already quivering in terror down on that planet because we have a ship that can disappear and reappear anywhere else? Are we trying to talk to them?"

Peter looked around at all of them.

"Don't you understand, any of you? There's only one species that we know of that has deliberately, consciously, knowingly tried to destroy another sentient species without any serious attempt at communication or warning. We're the ones. The first xenocide failed because the victims of the attack managed to conceal exactly one pregnant female. The second time it failed for a better reason-- because some members of the human species determined to stop it. Not just some, many. Congress. A big corporation. A philosopher on Divine Wind. A Samoan divine and his fellow believers on Pacifica. Wang-mu and I. Jane. And Admiral Lands's own officers and men, when they finally understood the situation. We're getting better, don't you see? But the fact remains-- we humans are the sentient species that has shown the most tendency to deliberately refuse to communicate with other species and instead destroy them utterly. Maybe the descoladores are varelse and maybe they're not. But I'm a lot more frightened at the thought that we are varelse. That's the cost of using the Little Doctor when it isn't needed and never will be, given the other

tools in our kit. If we choose to use the M. D. Device, then we are not ramen. We can never be trusted. We are the species that would deserve to die for the safety of all other sentient life."

Quara shook her head, but the smugness was gone. "Sounds to me like somebody is still trying to earn forgiveness for his own crimes."

"That was Ender," said Peter. "He spent his life trying to turn himself and everyone else into ramen. I look around me in this ship, I think of what I've seen, the people I've known in the past few months, and I think that the human race isn't doing too badly. We're moving in the right direction. A few throwbacks now and then. A bit of blustery talk. But by and large, we're coming closer to being worthy to associate with the hive queens and the pequeninos. And if the descoladores are perhaps a bit farther from being ramen than we are, that doesn't mean we have a right to destroy them. It means we have all the more reason to be patient with them and try to nurse them along. How many years has it taken us to get here from marking the sites of battles with piles of human skulls? Thousands of years. And all the time, we had teachers trying to get us to change, pointing the way. Bit by bit we learned. Let's teach them-- if they don't already know more than we do."

"It could take years just to learn their language," said Ela.

"Transportation is cheap now," said Peter. "No offense intended, Jane. We can keep teams shuttling back and forth for a long time without undue hardship to anyone. We can keep a fleet watching this planet. With pequeninos and hive workers alongside the human researchers. For centuries. For millennia. There's no hurry."

"I think that's dangerous," said Quara.

"And I think you have the same instinctive desire that we all have, the one that gets us in so damn much trouble all the time," said Peter. "You know that you're going to die, and you want to see it all resolved before you do."

"I'm not old yet!" Quara said.

Miro spoke up. "He's right, Quara. Ever since Marcao died, you've had death looming over you. Think about it, everybody. Humans are the short-lived species. Hive queens think they live forever. Pequeninos have the hope of many centuries in the third life. We're the ones who are in a hurry all the time. We're the ones who are determined to make decisions without getting enough information, because we want to act now, while we still have time."

"So that's it?" said Quara. "That's your decision? Let this grave threat to all life continue to sit here hatching their plans while we watch and watch from the sky?"

"Not we," said Peter.

"No, that's right," said Quara, "you're not part of this project."

"Yes I am," said Peter. "But you're not. You're going back down to Lusitania, and Jane will never bring you back here. Not until you've spent years proving that you've got your personal bugbears under control."

"You arrogant son-of-a-bitch!" Quara cried.

"Everybody here knows that I'm right," said Peter. "You're like Lands. You're too ready to make devastatingly far-reaching decisions and then refuse to let any argument change your mind. There are plenty of people like you, Quara. But we can never let any of them anywhere near this planet until we know more. The day may come when all the sentient species reach the conclusion that the descoladores are in fact varelse who must be destroyed. But I seriously doubt any of us here, with the exception of Jane, will be alive when that day comes."

"What, you think I'll live forever?" said Jane.

"You'd better," said Peter. "Unless you and Miro can figure out how to have children who can launch starships when they grow up." Peter turned to Jane. "Can you take us home now?"

"Even as we speak," said Jane.

They opened the door. They left the ship. They stepped onto the surface of a world that was not going to be destroyed after all.

All except Quara.

"Isn't Quara coming with us?" asked Wang-mu.

"Maybe she needs to be alone for a while," said Peter.

"You go on ahead," said Wang-mu.

"You think you can deal with her?" said Peter.

"I think I can try," said Wang-mu.

He kissed her. "I was hard on her. Tell her I'm sorry."

"Maybe later you can tell her yourself," said Wang-mu.

She went back inside the starship. Quara still sat facing her terminal. The last data she had been looking at before Peter and Wang-mu arrived in the starship still hung in the air over her terminal.

"Quara," said Wang-mu.

"Go away." The husky sound of her voice was ample evidence that she had been crying.

"Everything Peter said was true," said Wang-mu.

"Is that what you came to say? Rub salt in the wound?"

"Except that he gave the human race too much credit for our slight improvement."

Quara snorted. It was almost a yes.

"Because it seems to me that he and everyone else here had already decided you were varelse. To be banished without hope of Parole. Without understanding you first."

"Oh, they understand me," said Quara. "Little girl devastated by loss of brutal father whom she nevertheless loved. Still searching for father figure. Still responding to everyone else with the mindless rage she saw her father show. You think I don't know what they've decided?"

"They've got you pegged."

"Which is not true of me. I might have suggested that the Little Doctor ought to be kept around in case it was necessary, but I never said just to use it without any further attempt at communication. Peter just treated me as if I was that admiral all over again."

"I know," said Wang-mu.

"Yeah, right. I'm sure you're so sympathetic with me and you know he's wrong. Come on, Jane told us already that the two of you are-- what was the bullshit phrase? --in love."

"I wasn't proud of what Peter did to you. It was a mistake. He makes them. He hurts my feelings sometimes, too. So do you. You did just now. I don't know why. But sometimes I hurt other people, too. And sometimes I do terrible things because I'm so sure that I'm right. We're all like that. We all have a little bit of varelse in us. And a little bit of raman."

"Isn't that the sweetest little well-balanced undergraduate-level philosophy of life," said Quara.

"It's the best I could come up with," said Wang-mu. "I'm not educated like you."

"And is that the make-her-feel-guilty technique?"

"Tell me, Quara, if you're not really acting out your father's role or trying to call him back or whatever the analysis was, why are you so angry at everybody all the time?"

Quara finally swiveled in her chair and looked Wang-mu in the face. Yes, she had been crying. "You really want to know why I'm so filled with irrational fury all the time?" The taunting hadn't left her voice. "You really want to play shrink with me? Well try this one. What has me so completely pissed off is that all through my childhood, my older brother Quim was secretly molesting me, and now he's a martyr and they're going to make him a saint and nobody will ever know how evil he was and the terrible, terrible things he did to me."

Wang-mu stood there horrified. Peter had told her about Quim. How he died. The kind of man he was. "Oh, Quara," she said. "I'm so sorry."

A look of complete disgust passed across Quara's face. "You are so stupid. Quim never touched me, you stupid meddling little do-gooder. But you're so eager to get some cheap explanation about why I'm such a bitch that you'll believe any story that sounds halfway plausible. And right now you're probably still wondering whether maybe my confession was true and I'm only denying it because I'm afraid of the repercussions or some dumb merda like that. Get this straight, girl. You do not know me. You will never know me. I don't want you to know me. I don't want any friends, and if I did want friends, I would not want Peter's pet bimbo to do the honors. Can I possibly make myself clearer?"

In her life Wang-mu had been beaten by experts and vilified by champions. Quara was damn good at it by any standards, but not so good that Wang-mu couldn't bear it without flinching. "I notice, though," said Wang-mu, "that after your vile slander against the noblest member of your family, you couldn't stand to leave me believing that it was true. So you do have loyalty to someone, even if he's dead."

"You just don't take a hint, do you?" said Quara.

"And I notice that you still keep talking to me, even though you despise me and try to offend me."

"If you were a fish, you'd be a remora, you just clamp on and suck for dear life, don't you!"

"Because at any point you could just walk out of here and you wouldn't have to hear my pathetic attempts at making friends with you," said Wang-mu. "But you don't go."

"You are unbelievable," said Quara. She unstrapped herself from her chair, got up, and went out the open door.

Wang-mu watched her go. Peter was right. Humans were still the most alien of alien species. Still the most dangerous, the most unreasonable, the least predictable.

Even so, Wang-mu dared to make a couple of predictions to herself.

First, she was confident that the research team would someday establish communications with the descoladores.

The second prediction was much more iffy. More like a hope. Maybe even just a wish. That someday Quara would tell Wang-mu the truth. That someday the hidden wound that Quara bore would be healed. That someday they might be friends.

But not today. There was no hurry. Wang-mu would try to help Quara because she was so obviously in need, and because the people who had been around her the longest were clearly too sick of her to help. But helping Quara was not the only thing or even the most important thing she

had to accomplish. Marrying Peter and starting a life with him-- that was a much higher priority. And getting something to eat, a drink of water, and a place to pee-- those were the highest priorities of all at this precise moment in her life.

I guess that means I'm human, thought Wang-mu. Not a god. Maybe just a beast after all. Part raman. Part varelse. But more raman than varelse, at least on her good days. Peter, too, just like her. Both of them part of the same flawed species, determined to join together to make a couple of more members of that species. Peter and I together will call forth some aiua to come in from Outside and take control of a tiny body that our bodies have made, and we'll see that child be varelse on some days and raman on others. On some days we'll be good parents and some days we'll be wretched failures. Some days we'll be desperately sad and some days we'll be so happy we can hardly contain it. I can live with that.

#### Chapter 17 -- "THE ROAD GOES ON WITHOUT HIM NOW"

"I once heard a tale of a man who split himself in two. The one part never changed at all; the other grew and grew. The changeless part was always true, The growing part was always new, And I wondered, when the tale was through, Which part was me, and which was you."

-- from The God Whispers of Han Qing-jao

Valentine arose on the morning of Ender's funeral full of bleak reflection. She had come here to this world of Lusitania in order to be with him again and help him in his work; it had hurt Jakt, she knew, that she wanted so badly to be part of Ender's life again, yet her husband had given up the world of his childhood to come with her. So much sacrifice. And now Ender was gone.

Gone and not gone. Sleeping in her house was the man that she knew had Ender's aiua in him. Ender's aiua, and the face of her brother Peter. Somewhere inside him were Ender's memories. But he hadn't touched them yet, except unconsciously from time to time. Indeed, he was virtually hiding in her house in order not to rekindle those memories.

"What if I see Novinha? He loved her, didn't he?" Peter had asked almost as soon as he arrived. "He felt this awful sense of responsibility to her. And in a sense, I worry that I'm somehow married to her."

"Interesting question of identity, isn't it?" Valentine had answered. But it wasn't just an interesting question to Peter. He was terrified of getting caught up in Ender's life. Afraid, too, of living a life wracked with guilt as Ender's had been. "Abandonment of family," he had said. To which Valentine had replied, "The man who married Novinha died. We watched him die. She isn't looking for some

young husband who doesn't want her, Peter. Her life is full of grief enough without that. Marry Wang-mu, leave this place, go on, be a new self. Be Ender's true son, have the life he might have had if the demands of others hadn't tainted it from the start."

Whether he fully accepted her advice or not, Valentine couldn't guess. He remained hidden in the house, avoiding even those visitors who might trigger memories. Olhado came, and Grego, and Ela, each in turn, to express their condolences to Valentine on the death of her brother, but Peter never came into the room. Wang-mu did, however, this sweet young girl who nevertheless had a kind of steel in her that Valentine quite liked. Wang-mu played the gracious friend of the bereaved, keeping the conversation going as each of these children of Ender's wife talked about how Ender had saved their family, blessed their lives when they had thought themselves beyond the reach of all blessing.

And in the corner of the room, Plikt sat, absorbing, listening, fueling the speech that she had lived her whole life for.

Oh, Ender, the jackals have gnawed at your life for three thousand years. And now your friends will have their turn. In the end, will the toothmarks on your bones be all that different?

Today all would come to a close. Others might divide time differently, but to Valentine the Age of Ender Wiggin had come to a close. The age that began with one xenocide attempted had now ended with other xenocides prevented or, at least, postponed. Human beings might now be able to live with other peoples in peace, working out a shared destiny on dozens of colony worlds. Valentine would write the history of this, as she had written a history on every world that she and Ender had visited together. She would write, not a kind of oracle or scripture, the way Ender had done with his three books, *The Hive Queen*, *The Hegemon*, and *The Life of Human*; rather her book would be scholarly, with sources cited. She aspired to be, not Paul or Moses, but Thucydides. Though she wrote all under the name Demosthenes, her legacy from those childhood days when she and Peter, the first Peter, the dark and dangerous and magnificent Peter, had used their words to change the world. Demosthenes would publish a book chronicling the history of human involvement on Lusitania, and in that book would be much about Ender-- how he brought the cocoon of the Hive Queen here, how he became a part of the family most pivotal in dealings with the pequeninos. But it would not be a book about Ender. It would be a book about utlanning and framling, raman and varelse. Ender, who was a stranger in every land, belonging nowhere, serving everywhere, until he chose this world as his home, not just because there was a family that needed him, but also because in this place he did not have to be entirely a member of the human race. He could belong to the tribe of the pequenino, to the hive of the queen. He could be part of something larger than mere humanity.

And though there was no child with Ender's name as father on its birth certificate, he had become a father here. Of Novinha's children. Of Novinha herself, in a way. Of a young copy of Valentine herself. Of Jane, the first spawn of a mating between races, who now was a bright and beautiful creature who lived in mothertrees, in digital webs, in the phlotic twinings of the ansibles, and in a body that had once been Ender's and which, in a way, had once been Valentine's, for she remembered looking into mirrors and seeing that face and calling it herself.

And he was father of this new man, Peter, this strong and whole man. For he was not the Peter who had first come out of the starship. He was not the cynical, nasty, barbed young boy who strutted with arrogance and seethed with rage. He had become whole. There was the cool of ancient wisdom in him, even as he burned with the hot sweet fire of youth. He had a woman who was his equal in wit and virtue and vigor by his side. He had a normal lifetime of a man before him. Ender's truest son would make of this life, if not something as profoundly world-changing as Ender's life had been, then something happier. Ender would have wanted neither more nor less for him. Changing the world is good for those who want their names in books. But being happy, that is for those who write their names in the lives of others, and hold the hearts of others as the treasure most dear.

Valentine and Jakt and their children gathered on the porch of their house. Wang-mu was waiting there alone. "Will you take me with you?" asked the girl. Valentine offered her an arm. What is the name of her relationship to me? Niece-in-law-to-be? Friend would be a better word.

Plikt's speaking of Ender's death was eloquent and piercing. She had learned well from the master speaker. She wasted no time on inconsequential. She spoke at once of his great crime, explaining what Ender thought he was doing at the time, and what he thought of it after he knew each layer of truth that was revealed to him. "That was Ender's life," said Plikt, "unpeeling the onion of truth. Only unlike most of us, he knew that there was no golden kernel inside. There were only the layers of illusion and misunderstanding. What mattered was to know all the errors, all the self-serving explanations, all the mistakes, all the twisted observations, and then, not to find, but to make a kernel of truth. To light a candle of truth where there was no truth to be found. That was Ender's gift to us, to free us from the illusion that any one explanation will ever contain the final answer for all time, for all hearers. There is always, always more to learn."

Plikt went on then, recounting incidents and memories, anecdotes and pithy sayings; the gathered people laughed and cried and laughed again, and fell silent many times to connect these stories with their own lives. How like Ender I am! they sometimes thought, and then, Thank God my life is not like that!

Valentine, though, knew stories that would not be told here because Plikt did not know them, or at least could not see them through the eyes of memory. They weren't important stories. They revealed no inner truth. They were the flotsam and jetsam of shared years together. Conversations, quarrels, funny and tender moments on dozens of worlds or on the starships in between. And at the root of them all, the memories of childhood. The baby in Valentine's mother's arms. Father tossing him into the air. His early words, his babbling. None of that goo-goo stuff for baby Ender! He needed more syllables to speak: Deedle-deedle. Wagada wagada. Why am I remembering his baby talk?

The sweet-faced baby, eager for life. Baby tears from the pain of falling down. Laughter at the simplest things-- laughter because of a song, because of seeing a beloved face, because life was pure and good for him then, and nothing had caused him pain. He was surrounded by love and hope. The hands that touched him were strong and tender; he could trust them all. Oh, Ender, thought Valentine. How I wish you could have kept on living such a life of joy. But no one can. Language comes to us, and with it lies and threats, cruelty and disappointment. You walk, and

those steps lead you outside the shelter of your home. To keep the joy of childhood you would have to die as a child, or live as one, never becoming a man, never growing. So I can grieve for the lost child, and yet not regret the good man braced with pain and riven with guilt, who yet was kind to me and to many others, and whom I loved, and whom I also almost knew. Almost, almost knew.

Valentine let her tears of memory flow as Plikt's words washed over her, touching her now and then, but also not touching her because she knew far more about Ender than anyone here, and had lost more by losing him. Even more than Novinha, who sat near the front, her children gathered near her. Valentine watched as Miro put his arm around his mother even as he held to Jane on the other side of him. Valentine noticed also how Ela clung to and one time kissed Olhado's hand, and how Grego, weeping, leaned his head into stern Quara's shoulder, and how Quara reached out her arm to hold him close and comfort him. They loved Ender too, and knew him too; but in their grief, they leaned upon each other, a family that had strength to share because Ender had been part of them and healed them, or at least opened up the door of healing. Novinha would survive and perhaps grow past her anger at the cruel tricks life had played on her. Losing Ender was not the worst thing that happened to her; in some ways it was the best, because she had let him go.

Valentine looked at the pequeninos, who sat, some of them among the humans, some of them apart. To them this was a doubly holy place, where Ender's few remains were to be buried. Between the trees of Rooter and of Human, where Ender had shed a pequenino's blood to seal the pact between the species. There were many friends among pequeninos and humans now, though many fears and enmities remained as well, but the bridges had been built, in no small part because of Ender's book, which gave the pequeninos hope that some human, someday, would understand them; hope that sustained them until, with Ender, it became the truth.

And one expressionless hiveworker sat at a remote distance, neither human nor pequenino near her. She was nothing but a pair of eyes there. If the Hive Queen grieved for Ender, she kept it to herself. She would always be mysterious, but Ender had loved her, too; for three thousand years he had been her only friend, her protector. In a sense, Ender could count her among his children, too, among the adopted children who thrived under his protection.

In only three-quarters of an hour, Plikt was done. She ended simply:

"Even though Ender's aiaa lives on, as all aiaas live on undying, the man we knew is gone from us. His body is gone, and whatever parts of his life and works we take with us, they aren't him any longer, they are ourselves, they are the Ender-within-us just as we also have other friends and teachers, fathers and mothers, lovers and children and siblings and even strangers within us, looking out at the world through our eyes and helping us determine what it all might mean. I see Ender in you looking out at me. You see Ender in me looking out at you. And yet not one of us is truly him; we are each our own self, all of us strangers on our own road. We walked awhile on that road with Ender Wiggin. He showed us things we might not otherwise have seen. But the road goes on without him now. In the end, he was no more than any other man. But no less, either."

And then it was over. No prayer-- the prayers had all been said before she spoke, for the bishop had no intention of letting this unreligious ritual of Speaking be a part of the services of Holy Mother Church. The weeping had been done as well, the grief purged. They rose from their places

on the ground, the older ones stiffly, the children with exuberance, running and shouting to make up for the long confinement. It was good to hear laughter and shouting. That was also a good way to say good-bye to Ender Wiggin.

Valentine kissed Jakt and her children, embraced Wang-mu, then made her way alone through the crush of citizens. So many of the humans of Milagre had fled to other colonies; but now, with their planet saved, many of them chose not to stay on the new worlds. Lusitania was their home. They weren't the pioneering kind. Many others, though, had come back solely for this ceremony. Jane would return them to their farms and houses on virgin worlds. It would take a generation or two to fill the empty houses in Milagre.

On the porch Peter waited for her. She smiled at him. "I think you have an appointment now," said Valentine.

They walked together out of Milagre and into the new-growth forest that still could not utterly hide the evidence of recent fire. They walked until they came to a bright and shining tree. They arrived almost at the same time that the others, walking from the funeral site, arrived. Jane came to the glowing mothertree and touched it-- touched a part of herself, or at least a dear sister. Then Peter took his place beside Wang-mu, and Miro stood with Jane, and the priest married the two couples under the mothertree, with pequeninos looking on, and Valentine as the only human witness of the ceremony. No one else even knew the ceremony was taking place; it would not do, they had decided, to distract from Ender's funeral or Plikt's speaking. Time enough to announce the marriages later on.

When the ceremony was done, the priest left, with pequeninos as his guide to take him back through the wood. Valentine embraced the newly married couples, Jane and Miro, Peter and Wang-mu, spoke to them for a moment one by one, murmured words of congratulations and farewell, and then stood back and watched.

Jane closed her eyes, smiled, and then all four of them were gone. Only the mothertree remained in the middle of the clearing, bathed in light, heavy with fruit, festooned with blossoms, a perpetual celebrant of the ancient mystery of life.

## **ENDER'S SHADOW**

**by Orson Scott Card**

### FOREWORD

This book is, strictly speaking, not a sequel, because it begins about where *Ender's Game* begins, and also ends, very nearly, at the same place. In fact, it is another telling of the same tale, with many of the same characters and settings, only from the perspective of another character. It's hard to know what to call it. A companion novel? A parallel novel? Perhaps a "parallax," if I can move that scientific term into literature.

Ideally, this novel should work as well for readers who have never read *Ender's Game* as for those who have read it several times. Because it is not a sequel, there is nothing you need to know from the novel *Ender's Game* that is not contained here. And yet, if I have achieved my literary goal, these two books complement and fulfill each other. Whichever one you read first, the other novel should still work on its own merits.

For many years, I have gratefully watched as *Ender's Game* has grown in popularity, especially among school-age readers. Though it was never intended as a young-adult novel, it has been embraced by many in that age group and by many teachers who find ways to use the book in their classrooms.

I have never found it surprising that the existing sequels -- *Speaker for the Dead*, *Xenocide*, and *Children of the Mind* -- never appealed as strongly to those younger readers. The obvious reason is that *Ender's Game* is centered around a child, while the sequels are about adults; perhaps more important, *Ender's Game* is, at least on the surface, a heroic, adventurous novel, while the sequels are a completely different kind of fiction, slower paced, more contemplative and idea-centered, and dealing with themes of less immediate import to younger readers.

Recently, however, I have come to realize that the 3,000-year gap between *Ender's Game* and its sequels leaves plenty of room for other sequels that are more closely tied to the original. In fact, in one sense *Ender's Game* has no sequels, for the other three books make one continuous story in themselves, while *Ender's Game* stands alone.

For a brief time I flirted seriously with the idea of opening up the *Ender's Game* universe to other writers, and went so far as to invite a writer whose work I greatly admire, Neal Shusterman, to consider working with me to create novels about Ender Wiggin's companions in Battle School. As we talked, it became clear that the most obvious character to begin with would be Bean, the child-soldier whom Ender treated as he had been treated by his adult teachers.

And then something else happened. The more we talked, the more jealous I became that Neal might be the one to write such a book, and not me. It finally dawned on me that, far from being finished with writing about "kids in space," as I cynically described the project, I actually had more

to say, having actually learned something in the intervening dozen years since Ender's Game first appeared in 1985. And so, while still hoping that Neal and I can work together on something, I deftly swiped the project back.

I soon found that it's harder than it looks, to tell the same story twice, but differently. I was hindered by the fact that even though the viewpoint characters were different, the author was the same, with the same core beliefs about the world. I was helped by the fact that in the intervening years, I have learned a few things, and was able to bring different concerns and a deeper understanding to the project. Both books come from the same mind, but not the same; they draw on the same memories of childhood, but from a different perspective. For the reader, the parallax is created by Ender and Bean, standing a little ways apart as they move through the same events. For the writer, the parallax was created by a dozen years in which my older children grew up, and younger ones were born, and the world changed around me, and I learned a few things about human nature and about art that I had not known before.

Now you hold this book in your hands. Whether the literary experiment succeeds for you is entirely up to you to judge. For me it was worth dipping again into the same well, for the water was greatly changed this time, and if it has not been turned exactly into wine, at least it has a different flavor because of the different vessel that it was carried in, and I hope that you will enjoy it as much, or even more.

-- Greensboro, North Carolina, January 1999

## PART ONE -- URCHIN

### CHAPTER 1 -- POKE

"You think you've found somebody, so suddenly my program gets the ax?"

"It's not about this kid that Graff found. It's about the low quality of what you've been finding."

"We knew it was long odds. But the kids I'm working with are actually fighting a war just to stay alive."

"Your kids are so malnourished that they suffer serious mental degradation before you even begin testing them. Most of them haven't formed any normal human bonds, they're so messed up they can't get through a day without finding something they can steal, break, or disrupt."

"They also represent possibility, as all children do."

"That's just the kind of sentimentality that discredits your whole project in the eyes of the I.F."

\*\*\*

Poke kept her eyes open all the time. The younger children were supposed to be on watch, too, and sometimes they could be quite observant, but they just didn't notice all the things they needed to notice, and that meant that Poke could only depend on herself to see danger.

There was plenty of danger to watch for. The cops, for instance. They didn't show up often, but when they did, they seemed especially bent on clearing the streets of children. They would flail about them with their magnetic whips, landing cruel stinging blows on even the smallest children, haranguing them as vermin, thieves, pestilence, a plague on the fair city of Rotterdam. It was Poke's job to notice when a disturbance in the distance suggested that the cops might be running a sweep. Then she would give the alarm whistle and the little ones would rush to their hiding places till the danger was past.

But the cops didn't come by that often. The real danger was much more immediate -- big kids. Poke, at age nine, was the matriarch of her little crew (not that any of them knew for sure that she was a girl), but that cut no ice with the eleven- and twelve- and thirteen-year-old boys and girls who bullied their way around the streets. The adult-size beggars and thieves and whores of the street paid no attention to the little kids except to kick them out of the way. But the older children, who were among the kicked, turned around and preyed on the younger ones. Any time Poke's crew found something to eat -- especially if they located a dependable source of garbage or an easy mark for a coin or a bit of food -- they had to watch jealously and hide their winnings, for the bullies liked nothing better than to take away whatever scraps of food the little ones might have. Stealing from younger children was much safer than stealing from shops or passersby. And they enjoyed it,

Poke could see that. They liked how the little kids cowered and obeyed and whimpered and gave them whatever they demanded.

So when the scrawny little two-year-old took up a perch on a garbage can across the street, Poke, being observant, saw him at once. The kid was on the edge of starvation. No, the kid was starving. Thin arms and legs, joints that looked ridiculously oversized, a distended belly. And if hunger didn't kill him soon, the onset of autumn would, because his clothing was thin and there wasn't much of it even at that.

Normally she wouldn't have paid him more than passing attention. But this one had eyes. He was still looking around with intelligence. None of that stupor of the walking dead, no longer searching for food or even caring to find a comfortable place to lie while breathing their last taste of the stinking air of Rotterdam. After all, death would not be such a change for them. Everyone knew that Rotterdam was, if not the capital, then the main seaport of Hell. The only difference between Rotterdam and death was that with Rotterdam, the damnation wasn't eternal.

This little boy -- what was he doing? Not looking for food. He wasn't eyeing the pedestrians. Which was just as well -- there was no chance that anyone would leave anything for a child that small. Anything he might get would be taken away by any other child, so why should he bother? If he wanted to survive, he should be following older scavengers and licking food wrappers behind them, getting the last sheen of sugar or dusting of flour clinging to the packaging, whatever the first comer hadn't licked off.

There was nothing for this child out here on the street, not unless he got taken in by a crew, and Poke wouldn't have him. He'd be nothing but a drain, and her kids were already having a hard enough time without adding another useless mouth.

He's going to ask, she thought. He's going to whine and beg. But that only works on the rich people. I've got my crew to think of. He's not one of them, so I don't care about him. Even if he is small. He's nothing to me.

A couple of twelve-year-old hookers who didn't usually work this strip rounded a corner, heading toward Poke's base. She gave a low whistle. The kids immediately drifted apart, staying on the street but trying not to look like a crew.

It didn't help. The hookers knew already that Poke was a crew boss, and sure enough, they caught her by the arms and slammed her against a wall and demanded their "permission" fee. Poke knew better than to claim she had nothing to share -- she always tried to keep a reserve in order to placate hungry bullies. These hookers, Poke could see why they were hungry. They didn't look like what the pedophiles wanted, when they came cruising through. They were too gaunt, too old-looking. So until they grew bodies and started attracting the slightly-less-perverted trade, they had to resort to scavenging. It made Poke's blood boil, to have them steal from her and her crew, but it was smarter to pay them off. If they beat her up, she couldn't look out for her crew now, could she? So she took them to one of her stashes and came up with a little bakery bag that still had half a pastry in it.

It was stale, since she'd been holding it for a couple of days for just such an occasion, but the two hookers grabbed it, tore open the bag, and one of them bit off more than half before offering the remainder to her friend. Or rather, her former friend, for of such predatory acts are feuds born. The two of them started fighting, screaming at each other, slapping, raking at each other with clawed hands. Poke watched closely, hoping that they'd drop the remaining fragment of pastry, but no such luck. It went into the mouth of the same girl who had already eaten the first bite -- and it was that first girl who won the fight too, sending the other one running for refuge.

Poke turned around, and there was the little boy right behind her. She nearly tripped over him. Angry as she was at having had to give up food to those street-whores, she gave him a knee and knocked him to the ground. "Don't stand behind people if you don't want to land on your butt," she snarled.

He simply got up and looked at her, expectant, demanding.

"No, you little bastard, you're not getting nothing from me," said Poke. "I'm not taking one bean out of the mouths of my crew, you aren't \*worth\* a bean."

Her crew was starting to reassemble, now that the bullies had passed.

"Why you give your food to them?" said the boy. "You need that food."

"Oh, excuse me!" said Poke. She raised her voice, so her crew could hear her. "I guess you ought to be the crew boss here, is that it? You being so big, you got no trouble keeping the food."

"Not me," said the boy. "I'm not worth a bean, remember?"

"Yeah, I remember. Maybe \*you\* ought to remember and shut up."

Her crew laughed.

But the little boy didn't. "You got to get your own bully," he said.

"I don't \*get\* bullies, I get rid of them," Poke answered. She didn't like the way he kept talking, standing up to her. In a minute she was going to have to hurt him.

"You give food to bullies every day. Give that to \*one\* bully and get him to keep the others away from you."

"You think I never thought of that, stupid?" she said. "Only once he's bought, how I keep him? He won't fight for us."

"If he won't, then kill him," said the boy.

That made Poke mad, the stupid impossibility of it, the power of the idea that she knew she could never lay hands on. She gave him a knee again, and this time kicked him when he went down. "Maybe I start by killing you."

"I'm not worth a bean, remember?" said the boy. "You kill one bully, get another to fight for you, he want your food, he scared of you too."

She didn't know what to say to such a preposterous idea.

"They eating you up," said the boy. "Eating you up. So you got to kill one. Get him down, everybody as small as me. Stones crack any size head."

"You make me sick," she said.

"Cause you didn't think of it," he said.

He was flirting with death, talking to her that way. If she injured him at all, he'd be finished, he must know that.

But then, he had death living with him inside his flimsy little shirt already. Hard to see how it would matter if death came any closer.

Poke looked around at her crew. She couldn't read their faces.

"I don't need no baby telling me to kill what we can't kill."

"Little kid come up behind him, you shove, he fall over," said the boy. "Already got you some big stones, bricks. Hit him in the head. When you see brains you done."

"He no good to me dead," she said. "I want my own bully, he keep us safe, I don't want no dead one."

The boy grinned. "So now you like my idea," he said.

"Can't trust no bully," she answered.

"He watch out for you at the charity kitchen," said the boy. "You get in at the kitchen." He kept looking her in the eye, but he was talking for the others to hear. "He get you \*all\* in at the kitchen."

"Little kid get into the kitchen, the big kids, they beat him," said Sergeant. He was eight, and mostly acted like he thought he was Poke's second-in-command, though truth was she didn't have a second.

"You get you a bully, he make them go away."

"How he stop two bullies? Three bullies?" asked Sergeant.

"Like I said," the boy answered. "You push him down, he not so big. You get your rocks. You be ready. Be not you a soldier? Don't they call you Sergeant?"

"Stop talking to him, Sarge," said Poke. "I don't know why any of us is talking to some two-year-old."

"I'm four," said the boy.

"What your name?" asked Poke.

"Nobody ever said no name for me," he said.

"You mean you so stupid you can't remember your own name?"

"Nobody ever said no name," he said again. Still he looked her in the eye, lying there on the ground, the crew around him.

"Ain't worth a bean," she said.

"Am so," he said.

"Yeah," said Sergeant. "One damn bean."

"So now you got a name," said Poke. "You go back and sit on that garbage can, I think about what you said."

"I need something to eat," said Bean.

"If I get me a bully, if what you said works, then maybe I give you something."

"I need something now," said Bean.

She knew it was true.

She reached into her pocket and took out six peanuts she had been saving. He sat up and took just one from her hand, put it in his mouth and slowly chewed.

"Take them all," she said impatiently.

He held out his little hand. It was weak. He couldn't make a fist. "Can't hold them all," he said. "Don't hold so good."

Damn. She was wasting perfectly good peanuts on a kid who was going to die anyway.

But she was going to try his idea. It was audacious, but it was the first plan she'd ever heard that offered any hope of making things better, of changing something about their miserable life without her having to put on girl clothes and going into business. And since it was his idea, the crew had to see that she treated him fair. That's how you stay crew boss, they always see you be fair.

So she kept holding her hand out while he ate all six peanuts, one at a time.

After he swallowed the last one, he looked her in the eye for another long moment, and then said, "You better be ready to kill him."

"I want him alive."

"Be ready to kill him if he ain't the right one." With that, Bean toddled back across the street to his garbage can and laboriously climbed on top again to watch.

"You ain't no four years old!" Sergeant shouted over to him.

"I'm four but I'm just little," he shouted back.

Poke hushed Sergeant up and they went looking for stones and bricks and cinderblocks. If they were going to have a little war, they'd best be armed.

\*\*\*

Bean didn't like his new name, but it was a name, and having a name meant that somebody else knew who he was and needed something to call him, and that was a good thing. So were the six peanuts. His mouth hardly knew what to do with them. Chewing hurt.

So did watching as Poke screwed up the plan he gave her. Bean didn't choose her because she was the smartest crew boss in Rotterdam. Quite the opposite. Her crew barely survived because her judgment wasn't that good. And she was too compassionate. Didn't have the brains to make sure she got enough food herself to look well fed, so while her own crew knew she was nice and liked her, to strangers she didn't look prosperous. Didn't look good at her job.

But if she really was good at her job, she would never have listened to him. He never would have got close. Or if she did listen, and did like his idea, she would have got rid of him. That's the way it worked on the street. Nice kids died. Poke was almost too nice to stay alive. That's what Bean was counting on. But that's what he now feared.

All this time he invested in watching people while his body ate itself up, it would be wasted if she couldn't bring it off. Not that Bean hadn't wasted a lot of time himself. At first when he watched the way kids did things on the street, the way they were stealing from each other, at each other's throats, in each other's pockets, selling every part of themselves that they could sell, he saw how things could be better if somebody had any brains, but he didn't trust his own insight. He was sure there must be something else that he just didn't get. He struggled to learn more -- of everything. To learn to read so he'd know what the signs said on trucks and stores and wagons and bins. To learn

enough Dutch and enough I.F. Common to understand everything that was said around him. It didn't help that hunger constantly distracted him. He probably could have found more to eat if he hadn't spent so much time studying the people. But finally he realized: He already understood it. He had understood it from the start. There was no secret that Bean just didn't get yet because he was only little. The reason all these kids handled everything so stupidly was because they were stupid.

They were stupid and he was smart. So why was he starving to death while these kids were still alive? That was when he decided to act. That was when he picked Poke as his crew boss. And now he sat on a garbage can watching her blow it.

She chose the wrong bully, that's the first thing she did. She needed a guy who made it on size alone, intimidating people. She needed somebody big and dumb, brutal but controllable. Instead, she thinks she needs somebody \*small\*. No, stupid! Stupid! Bean wanted to scream at her as she saw her target coming, a bully who called himself Achilles after the comics hero. He was little and mean and smart and quick, but he had a gimp leg. So she thought she could take him down more easily. Stupid! The idea isn't just to take him down -- you can take \*anybody\* down the first time because they won't expect it. You need somebody who will \*stay\* down.

But he said nothing. Couldn't get her mad at him. See what happens. See what Achilles is like when he's beat. She'll see -- it won't work and she'll have to kill him and hide the body and try again with another bully before word gets out that there's a crew of little kids taking down bullies.

So up comes Achilles, swaggering -- or maybe that was just the rolling gait that his bent leg forced on him -- and Poke makes an exaggerated show of cowering and trying to get away. Bad job, thought Bean. Achilles gets it already. Something's wrong. You were supposed to act like you normally do! Stupid! So Achilles looks around a lot more. Wary. She tells him she's got something stashed -- that part's normal -- and she leads him into the trap in the alley. But look, he's holding back. Being careful. It isn't going to work.

But it does work, because of the gimp leg. Achilles can see the trap being sprung but he can't get away, a couple of little kids pile into the backs of his legs while Poke and Sergeant push him from the front and down he goes. Then there's a couple of bricks hitting his body and his bad leg and they're thrown hard -- the little kids get it, they do their job, even if Poke is stupid -- and yeah, that's good, Achilles \*is\* scared, he thinks he's going to die.

Bean was off his perch by now. Down the alley, watching, closer. Hard to see past the crowd. He pushes his way in, and the little kids -- who are all bigger than he is -- recognize him, they know he earned a view of this, they let him in. He stands right at Achilles' head. Poke stands above him, holding a big cinderblock, and she's talking.

"You get us into the food line at the shelter."

"Sure, right, I will, I promise."

Don't believe him. Look at his eyes, checking for weakness.

"You get more food this way, too, Achilles. You get my crew. We get enough to eat, we have more strength, we bring more to you. You need a crew. The other bullies shove you out of the way -- we've seen them! -- but with us, you don't got to take no shit. See how we do it? An army, that's what we are."

OK, now he was getting it. It *\*was\** a good idea, and he wasn't stupid, so it made sense to him.

"If this is so smart, Poke, how come you didn't do this before now?"

She had nothing to say to that. Instead, she glanced at Bean.

Just a momentary glance, but Achilles saw it. And Bean knew what he was thinking. It was so obvious.

"Kill him," said Bean.

"Don't be stupid," said Poke. "He's *\*in\**."

"That's right," said Achilles. "I'm in. It's a good idea."

"Kill him," said Bean. "If you don't kill him now, he's going to kill *\*you\**."

"You let this little walking turd get away with talking shit like this?" said Achilles.

"It's your life or his," said Bean. "Kill him and take the next guy."

"The next guy won't have my bad leg," said Achilles. "The next guy won't think he needs you. I know I do. I'm in. I'm the one you want. It makes sense."

Maybe Bean's warning made her more cautious. She didn't cave in quite yet. "You won't decide later that you're embarrassed to have a bunch of little kids in your crew?"

"It's *\*your\** crew, not mine," said Achilles.

Liar, thought Bean. Don't you see that he's lying to you?

"What this is to me," said Achilles, "this is my family. These are my kid brothers and sisters. I got to look after my family, don't I?"

Bean saw at once that Achilles had won. Powerful bully, and he had called these kids his sisters, his brothers. Bean could see the hunger in their eyes. Not the regular hunger, for food, but the real hunger, the deep hunger, for family, for love, for belonging. They got a little of that by being in Poke's crew. But Achilles was promising more. He had just beaten Poke's best offer. Now it was too late to kill him.

Too late, but for a moment it looked as if Poke was so stupid she was going to go ahead and kill him after all. She raised the cinderblock higher, to crash it down.

"No," said Bean. "You can't. He's family now."

She lowered the cinderblock to her waist. Slowly she turned to look at Bean. "You get the hell out of here," she said. "You no part of my crew. You get \*nothing\* here."

"No," said Achilles. "You better go ahead and kill me, you plan to treat him that way."

Oh, that sounded brave. But Bean knew Achilles wasn't brave. Just smart. He had already won. It meant nothing that he was lying there on the ground and Poke still had the cinderblock. It was his crew now. Poke was finished. It would be a while before anybody but Bean and Achilles understood that, but the test of authority was here and now, and Achilles was going to win it.

"This little kid," said Achilles, "he may not be part of your crew, but he's part of my family. You don't go telling my brother to get lost."

Poke hesitated. A moment. A moment longer.

Long enough.

Achilles sat up. He rubbed his bruises, he checked out his contusions. He looked in joking admiration to the little kids who had bricked him. "Damn, you bad!" They laughed -- nervously, at first. Would he hurt them because they hurt him? "Don't worry," he said. "You showed me what you can do. We have to do this to more than a couple of bullies, you'll see. I had to know you could do it right. Good job. What's your name?"

One by one he learned their names. Learned them and remembered them, or when he missed one he'd make a big deal about it, apologize, visibly work at remembering. Fifteen minutes later, they loved him.

If he could do this, thought Bean, if he's this good at making people love him, why didn't he do it before?

Because these fools always look up for power. People above you, they never want to share power with you. Why you look to them? They give you nothing. People below you, you give them hope, you give them respect, \*they\* give you power, cause they don't think they have any, so they don't mind giving it up.

Achilles got to his feet, a little shaky, his bad leg more sore than usual. Everybody stood back, gave him some space. He could leave now, if he wanted. Get away, never come back. Or go get some more bullies, come back and punish the crew. But he stood there, then smiled, reached into his pocket, took out the most incredible thing. A bunch of raisins. A whole handful of them. They looked at his hand as if it bore the mark of a nail in the palm.

"Little brothers and sisters first," he said. "Littlest first." He looked at Bean. "You."

"Not him!" said the next littlest. "We don't even know him."

"Bean was the one wanted us to kill you," said another.

"Bean," said Achilles. "Bean, you were just looking out for my family, weren't you?"

"Yes," said Bean.

"You want a raisin?"

Bean nodded.

"You first. You the one brought us all together, OK?"

Either Achilles would kill him or he wouldn't. At this moment, all that mattered was the raisin. Bean took it. Put it in his mouth. Did not even bite down on it. Just let his saliva soak it, bringing out the flavor of it.

"You know," said Achilles, "no matter how long you hold it in your mouth, it never turns back into a grape."

"What's a grape?"

Achilles laughed at him, still not chewing. Then he gave out raisins to the other kids. Poke had never shared out so many raisins, because she had never had so many to share. But the little kids wouldn't understand that. They'd think, Poke gave us garbage, and Achilles gave us raisins. That's because they were stupid.

## CHAPTER 2 -- KITCHEN

"I know you've already looked through this area, and you're probably almost done with Rotterdam, but something's been happening lately, since you visited, that ... oh, I don't know if it's really anything, I shouldn't have called."

"Tell me, I'm listening."

"There's always been fighting in the line. We try to stop them, but we only have a few volunteers, and they're needed to keep order inside the dining room, that and serve the food. So we know that a lot of kids who should get a turn can't even get in the line, because they're pushed out. And if we do manage to stop the bullies and let one of the little ones in, then they get beaten up afterward. We never see them again. It's ugly."

"Survival of the fittest."

"Of the cruelest. Civilization is supposed to be the opposite of that."

"You're civilized. They're not."

"Anyway, it's changed. All of a sudden. just in the past few days. I don't know why. But I just -- you said that anything unusual -- and whoever's behind it -- I mean, can civilization suddenly evolve all over again, in the middle of a jungle of children?"

"That's the only place it ever evolves. I'm through in Delft. There was nothing for us here. I already have enough blue plates."

\*\*\*

Bean kept to the background during the weeks that followed. He had nothing to offer now -- they already had his best idea. And he knew that gratitude wouldn't last long. He wasn't big and he didn't eat much, but if he was constantly underfoot, annoying people and chattering at them, it would soon become not only fun but popular to deny him food in hopes that he'd die or go away.

Even so, he often felt Achilles' eyes on him. He noticed this without fear. If Achilles killed him, so be it. He had been a few days from death anyway. It would just mean his plan didn't work so well after all, but since it was his only plan, it didn't matter if it turned out not to have been good. If Achilles remembered how Bean urged Poke to kill him -- and of course he did remember -- and if Achilles was planning how and when he would die, there was nothing Bean could do to prevent it.

Sucking up wouldn't help. That would just look like weakness, and Bean had seen for a long time how bullies -- and Achilles was still a bully at heart -- thrived on the terror of other children, how they treated people even worse when they showed their weakness. Nor would offering more clever ideas, first because Bean didn't have any, and second because Achilles would think it was an affront to his authority. And the other kids would resent it if Bean kept acting like he thought he was the only one with a brain. They already resented him for having thought of this plan that had changed their lives.

For the change was immediate. The very first morning, Achilles had Sergeant go stand in the line at Helga's Kitchen on Aert Van Nes Straat, because, he said, as long as we're going to get the crap beaten out of us anyway, we might as well try for the best free food in Rotterdam in case we get to eat before we die. He talked like that, but he had made them practice their moves till the last light of day the night before, so they worked together better and they didn't give themselves away so soon, the way they did when they were going after him. The practice gave them confidence. Achilles kept saying, "They'll expect this," and "They'll try that," and because he was a bully himself, they trusted him in a way they had never trusted Poke.

Poke, being stupid, kept trying to act as if she was in charge, as if she had only delegated their training to Achilles. Bean admired the way that Achilles did not argue with her, and did not change his plans or instructions in any way because of what she said. If she urged him to do what he was

already doing, he'd keep doing it. There was no show of defiance. No struggle for power. Achilles acted as if he had already won, and because the other kids followed him, he had.

The line formed in front of Helga's early, and Achilles watched carefully as bullies who arrived later inserted themselves in line in a kind of hierarchy -- the bullies knew which ones got pride of place. Bean tried to understand the principle Achilles used to pick which bully Sergeant should pick a fight with. It wasn't the weakest, but that was smart, since beating the weakest bully would only set them up for more fights every day. Nor was it the strongest. As Sergeant walked across the street, Bean tried to see what it was about the target bully that made Achilles pick him. And then Bean realized -- this was the strongest bully who had no friends with him.

The target was big and he looked mean, so beating him would look like an important victory. But he talked to no one, greeted no one. He was out of his territory, and several of the other bullies were casting resentful glances at him, sizing him up. There might have been a fight here today even if Achilles hadn't picked this soup line, this stranger.

Sergeant was cool as you please, slipping into place directly in front of the target. For a moment, the target just stood there looking at him, as if he couldn't believe what he was seeing. Surely this little kid would realize his deadly mistake and run away. But Sergeant didn't even act as if he noticed the target was there.

"Hey!" said the target. He shoved Sergeant hard, and from the angle of the push, Sergeant should have been propelled away from the line. But, as Achilles had told him, he planted a foot right away and launched himself forward, hitting the bully in front of the target in line, even though that was not the direction in which the target had pushed him.

The bully in front turned around and snarled at Sergeant, who pleaded, "He pushed me."

"He hit you himself," said the target.

"Do I look that stupid?" said Sergeant.

The bully-in-front sized up the target. A stranger. Tough, but not unbeatable. "Watch yourself, skinny boy."

That was a dire insult among bullies, since it implied incompetence and weakness.

"Watch your own self."

During this exchange, Achilles led a picked group of younger kids toward Sergeant, who was risking life and limb by staying right up between the two bullies. Just before reaching them, two of the younger kids darted through the line to the other side, taking up posts against the wall just beyond the target's range of vision. Then Achilles started screaming.

"What the hell do you think you're doing, you turd-stained piece of toilet paper! I send my boy to hold my place in line and you \*shove\* him? You shove him into my \*friend\* here?"

Of course they weren't friends at all -- Achilles was the lowest-status bully in this part of Rotterdam and he always took his place as the last of the bullies in line. But the target didn't know that, and he wouldn't have time to find out. For by the time the target was turned to face Achilles, the boys behind him were already leaping against his calves. There was no waiting for the usual exchange of shoves and brags before the fight began. Achilles began it and ended it with brutal swiftness. He pushed hard just as the younger boys hit, and the target hit the cobbled street hard. He lay there dazed, blinking. But already two other little kids were handing big loose cobblestones to Achilles, who smashed them down, one, two, on the target's chest. Bean could hear the ribs as they popped like twigs.

Achilles pulled him by his shirt and flopped him right back down on the street. He groaned, struggled to move, groaned again, lay still.

The others in line had backed away from the fight. This was a violation of protocol. When bullies fought each other, they took it into the alleys, and they didn't try for serious injury, they fought until supremacy was clear and it was over. This was a new thing, using cobblestones, breaking bones. It scared them, not because Achilles was so fearsome to look at, but because he had done the forbidden thing, and he had done it right out in the open.

At once Achilles signaled Poke to bring the rest of the crew and fill in the gap in the line. Meanwhile, Achilles strutted up and down the line, ranting at the top of his voice. "You can disrespect me, I don't care, I'm just a cripple, I'm just a guy with a gimp leg! But don't you go shoving my family! Don't you go shoving one of my children out of line! You hear me? Because if you do that some truck's going to come down this street and knock you down and break your bones, just like happened to this little pinprick, and next time maybe your head's going to be what breaks till your brains fall out on the street. You got to watch out for speeding trucks like the one that knocked down this fart-for-brains right here in front of my soup kitchen!"

There it was, the challenge. \*My\* kitchen. And Achilles didn't hold back, didn't show a spark of timidity about it. He kept the rant going, limping up and down the line, staring each bully in the face, daring him to argue. Shadowing his movements on the other side of the line were the two younger boys who had helped take down the stranger, and Sergeant strutted at Achilles's side, looking happy and smug. They reeked of confidence, while the other bullies kept glancing over their shoulders to see what those leg-grabbers behind them were doing.

And it wasn't just talk and brag, either. When one of the bullies started looking belligerent, Achilles went right up into his face. However, as he had planned beforehand, he didn't actually go after the belligerent one -- he was ready for trouble, asking for it. Instead, the boys launched themselves at the bully directly after him in line. Just as they leapt, Achilles turned and shoved the new target, screaming, "What do you think is so damn funny!" He had another cobblestone in his hands at once, standing over the fallen one, but he did not strike. "Go to the end of the line, you moron! You're lucky I'm letting you eat in my kitchen!"

It completely deflated the belligerent one, for the bully Achilles knocked down and obviously could have smashed was the one next \*lower\* in status. So the belligerent one hadn't been

threatened or harmed, and yet Achilles had scored a victory right in his face and he hadn't been a part of it.

The door to the soup kitchen opened. At once Achilles was with the woman who opened it, smiling, greeting her like an old friend. "Thank you for feeding us today," he said. "I'm eating last today. Thank you for bringing in my friends. Thank you for feeding my family."

The woman at the door knew how the street worked. She knew Achilles, too, and that something very strange was going on here. Achilles always ate last of the bigger boys, and rather shamefacedly. But his new patronizing attitude hardly had time to get annoying before the first of Poke's crew came to the door. "My family," Achilles announced proudly, passing each of the little kids into the hall. "You take good care of my children."

Even Poke he called his child. If she noticed the humiliation of it, though, she didn't show it. All she cared about was the miracle of getting into the soup kitchen. The plan had worked.

And whether she thought of it as her plan or Bean's didn't matter to Bean in the least, at least not till he had the first soup in his mouth. He drank it as slowly as he could, but it was still gone so fast that he could hardly believe it. Was this all? And how had he managed to spill so much of the precious stuff on his shirt?

Quickly he stuffed his bread inside his clothing and headed for the door. Stashing the bread and leaving, that was Achilles' idea and it was a good one. Some of the bullies inside the kitchen were bound to plan retribution. The sight of little kids eating would be galling to them. They'd get used to it soon enough, Achilles promised, but this first day it was important that all the little kids get out while the bullies were still eating.

When Bean got to the door, the line was still coming in, and Achilles stood by the door, chatting with the woman about the tragic accident there in the line. Paramedics must have been summoned to carry the injured boy away -- he was no longer groaning in the street. "It could have been one of the little kids," he said. "We need a policeman out here to watch the traffic. That driver would never have been so careless if there was a cop here."

The woman agreed. "It could have been awful. They said half his ribs were broken and his lung was punctured." She looked mournful, her hands fretting.

"This line forms up when it's still dark. It's dangerous. Can't we have a light out here? I've got my children to think about," said Achilles. "Don't you want my little kids to be safe? Or am I the only one who cares about them?"

The woman murmured something about money and how the soup kitchen didn't have much of a budget.

Poke was counting children at the door while Sergeant ushered them out into the street.

Bean, seeing that Achilles was trying to get the adults to protect them in line, decided the time was tight for him to be useful. Because this woman was compassionate and Bean was by far the smallest child, he knew he had the most power over her. He came up to her, tugged on her woollen skirt. "Thank you for watching over us," he said. "It's the first time I ever got into a real kitchen. Papa Achilles told us that you would keep us safe so we little ones could eat here every day."

"Oh, you poor thing! Oh, look at you." Tears streamed down the woman's face. "Oh, oh, you poor darling." She embraced him.

Achilles looked on, beaming. "I got to watch out for them," he said quietly. "I got to keep them safe."

Then he led his family -- it was no longer in any sense Poke's crew -- away from Helga's kitchen, all marching in a line. Till they rounded the corner of a building and then they ran like hell, joining hands and putting as much distance between them and Helga's kitchen as they could. For the rest of the day they were going to have to lie low. In twos and threes the bullies would be looking for them.

But they *could* lie low, because they didn't need to forage for food today. The soup already gave them more calories than they normally got, and they had the bread.

Of course, the first tax on that bread belonged to Achilles, who had eaten no soup. Each child reverently offered his bread to their new papa, and he took a bite from each one and slowly chewed it and swallowed it before reaching for the next offered bread. It was quite a lengthy ritual. Achilles took a mouthful of every piece of bread except two: Poke's and Bean's.

"Thanks," said Poke.

She was so stupid, she thought it was a gesture of respect. Bean knew better. By not eating their bread, Achilles was putting them outside the family. We are dead, thought Bean.

That's why Bean hung back, why he held his tongue and remained unobtrusive during the next few weeks. That was also why he endeavored never to be alone. Always he was within arm's reach of one of the other kids.

But he didn't linger near Poke. That was a picture he didn't want to get locked in anyone's memory, him tagging along with Poke.

From the second morning, Helga's soup kitchen had an adult outside watching, and a new light fixture on the third day. By the end of a week the adult guardian was a cop. Even so, Achilles never brought his group out of hiding until the adult was there, and then he would march the whole family right to the front of the line, and loudly thank the bully in first position for helping him look out for his children by saving them a place in line.

It was hard on all of them, though, seeing how the bullies looked at them. They had to be on their best behavior while the doorkeeper was watching, but murder was on their minds.

And it didn't get better; the bullies didn't "get used to it," despite Achilles' bland assurances that they would. So even though Bean was determined to be unobtrusive, he knew that something had to be done to turn the bullies away from their hatred, and Achilles, who thought the war was over and victory achieved, wasn't going to do it.

So as Bean took his place in line one morning, he deliberately hung back to be last of the family. Usually Poke brought up the rear -- it was her way of trying to pretend that she was somehow involved in ushering the little ones in. But this time Bean deliberately got in place behind her, with the hate-filled stare of the bully who should have had first position burning on his head.

Right at the door, where the woman was standing with Achilles, both of them looking proud of his family, Bean turned to face the bully behind him and asked, in his loudest voice, "Where's \*your\* children? How come you don't bring \*your\* children to the kitchen?"

The bully would have snarled something vicious, but the woman at the door was watching with raised eyebrows. "You look after little children, too?" she asked. It was obvious she was delighted about the idea and wanted the answer to be yes. And stupid as this bully was, he knew that it was good to please adults who gave out food. So he said, "Of course I do."

"Well, you can bring them, you know. Just like Papa Achilles here. We're always glad to see the little children."

Again Bean piped up, "They let people with little children come inside \*first\*!"

"You know, that's such a good idea," said the woman. "I think we'll make that a rule. Now, let's move along, we're holding up the hungry children."

Bean did not even glance at Achilles as he went inside.

Later, after breakfast, as they were performing the ritual of giving bread to Achilles, Bean made it a point to offer his bread yet again, though there was danger in reminding everyone that Achilles never took a share from him. Today, though, he had to see how Achilles regarded him, for being so bold and intrusive.

"If they all bring little kids, they'll run out of soup faster," said Achilles coldly. His eyes said nothing at all -- but that, too, was a message.

"If they all become papas," said Bean, "they won't be trying to kill us."

At that, Achilles' eyes came to life a little. He reached down and took the bread from Bean's hand. He bit down on the crust, tore away a huge piece of it. More than half. He jammed it into his mouth and chewed it slowly, then handed the remnant of the bread back to Bean.

It left Bean hungry that day, but it was worth it. It didn't mean that Achilles wasn't going to kill him someday, but at least he wasn't separating him from the rest of the family anymore. And that remnant of bread was far more food than he used to get in a day. Or a week, for that matter.

He was filling out. Muscles grew in his arms and legs again. He didn't get exhausted just crossing a street. He could keep up easily now, when the others jogged along. They all had more energy. They were healthy, compared to street urchins who didn't have a papa. Everyone could see it. The other bullies would have no trouble recruiting families of their own.

\*\*\*

Sister Carlotta was a recruiter for the International Fleet's training program for children. It had caused a lot of criticism in her order, and finally she won the right to do it by pointedly mentioning the Earth Defense Treaty, which was a veiled threat. If she reported the order for obstructing her work on behalf of the I.F., the order could lose its tax-exempt and draft-exempt status. She knew, however, that when the war ended and the treaty expired, she would no doubt be a nun in search of a home, for there would be no place for her among the Sisters of St. Nicholas.

But her mission in life, she knew, was to care for little children, and the way she saw it, if the Buggers won the next round of the war, all the little children of the Earth would die. Surely God did not mean that to happen -- but in her judgment, at least, God did not want his servants to sit around waiting for God to work miracles to save them. He wanted his servants to labor as best they could to bring about righteousness. So it was her business, as a Sister of St. Nicholas, to use her training in child development in order to serve the war effort. As long as the I.F. thought it worthwhile to recruit extraordinarily gifted children to train them for command roles in the battles to come, then she would help them by finding the children that would otherwise be overlooked. They would never pay anyone to do something as fruitless as scouring the filthy streets of every overcrowded city in the world, searching among the malnourished savage children who begged and stole and starved there; for the chance of finding a child with the intelligence and ability and character to make a go of it in Battle School was remote.

To God, however, all things were possible. Did he not say that the weak would be made strong, and the strong weak? Was Jesus not born to a humble carpenter and his bride in the country province of Galilee? The brilliance of children born to privilege and bounty, or even to bare sufficiency, would hardly show forth the miraculous power of God. And it was the miracle she was searching for. God had made humankind in his own image, male and female he created them. No Buggers from another planet were going to blow down what God had created.

Over the years, though, her enthusiasm, if not her faith, had flagged a little. Not one child had done better than a marginal success on the tests.

Those children were indeed taken from the streets and trained, but it wasn't Battle School. They weren't on the course that might lead them to save the world. So she began to think that her real work was a different kind of miracle -- giving the children hope, finding even a few to be lifted out of the morass, to be given special attention by the local authorities. She made it a point to indicate the most promising children, and then follow up on them with email to the authorities. Some of her

early successes had already graduated from college; they said they owed their lives to Sister Carlotta, but she knew they owed their lives to God.

Then came the call from Helga Braun in Rotterdam, telling her of certain changes in the children who came to her charity kitchen. Civilization, she had called it. The children, all by themselves, were becoming civilized.

Sister Carlotta came at once, to see a thing which sounded like a miracle. And indeed, when she beheld it with her own eyes, she could hardly believe it. The line for breakfast was now flooded with little children. Instead of the bigger ones shoving them out of the way or intimidating them into not even bothering to try, they were shepherding them, protecting them, making sure each got his share. Helga had panicked at first, fearful that she would run out of food -- but she found that when potential benefactors saw how these children were acting, donations increased. There was always plenty now -- not to mention an increase in volunteers helping.

"I was at the point of despair," she told Sister Carlotta. "On the day when they told me that a truck had hit one of the boys and broken his ribs. Of course that was a lie, but there he lay, right in the line. They didn't even try to conceal him from me. I was going to give up. I was going to leave the children to God and move in with my oldest boy in Frankfurt, where the government is not required by treaty to admit every refugee from any part of the globe."

"I'm glad you didn't," said Sister Carlotta. "You can't leave them to God, when God has left them to us."

"Well, that's the funny thing. Perhaps that fight in the line woke up these children to the horror of the life they were living, for that very day one of the big boys -- but the weakest of them, with a bad leg, they call him Achilles -- well, I suppose \*I\* gave him that name years ago, because Achilles had a weak heel, you know -- Achilles, anyway -- he showed up in the line with a group of little children. He as much as asked me for protection, warning me that what happened to that poor boy with the broken ribs -- he was the one I call Ulysses, because he wanders from kitchen to kitchen -- he's still in hospital, his ribs were completely smashed in, can you believe the brutality? -- Achilles, anyway, he warned me that the same thing might happen to his little ones, so I made the special effort, I came early to watch over the line, and badgered the police to finally give me a man, off-duty volunteers at first, on part pay, but now regulars -- you'd think I would have been watching over the line all along, but don't you see? It didn't make any difference because they didn't do their intimidation in the line, they did it where I couldn't see, so no matter how I watched over them, it was only the bigger, meaner boys who ended up in the line, and yes, I know they're God's children too and I fed them and tried to preach the gospel to them as they ate, but I was losing heart, they were so heartless themselves, so devoid of compassion, but Achilles, anyway, he had taken on a whole group of them, including the littlest child I ever saw on the streets, it just broke my heart, they call him Bean, so small, he looked to be two years old, though I've learned since that he thinks he's four, and he \*talks\* like he's ten at least, very precocious, I suppose that's why he lived long enough to get under Achilles' protection, but he was skin and bone, people say that when somebody's skinny, but in the case of this little Bean, it was true, I didn't know how he had muscles enough to walk, to \*stand\*, his arms and legs were as thin as an ant -- oh, isn't that awful? To compare him to the \*Buggers\*? Or I should say, the Formics, since they're saying now that

Buggers is a bad word in English, even though I.F. Common is \*not\* English, even though it began that way, don't you think?"

"So, Helga, you're telling me it began with this Achilles."

"Do call me Hazie. We're friends now, aren't we?" She gripped Sister Carlotta's hand. "You must meet this boy. Courage! Vision! Test him, Sister Carlotta. He is a leader of men! He is a civilizer!"

Sister Carlotta did not point out that civilizers often didn't make good soldiers. It was enough that the boy was interesting, and she had missed him the first time around. It was a reminder to her that she must be thorough.

In the dark of early morning, Sister Carlotta arrived at the door where the line had already formed. Helga beckoned to her, then pointed ostentatiously at a rather good-looking young man surrounded by smaller children. Only when she got closer and saw him take a couple of steps did she realize just how bad his right leg was. She tried to diagnose the condition. Was it an early case of rickets? A clubfoot, left uncorrected? A break that healed wrong?

It hardly mattered. Battle School would not take him with such an injury.

Then she saw the adoration in the eyes of the children, the way they called him Papa and looked to him for approval. Few adult men were good fathers. This boy of -- what, eleven? twelve? -- had already learned to be an extraordinarily good father. Protector, provider, king, god to his little ones. Even as ye do it unto the least of these, ye have done it unto me. Christ had a special place deep in his heart for this boy Achilles. So she would test him, and maybe the leg could be corrected; or, failing that, she could surely find a place for him in some good school in one of the cities of the Netherlands -- pardon, the International Territory -- that was not completely overwhelmed by the desperate poverty of refugees.

He refused.

"I can't leave my children," he said.

"But surely one of the others can look after them."

A girl who dressed as a boy spoke up. "I can!"

But it was obvious she could not -- she was too small herself. Achilles was right. His children depended on him, and to leave them would be irresponsible. The reason she was here was because he was civilized; civilized men do not leave their children.

"Then I will come to you," she said. "After you eat, take me where you spend your days, and let me teach you all in a little school. Only for a few days, but that would be good, wouldn't it?"

It *would* be good. It had been a long time since Sister Carlotta had actually taught a group of children. And never had she been given such a class as this. Just when her work had begun to seem

futile even to her, God gave her such a chance. It might even be a miracle. Wasn't it the business of Christ to make the lame walk? If Achilles did well on the tests, then surely God would let the leg also be fixed, would let it be within the reach of medicine.

"School's good," said Achilles. "None of these little ones can read."

Sister Carlotta knew, of course, that if Achilles could read, he certainly couldn't do it well.

But for some reason, perhaps some almost unnoticeable movement, when Achilles said that none of the little ones could read, the smallest of them all, the one called Bean, caught her eye. She looked at him, into eyes with sparks in them like distant campfires in the darkest night, and she knew that \*he\* knew how to read. She knew, without knowing how, that it was not Achilles at all, that it was this little one that God had brought her here to find.

She shook off the feeling. It was Achilles who was the civilizer, doing the work of Christ. It was the leader that the I.F. would want, not the weakest and smallest of the disciples.

\*\*\*

Bean stayed as quiet as possible during the school sessions, never speaking up and never giving an answer even when Sister Carlotta tried to insist. He knew that it wouldn't be good for him to let anyone know that he could already read and do numbers, nor that he could understand every language spoken in the street, picking up new languages the way other children picked up stones. Whatever Sister Carlotta was doing, whatever gifts she had to bestow, if it ever seemed to the other children that Bean was trying to show them up, trying to get ahead of them, he knew that he would not be back for another day of school. And even though she mostly taught things he already knew how to do, in her conversation there were many hints of a wider world, of great knowledge and wisdom. No adult had ever taken the time to speak to them like this, and he luxuriated in the sound of high language well spoken. When she taught it was in I.F. Common, of course, that being the language of the street, but since many of the children had also learned Dutch and some were even native Dutch speakers, she would often explain hard points in that language. When she was frustrated though, and muttered under her breath, that was in Spanish, the language of the merchants of Jonker Frans Straat, and he tried to piece together the meanings of new words from her muttering. Her knowledge was a banquet, and if he remained quiet enough, he would be able to stay and feast.

School had only been going for a week, however, when he made a mistake. She passed out papers to them, and they had writing on them. Bean read his paper at once. It was a "Pre-Test" and the instructions said to circle the right answers to each question. So he began circling answers and was halfway down the page when he realized that the entire group had fallen silent.

They were all looking at him, because Sister Carlotta was looking at him.

"What are you doing, Bean?" she asked. "I haven't even told you what to do yet. Please give me your paper."

Stupid, inattentive, careless -- if you die for this, Bean, you deserve it.

He handed her the paper.

She looked at it, then looked back at him very closely. "Finish it," she said.

He took the paper back from her hand. His pencil hovered over the page. He pretended to be struggling with the answer.

"You did the first fifteen in about a minute and a half," said Sister Carlotta. "Please don't expect me to believe that you're suddenly having a hard time with the next question." Her voice was dry and sarcastic.

"I can't do it," he said. "I was just playing anyway."

"Don't lie to me," said Carlotta. "Do the rest."

He gave up and did them all. It didn't take long. They were easy. He handed her the paper.

She glanced over it and said nothing. "I hope the rest of you will wait until I finish the instructions and read you the questions. If you try to guess at what the hard words are, you'll get all the answers wrong."

Then she proceeded to read each question and all the possible answers out loud. Only then could the other children set their marks on the papers.

Sister Carlotta didn't say another thing to call attention to Bean after that, but the damage was done. As soon as school was over, Sergeant came over to Bean. "So you can read," he said.

Bean shrugged.

"You been lying to us," said Sergeant.

"Never said I couldn't."

"Showed us all up. How come you didn't teach us?"

Because I was trying to survive, Bean said silently. Because I didn't want to remind Achilles that I was the smart one who thought up the original plan that got him this family. If he remembers that, he'll also remember who it was who told Poke to kill him.

The only answer he actually gave was a shrug.

"Don't like it when somebody holds out on us."

Sergeant nudged him with a foot.

Bean did not have to be given a map. He got up and jogged away from the group. School was out for him. Maybe breakfast, too. He'd have to wait till morning to find that out.

He spent the afternoon alone on the streets. He had to be careful. As the smallest and least important of Achilles' family, he might be overlooked. But it was more likely that those who hated Achilles would have taken special notice of Bean as one of the most memorable. They might take it into their heads that killing Bean or beating him to paste and leaving him would make a dandy warning to Achilles that he was still resented, even though life was better for everybody.

Bean knew there were plenty of bullies who felt that way. Especially the ones who weren't able to maintain a family, because they kept being too mean with the little children. The little ones learned quickly that when a papa got too nasty, they could punish him by leaving him alone at breakfast and attaching themselves to some other family. They would eat before him. They would have someone else's protection from him. He would eat last. If they ran out of food, he would get nothing, and Helga wouldn't even mind, because he wasn't a papa, he wasn't watching out for little ones. So those bullies, those marginal ones, they hated the way things worked these days, and they didn't forget that it was Achilles who had changed it all. Nor could they go to some other kitchen -- the word had spread among the adults who gave out food, and now all the kitchens had a rule that groups with little children got to be first in line. If you couldn't hold on to a family, you could get pretty hungry. And nobody looked up to you.

Still, Bean couldn't resist trying to get close enough to some of the other families to hear their talk. Find out how the other groups worked.

The answer was easy to learn: They didn't work all that well. Achilles really was a good leader. That sharing of bread -- none of the other groups did that. But there was a lot of punishing, the bully smacking kids who didn't do what he wanted. Taking their bread away from them because they didn't do something, or didn't do it quickly enough.

Poke had chosen right, after all. By dumb luck, or maybe she wasn't all that stupid. Because she had picked, not just the weakest bully, the easiest to beat, but also the smartest, the one who understood how to win and hold the loyalty of others. All Achilles had ever needed was the chance.

Except that Achilles still didn't share her bread, and now she was beginning to realize that this was a bad thing, not a good one. Bean could see it in her face when she watched the others do the ritual of sharing with Achilles. Because he got soup now -- Helga brought it to him at the door -- he took much smaller pieces, and instead of biting them off he tore them and ate them with a smile. Poke never got that smile from him. Achilles was never going to forgive her, and Bean could see that she was beginning to feel the pain of that. For she loved Achilles now, too, the way the other children did, and the way he kept her apart from the others was a kind of cruelty.

Maybe that's enough for him, thought Bean. Maybe that's his whole vengeance.

Bean happened to be curled up behind a newsstand when several bullies began a conversation near him. "He's full of brag about how Achilles is going to pay for what he did."

"Oh, right, Ulysses is going to punish him, right."

"Well, maybe not directly."

"Achilles and his stupid family will just take him apart. And this time they won't aim for his chest. He said so, didn't he? Break open his head and put his brains on the street, that's what Achilles'll do."

"He's still just a cripple."

"Achilles gets away with everything. Give it up."

"I'm hoping Ulysses does it. Kills him, flat out. And then none of us take in any of his bastards. You got that? Nobody takes them in. Let them all die. Put them all in the river."

The talk went on that way until the boys drifted away from the newsstand.

Then Bean got up and went in search of Achilles.

### CHAPTER 3 -- PAYBACK

"I think I have someone for you."

"You've thought that before."

"He's a born leader. But he does not meet your physical specifications."

"Then you'll pardon me if I don't waste time on him."

"If he passes your exacting intellectual and personality requirements, it is quite possible that for a minuscule portion of the brass button or toilet paper budget of the I. F., his physical limitations might be repaired."

"I never knew nuns could be sarcastic."

"I can't reach you with a ruler. Sarcasm is my last resort."

"Let me see the tests."

"I'll let you see the boy. And while we're at it, I'll let you see another."

"Also physically limited?"

"Small. Young. But so was the Wiggin boy, I hear. And this one -- somehow on the streets he taught himself to read."

"Ah, Sister Carlotta, you help me fill the empty hours of my life."

"Keeping you out of mischief is how I serve God."

\*\*\*

Bean went straight to Achilles with what he heard. It was too dangerous, to have Ulysses out of the hospital and word going around that he meant to get even for his humiliation.

"I thought that was all behind us," said Poke sadly. "The fighting I mean."

"Ulysses has been in bed for all this time," said Achilles. "Even if he knows about the changes, he hasn't had time to get how it works yet."

"So we stick together," said Sergeant. "Keep you safe."

"It might be safer for all," said Achilles, "if I disappear for a few days. To keep you safe."

"Then how will we get in to eat?" asked one of the younger ones. "They'll never let us in without you."

"Follow Poke," said Achilles. "Helga at the door will let you in just the same."

"What if Ulysses gets you?" asked one of the young ones. He rubbed the tears out of his eyes, lest he be shamed.

"Then I'll be dead," said Achilles. "I don't think he'll be content to put me in the hospital."

The child broke down crying, which set another to wailing, and soon it was a choir of boo-hoos, with Achilles shaking his head and laughing. "I'm not going to die. You'll be safe if I'm out of the way, and I'll come back after Ulysses has time to cool down and get used to the system."

Bean watched and listened in silence. He didn't think Achilles was handling it right, but he had given the warning and his responsibility was over. For Achilles to go into hiding was begging for trouble -- it would be taken as a sign of weakness.

Achilles slipped away that night to go somewhere that he couldn't tell them so that nobody could accidentally let it slip. Bean toyed with the idea of following him to see what he really did, but realized he would be more useful with the main group. After all, Poke would be their leader now, and Poke was only an ordinary leader. In other words, stupid. She needed Bean, even if she didn't know it.

That night Bean tried to keep watch, for what he did not know. At last he did sleep, and dreamed of school, only it wasn't the sidewalk or alley school with Sister Carlotta, it was a real school, with tables and chairs. But in the dream Bean couldn't sit at a desk. Instead he hovered in the air over it, and when he wanted to he flew anywhere in the room. Up to the ceiling. Into a crevice in the wall, into a secret dark place, flying upward and upward as it got warmer and warmer and ...

He woke in darkness. A cold breeze stirred. He needed to pee. He also wanted to fly. Having the dream end almost made him cry out with the pain of it. He couldn't remember ever dreaming of flying before. Why did he have to be little, with these stubby legs to carry him from place to place?

When he was flying he could look down at everyone and see the tops of their silly heads. He could pee or poop on them like a bird. He wouldn't have to be afraid of them because if they got mad he could fly away and they could never catch him.

Of course, if I could fly, everyone else could fly too and I'd still be the smallest and slowest and they'd poop and pee on me anyway.

There was no going back to sleep. Bean could feel that in himself. He was too frightened, and he didn't know why. He got up and went into the alley to pee.

Poke was already there. She looked up and saw him.

"Leave me alone for a minute," she said.

"No," he said.

"Don't give me any crap, little boy," she said.

"I know you squat to pee," he said, "and I'm not looking anyway." Glaring, she waited until he turned his back to urinate against the wall. "I guess if you were going to tell about me you already would have," she said.

"They all know you're a girl, Poke. When you're not there, Papa Achilles talks about you as 'she' and 'her.'"

"He's not my papa."

"So I figured," said Bean. He waited, facing the wall.

"You can turn around now." She was up and fastening her pants again.

"I'm scared of something, Poke," said Bean.

"What?"

"I don't know."

"You don't know what you're scared of?"

"That's why it's so scary."

She gave a soft, sharp laugh. "Bean, all that means is that you're four years old. Little kids see shapes in the night. Or they don't see shapes. Either way they're scared."

"Not me," said Bean. "When I'm scared, it's because something's wrong."

"Ulysses is looking to hurt Achilles, that's what."

"That wouldn't make you sad, would it?"

She glared at him. "We're eating better than ever. Everybody's happy. It was your plan. And I never cared about being the boss."

"But you hate him," said Bean.

She hesitated. "It feels like he's always laughing at me."

"How do you know what little kids are scared of?"

"Cause I used to be one," said Poke. "And I remember."

"Ulysses isn't going to hurt Achilles," said Bean.

"I know that," said Poke.

"Because you're planning to find Achilles and protect him."

"I'm planning to stay right here and watch out for the children."

"Or else maybe you're planning to find Ulysses first and kill him."

"How? He's bigger than me. By a lot."

"You didn't come out here to pee," said Bean. "Or else your bladder's the size of a gumball."

"You \*listened\*?"

Bean shrugged. "You wouldn't let me watch."

"You think too much, but you don't know enough to make sense of what's going on."

"I think Achilles was lying to us about what he's going to do," said Bean, "and I think you're lying to me right now."

"Get used to it," said Poke. "The world is full of liars."

"Ulysses doesn't care who he kills," said Bean. "He'd be just as happy to kill you as Achilles."

Poke shook her head impatiently. "Ulysses is nothing. He isn't going to hurt anybody. He's all brag."

"So why are you up?" asked Bean.

Poke shrugged.

"\*You're\* going to try to kill Achilles, aren't you," said Bean. "And make it look like Ulysses did it."

She rolled her eyes. "Did you drink a big glass of stupid juice tonight?"

"I'm smart enough to know you're lying!"

"Go back to sleep," she said. "Go back to the other children."

He regarded her for a while, and then obeyed.

Or rather, seemed to obey. He went back into the crawl space where they slept these days, but immediately crept out the back way and clambered up crates, drums, low walls, high walls, and finally got up onto a low-hanging roof. He walked to the edge in time to see Poke slip out of the alley into the street. She was going somewhere. To meet someone.

Bean slid down a pipe onto a rainbarrel, and scurried along Korte Hoog Straat after her. He tried to be quiet, but she wasn't trying, and there were other noises of the city, so she never heard his footfalls. He clung to the shadows of walls, but didn't dodge around too much. It was pretty straightforward, following her -- she only turned twice. Headed for the river. Meeting someone.

Bean had two guesses. It was either Ulysses or Achilles. Who else did she know, that wasn't already asleep in the nest? But then, why meet either of them? To plead with Ulysses for Achilles' life? To heroically offer herself in his place? Or to try to persuade Achilles to come back and face down Ulysses instead of hiding? No, these were all things that Bean might have thought of doing -- but Poke didn't think that far ahead.

Poke stopped in the middle of an open space on the dock at Scheepmakershaven and looked around. Then she saw what she was looking for. Bean strained to see. Someone waiting in a deep shadow. Bean climbed up on a big packing crate, trying to get a better view. He heard the two voices -- both children -- but he couldn't make out what they were saying. Whoever it was, he was taller than Poke. But that could be either Achilles or Ulysses.

The boy wrapped his arms around Poke and kissed her.

This was really weird. Bean had seen grownups do that plenty of times, but what would kids do it for? Poke was nine years old. Of course there were whores that age, but everybody knew that the johns who bought them were perverts.

Bean had to get closer, to hear what they were saying. He dropped down the back of the packing crate and slowly walked into the shadow of a kiosk. They, as if to oblige him, turned to face him; in the deep shadow he was invisible, at least if he kept still. He couldn't see them any better than they could see him, but he could hear snatches of their conversation now.

"You promised," Poke was saying. The guy mumbled in return.

A boat passing on the river scanned a spotlight across the riverside and showed the face of the boy Poke was with. It was Achilles.

Bean didn't want to see any more. To think he had once believed Achilles would someday kill Poke. This thing between girls and boys was something he just didn't get. In the midst of hate, this happens. Just when Bean was beginning to make sense of the world.

He slipped away and ran up Posthoornstraat.

But he did not head back to their nest in the crawlspace, not yet. For even though he had all the answers, his heart was still jumping; something is wrong, it was saying to him, something is wrong.

And then he remembered that Poke wasn't the only one hiding something from him. Achilles had also been lying. Hiding something. Some plan. Was it just this meeting with Poke? Then why all this business about hiding from Ulysses? To take Poke as his girl, he didn't have to hide to do that. He could do that right out in the open. Some bullies did that, the older ones. They usually didn't take nine-year-olds, though. Was that what Achilles was hiding?

"You promised," Poke said to Achilles there on the dock.

What did Achilles promise? That was why Poke came to him -- to pay him for his promise. But what could Achilles be promising her that he wasn't already giving her as part of his family? Achilles didn't have anything.

So he must have been promising not to do something. Not to kill her? Then that would be too stupid even for Poke, to go off alone with Achilles.

Not to kill me, thought Bean. That's the promise. Not to kill me.

Only I'm not the one in danger, or not the most danger. I might have said to kill him, but Poke was the one who knocked him down, who stood over him. That picture must still be in Achilles' mind, all the time he must remember it, must dream about it, him lying on the ground, a nine-year-old girl

standing over him with a cinderblock, threatening to kill him. A cripple like him, somehow he had made it into the ranks of the bullies. So he was tough -- but always mocked by the boys with two good legs, the lowest-status bully. And the lowest moment of his life had to be then, when a nine-year-old girl knocked him down and a bunch of little kids stood over him.

Poke, he blames you most. You're the one he has to smash in order to wipe out the agony of that memory.

Now it was clear. Everything Achilles had said today was a lie. He wasn't hiding from Ulysses. He would face Ulysses down -- probably still would, tomorrow. But when he faced Ulysses, Achilles would have a much bigger grievance. You killed Poke! He would scream the accusation. Ulysses would look so stupid and weak, denying it after all the bragging he'd done about how he'd get even. He might even admit to killing her, just for the brag of it. And then Achilles would strike at Ulysses and nobody would blame him for killing the boy. It wouldn't be mere self-defense, it would be defense of his family.

Achilles was just too damn smart. And patient. Waiting to kill Poke until there was somebody else who could be blamed for it.

Bean ran back to warn her. As fast as his little legs would move, the longest strides he could take. He ran forever.

There was nobody there on the dock where Poke had met Achilles.

Bean looked around helplessly. He thought of calling out, but that would be stupid. Just because it was Poke that Achilles hated most didn't mean that he had forgiven Bean, even if he did let Bean give him bread.

Or maybe I've gone crazy over nothing. He was hugging her, wasn't he? She came willingly, didn't she? There are things between boys and girls that I just don't understand. Achilles is a provider, a protector, not a murderer. It's my mind that works that way, my mind that thinks of killing someone who is helpless, just because he might pose a danger later. Achilles is the good one. I'm the bad one, the criminal.

Achilles is the one who knows how to love. I'm the one who doesn't.

Bean walked to the edge of the dock and looked across the channel. The water was covered with a low-flowing mist. On the far bank, the lights of Boompjes Straat twinkled like Sinterklaas Day. The waves lapped like tiny kisses against the pilings.

He looked down into the river at his feet. Something was bobbing in the water, bumped up against the wharf.

Bean looked at it for a while, uncomprehending. But then he understood that he had known all along what it was, he just didn't want to believe it. It was Poke. She was dead. It was just as Bean had feared. Everybody on the street would believe that Ulysses was guilty of the murder, even if

nothing could be proved. Bean had been right about everything. Whatever it was that passed between boys and girls, it didn't have the power to block hatred, vengeance for humiliation.

And as Bean stood there, looking down into the water, he realized: I either have to tell what happened, right now, this minute, to everybody, or I have to decide never to tell anybody, because if Achilles gets any hint that I saw what I saw tonight, he'll kill me and not give it a second thought. Achilles would simply say: Ulysses strikes again. Then he can pretend to be avenging two deaths, not one, when he kills Ulysses.

No, all Bean could do was keep silence. Pretend that he hadn't seen Poke's body floating in the river, her upturned face clearly recognizable in the moonlight.

She was stupid. Stupid not to see through Achilles' plans, stupid to trust him in any way, stupid not to listen to me. As stupid as I was, to walk away instead of calling out a warning, maybe saving her life by giving her a witness that Achilles could not hope to catch and therefore could not silence.

She was the reason Bean was alive. She was the one who gave him a name. She was the one who listened to his plan. And now she had died for it, and he could have saved her. Sure, he told her at the start to kill Achilles, but in the end she had been right to choose him -- he was the only one of the bullies who could have figured it all out and brought it off with such style. But Bean had also been right. Achilles was a champion liar, and when he decided that Poke would die, he began building up the lies that would surround the murder -- lies that would get Poke off by herself where he could kill her without witnesses; lies to alibi himself in the eyes of the younger kids.

I trusted him, thought Bean. I knew what he was from the start, and yet I trusted him.

Aw, Poke, you poor, stupid, kind, decent girl. You saved me and I let you down.

It's not \*just\* my fault. \*She's\* the one who went off alone with him.

Alone with him, trying to save my life? What a mistake, Poke, to think of anyone but yourself!

Am I going to die from her mistakes, too?

No. I'll die from my own damn mistakes.

Not tonight, though. Achilles had not set any plan in motion to get Bean off by himself. But from now on, when he lay awake at night, unable to drift off, he would think about how Achilles was just waiting. Biding his time. Till the day when Bean, too, would find himself in the river.

\*\*\*

Sister Carlotta tried to be sensitive to the pain these children were suffering, so soon after one of their own was strangled and thrown in the river. But Poke's death was all the more reason to push forward on the testing. Achilles had not been found yet -- with this Ulysses boy having already

struck once, it was unlikely that Achilles would come out of hiding for some time. So Sister Carlotta had no choice but to proceed with Bean.

At first the boy was distracted, and did poorly. Sister Carlotta could not understand how he could fail even the elementary parts of the test, when he was so bright he had taught himself to read on the street. It had to be the death of Poke. So she interrupted the test and talked to him about death, about how Poke was caught up in spirit into the presence of God and the saints, who would care for her and make her happier than she had ever been in life. He did not seem interested. If anything, he did worse as they began the next phase of the test.

Well, if compassion didn't work, sternness might.

"Don't you understand what this test is for, Bean?" she asked.

"No," he said. The tone of his voice added the unmistakable idea "and I don't care."

"All you know about is the life of the street. But the streets of Rotterdam are only a part of a great city, and Rotterdam is only one city in a world of thousands of such cities. The whole human race, Bean, that's what this test is about. Because the Formics --"

"The Buggers," said Bean. Like most street urchins, he sneered at euphemism.

"They will be back, scouring the Earth, killing every living soul. This test is to see if you are one of the children who will be taken to Battle School and trained to be a commander of the forces that will try to stop them. This test is about saving the world, Bean."

For the first time since the test began, Bean turned his full attention to her. "Where is Battle School?"

"In an orbiting platform in space," she said. "If you do well enough on this test, you get to be a spaceman!"

There was no childlike eagerness in his face. Only hard calculation.

"I've been doing real bad so far, haven't I," he said.

"The test results so far show that you're too stupid to walk and breathe at the same time."

"Can I start over?"

"I have another version of the tests, yes," said Sister Carlotta.

"Do it."

As she brought out the alternate set, she smiled at him, tried to relax him again. "So you want to be a spaceman, is that it? Or is it the idea of being part of the International Fleet?"

He ignored her.

This time through the test, he finished everything, even though the tests were designed not to be finished in the allotted time. His scores were not perfect, but they were close. So close that nobody would believe the results.

So she gave him yet another battery of tests, this one designed for older children -- the standard tests, in fact, that six-year-olds took when being considered for Battle School at the normal age. He did not do as well on these; there were too many experiences he had not had yet, to be able to understand the content of some of the questions. But he still did remarkably well. Better than any student she had ever tested.

And to think she had thought it was Achilles who had the real potential. This little one, this infant, really -- he was astonishing. No one would believe she had found him on the streets, living at the starvation level.

A suspicion crept into her mind, and when the second test ended and she recorded the scores and set them aside, she leaned back in her chair and smiled at bleary-eyed little Bean and asked him, "Whose idea was it, this family thing that the street children have come up with?"

"Achilles' idea," said Bean.

Sister Carlotta waited.

"His idea to call it a family, anyway," said Bean.

She still waited. Pride would bring more to the surface, if she gave him time.

"But having a bully protect the little ones, that was my plan," said Bean. "I told it to Poke and she thought about it and decided to try it and she only made one mistake."

"What mistake was that?"

"She chose the wrong bully to protect us."

"You mean because he couldn't protect her from Ulysses?"

Bean laughed bitterly as tears slid down his cheeks.

"Ulysses is off somewhere bragging about what he's going to do."

Sister Carlotta knew but did not want to know. "Do you know who killed her, then?"

"I told her to kill him. I told her he was the wrong one. I saw it in his face, lying there on the ground, that he would never forgive her. But he's cold. He waited so long. But he never took bread

from her. That should have told her. She shouldn't have gone off alone with him." He began crying in earnest now. "I think she was protecting \*me\*. Because I told her to kill him that first day. I think she was trying to get him not to kill me."

Sister Carlotta tried to keep emotion out of her voice. "Do you believe you might be in danger from Achilles?"

"I am now that I told you," he said. And then, after a moment's thought. "I was already. He doesn't forgive. He pays back, always."

"You realize that this isn't the way Achilles seems to me, or to Hazie. Helga, that is. To us, he seems -- civilized."

Bean looked at her like she was crazy. "Isn't that what it \*means\* to be civilized? That you can \*wait\* to get what you want?"

"You want to get out of Rotterdam and go to Battle School so you can get away from Achilles."

Bean nodded.

"What about the other children. Do you think they're in danger from him?"

"No," said Bean. "He's their papa."

"But not yours. Even though he took bread from you."

"He hugged her and kissed her," said Bean. "I saw them on the dock, and she let him kiss her and then she said something about how he promised, and so I left, but then I realized and I ran back and it couldn't have been long, just running for maybe six blocks, and she was dead with her eye stabbed out, floating in the water, bumping up against the dock. He can kiss you and kill you, if he hates you enough."

Sister Carlotta drummed her fingers on the desk. "What a quandary."

"What's a quandary?"

"I was going to test Achilles, too. I think he could get into Battle School."

Bean's whole body tightened. "Then don't send me. Him or me."

"Do you really think ..." Her voice trailed off. "You think he'd try to kill you there?"

"\*Try?\*" His voice was scornful. "Achilles doesn't just \*try\*."

Sister Carlotta knew that the trait Bean was speaking of, that ruthless determination, was one of the things that they looked for in Battle School. It might make Achilles more attractive to them than Bean. And they could channel such murderous violence up there. Put it to good use.

But civilizing the bullies of the street had not been Achilles' idea. It had been Bean who thought of it. Incredible, for a child so young to conceive of it and bring it about. This child was the prize, not the one who lived for cold vengeance. But one thing was certain. It would be wrong of her to take them both. Though she could certainly take the other one and get him into a school here on Earth, get him off the street. Surely Achilles would become truly civilized then, where the desperation of the street no longer drove children to do such hideous things to each other.

Then she realized what nonsense she had been thinking. It wasn't the desperation of the street that drove Achilles to murder Poke. It was pride. It was Cain, who thought that being shamed was reason enough to take his brother's life. It was Judas, who did not shrink to kiss before killing. What was she thinking, to treat evil as if it were a mere mechanical product of deprivation? All the children of the street suffered fear and hunger, helplessness and desperation. But they didn't all become cold-blooded, calculating murderers.

If, that is, Bean was right.

But she had no doubt that Bean was telling her the truth. If Bean was lying, she would give up on herself as a judge of children's character. Now that she thought about it, Achilles was slick. A flatterer. Everything he said was calculated to impress. But Bean said little, and spoke plainly when he did speak. And he was young, and his fear and grief here in this room were real.

Of course, he also had urged that a child be killed.

But only because he posed a danger to others. It wasn't pride.

How can I judge? Isn't Christ supposed to be the judge of quick and dead? Why is this in my hands, when I am not fit to do it?

"Would you like to stay here, Bean, while I transmit your test results to the people who make the decisions about Battle School? You'll be safe here."

He looked down at his hands, nodded, then laid his head on his anus and sobbed.

\*\*\*

Achilles came back to the nest that morning. "I couldn't stay away," he said. "Too much could go wrong." He took them to breakfast, just like always. But Poke and Bean weren't there.

Then Sergeant did his rounds, listening here and there, talking to other kids, talking to an adult here and there, finding out what was happening, anything that might be useful. It was along the Wijnhaven dock that he heard some of the longshoremen talking about the body found in the river that morning. A little girl. Sergeant found out where her body was being held till the authorities

arrived. He didn't shy away, he walked right up to the body under a tarpaulin, and without asking permission from any of the others standing there, he pulled it back and looked at her.

"What are you doing, boy!"

"Her name is Poke," he said.

"You know her? Do you know who might have killed her?"

"A boy named Ulysses, that's who killed her," said Sergeant. Then he dropped the tarp and his rounds were over. Achilles had to know that his fears had been justified, that Ulysses was taking out anybody he could from the family.

"We've got no choice but to kill him," said Sergeant.

"There's been enough bloodshed," said Achilles. "But I'm afraid you're right."

Some of the younger children were crying. One of them explained, "Poke fed me when I was going to die."

"Shut up," said Sergeant. "We're eating better now than we ever did when Poke was boss."

Achilles put a hand on Sergeant's arm, to still him. "Poke did the best a crew boss could do. And she's the one who got me into the family. So in a way, anything I get for you, she got for you."

Everyone nodded solemnly at that.

A kid asked, "You think Ulysses got Bean, too?"

"Big loss if he did," said Sergeant.

"Any loss to my family is a big loss," said Achilles. "But there'll be no more. Ulysses will either leave the city, now, or he's dead. Put the word out, Sergeant. Let it be known on the street that the challenge stands. Ulysses doesn't eat in any kitchen in town, until he faces me. That's what he decided for himself, when he chose to put a knife in Poke's eye."

Sergeant saluted him and took off at a run. The picture of businesslike obedience.

Except that as he ran, he, too, was crying. For he had not told anyone how Poke died, how her eye was a bloody wound. Maybe Achilles knew some other way, maybe he had already heard but didn't mention it till Sergeant came back with the news. Maybe maybe. Sergeant knew the truth. Ulysses didn't raise his hand against anybody. Achilles did it. Just as Bean warned in the beginning. Achilles would never forgive Poke for beating him. He killed her now because Ulysses would get blamed for it. And then sat there talking about how good she was and how they should all be grateful to her and everything Achilles got for them, it was really Poke who got it.

So Bean was right all along. About everything. Achilles might be a good papa to the family, but he was also a killer, and he never forgives.

Poke knew that, though. Bean warned her, and she knew it, but she chose Achilles for their papa anyway. Chose him and then died for it. She was like Jesus that Helga preached about in her kitchen while they ate. She died for her people. And Achilles, he was like God. He made people pay for their sins no matter what they did.

The important thing is, stay on the good side of God. That's what Helga teaches, isn't it? Stay right with God.

I'll stay right with Achilles. I'll honor my papa, that's for sure, so I can stay alive until I'm old enough to go out on my own.

As for Bean, well, he was smart, but not smart enough to stay alive, and if you're not smart enough to stay alive, then you're better off dead.

By the time Sergeant got to his first corner to spread the word about Achilles's ban on Ulysses from any kitchen in town, he was through crying. Grief was done. This was about survival now. Even though Sergeant knew Ulysses hadn't killed anybody, he meant to, and it was still important for the family's safety that he die. Poke's death provided a good excuse to demand that the rest of the papas stand back and let Achilles deal with him. When it was all over, Achilles would be the leader among all the papas of Rotterdam. And Sergeant would stand beside him, knowing the secret of his vengeance and telling no one, because that's how Sergeant, that's how the family, that's how all the urchins of Rotterdam would survive.

#### CHAPTER 4 -- MEMORIES

"I was mistaken about the first one. He tests well, but his character is not well suited to Battle School."

"I don't see that on the tests you've shown me."

"He's very sharp. He gives the right answers, but they aren't true."

"And what test did you use to determine this?"

"He committed murder."

"Well, that is a drawback. And the other one? What am I supposed to do with so young a child? A fish this small I would generally throw back into the stream."

"Teach him. Feed him. He'll grow."

"He doesn't even have a name."

"Yes he does."

"Bean? That isn't a name, it's a joke."

"It won't be when he's done with it."

"Keep him until he's five. Make of him what you can and show me your results then."

"I have other children to find."

"No, Sister Carlotta, you don't. In all your years of searching, this one is the best you've found. And there isn't time to find another. Bring this one up to snuff, and all your work will be worth it, as far as the I.F. is concerned."

"You frighten me, when you say there isn't time."

"I don't see why. Christians have been expecting the imminent end of the world for millennia."

"But it keeps not ending."

"So far, so good."

\*\*\*

At first all Bean cared about was the food. There was enough of it. He ate everything they put before him. He ate until he was full -- that most miraculous of words, which till now had had no meaning for him. He ate until he was stuffed. He ate until he was sick. He ate so often that he had bowel movements every day, sometimes twice a day. He laughed about it to Sister Carlotta. "All I do is eat and poop!" he said.

"Like any beast of the forest," said the nun. "It's time for you to begin to earn that food."

She was already teaching him, of course, daily lessons in reading and arithmetic, bringing him "up to level," though what level she had in mind, she never specified. She also gave him time to draw, and there were sessions where she had him sit there and try to remember every detail about his earliest memories. The clean place in particular fascinated her. But there were limits to memory. He was very small then, and had very little language. Everything was a mystery. He did remember climbing over the railing around his bed and falling to the floor. He didn't walk well at the time. Crawling was easier, but he liked walking because that's what the big people did. He clung to objects and leaned on walls and made good progress on two feet, only crawling when he had to cross an open space.

"You must have been eight or nine months old," Sister Carlotta said. "Most people don't remember that far back."

"I remember that everybody was upset. That's why I climbed out of bed. All the children were in trouble."

"All the children?"

"The little ones like me. And the bigger ones. Some of the grownups came in and looked at us and cried."

"Why?"

"Bad things, that's all. I knew it was a bad thing coming and I knew it would happen to all of us who were in the beds. So I climbed out. I wasn't the first. I don't know what happened to the others. I heard the grownups yelling and getting all upset when they found the empty beds. I hid from them. They didn't find me. Maybe they found the others, maybe they didn't. All I know is when I came out all the beds were empty and the room was very dark except a lighted sign that said \*exit\*."

"You could read then?" She sounded skeptical.

"When I \*could\* read, I remembered that those were the letters on the sign," said Bean. "They were the only letters I saw back then. Of course I remembered them."

"So you were alone and the beds were empty and the room was dark."

"They came back. I heard them talking. I didn't understand most of the words. I hid again. And this time when I came out, even the beds were gone. Instead, there were desks and cabinets. An office. And no, I didn't know what an office was then, either, but now I do know what an office is and I remember that's what the rooms had all become. Offices. People came in during the day and worked there, only a few at first but my hiding place turned out not to be so good, when people were working there. And I was hungry."

"Where did you hide?"

"Come on, you know. Don't you?"

"If I knew, I wouldn't ask."

"You saw the way I acted when you showed me the toilet."

"You hid inside the toilet?"

"The tank on the back. It was hard to get the lid up. And it wasn't comfortable in there. I didn't know what it was for. But people started using it and the water rose and fell and the pieces moved and it scared me. And like I said, I was hungry. Plenty to drink, except that I peed in it myself. My diaper was so waterlogged it fell off my butt. I was naked."

"Bean, do you understand what you're telling me? That you were doing all this before you were a year old?"

"You're the one who said how old I was," said Bean. "I didn't know about ages then. You told me to remember. The more I tell you, the more comes back to me. But if you don't believe me ..."

"I just ... I do believe you. But who were the other children? What was the place where you lived, that clean place? Who were those grownups? Why did they take away the other children? Something illegal was going on, that's certain."

"Whatever," said Bean. "I was just glad to get out of the toilet."

"But you were naked, you said. And you left the place?"

"No, I got found. I came out of the toilet and a grownup found me."

"What happened?"

"He took me home. That's how I got clothing. I called them clothings then."

"You were talking."

"Some."

"And this grownup took you home and bought you clothing."

"I think he was a janitor. I know more about jobs now and I think that's what he was. It was night when he worked, and he didn't wear a uniform like a guard."

"What happened?"

"That's when I first found out about legal and illegal. It wasn't legal for him to have a child. I heard him yelling at this woman about me and most of it I didn't understand, but at the end I knew he had lost and she had won, and he started talking to me about how I had to go away, and so I went."

"He just turned you loose in the streets?"

"No, I left. I think now he was going to have to give me to somebody else, and it sounded scary, so I left before he could do it. But I wasn't naked or hungry anymore. He was nice. After I left I bet he didn't have any more trouble."

"And that's when you started living on the streets."

"Sort of. A couple of places I found, they fed me. But every time, other kids, big ones, would see that I was getting fed and they'd come shouting and begging and the people would stop feeding me or the bigger kids would shove me out of the way or take the food right out of my hands. I was scared. One time a big kid got so mad at me for eating that he put a stick down my throat and made me throw up what I just ate, right on the street. He even tried to eat it but he couldn't, it made him try to throw up, too. That was the scariest time. I hid all the time after that. Hid. All the time."

"And starved."

"And watched," said Bean. "I ate some. Now and then. I didn't die."

"No, you didn't."

"I saw plenty who did. Lots of dead children. Big ones and little ones. I kept wondering how many of them were from the clean place."

"Did you recognize any of them?"

"No. Nobody looked like they ever lived in the clean place. Everybody looked hungry."

"Bean, thank you for telling me all this."

"You asked."

"Do you realize that there is no way you could have survived for three years as an infant?"

"I guess that means I'm dead."

"I just... I'm saying that God must have been watching over you."

"Yeah. Well, sure. So why didn't he watch over all those dead kids?"

"He took them to his heart and loved them."

"So then he *\*didn't\** love me?"

"No, he loved you too, he --"

"Cause if he was watching so careful, he could have given me something to eat now and then."

"He brought me to you. He has some great purpose in mind for you, Bean. You may not know what it is, but God didn't keep you alive so miraculously for no reason."

Bean was tired of talking about this. She looked so happy when she talked about God, but he hadn't figured it out yet, what God even was. It was like, she wanted to give God credit for every good thing, but when it was bad, then she either didn't mention God or had some reason why it was

a good thing after all. As far as Bean could see, though, the dead kids would rather have been alive, just with more food. If God loved them so much, and he could do whatever he wanted, then why wasn't there more food for these kids? And if God just wanted them dead, why didn't he let them die sooner or not even be born at all, so they didn't have to go to so much trouble and get all excited about trying to be alive when he was just going to take them to his heart. None of it made any sense to Bean, and the more Sister Carlotta explained it, the less he understood it. Because if there was somebody in charge, then he ought to be fair, and if he wasn't fair, then why should Sister Carlotta be so happy that he was in charge?

But when he tried to say things like that to her, she got really upset and talked even more about God and used words he didn't know and it was better just to let her say what she wanted and not argue.

It was the reading that fascinated him. And the numbers. He loved that. Having paper and pencil so he could actually write things, that was really good.

And maps. She didn't teach him maps at first, but there were some on the walls and the shapes of them fascinated him. He would go up to them and read the little words written on them and one day he saw the name of the river and realized that the blue was rivers and even bigger blue areas were places with even more water than the river, and then he realized that some of the other words were the same names that had been written on the street signs and so he figured out that somehow this thing was a picture of Rotterdam, and then it all made sense. Rotterdam the way it would look to a bird, if the buildings were all invisible and the streets were all empty. He found where the nest was, and where Poke had died, and all kinds of other places.

When Sister Carlotta found out that he understood the map, she got very excited. She showed him maps where Rotterdam was just a little patch of lines, and one where it was just a dot, and one where it was too small even to be seen, but she knew where it would be. Bean had never realized the world was so big. Or that there were so many people.

But Sister Carlotta kept coming back to the Rotterdam map, trying to get him to remember where things from his earliest memories were. Nothing looked the same, though, on the map, so it wasn't easy, and it took a long time for him to figure out where some of the places were where people had fed him. He showed these to Sister and she made a mark right on the map, showing each place. And after a while he realized -- all those places were grouped in one area, but kind of strung out, as if they marked a path from where he found Poke leading back through time to ...

To the clean place.

Only that was too hard. He had been too scared, coming out of the clean place with the janitor. He didn't know where it was. And the truth was, as Sister Carlotta herself said, the janitor might have lived anywhere compared to the clean place. So all she was going to find by following Bean's path backward was maybe the janitor's flat, or at least where he lived three years ago. And even then, what would the janitor know?

He would know where the clean place was, that's what he'd know. And now Bean understood: It was very important to Sister Carlotta to find out where Bean came from.

To find out who he really was.

Only ... he already knew who he really was. He tried to say this to her. "I'm right here. This is who I really am. I'm not pretending."

"I know that," she said, laughing, and she hugged him, which was all right. It felt good. Back when she first started doing it, he didn't know what to do with his hands. She had to show him how to hug her back. He had seen some little kids -- the ones with mamas or papas -- doing that but he always thought they were holding on tight so they wouldn't drop off onto the street and get lost. He didn't know that you did it just because it felt good. Sister Carlotta's body had hard places and squishy places and it was very strange to hug her. He thought of Poke and Achilles hugging and kissing, but he didn't want to kiss Sister Carlotta and after he got used to what hugging was, he didn't really want to do that either. He let her hug him. But he didn't ever think of hugging her himself. It just didn't come into his mind.

He knew that sometimes she hugged him instead of explaining things to him, and he didn't like that. She didn't want to tell him why it mattered that she find the clean place, so she hugged him and said, "Oh, you dear thing," or "Oh, you poor boy." But that only meant that it was even more important than she was saying, and she thought he was too stupid or ignorant to understand if she tried to explain.

He kept trying to remember more and more, if he could, only now he didn't tell her everything because she didn't tell *\*him\** everything and fair was fair. He would find the clean room himself. Without her. And then tell her if he decided it would be good for him to have her know. Because what if she found the wrong answer? Would she put him back on the street? Would she keep him from going to school in the sky? Because that's what she promised at first, only after the tests she said he did very well only he would *\*not\** go in the sky until he was five and maybe not even then because it was not entirely her decision and that's when he knew that she didn't have the power to keep her own promises. So if she found out the wrong thing about him, she might not be able to keep *\*any\** of her promises. Not even the one about keeping him safe from Achilles. That's why he had to find out on his own.

He studied the map. He pictured things in his mind. He talked to himself as he was falling asleep, talked and thought and remembered, trying to get the janitor's face back into his mind, and the room he lived in, and the stairs outside where the mean lady stood to scream at him.

And one day, when he thought he had remembered enough, Bean went to the toilet -- he liked the toilets, he liked to make them flush even though it scared him to see things disappear like that -- and instead of coming back to Sister Carlotta's teaching place, he went the other way down the corridor and went right out the door onto the street and no one tried to stop him.

That's when he realized his mistake, though. He had been so busy trying to remember the janitor's place that it never occurred to him that he had no idea where *\*this\** place was on the map. And it

wasn't in a part of town that he knew. In fact, it hardly seemed like the same world. Instead of the street being full of people walking and pushing carts and riding bikes or skating to get from one place to another, the streets were almost empty, and there were cars parked everywhere. Not a single store, either. All houses and offices, or houses made into offices with little signs out front. The only building that was different was the very one he had just come out of. It was blocky and square and bigger than the others, but it had no sign out in front of it at all.

He knew where he was going, but he didn't know how to get there from here. And Sister Carlotta would start looking for him soon.

His first thought was to hide, but then he remembered that she knew all about his story of hiding in the clean place, so she would also think of hiding and she would look for him in a hiding place close to the big building.

So he ran. It surprised him how strong he was now. It felt like he could run as fast as a bird flying, and he didn't get tired, he could run forever. All the way to the corner and around it onto another street.

Then down another street, and another, until he would have been lost except he started out lost and when you start out completely lost, it's hard to get lost. As he walked and trotted and jogged and ran up and down streets and alleys, he realized that all he had to do was find a canal or a stream and it would lead him to the river or to a place that he recognized. So the first bridge that went over water, he saw which way the water flowed and chose streets that would keep him close. It wasn't as if he knew where he was yet, but at least he was following a plan.

It worked. He came to the river and walked along it until he recognized, off in the distance and partly around a bend in the river, Maasboulevard, which led to the place where Poke was killed.

The bend in the river -- he knew it from the map. He knew where all of Sister Carlotta's marks had been. He knew that he had to go through the place where he used to live on the streets in order to get past them and closer to the area where the janitor might have lived. And that wouldn't be easy, because he would be known there, and Sister Carlotta might even have the cops looking for him and they would look there because that's where all the street urchins were and they would expect him to become a street urchin again.

What they were forgetting was that Bean wasn't hungry anymore. And since he wasn't hungry, he wasn't in a hurry.

He walked the long way around. Far from the river, far from the busy part of town where the urchins were. Whenever the streets started looking crowded he would widen his circle and stay away from the busy places. He took the rest of that day and most of the next making such a wide circle that for a while he was not in Rotterdam anymore at all, and he saw some of the countryside, just like the pictures -- farmland and the roads built up higher than the land around them. Sister Carlotta had explained to him once that most of the farmland was lower than the level of the sea, and great dikes were the only thing keeping the sea from rushing back onto the land and covering it. But Bean knew that he would never get close to any of the big dikes. Not by walking, anyway.

He drifted back into town now, into the Schiebroek district, and late in the afternoon of the second day he recognized the name of Rindijk Straat and soon found a cross street whose name he knew, a language he didn't understand. Now he could read the sign above the restaurant and realized that it was Armenian and that's probably what the woman had been speaking.

Which way had he walked to come here? He had smelled the food when he was walking along ... here? He walked a little way up, a little way down the street, turning and turning to reorient himself.

"What are you doing here, fatso?"

It was two kids, maybe eight years old. Belligerent but not bullies. Probably part of a crew. No, part of a family, now that Achilles had changed everything. If the changes had spread to this part of town.

"I'm supposed to meet my papa here," said Bean.

"And who's your papa?"

Bean wasn't sure whether they took the word "papa" to mean his father or the papa of his "family." He took the chance, though, of saying "Achilles."

They scoffed at the idea. "He's way down by the river, why would he meet a fatso like you clear up here?"

But their derision was not important -- what mattered was that Achilles' reputation had spread this far through the city.

"I don't have to explain his business to you," said Bean. "And all the kids in Achilles' family are fat like me. That's how well we eat."

"Are they all short like you?"

"I used to be taller, but I asked too many questions," said Bean, pushing past them and walking across Rozenlaan toward the area where the janitor's flat seemed likeliest to be.

They didn't follow him. Such was the magic of Achilles' name -- or perhaps it was just Bean's utter confidence, paying them no notice as if he had nothing to fear from them.

Nothing looked familiar. He kept turning around and checking to see if he recognized things when looking in the direction he might have been going after leaving the janitor's flat. It didn't help. He wandered until it was dark, and kept wandering even then.

Until, quite by chance, he found himself standing at the foot of a street lamp, trying to read a sign, when a set of initials carved on the pole caught his attention. P [heart shape] DVM, it said. He had

no idea what it meant; he had never thought of it during all his attempts to remember; but he knew that he had seen it before. And not just once. He had seen it several times. The janitor's flat was very close.

He turned slowly, scanning the area, and there it was: A small apartment building with both an inside and an outside stairway.

The janitor lived on the top floor. Ground floor, first floor, second floor, third. Bean went to the mailboxes and tried to read the names, but they were set too high on the wall and the names were all faded, and some of the tags were missing entirely.

Not that he ever knew the janitor's name, truth to tell. There was no reason to think he would have recognized it even if he had been able to read it on the mailbox.

The outside stairway did not go all the way up to the top floor. It must have been built for a doctor's office on the first floor. And because it was dark, the door at the top of the stairs was locked.

There was nothing to do but wait. Either he would wait all night and get into the building through one entrance or another in the morning, or someone would come back in the night and Bean would slip through a door behind him.

He fell asleep and woke up, slept and woke again. He worried that a policeman would see him and shove him away, so when he woke the second time he abandoned all pretense of being on watch and crept under the stairs and curled up there for the night.

He was awakened by drunken laughter. It was still dark, and beginning to rain just a little -- not enough to start dripping off the stairs, though, so Bean was dry. He stuck his head out to see who was laughing. It was a man and a woman, both merry with alcohol, the man furtively pawing and poking and pinching, the woman fending him off with halfhearted slaps. "Can't you wait?" she said.

"No," he said.

"You're just going to fall asleep without doing anything," she said.

"Not this time," he said. Then he threw up.

She looked disgusted and walked on without him. He staggered after her. "I feel better now," he said. "It'll be better."

"The price just went up," she said coldly. "And you brush your teeth first. "

"Course I brush my teeth."

They were right at the front of the building now. Bean was waiting to slip in after them.

Then he realized that he didn't have to wait. The man was the janitor from all those years before.

Bean stepped out of the shadows. "Thanks for bringing him home," he said to the woman.

They both looked at him in surprise.

"Who are you?" asked the janitor.

Bean looked at the woman and rolled his eyes. "He's not *that* drunk, I hope," said Bean. To the janitor he said, "Mama will not be happy to see you come home like this again."

"Mama!" said the janitor. "Who the hell are you talking about?"

The woman gave the janitor a shove. He was so off balance that he lurched against the wall, then slid down it to land on his buttocks on the sidewalk. "I should have known," she said. "You bring me home to your *wife*?"

"I'm not married," said the janitor. "This kid isn't mine."

"I'm sure you're telling the truth on both points," said the woman. "But you better let him help you up the stairs anyway. Mama's waiting." She started to walk away.

"What about my forty guilders?" he asked plaintively, knowing the answer even as he asked.

She made an obscene gesture and walked on into the night.

"You little bastard," said the janitor.

"I had to talk to you alone," said Bean.

"Who the hell are you? Who's your mama?"

"That's what I'm here to find out," said Bean. "I'm the baby you found and brought home. Three years ago."

The man looked at him in stupefaction.

Suddenly a light went on, then another. Bean and the janitor were bathed in overlapping flashlight beams. Four policemen converged on them.

"Don't bother running, kid," said a cop. "Nor you, Mr. Fun Time."

Bean recognized Sister Carlotta's voice. "They aren't criminals," she said. "I just need to talk to them. Up in his apartment."

"You followed me?" Bean asked her.

"I knew you were searching for him," she said. "I didn't want to interfere until you found him. Just in case you think you were really smart, young man, we intercepted four street thugs and two known sex offenders who were after you."

Bean rolled his eyes. "You think I've forgotten how to deal with them?"

Sister Carlotta shrugged. "I didn't want this to be the first time you ever made a mistake in your life." She did have a sarcastic streak.

\*\*\*

"So as I told you, there was nothing to learn from this Pablo de Noches. He's an immigrant who lives to pay for prostitutes. Just another of the worthless people who have gravitated here ever since the Netherlands became international territory."

Sister Carlotta had sat patiently, waiting for the inspector to wind down his I-told-you-so speech. But when he spoke of a man's worthlessness, she could not let the remark go unchallenged. "He took in that baby," she said. "And fed the child and cared for him."

The inspector waved off the objection. "We needed one more street urchin? Because that's all that people like this ever produce."

"You didn't learn \*nothing\* from him," Sister Carlotta said. "You learned the location where the boy was found."

"And the people renting the building during that time are untraceable. A company name that never existed. Nothing to go on. No way to track them down."

"But that nothing \*is\* something," said Sister Carlotta. "I tell you that these people had many children in this place, which they closed down in a hurry, with all the children but one taken away. You tell me that the company was a false name and can't be traced. So now, in your experience, doesn't that tell you a great deal about what was going on in that building?"

The inspector shrugged. "Of course. It was obviously an organ farm."

Tears came to Sister Carlotta's eyes. "And that is the only possibility?"

"A lot of defective babies are born to rich families," said the inspector. "There is an illegal market in infant and toddler organs. We close down the organ farms whenever we find out where they are. Perhaps we were getting close to this organ farm and they got wind of it and closed up shop. But there is no paper in the department on any organ farm that we actually found at that time. So perhaps they closed down for another reason. Still, nothing."

Patently, Sister Carlotta ignored his inability to realize how valuable this information was. "Where do the babies come from?"

The inspector looked at her blankly. As if he thought she was asking him to explain the facts of life.

"The organ farm," she said. "Where do they get the babies?"

The inspector shrugged. "Late-term abortions, usually. Some arrangement with the clinics, a kickback. That sort of thing."

"And that's the only source?"

"Well, I don't know. Kidnappings? I don't think that could be much of a factor, there aren't *that* many babies leaking through the security systems in the hospitals. People selling babies? It's been heard of, yes. Poor refugees arrive with eight children, and then a few years later they have only six, and they cry about the ones who died but who can prove anything? But nothing you can trace."

"The reason I'm asking," said Sister Carlotta, "is that this child is unusual. *Extremely* unusual."

"Three arms?" asked the inspector.

"Brilliant. Precocious. He escaped from this place before he was a year old. Before he could walk."

The inspector thought about that for a few moments. "He *crawled* away?"

"He hid in a toilet tank."

"He got the lid up before he was a year old?"

"He said it was hard to lift."

"No, it was probably cheap plastic, not porcelain. You know how these institutional plumbing fixtures are."

"You can see, though, why I want to know about the child's parentage. Some miraculous combination of parents."

The inspector shrugged. "Some children are born smart."

"But there is a hereditary component in this, inspector. A child like this must have ... remarkable parents. Parents likely to be prominent because of the brilliance of their own minds."

"Maybe. Maybe not," said the inspector. "I mean, some of these refugees, they might be brilliant, but they're caught up in desperate times. To save the other children, maybe they sell a baby. That's even a *smart* thing to do. It doesn't rule out refugees as the parents of this brilliant boy you have."  
"

"I suppose that's possible," said Sister Carlotta.

"It's the most information you'll ever have. Because this Pablo de Noches, he knows nothing. He barely could tell me the name of the town he came from in Spain."

"He was drunk when he was questioned," said Sister Carlotta.

"We'll question him again when he's sober," said the inspector. "We'll let you know if we learn anything more. In the meantime, though, you'll have to make do with what I've already told you, because there isn't anything more."

"I know all I need to know for now," said Sister Carlotta. "Enough to know that this child truly is a miracle, raised up by God for some great purpose."

"I'm not Catholic," said the inspector.

"God loves you all the same," said Sister Carlotta cheerfully.

## PART TWO -- LAUNCHY

### CHAPTER 5 -- READY OR NOT

"Why are you giving me a five-year-old street urchin to tend?"

"You've seen the scores."

"Am I supposed to take those seriously?"

"Since the whole Battle School program is based on the reliability of our juvenile testing program, yes, I think you should take his scores seriously. I did a little research. No child has ever done better. Not even your star pupil."

"It's not the validity of the tests that I doubt. It's the tester."

"Sister Carlotta is a nun. You'll never find a more honest person.

"Honest people have been known to deceive themselves. To want so desperately, after all these years of searching, to find one -- just one -- child whose value will be worth all that work."

"And she's found him."

"Look at the way she found him. Her first report touts this Achilles child, and this -- this Bean, this Legume -- he's just an afterthought. Then Achilles is gone, not another mention of him -- did he die? Wasn't she trying to get a leg operation for him? -- and it's Haricot Vert who is now her candidate."

"'Bean' is the name he calls himself. Rather as your Andrew Wiggin calls himself 'Ender.'"

"He's not \*my\* Andrew Wiggin."

"And Bean is not Sister Carlotta's child, either. If she were inclined to fudge the scores or administer tests unfairly, she would have pushed other students into the program long before now, and we'd already know how unreliable she was. She has never done that. She washes out her most hopeful children herself, then finds some place for them on Earth or in a non-command program. I think you're merely annoyed because you've already decided to focus all your attention and energy on the Wiggin boy, and you don't want any distraction."

"When did I lie down on your couch?"

"If my analysis is wrong, do forgive me."

"Of course I'll give this little one a chance. Even if I don't for one second believe these scores."

"Not just a chance. Advance him. Test him. Challenge him. Don't let him languish."

"You underestimate our program. We advance and test and challenge all our students."

"But some are more equal than others."

"Some take better advantage of the program than others."

"I'll look forward to telling Sister Carlotta about your enthusiasm."

\*\*\*

Sister Carlotta shed tears when she told Bean that it was time for him to leave. Bean shed none.

"I understand that you're afraid, Bean, but don't be," she said. "You'll be safe there, and there's so much to learn. The way you drink down knowledge, you'll be very happy there in no time. So you won't really miss me at all."

Bean blinked. What sign had he given that made her think he was afraid? Or that he would miss her?

He felt none of those things. When he first met her, he might have been prepared to feel something for her. She was kind. She fed him. She was keeping him safe, giving him a life.

But then he found Pablo the janitor, and there was Sister Carlotta, stopping Bean from talking to the man who had saved him long before she did. Nor would she tell him anything that Pablo had said, or anything she had learned about the clean place.

From that moment, trust was gone. Bean knew that whatever Sister Carlotta was doing, it wasn't for him. She was using him. He didn't know what for. It might even be something he would have chosen to do himself.

But she wasn't telling him the truth. She had secrets from him. The way Achilles kept secrets.

So during the months that she was his teacher, he had grown more and more distant from her. Everything she taught, he learned -- and much that she didn't teach as well. He took every test she gave him, and did well; but he showed her nothing he had learned that she hadn't taught him.

Of course life with Sister Carlotta was better than life on the street -- he had no intention of going back. But he did not trust her. He was on guard all the time. He was as careful as he had ever been back in Achilles's family. Those brief days at the beginning, when he wept in front of her, when he let go of himself and spoke freely -- that had been a mistake that he would not repeat. Life was better, but he wasn't safe, and this wasn't home.

Her tears were real enough, he knew. She really did love him, and would really miss him when he left. After all, he had been a perfect child, compliant, quick, obedient. To her, that meant he was "good." To him, it was only a way of keeping his access to food and learning. He wasn't stupid.

Why did she assume he was afraid? Because she was afraid *for* him. Therefore there might indeed be something to fear. He would be careful.

And why did she assume that he would miss her? Because she would miss him, and she could not imagine that what she was feeling, he might not feel as well. She had created an imaginary version of him. Like the games of Let's Pretend that she tried to play with him a couple of times. Harking back to her own childhood, no doubt, growing up in a house where there was always enough food. Bean didn't have to pretend things in order to exercise his imagination when he was on the street. Instead he had to imagine his plans for how to get food, for how to insinuate himself into a crew, for how to survive when he knew he seemed useless to everyone. He had to imagine how and when Achilles would decide to act against him for having advocated that Poke kill him. He had to imagine danger around every corner, a bully ready to seize every scrap of food. Oh, he had plenty of imagination. But he had no interest at all in playing Let's Pretend.

That was *her* game. She played it all the time. Let's pretend that Bean is a good little boy. Let's pretend that Bean is the son that this nun can never have for real. Let's pretend that when Bean leaves, he'll cry -- that he's not crying now because he's too afraid of this new school, this journey into space, to let his emotions show. Let's pretend that Bean loves me.

And when he understood this, he made a decision: It will do no harm to me if she believes all this. And she wants very much to believe it. So why not give it to her? After all, Poke let me stay with

the crew even though she didn't need me, because it would do no harm. It's the kind of thing Poke would do.

So Bean slid off his chair, walked around the table to Sister Carlotta, and put his arms as far around her as they would reach. She gathered him up onto her lap and held him tight, her tears flowing into his hair. He hoped her nose wasn't running. But he clung to her as long as she clung to him, letting go only when she let go of him. It was what she wanted from him, the only payment that she had ever asked of him. For all the meals, the lessons, the books, the language, for his future, he owed her no less than to join her in this game of Let's Pretend.

Then the moment passed. He slid off her lap. She dabbed at her eyes. Then she rose, took his hand, and led him out to the waiting soldiers, to the waiting car.

As he approached the car, the uniformed men loomed over him. It was not the grey uniform of the I.T. police, those kickers of children, those wielders of sticks. Rather it was the sky blue of the International Fleet that they wore, a cleaner look, and the people who gathered around to watch showed no fear, but rather admiration. This was the uniform of distant power, of safety for humanity, the uniform on which all hope depended. This was the service he was about to join.

But he was so small, and as they looked down at him he *\*was\** afraid after all, and clung more tightly to Sister Carlotta's hand. Was he going to become one of them? Was he going to be a man in such a uniform, with such admiration directed at him? Then why was he afraid?

I'm afraid, Bean thought, because I don't see how I can ever be so tall.

One of the soldiers bent down to him, to lift him into the car. Bean glared up at him, defying him to dare such a thing. "I can do it," he said.

The soldier nodded slightly, and stood upright again. Bean hooked his leg up onto the running board of the car and hoisted himself in. It was high off the ground, and the seat he held to was slick and offered scant purchase to his hands. But he made it, and positioned himself in the middle of the back seat, the only position where he could see between the front seats and have some idea of where the car would be going.

One of the soldiers got into the driver's seat. Bean expected the other to get into the back seat beside Bean, and anticipated an argument about whether Bean could sit in the middle or not. Instead, he got into the front on the other side. Bean was alone in back.

He looked out the side window at Sister Carlotta. She was still dabbing at her eyes with a handkerchief. She gave him a little wave. He waved back. She sobbed a little. The car glided forward along the magnetic track in the road. Soon they were outside the city, gliding through the countryside at a hundred and fifty kilometers an hour. Ahead was the Amsterdam airport, one of only three in Europe that could launch one of the shuttles that could fly into orbit. Bean was through with Rotterdam. For the time being, at least, he was through with Earth.

\*\*\*

Since Bean had never flown on an airplane, he did not understand how different the shuttle was, though that seemed to be all that the other boys could talk about at first. I thought it would be bigger. Doesn't it take off straight up? That was the old shuttle, stupid. There aren't any tray tables! That's cause in null-G you can't set anything down anyway, bonehead.

To Bean, the sky was the sky, and all he'd ever cared about was whether it was going to rain or snow or blow or burn. Going up into space did not seem any more strange to him than going up to the clouds.

What fascinated him were the other children. Boys, most of them, and all older than him. Definitely all larger. Some of them looked at him oddly, and behind him he heard one whisper, "Is he a kid or a doll?" But snide remarks about his size and his age were nothing new to him. In fact, what surprised him was that there was only the one remark, and it was whispered.

The kids themselves fascinated him. They were all so fat, so soft. Their bodies were like pillows, their cheeks full, their hair thick, their clothes well fitted. Bean knew, of course, that he had more fat on him now than at any time since he left the clean place, but he didn't see himself, he only saw them, and couldn't help comparing them to the kids on the street. Sergeant could take any of them apart. Achilles could ... well, no use thinking about Achilles.

Bean tried to imagine them lining up outside a charity kitchen. Or scrounging for candy wrappers to lick. What a joke. They had never missed a meal in their lives. Bean wanted to punch them all so hard in the stomach that they would puke up everything they ate that day. Let them feel some pain there in their gut, that gnawing hunger. And then let them feel it again the next day, and the next hour, morning and night, waking and sleeping, the constant weakness fluttering just inside your throat, the faintness behind your eyes, the headache, the dizziness, the swelling of your joints, the distension of your belly, the thinning of your muscles until you barely have strength to stand. These children had never looked death in the face and then chosen to live anyway. They were confident. They were unwary.

These children are no match for me.

And, with just as much certainty: I will never catch up to them. They'll always be bigger, stronger, quicker, healthier. Happier. They talked to each other boastfully, spoke wistfully of home, mocked the children who had failed to qualify to come with them, pretended to have inside knowledge about how things really were in Battle School. Bean said nothing. Just listened, watched them maneuver, some of them determined to assert their place in the hierarchy, others quieter because they knew their place would be lower down; a handful relaxed, unworried, because they had never had to worry about the pecking order, having been always at the top of it. A part of Bean wanted to engage in the contest and win it, clawing his way to the top of the hill. Another part of him disdained the whole group of them. What would it mean, really, to be top dog in this mangy pack?

Then he glanced down at his small hands, and at the hands of the boy sitting next to him.

I really do look like a doll compared to the rest of them.

Some of the kids were complaining about how hungry they were. There was a strict rule against eating for twenty-four hours before the shuttle flight, and most of these kids had never gone so long without eating. For Bean, twenty-four hours without food was barely noticeable. In his crew, you didn't worry about hunger until the second week.

The shuttle took off, just like any airplane, though it had a long, long runway to get it up to speed, it was so heavy. Bean was surprised at the motion of the plane, the way it charged forward yet seemed to hold still, the way it rocked a little and sometimes bumped, as if it were rolling over irregularities in an invisible road.

When they got up to a high altitude, they rendezvoused with two fuel planes, in order to take on the rest of the rocket fuel needed to achieve escape velocity. The plane could never have lifted off the ground with that much fuel on board.

During the refueling, a man emerged from the control cabin and stood at the front of the rows of seats. His sky blue uniform was crisp and perfect, and his smile looked every bit as starched and pressed and unstainable as his clothes.

"My dear darling little children," he said. "Some of you apparently can't read yet. Your seat harnesses are to remain in place throughout the entire flight. Why are so many of them unfastened? Are you going somewhere?"

Lots of little clicks answered him like scattered applause.

"And let me also warn you that no matter how annoying or enticing some other child might be, keep your hands to yourself. You should keep in mind that the children around you scored every bit as high as you did on every test you took, and some of them scored higher."

Bean thought: That's impossible. Somebody here had to have the highest score.

A boy across the aisle apparently had the same thought. "Right," he said sarcastically.

"I was making a point, but I'm willing to digress," said the man. "Please, share with us the thought that so enthralled you that you could not contain it silently within you."

The boy knew he had made a mistake, but decided to tough it out. "Somebody here has the highest score."

The man continued looking at him, as if inviting him to continue.

Inviting him to dig himself a deeper grave, thought Bean.

"I mean, you said that everybody scored as high as everybody else, and some scored higher, and that's just obviously not true."

The man waited some more.

"That's all I had to say."

"Feel better?" said the man.

The boy sullenly kept his silence.

Without disturbing his perfect smile, the man's tone changed, and instead of bright sarcasm, there was now a sharp whiff of menace. "I asked you a question, boy."

"No, I don't feel better."

"What's your name?" asked the man.

"Nero."

A couple of children who knew a little bit about history laughed at the name. Bean knew about the emperor Nero. He did not laugh, however. He knew that a child named Bean was wise not to laugh at other kids' names. Besides, a name like that could be a real burden to bear. It said something about the boy's strength or at least his defiance that he didn't give some nickname.

Or maybe Nero was his nickname.

"Just ... Nero?" asked the man.

"Nero Boulanger."

"French? Or just hungry?"

Bean did not get the joke. Was Boulanger a name that had something to do with food?

"Algerian."

"Nero, you are an example to all the children on this shuttle. Because most of them are so foolish, they think it is better to keep their stupidest thoughts to themselves. You, however, understand the profound truth that you must reveal your stupidity openly. To hold your stupidity inside you is to embrace it, to cling to it, to protect it. But when you expose your stupidity, you give yourself the chance to have it caught, corrected, and replaced with wisdom. Be brave, all of you, like Nero Boulanger, and when you have a thought of such surpassing ignorance that you think it's actually smart, make sure to make some noise, to let your mental limitations squeak out some whimpering fart of a thought, so that you have a chance to learn."

Nero grumbled something.

"Listen -- another flatulence, but this time even less articulate than before. Tell us, Nero. Speak up. You are teaching us all by the example of your courage, however half-assed it might be."

A couple of students laughed.

"And listen -- your fart has drawn out other farts, from people equally stupid, for they think they are somehow superior to you, and that they could not just as easily have been chosen to be examples of superior intellect."

There would be no more laughter.

Bean felt a kind of dread, for he knew that somehow, this verbal sparring, or rather this one-sided verbal assault, this torture, this public exposure, was going to find some twisted path that led to him. He did not know how he sensed this, for the uniformed man had not so much as glanced at Bean, and Bean had made no sound, had done nothing to call attention to himself. Yet he knew that he, not Nero, would end up receiving the cruelest thrust from this man's dagger.

Then Bean realized why he was sure it would turn against him. This had turned into a nasty little argument about whether someone had higher test scores than anyone else on the shuttle. And Bean had assumed, for no reason whatsoever, that he was the child with the highest scores.

Now that he had seen his own belief, he knew it was absurd. These children were all older and had grown up with far more advantages. He had had only Sister Carlotta as a teacher -- Sister Carlotta and, of course, the street, though few of the things he learned \*there\* had shown up on the tests. There was no way that Bean had the highest score.

Yet he still knew, with absolute certainty, that this discussion was full of danger for him.

"I told you to speak up, Nero. I'm waiting."

"I still don't see how anything I said was stupid," said Nero.

"First, it was stupid because I have all the authority here, and you have none, so I have the power to make your life miserable, and you have no power to protect yourself. So how much intelligence does it take just to keep your mouth shut and avoid calling attention to yourself? What could be a more obvious decision to make when confronted with such a lopsided distribution of power?"

Nero withered in his seat.

"Second, you seemed to be listening to me, not to find out useful information, but to try to catch me in a logical fallacy. This tells us all that you are used to being smarter than your teachers, and that you listen to them in order to catch them making mistakes and prove how smart you are to the other students. This is such a pointless, stupid way of listening to teachers that it is clear you are going to waste months of our time before you finally catch on that the only transaction that matters is a transfer of useful information from adults who possess it to children who do not, and that catching mistakes is a criminal misuse of time."

Bean silently disagreed. The criminal misuse of time was pointing out the mistakes. Catching them -- noticing them -- that was essential. If you did not in your own mind distinguish between useful and erroneous information, then you were not \*learning\* at all, you were merely replacing ignorance with false belief, which was no improvement.

The part of the man's statement that was true, however, was about the uselessness of speaking up. If I know that the teacher is wrong, and say nothing, then I remain the only one who knows, and that gives me an advantage over those who believe the teacher.

"Third," said the man, "my statement only seems to be self-contradictory and impossible because you did not think beneath the surface of the situation. In fact it is not necessarily true that one person has the highest scores of everyone on this shuttle. That's because there were many tests, physical, mental, social, and psychological, and many ways to define 'highest' as well, since there are many ways to be physically or socially or psychologically fit for command. Children who tested highest on stamina may not have tested highest on strength; children who tested highest on memory may not have tested highest on anticipatory analysis. Children with remarkable social skills might be weaker in delay of gratification. Are you beginning to grasp the shallowness of your thinking that led you to your stupid and useless conclusion?"

Nero nodded.

"Let us hear the sound of your flatulence again, Nero. Be just as loud in acknowledging your errors as you were in making them."

"I was wrong."

There was not a boy on that shuttle who would not have avowed a preference for death to being in Nero's place at that moment. And yet Bean felt a kind of envy as well, though he did not understand why he would envy the victim of such torture.

"And yet," said the man, "you happen to be less wrong on this particular shuttle flight than you would have been in any other shuttle filled with launchies heading for Battle School. And do you know why?"

He did not choose to speak.

"Does anyone know why? Can anyone guess? I am inviting speculation."

No one accepted the invitation.

"Then let me choose a volunteer. There is a child here named -- improbable as it might sound -- 'Bean.' Would that child please speak?"

Here it comes, thought Bean. He was filled with dread; but he was also filled with excitement, because this was what he wanted, though he did not know why. Look at me. Talk to me, you with the power, you with the authority.

"I'm here, sir," said Bean.

The man made a show of looking and looking, unable to see where Bean was. Of course it was a sham -- he knew exactly where Bean was sitting before he ever spoke. "I can't see where your voice came from. Would you raise a hand?"

Bean immediately raised his hand. He realized, to his shame, that his hand did not even reach to the top of the high-backed seat.

"I still can't see you," said the man, though of course he could. "I give you permission to unstrap and stand on your seat."

Bean immediately complied, peeling off the harness and bounding to his feet. He was barely taller than the back of the seat in front of him.

"Ah, there you are," said the man. "Bean, would you be so kind as to speculate about why, in this shuttle, Nero comes closer to being correct than on any other?"

"Maybe somebody here scored highest on a lot of tests."

"Not just a lot of tests, Bean. All the tests of intellect. All the psychological tests. All the tests pertinent to command. Every one of them. Higher than anyone else on this shuttle."

"So I was right," said the newly defiant Nero.

"No you were not," said the man. "Because that remarkable child, the one who scored highest on all the tests related to command, happens to have scored the very lowest on the physical tests. And do you know why?"

No one answered.

"Bean, as long as you're standing, can you speculate about why this one child might have scored lowest on the physical tests?"

Bean knew how he had been set up. And he refused to try to hide from the obvious answer. He would say it, even though the question was designed to make the others detest him for answering it. After all, they would detest him anyway, no matter who said the answer.

"Maybe he scored lowest on the physical tests because he's very, very small."

Groans from many boys showed their disgust at his answer. At the arrogance and vanity that it suggested. But the man in uniform only nodded gravely.

"As should be expected from a boy of such remarkable ability, you are exactly correct. Only this boy's unusually small stature prevented Nero from being correct about there being one child with higher scores than everybody else." He turned to Nero. "So close to not being a complete fool," he said. "And yet ... even if you had been right, it would only have been by accident. A broken clock is right two times a day. Sit down now, Bean, and put on your harness. The refueling is over and we're about to boost."

Bean sat down. He could feel the hostility of the other children. There was nothing he could do about that right now, and he wasn't sure that it was a disadvantage, anyway. What mattered was the much more puzzling question: Why did the man set him up like that? If the point was to get the kids competing with each other, they could have passed around a list with everyone's scores on all the tests, so they all could see where they stood. Instead, Bean had been singled out. He was already the smallest, and knew from experience that he was therefore a target for every mean-spirited impulse in a bully's heart. So why did they draw this big circle around him and all these arrows pointing at him, practically demanding that he be the main target of everyone's fear and hate?

Draw your targets, aim your darts. I'm going to do well enough in this school that someday I'll be the one with the authority, and then it won't matter who likes \*me\*. What will matter is who \*I\* like.

"As you may remember," said the man, "before the first fart from the mouthhole of Nero Bakerboy here, I was starting to make a point. I was telling you that even though some child here may seem like a prime target for your pathetic need to assert supremacy in a situation where you are unsure of being recognized for the hero that you want people to think you are, you must control yourself, and refrain from poking or pinching, jabbing or hitting, or even making snidely provocative remarks or sniggering like warthogs just because you think somebody is an easy target. And the reason why you should refrain from doing this is because you don't know who in this group is going to end up being \*your\* commander in the future, the admiral when you're a mere captain. And if you think for one moment that they will forget how you treated them now, today, then you really are a fool. If they're good commanders, they'll use you effectively in combat no matter how they despise you. But they don't have to be helpful to you in advancing your career. They don't have to nurture you and bring you along. They don't have to be kind and forgiving. Just think about that. The people you see around you will someday be giving you orders that will decide whether you live or die. I'd suggest you work on earning their respect, not trying to put them down so you can show off like some schoolyard punk."

The man turned his icy smile on Bean one more time.

"And I'll bet that Bean, here, is already planning to be the admiral who gives you all orders someday. He's even planning how he'll order \*me\* to stand solitary watch on some asteroid observatory till my bones melt from osteoporosis and I ooze around the station like an amoeba."

Bean hadn't given a moment's thought to some future contest between him and this particular officer. He had no desire for vengeance. He wasn't Achilles. Achilles was stupid. And this officer

was stupid for thinking that Bean would think that way. No doubt, however, the man thought Bean would be grateful because he had just warned the others not to pick on him. But Bean had been picked on by tougher bastards than these could possibly be; this officer's "protection" was not needed, and it made the gulf between Bean and the other children wider than before. If Bean could have lost a couple of tussles, he would have been humanized, accepted perhaps. But now there would be no tussles. No easy way to build bridges.

That was the reason for the annoyance that the man apparently saw on Bean's face. "I've got a word for you, Bean. I don't care what you do to me. Because there's only one enemy that matters. The Buggers. And if you can grow up to be the admiral who can give us victory over the Buggers and keep Earth safe for humanity, then make me eat my own guts, ass-first, and I'll still say, Thank you, sir. The Buggers are the enemy. Not Nero. Not Bean. Not even me. So keep your hands off each other."

He grinned again, mirthlessly.

"Besides, the last time somebody tried picking on another kid, he ended up flying through the shuttle in null-G and got his arm broken. It's one of the laws of strategy. Until you know that you're tougher than the enemy, you maneuver, you don't commit to battle. Consider that your first lesson in Battle School."

First lesson? No wonder they used this guy to tend children on the shuttle flights instead of having him teach. If you followed *that* little piece of wisdom, you'd be paralyzed against a vigorous enemy. Sometimes you *have* to commit to a fight even when you're weak. You *don't* wait till you *know* you're tougher. You *make* yourself tougher by whatever means you can, and then you strike by surprise, you sneak up, you backstab, you blindside, you cheat, you lie, you do whatever it takes to make sure that you come out on top.

This guy might be real tough as the only adult on a shuttle full of kids, but if he were a kid on the streets of Rotterdam, he'd "maneuver" himself into starvation in a month. If he wasn't killed before that just for talking like he thought his piss was perfume.

The man turned to head back to the control cabin.

Bean called out to him.

"What's your name?"

The man turned and fixed him with a withering stare. "Already drafting the orders to have my balls ground to powder, Bean?"

Bean didn't answer. Just looked him in the eye.

"I'm Captain Dimak. Anything else you want to know?"

Might as well find out now as later. "Do you teach at Battle School?"

"Yes," he said. "Coming down to pick up shuttle-loads of little boys and girls is how we get Earthside leave. Just as with you, my being on this shuttle means my vacation is over."

The refueling planes peeled away and rose above them. No, it was their own craft that was sinking. And the tail was sinking lower than the nose of the shuttle.

Metal covers came down over the windows. It felt like they were falling faster, faster ... until, with a bone-shaking roar, the rockets fired and the shuttle began to rise again, higher, faster, faster, until Bean felt like he was going to be pushed right through the back of his chair. It seemed to go on forever, unchanging.

Then ... silence.

Silence, and then a wave of panic. They were falling again, but this time there was no downward direction, just nausea and fear.

Bean closed his eyes. It didn't help. He opened them again, tried to reorient himself. No direction provided equilibrium. But he had schooled himself on the street not to succumb to nausea -- a lot of the food he had to eat had already gone a little bad, and he couldn't afford to throw it up. So he went into his anti-nausea routine -- deep breaths, distracting himself by concentrating on wiggling his toes. And, after a surprisingly short time, he was used to the null-G. As long as he didn't expect any direction to be down, he was fine.

The other kids didn't have his routine, or perhaps they were more susceptible to the sudden, relentless loss of balance. Now the reason for the prohibition against eating before the launch became clear. There was plenty of retching going on, but with nothing to throw up, there was no mess, no smell.

Dimak came back into the shuttle cabin, this time standing on the ceiling. Very cute, thought Bean. Another lecture began, this time about how to get rid of planetside assumptions about directions and gravity. Could these kids possibly be so stupid they needed to be told such obvious stuff?

Bean occupied the time of the lecture by seeing how much pressure it took to move himself around within his loosely-fitting harness. Everybody else was big enough that the harnesses fit snugly and prevented movement. Bean alone had room for a little maneuvering. He made the most of it. By the time they arrived at Battle School, he was determined to have at least a little skill at movement in null-G. He figured that in space, his survival might someday depend on knowing just how much force it would take to move his body, and then how much force it would take to stop. Knowing it in his mind wasn't half so important as knowing it with his body. Analyzing things was fine, but good reflexes could save your life.

"Normally your reports on a launch group are brief. A few troublemakers, an incident report, or -- best of all -- nothing."

"You're free to disregard any portion of my report, sir."

"Sir? My, but aren't we the prickly martinet today."

"What part of my report did you think was excessive?"

"I think this report is a love song."

"I realize that it might seem like sucking up, to use with every launch the technique you used with Ender Wiggin --"

"You use it with every launch?"

"As you noticed yourself, sir, it has interesting results. It causes an immediate sorting out."

"A sorting out into categories that might not otherwise exist. Nevertheless, I accept the compliment implied by your action. But seven pages about Bean -- really, did you actually learn that much from a response that was primarily silent compliance?"

"That is just my point, sir. It was not compliance at all. It was -- I was performing the experiment, but it felt as though his were the big eye looking down the microscope, and I were the specimen on the slide."

"So he unnerved you."

"He would unnerve anyone. He's cold, sir. And yet"

"And yet hot. Yes, I read your report. Every scintillating page of it."

"Yes sir."

"I think you know that it is considered good advice for us not to get crushes on our students."

"Sir?"

"In this case, however, I am delighted that you are so interested in Bean. Because, you see, I am not. I already have the boy I think gives us our best chance. Yet there is considerable pressure, because of Bean's damnable faked-up test scores, to give him special attention. Very well, he shall have it. And you shall give it to him."

"But sir ..."

"Perhaps you are unable to distinguish an order from an invitation."

"I'm only concerned that ... I think he already has a low opinion of me."

"Good. Then he'll underestimate you. Unless you think his low opinion might be correct."

"Compared to him, sir, we might all be a little dim."

"Close attention is your assignment. Try not to worship him."

\*\*\*

All that Bean had on his mind was survival, that first day in Battle School. No one would help him -- that had been made clear by Dimak's little charade in the shuttle. They were setting him up to be surrounded by ... what? Rivals at best, enemies at worst. So it was the street again. Well, that was fine. Bean had survived on the street. And would have kept on surviving, even if Sister Carlotta hadn't found him. Even Pablo -- Bean might have made it even without Pablo the janitor finding him in the toilet of the clean place.

So he watched. He listened. Everything the others learned, he had to learn just as well, maybe better. And on top of that, he had to learn what the others were oblivious to -- the workings of the group, the systems of the Battle School. How teachers got on with each other. Where the power was. Who was afraid of whom. Every group had its bosses, its suckups, its rebels, its sheep. Every group had its strong bonds and its weak ones, friendships and hypocrisies. Lies within lies within lies. And Bean had to find them all, as quickly as possible, in order to learn the spaces in which he could survive.

They were taken to their barracks, given beds, lockers, little portable desks that were much more sophisticated than the one he had used when studying with Sister Carlotta. Some of the kids immediately began to play with them, trying to program them or exploring the games built into them, but Bean had no interest in that. The computer system of Battle School was not a person; mastering it might be helpful in the long run, but for today it was irrelevant. What Bean needed to find out was all outside the launchy barracks.

Which is where, soon enough, they went. They arrived in the "morning" according to space time -- which, to the annoyance of many in Europe and Asia, meant Florida time, since the earliest stations had been controlled from there. For the kids, having launched from Europe, it was late afternoon, and that meant they would have a serious time-lag problem. Dimak explained that the cure for this was to get vigorous physical exercise and then take a short nap -- no more than three hours -- in the early afternoon, following which they would again have plenty of physical exercise so they could fall asleep that night at the regular bedtime for students.

They piled out to form a line in the corridor. "Green Brown Green," said Dimak, and showed them how those lines on the corridor walls would always lead them back to their barracks. Bean found himself jostled out of line several times, and ended up right at the back. He didn't care -- mere jostling drew no blood and left no bruise, and last in line was the best place from which to observe.

Other kids passed them in the corridor, sometimes individuals, sometimes pairs or trios, most with brightly-colored uniforms in many different designs. Once they passed an entire group dressed alike and wearing helmets and carrying extravagant sidearms, jogging along with an intensity of purpose that Bean found intriguing. They're a crew, he thought. And they're heading off for a fight.

They weren't too intense to notice the new kids walking along the corridor, looking up at them in awe. Immediately there were catcalls. "Launchies!" "Fresh meat!" "Who make cocç [coco] in the hall and don't clean it up!" "They even smell stupid!" But it was all harmless banter, older kids asserting their supremacy. It meant nothing more than that. No real hostility. In fact it was almost affectionate. They remembered being launchies themselves.

Some of the launchies ahead of Bean in line were resentful and called back some vague, pathetic insults, which only caused more hooting and derision from the older kids. Bean had seen older, bigger kids who hated younger ones because they were competition for food, and drove them away, not caring if they caused the little ones to die. He had felt real blows, meant to hurt. He had seen cruelty, exploitation, molestation, murder. These other kids didn't know love when they saw it.

What Bean wanted to know was how that crew was organized, who led it, how he was chosen, what the crew was \*for\*. The fact that they had their own uniform meant that it had official status. So that meant that the adults were ultimately in control -- the opposite of the way crews were organized in Rotterdam, where adults tried to break them up, where newspapers wrote about them as criminal conspiracies instead of pathetic little leagues for survival.

That, really, was the key. Everything the children did here was shaped by adults. In Rotterdam, the adults were either hostile, unconcerned, or, like Helga with her charity kitchen, ultimately powerless. So the children could shape their own society without interference. Everything was based on survival -- on getting enough food without getting killed or injured or sick. Here, there were cooks and doctors, clothing and beds. Power wasn't about access to food-it was about getting the approval of adults.

That's what those uniforms meant. Adults chose them, and children wore them because adults somehow made it worth their while.

So the key to everything was understanding the teachers.

All this passed through Bean's mind, not so much verbally as with a clear and almost instantaneous understanding that within that crew there was no power at all, compared to the power of the teachers, before the uniformed catcallers reached him. When they saw Bean, so much smaller than any of the other kids, they broke out laughing, hooting, howling. "That one isn't big enough to be a turd!" "I can't believe he can walk!" "Did'ums wose um's mama?" "Is it even human?"

Bean tuned them out immediately. But he could feel the enjoyment of the kids ahead of him in line. They had been humiliated in the shuttle; now it was Bean's turn to be mocked. They loved it. And so did Bean-because it meant that he was seen as less of a rival. By diminishing him, the passing soldiers had made him just that much safer from ...

From what? What was the danger here?

For there would be danger. That he knew. There was always danger. And since the teachers had all the power, the danger would come from them. But Dimak had started things out by turning the other kids against him. So the children themselves were the weapons of choice. Bean had to get to know the other kids, not because they themselves were going to be his problem, but because their weaknesses, their desires could be used against him by the teachers. And, to protect himself, Bean would have to work to undercut their hold on the other children. The only safety here was to subvert the teachers' influence. And yet that was the greatest danger -- if he was caught doing it.

They palmed in on a wall-mounted pad, then slid down a pole -- the first time Bean had ever done it with a smooth shaft. In Rotterdam, all his sliding had been on rainspouts, signposts, and lightpoles. They ended up in a section of Battle School with higher gravity. Bean did not realize how light they must have been on the barracks level until he felt how heavy he was down in the gym.

"This is just a little heavier than Earth normal gravity," said Dimak. "You have to spend at least a half-hour a day here, or your bones start to dissolve. And you have to spend the time exercising, so you keep at peak endurance. And that's the key -- endurance exercise, not bulking up. You're too small for your bodies to endure that kind of training, and it fights you here. Stamina, that's what we want."

The words meant almost nothing to the kids, but soon the trainer had made it clear. Lots of running on treadmills, riding on cycles, stair-stepping, pushups, situps, chinups, backups, but no weights. Some weight equipment was there, but it was all for the use of teachers. "Your heartrate is monitored from the moment you enter here," said the trainer. "If you don't have your heartrate elevated within five minutes of arrival and you don't keep it elevated for the next twenty-five minutes, it goes on your record and I see it on my control board here."

"I get a report on it too," said Dimak. "And you go on the pig list for everyone to see you've been lazy."

Pig list. So that's the tool they used -- shaming them in front of the others. Stupid. As if Bean cared.

It was the monitoring board that Bean was interested in. How could they possibly monitor their heartrates and know what they were doing, automatically, from the moment they arrived? He almost asked the question, until he realized the only possible answer: The uniform. It was in the clothing. Some system of sensors. It probably told them a lot more than heartrate. For one thing, they could certainly track every kid wherever he was in the station, all the time. There must be hundreds and hundreds of kids here, and there would be computers reporting the whereabouts, the heartrates, and who could guess what other information about them. Was there a room somewhere with teachers watching every step they took?

Or maybe it wasn't the clothes. After all, they had to palm in before coming down here, presumably to identify themselves. So maybe there were special sensors in this room.

Time to find out. Bean raised his hand. "Sir," he said.

"Yes?" The trainer did a doubletake on seeing Bean's size, and a smile played around the corners of his mouth. He glanced at Dimak. Dimak did not crack a smile or show any understanding of what the trainer was thinking.

"Is the heartrate monitor in our clothing? If we take off any part of our clothes while we're exercising, does it --"

"You are not authorized to be out of uniform in the gym," said the trainer. "The room is kept cold on purpose so that you will not need to remove clothing. You will be monitored at all times."

Not really an answer, but it told him what he needed to know. The monitoring depended on the clothes. Maybe there was an identifier in the clothing and by palming in, they told the gym sensors which kid was wearing which set of clothing. That would make sense.

So clothing was probably anonymous from the time you put on a clean set until you palmed in somewhere. That was important -- it meant that it might be possible to be untagged without being naked. Naked, Bean figured, would probably be conspicuous around here.

They all exercised and the trainer told them which of them were not up to the right heartrate and which of them were pushing too hard and would fatigue themselves too soon. Bean quickly got an idea of the level he had to work at, and then forgot about it. He'd remember by reflex, now that he knew.

It was mealtime, then. They were alone in the mess hall -- as fresh arrivals, they were on a separate schedule that day. The food was good and there was a lot of it. Bean was stunned when some of the kids looked at their portion and complained about how little there was. It was a feast! Bean couldn't finish it. The whiners were informed by the cooks that the quantities were all adapted to their individual dietary needs -- each kid's portion size came up on a computer display when he palmed in upon entering the mess hall.

So you don't eat without your palm on a pad. Important to know.

Bean soon found out that his size was going to get official attention. When he brought his half-finished tray to the disposal unit, an electronic chiming sound brought the on-duty nutritionist to speak to him. "It's your first day, so we aren't going to be rigid about it. But your portions are scientifically calibrated to meet your dietary needs, and in the future you will finish every bit of what you are served."

Bean looked at him without a word. He had already made his decision. If his exercise program made him hungrier, then he'd eat more. But if they were expecting him to gorge himself, they could

forget it. It would be a simple enough matter to dump excess food onto the trays of the whiners. They'd be happy with it, and Bean would eat only as much as his body wanted. He remembered hunger very well, but he had lived with Sister Carlotta for many months, and he knew to trust his own appetite. For a while he had let her goad him into eating more than he actually was hungry for. The result had been a sense of loginess, a harder time sleeping and a harder time staying awake. He went back to eating only as much as his body wanted, letting his hunger be his guide, and it kept him sharp and quick. That was the only nutritionist he trusted. Let the whiners get sluggish.

Dimak stood after several of them had finished eating. "When you're through, go back to the barracks. If you think you can find it. If you have any doubt, wait for me and I'll bring the last group back myself."

The corridors were empty when Bean went out into the corridor. The other kids palmed the wall and their green-brown-green strip turned on. Bean watched them go. One of them turned back. "Aren't you coming?" Bean said nothing. There was nothing to say. He was obviously standing still. It was a stupid question. The kid turned around and jogged on down the corridor toward the barracks.

Bean went the other way. No stripes on the wall. He knew that there was no better time to explore than now. If he was caught out of the area he was supposed to be in, they'd believe him if he claimed to have got lost.

The corridor sloped up both behind him and in front of him. To his eyes it looked like he was always going uphill, and when he looked back, it was uphill to go back the way he had come. Strange. But Dimak had already explained that the station was a huge wheel, spinning in space so that centrifugal force would replace gravity. That meant the main corridor on each level was a big circle, so you'd always come back to where you started, and "down" was always toward the outside of the circle. Bean made the mental adjustment. It was dizzying at first, to picture himself on his side as he walked along, but then he mentally changed the orientation so that he imagined the station as a wheel on a cart, with him at the bottom of it no matter how much it turned. That put the people above him upside down, but he didn't care. Wherever he was was the bottom, and that way down stayed down and up stayed up.

The launchies were on the mess hall level, but the older kids must not be, because after the mess halls and the kitchens, there were only classrooms and unmarked doors with palmpads high enough that they were clearly not meant for children to enter. Other kids could probably reach those pads, but not even by jumping could Bean hope to palm one. It didn't matter. They wouldn't respond to any child's handprint, except to bring some adult to find out what the kid thought he was doing, trying to enter a room where he had no business.

By long habit -- or was it instinct? -- Bean regarded such barriers as only temporary blocks. He knew how to climb over walls in Rotterdam, how to get up on roofs. Short as he was, he still found ways to get wherever he needed to go. Those doors would not stop him if he decided he needed to get beyond them. He had no idea right now how he'd do it, but he had no doubt that he would find a way. So he wasn't annoyed. He simply tucked the information away, waiting until he thought of some way to use it.

Every few meters there was a pole for downward passage or a ladderway for going up. To get down the pole to the gym, he had had to palm a pad. But there seemed to be no pad on most of these. Which made sense. Most poles and ladderways would merely let you pass between floors -- no, they called them decks; this was the International Fleet and so everything pretended to be a ship -- while only one pole led down to the gym, to which they needed to control access so that it didn't get overcrowded with people coming when they weren't scheduled. As soon as he had made sense of it, Bean didn't have to think of it anymore. He scrambled up a ladder.

The next floor up had to be the barracks level for the older kids. Doors were more widely spaced, and each door had an insignia on it. Using the colors of some uniform -- no doubt based on their stripe colors, though he doubted the older kids ever had to palm the wall to find their way around -- there was also the silhouette of an animal. Some of them he didn't recognize, but he recognized a couple of birds, some cats, a dog, a lion. Whatever was in use symbolically on signs in Rotterdam. No pigeon. No fly. Only noble animals, or animals noted for courage. The dog silhouette looked like some kind of hunting animal, very thin around the hips. Not a mongrel.

So this is where the crews meet, and they have animal symbols, which means they probably call themselves by animal names. Cat Crew. Or maybe Lion Crew. And probably not Crew. Bean would soon learn what they called themselves. He closed his eyes and tried to remember the colors and insignia on the crew that passed and mocked him in the corridor earlier. He could see the shape in his mind, but didn't see it on any of the doors he passed. It didn't matter -- not worth traveling the whole corridor in search of it, when that would only increase his risk of getting caught.

Up again. More barracks, more classrooms. How many kids in a barracks? This place was bigger than he thought.

A soft chime sounded. Immediately, several doors opened and kids began to pour out into the corridor. A changeover time.

At first Bean felt more secure among the big kids, because he thought he could get lost in the crowd, the way he always did in Rotterdam. But that habit was useless here. This wasn't a random crowd of people on their own errands. These might be kids but they were military. They knew where everybody was supposed to be, and Bean, in his launchy uniform, was way out of place. Almost at once a couple of older kids stopped him.

"You don't belong on this deck," said one. At once several others stopped to look at Bean as if he were an object washed into the street by a storm.

"Look at the size of this one."

"Poor kid gots to sniff everybody's butt, neh?"

"Eh!"

"You're out of area, launchy."

Bean said nothing, just looked at each one as he spoke. Or she.

"What are your colors?" asked a girl.

Bean said nothing. Best excuse would be that he didn't remember, so he couldn't very well name them now.

"He's so small he could walk between my legs without touching my --"

"Oh. shut up, Dink, that's what you said when Ender --"

"Yeah, Ender, right."

"You don't think this is the kid they --"

"Was Ender *\*this\** small when he arrived?"

"-- been saying, he another Ender?"

"Right, like this one's going to shoot to the top of the standings."

"It wasn't Ender's fault that Bonzo wouldn't let him fire his weapon."

"But it's a fluke, that's all I'm saying --"

"This the one they talking about? One like Ender? Top scores?"

"Just get him down to the launchy level."

"Come with me," said the girl, taking him firmly by the hand.

Bean came along meekly.

"My name is Petra Arkanian," she said.

Bean said nothing.

"Come on, you may be little and you may be scared, but they don't let you in here if you're deaf or stupid."

Bean shrugged.

"Tell me your name before I break your stubby little fingers."

"Bean," he said.

"That's not a name, that's a lousy meal."

He said nothing.

"You don't fool me," she said. "This mute thing, it's just a cover. You came up here on purpose."

He kept his silence but it stabbed at him, that she had figured him out so easily.

"Kids for this school, they're chosen because they're smart and they've got initiative. So of course you wanted to explore. The thing is, they expect it. They probably know you're doing it. So there's no point in hiding it. What are they going to do, give you some big bad piggy points?"

So that's what the older kids thought about the pig list.

"This stubborn silence thing, it'll just piss people off. I'd forget about it if I were you. Maybe it worked with Mommy and Daddy, but it just makes you look stubborn and ridiculous because anything that matters, you're going to tell anyway, so why not just talk?"

"OK," said Bean.

Now that he was complying, she didn't crow about it. The lecture worked, so the lecture was over. "Colors?" she asked.

"Green brown green."

"Those launchy colors sound like something you'd find in a dirty toilet, don't you think?"

So she was just another one of the stupid kids who thought it was cute to make fun of launchies.

"It's like they designed everything to get the older kids to make fun of the younger ones."

Or maybe she wasn't. Maybe she was just talking. She was a talker. There weren't a lot of talkers on the streets. Not among the kids, anyway. Plenty of them among the drunks.

"The system around here is screwed. It's like they want us to act like little kids. Not that that's going to bother you. Hell, you're already doing some dumb lost-little-kid act."

"Not now," he said.

"Just remember this. No matter what you do, the teachers know about it and they already have some stupid theory about what this means about your personality or whatever. They always find a way to use it against you, if they want to, so you might as well not try. No doubt it's already in your report that you took this little jaunt when you were supposed to be having beddy-bye time and that probably tells them that you respond to insecurity by seeking to be alone while exploring the limits of your new environment." She used a fancy voice for the last part.

And maybe she had more voices to show off to him, but he wasn't going to stick around to find out. Apparently she was a take-charge person and didn't have anybody to take charge of until he came along. He wasn't interested in becoming her project. It was all right being Sister Carlotta's project because she could get him out of the street and into Battle School. But what did this Petra Arkanian have to offer him?

He slid down a pole, stopped in front of the first opening, pushed out into the corridor, ran to the next ladderway, and scooted up two decks before emerging into another corridor and running full out. She was probably right in what she said, but one thing was certain -- he was not going to have her hold his hand all the way back to green-brown-green. The last thing he needed, if he was going to hold his own in this place, was to show up with some older kid holding his hand.

Bean was four decks above the mess level where he was supposed to be right now. There were kids moving through here, but nowhere near as many as the deck below. Most of the doors were unmarked, but a few stood open, including one wide arch that opened into a game room.

Bean had seen computer games in some of the bars in Rotterdam, but only from a distance, through the doors and between the legs of men and women going in and out in their endless search for oblivion. He had never seen a child playing a computer game, except on the vids in store windows. Here it was real, with only a few players catching quick games between classes so that each game's sounds stood out. A few kids playing solo games, and then four of them playing a four-sided space game with a holographic display. Bean stood back far enough not to intrude in their sightlines and watched them play. Each of them controlled a squadron of four tiny ships, with the goal of either wiping out all the other fleets or capturing -- but not destroying -- each player's slow-moving mothership. He learned the rules and the terminology by listening to the four boys chatter as they played.

The game ended by attrition, not by any cleverness -- the last boy simply happened to be the least stupid in his use of his ships. Bean watched as they reset the game. No one put in a coin. The games here were free.

Bean watched another game. It was just as quick as the first, as each boy committed his ships clumsily, forgetting about whichever one was not actively engaged. It was as if they thought of their force as one active ship and three reserves.

Maybe the controls didn't allow anything different. Bean moved closer. No, it was possible to set the course for one, flip to control another ship, and another, then return to the first ship to change its course at any time.

How did these boys get into Battle School if this was all they could think of? Bean had never played a computer game before, but he saw at once that any competent player could quickly win if this was the best competition available.

"Hey, dwarf, want to play?"

One of them had noticed him. Of course the others did, too.

"Yes," said Bean.

"Well Bugger that," said the one who invited him. "Who do you think you are, Ender Wiggin?"

They laughed and then all four of them walked away from the game, heading for their next class. The room was empty. Class time.

Ender Wiggin. The kids in the corridor talked about him, too. Something about Bean made these kids think of Ender Wiggin. Sometimes with admiration, sometimes with resentment. This Ender must have beaten some older kids at a computer game or something. And he was at the top of the standings, that's what somebody said. Standings in what?

The kids in the same uniform, running like one crew, heading for a fight -- that was the central fact of life here. There was one core game that everyone played. They lived in barracks according to what team they were on. Every kid's standings were reported so everybody else knew them. And whatever the game was, the adults ran it.

So this was the shape of life here. And this Ender Wiggin, whoever he was, he was at the top of it all, he led the standings.

Bean reminded people of him.

That made him a little proud, yes, but it also annoyed him. It was safer not to be noticed. But because this other small kid had done brilliantly, everybody who saw Bean thought of Ender and that made Bean memorable. That would limit his freedom considerably. There was no way to disappear here, as he had been able to disappear in crowds in Rotterdam.

Well, who cared? He couldn't be hurt now, not really. No matter what happened, as long as he was here at Battle School he would never be hungry. He'd always have shelter. He had made it to heaven. All he had to do was the minimum required to not get sent home early. So who cared if people noticed him or not? It made no difference. Let them worry about their standings. Bean had already won the battle for survival, and after that, no other competition mattered.

But even as he had that thought, he knew it wasn't true. Because he did care. It wasn't enough just to survive. It never had been. Deeper than his need for food had been his hunger for order, for finding out how things worked, getting a grasp on the world around him. When he was starving, of course he used what he learned in order to get himself into Poke's crew and get her crew enough food that there would be enough to trickle some down to him at the bottom of the pecking order. But even when Achilles had turned them into his family and they had something to eat every day, Bean hadn't stopped being alert, trying to understand the changes, the dynamics in the group. Even with Sister Carlotta, he had spent a lot of effort trying to understand why and how she had the power to do for him what she was doing, and the basis on which she had chosen him. He had to know. He had to have the picture of everything in his mind.

Here, too. He could have gone back to the barracks and napped. Instead, he risked getting in trouble just to find out things that no doubt he would have learned in the ordinary course of events.

Why did I come up here? What was I looking for?

The key. The world was full of locked doors, and he had to get his hands on every key.

He stood still and listened. The room was nearly silent. But there was white noise, background rumble and hiss that made it so sounds didn't carry throughout the entire station.

With his eyes closed, he located the source of the faint rushing sound. Eyes open, he then walked to where the vent was. An out-flowing vent with slightly warmer air making a very slight breeze. The rushing sound was not the hiss of air here at the vent, but rather a much louder, more distant sound of the machinery that pumped air throughout the Battle School.

Sister Carlotta had told him that in space, there was no air, so wherever people lived, they had to keep their ships and stations closed tight, holding in every bit of air. And they also had to keep changing the air, because the oxygen, she said, got used up and had to be replenished. That's what this air system was about. It must go everywhere through the ship.

Bean sat before the vent screen, feeling around the edges. There were no visible screws or nails holding it on. He got his fingernails under the rim and carefully slid his fingers around it, prying it out a little, then a little more. His fingers now fit under the edges. He pulled straight forward. The vent came free, and Bean toppled over backward.

Only for a moment. He set aside the screen and tried to see into the vent. The vent duct was only about fifteen centimeters deep from front to back. The top was solid, but the bottom was open, leading down into the duct system.

Bean sized up the vent opening just the way he had, years before, stood on the seat of a toilet and studied the inside of the toilet tank, deciding whether he could fit in it. And the conclusion was the same -- it would be cramped, it would be painful, but he could do it.

He reached an arm inside and down. He couldn't feel the bottom. But with arms as short as his, that didn't mean much. There was no way to tell by looking which way the duct went when it got down to the floor level. Bean could imagine a duct leading under the floor, but that felt wrong to him. Sister Carlotta had said that every scrap of material used to build the station had to be hauled up from Earth or the manufacturing plants on the moon. They wouldn't have big gaps between the decks and the ceilings below because that would be wasted space into which precious air would have to be pumped without anyone breathing it. No, the ductwork would be in the outside walls. It was probably no more than fifteen centimeters deep anywhere.

He closed his eyes and imagined an air system. Machinery making a warm wind blow through the narrow ducts, flowing into every room, carrying fresh breathable air everywhere.

No, that wouldn't work. There had to be a place where the air was getting sucked in and drawn back. And if the air blew in at the outside walls, then the intake would be ... in the corridors.

Bean got up and ran to the door of the game room. Sure enough, the corridor's ceiling was at least twenty centimeters lower than the ceiling inside the room. But no vents. Just light fixtures.

He stepped back into the room and looked up. All along the top of the wall that bordered on the corridor there was a narrow vent that looked more decorative than practical. The opening was about three centimeters. Not even Bean could fit through the intake system.

He ran back to the open vent and took off his shoes. No reason to get hung up because his feet were so much bigger than they needed to be.

He faced the vent and swung his feet down into the opening. Then he wriggled until his legs were entirely down the hole and his buttocks rested on the rim of the vent. His feet still hadn't found bottom. Not a good sign. What if the vent dropped straight down into the machinery?

He wriggled back out, then went in the other way. It was harder and more painful, but now his arms were more usable, giving him a good grip on the floor as he slid chest-deep into the hole.

His feet touched bottom.

Using his toes, he probed. Yes, the ductwork ran to the left and the right, along the outside wall of the room. And the opening was tall enough that he could slide down into it, then wriggle -- always on his side -- along from room to room.

That was all he needed to know at present. He gave a little jump so his anus reached farther out onto the floor, meaning to use friction to let him pull himself up. Instead, he just slid back down into the vent.

Oh, this was excellent. Someone would come looking for him, eventually, or he'd be found by the next batch of kids who came in to play games, but he did not want to be found like this. More to the point, the ductwork would only give him an alternate route through the station if he could climb out of the vents. He had a mental image of somebody opening a vent and seeing his skull looking out at them, his dead body completely dried up in the warm wind of the air ducts where he starved to death or died of thirst trying to get out of the vents.

As long as he was just standing there, though, he might as well find out if he could cover the vent opening from the inside.

He reached over and, with difficulty, got a finger on the screen and was able to pull it toward him. Once he got a hand solidly on it, it wasn't hard at all to get it over the opening. He could even pull it in, tightly enough that it probably wouldn't be noticeably different to casual observers on the other side. With the vent closed, though, he had to keep his head turned to one side. There wasn't room enough for him to turn it. So once he got in the duct system, his head would either stay turned to the left or to the right. Great.

He pushed the vent back out, but carefully, so that it didn't fall to the floor. Now it was time to climb out in earnest.

After a couple more failures, he finally realized that the screen was exactly the tool he needed. Laying it down on the floor in front of the vent, he hooked his fingers under the far end. Pulling back on the screen provided him with the leverage to lift his body far enough to get his chest over the rim of the vent opening. It hurt, to hang the weight of his body on such a sharp edge, but now he could get up on his elbows and then on his hands, lifting his whole body up through the opening and back into the room.

He thought carefully through the sequence of muscles he had used and then thought about the equipment in the gym. Yes, he could strengthen those muscles.

He put the vent screen back into place. Then he pulled up his shirt and looked at the red marks on his skin where the rim of the vent opening had scraped him mercilessly. There was some blood. Interesting. How would he explain it, if anyone asked? He'd have to see if he could reinjure the same spot by climbing around on the bunks later.

He jogged out of the game room and down the corridor to the nearest pole, then dropped to the mess hall level. All the way, he wondered why he had felt such urgency about getting into the ducts. Whenever he got like that in the past, doing some task without knowing why it even mattered, it had turned out that there was a danger that he had sensed but that hadn't yet risen to his conscious mind. What was the danger here?

Then he realized -- in Rotterdam, out on the street, he had always made sure he knew a back way out of everything, an alternate path to get from one place to another. If he was running from someone, he never dodged into a cul-de-sac to hide unless he knew another way out. In truth, he never really hid at all -- he evaded pursuit by keeping on the move, always. No matter how awful the danger following him might be, he could not hold still. It felt terrible to be cornered. It hurt.

It hurt and was wet and cold and he was hungry and there wasn't enough air to breathe and people walked by and if they just lifted the lid they would find him and he had no way to run if they did that, he just had to sit there waiting for them to pass without noticing him. If they used the toilet and flushed it, the equipment wouldn't work right because the whole weight of his body was pressing down on the float. A lot of the water had spilled out of the tank when he climbed in. They'd notice something was wrong and they'd find him.

It was the worst experience of his life, and he couldn't stand the idea of ever hiding like that again. It wasn't the small space that bothered him, or that it was wet, or that he was hungry or alone. It was the fact that the only way out was into the arms of his pursuers.

Now that he understood that about himself, he could relax. He hadn't found the ductwork because he sensed some danger that hadn't yet risen to his conscious mind. He found the ductwork because he remembered how bad it felt to hide in the toilet tank as a toddler. So whatever danger there might be, he hadn't sensed it yet. It was just a childhood memory coming to the surface. Sister

Carlotta had told him that a lot of human behavior was really acting out our responses to dangers long past. It hadn't sounded sensible to Bean at the time, but he didn't argue, and now he could see that she was right.

And how could he know there would never be a time when that narrow, dangerous highway through the ductwork might not be exactly the route he needed to save his life?

He never did palm the wall to light up green-brown-green. He knew exactly where his barracks was. How could he not? He had been there before, and knew every step between the barracks and every other place he had visited in the station.

And when he got there, Dimak had not yet returned with the slow eaters. His whole exploration hadn't taken more than twenty minutes, including his conversation with Petra and watching two quick computer games during the class break.

He awkwardly hoisted himself up from the lower bunk, dangling for a while from his chest on the rim of the second bunk. Long enough that it hurt in pretty much the same spot he had injured climbing out of the vent. "What are you doing?" asked one of the launchies near him.

Since the truth wouldn't be understood, he answered truthfully. "Injuring my chest," he said.

"I'm trying to sleep," said the other boy. "You're supposed to sleep, too."

"Naptime," said another boy. "I feel like I'm some stupid four-year-old."

Bean wondered vaguely what these boys' lives had been like, when taking a nap made them think of being four years old.

\*\*\*

Sister Carlotta stood beside Pablo de Noches, looking at the toilet tank. "Old-fashioned kind," said Pablo. "Norteamericano. Very popular for a while back when the Netherlands first became international."

She lifted the lid on the toilet tank. Very light. Plastic.

As they came out of the lavatory, the office manager who had been showing them around looked at her curiously. "There's not any kind of danger from using the toilets, is there?" she asked.

"No," said Sister Carlotta. "I just had to see it, that's all. It's Fleet business. I'd appreciate it if you didn't talk about our visit here."

Of course, that almost guaranteed that she would talk about nothing else. But Sister Carlotta counted on it sounding like nothing more than strange gossip.

Whoever had run an organ farm in this building would not want to be discovered, and there was a lot of money in such evil businesses. That was how the devil rewarded his friends -- lots of money, up to the moment he betrayed them and left them to face the agony of hell alone.

Outside the building, she spoke again to Pablo. "He really hid in there?"

"He was very tiny," said Pablo de Noches. "He was crawling when I found him, but he was soaking wet up to his shoulder on one side, and his chest. I thought he peed himself, but he said no. Then he showed me the toilet. And he was red here, here, where he pressed against the mechanism."

"He was talking," she said.

"Not a lot. A few words. So tiny. I could not believe a child so small could talk."

"How long was he in there?"

Pablo shrugged. "Shriveled up skin like old lady. All over. Cold. I was thinking, he will die. Not warm water like a swimming pool. Cold. He shivered all night."

"I can't understand why he \*didn't\* die," said Sister Carlotta.

Pablo smiled. "No hay nada que Dios no puede hacer."

"True," she answered. "But that doesn't mean we can't figure out \*how\* God works his miracles. Or why."

Pablo shrugged. "God does what he does. I do my work and live, the best man I can be."

She squeezed his arm. "You took in a lost child and saved him from people who meant to kill him. God saw you do that and he loves you."

Pablo said nothing, but Sister Carlotta could guess what he was thinking -- how many sins, exactly, were washed away by that good act, and would it be enough to keep him out of hell?

"Good deeds do not wash away sins," said Sister Carlotta. "Solo el redentor puede limpiar su alma."

Pablo shrugged. Theology was not his skill.

"You don't do good deeds for yourself," said Sister Carlotta. "You do them because God is in you, and for those moments you are his hands and his feet, his eyes and his lips."

"I thought God was the baby. Jesus say, if you do it to this little one, you do it to me."

Sister Carlotta laughed. "God will sort out all the fine points in his own due time. It is enough that we try to serve him."

"He was so small," said Pablo. "But God was in him."

She bade him goodbye as he got out of the taxi in front of his apartment building.

Why did I have to see that toilet with my own eyes? My work with Bean is done. He left on the shuttle yesterday. Why can't I leave the matter alone?

Because he should have been dead, that's why. And after starving on the streets for all those years, even if he lived he was so malnourished he should have suffered serious mental damage. He should have been permanently retarded.

That was why she could not abandon the question of Bean's origin. Because maybe he *\*was\** damaged. Maybe he *\*is\** retarded. Maybe he started out so smart that he could lose half his intellect and still be the miraculous boy he is.

She thought of how St. Matthew kept saying that all the things that happened in Jesus' childhood, his mother treasured them in her heart. Bean is not Jesus, and I am not the Holy Mother. But he is a boy, and I have loved him as my son. What he did, no child of that age could do.

No child of less than a year, not yet walking by himself, could have such clear understanding of his danger that he would know to do the things that Bean did. Children that age often climbed out of their cribs, but they did not hide in a toilet tank for hours and then come out alive and ask for help. I can call it a miracle all I want, but I have to understand it. They use the dregs of the Earth in those organ farms. Bean has such extraordinary gifts that he could only have come from extraordinary parents.

And yet for all her research during the months that Bean lived with her, she had never found a single kidnapping that could possibly have been Bean. No abducted child. Not even an accident from which someone might have taken a surviving infant whose body was therefore never found. That wasn't proof -- not every baby that disappeared left a trace of his life in the newspapers, and not every newspaper was archived and available for a search on the nets. But Bean had to be the child of parents so brilliant that the world took note of them -- didn't he? Could a mind like his come from ordinary parents? Was that the miracle from which all other miracles flowed?

No matter how much Sister Carlotta tried to believe it, she could not. Bean was not what he seemed to be. He was in Battle School now, and there was a good chance he would end up someday as the commander of a great fleet. But what did anyone know about him? Was it possible that he was not a natural human being at all? That his extraordinary intelligence had been given him, not by God, but by someone or something else?

There was the question: If not God, then who could make such a child?

Sister Carlotta buried her face in her hands. Where did such thoughts come from? After all these years of searching, why did she have to keep doubting the one great success she had?

We have seen the beast of Revelation, she said silently. The Bugger, the Formic monster bringing destruction to the Earth, just as prophesied. We have seen the beast, and long ago Mazer Rackham and the human fleet, on the brink of defeat, slew that great dragon. But it will come again, and St. John the Revelator said that when it did, there would be a prophet who came with him.

No, no. Bean is good, a good-hearted boy. He is not any kind of devil, not the servant of the beast, just a boy of great gifts that God may have raised up to bless this world in the hour of its greatest peril. I know him as a mother knows her child. I am not wrong.

Yet when she got back to her room, she set her computer to work, searching now for something new. For reports from or about scientists who had been working, at least five years ago, on projects involving alterations in human DNA.

And while the search program was querying all the great indexes on the nets and sorting their replies into useful categories, Sister Carlotta went to the neat little pile of folded clothing waiting to be washed. She would not wash it after all. She put it in a plastic bag along with Bean's sheets and pillowcase, and sealed the bag. Bean had worn this clothing, slept on this bedding. His skin was in it, small bits of it. A few hairs. Maybe enough DNA for a serious analysis.

He was a miracle, yes, but she would find out just what the dimensions of this miracle might be. For her ministry had not been to save the children of the cruel streets of the cities of the world. Her ministry had been to help save the one species made in the image of God. That was still her ministry. And if there was something wrong with the child she had taken into her heart as a beloved son, she would find out about it, and give warning.

## CHAPTER 7 -- EXPLORATION

"So this launch group was slow getting back to their barracks."

"There is a twenty-one-minute discrepancy."

"Is that a lot? I didn't even know this sort of thing was tracked."

"For safety. And to have an idea, in the event of emergency, where everyone is. Tracking the uniforms that departed from the mess hall and the uniforms that entered the barracks, we come up with an aggregate of twenty-one minutes. That could be twenty-one children loitering for exactly one minute, or one child for twenty-one minutes."

"That's very helpful. Am I supposed to ask them?"

"No! They aren't supposed to know that we track them by their uniforms. It isn't good for them to know how much we know about them."

"And how little."

"Little?"

"If it was one student, it wouldn't be good for him to know that our tracking methods don't tell us who it was."

"Ah. Good point. And ... actually, I came to you because I believe that it was one student only."

"Even though your data aren't clear?"

"Because of the arrival pattern. Spaced out in groups of two or three, a few solos. Just the way they left the mess hall. A little bit of clumping -- three solos become a threesome, two twos arrive as four -- but if there had been some kind of major distraction in the corridor, it would have caused major coalescing, a much larger group arriving at once after the disturbance ended."

"So. One student with twenty-one minutes unaccounted for."

"I thought you should at least be aware."

"What would he do with twenty-one minutes?"

"You know who it was?"

"I will, soon enough. Are the toilets tracked? Are we sure it wasn't somebody so nervous he went in to throw up his lunch?"

"Toilet entry and exit patterns were normal. In and out."

"Yes, I'll find out who it was. And keep watching the data for this launch group."

"So I was right to bring this to your attention?"

"Did you have any doubt of it?"

\*\*\*

Bean slept lightly, listening, as he always did, waking twice that he remembered. He didn't get up, just lay there listening to the breathing of the others. Both times, there was a little whispering somewhere in the room. Always children's voices, no urgency about them, but the sound was enough to rouse Bean and kindle his attention, just for a moment till he was sure there was no danger.

He woke the third time when Dimak entered the room. Even before sitting up, Bean knew that's who it was, from the weight of his step, the sureness of his movement, the press of authority. Bean's eyes were open before Dimak spoke; he was on all fours, ready to move in any direction, before Dimak finished his first sentence.

"Naptime is over, boys and girls, time for work."

It was not about Bean. If Dimak knew what Bean had done after lunch and before their nap, he gave no sign. No immediate danger.

Bean sat on his bunk as Dimak instructed them in the use of their lockers and desks. Palm the wall beside the locker and it opens. Then turn on the desk and enter your name and a password.

Bean immediately palmed his own locker with his right hand, but did not palm the desk. Instead, he checked on Dimak -- busy helping another student near the door -- then scrambled to the unoccupied third bunk above his own and palmed *that* locker with his left hand. There was a desk inside that one, too. Quickly he turned on his own desk and typed in his name and a password. Bean. Achilles. Then he pulled out the other desk and turned it on. Name? Poke. Password? Carlotta.

He slipped the second desk back into the locker and closed the door, then tossed his first desk down onto his own bunk and slipped down after it. He did not look around to see if anyone noticed him. If they did, they'd say something soon enough; visibly checking around would merely call attention to him and make people suspect him who would not otherwise have noticed what he did.

Of course the adults would know what he had done. In fact, Dimak was certainly noticing already, when one child complained that his locker wouldn't open. So the station computer knew how many students there were and stopped opening lockers when the right total had been opened. But Dimak did not turn and demand to know who had opened two lockers. Instead, he pressed his own palm against the last student's locker. It popped open. He closed it again, and now it responded to the student's palm.

So they were going to let him have his second locker, his second desk, his second identity. No doubt they would watch him with special interest to see what he did with it. He would have to make a point of fiddling with it now and then, clumsily, so they'd think they knew what he wanted a second identity for. Maybe some kind of prank. Or to write down secret thoughts. That would be fun -- Sister Carlotta was always prying after his secret thoughts, and no doubt these teachers would, too. Whatever he wrote, they'd eat it up.

Therefore they wouldn't be looking for his truly private work, which he would perform on his own desk. Or, if it was risky, on the desk of one of the boys across from him, both of whose passwords he had carefully noticed and memorized. Dimak was lecturing them about protecting their desks at all times, but it was inevitable that kids would be careless, and desks would be left lying around.

For now, though, Bean would do nothing riskier than what he had already done. The teachers had their own reasons for letting him do it. What mattered is that they not know his own.

After all, he didn't know himself. It was like the vent -- if he thought of something that might get him some advantage later, he did it.

Dimak went on talking about how to submit homework, the directory of teachers' names, and the fantasy game that was on every desk. "You are not to spend study time playing the game," he said. "But when your studies are done, you are permitted a few minutes to explore."

Bean understood at once. The teachers \*wanted\* the students to play the game, and knew that the best way to encourage it was to put strict limits on it ... and then not enforce them. A game-Sister Carlotta had used games to try to analyze Bean from time to time. So Bean always turned them into the same game: Try to figure out what Sister Carlotta is trying to learn from the way I play this game.

In this case, though, Bean figured that anything he did with the game would tell them things that he didn't want them to know about him. So he would not play at all, unless they compelled him. And maybe not even then. It was one thing to joust with Sister Carlotta; here, they no doubt had real experts, and Bean was not going to give them a chance to learn more about him than he knew himself.

Dimak took them on the tour, showing them most of what Bean had already seen. The other kids went ape over the game room. Bean did not so much as glance at the vent into which he had climbed, though he did make it a point to fiddle with the game he had watched the bigger boys play, figuring out how the controls worked and verifying that his tactics could, in fact, be carried out.

They did a workout in the gym, in which Bean immediately began working on the exercises that he thought he'd need -- one-armed pushups and pullups being the most important, though they had to get a stool for him to stand on in order to reach the lowest chinning bar. No problem. Soon enough he'd be able to jump to reach it. With all the food they were giving him, he could build up strength quickly.

And they seemed grimly determined to pack food into him at an astonishing rate. After the gym they showered, and then it was suppertime. Bean wasn't even hungry yet, and they piled enough food onto his tray to feed his whole crew back in Rotterdam. Bean immediately headed for a couple of the kids who had whined about their small portions and, without even asking permission, scraped his excess onto their trays. When one of them tried to talk to him about it, Bean just put his finger to his lips. In answer, the boy grinned. Bean still ended up with more food than he wanted, but when he turned in his tray, it was scraped clean. The nutritionist would be happy. It remained to be seen if the janitors would report the food Bean left on the floor.

Free time. Bean headed back to the game room, hoping that tonight he'd actually see the famous Ender Wiggin. If he was there, he would no doubt be the center of a group of admirers. But at the center of the groups he saw were only the ordinary prestige-hungry clique-formers who thought they were leaders and so would follow their group anywhere in order to maintain that delusion. No way could any of them be Ender Wiggin. And Bean was not about to ask.

Instead, he tried his hand at several games. Each time, though, the moment he lost for the first time, other kids would push him out of the way. It was an interesting set of social rules. The students knew that even the shortest, greenest launchy was entitled to his turn -- but the moment a turn ended, so did the protection of the rule. And they were rougher in shoving him than they needed to be, so the message was clear -- you shouldn't have been using that game and making me wait. Just like the food lines at the charity kitchens in Rotterdam -- except that absolutely nothing that mattered was at stake.

That was interesting, to find that it wasn't hunger that caused children to become bullies on the street. The bulliness was already in the child, and whatever the stakes were, they would find a way to act as they needed to act. If it was about food, then the children who lost would die; if it was about games, though, the bullies did not hesitate to be just as intrusive and send the same message. Do what I want, or pay for it.

Intelligence and education, which all these children had, apparently didn't make any important difference in human nature. Not that Bean had really thought they would.

Nor did the low stakes make any difference in Bean's response to the bullies. He simply complied without complaint and took note of who the bullies were. Not that he had any intention of punishing them or of avoiding them, either. He would simply remember who acted as a bully and take that into account when he was in a situation where that information might be important.

No point in getting emotional about anything. Being emotional didn't help with survival. What mattered was to learn everything, analyze the situation, choose a course of action, and then move boldly. Know, think, choose, do. There was no place in that list for "feel." Not that Bean didn't have feelings. He simply refused to think about them or dwell on them or let them influence his decisions, when anything important was at stake.

"He's even smaller than Ender was."

Again, again. Bean was so tired of hearing that.

"Don't talk about that hijo de puta to me, bicho."

Bean perked up. Ender had an enemy. Bean was wondering when he'd spot one, for someone who was first in the standings *\*had\** to have provoked something besides admiration. Who said it? Bean drifted nearer to the group the conversation had come from. The same voice came up again. Again. And then he knew: That one was the boy who had called Ender an hijo de puta.

He had the silhouette of some kind of lizard on his uniform. And a single triangle on his sleeve. None of the boys around him had the triangle. All were focused on him. Captain of the team?

Bean needed more information. He tugged on the sleeve of a boy standing near him.

"What," said the boy, annoyed.

"Who's that boy there?" asked Bean. "The team captain with the lizard."

"It's a salamander, pinhead. Salamander \*army\*. And he's the \*commander\*."

Teams are called armies. Commander is the triangle rank. "What's his name?"

"Bonzo Madrid. And he's an even bigger asshole than you." The boy shrugged himself away from Bean.

So Bonzo Madrid was bold enough to declare his hatred for Ender Wiggin, but a kid who was not in Bonzo's army had contempt for \*him\* in turn and wasn't afraid to say so to a stranger. Good to know. The only enemy Ender had, so far, was contemptible.

But ... contemptible as Bonzo might be, he was a commander. Which meant it was possible to become a commander without being the kind of boy that everybody respected. So what was their standard of judgment, in assigning command in this war game that shaped the life of Battle School?

More to the point, how do I get a command?

That was the first moment that Bean realized that he even had such a goal. Here in Battle School, he had arrived with the highest scores in his launch group -- but he was the smallest and youngest and had been isolated even further by the deliberate actions of his teacher, making him a target of resentment. Somehow, in the midst of all this, Bean had made the decision that this would not be like Rotterdam. He was not going to live on the fringes, inserting himself only when it was absolutely essential for his own survival. As rapidly as possible, he was going to put himself in place to command an army.

Achilles had ruled because he was brutal, because he was willing to kill. That would always trump intelligence, when the intelligent one was physically smaller and had no strong allies. But here, the bullies only shoved and spoke rudely. The adults controlled things tightly and so brutality would not prevail, not in the assignment of command. Intelligence, then, had a chance to win out. Eventually, Bean might not have to live under the control of stupid people.

If this was what Bean wanted -- and why not try for it, as long as some more important goal didn't come along first? -- then he had to learn how the teachers made their decisions about command. Was it solely based on performance in classes? Bean doubted it. The International Fleet had to have smarter people than that running this school. The fact that they had that fantasy game on every desk suggested that they were looking at personality as well. Character. In the end, Bean suspected, character mattered more than intelligence. In Bean's litany of survival -- know, think, choose, do -- intelligence only mattered in the first three, and was the decisive factor only in the second one. The teachers knew that.

Maybe I \*should\* play the game, thought Bean.

Then: Not yet. Let's see what happens when I don't play.

At the same time he came to another conclusion he did not even know he had been concerned about. He would talk to Bonzo Madrid.

Bonzo was in the middle of a computer game, and he was obviously the kind of person who thought of anything unexpected as an affront to his dignity. That meant that for Bean to accomplish what he wanted, he could not approach Bonzo in a cringing way, like the suckups who surrounded him as he played, commending him even for his stupid mistakes in game-play.

Instead, Bean pushed close enough to see when Bonzo's onscreen character died -- again. "Señor [Senor] Madrid, puedo hablar convozco?" The Spanish came to mind easily enough -- he had listened to Pablo de Noches talk to fellow immigrants in Rotterdam who visited his apartment, and on the telephone to family members back in Valencia. And using Bonzo's native language had the desired effect. He didn't ignore Bean. He turned and glared at him.

"What do you want, bichinho?" Brazilian slang was common in Battle School, and Bonzo apparently felt no need to assert the purity of his Spanish.

Bean looked him in the eye, even though he was about twice Bean's height, and said, "People keep saying that I remind them of Ender Wiggin, and you're the only person around here who doesn't seem to worship him. I want to know the truth."

The way the other kids fell silent told Bean that he had judged aright -- it was dangerous to ask Bonzo about Ender Wiggin. Dangerous, but that's why Bean had phrased his request so carefully.

"Damn right I don't worship the farteating insubordinate traitor, but why should I tell \*you\* about him?"

"Because you won't lie to me," said Bean, though he actually thought it was obvious Bonzo would probably lie outrageously in order to make himself look like the hero of what was obviously a story of his own humiliation at Ender's hands. "And if people are going to keep comparing me to the guy, I've got to know what he really is. I don't want to get iced because I do it all wrong here. You don't owe me nothing, but when you're small like me, you gots to have somebody who can tell you the stuff you gots to know to survive." Bean wasn't quite sure of the slang here yet, but what he knew, he used.

One of the other kids chimed in, as if Bean had written him a script and he was right on cue. "Get lost, launchy, Bonzo Madrid doesn't have time to change diapers."

Bean rounded on him and said fiercely, "I can't ask the teachers, they don't tell the truth. If Bonzo don't talk to me who I ask then? \*You\*? You don't know zits from zeroes."

It was pure Sergeant, that spiel, and it worked. Everybody laughed at the kid who had tried to brush him off, and Bonzo joined in, then put a hand on Bean's shoulder. "I'll tell you what I know, kid, it's about time somebody wanted to hear the truth about that walking rectum." To the kid that

Bean had just fronted, Bonzo said, "Maybe you better finish my game, it's the only way you'll ever get to play at that level."

Bean could hardly believe a commander would say such a pointlessly offensive thing to one of his own subordinates. But the boy swallowed his anger and grinned and nodded and said, "That's right, Bonzo," and turned to the game, as instructed. A real suckup.

By chance Bonzo led him to stand right in front of the wall vent where Bean had been stuck only a few hours before. Bean gave it no more than a glance.

"Let me tell you about Ender. He's all about beating the other guy. Not just winning -- he has to beat the other guy into the ground or he isn't happy. No rules for him. You give him a plain order, and he acts like he's going to obey it, but if he sees a way to make himself look good and all he has to do is disobey the order, well, all I can say is, I pity whoever has him in his army."

"He used to be Salamander?"

Bonzo's face reddened. "He wore a uniform with our colors, his name was on my roster, but he was *\*never\** Salamander. The minute I saw him, I knew he was trouble. That cocky look on his face, like he thinks the whole Battle School was made just to give him a place to strut. I wasn't having it. I put in to transfer him the second he showed up and I refused to let him practice with us, I knew he'd learn our whole system and then take it to some other army and use what he learned from me to stick it to my army as fast as he could. I'm not stupid!"

In Bean's experience, that was a sentence never uttered except to prove its own inaccuracy.

"So he didn't follow orders."

"It's more than that. He goes crying like a baby to the teachers about how I don't let him practice, even though they *\*know\** I've put in to transfer him out, but he whines and they let him go in to the battleroom during freetime and practice alone. Only he starts getting kids from his launch group and then kids from other armies, and they go in there as if he was their commander, doing what he tells them. That really pissed off a lot of us. And the teachers always give that little suckup whatever he wants, so when we commanders *\*demanded\** that they bar our soldiers from practicing with him, they just said, 'Freetime is *\*free\**,' but everything is part of the game, sabe? Everything, so they're letting him cheat, and every lousy soldier and sneaky little bastard goes to Ender for those freetime practices so every army's system is compromised, sabe? You plan your strategy for a game and you never know if your plans aren't being told to a soldier in the enemy army the second they come out of your mouth, sabe?"

Sabe sabe sabe. Bean wanted to shout back at him, Si, yo *\*s,\** [*\*se\**], but you couldn't show impatience with Bonzo. Besides, this was all fascinating. Bean was getting a pretty good picture of how this army game shaped the life of Battle School. It gave the teachers a chance to see not only how the kids handled command, but also how they responded to incompetent commanders like Bonzo. Apparently, he had decided to make Ender the goat of his army, only Ender refused to take it. This Ender Wiggin was the kind of kid who got it that the teachers ran everything and used them

by getting that practice room. He didn't ask them to get Bonzo to stop picking on him, he asked them for an alternate way to train himself. Smart. The teachers had to love that, and Bonzo couldn't do a thing about it.

Or could he?

"What did you do about it?"

"It's what we're going to do. I'm about fed up. If the teachers won't stop it, somebody else will have to, neh?" Bonzo grinned wickedly. "So I'd stay out of Ender Wiggin's freetime practice if I were you."

"Is he really number one in the standings?"

"Number one is piss," said Bonzo. "He's dead last in loyalty. There's not a commander who wants him in his army."

"Thanks," said Bean. "Only now it kind of pisses me off that people say I'm like him."

"Just because you're small. They made him a soldier when he was still way too young. Don't let them do that to you, and you'll be OK, sabe?"

"Ahora s, [se]," said Bean. He gave Bonzo his biggest grin.

Bonzo smiled back and clapped him on his shoulder. "You'll do OK. When you get big enough, if I haven't graduated yet, maybe you'll be in Salamander."

If they leave you in command of an army for another day, it's just so that the other students can learn how to make the best of taking orders from a higher-ranking idiot. "I'm not going to be a soldier for a \*long\* time," said Bean.

"Work hard," said Bonzo. "It pays off." He clapped him on the shoulder yet again, then walked off with a big grin on his face. Proud of having helped a little kid. Glad to have convinced somebody of his own twisted version of dealing with Ender Wiggin, who was obviously smarter farting than Bonzo was talking.

And there was a threat of violence against the kids who practiced with Ender Wiggin in freetime. That was good to know. Bean would have to decide now what to do with that information. Get the warning to Ender? Warn the teachers? Say nothing? Be there to watch?

Freetime ended. The game room cleared out as everyone headed to their barracks for the time officially dedicated to independent study. Quiet time, in other words. For most of the kids in Bean's launch group, though, there was nothing to study -- they hadn't had any classes yet. So for tonight, study meant playing the fantasy game on their desks and bantering with each other to assert position. Everybody's desk popped up with the suggestion that they could write letters home to their

families. Some of the kids chose to do that. And, no doubt, they all assumed that's what Bean was doing.

But he was not. He signed on to his first desk as Poke and discovered that, as he suspected, it didn't matter which desk he used, it was the name and password that determined everything. He would never have to pull that second desk out of its locker. Using the Poke identity, he wrote a journal entry. This was not unexpected -- "diary" was one of the options on the desk.

What should he be? A whiner? "Everybody pushed me out of the way in the game room just because I'm little, it isn't fair!" A baby? "I miss Sister Carlotta so so so much, I wish I could be in my own room back in Rotterdam." Ambitious? "I'll get the best scores on everything, they'll see."

In the end, he decided on something a little more subtle.

{What would Achilles do if he were me? Of course he's not little, but with his bad leg it's almost the same thing. Achilles always knew how to wait and not show them anything. That's what I've got to do, too. Just wait and see what pops up. Nobody's going to want to be my friend at first. But after a while, they'll get used to me and we'll start sorting ourselves out in the classes. The first ones who'll let me get close will be the weaker ones, but that's not a problem. You build your crew based on loyalty first, that's what Achilles did, build loyalty and train them to obey. You work with what you have, and go from there.}

Let them stew on *that*. Let them think he was trying to turn Battle School into the street life that he knew. They'd believe it. And in the meantime, he'd have time to learn as much as he could about how Battle School actually worked, and come up with a strategy that actually fit the situation.

Dimak came in one last time before lights out. "Your desks keep working after lights out," he said, "but if you use it when you're supposed to be sleeping, we'll know about it and we'll know what you're doing. So it better be important, or you go on the pig list."

Most of the kids put their desks away; a couple of them defiantly kept them out. Bean didn't care either way. He had other things to think about. Plenty of time for the desk tomorrow, or the next day.

He lay in the near-darkness -- apparently the babies here had to have a little light so they could find their way to the toilet without tripping -- and listened to the sounds around him, learning what they meant. A few whispers, a few shushes. The breathing of boys and girls as, one by one, they fell asleep. A few even had light child-snores. But under those human sounds, the windsound from the air system, and random clicking and distant voices, sounds of the flexing of a station rotating into and out of sunlight, the sound of adults working through the night.

This place was so expensive. Huge, to hold thousands of kids and teachers and staff and crew. As expensive as a ship of the fleet, surely. And all of it just to train little children. The adults may keep the kids wrapped up in a game, but it was serious business to *them*. This program of training children for war wasn't just some wacko educational theory gone mad, though Sister Carlotta was probably right when she said that a lot of people thought it was. The I.F. wouldn't maintain it at this

level if it weren't expected to give serious results. So these kids snoring and soughing and whispering their way into the darkness, they really mattered.

They expect results from me. It's not just a party up here, where you come for the food and then do what you want. They really do want to make commanders out of us. And since Battle School has been going for a while, they probably have proof that it works -- kids who already graduated and went on to compile a decent service record. That's what I've got to keep in mind. Whatever the system is here, it works.

A different sound. Not regular breathing. Jagged little breaths. An occasional gasp. And then ... a sob.

Crying. Some boy was crying himself to sleep.

In the nest, Bean had heard some of the kids cry in their sleep, or as they neared sleep. Crying because they were hungry or injured or sick or cold. But what did these kids have to cry about here?

Another set of soft sobs joined the first.

They're homesick, Bean realized. They've never been away from mommy and daddy before, and it's getting to them.

Bean just didn't get it. He didn't feel that way about anybody. You just live in the place you're in, you don't worry about where you used to be or where you wish you were, \*here\* is where you are and here's where you've got to find a way to survive and lying in bed boo-hooing doesn't help much with \*that\*.

No problem, though. Their weakness just puts me farther ahead. One less rival on my road to becoming a commander.

Is that how Ender Wiggin thought about things? Bean recalled everything he had learned about Ender so far. The kid was resourceful. He didn't openly fight with Bonzo, but he didn't put up with his stupid decisions, either. It was fascinating to Bean, because on the street the one rule he knew for sure was, you don't stick your neck out unless your throat's about to be slit anyway. If you have a stupid crew boss, you don't tell him he's stupid, you don't show him he's stupid, you just go along and keep your head down. That's how kids survived.

When he had to, Bean had taken a bold risk. Got himself onto Poke's crew that way. But that was about food. That was about not dying. Why did Ender take such a risk when there was nothing at stake but his standing in the war game?

Maybe Ender knew something Bean didn't know. Maybe there was some reason why the game was more important than it seemed.

Or maybe Ender was one of those kids who just couldn't stand to lose, ever. The kind of kid who's for the team only as long as the team is taking him where he wants to go, and if it isn't, then it's every man for himself. That's what Bonzo thought. But Bonzo was stupid.

Once again, Bean was reminded that there were things he didn't understand. Ender wasn't doing every man for himself. He didn't practice alone. He opened his free time practice to other kids. Launchies, too, not just kids who could do things for him. Was it possible he did that just because it was a decent thing to do?

The way Poke had offered herself to Achilles in order to save Bean's life?

No, Bean didn't \*know\* that's what she did, he didn't know that's why she died.

But the possibility was there. And in his heart, he believed it. That was the thing he had always despised about her. She acted tough but she was soft at heart. And yet ... that softness was what saved his life. And try as he might, he couldn't get himself to take the too-bad-for-her attitude that prevailed on the street. She listened to me when I talked to her, she did a hard thing that risked her own life on the chance that it would lead to a better life for all her crew. Then she offered me a place at her table and, in the end, she put herself between me and danger. Why?

What was this great secret? Did Ender know it? How did he learn it? Why couldn't Bean figure it out for himself? Try as he might, though, he couldn't understand Poke. He couldn't understand Sister Carlotta, either. Couldn't understand the arms she held him with, the tears she shed over him. Didn't they understand that no matter how much they loved him, he was still a separate person, and doing good for him didn't improve their lives in any way?

If Ender Wiggin has this weakness, then I will not be anything like him. I am not going to sacrifice myself for anybody. And the beginning of that is that I refuse to lie in my bed and cry for Poke floating there in the water with her throat slit, or boo-hoo because Sister Carlotta isn't asleep in the next room.

He wiped his eyes, rolled over, and willed his body to relax and go to sleep. Moments later, he was dozing in that light, easy-to-rouse sleep. Long before morning his pillow would be dry.

\*\*\*

He dreamed, as human beings always dream -- random firings of memory and imagination that the unconscious mind tries to put together into coherent stories. Bean rarely paid attention to his own dreams, rarely even remembered that he dreamed at all. But this morning he awoke with a clear image in his mind.

Ants, swarming from a crack in the sidewalk. Little black ants. And larger red ants, doing battle with them, destroying them. All of them scurrying. None of them looking up to see the human shoe coming down to stamp the life out of them.

When the shoe came back up, what was crushed under it was not ant bodies at all. They were the bodies of children, the urchins from the streets of Rotterdam. All of Achilles' family. Bean himself -- he recognized his own face, rising above his flattened body, peering around for one last glimpse at the world before death.

Above him loomed the shoe that killed him. But now it was worn on the end of a bugger's leg, and the bugger laughed and laughed.

Bean remembered the laughing bugger when he awoke, and remembered the sight of all those children crushed flat, of his own body mashed like gum under a shoe. The meaning was obvious: While we children play at war, the buggers are coming to crush us. We must look above the level of our private struggles and keep in mind the greater enemy.

Except that Bean rejected that interpretation of his own dream the moment he thought of it. Dreams have no meaning at all, he reminded himself. And even if they do mean something, it's a meaning that reveals what I feel, what I fear, not some deep abiding truth. So the buggers are coming. So they might crush us all like ants under their feet. What's that to me? My business right now is to keep Bean alive, to advance myself to a position where I might be useful in the war against the buggers. There's nothing I can do to stop them right now.

Here's the lesson Bean took from his own dream: Don't be one of the scurrying, struggling ants.

Be the shoe.

\*\*\*

Sister Carlotta had reached a dead end in her search of the nets. Plenty of information on human genetics studies, but nothing like what she was looking for.

So she sat there, doodling with a nuisance game on her desk while trying to think of what to do next and wondering why she was bothering to look into Bean's beginnings at all, when the secure message arrived from the I.F. Since the message would erase itself a minute after arrival, to be re-sent every minute until it was read by the recipient, she opened it at once and keyed in her first and second passwords.

{FROM: Col.Graff@BattleSchool.IF

TO: Ss.Carlotta@SpecAsn.RemCon.IF

RE: Achilles

Please report all info on "Achilles" as known to subject.}

As usual, a message so cryptic that it didn't actually have to be encrypted, though of course it had been. This was a secure message, wasn't it? So why not just use the kid's name. "Please report on 'Achilles' as known to \*Bean\*."

Somehow Bean had given them the name Achilles, and under circumstances such that they didn't want to ask him directly to explain. So it had to be in something he had written. A letter to her? She felt a little thrill of hope and then scoffed at her own feelings. She knew perfectly well that mail from the kids in Battle School was almost never passed along, and besides, the chance of Bean actually writing to her was remote. But they had the name somehow, and wanted to know from her what it meant.

The trouble is, she didn't want to give him that information without knowing what it would mean for Bean.

So she prepared an equally cryptic reply:

{Will reply by secure conference only.}

Of course this would infuriate Graff, but that was just a perk. Graff was so used to having power far beyond his rank that it would be good for him to have a reminder that all obedience was voluntary and ultimately depended on the free choice of the person receiving the orders. And she would obey, in the end. She just wanted to make sure Bean was not going to suffer from the information. If they knew he had been so closely involved with both the perpetrator and the victim of a murder, they might drop him from the program. And even if she was sure it would be all right to talk about it, she might be able to get a quid pro quo.

It took another hour before the secure conference was set up, and when Graff's head appeared in the display above her computer, he was not happy. "What game are you playing today, Sister Carlotta?"

"You've been putting on weight, Colonel Graff. That's not healthy."

"Achilles," he said.

"Man with a bad heel," she said. "Killed Hector and dragged his body around the gates of Troy. Also had a thing for a captive girl named Briseis."

"You know that's not the context."

"I know more than that. I know you must have got the name from something Bean wrote, because the name is not pronounced uh-KILL-eez, it's pronounced ah-SHEEL. French."

"Someone local there."

"Dutch is the native language here, though Fleet Common has just about driven it out as anything but a curiosity."

"Sister Carlotta, I don't appreciate your wasting the expense of this conference."

"And I'm not going to talk about it until I know why you need to know."

Graff took a few deep breaths. She wondered if his mother taught him to count to ten, or if, perhaps, he had learned to bite his tongue from dealing with nuns in Catholic school.

"We are trying to make sense of something Bean wrote."

"Let me see it and I'll help you as I can."

"He's not your responsibility anymore, Sister Carlotta," said Graff.

"Then why are you asking me about him? He's your responsibility, yes? So I can get back to work, yes?"

Graff sighed and did something with his hands, out of sight in the display. Moments later the text of Bean's diary entry appeared on her display below and in front of Graff's face. She read it, smiling slightly.

"Well?" asked Graff.

"He's doing a number on you, Colonel."

"What do you mean?"

"He knows you're going to read it. He's misleading you."

"You \*know\* this?"

"Achilles might indeed be providing him with an example, but not a good one. Achilles once betrayed someone that Bean valued highly."

"Don't be vague, Sister Carlotta."

"I wasn't vague. I told you precisely what I wanted you to know. Just as Bean told you what he wanted you to hear. I can promise you that his diary entries will only make sense to you if you recognize that he is writing these things for you, with the intent to deceive."

"Why, because he didn't keep a diary down there?"

"Because his memory is perfect," said Sister Carlotta. "He would never, never commit his real thoughts to a readable form. He keeps his own counsel. Always. You will never find a document written by him that is not meant to be read."

"Would it make a difference if he was writing it under another identity? Which he thinks we don't know about?"

"But you \*do\* know about it, and so he \*knows\* you will know about it, so the other identity is there only to confuse you, and it's working."

"I forgot, you think this kid is smarter than God."

"I'm not worried that you don't accept my evaluation. The better you know him, the more you'll realize that I'm right. You'll even come to believe those test scores."

"What will it take to get you to help me with this?" asked Graff.

"Try telling me the truth about what this information will mean to Bean."

"He's got his primary teacher worried. He disappeared for twenty-one minutes on the way back from lunch -- we have a witness who talked to him on a deck where he had no business, and that still doesn't account for that last seventeen minutes of his absence. He doesn't play with his desk --"

"You think setting up false identities and writing phony diary entries isn't playing?"

"There's a diagnostic / therapeutic game that all the children play -- he hasn't even signed on yet."

"He'll know that the game is psychological, and he won't play it until he knows what it will cost him."

"Did you teach him that attitude of default hostility?"

"No, I learned it from him."

"Tell me straight. Based on this diary entry, it looks as though he plans to set up his own crew here, as if this were the street. We need to know about this Achilles so we'll know what he actually has in mind."

"He plans no such thing," said Sister Carlotta.

"You say it so forcefully, but without giving me a single reason to trust your conclusion."

"You called \*me\*, remember?"

"That's not enough, Sister Carlotta. Your opinions on this boy are suspect."

"He would never emulate Achilles. He would never write his true plans where you could find them. He does not build crews, he joins them and uses them and moves on without a backward glance."

"So investigating this Achilles won't give us a clue about Bean's future behavior?"

"Bean prides himself on not holding grudges. He thinks they're counterproductive. But at some level, I believe he wrote about Achilles specifically because you would read what he wrote and would want to know more about Achilles, and if you investigated him you would discover a very bad thing that Achilles did."

"To Bean?"

"To a friend of his."

"So he \*is\* capable of having friendships?"

"The girl who saved his life here on the street."

"And what's \*her\* name?"

"Poke. But don't bother looking for her. She's dead."

Graff thought about that a moment. "Is that the bad thing Achilles did?"

"Bean has reason to believe so, though I don't think it would be evidence enough to convict in court. And as I said, all these things may be unconscious. I don't think Bean would knowingly try to get even with Achilles, or anybody else, for that matter, but he might hope you'd do it for him."

"You're still holding back, but I have no choice but to trust your judgment, do I?"

"I promise you that Achilles is a dead end."

"And if you think of a reason why it might not be so dead after all?"

"I want your program to succeed, Colonel Graff, even more than I want Bean to succeed. My priorities are not skewed by the fact that I do care about the child. I really have told you everything now. But I hope you'll help me also."

"Information isn't traded in the I.F., Sister Carlotta. It flows from those who have it to those who need it."

"Let me tell you what I want, and you decide if I need it."

"Well?"

"I want to know of any illegal or top secret projects involving the alteration of the human genome in the past ten years."

Graff looked off into the distance. "It's too soon for you to be off on a new project, isn't it. So this is the same old project. This is about Bean."

"He came from somewhere."

"You mean his mind came from somewhere."

"I mean the whole package. I think you're going to end up relying on this boy, betting all our lives on him, and I think you need to know what's going on in his genes. It's a poor second to knowing what's happening in his mind, but that, I suspect, will always be out of reach for you."

"You sent him up here, and then you tell me something like this. Don't you realize that you have just guaranteed that I will never let him move to the top of our selection pool?"

"You say that now, when you've only had him for a day," said Sister Carlotta. "He'll grow on you."

"He damn well better not shrink or he'd get sucked away by the air system."

"Tut-tut, Colonel Graff."

"Sorry, Sister," he answered.

"Give me a high enough clearance and I'll do the search myself."

"No," he said. "But I'll get summaries sent to you."

She knew that they would give her only as much information as they thought she should have. But when he tried to fob her off with useless drivel, she'd deal with that problem, too. Just as she would try to get to Achilles before the I.F. found him. Get him away from the streets and into a school. Under another name. Because if the I.F. found him, in all likelihood they would test him -- or find her scores on him. If they tested him, they would fix his foot and bring him up to Battle School. And she had promised Bean that he would never have to face Achilles again.

## CHAPTER 8 -- GOOD STUDENT

"He doesn't play the fantasy game at \*all\*?"

"He has never so much as chosen a figure, let alone come through the portal."

"It's not possible that he hasn't discovered it."

"He reset the preferences on his desk so that the invitation no longer pops up."

"From which you conclude ..."

"He knows it isn't a game. He doesn't want us analyzing the workings of his mind."

"And yet he wants us to advance him."

"I don't know that. He buries himself in his studies. For three months he's been getting perfect scores on every test. But he only reads the lesson material once. His study is on other subjects of his own choosing."

"Such as?"

"Vauban."

"Seventeenth-century fortifications? What is he \*thinking\*?"

"You see the problem?"

"How does he get along with the other children?"

"I think the classic description is 'loner.' He is polite. He volunteers nothing. He asks only what he's interested in. The kids in his launch group think he's strange. They know he scores better than them on everything, but they don't hate him. They treat him like a force of nature. No friends, but no enemies."

"That's important, that they don't hate him. They should, if he stays aloof like that."

"I think it's a skill he learned on the street -- to turn away anger. He never gets angry himself. Maybe that's why the teasing about his size stopped."

"Nothing that you're telling me suggests that he has command potential."

"If you think he's trying to show command potential and failing at it, then you're right."

"So ... what do you think he's doing?"

"Analyzing us."

"Gathering information without giving any. Do you really think he's that sophisticated?"

"He stayed alive on the street."

"I think it's time for you to probe a little."

"And let him know that his reticence bothers us?"

"If he's as clever as you think, he already knows."

\*\*\*

Bean didn't mind being dirty. He had gone years without bathing, after all. A few days didn't bother him. And if other people minded, they kept their opinions to themselves. Let them add it to the gossip about him. Smaller and younger than Ender! Perfect scores on every test! Stinks like a pig!

That shower time was precious. That's when he could sign on to his desk as one of the boys bunking near him -- while they were showering. They were naked, wearing only towels to the shower, so their uniforms weren't tracking them. During that time Bean could sign on and explore the system without letting the teachers know that he was learning the tricks of the system. It tipped his hand, just a little, when he altered the preferences so he didn't have to face that stupid invitation to play their mind game every time he changed tasks on his desk. But that wasn't a very difficult hack, and he decided they wouldn't be particularly alarmed that he'd figured it out.

So far, Bean had found only a few really useful things, but he felt as though he was on the verge of breaking through more important walls. He knew that there was a virtual system that the students were meant to hack through. He had heard the legends about how Ender (of course) had hacked the system on his first day and signed on as God, but he knew that while Ender might have been unusually quick about it, he wasn't doing anything that wasn't expected of bright, ambitious students.

Bean's first achievement was to find the way the teachers' system tracked student computer activity. By avoiding the actions that were automatically reported to the teachers, he was able to create a private file area that they wouldn't see unless they were deliberately looking for it. Then, whenever he found something interesting while signed on as someone else, he would remember the location, then go and download the information into his secure area and work on it at his leisure -- while his desk reported that he was reading works from the library. He actually read those works, of course, but far more quickly than his desk reported.

With all that preparation, Bean expected to make real progress. But far too quickly he ran into the firewalls -- information the system had to have but wouldn't yield. He found several workarounds. For instance, he couldn't find any maps of the whole station, only of the student-accessible areas, and those were always diagrammatic and cute, deliberately out of scale. But he did find a series of emergency maps in a program that would automatically display them on the walls of the corridors in the event of a pressure-loss emergency, showing the nearest safety locks. These maps were to scale, and by combining them into a single map in his secure area, he was able to create a schema of the whole station. Nothing was labeled except the locks, of course, but he learned of the existence of a parallel system of corridors on either side of the student area. The station must be not one but three parallel wheels, cross-linked at many points. That's where the teachers and staff lived, where the life support was located, the communications with the Fleet. The bad news was that they had separate air-circulation systems. The ductwork in one would not lead him to either of the others. Which meant that while he could probably spy on anything going on in the student wheel, the other wheels were out of reach.

Even within the student wheel, however, there were plenty of secret places to explore. The students had access to four decks, plus the gym below A-Deck and the battleroom above D-Deck.

There were actually nine decks, however, two below A-Deck and three above D. Those spaces had to be used for something. And if they thought it was worth hiding it from the students, Bean figured it was worth exploring.

And he would have to start exploring soon. His exercise was making him stronger, and he was staying lean by not overeating -- it was unbelievable how much food they tried to force on him, and they kept increasing his portions, probably because the previous servings hadn't caused him to gain as much weight as they wanted him to gain. But what he could not control was the increase in his height. The ducts would be impassable for him before too long -- if they weren't already. Yet using the air system to get him access to the hidden decks was not something he could do during showers. It would mean losing sleep. So he kept putting it off -- one day wouldn't make that much difference.

Until the morning when Dimak came into the barracks first thing in the morning and announced that everyone was to change his password immediately, with his back turned to the rest of the room, and was to tell no one what the new password was. "Never type it in where anyone can see," he said.

"Somebody's been using other people's passwords?" asked a kid, his tone suggesting that he thought this an appalling idea. Such dishonor! Bean wanted to laugh.

"It's required of all I.F. personnel, so you might as well develop the habit now," said Dimak. "Anyone found using the same password for more than a week will go on the pig list."

But Bean could only assume that they had caught on to what he was doing. That meant they had probably looked back into his probing for the past months and knew pretty much what he had found out. He signed on and purged his secure file area, on the chance that they hadn't actually found it yet. Everything he really needed there, he had already memorized. He would never rely on the desk again for anything his memory could hold.

Stripping and wrapping his towel around him, Bean headed for the showers with the others. But Dimak stopped him at the door.

"Let's talk," he said.

"What about my shower?" asked Bean.

"Suddenly you care about cleanliness?" asked Dimak.

So Bean expected to be chewed out for stealing passwords. Instead, Dimak sat beside him on a lower bunk near the door and asked him far more general questions. "How are you getting on here?"

"Fine."

"I know your test scores are good, but I'm concerned that you aren't making many friends among the other kids."

"I've got a lot of friends."

"You mean you know a lot of people's names and don't quarrel with anybody."

Bean shrugged. He didn't like this line of questioning any better than he would have liked an inquiry into his computer use.

"Bean, the system here was designed for a reason. There are a lot of factors that go into our decisions concerning a student's ability to command. The classwork is an important part of that. But so is leadership."

"Everybody here is just full of leadership ability, right?"

Dimak laughed. "Well, that's true, you can't all be leaders at once."

"I'm about as big as a three-year-old," said Bean. "I don't think a lot of kids are eager to start saluting me."

"But you could be building networks of friendship. The other kids are. You don't."

"I guess I don't have what it takes to be a commander."

Dimak raised an eyebrow. "Are you suggesting you *\*want\** to be iced?"

"Do my test scores look like I'm trying to fail?"

"What *\*do\** you want?" asked Dimak. "You don't play the games the other kids play. Your exercise program is weird, even though you know the regular program is designed to strengthen you for the battleroom. Does that mean you don't intend to play that game, either? Because if that's your plan, you really *\*will\** get iced. That's our primary means of assessing command ability. That's why the whole life of the school is centered around the armies."

"I'll do fine in the battleroom," said Bean.

"If you think you can do it without preparation, you're mistaken. A quick mind is no replacement for a strong, agile body. You have no idea how physically demanding the battleroom can be."

"I'll join the regular workouts, sir."

Dimak leaned back and closed his eyes with a small sigh. "My, but you're compliant, aren't you, Bean."

"I try to be, sir."

"That is such complete bullshit," said Dimak.

"Sir?" Here it comes, thought Bean.

"If you devoted the energy to making friends that you devote to hiding things from the teachers, you'd be the most beloved kid in the school."

"That would be Ender Wiggin, sir."

"And don't think we haven't picked up on the way you obsess about Wiggin."

"Obsess?" Bean hadn't asked about him after that first day. Never joined in discussions about the standings. Never visited the battleroom during Ender's practice sessions.

Oh. What an obvious mistake. Stupid.

"You're the only launchy who has completely avoided so much as seeing Ender Wiggin. You track his schedule so thoroughly that you are never in the same room with him. That takes real effort."

"I'm a launchy, sir. He's in an army."

"Don't play dumb, Bean. It's not convincing and it wastes my time."

Tell a useless and obvious truth, that was the rule. "Everyone compares me to Ender all the time 'cause I came here so young and small. I wanted to make my own way."

"I'll accept that for now because there's a limit to how deeply I want to wade into your bullshit," said Dimak.

But in saying what he'd said about Ender, Bean wondered if it might not be true. Why shouldn't I have such a normal emotion as jealousy? I'm not a machine. So he was a little offended that Dimak seemed to assume that something more subtle had to be going on. That Bean was lying no matter what he said.

"Tell me," said Dimak, "why you refuse to play the fantasy game."

"It looks boring and stupid," said Bean. That was certainly true.

"Not good enough," said Dimak. "For one thing, it *isn't* boring and stupid to any other kid in Battle School. In fact, the game adapts itself to your interests."

I have no doubt of *that*, thought Bean. "It's all pretending," said Bean. "None of it's real."

"Stop hiding for one second, can't you?" snapped Dimak. "You know perfectly well that we use the game to analyze personality, and that's why you refuse to play."

"Sounds like you've analyzed my personality anyway," said Bean.

"You just don't let up, do you?"

Bean said nothing. There was nothing to say.

"I've been looking at your reading list," said Dimak. "Vauban?"

"Yes?"

"Fortification engineering from the time of Louis the Fourteenth?"

Bean nodded. He thought back to Vauban and how his strategies had adapted to fit Louis's ever-more-straitened finances. Defense in depth had given way to a thin line of defenses; building new fortresses had largely been abandoned, while razing redundant or poorly placed ones continued. Poverty triumphing over strategy. He started to talk about this, but Dimak cut him off.

"Come on, Bean. Why are you studying a subject that has nothing to do with war in space?"

Bean didn't really have an answer. He had been working through the history of strategy from Xenophon and Alexander to Caesar and Machiavelli. Vauban came in sequence. There was no plan -- mostly his readings were a cover for his clandestine computer work. But now that Dimak was asking him, what *did* seventeenth-century fortifications have to do with war in space?

"I'm not the one who put Vauban in the library."

"We have the full set of military writings that are found in every library in the fleet. Nothing more significant than that."

Bean shrugged.

"You spent two hours on Vauban."

"So what? I spent as long on Frederick the Great, and I don't think we're doing field drills, either, or bayoneting anyone who breaks ranks during a march into fire."

"You didn't actually read Vauban, did you," said Dimak. "So I want to know what you *were* doing."

"I *was* reading Vauban."

"You think we don't know how fast you read?"

"And *thinking* about Vauban?"

"All right then, what were you thinking?"

"Like you said. About how it applies to war in space." Buy some time here. What \*does\* Vauban have to do with war in space?

"I'm waiting," said Dimak. "Give me the insights that occupied you for two hours just yesterday."

"Well of course fortifications are impossible in space," said Bean. "In the traditional sense, that is. But there are things you can do. Like his mini-fortresses, where you leave a sallying force outside the main fortification. You can station squads of ships to intercept raiders. And there are barriers you can put up. Mines. Fields of flotsam to cause collisions with fast-moving ships, holing them. That sort of thing."

Dimak nodded, but said nothing.

Bean was beginning to warm to the discussion. "The real problem is that unlike Vauban, we have only one strong point worth defending -- Earth. And the enemy is not limited to a primary direction of approach. He could come from anywhere. From anywhere all at once. So we run into the classic problem of defense, cubed. The farther out you deploy your defenses, the more of them you have to have, and if your resources are limited, you soon have more fortifications than you can man. What good are bases on moons Jupiter or Saturn or Neptune, when the enemy doesn't even have to come in on the plane of the ecliptic? He can bypass all our fortifications. The way Nimitz and MacArthur used two-dimensional island-hopping against the defense in depth of the Japanese in World War II. Only our enemy can work in three dimensions. Therefore we cannot possibly maintain defense in depth. Our only defense is early detection and a single massed force."

Dimak nodded slowly. His face showed no expression. "Go on."

Go on? That wasn't enough to explain two hours of reading? "Well, so I thought that even that was a recipe for disaster, because the enemy is free to divide his forces. So even if we intercept and defeat ninety-nine of a hundred attacking squadrons, he only has to get one squadron through to cause terrible devastation on Earth. We saw how much territory a single ship could scour when they first showed up and started burning over China. Get ten ships to Earth for a single day -- and if they spread us out enough, they'd have a lot more than a day! -- and they could wipe out most of our main population centers. All our eggs are in that one basket."

"And all this you got from Vauban," said Dimak.

Finally. That was apparently enough to satisfy him. "From thinking about Vauban, and how much harder our defensive problem is."

"So," said Dimak, "what's your solution?"

Solution? What did Dimak think Bean was? I'm thinking about how to get control of the situation here in Battle School, not how to save the world! "I don't think there is a solution," said Bean, buying time again. But then, having said it, he began to believe it. "There's no point in trying to defend Earth at all. In fact, unless they have some defensive device we don't know about, like some

way of putting an invisible shield around a planet or something, the enemy is just as vulnerable. So the only strategy that makes any sense at all is an all-out attack. To send our fleet against \*their\* home world and destroy it."

"What if our fleets pass in the night?" asked Dimak. "We destroy each other's worlds and all we have left are ships?"

"No," said Bean, his mind racing. "Not if we sent out a fleet immediately after the Second Bugger War. After Mazer Rackham's strike force defeated them, it would take time for word of their defeat to come back to them. So we build a fleet as quickly as possible and launch it against their home world immediately. That way the news of their defeat reaches them at the same time as our devastating counterattack."

Dimak closed his eyes. "Now you tell us."

"No," said Bean, as it dawned on him that he was right about everything. "That fleet was already sent. Before anybody on this station was born, that fleet was launched."

"Interesting theory," said Dimak. "Of course you're wrong on every point."

"No I'm not," said Bean. He knew he wasn't wrong, because Dimak's air of calm was not holding. Sweat was standing out on his forehead. Bean had hit on something really important here, and Dimak knew it.

"I mean your theory is right, about the difficulty of defense in space. But hard as it is, we still have to do it, and that's why you're here. As to some fleet we supposedly launched -- the Second Bugger War exhausted humanity's resources, Bean. It's taken us this long to get a reasonable-sized fleet again. And to get better weaponry for the next battle. If you learned anything from Vauban, you should have learned that you can't build more than your people have resources to support. Besides which, you're assuming we know where the enemy's home world is. But your analysis is good insofar as you've identified the magnitude of the problem we face."

Dimak got up from the bunk. "It's nice to know that your study time isn't completely wasted on breaking into the computer system," he said.

With that parting shot, he left the barracks.

Bean got up and walked back to his own bunk, where he got dressed. No time for a shower now, and it didn't matter anyway. Because he knew that he had struck a nerve in what he said to Dimak. The Second Bugger War hadn't exhausted humanity's resources, Bean was sure of that. The problems of defending a planet were so obvious that the I.F. couldn't possibly have missed them, especially not in the aftermath of a nearly-lost war. They knew they had to attack. They built the fleet. They launched it. It was gone. It was inconceivable that they had done anything else.

So what was all this nonsense with the Battle School for? Was Dimak right, that Battle School was simply about building up the defensive fleet around Earth to counter any enemy assault that might have passed our invasion fleet on the way?

If that were true, there would be no reason to conceal it. No reason to lie. In fact, all the propaganda on Earth was devoted to telling people how vital it was to prepare for the next Bugger invasion. So Dimak had done nothing more than repeat the story that the I.F. had been telling everybody on Earth for three generations. Yet Dimak was sweating like a fish. Which suggested that the story wasn't true.

The defensive fleet around Earth was already fully manned, that was the problem. The normal process of recruitment would have been enough. Defensive war didn't take brilliance, just alertness. Early detection, cautious interception, protection of an adequate reserve. Success depended, not on the quality of command, but on the quantity of available ships and the quality of the weaponry. There was no reason for Battle School -- Battle School only made sense in the context of an offensive war, a war where maneuver, strategy, and tactics would play an important role. But the offensive fleet was already gone. For all Bean knew, the battle had already been fought years ago and the I.F. was just waiting for news about whether we had won or lost. It all depended on how many light-years away the Bugger home planet was.

For all we know, thought Bean, the war is already over, the I.F. knows that we won, and they simply haven't told anybody.

And the reason for that was obvious. The only thing that had ended war on Earth and bound together all of humanity was a common cause -- defeating the Buggers. As soon as it was known that the Bugger threat was eliminated, all the pent-up hostilities would be released. Whether it was the Muslim world against the West, or long-restrained Russian imperialism and paranoia against the Atlantic alliance, or Indian adventurism, or ... or all of them at once. Chaos. The resources of the International Fleet would be co-opted by mutinying commanders from one faction or another. Conceivably it could mean the destruction of Earth -- without any help from the Formics at all.

That's what the I.F. was trying to prevent. The terrible cannibalistic war that would follow. Just as Rome tore itself apart in civil war after the final elimination of Carthage -- only far worse, because the weapons were more terrible and the hatreds far deeper, national and religious hatreds rather than the mere personal rivalries among leading citizens of Rome.

The I.F. was determined to prevent it.

In that context, Battle School made perfect sense. For many years, almost every child on Earth had been tested, and those with any potential brilliance in military command were taken out of their homeland and put into space. The best of the Battle School graduates, or at least those most loyal to the I.F., might very well be used to command armies when the I.F. finally announced the end of the war and struck preemptively to eliminate national armies and unify the world, finally and permanently, under one government. But the main purpose of the Battle School was to get these kids off Earth so that they could not become commanders of the armies of any one nation or faction.

After all, the invasion of France by the major European powers after the French Revolution led to the desperate French government discovering and promoting Napoleon, even though in the end he seized the reins of power instead of just defending the nation. The I.F. was determined that there would be no Napoleons on Earth to lead the resistance. All the potential Napoleons were here, wearing silly uniforms and battling each other for supremacy in a stupid game. It was all pig lists. By taking us, they have tamed the world.

"If you don't get dressed, you'll be late for class," said Nikolai, the boy who slept on the bottommost bunk directly across from Bean.

"Thanks," said Bean. He shed his dry towel and hurriedly pulled on his uniform.

"Sorry I had to tell them about your using my password," said Nikolai.

Bean was dumfounded.

"I mean, I didn't \*know\* it was you, but they started asking me what I was looking for in the emergency map system, and since I didn't know what they were talking about, it wasn't hard to guess that somebody was signing on as me, and there you are, in the perfect place to see my desk whenever I sign on, and ... I mean, you're really smart. But it's not like I set out to tell on you."

"That's fine," said Bean. "Not a problem."

"But, I mean, what \*did\* you find out? From the maps?"

Until this moment, Bean would have blown off the question -- and the boy. Nothing much, I was just curious, that's what he would have said. But now his whole world had changed. Now it mattered that he have connections with the other boys, not so he could show his leadership ability to the teachers, but so that when war did break out on Earth, and when the I.F.'s little plan failed, as it was bound to do, he would know who his allies and enemies were among the commanders of the various national and factional armies.

For the I.F.'s plan \*would\* fail. It was a miracle it hadn't failed already. It depended too heavily on millions of soldiers and commanders being more loyal to the I.F. than to their homeland. It would not happen. The I.F. itself would break up into factions, inevitably.

But the plotters no doubt were aware of that danger. They would have kept the number of plotters as small as possible -- perhaps only the triumvirate of Hegemon, Strategos, and Polemarch and maybe a few people here at Battle School. Because this station was the heart of the plan. Here was where every single gifted commander for two generations had been studied intimately. There were records on every one of them -- who was most talented, most valuable. What their weaknesses were, both in character and in command. Who their friends were. What their loyalties were. Which of them, therefore, should be approached to command the I.F.'s forces in the intrahuman wars to come, and which should be stripped of command and held incommunicado until hostilities were over.

No wonder they were worried about Bean's lack of participation in their little mind game. It made him an unknown quantity. It made him dangerous.

Now it was even more dangerous for Bean to play than ever. Not playing might make them suspicious and fearful -- but in whatever move they planned against him, at least they wouldn't know anything about him. While if he did play, then they might be less suspicious -- but if they did move against him, they would do it knowing whatever information the game gave to them. And Bean was not at all confident of his ability to outplay the game. Even if he tried to give them misleading results, that strategy in itself might tell them more about him than he wanted them to know.

And there was another possibility, too. He might be completely wrong. There might be key information that he did not have. Maybe no fleet had been launched. Maybe they hadn't defeated the Buggers at their home world. Maybe there really was a desperate effort to build a defensive fleet. Maybe maybe maybe.

Bean had to get more information in order to have some hope that his analysis was correct and that his choices would be valid.

And Bean's isolation had to end.

"Nikolai," said Bean, "you wouldn't believe what I found out from those maps. Did you know there are nine decks, not just four?"

"Nine?"

"And that's just in this wheel. There are two other wheels they never tell us about."

"But the pictures of the station show only the one wheel."

"Those pictures were all taken when there *\*was\** only one wheel. But in the plans, there are three. Parallel to each other, turning together."

Nikolai looked thoughtful. "But that's just the plans. Maybe they never built those other wheels."

"Then why would they still have maps for them in the emergency system?"

Nikolai laughed. "My father always said, bureaucrats never throw anything away."

Of course. Why hadn't he thought of that? The emergency map system was no doubt programmed before the first wheel was ever brought into service. So all those maps would already be in the system, even if the other wheels were never built, even if two-thirds of the maps would never have a corridor wall to be displayed on. No one would bother to go into the system and clean them out.

"I never thought of that," said Bean. He knew, given his reputation for brilliance, that he could pay Nikolai no higher compliment. As indeed the reaction of the other kids in nearby bunks showed. No one had ever had such a conversation with Bean before. No one had ever thought of something that Bean hadn't obviously thought of first. Nikolai was blushing with pride.

"But the nine decks, that makes sense," said Nikolai.

"Wish I knew what was on them," said Bean.

"Life support," said the girl named Corn Moon. "They got to be making oxygen somewhere here. That takes a lot of plants."

More kids joined in. "And staff. All we ever see are teachers and nutritionists."

"And maybe they *did* build the other wheels. We don't *know* they didn't."

The speculation ran rampant through the group. And at the center of it all: Bean.

Bean and his new friend, Nikolai.

"Come on," said Nikolai, "we'll be late for math."

### PART THREE -- SCHOLAR

#### CHAPTER 9 -- GARDEN OF SOFIA

"So he found out how many decks there are. What can he possibly do with that information?"

"Yes, that's the exact question. What was he planning, that he felt it necessary to find that out? Nobody else even looked for that, in the whole history of this school."

"You think he's plotting revolution?"

"All we know about this kid is that he survived on the streets of Rotterdam. It's a hellish place, from what I hear. The kids are vicious. They make Lord of the Flies look like Pollyanna."

"When did you read Pollyanna?"

"It was a book?"

"How can he plot a revolution? He doesn't have any friends."

"I never said anything about revolution, that's *\*your\** theory."

"I don't have a theory. I don't understand this kid. I never even wanted him up here. I think we should just send him home."

"No."

"No *\*sir\**, I'm sure you meant to say."

"After three months in Battle School, he figured out that defensive war makes no sense and that we must have launched a fleet against the Bugger home worlds right after the end of the last war."

"He knows *\*that\**? And you come telling me he knows how many *\*decks\** there are?"

"He doesn't *\*know\** it. He guessed. I told him he was wrong."

"I'm sure he believed you."

"I'm sure he's in doubt."

"This is all the more reason to send him back to Earth. Or out to some distant base somewhere. Do you realize the nightmare if there's a breach of security on this?"

"Everything depends on how he uses the information."

"Only we don't know anything about him, so we have no way of knowing how he'll use it."

"Sister Carlotta --"

"Do you *\*hate\** me? That woman is even more inscrutable than your little dwarf."

"A mind like Bean's is not to be thrown away just because we fear there might be a security breach."

"Nor is security to be thrown away for the sake of one really smart kid."

"Aren't we smart enough to create new layers of deception for him? Let him find out something that he'll think is the truth. All we have to do is come up with a lie that we think he'll believe."

\*\*\*

Sister Carlotta sat in the terrace garden, across the tiny table from the wizened old exile.

"I'm just an old Russian scientist living out the last years of his life on the shores of the Black Sea." Anton took a long drag on his cigarette and blew it out over the railing, adding it to the pollution flowing from Sofia out over the water.

"I'm not here with any law enforcement authority," said Sister Carlotta.

"You have something much more dangerous to me. You are from the Fleet."

"You're in no danger."

"That's true, but only because I'm not going to tell you anything."

"Thank you for your candor."

"You value candor, but I don't think you would appreciate it if I told you the thoughts your body arouses in the mind of this old Russian."

"Trying to shock nuns is not much sport. There is no trophy."

"So you take nunitude seriously."

Sister Carlotta sighed. "You think I came here because I know something about you and you don't want me to find out more. But I came here because of what I can't find out about you."

"Which is?"

"Anything. Because I was researching a particular matter for the I.F., they gave me a summary of articles on the topic of research into altering the human genome."

"And my name came up?"

"On the contrary, your name was never mentioned."

"How quickly they forget."

"But when I read the few papers available from the people they did mention -- always early work, before the I.F. security machine clamped down on them -- I noticed a trend. Your name was always cited in their footnotes. Cited constantly. And yet not a word of yours could be found. Not even abstracts of papers. Apparently you have never published."

"And yet they quote me. Almost miraculous, isn't it? You people do collect miracles, don't you? To make saints?"

"No beatification until after you're dead, sorry."

"I have only one lung left as it is," said Anton. "So I don't have that long to wait, as long as I keep smoking."

"You could stop."

"With only one lung, it takes twice as many cigarettes to get the same nicotine. Therefore I have had to increase my smoking, not cut down. This should be obvious, but then, you do not think like a scientist, you think like a woman of faith. You think like an obedient person. When you find out something is bad, you don't do it."

"Your research was into genetic limitations on human intelligence."

"Was it?"

"Because it's in that area that you are always cited. Of course, these papers were never \*about\* that exact subject, or they too would have been classified. But the titles of the articles mentioned in the footnotes -- the ones you never wrote, since you never published anything -- are all tied to that area."

"It is so easy in a career to find oneself in a rut."

"So I want to ask you a hypothetical question."

"My favorite kind. Next to rhetorical ones. I can nap equally well through either kind."

"Suppose someone were to break the law and attempt to alter the human genome, specifically to enhance intelligence."

"Then someone would be in serious danger of being caught and punished."

"Suppose that, using the best available research, he found certain genes that he could alter in an embryo that would enhance the intelligence of the person when he was born."

"Embryo! Are you testing me? Such changes can only happen in the egg. A single cell."

"And suppose a child was born with these alterations in place. The child was born and he grew up enough for his great intelligence to be noticed."

"I assume you are not speaking of your own child."

"I'm speaking of no child at all. A hypothetical child. How would someone recognize that this child had been genetically altered? Without actually examining the genes."

Anton shrugged. "What does it matter if you examine the genes? They will be normal."

"Even though you altered them?"

"It is such a little change. Hypothetically speaking."

"Within the normal range of variation?"

"It is two switches, one that you turn on, one that you turn off. The gene is already there, you see."

"What gene?"

"Savants were the key, for me. Autistic, usually. Dysfunctional. They have extraordinary mental powers. Lightning-fast calculations. Phenomenal memories. But they are inept, even retarded in other areas. Square roots of twelve-digit numbers in seconds, but incapable of conducting a simple purchase in a store. How can they be so brilliant, and so stupid?"

"That gene?"

"No, it was another, but it showed me what was possible. The human brain could be far smarter than it is. But is there a, how you say, bargain?"

"Trade-off."

"A terrible bargain. To have this great intellect, you have to give up everything else. That's how the brains of autistic savants accomplish such feats. They do one thing, and the rest is a distraction, an annoyance, beyond the reach of any conceivable interest. Their attention truly is undivided."

"So all hyperintelligent people would be retarded in some other way."

"That is what we all assumed, because that is what we saw. The exceptions seemed to be only mild savants, who were thus able to spare some concentration on ordinary life. Then I thought ... but I can't tell you what I thought, because I have been served with an order of inhibition."

He smiled helplessly. Sister Carlotta's heart fell. When someone was a proven security risk, they implanted in his brain a device that caused any kind of anxiety to launch a feedback loop, leading to a panic attack. Such people were then given periodic sensitization to make sure that they felt a great deal of anxiety when they contemplated talking about the forbidden subject. Viewed one way, it was a monstrous intrusion on a person's life; but if it was compared to the common practice of imprisoning or killing people who could not be trusted with a vital secret, an order of intervention could look downright humane.

That explained, of course, why Anton was amused by everything. He had to be. If he allowed himself to become agitated or angry -- any strong negative emotion, really -- then he would have a panic attack even without talking about forbidden subjects. Sister Carlotta had read an article once in which the wife of a man equipped with such a device said that their life together had never been happier, because now he took everything so calmly, with good humor. "The children love him now, instead of dreading his time at home." She said that, according to the article, only hours before he threw himself from a cliff. Life was better, apparently, for everyone but him.

And now she had met a man whose very memories had been rendered inaccessible.

"What a shame," said Sister Carlotta.

"But stay. My life here is a lonely one. You're a sister of mercy, aren't you? Have mercy on a lonely old man, and walk with me."

She wanted to say no, to leave at once. At that moment, however, he leaned back in his chair and began to breathe deeply, regularly, with his eyes closed, as he hummed a little tune to himself.

A ritual of calming. So ... at the very moment of inviting her to walk with him, he had felt some kind of anxiety that triggered the device. That meant there was something important about his invitation.

"Of course I'll walk with you," she said. "Though technically my order is relatively unconcerned with mercy to individuals. We are far more pretentious than that. Our business is trying to save the world."

He chuckled. "One person at a time would be too slow, is that it?"

"We make our lives of service to the larger causes of humanity. The Savior already died for sin. We work on trying to clean up the consequences of sin on other people."

"An interesting religious quest," said Anton. "I wonder whether my old line of research would have been considered a service to humanity, or just another mess that someone like you would have to clean up."

"I wonder that myself," said Sister Carlotta.

"We will never know." They strolled out of the garden into the alley behind the house, and then to a street, and across it, and onto a path that led through an untended park.

"The trees here are very old," Sister Carlotta observed.

"How old are \*you\*, Carlotta?"

"Objectively or subjectively?"

"Stick to the Gregorian calendar, please, as most recently revised."

"That switch away from the Julian system still sticks in the Russian craw, does it?"

"It forced us for more than seven decades to commemorate an October Revolution that actually occurred in November."

"You are much too young to remember when there were Communists in Russia."

"On the contrary, I am old enough now to have all the memories of my people locked within my head. I remember things that happened long before I was born. I remember things that never happened at all. I live in memory."

"Is that a pleasant place to dwell?"

"Pleasant?" He shrugged. "I laugh at all of it because I must. Because it is so sweetly sad -- all the tragedies, and yet nothing is learned."

"Because human nature never changes," she said.

"I have imagined," he said, "how God might have done better, when he made man -- in his own image, I believe."

"Male and female created he them. Making his image anatomically vague, one must suppose."

He laughed and clapped her rather too forcefully on the back. "I didn't know you could laugh about such things! I am pleasantly surprised!"

"I'm glad I could bring cheer into your bleak existence."

"And then you sink the barb into the flesh." They reached an overlook that had rather less of a view of the sea than Anton's own terrace. "It is not a bleak existence, Carlotta. For I can celebrate God's great compromise in making human beings as we are."

"Compromise?"

"Our bodies could live forever, you know. We don't have to wear out. Our cells are all alive; they can maintain and repair themselves, or be replaced by fresh ones. There are even mechanisms to keep replenishing our bones. Menopause need not stop a woman from bearing children. Our brains need not decay, shedding memories or failing to absorb new ones. But God made us with death inside."

"You are beginning to sound serious about God."

"God made us with death inside, and also with intelligence. We have our seventy years or so -- perhaps ninety, with care -- in the mountains of Georgia, a hundred and thirty is not unheard of, though I personally believe they are all liars. They would claim to be immortal if they thought they could get away with it. We could live forever, if we were willing to be stupid the whole time."

"Surely you're not saying that God had to choose between long life and intelligence for human beings!"

"It's there in your own Bible, Carlotta. Two trees -- knowledge and life. You eat of the tree of knowledge, and you will surely die. You eat of the tree of life, and you remain a child in the garden forever, undying."

"You speak in theological terms, and yet I thought you were an unbeliever."

"Theology is a joke to me. Amusing! I laugh at it. I can tell amusing stories about theology, to jest with believers. You see? It pleases me and keeps me calm."

At last she understood. How clearly did he have to spell it out? He was telling her the information she asked about, but doing it in code, in a way that fooled not only any eavesdroppers -- and there might well be listeners to every word they said -- but even his own mind. It was all a jest; therefore he could tell her the truth, as long as he did it in this form.

"Then I don't mind hearing your wild humorous forays into theology."

"Genesis tells of men who lived to be more than nine hundred years old. What it does not tell you is how very stupid these men all were."

Sister Carlotta laughed aloud.

"That's why God had to destroy humanity with his little flood," Anton went on. "Get rid of those stupid people and replace them with quicker ones. Quick quick quick, their minds moved, their metabolism. Rushing onward into the grave."

"From Methuselah at nearly a millennium of life to Moses with his hundred and twenty years, and now to us. But our lives are getting longer."

"I rest my case."

"Are we stupider now?"

"So stupid that we would rather have long life for our children than see them become too much like God, knowing ... good and evil ... knowing ... everything." He clutched at his chest, gasping. "Ah, God! God in heaven!" He sank to his knees, His breath was shallow and rapid now. His eyes rolled back in his head. He fell over.

Apparently he hadn't been able to maintain his self-deception. His body finally caught on to how he had managed to tell his secret to this woman by speaking it in the language of religion.

She rolled him onto his back. Now that he had fainted, his panic attack was subsiding. Not that fainting was trivial in a man of Anton's age. But he would not need any heroism to bring him back, not this time. He would wake up calm.

Where were the people who were supposed to be monitoring him? Where were the spies who were listening in to their conversation?

Pounding feet on the grass, on the leaves.

"A bit slow, weren't you?" she said without looking up.

"Sorry, we didn't expect anything." The man was youngish, but not terribly bright-looking. The implant was supposed to keep him from spilling his tale; it was not necessary for his guards to be clever.

"I think he'll be all right."

"What were you talking about?"

"Religion," she said, knowing that her account would probably be checked against a recording. "He was criticizing God for mis-making human beings. He claimed to be joking, but I think that a man of his age is never really joking when he talks about God, do you?"

"Fear of death gets in them," said the young man sagely -- or at least as sagely as he could manage.

"Do you think he accidentally triggered this panic attack by agitating his own anxiety about death?" If she asked it as a question, it wasn't actually a lie, was it?

"I don't know. He's coming around."

"Well, I certainly don't want to cause him any more anxiety about religious matters. When he wakes up, tell him how grateful I am for our conversation. Assure him that he has clarified for me one of the great questions about God's purpose."

"Yes, I'll tell him," said the young man earnestly.

Of course he would garble the message hopelessly.

Sister Carlotta bent over and kissed Anton's cold, sweaty forehead. Then she rose to her feet and walked away.

So that was the secret. The genome that allowed a human being to have extraordinary intelligence acted by speeding up many bodily processes. The mind worked faster. The child developed faster. Bean was indeed the product of an experiment in unlocking the savant gene. He had been given the fruit of the tree of knowledge. But there was a price. He would not be able to taste of the tree of life. Whatever he did with his life, he would have to do it young, because he would not live to be old.

Anton had not done the experiment. He had not played God, bringing forth human beings who would live in an explosion of intelligence, sudden fireworks instead of single, long-burning candles. But he had found a key God had hidden in the human genome. Someone else, some follower, some insatiably curious soul, some would-be visionary longing to take human beings to the next stage of evolution or some other such mad, arrogant cause -- this someone had taken the bold step of turning that key, opening that door, putting the killing, brilliant fruit into the hand of

Eve. And because of that act -- that serpentine, slithering crime -- it was Bean who had been expelled from the garden. Bean who would now, surely, die -- but die like a god, knowing good and evil.

## CHAPTER 10 -- SNEAKY

"I can't help you. You didn't give me the information I asked for."

"We gave you the damned summaries."

"You gave me nothing and you know it. And now you come to me asking me to evaluate Bean for you -- but you do not tell me why, you give me no context. You expect an answer but you deprive me of the means of providing it."

"Frustrating, isn't it?"

"Not for me. I simply won't give you any answer."

"Then Bean is out of the program."

"If your mind is made up, no answer of mine will change you, especially because you have made certain my answer will be unreliable."

"You know more than you've told me, and I must have it."

"How marvelous. You have achieved perfect empathy with me, for that is the exact statement I have repeatedly made to you."

"An eye for an eye? How Christian of you."

"Unbelievers always want \*other\* people to act like Christians."

"Perhaps you haven't heard, but there's a war on."

"Again, I could have said the same thing to you. There's a war on, yet you fence me around with foolish secrecy. Since there is no evidence of the Formic enemy spying on us, this secrecy is not about the war. It's about the Triumvirate maintaining their power over humanity. And I am not remotely interested in that."

"You're wrong. That information is secret in order to prevent some terrible experiments from being performed."

"Only a fool closes the door when the wolf is already inside the barn."

"Do you have proof that Bean is the result of a genetic experiment?"

"How can I prove it, when you have cut me off from all evidence? Besides, what matters is not \*whether\* he has altered genes, but what those genetic changes, if he has them, might lead him to do. Your tests were all designed to allow you to predict the behavior of normal human beings. They may not apply to Bean."

"If he's that unpredictable, then we can't rely on him. He's out."

"What if he's the only one who can win the war? Do you drop him from the program then?"

\*\*\*

Bean didn't want to have much food in his body, not tonight, so he gave away almost all his food and turned in a clean tray long before anyone else was done. Let the nutritionist be suspicious -- he had to have time alone in the barracks.

The engineers had always located the intake at the top of the wall over the door into the corridor. Therefore the air must flow into the room from the opposite end, where the extra bunks were unoccupied. Since he had not been able to see a vent just glancing around that end of the room, it had to be located under one of the lower bunks. He couldn't search for it when others would see him, because no one could be allowed to know that he was interested in the vents. Now, alone, he dropped to the floor and in moments was jimmying at the vent cover. It came off readily. He tried putting it back on, listening carefully for the level of noise that operation caused. Too much. The vent screen would have to stay off. He laid it on the floor beside the opening, but out of the way so he wouldn't accidentally bump into it in the darkness. Then, to be sure, he took it completely out from under that bunk and slid it under the one directly across.

Done. He then resumed his normal activities.

Until night. Until the breathing of the others told him that most, if not all, were asleep.

Bean slept naked, as many of the boys did -- his uniform would not give him away. They were told to wear their towels when going to and from the toilet in the night, so Bean assumed that it, too, could be tracked.

So as Bean slid down from his bunk, he pulled his towel from its hook on the bunk frame and wrapped it around himself as he trotted to the door of the barracks.

Nothing unusual. Toilet trips were allowed, if not encouraged, after lights out, and Bean had made it a point to make several such runs during his time in Battle School. No pattern was being violated. And it was a good idea to make his first excursion with an empty bladder.

When he came back, if anyone was awake all they saw was a kid in a towel heading back to his bunk.

But he walked past his bunk and quietly sank down and slid under the last bunk, where the uncovered vent awaited him. His towel remained on the floor under the bunk, so that if anyone woke enough to notice that Bean's bunk was empty, they would see that his towel was missing and assume he had gone to the toilet.

It was no less painful this time, sliding into the vent, but once inside, Bean found that his exercise had paid off. He was able to slide down at an angle, always moving slowly enough to make no noise and to avoid snagging his skin on any protruding metal. He wanted no injuries he'd have to explain.

In the utter darkness of the air duct, he had to keep his mental map of the station constantly in mind. The faint nightlight of each barracks cast only enough light into the air ducts to allow him to make out the location of each vent. But what mattered was not the location of the other barracks on this level. Bean had to get either up or down to a deck where teachers lived and worked. Judging from the amount of time it took Dimak to get to their barracks the rare times that a quarrel demanded his attention, Bean assumed that his quarters were on another deck. And because Dimak always arrived breathing a little heavily, Bean also assumed it was a deck below their own level, not above -- Dimak had to climb a ladder, not slide down a pole, to reach them.

Nevertheless, Bean had no intention of going down first. He had to see whether he could successfully climb to a higher deck before getting himself potentially trapped on a lower one.

So when he finally -- after passing three barracks -- came to a vertical shaft, he did not climb down. Instead, he probed the walls to see how much larger it was than the horizontals. It was much wider -- Bean could not reach all the way across it. But it was only slightly deeper, front to back. That was good. As long as Bean didn't work too hard and sweat too much, friction between his skin and the front and back walls of the duct would allow him to inch his way upward. And in the vertical duct, he could face forward, giving his neck a much-needed respite from being perpetually turned to one side.

Downward was almost harder than upward, because once he started sliding it was harder to stop. He was also aware that the lower he went, the heavier he would become. And he had to keep checking the wall beside him, looking for another side duct.

But he didn't have to find it by probing, after all. He could see the side duct, because there was light in both directions. The teachers didn't have the same lights-out rules as the students, and their quarters were smaller, so that vents came more frequently, spilling more light into the duct.

In the first room, a teacher was awake and working at his desk. The trouble was that Bean, peering out of a vent screen near the floor, could not see a thing he was typing.

It would be that way in all the rooms. The floor vents would not work for him. He had to get into the air-intake system.

Back to the vertical duct. The wind was coming from above, and so that was where he had to go if he was to cross over from one system to another. His only hope was that the duct system would have an access door before he reached the fans, and that he would be able to find it in the dark.

Heading always into the wind, and finding himself noticeably lighter after climbing past seven decks, he finally reached a wider area with a small light strip. The fans were much louder, but he still wasn't near enough to see them. It didn't matter. He would be out of this wind.

The access door was clearly marked. It also might be wired to sound an alarm if it was opened. But he doubted it. That was the kind of thing that was done in Rotterdam to guard against burglars. Burglary wasn't a serious problem on space stations. This door would only have been alarmed if all doors in the station were fitted with alarms. He'd find out soon enough.

He opened the door, slipped out into a faintly lighted space, closed the door behind him.

The structure of the station was visible here, the beams, the sections of metal plating. There were no solid surfaces. The room was also noticeably colder, and not just because he was out of the hot wind. Cold hard space was on the other side of those curved plates. The furnaces might be located here, but the insulation was very good, and they had not bothered to pump much of that hot air into this space, relying instead on seepage to heat it. Bean hadn't been this cold since Rotterdam ... but compared to wearing thin clothing in the winter streets with the wind off the North Sea, this was still almost balmy. It annoyed Bean that he had become so pampered here that he even cared about such a slight chill. And yet he couldn't keep himself from shivering a couple of times. Even in Rotterdam, he hadn't been naked.

Following the ductwork, he climbed up the workmen's ladderways to the furnaces and then found the air-intake ducts and followed them back down. It was easy to find an access door and enter the main vertical duct.

Because the air in the intake system did not have to be under positive pressure, the ducts did not have to be so narrow. Also, this was the part of the system where dirt had to be caught and removed, so it was more important to maintain access; by the time air got past the furnaces, it was already as clean as it was ever going to get. So instead of shinnying up and down narrow shafts, Bean scrambled easily down a ladder, and in the low light still had no trouble reading the signs telling which deck each side opening led to.

The side passages weren't really ducts at all. Instead, they consisted of the entire space between the ceiling of one corridor and the floor of the one above. All the wiring was here, and the water pipes -- hot, cold, sewer. And besides the strips of dim worklights, the space was frequently lighted by the vents on both sides of the space -- those same narrow strips of vent openings that Bean had seen from the floor below on his first excursion.

Now he could see easily down into each teacher's quarters. He crept along, making as little noise as possible -- a skill he had perfected prowling through Rotterdam. He quickly found what he was looking for -- a teacher who was awake, but not working at his desk. The man was not well known to Bean, because he supervised an older group of launchies and did not teach any of the classes

Bean was taking. He was heading for a shower. That meant he would come back to the room and, perhaps, would sign in again, allowing Bean to have a chance at getting both his log-in name and his password.

No doubt the teachers changed passwords often, so whatever he got wouldn't last long. Moreover, it was always possible that attempting to use a teacher's password on a student desk might set off some kind of alarm. But Bean doubted it. The whole security system was designed to shut students out, to monitor student behavior. The teachers would not be so closely watched. They frequently worked on their desks at odd hours, and they also frequently signed on to student desks during the day to call on their more powerful tools to help solve a student's problem or give a student more personalized computer resources. Bean was reasonably sure that the risk of discovery was outweighed by the benefits of snagging a teacher's identity.

While he waited, he heard voices a few rooms up. He wasn't quite close enough to make out the words. Did he dare risk missing the bather's return?

Moments later he was looking down into the quarters of ... Dimak himself. Interesting. He was talking to a man whose holographic image appeared in the air over his desk. Colonel Graff, Bean realized. The commandant of Battle School.

"My strategy was simple enough," Graff was saying. "I gave in and got her access to the stuff she wanted. She was right, I can't get good answers from her unless I let her see the data she's asking for."

"So did she give you any answers?"

"No, too soon. But she gave me a very good question."

"Which is?"

"Whether the boy is actually human."

"Oh, come on. Does she think he's a Bugger larva in a human suit?"

"Nothing to do with the Buggers. Genetically enhanced. It would explain a lot."

"But still human, then."

"Isn't that debatable? The difference between humans and chimpanzees is genetically slight. Between humans and neanderthals it had to be minute. How much difference would it take for him to be a different species?"

"Philosophically interesting, but in practical terms --"

"In practical terms, we don't know what this kid will do. There's no data on his species. He's a primate, which suggests certain regularities, but we can't assume anything about his motivations that --"

"Sir, with all due respect, he's still a kid. He's a human being. He's not some alien --"

"That's precisely what we've got to find out before we determine how much we can rely on him. And that's why you are to watch him even more carefully. If you can't get him into the mind game, then find some other way to figure out what makes him tick. Because we can't use him until we know just how much we can rely on him."

Interesting that they openly call it the mind game among themselves, thought Bean.

Then he realized what they were saying. "Can't get him into the mind game." As far as Bean knew, he was the only kid who didn't play the fantasy game. They were talking about him. New species. Genetically altered. Bean felt his heart pounding in his chest. What am I? Not just smart, but ... different.

"What about the breach of security?" Dimak asked.

"That's the other thing. You've got to figure out what he knows. Or at least how likely he is to spill it to any other kids. That's the greatest danger right now. Is the possibility of this kid being the commander we need great enough to balance the risk of breaching security and collapsing the program? I thought with Ender we had an all-or-nothing long-odds bet, but this one makes Ender look like a sure thing."

"I didn't think of you as a gambler, sir."

"I'm not. But sometimes you're forced into the game."

"I'm on it, sir."

"Encrypt everything you send me on him. No names. No discussions with other teachers beyond the normal. Contain this."

"Of course."

"If the only way we can beat the Buggers is to replace ourselves with a new species, Dimak, then have we really saved humanity?"

"One kid is not replacement of a species," said Dimak.

"Foot in the door. Camel's nose in the tent. Give them an inch."

"\*Them\*, sir?"

"Yes, I'm paranoid and xenophobic. That's how I got this job. Cultivate those virtues and you, too, might rise to my lofty station."

Dimak laughed. Graff didn't. His head disappeared from the display.

Bean had the discipline to remember that he was waiting to get a password. He crept back to the bather's room.

Still not back.

What breach of security were they talking about? It must have been recent, for them to be discussing it with such urgency. That meant it had to be Bean's conversation with Dimak about what was really going on with the Battle School. And yet his guess that the battle had already happened could not be it, or Dimak and Graff would not be talking about how he might be the only way they could beat the Buggers. If the Buggers were still unbeaten, the breach of security had to be something else.

It could still be that his earlier guess was partly right, and Battle School existed as much to strip the Earth of good commanders as to beat the Buggers. Graff and Dimak's fear might be that Bean would let other kids in on the secret. For some of them, at least, it might rekindle their loyalty to the nation or ethnic group or ideology of their parents.

And since Bean had definitely been planning to probe the loyalties of other students over the next months and years, he now would have to be doubly cautious not to let his pattern of conversation attract the attention of the teachers. All he needed to know was which of the best and brightest kids had the strongest home loyalties. Of course, for that Bean would need to figure out just how loyalty worked, so he would have some idea of how to weaken it or strengthen it, how to exploit it or turn it.

But just because this first guess of Bean's could explain their words didn't mean it was right. And just because the final Bugger war had not yet been fought didn't mean his initial guess was completely wrong. They might, for instance, have launched a fleet against the Bugger home world years ago, but were still preparing commanders to fight off an invasion fleet now approaching Earth. In that case, the security breach Graff and Dimak feared was that Bean would frighten others by letting them know how urgent and dire the situation of humanity was.

The irony was that of all the children Bean had ever known, none could keep a secret as well as he did. Not even Achilles, for in refusing his share of Poke's bread, he had tipped his hand.

Bean could keep a secret, but he also knew that sometimes you had to give some hint of what you knew in order to get more information. That was what had prompted Bean's conversation with Dimak. It was dangerous, but in the long run, if he could keep them from removing him from the school entirely in order to silence him -- not to mention keeping them from killing him -- he had learned more important information than he had given them. In the end, the only things they could learn from him were about himself. And what he learned from them was about everything else -- a much larger pool of knowledge.

Himself. That was their puzzle -- who he was. Silly to be concerned about whether he was human. What else *could* he be? He had never seen any child show any desire or emotion that he himself had not felt. The only difference was that Bean was stronger, and did not let his fleeting needs and passions control his actions. Did that make him alien? He was human -- only better.

The teacher came back into the room. He hung up his damp towel, but even before he dressed he sat back down and logged on. Bean watched his fingers move over the keys. It was so quick. A blur of keystrokes. He would have to replay the memory in his mind many times to make sure. But at least he had seen it; nothing obstructed his view.

Bean crawled back toward the vertical intake shaft. The evening's expedition had already taken as long as he dared -- he needed his sleep, and every minute away increased the risk of chance discovery.

In fact, he had been very lucky on this first foray through the ducts. To happen to hear Dimak and Graff conversing about him, to happen to watch a teacher who conveniently gave him a clear view of his log-in. For a moment it crossed Bean's mind that they might know he was in the air system, might even have staged all this for him, to see what he'd do. It might be just one more experiment.

No. It wasn't just luck that this teacher showed him the log-in. Bean had chosen to watch him because he was going to shower, because his desk was sitting on the table in such a way that Bean had a reasonable chance of seeing the log-in. It was an intelligent choice on Bean's part. He had gone with the best odds, and it paid off.

As for Dimak and Graff, it might have been chance that he overheard them talking, but it was his own choice to move closer at once in order to hear. And, come to think of it, he had chosen to go exploring in the ducts because of precisely the same event that had prompted Graff and Dimak to be so concerned. Nor was it a surprise that their conversation happened after lights-out for the children -- that's when things would have quieted down, and, with duties done, there would be time for a conversation without Graff calling Dimak in for a special meeting, which might arouse questions in the minds of the other teachers. Not luck, really -- Bean had made his own luck. He saw the log-in and overheard the conversation because he had made that quick decision to get into the intake system and acted on it at once.

He had always made his own luck.

Maybe that was something that went along with whatever genetic alteration Graff had found out about.

*\*She\**, they had said. *\*She\** had raised the question of whether Bean was genetically human. Some woman who was searching for information, and Graff had given in, was letting her have access to facts that had been hidden from her. That meant that he would receive more answers from this woman as she began to use that new data. More answers about Bean's origins.

Could it be Sister Carlotta who had doubted Bean's humanity?

Sister Carlotta, who wept when he left her and went into space? Sister Carlotta, who loved him as a mother loves her child? How could \*she\* doubt him?

If they wanted to find some inhuman human, some alien in a human suit, they ought to take a good long look at a nun who embraces a child as her own, and then goes around casting doubt about whether he's a real boy. The opposite of Pinocchio's fairy. She touches a real boy and turns him into something awful and fearful.

It could not have been Sister Carlotta they were talking about. Just another woman. His guess that it might be her was simply wrong, just like his guess that the final battle with the Buggers had already happened. That's why Bean never fully trusted his own guesses. He acted on them, but always kept himself open to the possibility that his interpretations might be wrong.

Besides, \*his\* problem was not figuring out whether he really was human or not. Whatever he was, he was himself and must act in such a way as to not only stay alive but also get as much control over his own future as possible. The only danger to him was that \*they\* were concerned about the issue of his possible genetic alteration. Bean's task was therefore to appear so normal that their fears on that score would be dispelled.

But how could he pretend to be normal? He hadn't been brought here because he was normal, he was brought here because he was extraordinary. For that matter, so were all the other kids. And the school put so much strain on them that some became downright odd. Like Bonzo Madrid, with his loud vendetta against Ender Wiggin. So in fact, Bean shouldn't appear normal, he should appear weird in the expected ways.

Impossible to fake that. He didn't know yet what signs the teachers were looking for in the behavior of the children here. He could find ten things to do, and do them, never guessing that there were ninety things he hadn't noticed.

No, what he had to do was not to \*act\* in predictable ways, but to \*become\* what they hoped their perfect commander would be.

When he got back to his barracks, climbed back up to his bunk, and checked the time on his desk, he found that he had done it all in less than an hour. He put away his desk and lay there replaying in his mind the image in his memory of the teacher's fingers, logging in. When he was reasonably certain of what the log-in and password were, he allowed himself to drift toward sleep.

Only then, as he was beginning to doze, did he realize what his perfect camouflage would be, quelling their fears and bringing him both safety and advancement.

He had to become Ender Wiggin.

CHAPTER 11 -- DADDY

"Sir. I asked for a private interview."

"Dimak is here because your breach of security affects his work."

"Breach of security! This is why you reassign me?"

"There is a child who used your log-in to the master teacher system. He found the log-in record files and rewrote them to give himself an identity."

"Sir, I have faithfully adhered to all regulations. I never sign on in front of the students."

"Everyone *says* they never sign on, but then it turns out they do."

"Excuse me, sir, but Uphanad does not. He's always on the others when he catches them doing it. Actually, he's kind of anal about it. Drives us all crazy."

"You can check my log-in records. I never sign on during teaching hours. In fact, I never sign on outside my quarters."

"Then how could this child possibly get in using your log-in?"

"My desk sits on my table, like so. If I may use your desk to demonstrate."

"Of course."

"I sit like so. I keep my back to the door so no one can even see in. I never sign on in any other position."

"Well it's not like there's a window he can peek through!"

"Yes there is, sir."

"Dimak?"

"There *is* a window, sir. Look. The vent."

"Are you seriously suggesting that he could --"

"He is the smallest child who ever --"

"It was that little *Bean* child who got my log-in?"

"Excellent, Dimak, you've managed to let his name slip out, haven't you."

"I'm sorry, sir."

"Ah. Another security breach. Will you send Dimak home with me?"

"I'm not sending anybody home."

"Sir, I must point out that Bean's intrusion into the master teacher system is an excellent opportunity."

"To have a student romping through the student data files?"

"To study Bean. We don't have him in the fantasy game, but now we have the game \*he\* chooses to play. We watch where he goes in the system, what he does with this power he has created for himself."

"But the damage he can do is --"

"He won't do any damage, sir. He won't do anything to give himself away. This kid is too street-smart. It's information he wants. He'll look, not touch."

"So you've got him analyzed already, is that it? You know what he's doing at all times?"

"I know that if there's a story we really want him to believe, he has to discover it himself. He has to \*steal\* it from us. So I think this little security breach is the perfect way to heal a much more important one."

"What I'm wondering is, if he's been crawling through the ducts, what \*else\* has he heard?"

"If we close off the duct system, he'll know he was caught, and then he won't trust what we set up for him to find."

"So I have to permit a child to crawl around through the ductwork and --"

"He can't do it much longer. He's growing, and the ducts are extremely shallow."

"That's not much comfort right now. And, unfortunately, we'll still have to kill Uphanad for knowing too much."

"Please assure me that you're joking."

"Yes, I'm joking. You'll have him as a student soon enough, Captain Uphanad. Watch him very carefully. Speak of him only with me. He's unpredictable and dangerous."

"Dangerous. Little Bean."

"He cleaned \*your\* clock, didn't he?"

"Yours too, sir, begging your pardon."

\*\*\*

Bean worked his way through every student at Battle School, reading the records of a half dozen or so per day. Their original scores, he found, were the least interesting thing about them. Everyone here had such high scores on all the tests given back on Earth that the differences were almost trivial. Bean's own scores were the highest, and the gap between him and the next highest, Ender Wiggin, was wide -- as wide as the gap between Ender and the next child after him. But it was all relative. The difference between Ender and Bean amounted to half of a percentage point; most of the children clustered between 97 and 98 percent.

Of course, Bean knew what they could not know, that for him getting the highest possible score on the tests had been easy. He could have done more, he could have done better, but he had reached the boundary of what the test could discover. The gap between him and Ender was much wider than they supposed.

And yet ... in reading the records, Bean came to see that the scores were merely a guide to a child's potential. The teachers talked most about things like cleverness, insight, intuition; the ability to develop rapport, to outguess an opponent; the courage to act boldly, the caution to make certain before committing, the wisdom to know which course was the appropriate one. And in considering this, Bean realized that he was not necessarily any better at \*these\* things than the other students.

Ender Wiggin really did know things that Bean did not know. Bean might have thought to do as Wiggin did, arranging extra practices to make up for being with a commander who wouldn't train him. Bean even might have tried to bring in a few other students to train with him, since many things could not be done alone. But Wiggin had taken all comers, no matter how difficult it became to practice with so many in the battleroom, and according to the teachers' notes, he spent more time now training others than in working on his own technique. Of course, that was partly because he was no longer in Bonzo Madrid's army, so he got to take part in the regular practices. But he still kept working with the other kids, especially the eager launchies who wanted a head start before they were promoted into a regular army. Why?

Is he doing what I'm doing, studying the other students to prepare for a later war on Earth? Is he building some kind of network that reaches out into all the armies? Is he somehow mistraining them, so he can take advantage of their mistakes later?

From what Bean heard about Wiggin from the kids in his launch group who attended those practices, he came to realize that it was something else entirely. Wiggin seemed really to care about the other kids doing their best. Did he need so badly for them to like him? Because it was working, if that's what he was trying for. They worshiped him.

But there had to be more to it than some hunger for love. Bean couldn't get a handle on it.

He found that the teachers' observations, while helpful, didn't really help him get inside Wiggin's head. For one thing, they kept the psychological observations from the mind game somewhere else

that Bean didn't have access to. For another, the teachers couldn't really get into Wiggin's mind because they simply didn't think at his level.

Bean did.

But Bean's project wasn't to analyze Wiggin out of scientific curiosity, or to compete with him, or even to understand him. It was to make himself into the kind of child that the teachers would trust, would rely on. Would regard as fully human. For that project, Wiggin was his teacher because Wiggin had already done what Bean needed to do.

And Wiggin had done it without being perfect. Without being, as far as Bean could tell, completely sane. Not that anyone was. But Wiggin's willingness to give up hours every day to training kids who could do nothing for him -- the more Bean thought about it, the less sense it made. Wiggin was not building a network of supporters. Unlike Bean, he didn't have a perfect memory, so Bean was quite sure Wiggin was not compiling a mental dossier on every other kid in Battle School. The kids he worked with were not the best, and were often the most fearful and dependent of the launchies and of the losers in the regular armies. They came to him because they thought being in the same room with the soldier who was leading in the standings might bring some luck to them. But why did Wiggin keep giving his time to \*them\*?

Why did Poke die for me?

That was the same question. Bean knew it. He found several books about ethics in the library and called them up on his desk to read. He soon discovered that the only theories that explained altruism were bogus. The stupidest was the old sociobiological explanation of uncles dying for nephews -- there were no blood ties in armies now, and people often died for strangers. Community theory was fine as far as it went -- it explained why communities all honored sacrificial heroes in their stories and rituals, but it still didn't explain the heroes themselves.

For that was what Bean saw in Wiggin. This was the hero at his root.

Wiggin really does not care as much about himself as he does about these other kids who aren't worth five minutes of his time.

And yet this may be the very trait that makes everyone focus on him. Maybe this is why in all those stories Sister Carlotta told him, Jesus always had a crowd around him.

Maybe this is why I'm so afraid of Wiggin. Because \*he's\* the alien, not me. He's the unintelligible one, the unpredictable one. He's the one who doesn't do things for sensible, predictable reasons. I'm going to survive, and once you know that, there's nothing more to know about me. Him, though, he could do anything.

The more he studied Wiggin, the more mysteries Bean uncovered. The more he determined to act like Wiggin until, at some point, he came to see the world as Wiggin saw it.

But even as he tracked Wiggin -- still from a distance -- what Bean could not let himself do was what the younger kids did, what Wiggin's disciples did. He could not call him Ender. Calling him by his last name kept him at a distance. A microscope's distance, anyway.

What did Wiggin study when he read on his own? Not the books of military history and strategy that Bean had blown through in a rush and was now rereading methodically, applying everything to both space combat and modern warfare on Earth. Wiggin did his share of reading, too, but when he went into the library he was just as likely to look at combat vids, and the ones he watched most often were of Bugger ships. Those and the clips of Mazer Rackham's strike force in the heroic battle that broke the back of the Second Invasion.

Bean watched them too, though not over and over again -- once he saw them, he remembered them perfectly and could replay them in his mind, with enough detail that he could notice things later that he hadn't realized at first. Was Wiggin seeing something new each time he went back to these vids? Or was he looking for something that he hadn't yet found?

Is he trying to understand the way the Buggers think? Why doesn't he realize that the library here simply doesn't have enough of the vids to make it useful? It's all propaganda stuff here. They withheld all the terrible scenes of dead guys, of fighting and killing hand to hand when ships were breached and boarded. They didn't have vids of defeats, where the Buggers blew the human ships out of the sky. All they had here was ships moving around in space, a few minutes of preparation for combat.

War in space? So exciting in the made-up stories, so boring in reality. Occasionally something would light up, mostly it was just dark.

And, of course, the obligatory moment of Mazer Rackham's victory.

What could Wiggin possibly hope to learn?

Bean learned more from the omissions than from what he actually saw. For instance, there was not one picture of Mazer Rackham anywhere in the library. That was odd. The Triumvirates' faces were everywhere, as were those of other commanders and political leaders. Why not Rackham? Had he died in the moment of victory? Or was he, perhaps, a fictitious figure, a deliberately-created legend, so that there could be a name to peg the victory to? But if that were the case, they'd have created a face for him -- it was too easy to do that. Was he deformed?

Was he really, really small?

If I grow up to be the commander of the human fleet that defeats the Buggers, will they hide my picture, too, because someone so tiny can never be seen as a hero?

Who cares? I don't want to be a hero.

That's Wiggin's gig.

\*\*\*

Nikolai, the boy across from him. Bright enough to make some guesses Bean hadn't made first. Confident enough not to get angry when he caught Bean intruding on him. Bean was so hopeful when he came at last to Nikolai's file.

The teacher evaluation was negative. "A place-holder." Cruel -- but was it true?

Bean realized: I have been putting too much trust in the teachers' evaluations. Do I have any real evidence that they're right? Or do I believe in their evaluations because I am rated so highly? Have I let them flatter me into complacency?

What if all their evaluations were hopelessly wrong?

I had no teacher files on the streets of Rotterdam. I actually knew the children. Poke -- I made my own judgment of her, and I was almost right, just a few surprises here and there. Sergeant -- no surprises at all. Achilles -- yes, I knew him.

So why have I stayed apart from the other students? Because they isolated me at first, and because I decided that the teachers had the power. But now I see that I was only partly right. The teachers have the power here and now, but someday I will not be in Battle School, and what does it matter then what the teachers think of me? I can learn all the military theory and history that I want, and it will do me no good if they never entrust me with command. And I will never be placed in charge of an army or a fleet unless they have reason to believe that other men would follow me.

Not men today, but boys, most of them, a few girls. Not men, but they *will* be men. How do they choose their leaders? How do I make them follow one who is so small, so resented?

What did Wiggin do?

Bean asked Nikolai which of the kids in their launch group practiced with Wiggin.

"Only a few. And they on the fringes, neh? Suckups and brags."

"But who are they?"

"You trying to get in with Wiggin?"

"Just want to find out about him."

"What you want to know?"

The questions bothered Bean. He didn't like talking so much about what he was doing. But he didn't sense any malice in Nikolai. He just wanted to know.

"History. He the best, neh? How he get that way?" Bean wondered if he sounded quite natural with the soldier slang. He hadn't used it that much. The music of it, he still wasn't quite there.

"You find out, you tell me." He rolled his eyes in self-derision.

"I'll tell you," said Bean.

"I got a chance to be best like Ender?" Nikolai laughed. "\*You\* got a chance, the way you learn."

"Wiggin's snot ain't honey," said Bean.

"What does that mean?"

"He human like anybody. I find out, I tell you, OK?"

Bean wondered why Nikolai already despaired about his own chances of being one of the best. Could it be that the teachers' negative evaluation was right after all? Or had they unconsciously let him see their disdain for him, and he believed them?

From the boys Nikolai had pointed out -- the brags and suckups, which wasn't an inaccurate evaluation as far as it went -- Bean learned what he wanted to know. The names of Wiggin's closest friends.

Shen. Alai. Petra -- her again! But Shen the longest.

Bean found him in the library during study time. The only reason to go there was for the vids -- all the books could be read from the desks. Shen wasn't watching vids, though. He had his desk with him, and he was playing the fantasy game.

Bean sat down beside him to watch. A lion-headed man in chain mail stood before a giant, who seemed to be offering him a choice of drinks -- the sound was shaped so that Bean couldn't hear it from beside the desk, though Shen seemed to be responding; he typed in a few words. His lion-man figure drank one of the substances and promptly died.

Shen muttered something and shoved the desk away.

"That the Giant's Drink?" said Bean. "I heard about that."

"You've never played it?" said Shen. "You can't win it. I \*thought\*."

"I heard. Didn't sound fun."

"\*Sound\* fun? You haven't tried it? It's not like it's hard to find."

Bean shrugged, trying to fake the mannerisms he'd seen other boys use. Shen looked amused. Because Bean did the cool-guy shrug wrong? Or because it looked cute to have somebody so small do it?

"Come on, you don't play the fantasy game?"

"What you said," Bean prompted him. "You *\*thought\** nobody ever won it."

"I saw a guy in a place I'd never seen. I asked him where it was, and he said, 'Other side of the Giant's Drink.'"

"He tell you how to get there?"

"I didn't ask."

"Why not?"

Shen grinned, looked away.

"It be Wiggin, neh?" asked Bean.

The grin faded. "I didn't say that."

"I know you're his friend, that's why I came here."

"What is this? You spying on him? You from Bonzo?"

This was not going well. Bean hadn't realized how protective Wiggin's friends might be. "I'm from me. Look, nothing bad, OK? I just -- look, I just want to know about -- you know him from the start, right? They say you been his friend from launchy days."

"So what?"

"Look, he got friends, right? Like you. Even though he always does better in class, always the best on everything, right? But they don't hate him."

"Plenty bichfo [bichao] hate him."

"I got to make some friends, man." Bean knew that he shouldn't try to sound pitiful. Instead, he should sound like a pitiful kid who was trying really hard *\*not\** to sound pitiful. So he ended his maudlin little plea with a laugh. As if he was trying to make it sound like a joke.

"You're pretty short," said Shen.

"Not on the planet I'm from," said Bean.

For the first time, Shen let a genuine smile come to his face. "The planet of the pygmies."

"Them boys too big for me."

"Look, I know what you're saying," said Shen. "I had this funny walk. Some of the kids were ragging me. Ender stopped them."

"How?"

"Ragged them more."

"I never heard he got a mouth."

"No, he didn't say nada. Did it on the desk. Sent a message from God."

Oh, yeah. Bean had heard about that. "He did that for you?"

"They were making fun of my butt. I had a big butt. Before workouts, you know? Back then. So he make fun of them for looking at my butt. But he signs it God."

"So they didn't know it was him."

"Oh, they knew. Right away. But he didn't say anything. Out loud."

"That's how you got to be friends? He the protector of the little guys?" Like Achilles ...

"\*Little\* guys?" said Shen. "He was the smallest in our launch group. Not like you, but way small. Younger, see."

"He was youngest, but he became your protector?"

"No. Not like that. No, he kept it from going on, that's all. He went to the group -- it was Bernard, he was getting together the biggest guys, the tough guys --"

"The bullies."

"Yeah, I guess. Only Ender, he goes to Bernard's number one, his best friend. Alai. He gets Alai to be his friend, too."

"So he stole away Bernard's support?"

"No, man. No, it's not like that. He made friends with Alai, and then got Alai to help him make friends with Bernard."

"Bernard ... he's the one, Ender broke his arm in the shuttle."

"That's right. And I think, really, Bernard never forgave him, but he saw how things were."

"How were things?"

"Ender's \*good\*, man. You just -- he doesn't hate anybody. If you're a good person, you're going to like him. You want him to like you. If he likes you, then you're OK, see? But if you're scum, he just makes you mad. Just knowing he exists, see? So Ender, he tries to wake up the good part of you."

"How do you wake up 'good parts'?"

"I don't know, man. You think I know? It just ... you know Ender long enough, he just makes you want him to be proud of you. That sounds so ... sounds like I'm a baby, neh?"

Bean shook his head. What it sounded like to him was devotion. Bean hadn't really understood this. Friends were friends, he thought. Like Sergeant and Poke used to be, before Achilles. But it was never love. When Achilles came, they loved him, but it was more like worship, like ... a god, he got them bread, they gave bread back to him. Like ... well, like what he called himself. Papa. Was it the same thing? Was Ender Achilles all over again?

"You're smart, kid," said Shen. "I was there, neh? Only I never once thought, How did Ender \*do\* it? How can I do the same, be like him? It's like that was Ender, he's great, but it's nothing \*I\* could do. Maybe I should have tried. I just wanted to be ... \*with\* him."

"Cause you're good, too," said Bean.

Shen rolled his eyes. "I guess that's what I was saying, wasn't it? Implying, anyway. Guess that makes me a brag, neh?"

"Big old brag," said Bean, grinning.

"He's just ... he makes you want to ... I'd die for him. That sounds like hero talk, neh? But it's true. I'd die for him. I'd kill for him."

"You'd fight for him."

Shen got it at once. "That's right. He's a born commander."

"Alai fight for him too?"

"A lot of us."

"But some not, yes?"

"Like I said, the bad ones, they hate him, he makes them crazy."

"So the whole world divides up -- good people love Wiggin, bad people hate Wiggin."

Shen's face went suspicious again. "I don't know why I told you all that merda. You too smart to believe any of it."

"I do believe it," said Bean. "Don't be mad at me." He'd learned that one a long time ago. Little kid says, Don't be mad at me, they feel a little silly.

"I'm not mad," said Shen. "I just thought you were making fun of me."

"I wanted to know how Wiggin makes friends."

"If I knew that, if I really understood that, I'd have more friends than I do, kid. But I got Ender as my friend, and all his friends are my friends too, and I'm their friend, so ... it's like a family."

A family. Papa. Achilles again.

That old dread returned. That night after Poke died. Seeing her body in the water. Then Achilles in the morning. How he acted. Was that Wiggin? Papa until he got his chance?

Achilles was evil, and Ender was good. Yet they both created a family. Both had people who loved them, who would die for them. Protector, papa, provider, mama. Only parent to a crowd of orphans. We're all street kids up here in Battle School, too. We might not be hungry, but we're all still wishing for a family.

Except me. Last thing I need. Some papa smiling at me, waiting with a knife.

Better to *\*be\** the papa than to have one.

How can I do that? Get somebody to love me the way Shen loves Wiggin?

No chance. I'm too little. Too cute. I got nothing they want. All I can do is protect myself, work the system. Ender's got plenty to teach those that have some hope of doing what he's done. But me, I have to learn my own way.

Even as he made the decision, though, he knew he wasn't done with Wiggin. Whatever Wiggin had, whatever Wiggin knew, Bean *\*would\** learn it.

And so passed the weeks, the months. Bean did all his regular classwork. He attended the regular battleroom classes with Dimak teaching them how to move and shoot, the basic skills. On his own he completed all the enrichment courses you could take at your own desk, certifying in everything. He studied military history, philosophy, strategy. He read ethics, religion, biology. He kept track of every student in the school, from the newly arrived launchies to the students about to graduate. When he saw them in the halls, he knew more about them than they knew about themselves. He knew their nation of origin. He knew how much they missed their families and how important their

native country or ethnic or religious group was to them. He knew how valuable they might be to a nationalist or idealist resistance movement.

And he kept reading everything Wiggin read, watching everything Wiggin watched. Hearing about Wiggin from the other kids. Watching Wiggin's standings on the boards. Meeting more of Wiggin's friends, hearing them talk about him. Bean listened to all the things Wiggin was quoted as saying and tried to fit them into some coherent philosophy, some worldview, some attitude, some plan.

And he found out something interesting. Despite Wiggin's altruism, despite his willingness to sacrifice, not one of his friends ever said that Wiggin came and talked over his problems. They all went to Wiggin, but who did Wiggin go to? He had no more \*real\* friends than Bean did. Wiggin kept his own counsel, just like Bean.

Soon Bean found himself being advanced out of classes whose work he had already mastered and being plunged into classwork with older and older groups, who looked at him with annoyance at first, but later simply with awe, as he raced past them and was promoted again before they were half done. Had Wiggin been pushed through his classwork at an accelerated rate? Yes, but not quite as fast. Was that because Bean was better? Or because the deadline was getting closer?

For the sense of urgency in teacher evaluations was getting greater. The ordinary students -- as if any child here were ordinary -- were getting briefer and briefer notations. They weren't being ignored, exactly. But the best were being identified and lifted out.

The \*seeming\* best. For Bean began to realize that the teachers' evaluations were often colored by which students they liked the best. The teachers pretended to be dispassionate, impartial, but in fact they got sucked in by the more charismatic children, just as the other students did. If a kid was likable, they gave him better comments on leadership, even if he was really just glib and athletic and needed to surround himself with a team. As often as not, they tagged the very students who would be the least effective commanders, while ignoring the ones who, to Bean, showed real promise. It was frustrating to watch them make such obvious mistakes. Here they had Wiggin right before their eyes -- Wiggin, who was the real thing -- and they still went on misreading everybody else. Getting all excited about some of these energetic, self-confident, ambitious kids even though they weren't actually producing excellent work.

Wasn't this whole school set up in order to find and train the best possible commanders? The Earthside testing did pretty well -- there were no real dolts among the students. But the system had overlooked one crucial factor: How were the teachers chosen?

They were career military, all of them. Proven officers with real ability. But in the military you don't get trusted positions just because of your ability. You also have to attract the notice of superior officers. You have to be liked. You have to fit in with the system. You have to look like what the officers above you think that officers should look like. You have to think in ways that they are comfortable with.

The result was that you ended up with a command structure that was top-heavy with guys who looked good in uniform and talked right and did well enough not to embarrass themselves, while the really good ones quietly did all the serious work and bailed out their superiors and got blamed for errors they had advised against until they eventually got out.

That was the military. These teachers were all the kind of people who thrived in that environment. And they were selecting their favorite students based on precisely that same screwed-up sense of priorities.

No wonder a kid like Dink Meeker saw through it and refused to play. He was one of the few kids who was both likable \*and\* talented. His likability made them try to make him commander of his own army; his talent let him understand why they were doing it and turn them down because he couldn't believe in such a stupid system. And other kids, like Petra Arkanian, who had obnoxious personalities but could handle strategy and tactics in their sleep, who had the confidence to lead others into war, to trust their own decisions and act on them -- they didn't care about trying to be one of the guys, and so they got overlooked, every flaw became magnified, every strength belittled.

So Bean began constructing his own anti-army. Kids who weren't getting picked out by the teachers, but were the real talents, the ones with heart and mind, not just face and chat. He began to imagine who among them should be officers, leading their own toons under the command of ...

Of Ender Wiggin, of course. Bean could not imagine anyone else in that position. Wiggin would know how to use them.

And Bean knew just where he should be. Close to Wiggin. A toon leader, but the most trusted of them. Wiggin's righthand man. So when Wiggin was about to make a mistake, Bean could point out to him the error he was making. And so that Bean could be close enough to maybe understand why Wiggin was human and he himself was not.

\*\*\*

Sister Carlotta used her new security clearance like a scalpel, most of the time, slicing her way into the information establishment, picking up answers here and new questions there, talking to people who never guessed what her project was, why she knew so much about their top-secret work, and quietly putting it all together in her own mind, in memos to Colonel Graff.

But sometimes she wielded her top security clearance like a meat-ax, using it to get past prison wardens and security officers, who saw her unbelievable level of need-to-know and then, when they checked to make sure her documents weren't a stupid forgery, were screamed at by officers so high-ranked that it made them want to treat Sister Carlotta like God.

That's how, at last, she came face to face with Bean's father. Or at least the closest thing to a father that he had.

"I want to talk to you about your installation in Rotterdam."

He looked at her sourly. "I already reported on everything. That's why I'm not dead, though I wonder if I made the right choice."

"They told me you were quite the whiner," said Sister Carlotta, utterly devoid of compassion. "I didn't expect it to surface so quickly."

"Go to hell." He turned his back on her.

As if that meant anything. "Dr. Volescu, the records show that you had twenty-three babies in your organ farm in Rotterdam."

He said nothing.

"But of course that's a lie."

Silence.

"And, oddly enough, I know that the lie is not your idea. Because I know that your installation was not an organ farm indeed, and that the reason you aren't dead is because you agreed to plead guilty to running an organ farm in exchange for never discussing what you were *\*really\** doing there."

He slowly turned around again. Enough that he could look up and see her with a sidelong glance. "Let me see that clearance you tried to show me before."

She showed it to him again. He studied it.

"What do you know?" he asked.

"I know your real crime was continuing a research project after it was closed down. Because you had these fertilized eggs that had been meticulously altered. You had turned Anton's key. You wanted them to be born. You wanted to see who they would become."

"If you know all that, why have you come to me? Everything I knew is in the documents you must have read."

"Not at all," said Sister Carlotta. "I don't care about confessions. I don't care about logistics. I want to know about the babies."

"They're all dead," he said. "We killed them when we knew we were about to be discovered." He looked at her with bitter defiance. "Yes, infanticide. Twenty-three murders. But since the government couldn't admit that such children had ever existed, I was never charged with the crimes. God judges me, though. God will press the charges. Is that why you're here? Is that who gave you your clearance?"

You make jokes about this? "All I want to know is what you learned about them."

"I learned nothing, there was no time, they were still babies."

"You had them for almost a year. They developed. All the work done since Anton found his key was theoretical. \*You\* watched the babies grow."

A slow smile crept across his face. "This is like those Nazi medical crimes all over again. You deplore what I did, but you still want to know the results of my research."

"You monitored their growth. Their health. Their intellectual development."

"We were about to start the tracking of intellectual development. The project wasn't funded, of course, so it's not as if we could provide much more than a clean warm room and basic bodily needs."

"Their bodies, then. Their motor skills."

"Small," he said. "They are born small, they grow slowly. Undersized and underweight, all of them."

"But very bright?"

"Crawling very young. Making pre-speech sounds far earlier than normal. That's all we knew. I didn't see them often myself. I couldn't afford the risk of detection."

"So what was your prognosis?"

"Prognosis?"

"How did you see their future?"

"Dead. That's everyone's future. What are you talking about?"

"If they hadn't been slaughtered, Dr. Volescu, what would have happened?"

"They would have kept on growing, of course."

"And later?"

"There \*is\* no later. They keep on growing."

She thought for a moment, trying to process the information.

"That's right, Sister. You're getting it. They grow slowly, but they never stop. That's what Anton's key does. Unlocks the mind because the brain never stops growing. But neither does anything else. The cranium keeps expanding -- it's never fully closed. The arms and legs, longer and longer."

"So when they reach adult height ..."

"There is no adult height. There's just height at time of death. You can't keep growing like that forever. There's a reason why evolution builds a stop-clock into the growth control of long-lived bodies. You can't keep growing without some organ giving out, eventually. Usually the heart."

The implications filled Sister Carlotta with dread. "And the rate of this growth? In the children, I mean? How long until they are at normal height for their age?"

"My guess was that they'd catch up twice," said Volescu. "Once just before puberty, and then the normal kids would leap ahead for a while, but slow and steady wins the race, n'est-ce pas? By twenty, they would be giants. And then they'd die, almost certainly before age twenty-five. Do you have any idea how huge they would be? So my killing them, you see -- it was a mercy."

"I doubt any of them would have chosen to miss out on even the mere twenty years you took from them."

"They never knew what happened to them. I'm not a monster. We drugged them all. They died in their sleep and then the bodies were incinerated."

"What about puberty? Would they ever mature sexually?"

"That's the part we'll never know, isn't it?"

Sister Carlotta got up to go.

"He lived, didn't he?" asked Volescu.

"Who?"

"The one we lost. The one whose body wasn't with the others. I counted only twenty-two going into the fire."

"When you worship Moloch, Dr. Volescu, you get no answers but the ones your chosen god provides."

"Tell me what he's like." His eyes were so hungry.

"You know it was a boy?"

"They were all boys," said Volescu.

"What, did you discard the girls?"

"How do you think I got the genes I worked with? I implanted my own altered DNA into denucleated eggs."

"God help us, they were all your own twins?"

"I'm not the monster you think I am," said Volescu. "I brought the frozen embryos to life because I had to know what they would become. Killing them was my greatest sorrow."

"And yet you did it -- to save yourself."

"I was afraid. And the thought came to me: They're only copies. It isn't murder to discard the copies."

"Their souls and lives were their own."

"Do you think the government would have let them live? Do you really think they would have survived? Any of them?"

"You don't deserve to have a son," said Sister Carlotta.

"But I have one, don't I?" He laughed. "While you, Miss Carlotta, perpetual bride of the invisible God, how many do *you* have?"

"They may have been copies, Volescu, but even dead they're worth more than the original."

He continued laughing as she walked down the corridor away from him, but it sounded forced. She knew his laughter was a mask for grief. But it wasn't the grief of compassion, or even of remorse. It was the grief of a damned soul.

Bean. God be thanked, she thought, that you do not know your father, and never will. You're nothing like him. You're far more human.

In the back of her mind, though, she had one nagging doubt. Was she sure Bean had more compassion, more humanity? Or was Bean as cold of heart as this man? As incapable of empathy? Was he all mind?

Then she thought of him growing and growing, from this too-tiny child to a giant whose body could no longer sustain life. This was the legacy your father gave you. This was Anton's key. She thought of David's cry, when he learned of the death of his son. Absalom! Oh Absalom! Would God I could die for thee, Absalom, my son!

But he was not dead yet, was he? Volescu might have been lying, might simply be wrong. There might be some way to prevent it. And even if there was not, there were still many years ahead of Bean. And how he lived those years still mattered.

God raises up the children that he needs, and makes men and women of them, and then takes them from this world at his good pleasure. To him all of life is but a moment. All that matters is what that moment was used for. And Bean *would* use it well. She was sure of that.

Or at least she hoped it with such fervor that it felt like certainty.

## CHAPTER 12 -- ROSTER

"If Wiggin's the one, then let's get him to Eros."

"He's not ready for Command School yet. It's premature."

"Then we have to go with one of the alternates."

"That's your decision."

"*Our* decision! What do we have to go on but what you tell us?"

"I've told you about those older boys, too. You have the same data I have."

"Do we have all of it?"

"Do you *want* all of it?"

"Do we have the data on all the children with scores and evaluations at such a high level?"

"No."

"Why not?"

"Some of them are disqualified for various reasons."

"Disqualified by whom?"

"By me."

"On what grounds?"

"One of them is borderline insane, for instance. We're trying to find some structure in which his abilities will be useful. But he could not possibly bear the weight of complete command."

"That's one."

"Another is undergoing surgery to correct a physical defect."

"Is it a defect that limits his ability to command?"

"It limits his ability to be trained to command."

"But it's being fixed."

"He's about to have his third operation. If it works, he might amount to something. But, as you say, there won't be time."

"How many more children have you concealed from us?"

"I have \*concealed\* none of them. If you mean how many have I simply not referred to you as potential commanders, the answer is \*all\* of them. Except the ones whose names you already have."

"Let me be blunt. We hear rumors about a very young one."

"They're all young."

"We hear rumors about a child who makes the Wiggin boy look slow."

"They all have their different strengths."

"There are those who want you relieved of your command."

"If I'm not to be allowed to select and train these kids properly, I'd prefer to be relieved, sir. Consider this a request."

"So it was a stupid threat. Advance them all as quickly as you can. just keep in mind that they need a certain amount of time in Command School, too. It does us no good to give them all your training if they don't have time to get ours."

\*\*\*

Dimak met Graff in the battleroom control center. Graff conducted all his secure meetings here, until they could be sure Bean had grown enough that he couldn't get through the ducts. The battlerooms had their own separate air systems.

Graff had an essay on his desk display. "Have you read this? 'Problems in Campaigning Between Solar Systems Separated by Light-years.'"

"It's been circulating pretty widely among the faculty."

"But it isn't signed," said Graff. "You don't happen to know who wrote it, do you?"

"No, sir. Did you write it?"

"I'm no scholar, Dimak, you know that. In fact, this was written by a student."

"At Command School?"

"A student here."

At that moment Dimak understood why he had been called in. "Bean."

"Six years old. The paper reads like a work of scholarship!"

"I should have guessed. He picks up the voice of the strategists he's been reading. Or their translators. Though I don't know what will happen now that he's he's [sic -- should be a single "he's"] been reading Frederick and Bulow in the original -- French and German. He inhales languages and breathes them back out."

"What did you think of this paper?"

"You already know it's killing me to keep key information from this boy. If he can write \*this\* with what he knows, what would happen if we told him everything? Colonel Graff, why can't we promote him right out of Battle School, set him loose as a theorist, and then watch what he spits out?"

"Our job isn't to find theorists here. It's too late for theory anyway."

"I just think ... look, a kid so small, who'd follow him? He's being wasted here. But when he writes, nobody knows how little he is. Nobody knows how young he is."

"I see your point, but we're not going to breach security, period."

"Isn't he already a grave security risk?"

"The mouse who scuttles through the ducts?"

"No. I think he's grown too big for that. He doesn't do those side-arm pushups anymore. I thought the security risk came from the fact that he guessed that an offensive fleet had been launched generations ago, so why were we still training children for command?"

"From analysis of his papers, from his activities when he signs on as a teacher, we think he's got a theory and it's wonderfully wrong. But he believes his false theory \*only\* because he doesn't know about the ansible. Do you understand? Because that's the main thing we'd have to tell him about, isn't it?"

"Of course."

"So you see, that's the one thing we can't tell him."

"What is his theory?"

"That we're assembling children here in preparation for a war between nations, or between nations and the I.F. A landside war, back on Earth."

"Why would we take the kids into space to prepare for a war on Earth?"

"Think just a minute and you'll get it."

"Because ... because when we've licked the Formics, there probably *\*will\** be a little landside conflict. And all the talented commanders -- the I.F. would already have them."

"You see? We can't have this kid publishing, not even within the I.F. Not everybody has given up loyalty to groups on Earth."

"So why did you call me in?"

"Because I *\*do\** want to use him. We aren't running the war here, but we *\*are\** running a school. Did you read his paper about the ineffectiveness of using officers as teachers?"

"Yes. I felt slapped."

"This time he's mostly wrong, because he has no way of knowing how nontraditional our recruitment of faculty has always been. But he may also be a little bit right. Because our system of testing for officer potential was designed to produce candidates with the traits identified in the most highly regarded officers in the Second Invasion."

"Hi-ho."

"You see? Some of the highly regarded were officers who performed well in battle, but the war was too short to weed out the deadwood. The officers they tested included just the kind of people he criticized in his paper. So ..."

"So he had the wrong reason, but the right result."

"Absolutely. It gives us little pricks like Bonzo Madrid. You've known officers like him, haven't you? So why should we be surprised that our tests give him command of an army even though he has no idea what to do with it. All the vanity and all the stupidity of Custer or Hooker or -- hell, pick your own vain incompetent, it's the most common kind of general officer."

"May I quote you?"

"I'll deny it. The thing is, Bean has been studying the dossiers of all the other students. We think he's evaluating them for loyalty to their native identity group, and also for their excellence as commanders."

"By \*his\* standards of excellence."

"We need to get Ender the command of an army. We're under a lot of pressure to get our leading candidates into Command School. But if we bust one of the current commanders in order to make a place for Ender, it'll cause too much resentment."

"So you have to give him a new army."

"Dragon."

"There are still kids here who remember the last Dragon Army."

"Right. I like that. The jinx."

"I see. You want to give Ender a running start."

"It gets worse."

"I thought it would."

"We also aren't going to give him any soldiers that aren't already on their commanders' transfer list."

"The dregs? What are you \*doing\* to this kid?"

"If we choose them, by our ordinary standards, then yes, the dregs. But we aren't going to choose Ender's army."

"Bean?"

"Our tests are worthless on this, right? Some of those dregs are the very best students, according to Bean, right? And he's been studying the launchies. So give him an assignment. Tell him to solve a hypothetical problem. Construct an army only out of launchies. Maybe the soldiers on the transfer lists, too."

"I don't think there's any way to do that without telling him that we're on to his fake teacher login."

"So tell him."

"Then he won't believe anything he found while searching."

"He didn't find anything," said Graff. "We didn't have to plant anything fake for him to find, because he had his false theory. See? So whether he thinks we planted stuff or not, he'll stay deceived and we're still secure."

"You seem to be counting on your understanding of his psychology."

"Sister Carlotta assures me that he differs from ordinary human DNA in only one small area."

"So now he's human again?"

"I've got to make decisions based on \*something\*, Dimak!"

"So the jury's still out on the human thing?"

"Get me a roster of the hypothetical army Bean would pick, so we can give it to Ender."

"He'll put himself in it, you know."

"He damn well better, or he's not as smart as we've been thinking."

"What about Ender? Is he ready?"

"Anderson thinks he is." Graff sighed. "To Bean, it's still just a game, because none of the weight has fallen on him yet. But Ender ... I think he knows, deep down, where this is going to lead. I think he feels it already."

"Sir, just because you're feeling the weight doesn't mean he is."

Graff laughed. "You cut straight to the heart of things, don't you!"

"Bean's hungry for it, sir. If Ender isn't, then why not put the burden where it's wanted?"

"If Bean's hungry for it, it proves he's still too young. Besides, the hungry ones always have something to prove. Look at Napoleon. Look at Hitler. Bold at first, yes, but then \*still\* bold later on, when they need to cautious, to pull back. Patton. Caesar. Alexander. Always overreaching, never quite putting the finish on it. No, it's Ender, not Bean. Ender doesn't want to do it, so he won't have anything to prove."

"Are you sure you're not just picking the kind of commander you'd want to serve under?"

"That's precisely what I'm doing," said Graff. "Can you think of a better standard?"

"The thing is, you can't pass the buck on this one, can you? Can't say how it was the tests, you just followed the tests. The scores. Whatever."

"Can't run this like a machine."

"That's why you don't want Bean, isn't it? Because he was \*made\*, like a machine."

"I don't analyze myself. I analyze \*them\*."

"So if we win, who really won the war? The commander you picked? Or you, for picking him?"

"The Triumvirate, for trusting me. After their fashion. But if we lose ..."

"Well \*then\* it's definitely you."

"We're \*all\* dead then. What will they do? Kill me first? Or leave me till last so I can contemplate the consequences of my error?"

"Ender, though. I mean if he's the one. \*He\* won't say it's you. He'll take it all on himself. Not the credit for victory -- just the blame for failure."

"Win or lose, the kid I pick is going to have a brutal time of it."

\*\*\*

Bean got his summons during lunch. He reported at once to Dimak's quarters.

He found his teacher sitting at his desk, reading something. The light was set so that Bean couldn't read it through the dazzle.

"Have a seat," said Dimak.

Bean jumped up and sat on Dimak's bed, his legs dangling.

"Let me read you something," said Dimak. "There are no fortifications, no magazines, no strong points ... In the enemy solar system, there can be no living off the land, since access to habitable planets will be possible only after complete victory ... Supply lines are not a problem, since there are none to protect, but the cost of that is that all supplies and ordnance must be carried with the invading fleet ... In effect, all interstellar invasion fleets are suicide attacks, because time dilation means that even if a fleet returns intact, almost no one they knew will still be alive. They can never return, and so must be sure that their force is sufficient to be decisive and therefore is worth the sacrifice.... Mixed-sex forces allow the possibility of the army becoming a permanent colony and/or occupying force on the captured enemy planet."

Bean listened complacently. He had left it in his desk for them to find it, and they had done so.

"You wrote this, Bean, but you never submitted it to anybody."

"There was never an assignment that it fit."

"You don't seem surprised that we found it."

"I assume that you routinely scan our desks."

"Just as you routinely scan ours?"

Bean felt his stomach twist with fear. They knew.

"Cute, naming your false log-in 'Graff' with a caret in front of it."

Bean said nothing.

"You've been scanning all the other students' records. Why?"

"I wanted to know them. I've only made friends with a few."

"Close friends with none."

"I'm little and I'm smarter than they are. Nobody's standing in line."

"So you use their records to tell you more about them. Why do you feel the need to understand them?"

"Someday I'll be in command of one of these armies."

"Plenty of time to get to know your soldiers then."

"No sir," said Bean. "No time at all."

"Why do you say that?"

"Because of the way I've been promoted. And Wiggin. We're the two best students in this school, and we're being raced through. I'm not going to have much time when I get an army."

"Bean, be realistic. It's going to be a long time before anybody's going to be willing to follow you into battle."

Bean said nothing. He knew that this was false, even if Dimak didn't. "Let's see just how good your analysis is. Let me give you an assignment."

"For which class?"

"No class, Bean. I want you to create a hypothetical army. Working only with launchies, construct an entire roster, the full complement of forty-one soldiers."

"\*No\* veterans?"

Bean meant the question neutrally, just checking to make sure he understood the rules. But Dimak seemed to take it as criticism of the unfairness of it. "No, tell you what, you can include veterans who are posted for transfer at their commanders' request. That'll give you some experienced ones."

The ones the commander couldn't work with. Some really were losers, but some were the opposite. "Fine," said Bean.

"How long do you think it will take you?"

Bean already had a dozen picked out. "I can tell the list to you right now."

"I want you to think about it seriously."

"I already have. But you need to answer a couple of questions first. You said forty-one soldiers, but that would include the commander."

"All right, forty, and leave the commander blank."

"I have another question. Am I to command the army?"

"You can write it up that way, if you want."

But Dimak's very unconcern told Bean that the army was not for him. "This army's for Wiggin, isn't it?"

Dimak glowered. "It's hypothetical."

"Definitely Wiggin," said Bean. "You can't boot somebody else out of command to make room for him, so you're giving Wiggin a whole new army. I bet it's Dragon."

Dimak looked stricken, though he tried to cover it.

"Don't worry," said Bean. "I'll give him the best army you can form, following those rules."

"I \*said\* this was hypothetical!"

"You think I wouldn't figure it out when I found myself in Wiggin's army and everybody else in it was also on my roster?"

"Nobody's said we're actually going to follow your roster!"

"You will. Because I'll be right and you'll know it," said Bean. "And I can promise you, it'll be a hell of an army. With Wiggin to train us, we'll kick ass."

"Just do the hypothetical assignment, and talk to no one about it. Ever."

That was dismissal, but Bean didn't want to be dismissed yet. They came to \*him\*. They were having \*him\* do their work. He wanted to have his say while they were still listening. "The reason this army can be so good is that your system's been promoting a lot of the wrong kids. About half the best kids in this school are launchies or on the transfer lists, because they're the ones who haven't already been beaten into submission by the kiss-ass idiots you put in command of armies or toons. These misfits and little kids are the ones who can win. Wiggin will figure that out. He'll know how to use us."

"Bean, you're not as smart about everything as you think you are!"

"Yes I am, sir," said Bean. "Or you wouldn't have given this assignment to me. May I be dismissed? Or do you want me to tell you the roster now?"

"Dismissed," said Dimak.

I probably shouldn't have provoked him, thought Bean. Now it's possible that he'll fiddle with my roster just to prove he can. But that's not the kind of man he is. If I'm not right about that, then I'm not right about anybody else, either.

Besides, it felt good to speak the truth to someone in power.

\*\*\*

After working with the list a little while, Bean was just as glad that Dimak hadn't taken him up on his foolish offer to make up the roster on the spot. Because it wasn't just a matter of naming the forty best soldiers among the launchies and the transfer lists.

Wiggin was way early for command, and that would make it harder for older kids to take it -- getting put into a kid's army. So he struck off the list all who were older than Wiggin.

That left him with nearly sixty kids who were good enough to be in the army. Bean was ranking them in order of value when he realized that he was about to make another mistake. Quite a few of these kids were in the group of launchies and soldiers that practiced with Wiggin during free time. Wiggin would know these kids best, and naturally he'd look to them to be his toon leaders. The core of his army.

The trouble was, while a couple of them would do fine as toon leaders, relying on that group would mean passing over several who weren't part of that group. Including Bean.

So he doesn't choose me to lead a toon. He isn't going to choose me anyway, right? I'm too little. He won't look at me and see a leader.

Is this just about me, then? Am I corrupting this process just to get myself a chance to show what I can do?

And if I am, what's wrong with that? I know what I can do, and no one else really gets it. The teachers think I'm a scholar, they know I'm smart, they trust my judgment, but they aren't making this army for me, they're making it for him. I still have to prove to them what I can do. And if I really am one of the best, it would be to the benefit of the program to have it revealed as quickly as possible.

And then he thought: Is this how idiots rationalize their stupidity to themselves?

"Ho, Bean," said Nikolai.

"Ho," said Bean. He passed a hand across his desk, blanking the display. "Tell me."

"Nothing to tell. \*You\* looked grim."

"Just doing an assignment."

Nikolai laughed. "You never look that serious doing classwork. You just read for a while and then you type for a while. Like it was nothing. This is something."

"An extra assignment."

"A hard one, neh?"

"Not very."

"Sorry to break in. Just thought maybe something was wrong. Maybe a letter from home."

They both laughed at that. Letters weren't that common here. Every few months at the most. And the letters were pretty empty when they came. Some never got mail at all. Bean was one of them, and Nikolai knew why. It wasn't a secret, he was just the only one who noticed and the only one who asked about it. "No family at \*all\*?" he had said. "Some kids' families, maybe I'm the lucky one," Bean answered him, and Nikolai agreed. "But not mine. I wish you had parents like mine." And then he went on about how he was an only child, but his parents really worked hard to get him. "They did it with surgery, fertilized five or six eggs, then twinned the healthiest ones a few more times, and finally they picked me. I grew up like I was going to be king or the Dalai Lama or something. And then one day the I.F. says, we need him. Hardest thing my parents ever did, saying yes. But I said, What if I'm the next Mazer Rackham? And they let me go."

That was months ago, but it was still between them, that conversation. Kids didn't talk much about home. Nikolai didn't discuss his family with anybody else, either. Just with Bean. And in return, Bean told him a little about life on the street. Not a lot of details, because it would sound like he was asking for pity or trying to look cool. But he mentioned how they were organized into a family. Talked about how it was Poke's crew, and then it became Achilles' family, and how they got into a charity kitchen. Then Bean waited to see how much of this story started circulating.

None of it did. Nikolai never said a word about it to anyone else. That was when Bean was sure that Nikolai was worth having as a friend. He could keep things to himself without even having to be asked to do it.

And now here Bean was, making up the roster for this great army, and here sat Nikolai, asking him what he was doing. Dimak had said to tell no one, but Nikolai could keep a secret. What harm could it do?

Then Bean recovered his senses. Knowing about this wouldn't help Nikolai in any way. Either he'd be in Dragon Army or he wouldn't. If he wasn't, he'd know Bean hadn't put him there. If he was, it would be worse, because he'd wonder if Bean had included him in the roster out of friendship instead of excellence.

Besides, Nikolai shouldn't be in Dragon Army. Bean liked him and trusted him, but Nikolai was not among the best of the launchies. He was smart, he was quick, he was good -- but he was nothing special.

Except to me, thought Bean.

"It was a letter from *\*your\** parents," said Bean. "They've stopped writing to you, they like me better."

"Yeah, and the Vatican is moving to Mecca."

"And I'm going to be made Polemarch."

"No jeito," said Nikolai. "You too tall, bicho." Nikolai picked up his desk. "I can't help you with your classwork tonight, Bean, so please don't beg me." He lay back on his bed, started into the fantasy game.

Bean lay back, too. He woke up his display and began wrestling with the names again. If he eliminated every one of the kids who'd been practicing with Wiggin, how many of the good ones would it leave? Fifteen veterans from the transfer lists. Twenty-two launchies, including Bean.

Why *\*hadn't\** these launchies taken part in Wiggin's freetime practices? The veterans, they were already in trouble with their commanders, they weren't about to antagonize them any more, so it made sense for them not to have taken part. But these launchies, weren't they ambitious? Or were they bookish, trying to do it all through classwork instead of catching on that the battleroom was everything? Bean couldn't fault them for that -- it had taken him a while to catch on, too. Were they so confident of their own abilities they didn't think they needed the extra prep? Or so arrogant they didn't want anybody to think they owed their success to Ender Wiggin? Or so shy they ...

No. He couldn't possibly guess their motives. They were all too complex anyway. They were smart, with good evaluations -- good by Bean's standards, not necessarily by the teachers'. That was all he needed to know. If he gave Wiggin an army without a single kid he'd worked with in practices, then all the army would start out equal in his eyes. Which meant Bean would have the

same chance as any other kid to earn Wiggin's eye and maybe get command of a toon. If they couldn't compete with Bean for that position, then too damn bad for them.

But that left him with thirty-seven names on the roster. Three more slots to fill.

He went back and forth on a couple. Finally decided to include Crazy Tom, a veteran who held the unenviable record of being the most-transferred soldier in the history of the game who wasn't actually iced and sent home. So far. The thing was, Crazy Tom really was good. Sharp mind. But he couldn't stand it when somebody above him was stupid and unfair. And when he got pissed, he really went off. Ranting, throwing things, tearing bedding off every bed in his barracks once, another time writing a message about what an idiot his commander was and mailing it to every other student in the school. A few actually got it before the teachers intercepted it, and they said it was the hottest thing they ever read. Crazy Tom. Could be disruptive. But maybe he was just waiting for the right commander. He was in.

And a girl, Wu, which of course had become Woo and even Woo-\*hoo\*. Brilliant at her studies, absolutely a killer in the arcade games, but she refused to be a toon leader and as soon as her commanders asked her, she put in for a transfer and refused to fight until they gave it to her. Weird. Bean had no idea why she did that -- the teachers were baffled, too. Nothing in her tests to show why. What the hell, thought Bean. She's in.

Last slot.

He typed in Nikolai's name.

Am I doing him a favor? He's not bad, he's just a little slower than these kids, just a little gentler. It'll be hard for him. And if he's left out of it, he won't mind. He'll just do his best with whatever army he gets sent to eventually.

And yet ... Dragon Army is going to be a legend. Not just here in Battle School, either. These kids are going to go on to be leaders in the I.F. Or somewhere, anyway. And they'll tell stories about when they were in Dragon Army with the great Ender Wiggin. And if I include Nikolai, then even if he isn't the best of the soldiers, even if he's in fact the slowest, he'll still be \*in\*, he'll still be able to tell those stories someday. And he's not bad. He won't embarrass himself. He won't bring down the army. He'll do OK. So why not?

And I want him with me. He's the only one I've ever talked to. About personal things. The only one who knows the name of Poke. I want him. And there's a slot on the roster.

Bean went down the list one more time. Then he alphabetized it and mailed it to Dimak.

\*\*\*

The next morning, Bean, Nikolai, and three other kids in their launch group had their assignment to Dragon Army. Months before they should have been promoted to soldiers. The unchosen kids

were envious, hurt, furious by turn. Especially when they realized Bean was one of the chosen. "Do they \*make\* uniform flash suits that size?"

It was a good question. And the answer was no, they didn't. The colors of Dragon Army were grey, orange, grey. Because soldiers were usually a lot older than Bean when they came in, they had to cut a flash suit down for Bean, and they didn't do it all that well. Flash suits weren't manufactured in space, and nobody had the tools to do a first-rate job of alteration.

When they finally got it to fit him, Bean wore his flash suit to the Dragon Army barracks. Because it had taken him so long to be fitted, he was the last to arrive. Wiggin arrived at the door just as Bean was entering. "Go ahead," said Wiggin.

It was the first time Wiggin had ever spoken to him -- for all Bean knew, the first time Wiggin had even noticed him. So thoroughly had Bean concealed his fascination with Wiggin that he had made himself effectively invisible.

Wiggin followed him into the room. Bean started down the corridor between the bunks, heading for the back of the room where the younger soldiers always had to sleep. He glanced at the other kids, who were all looking at him as he passed with a mixture of horror and amusement. They were in an army so lame that \*this\* little tiny kid was part of it?

Behind him, Wiggin was starting his first speech. Voice confident, loud enough but not shouting, not nervous. "I'm Ender Wiggin. I'm your commander. Bunking will be arranged by seniority."

Some of the launchies groaned.

"Veterans to the back of the room, newest soldiers to the front."

The groaning stopped. That was the opposite of the way things were usually arranged. Wiggin was already shaking things up. Whenever he came into the barracks, the kids closest to him would be the new ones. Instead of getting lost in the shuffle, they'd always have his attention.

Bean turned around and headed back to the front of the room. He was still the youngest kid in Battle School, but five of the soldiers were from more recently arrived launch groups, so they got the positions nearest the door. Bean got an upper bunk directly across from Nikolai, who had the same seniority, being from the same launch group.

Bean clambered up onto his bed, hampered by his flash suit, and put his palm beside the locker. Nothing happened.

"Those of you who are in an army for the first time," said Wiggin, "just pull the locker open by hand. No locks. Nothing private here."

Laboriously Bean pulled off his flash suit to stow it in his locker.

Wiggin walked along between the bunks, making sure that seniority was respected. Then he jogged to the front of the room. "All right, everybody. Put on your flash suits and come to practice."

Bean looked at him in complete exasperation. Wiggin had been looking right at him when he started taking off his flash suit. Why didn't he suggest that Bean not take the damn thing off?

"We're on the morning schedule," Wiggin continued. "Straight to practice after breakfast. Officially you have a free hour between breakfast and practice. We'll see what happens after I find out how good you are."

Truth was, Bean felt like an idiot. Of course Wiggin would head for practice immediately. He shouldn't have needed a warning not to take the suit off. He should have \*known\*.

He tossed his suit pieces onto the floor and slid down the frame of the bunk. A lot of the other kids were talking, flipping clothes at each other, playing with their weapons. Bean tried to put on the cut-down suit, but couldn't figure out some of the jury-rigged fastenings. He had to take off several pieces and examine them to see how they fit, and finally gave up, took it all off, and started assembling it on the floor.

Wiggin, unconcerned, glanced at his watch. Apparently three minutes was his deadline. "All right, everybody out, now! On your way!"

"But I'm naked!" said one boy -- Anwar, from Ecuador, child of Egyptian immigrants. His dossier ran through Bean's mind.

"Dress faster next time," said Wiggin.

Bean was naked, too. Furthermore, Wiggin was standing right there, watching him struggle with his suit. He could have helped. He could have waited. What am I getting myself in for?

"Three minutes from first call to running out the door -- that's the rule this week," said Wiggin. "Next week the rule is two minutes. Move!"

Out in the corridor, kids who were in the midst of free time or were heading for class stopped to watch the parade of the unfamiliar uniforms of Dragon Army. And to mock the ones that were even more unusual.

One thing for sure. Bean was going to have to practice getting dressed in his cut-down suit if he was going to avoid running naked through the corridors. And if Wiggin didn't make any exceptions for him the first day, when he'd only just got his nonregulation flash suit, Bean certainly was \*not\* going to ask for special favors.

I chose to put myself in this army, Bean reminded himself as he jogged along, trying to keep pieces of his flash suit from spilling out of his arms.

## PART FOUR -- SOLDIER

### CHAPTER 13 -- DRAGON ARMY

"I need access to Bean's genetic information," said Sister Carlotta.

"That's not for you," said Graff.

"And here I thought my clearance level would open any door."

"We invented a special new category of security, called 'Not for Sister Carlotta.' We don't want you sharing Bean's genetic information with anyone else. And you were already planning on putting it in other hands, weren't you?"

"Only to perform a test. So ... you'll have to perform it for me. I want a comparison between Bean's DNA and Volescu's."

"I thought you told me Volescu was the source of the cloned DNA."

"I've been thinking about it since I told you that, Colonel Graff, and you know what? Bean doesn't look anything like Volescu. I couldn't see how he could possibly grow up to be like him, either."

"Maybe the difference in growth patterns makes him look different, too."

"Maybe. But it's also possible Volescu is lying. He's a vain man."

"Lying about everything?"

"Lying about anything. About paternity, quite possibly. And if he's lying about that --"

"Then maybe Bean's prognosis isn't so bleak? Don't you think we've already checked with our genetics people? Volescu wasn't lying about that, anyway. Anton's key will probably behave just the way he described."

"Please. Run the test and tell me the results."

"Because you don't want Bean to be Volescu's son."

"I don't want Bean to be Volescu's twin. And neither, I think, do you."

"Good point. Though I must tell you, the boy does have a vain streak."

"When you're as gifted as Bean, accurate self-assessment looks like vanity to other people."

"Yeah, but he doesn't have to rub it in, does he?"

"Uh-oh. Has someone's ego been hurt?"

"Not mine. Yet. But one of his teachers is feeling a little bruised."

"I notice you aren't telling me I faked his scores anymore."

"Yes, Sister Carlotta, you were right all along. He deserves to be here. And so does ... Well, let's just say you hit the jackpot after all those years of searching."

"It's humanity's jackpot."

"I said he was worth bringing up here, not that he was the one who'll lead us to victory. The wheel's still spinning on that one. And my money's on another number."

\*\*\*

Going up the ladderways while holding a flash suit wasn't practical, so Wiggin made the ones who were dressed run up and down the corridor, working up a sweat, while Bean and the other naked or partially-dressed kids got their suits on. Nikolai helped Bean get his suit fastened; it humiliated Bean to need help, but it would have been worse to be the last one finished -- the pesky little teeny brat who slows everyone down. With Nikolai's help, he was not the last one done.

"Thanks."

"No ojjikay [sic -- no idea what this means]."

Moments later, they were streaming up the ladders to the battleroom level. Wiggin took them all the way to the upper door, the one that opened out into the middle of the battleroom wall. The one used for entering when it was an actual battle. There were handholds on the sides, the ceiling, and the floor, so students could swing out and hurl themselves into the null-G environment. The story was that gravity was lower in the battleroom because it was closer to the center of the station, but Bean had already realized that was bogus. There would still be some centrifugal force at the doors and a pronounced Coriolis effect. Instead, the battlerooms were completely null. To Bean, that meant that the I.F. had a device that would either block gravitation or, more likely, produce false gravity that was perfectly balanced to counter Coriolis and centrifugal forces in the battleroom, starting exactly at the door. It was a stunning technology -- and it was never discussed inside the I.F., at least not in the literature available to students in Battle School, and completely unknown outside.

Wiggin assembled them in four files along the corridor and ordered them to jump up and use the ceiling handholds to fling their bodies into the room. "Assemble on the far wall, as if you were going for the enemy's gate." To the veterans that meant something. To the launchies, who had never

been in a battle and had never, for that matter, entered through the upper door, it meant nothing at all. "Run up and go four at a time when I open the gate, one group per second." Wiggin walked to the back of the group and, using his hook, a controller strapped to the inside of his wrist and curved to conform to his left hand, he made the door, which had seemed quite solid, disappear.

"Go!" The first four kids started running for the gate. "Go!" The next group began to run before the first had even reached it. There would be no hesitation or somebody would crash into you from behind. "Go!" The first group grabbed and swung with varying degrees of clumsiness and heading out in various directions. "Go!" Later groups learned, or tried to, from the awkwardness of the earlier ones. "Go!"

Bean was at the end of the line, in the last group. Wiggin laid a hand on his shoulder. "You can use a side handhold if you want."

Right, thought Bean. \*Now\* you decide to baby me. Not because my meshugga flash suit didn't fit together right, but just because I'm short. "Go suck on it," said Bean.

"Go!"

Bean kept pace with the other three, though it meant pumping his legs half again as fast, and when he got near the gate he took a flying leap, tapped the ceiling handhold with his fingers as he passed, and sailed out into the room with no control at all, spinning in three nauseating directions at once.

But he didn't expect himself to do any better, and instead of fighting the spin, he calmed himself and did his anti-nausea routine, relaxing himself until he neared a wall and had to prepare for impact. He didn't land near one of the recessed handholds and wasn't facing the right way to grab anything even if he had. So he rebounded, but this time was a little more stable as he flew, and he ended up on the ceiling very near the back wall. It took him less time than some to make his way down to where the others were assembling, lined up along the floor under the middle gate on the back wall -- the enemy gate.

Wiggin sailed calmly through the air. Because he had a hook, during practice he could maneuver in midair in ways that soldiers couldn't; during battle, though, the hook would be useless, so commanders had to make sure they didn't become dependent on the hook's added control. Bean noted approvingly that Wiggin seemed not to use the hook at all. He sailed in sideways, snagged a handhold on the floor about ten paces out from the back wall, and hung in the air. Upside down.

Fixing his gaze on one of them, Wiggin demanded, "Why are you upside down, soldier?"

Immediately some of the other soldiers started to turn themselves upside down like Wiggin.

"Attention!" Wiggin barked. All movement stopped. "I said why are you upside down!"

Bean was surprised that the soldier didn't answer. Had he forgotten what the teacher did in the shuttle on the way here? The deliberate disorientation? Or was that something that only Dimak did?

"I said why does every one of you have his feet in the air and his head toward the ground!"

Wiggin didn't look at Bean in particular, and this was one question Bean didn't want to answer. There was no assurance of which particular correct answer Wiggin was looking for, so why open his mouth just to get shut down?

It was a kid named Shame -- short for Seamus -- who finally spoke up. "Sir, this is the direction we were in coming out of the door." Good job, thought Bean. Better than some lame argument that there was no up or down in null-G.

"Well what difference is that supposed to make! What difference does it make what the gravity was back in the corridor! Are we going to fight in the corridor? Is there any gravity here?"

No sir, they all murmured.

"From now on, you forget about gravity before you go through that door. The old gravity is gone, erased. Understand me? Whatever your gravity is when you get to the door, remember -- the enemy's gate is down. Your feet are toward the enemy gate. Up is toward your own gate. North is that way" -- he pointed toward what had been the ceiling -- "south is that way, east is that way, west is -- what way?"

They pointed.

"That's what I expected," said Wiggin. "The only process you've mastered is the process of elimination, and the only reason you've mastered that is because you can do it in the toilet."

Bean watched, amused. So Wiggin subscribed to the you're-so-stupid-you-need-me-to-wipe-your-butts school of basic training. Well, maybe that was necessary. One of the rituals of training. Boring till it was over, but ... commander's choice.

Wiggin glanced at Bean, but his eyes kept moving.

"What was the circus I saw out here! Did you call that forming up? Did you call that flying? Now everybody, launch and form up on the ceiling! Right now! Move!"

Bean knew what the trap was and launched for the wall they had just entered through before Wiggin had even finished talking. Most of the others also got what the test was, but a fair number of them launched the wrong way -- toward the direction Wiggin had called \*north\* instead of the direction he had identified as \*up\*. This time Bean happened to arrive near a handhold, and he caught it with surprising ease. He had done it before in his launch group's battleroom practices, but he was small enough that, unlike the others, it was quite possible for him to land in a place that had no handhold within reach. Short arms were a definite drawback in the battleroom. On short bounds he could aim at a handhold and get there with some accuracy. On a cross-room jump there was little hope of that. So it felt good that this time, at least, he didn't look like an oaf. In fact, having launched first, he arrived first.

Bean turned around and watched as the ones who had blown it made the long, embarrassing second leap to join the rest of the army. He was a little surprised at who some of the bozos were. Inattention can make clowns of us all, he thought.

Wiggin was watching him again, and this time it was no passing glance.

"You!" Wiggin pointed at him. "Which way is down?"

Didn't we just cover this? "Toward the enemy door."

"Name, kid?"

Come on, Wiggin really didn't know who the short kid with the highest scores in the whole damn school was? Well, if we're playing mean sergeant and hapless recruit, I better follow the script. "This soldier's name is Bean, sir."

"Get that for size or for brains?"

Some of the other soldiers laughed. But not many of them. \*They\* knew Bean's reputation. To them it was no longer funny that he was so small -- it was just embarrassing that a kid that small could make perfect scores on tests that had questions they didn't even understand.

"Well, Bean, you're right onto things." Wiggin now included the whole group as he launched into a lecture on how coming through the door feet first made you a much smaller target for the enemy to shoot at. Harder for him to hit you and freeze you. "Now, what happens when you're frozen?"

"Can't move," somebody said.

"That's what frozen \*means\*," said Wiggin. "But what \*happens\* to you?"

Wiggin wasn't phrasing his question very clearly, in Bean's opinion, and there was no use in prolonging the agony while the others figured it out. So Bean spoke up. "You keep going in the direction you started in. At the speed you were going when you were flashed."

"That's true," said Wiggin. "You five, there on the end, move!" He pointed at five soldiers, who spent long enough looking at each other to make sure which five he meant that Wiggin had time to flash them all, freezing them in place. During practice, it took a few minutes for a freeze to wear off, unless the commander used his hook to unfreeze them earlier.

"The next five, move!"

Seven kids moved at once -- no time to count. Wiggin flashed them as quickly as he flashed the others, but because they had already launched, they kept moving at a good clip toward the walls they had headed for.

The first five were hovering in the air near where they had been frozen.

"Look at these so-called soldiers. Their commander ordered them to move, and now look at them. Not only are they frozen, they're frozen right here, where they can get in the way. While the others, because they moved when they were ordered, are frozen down there, plugging up the enemy's lanes, blocking the enemy's vision. I imagine that about five of you have understood the point of this."

We all understand it, Wiggin. It's not like they bring stupid people up here to Battle School. It's not like I didn't pick you the best available army.

"And no doubt Bean is one of them. Right, Bean?"

Bean could hardly believe that Wiggin was singling him out *\*again\**.

Just because I'm little, he's using me to embarrass the others. The little guy knows the answers, so why don't you big boys.

But then, Wiggin doesn't realize yet. He thinks he has an army of incompetent launchies and rejects. He hasn't had a chance to see that he actually has a select group. So he thinks of me as the most ludicrous of a sad lot. He's found out I'm not an idiot, but he still assumes the others are.

Wiggin was still looking at him. Oh, yeah, he had asked a question. "Right, sir," said Bean.

"Then what is the point?"

Spit back to him exactly what he just said to us. "When you are ordered to move, move fast, so if you get iced you'll bounce around instead of getting in the way of your own army's operations."

"Excellent. At least I have one soldier who can figure things out."

Bean was disgusted. This was the commander who was supposed to turn Dragon into a legendary army? Wiggin was supposed to be the alpha and omega of the Battle School, and he's playing the game of singling me out to be the goat. Wiggin didn't even find out our scores, didn't discuss his soldiers with the teachers. If he did, he'd already know that I'm the smartest kid in the school. The others all know it. That's why they're looking at each other in embarrassment. Wiggin is revealing his own ignorance.

Bean saw how Wiggin seemed to be registering the distaste of his own soldiers. It was just an eyeblink, but maybe Wiggin finally got it that his make-fun-of-the-shrimp ploy was backfiring. Because he finally got on with the business of training. He taught them how to kneel in midair -- even flashing their own legs to lock them in place -- and then fire between their knees as they moved downward toward the enemy, so that their legs became a shield, absorbing fire and allowing them to shoot for longer periods of time out in the open. A good tactic, and Bean finally began to get some idea of why Wiggin might not be a disastrous commander after all. He could sense the others giving respect to their new commander at last.

When they'd got the point, Wiggin thawed himself and all the soldiers he had frozen in the demonstration. "Now," he said, "which way is the enemy's gate?"

"Down!" they all answered.

"And what is our attack position?"

Oh, right, thought Bean, like we can all give an explanation in unison. The only way to answer was to demonstrate -- so Bean flipped himself away from the wall, heading for the other side, firing between his knees as he went. He didn't do it perfectly -- there was a little rotation as he went -- but all in all, he did OK for his first actual attempt at the maneuver.

Above him, he heard Wiggin shout at the others. "Is Bean the only one who knows how?"

By the time Bean had caught himself on the far wall, the whole rest of the army was coming after him, shouting as if they were on the attack. Only Wiggin remained at the ceiling. Bean noticed, with amusement, that Wiggin was standing there oriented the same way he had been in the corridor -- his head "north," the old "up." He might have the theory down pat, but in practice, it's hard to shake off the old gravity-based thinking. Bean had made it a point to orient himself sideways, his head to the west. And the soldiers near him did the same, taking their orientation from him. If Wiggin noticed, he gave no sign.

"Now come back at me, all of you, attack \*me\*!"

Immediately his flash suit lit up with forty weapons firing at him as his entire army converged on him, firing all the way. "Ouch," said Wiggin when they arrived. "You got me."

Most of them laughed.

"Now, what are your legs good for, in combat?"

Nothing, said some boys.

"Bean doesn't think so," said Wiggin.

So he isn't going to let up on me even now. Well, what does he want to hear? Somebody else muttered "shields," but Wiggin didn't key in on that, so he must have something else in mind. "They're the best way to push off walls," Bean guessed.

"Right," said Wiggin.

"Come on, pushing off is movement, not combat," said Crazy Tom. A few others murmured their agreement.

Oh good, now it starts, thought Bean. Crazy Tom picks a meaningless quarrel with his commander, who gets pissed off at him and ...

But Wiggin didn't take umbrage at Crazy Tom's correction. He just corrected him back, mildly. "There *\*is\** no combat without movement. Now, with your legs frozen like this, can you push off walls?"

Bean had no idea. Neither did anyone else.

"Bean?" asked Wiggin. Of course.

"I've never tried it," said Bean, "but maybe if you faced the wall and doubled over at the waist --"

"Right but wrong. Watch me. My back's to the wall, legs are frozen. Since I'm kneeling, my feet are against the wall, Usually, when you push off you have to push downward, so you string out your body behind you like a string *\*bean\**, right?"

The group laughed. For the first time, Bean realized that maybe Wiggin wasn't being stupid to get the whole group laughing at the little guy. Maybe Wiggin knew perfectly well that Bean was the smartest kid, and had singled him out like this because he could tap into all the resentment the others felt for him. This whole session was guaranteeing that the other kids would all think it was OK to laugh at Bean, to despise him even though he was smart.

Great system, Wiggin. Destroy the effectiveness of your best soldier, make sure he gets no respect.

However, it was more important to learn what Wiggin was teaching than to feel sullen about the way he was teaching it. So Bean watched intently as Wiggin demonstrated a frozen-leg takeoff from the wall. He noticed that Wiggin gave himself a deliberate spin. It would make it harder for him to shoot as he flew, but it would also make it very hard for a distant enemy to focus enough light on any part of him for long enough to get a kill.

I may be pissed off, but that doesn't mean I can't learn.

It was a long and grueling practice, drilling over and over again on new skills. Bean saw that Wiggin wasn't willing to let them learn each technique separately. They had to do them all at once, integrating them into smooth, continuous movements. Like dancing, Bean thought. You don't learn to shoot and then learn to launch and then learn to do a controlled spin -- you learn to launch-shoot-spin.

At the end, all of them dripping with sweat, exhausted, and flushed with the excitement of having learned stuff that they'd never heard of other soldiers doing, Wiggin assembled them at the lower door and announced that they'd have another practice during free time. "And don't tell me that free time is supposed to be free. I know that, and you're perfectly free to do what you want. I'm *\*inviting\** you to come to an extra, *\*voluntary\** practice."

They laughed. This group consisted entirely of kids who had *\*not\** chosen to do extra battleroom practice with Wiggin before, and he was making sure they understood that he expected them to

change their priorities now. But they didn't mind. After this morning they knew that when Wiggin ran a practice, every second was effective. They couldn't afford to miss a practice or they'd fall significantly behind. Wiggin would get their free time. Even Crazy Tom wasn't arguing about it.

But Bean knew that he had to change his relationship with Wiggin right now, or there was no chance that he would get a chance for leadership. What Wiggin had done to him in today's practice, feeding on the resentment of the other kids for this little pipsqueak, would make it even less plausible for Bean to be made a leader within the army -- if the other kids despised him, who would follow him?

So Bean waited for Wiggin in the corridor after the others had gone on ahead.

"Ho, Bean," said Wiggin.

"Ho, Ender," said Bean. Did Wiggin catch the sarcasm in the way Bean said his name? Was that why he paused a moment before answering?

"\*Sir\*," said Wiggin softly.

Oh, cut out the merda, I've seen those vids, we all \*laugh\* at those vids. "I know what you're doing, \*Ender\*, sir, and I'm warning you."

"Warning me?"

"I can be the best man you've got, but don't play games with me."

"Or what?"

"Or I'll be the worst man you've got. One or the other." Not that Bean expected Wiggin to understand what he meant by that. How Bean could only be effective if he had Wiggin's trust and respect, how otherwise he'd just be the little kid, useful for nothing. Wiggin would probably take it to mean that Bean meant to cause trouble if Wiggin didn't use him. And maybe he did mean that, a little.

"And what do you want?" asked Wiggin. "Love and kisses?"

Say it flat out, put it in his mind so plainly he can't pretend not to understand. "I want a toon."

Wiggin walked close to Bean, looked down at him. To Bean, though, it was a good sign that Wiggin hadn't just laughed. "Why should you get a toon?"

"Because I'd know what to do with it."

"Knowing what to do with a toon is easy. It's getting them to do it that's hard. Why should any soldier want to follow a little pinprick like you?"

Wiggin had got straight to the crux of the problem. But Bean didn't like the malicious way he said it. "They used to call \*you\* that, I hear. I hear Bonzo Madrid still does."

Wiggin wasn't taking the bait. "I asked you a question, soldier."

"I'll earn their respect, sir, if you don't stop me."

To his surprise, Wiggin grinned. "I'm helping you."

"Like hell."

"Nobody would notice you, except to feel sorry for the little kid. But I made sure they \*all\* noticed you today."

You should have done your research, Wiggin. You're the only one who didn't know already who I was.

"They'll be watching every move you make," said Wiggin. "All you have to do to earn their respect now is be perfect."

"So I don't even get a chance to learn before I'm being judged." That's not how you bring along talent.

"Poor kid. Nobody's treatin' him fair."

Wiggin's deliberate obtuseness infuriated Bean. You're smarter than this, Wiggin!

Seeing Bean's rage, Wiggin brought a hand forward and pushed him until his back rested firmly against the wall. "I'll tell you how to get a toon. Prove to me you know what you're doing as a soldier. Prove to me you know how to use other soldiers. And then prove to me that somebody's willing to follow you into battle. Then you'll get your toon. But not bloody well until."

Bean ignored the hand pressing against him. It would take a lot more than that to intimidate him physically. "That's fair," he said. "\*If\* you actually work that way, I'll be a toon leader in a month."

Now it was Wiggin's turn to be angry. He reached down, grabbed Bean by the front of his flash suit, and slid him up the wall so they stood there eye to eye. "When I say I work a certain way, Bean, then that's the way I work."

Bean just grinned at him. In this low gravity, so high in the station, picking up little kids wasn't any big test of strength. And Wiggin was no bully. There was no serious threat here.

Wiggin let go of him. Bean slid down the wall and landed gently on his feet, rebounded slightly, settled again. Wiggin walked to the pole and slid down. Bean had won this encounter by getting under Wiggin's skin. Besides, Wiggin knew he hadn't handled this situation very well. He wouldn't

forget. In fact, it was Wiggin who had lost a little respect, and he knew it, and he'd be trying to earn it back.

Unlike you, Wiggin, I *\*do\** give the other guy a chance to learn what he's doing before I insist on perfection. You screwed up with me today, but I'll give you a chance to do better tomorrow and the next day.

But when Bean got to the pole and reached out to take hold, he realized his hands were trembling and his grip was too weak. He had to pause a moment, leaning on the pole, till he had calmed enough.

That face-to-face encounter with Wiggin, he hadn't won that. It might even have been a stupid thing to do. Wiggin *\*had\** hurt him with those snide comments, that ridicule. Bean had been studying Wiggin as the subject of his private theology, and today he had found out that all this time Wiggin didn't even know Bean existed. Everybody compared Bean to Wiggin -- but apparently Wiggin hadn't heard or didn't care. He had treated Bean like nothing. And after having worked so hard this past year to earn respect, Bean didn't find it easy to be nothing again. It brought back feelings he thought he left behind in Rotterdam. The sick fear of imminent death. Even though he knew that no one here would raise a hand against him, he still remembered being on the edge of dying when he first went up to Poke and put his life in her hands.

Is that what I've done, once again? By putting myself on this roster, I gave my future into this boy's hands. I counted on him seeing in me what I see. But of course he couldn't. I have to give him time.

If there *\*was\** time. For the teachers were moving quickly now, and Bean might not *\*have\** a year in this army to prove himself to Wiggin.

## CHAPTER 14 -- BROTHERS

"You have results for me?"

"Interesting ones. Volescu *\*was\** lying. Somewhat."

"I hope you're going to be more precise than that."

"Bean's genetic alteration was not based on a clone of Volescu. But they *\*are\** related. Volescu is definitely not Bean's father. But he is almost certainly Volescu's [sic -- should be "Bean's"] half-uncle or a double cousin. I hope Volescu has a half-brother or double first cousin, because such a man is the only possible father of the fertilized egg that Volescu altered."

"You have a list of Volescu's relatives, I assume?"

"We didn't need any family at the trial. And Volescu's mother was not married. He uses her name."

"So Volescu's father had another child somewhere only you don't even know his name. I thought you knew everything."

"We know everything that we knew was worth knowing. That's a crucial distinction. We simply haven't looked for Volescu's father. He's not guilty of anything important. We can't investigate everybody."

"Another matter. Since you know everything that you know is worth knowing, perhaps you can tell me why a certain crippled boy has been removed from the school where I placed him?"

"Oh. Him. When you suddenly stopped touting him, we got suspicious. So we checked him out. Tested him. He's no Bean, but he definitely belongs here."

"And it never crossed your mind that I had good reason for keeping him out of Battle School?"

"We assumed that you thought that we might choose Achilles over Bean, who was, after all, far too young, so you offered only your favorite."

"You assumed. I've been dealing with you as if you were intelligent, and you've been dealing with me as if I were an idiot. Now I see it should have been the exact reverse."

"I didn't know Christians got so angry."

"Is Achilles already in Battle School?"

"He's still recovering from his fourth surgery. We had to fix the leg on Earth."

"Let me give you a word of advice. Do *\*not\** put him in Battle School while Bean is still there."

"Bean is only six. He's still too young to *\*enter\** Battle School, let alone graduate."

"If you put Achilles in, take Bean out. Period."

"Why?"

"If you're too stupid to believe me after all my other judgments turned out to be correct, why should I give you the ammunition to let you second-guess me? Let me just say that putting them in school together is a probable death sentence for one of them."

"Which one?"

"That rather depends on which one sees the other first."

"Achilles says he owes everything to Bean. He loves Bean."

"Then by all means, believe him and not me. But don't send the body of the loser back to me to deal with. You bury your own mistakes."

"That sounds pretty heartless."

"I'm not going to weep over the grave of either boy. I tried to save both their lives. You apparently seem determined to let them find out which is fittest in the best Darwinian fashion."

"Calm down, Sister Carlotta. We'll consider what you've told us. We won't be foolish."

"You've already been foolish. I have no high expectations for you now."

\*\*\*

As days became weeks, the shape of Wiggin's army began to unfold, and Bean was filled with both hope and despair. Hope, because Wiggin was setting up an army that was almost infinitely adaptable. Despair, because he was doing it without any reliance on Bean.

After only a few practices, Wiggin had chosen his toon leaders -- every one of them a veteran from the transfer lists. In fact, every veteran was either a toon leader or a second. Not only that, instead of the normal organization -- four toons of ten soldiers each -- he had created five toons of eight, and then made them practice a lot in half-toons of four men each, one commanded by the toon leader, the other by the second.

No one had ever fragmented an army like that before. And it wasn't just an illusion. Wiggin worked hard to make sure the toon leaders and seconds had plenty of leeway. He'd tell them their objective and let the leader decide how to achieve it. Or he'd group three toons together under the operational command of one of the toon leaders to handle one operation, while Wiggin himself commanded the smaller remaining force. It was an extraordinary amount of delegation.

Some of the soldiers were critical at first. As they were milling around near the entrance to the barracks, the veterans talked about how they'd practiced that day -- in ten groups of four. "Everybody knows it's loser strategy to divide your army," said Fly Molo, who commanded A toon.

Bean was a little disgusted that the soldier with the highest rank after Wiggin would say something disparaging about his commander's strategy. Sure, Fly was learning, too. But there's such a thing as insubordination.

"He hasn't divided the army," said Bean. "He's just organized it. And there's no such thing as a rule of strategy that you can't break. The idea is to have your army concentrated at the decisive point. Not to keep it huddled together all the time."

Fly glared at Bean. "Just cause you little guys can hear us doesn't mean you understand what we're talking about."

"If you don't want to believe me, think what you want. My talking isn't going to make you stupider than you already are."

Fly came at him, grabbing him by the arm and dragging him to the edge of his bunk.

At once, Nikolai launched himself from the bunk opposite and landed on Fly's back, bumping his head into the front of Bean's bunk. In moments, the other toon leaders had pulled Fly and Nikolai apart -- a ludicrous fight anyway, since Nikolai wasn't that much bigger than Bean.

"Forget it, Fly," said Hot Soup -- Han Tzu, leader of D toon. "Nikolai thinks he's Bean's big brother."

"What's the kid doing mouthing off to a toon leader?" demanded Fly.

"You were being insubordinate toward our commander," said Bean. "And you were also completely wrong. By your view, Lee and Jackson were idiots at Chancellorsville."

"He keeps doing it!"

"Are you so stupid you can't recognize the truth just because the person telling it to you is short?" All of Bean's frustration at not being one of the officers was spilling out. He knew it, but he didn't feel like controlling it. They needed to hear the truth. And Wiggin needed to have the support when he was being taken down behind his back.

Nikolai was standing on the lower bunk, so he was as close to Bean as possible, affirming the bond between them. "Come on, Fly," said Nikolai. "This is \*Bean\*, remember?"

And, to Bean's surprise, that silenced Fly. Until this moment, Bean had not realized the power that his reputation had. He might be just a regular soldier in Dragon Army, but he was still the finest student of strategy and military history in the school, and apparently everybody -- or at least everybody but Wiggin -- knew it.

"I should have spoken with more respect," said Bean.

"Damn right," said Fly.

"But so should you."

Fly lunged against the grip of the boys holding him.

"Talking about Wiggin," said Bean. "You spoke without respect. 'Everybody knows it's loser strategy to divide your army.'" He got Fly's intonation almost exactly right. Several kids laughed. And, grudgingly, so did Fly.

"OK, right," said Fly. "I was out of line." He turned to Nikolai. "But I'm still an officer."

"Not when you're dragging a little kid off his bunk you're not," said Nikolai. "You're a bully when you do that."

Fly blinked. Wisely, no one else said a thing until Fly had decided how he was going to respond. "You're right, Nikolai. To defend your friend against a bully." He looked from Nikolai to Bean and back again. "Pusha, you guys even look like brothers." He walked past them, heading for his bunk. The other toon leaders followed him. Crisis over.

Nikolai looked at Bean then. "I was never as squished up and ugly as you," he said.

"And if I'm going to grow up to look like you, I'm going to kill myself now," said Bean.

"Do you have to talk to really *\*big\** guys like that?"

"I didn't expect you to attack him like a one-man swarm of bee."

"I guess I wanted to jump on somebody," said Nikolai.

"You? Mr. Nice Guy?"

"I don't feel so nice lately." He climbed up on the bunk beside Bean, so they could talk more softly. "I'm out of my depth here, Bean. I don't belong in this army."

"What do you mean?"

"I wasn't ready to get promoted. I'm just average. Maybe not that good. And even though this army wasn't a bunch of heroes in the standings, these guys are good. Everybody learns faster than me. Everybody *\*gets\** it and I'm still standing there thinking about it."

"So you work harder."

"I *\*am\** working harder. You -- you just get it, right away, everything, you see it all. And it's not that I'm stupid. I always get it, too. Just ... a step behind."

"Sorry," said Bean.

"What are *\*you\** sorry about? It's not *\*your\** fault."

Yes it is, Nikolai. "Come on, you telling me you wish you weren't part of Ender Wiggin's army?"

Nikolai laughed a little. "He's really something, isn't he?"

"You'll do your part. You're a good soldier. You'll see. When we get into the battles, you'll do as well as anybody."

"Eh, probably. They can always freeze me and throw me around. A big lumpy projectile weapon."

"You're not so lumpy."

"Everybody's lumpy compared to you. I've watched you -- you give away half your food."

"They feed me too much."

"I've got to study." Nikolai jumped across to his bunk.

Bean felt bad sometimes about having put Nikolai in this situation. But when they started winning, a lot of kids outside of Dragon Army would be wishing they could trade places with him. In fact, it was kind of surprising Nikolai realized he wasn't as qualified as the others. After all, the differences weren't that pronounced. Probably there were a lot of kids who felt just like Nikolai. But Bean hadn't really reassured him. In fact, he had probably reaffirmed Nikolai's feelings of inferiority.

What a sensitive friend I am.

\*\*\*

There was no point in interviewing Volescu again, not after getting such lies from him the first time. All that talk of copies, and him the original -- there was no mitigation now. He was a murderer, a servant of the Father of Lies. He would do nothing to help Sister Carlotta. And the need to find out what might be expected of the one child who evaded Volescu's little holocaust was too great to rely again on the word of such a man.

Besides, Volescu had made contact with his half-brother or double cousin -- how else could he have obtained a fertilized egg containing his DNA? So Sister Carlotta should be able either to follow Volescu's trail or duplicate his research.

She learned quickly that Volescu was the illegitimate child of a Romanian woman in Budapest, Hungary. A little checking -- and the judicious use of her security clearance -- got her the name of the father, a Greek-born official in the League who had recently been promoted to service on the Hegemon's staff. That might have been a roadblock, but Sister Carlotta did not need to speak to the grandfather. She only needed to know who he was in order to find out the names of his three legitimate children. The daughter was eliminated because the shared parent was a male. And in checking the two sons, she decided to go first to visit the married one.

They lived on the island of Crete, where Julian ran a software company whose only client was the International Defense League. Obviously this was not a coincidence, but nepotism was almost honorable compared to some of the outright graft and favor-trading that was endemic in the League. In the long run such corruption was basically harmless, since the International Fleet had seized control of its own budget early on and never let the League touch it again. Thus the Polemarch and the Strategos had far more money at their disposal than the Hegemon, which made him, though first in title, weakest in actual power and independence of movement.

And just because Julian Delphiki owed his career to his father's political connections did not necessarily mean that his company's product was not adequate and that he himself was not an honest man. By the standards of honesty that prevailed in the world of business, anyway.

Sister Carlotta found that she did not need her security clearance to get a meeting with Julian and his wife, Elena. She called and said she would like to see them on a matter concerning the I.F., and they immediately opened their calendar to her. She arrived in Knossos and was immediately driven to their home on a bluff overlooking the Aegean. They looked nervous -- indeed, Elena was almost frantic, wringing a handkerchief.

"Please," she said, after accepting their offer of fruit and cheese. "Please tell me why you are so upset. There's nothing about my business that should alarm you."

The two of them glanced at each other, and Elena became flustered. "Then there's nothing wrong with our boy?"

For a moment, Sister Carlotta wondered if they already knew about Bean -- but how could they?

"Your son?"

"Then he's all right!" Elena burst into tears of relief and when her husband knelt beside her, she clung to him and sobbed.

"You see, it was very hard for us to let him go into service," said Julian. "So when a religious person calls to tell us she needs to see us on business pertaining to the I.F., we thought -- we leapt to the conclusion --"

"Oh, I'm so sorry. I didn't know you had a son in the military, or I would have been careful to assure you from the start that ... but now I fear I am here under false pretenses. The matter I need to speak to you about is personal, so personal you may be reluctant to answer. Yet it *is* about a matter that is of some importance to the I.F. Truthful answers cannot possibly expose you to any personal risk, I promise."

Elena got control of herself. Julian seated himself again, and now they looked at Sister Carlotta almost with cheerfulness. "Oh, ask whatever you want," said Julian. "We're just happy that -- whatever you want to ask."

"We'll answer if we can," said Elena.

"You say you have a son. This raises the possibility that -- there is reason to wonder if you might not at some point have ... was your son conceived under circumstances that would have allowed a clone of his fertilized egg to be made?"

"Oh yes," said Elena. "That is no secret. A defect in one fallopian tube and an ectopic pregnancy in the other made it impossible for me to conceive in utero. We wanted a child, so they drew out

several of my eggs, fertilized them with my husband's sperm, and then cloned the ones we chose. There were four that we cloned, six copies of each. Two girls and two boys. So far, we have implanted only the one. He was such a -- such a special boy, we did not want to dilute our attention. Now that his education is out of our hands, however, we have been thinking of bearing one of the girls. It's time." She reached over and took Julian's hand and smiled. He smiled back.

Such a contrast to Volescu. Hard to believe there was any genetic material in common.

"You said six copies of each of the four fertilized eggs," said Sister Carlotta.

"Six including the original," said Julian. "That way we have the best chance of implanting each of the four and carrying them through a full pregnancy."

"A total of twenty-four fertilized eggs. And only one of them was implanted?"

"Yes, we were very fortunate, the first one worked perfectly."

"Leaving twenty-three."

"Yes. Exactly."

"Mr. Delphiki, all twenty-three of those fertilized eggs remain in storage, waiting for implantation?"

"Of course."

Sister Carlotta thought for a moment. "How recently have you checked?"

"Just last week," said Julian. "As we began talking about having another child. The doctor assured us that nothing has happened to the eggs and they can be implanted with only a few hours' notice."

"But did the doctor actually check?"

"I don't know," said Julian.

Elena was starting to tense up a little. "What have you heard?" she asked.

"Nothing," said Sister Carlotta. "What I am looking for is the source of a particular child's genetic material. I simply need to make sure that your fertilized eggs were not the source."

"But of course they were not. Except for our son."

"Please don't be alarmed. But I would like to know the name of your doctor and the facility where the eggs are stored. And then I would be glad if you would call your doctor and have him go, in person, to the facility and insist upon seeing the eggs himself."

"They can't be seen without a microscope," said Julian.

"See that they have not been disturbed," said Sister Carlotta.

They had both become hyperalert again, especially since they had no idea what this was all about - nor could they be told. As soon as Julian gave her the name of doctor and hospital, Sister Carlotta stepped onto the porch and, as she gazed at the sail-specked Aegean, she used her global and got herself put through to the I.F. headquarters in Athens.

It would take several hours, perhaps, for either her call or Julian's to bring in the answer, so she and Julian and Elena made a heroic effort to appear unconcerned. They took her on a walking tour of their neighborhood, which offered views both ancient and modern, and of nature verdant, desert, and marine. The dry air was refreshing as long as the breeze from the sea did not lag, and Sister Carlotta enjoyed hearing Julian talk about his company and Elena talk about her work as a teacher. All thought of their having risen in the world through government corruption faded as she

realized that however he got his contract, Julian was a serious, dedicated creator of software, while Elena was a fervent teacher who treated her profession as a crusade. "I knew as soon as I started teaching our son how remarkable he was," Elena told her. "But it wasn't until his pre-tests for school placement that we first learned that his gifts were particularly suited for the I.F."

Alarm bells went off. Sister Carlotta had assumed that their son was an adult. After all, they were not a young couple. "How old is your son?"

"Eight years old now," said Julian. "They sent us a picture. Quite a little man in his uniform. They don't let many letters come through."

Their son was in Battle School. They appeared to be in their forties, but they might not have started to have a family until late, and then tried in vain for a while, going through a tubal pregnancy before finding out that Elena could no longer conceive. Their son was only a couple of years older than Bean.

Which meant that Graff could compare Bean's genetic code with that of the Delphiki boy and find out if they were from the same cloned egg. There would be a control, to compare what Bean was like with Anton's key turned, as opposed to the other, whose genes were unaltered.

Now that she thought about it, of *course* any true sibling of Bean's would have exactly the abilities that would bring the attention of the I.F. Anton's key made a child into a savant in general; the particular mix of skills that the I.F. looked for were not affected. Bean would have had those skills no matter what; the alteration merely allowed him to bring a far sharper intelligence to bear on abilities he already had.

*If* Bean was in fact their child. Yet the coincidence of twenty-three fertilized eggs and the twenty-three children that Volescu had produced in the "clean room" -- what other conclusion could she reach?

And soon the answer came, first to Sister Carlotta, but immediately thereafter to the Delphikis. The I.F. investigators had gone to the clinic with the doctor and together they had discovered that the eggs were missing.

It was hard news for the Delphikis to bear, and Sister Carlotta discreetly waited outside while Elena and Julian took some time alone together. But soon they invited her in. "How much can you tell us?" Julian asked. "You came here because you suspected our babies might have been taken. Tell me, were they born?"

Sister Carlotta wanted to hide behind the veil of military secrecy, but in truth there was no military secret involved -- Volescu's crime was a matter of public record. And yet ... weren't they better off not knowing?

"Julian, Elena, accidents happen in the laboratory. They might have died anyway. Nothing is certain. Isn't it better just to think of this as a terrible accident? Why add to the burden of the loss you already have?"

Elena looked at her fiercely. "You *will* tell me, Sister Carlotta, if you love the God of truth!"

"The eggs were stolen by a criminal who ... illegally caused them to be brought through gestation. When his crime was about to be discovered, he gave them a painless death by sedative. They did not suffer."

"And this man will be put on trial?"

"He has already been tried and sentenced to life in prison," said Sister Carlotta.

"Already?" asked Julian. "How long ago were our babies stolen?"

"More than seven years ago."

"Oh!" cried Elena. "Then our babies ... when they died ..."

"They were infants. Not a year old yet."

"But why *our* babies? Why would he steal them? Was he going to sell them for adoption? Was he..."

"Does it matter? None of his plans came to fruition," said Sister Carlotta. The nature of Volescu's experiments *was* a secret.

"What was the murderer's name?" asked Julian. Seeing her hesitation, he insisted. "His name is a matter of public record, is it not?"

"In the criminal courts of Rotterdam," said Sister Carlotta. "Volescu."

Julian reacted as if slapped -- but immediately controlled himself. Elena did not see it.

He knows about his father's mistress, thought Sister Carlotta. He understands now what part of the motive had to be. The legitimate son's children were kidnapped by the bastard, experimented on, and eventually killed -- and the legitimate son didn't find out about it for seven years. Whatever privations Volescu fancied that his fatherlessness had caused him, he had taken his vengeance. And for Julian, it also meant that his father's lusts had come back to cause this loss, this pain to Julian and his wife. The sins of the fathers are visited upon the children unto the third and fourth generation ...

But didn't the scripture say the third and fourth generation of them that hate me? Julian and Elena did not hate God. Nor did their innocent babies.

It makes no more sense than Herod's slaughter of the babes of Bethlehem. The only comfort was the trust that a merciful God caught up the spirits of the slain infants into his bosom, and that he brought comfort, eventually, to the parents' hearts.

"Please," said Sister Carlotta. "I cannot say you should not grieve for the children that you will never hold. But you can still rejoice in the child that you have."

"A million miles away!" cried Elena.

"I don't suppose ... you don't happen to know if the Battle School ever lets a child come home for a visit," said Julian. "His name is Nikolai Delphiki. Surely under the circumstances ..."

"I'm so sorry," said Sister Carlotta. Reminding them of the child they had was not such a good idea after all, when they did not, in fact, have him. "I'm sorry that my coming led to such terrible news for you."

"But you learned what you came to learn," said Julian.

"Yes," said Sister Carlotta.

Then Julian realized something, though he said not a word in front of his wife. "Will you want to return to the airport now?"

"Yes, the car is still waiting. Soldiers are much more patient than cab drivers."

"I'll walk you to the car," said Julian.

"No, Julian," said Elena, "don't leave me."

"Just for a few moments, my love. Even now, we don't forget courtesy." He held his wife for a long moment, then led Sister Carlotta to the door and opened it for her.

As they walked to the car, Julian spoke of what he had come to understand. "Since my father's bastard is already in prison, you did not come here because of his crime."

"No," she said.

"One of our children is still alive," he said.

"What I tell you now I should not tell, because it is not within my authority," said Sister Carlotta. "But my first allegiance is to God, not the I.F. If the twenty-two children who died at Volescu's hand were yours, then a twenty-third may be alive. It remains for genetic testing to be done."

"But we will not be told," said Julian.

"Not yet," said Sister Carlotta. "And not soon. Perhaps not ever. But if it is within my power, then a day will come when you will meet your second son."

"Is he ... do you know him?"

"If it is your son," she said, "then yes, I know him. His life has been hard, but his heart is good, and he is such a boy as to make any father or mother proud. Please don't ask me more. I've already said too much."

"Do I tell this to my wife?" asked Julian. "What will be harder for her, to know or not know?"

"Women are not so different from men. \*You\* preferred to know."

Julian nodded. "I know that you were only the bearer of news, not the cause of our loss. But your visit here will not be remembered with happiness. Yet I want you to know that I understand how kindly you have done this miserable job."

She nodded. "And you have been unfailingly gracious in a difficult hour."

Julian opened the door of her car. She stooped to the seat, swung her legs inside. But before he could close the door for her, she thought of one last question, a very important one.

"Julian, I know you were planning to have a daughter next. But if you had gone on to bring another son into the world, what would you have named him?"

"Our firstborn was named for my father, Nikolai," he said. "But Elena wanted to name a second son for me."

"Julian Delphiki," said Sister Carlotta. "If this truly is your son, I think he would be proud someday to bear his father's name."

"What name does he use now?" asked Julian.

"Of course I cannot say."

"But ... not Volescu, surely."

"No. As far as I'm concerned, he'll never hear that name. God bless you, Julian Delphiki. I will pray for you and your wife."

"Pray for our children's souls, too, Sister."

"I already have, and do, and will."

\*\*\*

Major Anderson looked at the boy sitting across the table from him. "Really, it's not that important a matter, Nikolai."

"I thought maybe I was in trouble."

"No, no. We just noticed that you seemed to be a particular friend of Bean. He doesn't have a lot of friends."

"It didn't help that Dimak painted a target on him in the shuttle. And now Ender's gone and done the same thing. I suppose Bean can take it, but smart as he is, he kind of pisses off a lot of the other kids."

"But not you?"

"Oh, he pisses me off, too."

"And yet you became his friend."

"Well, I didn't mean to. I just had the bunk across from him in launchy barracks."

"You traded for that bunk."

"Did I? Oh. Eh."

"And you did that before you knew how smart Bean was."

"Dimak told us in the shuttle that Bean had the highest scores of any of us."

"Was that why you wanted to be near him?"

Nikolai shrugged.

"It was an act of kindness," said Major Anderson. "Perhaps I'm just an old cynic, but when I see such an inexplicable act I become curious."

"He really does kind of look like my baby pictures. Isn't that dumb? I saw him and I thought, he looks just like cute little baby Nikolai. Which is what my mother always called me in my baby pictures. I never thought of them as \*me\*. I was big Nikolai. That was cute little baby Nikolai. I used to pretend that he was my little brother and we just happened to have the same name. Big Nikolai and Cute Little Baby Nikolai."

"I see that you're ashamed, but you shouldn't be. It's a natural thing for an only child to do."

"I wanted a brother."

"Many who have a brother wish they didn't."

"But the brother I made up for myself, he and I got along fine." Nikolai laughed at the absurdity of it.

"And you saw Bean and thought of him as the brother you once imagined."

"At first. Now I know who he really is, and it's better. It's like ... sometimes he's the little brother and I'm looking out for him, and sometimes he's the big brother and he's looking out for me."

"For instance?"

"What?"

"A boy that small -- how does he look out for you?"

"He gives me advice. Helps me with classwork. We do some practice together. He's better at almost everything than I am. Only I'm bigger, and I think I like him more than he likes me."

"That may be true, Nikolai. But as far as we can tell, he likes you more than he likes anybody else. He just ... so far, he may not have the same capacity for friendship that you have. I hope that my asking you these questions won't change your feelings and actions toward Bean. We don't assign people to be friends, but I hope you'll remain Bean's."

"I'm not his friend," said Nikolai.

"Oh?"

"I told you. I'm his brother." Nikolai grinned. "Once you get a brother, you don't give him up easy."

## CHAPTER 15 -- COURAGE

"Genetically, they're identical twins. The only difference is Anton's key."

"So the Delphikis have two sons."

"The Delphikis have one son, Nikolai, and he's with us for the duration. Bean was an orphan found on the streets of Rotterdam."

"Because he was kidnapped."

"The law is clear. Fertilized eggs are property. I know that this is a matter of religious sensitivity for you, but the I.F. is bound by law, not --"

"The I.F. uses law where possible to achieve its own ends. I know you're fighting a war. I know that some things are outside your power. But the war will not go on forever. All I ask is this: Make this information part of a record -- part of many records. So that when the war ends, the proof of these things can and will survive. So the truth won't stay hidden."

"Of course."

"No, not of course. You know that the moment the Formics are defeated, the I.F. will have no reason to exist. It will try to continue to exist in order to maintain international peace. But the League is not politically strong enough to survive in the nationalist winds that will blow. The I.F. will break into fragments, each following its own leader, and God help us if any part of the fleet ever should use its weapons against the surface of the Earth."

"You've been spending too much time reading the Apocalypse."

"I may not be one of the genius children in your school, but I see how the tides of opinion are flowing here on Earth. On the nets a demagogue named Demosthenes is inflaming the West about illegal and secret maneuvers by the Polemarch to give an advantage to the New Warsaw Pact, and the propaganda is even more virulent from Moscow, Baghdad, Buenos Aires, Beijing. There are a few rational voices, like Locke, but they're given lip service and then ignored. You and I can't do anything about the fact that world war will certainly come. But we *can* do our best to make sure these children don't become pawns in that game."

"The only way they won't be pawns is if they're players."

"You've been raising them. Surely you don't *fear* them. Give them their chance to play."

"Sister Carlotta all my work is aimed at preparing for the showdown with the Formics. At turning these children into brilliant, reliable commanders. I can't look beyond that mark."

"Don't *look*. Just leave the door open for their families, their nations to claim them."

"I can't think about that right now."

"Right now is the only time you'll have the power to do it."

"You overestimate me."

"You underestimate yourself."

\*\*\*

Dragon Army had only been practicing for a month when Wiggin came into the barracks only a few seconds after lights-on, brandishing a slip of paper. Battle orders. They would face Rabbit Army at 0700. And they'd do it without breakfast.

"I don't want anybody throwing up in the battleroom."

"Can we at least take a leak first?" asked Nikolai.

"No more than a decaliter," said Wiggin.

Everybody laughed, but they were also nervous. As a new army, with only a handful of veterans, they didn't actually expect to win, but they didn't want to be humiliated, either. They all had different ways of dealing with nerves -- some became silent, others talkative. Some joked and bantered, others turned surly. Some just lay back down on their bunks and closed their eyes.

Bean watched them. He tried to remember if the kids in Poke's crew ever did these things. And then realized: They were \*hungry\*, not afraid of being shamed. You don't get this kind of fear until you have enough to eat. So it was the bullies who felt like these kids, afraid of humiliation but not of going hungry. And sure enough, the bullies standing around in line showed all these attitudes. They were always performing, always aware of others watching them. Fearful they would have to fight; eager for it, too.

What do I feel?

What's wrong with me that I have to think about it to know?

Oh ... I'm just sitting here, watching. I'm one of \*those\*.

Bean pulled out his flash suit, but then realized he had to use the toilet before putting it on. He dropped down onto the deck and pulled his towel from its hook, wrapped it around himself. For a moment he flashed back to that night he had tossed his towel under a bunk and climbed into the ventilation system. He'd never fit now. Too thickly muscled, too tall. He was still the shortest kid in Battle School, and he doubted if anyone else would notice how he'd grown, but he was aware of how his arms and legs were longer. He could reach things more easily. Didn't have to jump so often just to do normal things like palming his way into the gym.

I've changed, thought Bean. My body, of course. But also the way I think.

Nikolai was still lying in bed with his pillow over his head. Everybody had his own way of coping.

The other kids were all using the toilets and getting drinks of water, but Bean was the only one who thought it was a good idea to shower. They used to tease him by asking if the water was still warm when it got all the way down there, but the joke was old now. What Bean wanted was the steam. The blindness of the fog around him, of the fogged mirrors, everything hidden, so he could be anyone, anywhere, any size.

Someday they'll all see me as I see myself. Larger than any of them. Head and shoulders above the rest, seeing farther, reaching farther, carrying burdens they could only dream of. In Rotterdam all I cared about was staying alive. But here, well fed, I've found out who I am. What I might be. \*They\* might think I'm an alien or a robot or something, just because I'm not genetically ordinary. But when I've done the great deeds of my life, they'll be proud to claim me as a human, furious at anyone who questions whether I'm truly one of them.

Greater than Wiggin.

He put the thought out of his mind, or tried to. This wasn't a competition. There was room for two great men in the world at the same time. Lee and Grant were contemporaries, fought against each other. Bismarck and Disraeli. Napoleon and Wellington.

No, that's not the comparison. It's \*Lincoln\* and Grant. Two great men working together.

It was disconcerting, though, to realize how rare that was. Napoleon could never bear to let any of his lieutenants have real authority. All victories had to be his alone. Who was the great man beside Augustus? Alexander? They had friends, they had rivals, but they never had partners.

That's why Wiggin has kept me down, even though he knows by now from the reports they give to army commanders that I've got a mind better than anybody else in Dragon. Because I'm too obviously a rival. Because I made it clear that first day that I intended to rise, and he's letting me know that it won't happen while I'm with his army.

Someone came into the bathroom. Bean couldn't see who it was because of the fog. Nobody greeted him. Everybody else must have finished here and gone back to get ready.

The newcomer walked through the fog past the opening in Bean's shower stall. It was Wiggin.

Bean just stood there, covered with soap. He felt like an idiot. He was in such a daze he had forgotten to rinse, was just standing in the fog, lost in his thoughts. Hurriedly he moved under the water again.

"Bean?"

"Sir?" Bean turned to face him. Wiggin was standing in the shower entrance.

"I thought I ordered everybody to get down to the gym."

Bean thought back. The scene unfolded in his mind. Yes, Wiggin *\*had\** ordered everybody to bring their flash suits to the gym.

"I'm sorry. I ... was thinking of something else ..."

"Everybody's nervous before their first battle."

Bean hated that. To have Wiggin see him doing something stupid. Not remembering an order -- Bean remembered *\*everything\**. It just hadn't registered. And now he was patronizing him. Everybody's nervous!

"*\*You\** weren't," said Bean.

Wiggin had already stepped away. He came back. "Wasn't I?"

"Bonzo Madrid gave you orders not to take your weapon out. You were supposed to just stay there like a dummy. You weren't nervous about doing *\*that\**."

"No," said Wiggin. "I was pissed."

"Better than nervous."

Wiggin started to leave. Then returned again. "Are *\*you\** pissed?"

"I did that before I showered," said Bean.

Wiggin laughed. Then his smile disappeared. "You're late, Bean, and you're still busy rinsing. I've already got your flash suit down in the gym. All we need now is your ass in it." Wiggin took Bean's towel off its hook. "I'll have this waiting for you down there, too. Now move."

Wiggin left.

Bean turned the water off, furious. That was completely unnecessary, and Wiggin knew it. Making him go through the corridor wet and naked during the time when other armies would be coming back from breakfast. That was low, and it was stupid.

Anything to put me down. Every chance he gets.

Bean, you idiot, you're still standing here. You could have run down to the gym and beaten him there. Instead, you're shooting your stupid self in the stupid foot. And why? None of this makes sense. None of this is going to help you. You want him to make you a toon leader, not think of you

with contempt. So why are you doing things to make yourself look stupid and young and scared and unreliable?

And still you're standing here, frozen.

I'm a coward.

The thought ran through Bean's mind and filled him with terror. But it wouldn't go away.

I'm one of those guys who freezes up or does completely irrational things when he's afraid. Who loses control and goes slack-minded and stupid.

But I didn't do that in Rotterdam. If I had, I'd be dead.

Or maybe I *did* do it. Maybe that's why I didn't call out to Poke and Achilles when I saw them there alone on the dock. He wouldn't have killed her if I'd been there to witness what happened. Instead I ran off until I realized the danger she was in. But why didn't I realize it before? Because I *did* realize it, just as I heard Wiggin tell us to meet in the gym. Realized it, understood it completely, but was too cowardly to act. Too afraid that something would go wrong.

And maybe that's what happened Achilles lay on the ground and I told Poke to kill him. I was wrong and she was right. Because *any* bully she caught that way would probably have held a grudge -- and might easily have acted on it immediately, killing her as soon as they let him up. Achilles was the likeliest one, maybe the only one that would agree to the arrangement Bean had thought up. There was no choice. But I got scared. Kill him, I said, because I wanted it to go away.

And still I'm standing here. The water is off. I'm dripping wet and cold. But I can't move.

Nikolai was standing in the bathroom doorway. "Too bad about your diarrhea," he said.

"What?"

"I told Ender about how you were up with diarrhea in the night. That's why you had to go to the bathroom. You were sick, but you didn't want to tell him because you didn't want to miss the first battle."

"I'm so scared I couldn't take a dump if I wanted to," said Bean.

"He gave me your towel. He said it was stupid of him to take it." Nikolai walked in and gave it to him. "He said he needs you in the battle, so he's glad you're toughing it out."

"He doesn't need me. He doesn't even want me."

"Come on, Bean," said Nikolai. "You can do this."

Bean toweled off. It felt good to be moving. Doing something.

"I think you're dry enough," said Nikolai.

Again, Bean realized he was simply drying and drying himself, over and over.

"Nikolai, what's wrong with me?"

"You're afraid that you'll turn out to be just a little kid. Well, here's a clue: You *are* a little kid."

"So are you."

"So it's OK to be really bad. Isn't that what you keep telling me?" Nikolai laughed. "Come on, if I can do it, bad as I am, so can you."

"Nikolai," said Bean.

"What now?"

"I really *do* have to crap."

"I sure hope you don't expect me to wipe your butt."

"If I don't come out in three minutes, come in after me."

Cold and sweating -- a combination he wouldn't have thought possible. Bean went into the toilet stall and closed the door. The pain in his abdomen was fierce. But he couldn't get his bowel to loosen up and let go.

What am I so *afraid* of?

Finally, his alimentary system triumphed over his nervous system. It felt like everything he'd ever eaten flooded out of him at once.

"Time's up," said Nikolai. "I'm coming in."

"At peril of your life," said Bean. "I'm done, I'm coming out."

Empty now, clean, and humiliated in front of his only real friend, Bean came out of the stall and wrapped his towel around him.

"Thanks for keeping me from being a liar," said Nikolai.

"What?"

"About your having diarrhea."

"For you I'd get dysentery."

"Now that's friendship."

By the time they got to the gym, everybody was already in their flash suits, ready to go. While Nikolai helped Bean get into his suit, Wiggin had the rest of them lie down on the mats and do relaxation exercises. Bean even had time to lie down for a couple of minutes before Wiggin had them get up. 0656. Four minutes to get to the battleroom. He was cutting it pretty fine.

As they ran along the corridor, Wiggin occasionally jumped up to touch the ceiling. Behind him, the rest of the army would jump up and touch the same spot when they reached it. Except the smaller ones. Bean, his heart still burning with humiliation and resentment and fear, did not try. You do that kind of thing when you belong with the group. And he didn't belong. After all his brilliance in class, the truth was out now. He was a coward. He didn't belong in the military at all. If he couldn't even risk playing a game, what would he be worth in combat? The real generals exposed themselves to enemy fire. Fearless, they had to be, an example of courage to their men.

Me, I freeze up, take long showers, and dump a week's rations into the head. Let's see them follow \*that\* example.

At the gate, Wiggin had time to line them up in toons, then remind them. "Which way is the enemy's gate?"

"Down!" they all answered.

Bean only mouthed the word. Down. Down down down.

What's the best way to get down off a goose?

What are you doing up on a goose in the first place, you fool!

The grey wall in front of them disappeared, and they could see into the battleroom. It was dim -- not dark, but so faintly lighted that the only way they could see the enemy gate was the light of Rabbit Army's flash suits pouring out of it.

Wiggin was in no hurry to get out of the gate. He stood there surveying the room, which was arranged in an open grid, with eight "stars" -- large cubes that served as obstacles, cover, and staging platforms -- distributed fairly evenly if randomly through the space.

Wiggin's first assignment was to C toon. Crazy Tom's toon. The toon Bean belonged to. Word was whispered down the file. "Ender says slide the wall." And then, "Tom says flash your legs and go in on your knees. South wall."

Silently they swung into the room, using the handholds to propel themselves along the ceiling to the east wall. "They're setting up their battle formation. All we want to do is cut them up a little, make them nervous, confused, because they don't know what to do with us. We're raiders. So we

shoot them up, then get behind that star. \*Don't\* get stuck out in the middle. And \*aim\*. Make every shot count."

Bean did everything mechanically. It was habit now to get in position, freeze his own legs, and then launch with his body oriented the right way. They'd done it hundreds of times. He did it exactly right; so did the other seven soldiers in the toon. Nobody was looking for anyone to fail. He was right where they expected him to be, doing his job.

They coasted along the wall, always within reach of a handhold. Their frozen legs were dark, blocking the lights of the rest of their flash suits until they were fairly close. Wiggin was doing something up near the gate to distract Rabbit Army's attention, so the surprise was pretty good.

As they got closer, Crazy Tom said, "Split and rebound to the star -- me north, you south."

It was a maneuver that Crazy Tom had practiced with his toon. It was the right time for it, too. It would confuse the enemy more to have two groups to shoot at, heading different directions.

They pulled up on handholds. Their bodies, of course, swung against the wall, and suddenly the lights of their flash suits were quite visible. Somebody in Rabbit saw them and gave the alarm.

But C was already moving, half the toon diagonally south, the other half north, and all angling downward toward the floor. Bean began firing; the enemy was also firing at him. He heard the low whine that said somebody's beam was on his suit, but he was twisting slowly, and far enough from the enemy that none of the beams was in one place long enough to do damage. In the meantime, he found that his arm tracked perfectly, not trembling at all. He had practiced this a lot, and he was good at it. A clean kill, not just an arm or leg.

He had time for a second before he hit the wall and had to rebound up to the rendezvous star. One more enemy hit before he got there, and then he snagged a handhold on the star and said, "Bean here."

"Lost three," said Crazy Tom. "But their formation's all gone to hell."

"What now?" said Dag.

They could tell from the shouting that the main battle was in progress. Bean was thinking back over what he had seen as he approached the star.

"They sent a dozen guys to this star to wipe us out," said Bean. "They'll come around the east and west sides."

They all looked at him like he was insane. How could he know this?

"We've got about one more second," said Bean.

"All south," said Crazy Tom.

They swung up to the south side of the star. There were no Rabbits on that face, but Crazy Tom immediately led them in an attack around to the west face. Sure enough, there were Rabbits there, caught in the act of attacking what they clearly thought of as the "back" of the star -- or, as Dragon Army was trained to think of it, the bottom. So to the Rabbits, the attack seemed to come from below, the direction they were least aware of. In moments, the six Rabbits on that face were frozen and drifting along below the star.

The other half of the attack force would see that and know what had happened.

"Top," said Crazy Tom.

To the enemy, that would be the front of the star -- the position most exposed to fire from the main formation. The last place they'd expect Tom's toon to go.

And once they were there, instead of continuing to attempt to engage the strike force coming against them, Crazy Tom had them shoot at the main Rabbit formation, or what was left of it -- mostly disorganized groups hiding behind stars and firing at Dragons coming down at them from several directions. The five of them in C toon had time to hit a couple of Rabbits each before the strike force found them again.

Without waiting for orders, Bean immediately launched away from the surface of the star so he could shoot downward at the strike force. This close, he was able to do four quick kills before the whining abruptly stopped and his suit went completely stiff and dark. The Rabbit who got him wasn't one of the strike force -- it was somebody from the main force above him. And to his satisfaction, Bean could see that because of his firing, only one soldier from C toon was hit by the strike force sent against them. Then he rotated out of view.

It didn't matter now. He was out. But he had done well. Seven kills that he was sure of, maybe more. And it was more than his personal score. He had come up with the information Crazy Tom needed in order to make a good tactical decision, and then he had taken the bold action that kept the strike force from causing too many casualties. As a result, C toon remained in position to strike at the enemy from behind. Without any place to hide, Rabbit would be wiped out in moments. And Bean was part of it.

I didn't freeze once we got into action. I did what I was trained to do, and I stayed alert, and I thought of things. I can probably do better, move faster, see more. But for a first battle, I did fine. I can do this.

Because C toon was crucial to the victory, Wiggin used the other four toon leaders to press their helmets to the corners of the enemy gate, and gave Crazy Tom the honor of passing through the gate, which is what formally ended the game, bringing the lights on bright.

Major Anderson himself came in to congratulate the winning commander and supervise cleanup. Wiggin quickly unfroze the casualties. Bean was relieved when his suit could move again. Using his hook, Wiggin drew them all together and formed his soldiers into their five toons before he

began unfreezing Rabbit Army. They stood at attention in the air, their feet pointed down, their heads up -- and as Rabbit unfroze, they gradually oriented themselves in the same direction. They had no way of knowing it, but to Dragon, that was when victory became complete -- for the enemy was now oriented as if their \*own\* gate was down.

\*\*\*

Bean and Nikolai were already eating breakfast when Crazy Tom came to their table. "Ender says instead of fifteen minutes for breakfast, we have till 0745. And he'll let us out of practice in time to shower."

That was good news. They could slow down their eating.

Not that it mattered to Bean. His tray had little food on it, and he finished it immediately. Once he was in Dragon Army, Crazy Tom had caught him giving away food. Bean told him that he was always given too much, and Tom took the matter to Ender, and Ender got the nutritionists to stop overfeeding Bean. Today was the first time Bean ever wished for more. And that was only because he was so up from the battle.

"Smart," said Nikolai.

"What?"

"Ender tells us we've got fifteen minutes to eat, which feels rushed and we don't like it. Then right away he sends around the toon leaders, telling us we have till 0745. That's only ten minutes longer, but now it feels like forever. And a shower -- we're supposed to be able to shower right after the game, but now we're grateful."

"\*And\* he gave the toon leaders the chance to bring good news," said Bean.

"Is that important?" asked Nikolai. "We know it was Ender's choice."

"Most commanders make sure all good news comes from them," said Bean, "and bad news from the toon leaders. But Wiggin's whole technique is building up his toon leaders. Crazy Tom went in there with nothing more than his training and his brains and a single objective -- strike first from the wall and get behind them. All the rest was up to him."

"Yeah, but if his toon leaders screw up, it looks bad on Ender's record," said Nikolai.

Bean shook his head. "The point is that in his very first battle, Wiggin divided his force for tactical effect, and C toon was able to continue attacking even after we ran out of plans, because Crazy Tom was really, truly in charge of us. We didn't sit around wondering what Wiggin wanted us to do."

Nikolai got it, and nodded. "Bacana. That's right."

"Completely right," said Bean. By now everybody at the table was listening. "And that's because Wiggin isn't just thinking about Battle School and standings and merda like that. He keeps watching vids of the Second Invasion, did you know that? He's thinking about how to beat the \*Buggers\*. And he knows that the way you do that is to have as many commanders ready to fight them as you can get. Wiggin doesn't want to come out of this with Wiggin as the only commander ready to fight the Buggers. He wants to come out of this with him \*and\* the toon leaders \*and\* the seconds \*and\* if he can do it every single one of his soldiers ready to command a fleet against the Buggers if we have to."

Bean knew his enthusiasm was probably giving Wiggin credit for more than he had actually planned, but he was still full of the glow of victory. And besides, what he was saying was true -- Wiggin was no Napoleon, holding on to the reins of control so tightly that none of his commanders was capable of brilliant independent command. Crazy Tom had performed well under pressure. He had made the right decisions -- including the decision to listen to his smallest, most useless-looking soldier. And Crazy Tom had done that because Wiggin had set the example by listening to his toon leaders. You learn, you analyze, you choose, you act.

After breakfast, as they headed for practice, Nikolai asked him, "Why do you call him Wiggin?"

"Cause we're not friends," said Bean.

"Oh, so it's Mr. Wiggin and Mr. Bean, is that it?"

"No. \*Bean\* is my first name."

"Oh. So it's Mr. Wiggin and Who The Hell Are You."

"Got it."

\*\*\*

Everybody expected to have at least a week to strut around and brag about their perfect won-lost record. Instead, the next morning at 0630, Wiggin appeared in the barracks, again brandishing battle orders. "Gentlemen, I hope you learned something yesterday, because today we're going to do it again."

All were surprised, and some were angry -- it wasn't fair, they weren't ready. Wiggin just handed the orders to Fly Molo, who had just been heading out for breakfast. "Flash suits!" cried Fly, who clearly thought it was a cool thing to be the first army ever to fight two in a row like this.

But Hot Soup, the leader of D toon, had another attitude. "Why didn't you tell us earlier?"

"I thought you needed the shower," said Wiggin. "Yesterday Rabbit Army claimed we only won because the stink knocked them out."

Everybody within earshot laughed. But Bean was not amused. He knew that the paper hadn't been there first thing, when Wiggin woke up. The teachers planted it late. "Didn't find the paper till you got back from the showers, right?"

Wiggin gave him a blank look. "Of course. I'm not as close to the floor as you."

The contempt in his voice struck Bean like a blow. Only then did he realize that Wiggin had taken his question as a criticism -- that Wiggin had been inattentive and hadn't \*noticed\* the orders. So now there was one more mark against Bean in Wiggin's mental dossier. But Bean couldn't let that upset him. It's not as if Wiggin didn't have him tagged as a coward. Maybe Crazy Tom told Wiggin about how Bean contributed to the victory yesterday, and maybe not. It wouldn't change what Wiggin had seen with his own eyes -- Bean malingering in the shower. And now Bean apparently taunting him for making them all have to rush for their second battle. Maybe I'll be made toon leader on my thirtieth birthday. And then only if everybody else is drowned in a boat accident.

Wiggin was still talking, of course, explaining how they should expect battles any time, the old rules were coming apart. "I can't pretend I like the way they're screwing around with us, but I do like one thing -- that I've got an army that can handle it."

As he put on his flash suit, Bean thought through the implications of what the teachers were doing. They were pushing Wiggin faster and also making it harder for him. And this was only the beginning. Just the first few sprinkles of a snotstorm.

Why? Not because Wiggin was so good he needed the testing. On the contrary -- Wiggin was training his army well, and the Battle School would only benefit from giving him plenty of time to do it. So it had to be something outside Battle School.

Only one possibility, really. The Bugger invaders were getting close. Only a few years away. They had to get Wiggin through training.

Wiggin. Not all of us, just Wiggin. Because if it were everybody, then everybody's schedule would be stepped up like this. Not just ours.

So it's already too late for me. Wiggin's the one they've chosen to rest their hopes on. Whether I'm toon leader or not will never matter. All that matters is: Will Wiggin be ready?

If Wiggin succeeds, there'll still be room for me to achieve greatness in the aftermath. The League will come apart. There'll be war among humans. Either I'll be used by the I.F. to help keep the peace, or maybe I can get into some army on Earth. I've got plenty of life ahead of me. Unless Wiggin commands our fleet against the invading Buggers and loses. Then none of us has any life at all.

All I can do right now is my best to help Wiggin learn everything he can learn here. The trouble is, I'm not close enough to him for me to have any effect on him at all.

The battle was with Petra Arkanian, commander of Phoenix Army. Petra was sharper than Carn Carby had been; she also had the advantage of hearing how Wiggin worked entirely without formations and used little raiding parties to disrupt formations ahead of the main combat. Still, Dragon finished with only three soldiers flashed and nine partially disabled. A crushing defeat. Bean could see that Petra didn't like it, either. She probably felt like Wiggin had poured it on, deliberately setting her up for humiliation. But she'd get it, soon enough -- Wiggin simply turned his toon leaders loose, and each of them pursued total victory, as he had trained them. Their system worked better, that's all, and the old way of doing battle was doomed.

Soon enough, all the other commanders would start adapting, learning from what Wiggin did. Soon enough, Dragon Army would be facing armies that were divided into five toons, not four, and that moved in a free-ranging style with a lot more discretion given to the toon leaders. The kids didn't get to Battle School because they were idiots. The only reason the techniques worked a second time was because there'd only been a day since the first battle, and nobody expected to have to face Wiggin again so soon. Now they'd know that changes would have to be made fast. Bean guessed that they'd probably never see another formation.

What then? Had Wiggin emptied his magazine, or would he have new tricks up his sleeve? The trouble was, innovation never resulted in victory over the long term. It was too easy for the enemy to imitate and improve on your innovations. The real test for Wiggin would be what he did when he was faced with slugfests between armies using similar tactics.

And the real test for me will be seeing if I can stand it when Wiggin makes some stupid mistake and I have to sit here as an ordinary soldier and watch him do it.

The third day, another battle. The fourth day, another. Victory. Victory. But each time, the score was closer. Each time, Bean gained more confidence as a soldier -- and became more frustrated that the most he could contribute, beyond his own good aim, was occasionally making a suggestion to Crazy Tom, or reminding him of something Bean had noticed and remembered.

Bean wrote to Dimak about it, explaining how he was being underused and suggesting that he would be getting better trained by working with a worse commander, where he'd have a better chance of getting his own toon.

The answer was short. "Who else would want you? Learn from Ender."

Brutal but true. No doubt even Wiggin didn't really want him. Either he was forbidden to transfer any of his soldiers, or he had tried to trade Bean away and no one would take him.

\*\*\*

It was free time of the evening after their fourth battle. Most of the others were trying to keep up with their classwork -- the battles were really taking it out of them, especially because they could all see that they needed to practice hard to stay ahead. Bean, though, coasted through classwork like always, and when Nikolai told him he didn't need any more damned help with his assignments, Bean decided that he should take a walk.

Passing Wiggin's quarters -- a space even smaller than the cramped quarters the teachers had, just space for a bunk, one chair, and a tiny table -- Bean was tempted to knock on the door and sit down and have it out with Wiggin once and for all. Then common sense prevailed over frustration and vanity, and Bean wandered until he came to the arcade.

It wasn't as full as it used to be. Bean figured that was because everyone was holding extra practices now, trying to implement whatever they thought it was Wiggin was doing before they actually had to face him in battle. Still, a few were still willing to fiddle with the controllers and make things move on screens or in holodisplays.

Bean found a flat-screen game that had, as its hero, a mouse. No one was using it, so Bean started maneuvering it through a maze. Quickly the maze gave way to the wallspaces and crawlspaces of an old house, with traps set here and there, easy stuff. Cats chased him -- ho hum. He jumped up onto a table and found himself face to face with a giant.

A giant who offered him a drink.

This was the fantasy game. This was the psychological game that everybody else played on their desks all the time. No wonder no one was playing it here. They all recognized it and that wasn't the game they came here to play.

Bean was well aware that he was the only kid in the school who had never played the fantasy game. They had tricked him into playing this once, but he doubted that anything important could be learned from what he had done so far. So screw 'em. They could trick him into playing up to a point, but he didn't have to go further.

Except that the giant's face had changed. It was Achilles.

Bean stood there in shock for a moment. Frozen, frightened. How did they know? Why did they do it? To put him face-to-face with Achilles, by surprise like that. Those bastards.

He walked away from the game.

Moments later, he turned around and came back. The giant was no longer on the screen. The mouse was running around again, trying to get out of the maze.

No, I won't play. Achilles is far away and he does not have the power to hurt me. Or Poke either, not anymore. I don't have to think about him and I sure as hell don't have to drink anything he offers me.

Bean walked away again, and this time did not come back.

He found himself down by the mess. It had just closed, but Bean had nothing better to do, so he sat down in the corridor beside the mess hall door and rested his forehead on his knees and thought about Rotterdam and sitting on top of a garbage can watching Poke working with her crew and how

she was the most decent crew boss he'd seen, the way she listened to the little kids and gave them a fair share and kept them alive even if it meant not eating so much herself and that's why he chose her, because she had mercy-mercy enough that she just might listen to a child.

Her mercy killed her.

\*I\* killed her when I chose her.

There better be a God. So he can damn Achilles to hell forever.

Someone kicked at his foot.

"Go away," said Bean, "I'm not bothering you."

Whoever it was kicked again, knocking Bean's feet out from under him. With his hands he caught himself from falling over. He looked up. Bonzo Madrid loomed over him.

"I understand you're the littlest dingleberry clinging to the butt hairs of Dragon Army," said Bonzo.

He had three other guys with him. Big guys. They all had bully faces.

"Hi, Bonzo."

"We need to talk, pinprick."

"What is this, espionage?" asked Bean. "You're not supposed to talk to soldiers in other armies."

"I don't need espionage to find out how to beat Dragon Army," said Bonzo.

"So you're just looking for the littlest Dragon soldiers wherever you can find them, and then you'll push them around a little till they cry?"

Bonzo's face showed his anger. Not that it didn't always show anger.

"Are you begging to eat out of your own asshole, pinprick?"

Bean didn't like bullies right now. And since, at the moment, he felt guilty of murdering Poke, he didn't really care if Bonzo Madrid ended up being the one to administer the death penalty. It was time to speak his mind.

"You're at least three times my weight," said Bean, "except inside your skull. You're a second-rater who somehow got an army and never could figure out what to do with it. Wiggin is going to grind you into the ground and he isn't even going to have to try. So does it really matter what you do to me? I'm the smallest and weakest soldier in the whole school. Naturally \*I'm\* the one you choose to kick around."

"Yeah, the smallest and weakest," said one of the other kids.

Bonzo didn't say anything, though. Bean's words had stung. Bonzo had his pride, and he knew now that if he harmed Bean it would be a humiliation, not a pleasure.

"Ender Wiggin isn't going to beat me with that collection of launchies and rejects that he calls an army. He may have psyched out a bunch of dorks like Carn and ... \*Petra\*." He spat her name. "But whenever \*we\* find crap my army can pound it flat."

Bean affixed him with his most withering glare. "Don't you get it, Bonzo? The teachers have picked Wiggin. He's the best. The best ever. They didn't give him the worst army. They gave him the \*best\* army. Those veterans you call rejects -- they were soldiers so good that the \*stupid\* commanders couldn't get along with them and tried to transfer them away. Wiggin knows how to use good soldiers, even if you don't. That's why Wiggin is winning. He's smarter than you. And his soldiers are all smarter than your soldiers. The deck is stacked against you, Bonzo. You might as well give up now. When your pathetic little Salamander Army faces us, you'll be so whipped you'll have to pee sitting down."

Bean might have said more -- it's not like he had a plan, and there was certainly a lot more he could have said -- but he was interrupted. Two of Bonzo's friends scooped him up and held him high against the wall, higher than their own heads. Bonzo put one hand around his throat, just under his jaw, and pressed back. The others let go. Bean was hanging by his neck, and he couldn't breathe. Reflexively he kicked, struggling to get some purchase with his feet. But long-armed Bonzo was too far away for any of Bean's kicking to land on him.

"The game is one thing," Bonzo said quietly. "The teachers can rig that and give it to their little Wiggin catamite. But there'll come a time when it isn't a game. And when that time comes, it won't be a frozen flash suit that makes it so Wiggin can't move. Comprendes?"

What answer was he hoping for? It was a sure thing Bean couldn't nod or speak.

Bonzo just stood there, smiling maliciously, as Bean struggled.

Everything started turning black around the edges of Bean's vision before Bonzo finally let him drop to the floor. He lay there, coughing and gasping.

What have I done? I goaded Bonzo Madrid. A bully with none of Achilles's subtlety. When Wiggin beats him, Bonzo isn't going to take it. He won't stop with a demonstration, either. His hatred for Wiggin runs deep.

As soon as he could breathe again, Bean headed back to the barracks. Nikolai noticed the marks on his neck at once. "Who was choking you?"

"I don't know," said Bean.

"Don't give me that," said Nikolai. "He was facing you, look at the fingermarks."

"I don't remember."

"You remember the pattern of arteries on your own placenta."

"I'm not going to tell you," said Bean. To that, Nikolai had no answer, though he didn't like it.

Bean signed on as ^Graff and wrote a note to Dimak, even though he knew it would do no good.

"Bonzo is insane. He could kill somebody, and Wiggin's the one he hates the most."

The answer came back quickly, almost as if Dimak had been waiting for the message. "Clean up your own messes. Don't go crying to mama."

The words stung. It wasn't Bean's mess, it was Wiggin's. And, ultimately, the teachers', for having put Wiggin in Bonzo's army to begin with. And then to taunt him because he didn't have a mother - when did the teachers become the enemy here? They were supposed to protect us from crazy kids like Bonzo Madrid. How do they think I'm going to clean this mess up?

The only thing that will stop Bonzo Madrid is to kill him.

And then Bean remembered standing there looking down at Achilles, saying, "You got to kill him."

Why couldn't I have kept my mouth shut? Why did I have to goad Bonzo Madrid? Wiggin is going to end up like Poke. And it will be my fault again.

## CHAPTER 16 -- COMPANION

"So you see, Anton, the key you found has been turned, and it may be the salvation of the human race."

"But the poor boy. To live his life so small, and then die as a giant."

"Perhaps he'll be ... amused at the irony."

"How strange to think that my little key might turn out to be the salvation of the human race. From the invading beasts, anyway. Who will save us when we become our own enemy again?"

"We are not enemies, you and I."

"Not many people are enemies to anyone. But the ones full of greed or hate, pride or fear -- their passion is strong enough to lever all the world into war."

"If God can raise up a great soul to save us from one menace, might he not answer our prayers by raising up another when we need him?"

"But Sister Carlotta, you know the boy you speak of was not raised up by God. He was created by a kidnapper, a baby-killer, an outlaw scientist."

"Do you know why Satan is so angry all the time? Because whenever he works a particularly clever bit of mischief, God uses it to serve his own righteous purposes."

"So God uses wicked people as his tools."

"God gives us the freedom to do great evil, if we choose. Then he uses his own freedom to create goodness out of that evil, for that is what he chooses."

"So in the long run, God always wins."

"Yes."

"In the short run, though, it *can* be uncomfortable."

"And when, in the past, would you have preferred to die, instead of being alive here today?"

"There it is. We get used to everything. We find hope in anything."

"That's why I've never understood suicide. Even those suffering from great depression or guilt -- don't they feel Christ the Comforter in their hearts, giving them hope?"

"You're asking me?"

"God not being convenient, I ask a fellow mortal."

"In my view, suicide is not really the wish for life to end."

"What is it, then?"

"It is the only way a powerless person can find to make everybody else look away from his shame. The wish is not to die, but to hide."

"As Adam and Eve hid from the Lord."

"Because they were naked."

"If only Such sad people could remember: Everyone is naked. Everyone wants to hide. But life is still sweet. Let it go on."

"You don't believe that the Formics are the beast of the Apocalypse, then, Sister?"

"No, Anton. I believe they are also children of God."

"And yet you found this boy specifically so he could grow up to destroy them."

"\*Defeat\* them. Besides, if God does not want them to die, they will not die."

"And if God wants \*us\* to die, we will. Why do you work so hard, then?"

"Because these hands of mine, I gave them to God, and I serve him as best I can. If he had not wanted me to find Bean, I would not have found him."

"And if God wants the Formics to prevail?"

"He'll find some other hands to do it. For that job, he can't have mine."

\*\*\*

Lately, while the toon leaders drilled the soldiers, Wiggin had taken to disappearing. Bean used his ^Graff log-on to find what he was doing. He'd gone back to studying the vids of Mazer Rackham's victory, much more intensely and single-mindedly than ever before. And this time, because Wiggin's army was playing games daily and winning them all, the other commanders and many toon leaders and common soldiers as well began to go to the library and watch the same vids, trying to make sense of them, trying to see what Wiggin saw.

Stupid, thought Bean. Wiggin isn't looking for anything to use here in Battle School -- he's created a powerful, versatile army and he'll figure out what to do with them on the spot. He's studying those vids in order to figure out how to beat the Buggers. Because he knows now: He will face them someday. The teachers would not be wrecking the whole system here in Battle School if they were not nearing the crisis, if they did not need Ender Wiggin to save us from the invading Buggers. So Wiggin studies the Buggers, desperate for some idea of what they want, how they fight, how they die.

Why don't the teachers see that Wiggin is done? He's not even thinking about Battle School anymore. They should take him out of here and move him into Tactical School, or whatever the next stage of his training will be. Instead, they're pushing him, making him tired.

Us too. We're tired.

Bean saw it especially in Nikolai, who was working harder than the others just to keep up. If we were an ordinary army, thought Bean, most of us would be like Nikolai. As it is, many of us are -- Nikolai was not the first to show his weariness. Soldiers drop silverware or food trays at mealtimes. At least one has wet his bed. We argue more at practice. Our classwork is suffering. Everyone has limits. Even me, even genetically-altered Bean the thinking machine, I need time to relubricate and refuel, and I'm not getting it.

Bean even wrote to Colonel Graff about it, a snippy little note saying only, "It is one thing to train soldiers and quite another to wear them out." He got no reply.

Late afternoon, with a half hour before mess call. They had already won a game that morning and then practiced after class, though the toon leaders, at Wiggin's suggestion, had let their soldiers go early. Most of Dragon Army was now dressing after showers, though some had already gone on to kill time in the game room or the video room ... or the library. Nobody was paying attention to classwork now, but a few still went through the motions.

Wiggin appeared in the doorway, brandishing the new orders.

A second battle on the \*same day\*.

"This one's hot and there's no time," said Wiggin. "They gave Bonzo notice about twenty minutes ago, and by the time we get to the door they'll have been inside for a good five minutes at least."

He sent the four soldiers nearest the door -- all young, but not launches anymore, they were veterans now -- to bring back the ones who had left. Bean dressed quickly -- he had learned how to do it by himself now, but not without hearing plenty of jokes about how he was the only soldier who had to practice getting dressed, and it was still slow.

As they dressed, there was plenty of complaining about how this was getting stupid, Dragon Army should have a break now and then. Fly Molo was the loudest, but even Crazy Tom, who usually laughed at everything, was pissed about it. When Tom said, "Same day nobody ever do two battles!" Wiggin answered, "Nobody ever beat Dragon Army, either. This be your big chance to lose?"

Of course not. Nobody intended to lose. They just wanted to complain about it.

It took a while, but finally they were gathered in the corridor to the battleroom. The gate was already open. A few of the last arrivals were still putting on their flash suits. Bean was right behind Crazy Tom, so he could see down into the room. Bright light. No stars, no grid, no hiding place of any kind. The enemy gate was open, and yet there was not a Salamander soldier to be seen.

"My heart," said Crazy Tom. "They haven't come out yet, either."

Bean rolled his eyes. Of course they were out. But in a room without cover, they had simply formed themselves up on the ceiling, gathered around Dragon Army's gate, ready to destroy everybody as they came out.

Wiggin caught Bean's facial expression and smiled as he covered his own mouth to signal them all to be silent. He pointed all around the gate, to let them know where Salamander was gathered, then motioned for them to move back.

The strategy was simple and obvious. Since Bonzo Madrid had kindly pinned his army against a wall, ready to be slaughtered, it only remained to find the right way to enter the battleroom and carry out the massacre.

Wiggin's solution -- which Bean liked -- was to transform the larger soldiers into armored vehicles by having them kneel upright and freeze their legs. Then a smaller soldier knelt on each big kid's calves, wrapped one arm around the bigger soldier's waist, and prepared to fire. The largest soldiers were used as launchers, throwing each pair into the battleroom.

For once being small had its advantages. Bean and Crazy Tom were the pair Wiggin used to demonstrate what he wanted them all to do. As a result, when the first two pairs were thrown into the room, Bean got to begin the slaughter. He had three kills almost at once -- at such close range, the beam was tight and the kills came fast. And as they began to go out of range, Bean climbed around Crazy Tom and launched off of him, heading east and somewhat up while Tom went even faster toward the far side of the room. When other Dragons saw how Bean had managed to stay within firing range, while moving sideways and therefore remaining hard to hit, many of them did the same. Eventually Bean was disabled, but it hardly mattered -- Salamander was wiped out to the last man, and without a single one of them getting off the wall. Even when it was obvious they were easy, stationary targets, Bonzo didn't catch on that he was doomed until he himself was already frozen, and nobody else had the initiative to countermand his original order and start moving so they wouldn't be so easy to hit. Just one more example of why a commander who ruled by fear and made all the decisions himself would always be beaten, sooner or later.

The whole battle had taken less than a full minute from the time Bean rode Crazy Tom through the door until the last Salamander was frozen.

What surprised Bean was that Wiggin, usually so calm, was pissed off and showing it. Major Anderson didn't even have a chance to give the official congratulations to the victor before Wiggin shouted at him, "I thought you were going to put us against an army that could match us in a fair fight."

Why would he think that? Wiggin must have had some kind of conversation with Anderson, must have been promised something that hadn't been delivered.

But Anderson explained nothing. "Congratulations on the victory, commander."

Wiggin wasn't going to have it. It wasn't going to be business as usual. He turned to his army and called out to Bean by name. "If you had commanded Salamander Army, what would you have done?"

Since another Dragon had used him to shove off in midair, Bean was now drifting down near the enemy gate, but he heard the question -- Wiggin wasn't being subtle about this. Bean didn't want to answer, because he knew what a serious mistake this was, to speak slightingly of Salamander and call on the smallest Dragon soldier to correct Bonzo's stupid tactics. Wiggin hadn't had Bonzo's hand around his throat the way Bean had. Still, Wiggin was commander, and Bonzo's tactics had been stupid, and it was fun to say so.

"Keep a shifting pattern of movement going in front of the door," Bean answered, loudly, so every soldier could hear him -- even the Salamanders, still clinging to the ceiling. "You never hold still when the enemy knows exactly where you are."

Wiggin turned to Anderson again. "As long as you're cheating, why don't you train the other army to cheat intelligently!"

Anderson was still calm, ignoring Wiggin's outburst. "I suggest that you remobilize your army."

Wiggin wasn't wasting time with rituals today. He pressed the buttons to thaw both armies at once. And instead of forming up to receive formal surrender, he shouted at once, "Dragon Army dismissed!"

Bean was one of those nearest the gate, but he waited till nearly last, so that he and Wiggin left together. "Sir," said Bean. "You just humiliated Bonzo and he's --"

"I know," said Wiggin. He jogged away from Bean, not wanting to hear about it.

"He's dangerous!" Bean called after him. Wasted effort. Either Wiggin already knew he'd provoked the wrong bully, or he didn't care.

Did he do it deliberately? Wiggin was always in control of himself, always carrying out a plan. But Bean couldn't think of any plan that required yelling at Major Anderson and shaming Bonzo Madrid in front of his whole army.

Why would Wiggin do such a stupid thing?

\*\*\*

It was almost impossible to think of geometry, even though there was a test tomorrow. Classwork was utterly unimportant now, and yet they went on taking the tests and turning in or failing to turn in their assignments. The last few days, Bean had begun to get less-than-perfect scores. Not that he didn't know the answers, or at least how to figure them out. It's that his mind kept wandering to things that mattered more -- new tactics that might surprise an enemy; new tricks that the teachers might pull in the way they set things up; what might be, must be going on in the larger war, to cause the system to start breaking apart like this; what would happen on Earth and in the I.F. once the Buggers were defeated. If they were defeated. Hard to care about volumes, areas, faces, and dimensions of solids. On a test yesterday, working out problems of gravity near planetary and stellar masses, Bean finally gave up and wrote:

$2 + 2 = \pi \cdot \sqrt{2+n}$  : When you know the value of n, I'll finish this test.

He knew that the teachers all knew what was going on, and if they wanted to pretend that classwork still mattered, fine, let them, but he didn't have to play.

At the same time, he knew that the problems of gravity mattered to someone whose only likely future was in the International Fleet. He also needed a thorough grounding in geometry, since he had a pretty good idea of what math was yet to come. He wasn't going to be an engineer or artilleryman or rocket scientist or even, in all likelihood, a pilot. But he had to know what they knew better than they knew it, or they'd never respect him enough to follow him.

Not tonight, that's all, thought Bean. Tonight I can rest. Tomorrow I'll learn what I need to learn. When I'm not so tired.

He closed his eyes.

He opened them again. He opened his locker and took out his desk.

Back on the streets of Rotterdam he had been tired, worn out by hunger and malnutrition and despair. But he kept watching. Kept thinking. And therefore he was able to stay alive. In this army everyone was getting tired, which meant that there would be more and more stupid mistakes. Bean, of all of them, could least afford to become stupid. Not being stupid was the only asset he had.

He signed on. A message appeared in his display.

See me at once -- Ender

It was only ten minutes before lights out. Maybe Wiggin sent the message three hours ago. But better late than never. He slid off his bunk, not bothering with shoes, and padded out into the corridor in his stocking feet. He knocked at the door marked

COMMANDER

DRAGON ARMY

"Come in," said Wiggin.

Bean opened the door and came inside. Wiggin looked tired in the way that Colonel Graff usually looked tired. Heavy skin around the eyes, face slack, hunched in the shoulders, but eyes still bright and fierce, watching, thinking. "Just saw your message," said Bean.

"Fine."

"It's near lights-out."

"I'll help you find your way in the dark."

The sarcasm surprised Bean. As usual, Wiggin had completely misunderstood the purpose of Bean's comment. "I just didn't know if you knew what time it was --"

"I always know what time it is."

Bean sighed inwardly. It never failed. Whenever he had any conversation with Wiggin, it turned into some kind of pissing contest, which Bean always lost even when it was Wiggin whose deliberate misunderstanding caused the whole thing. Bean hated it. He recognized Wiggin's genius and honored him for it. Why couldn't he see anything good in Bean?

But Bean said nothing. There was nothing he could say that would improve the situation. Wiggin had called him in. Let Wiggin move the meeting forward.

"Remember four weeks ago, Bean? When you told me to make you a toon leader?"

"Eh."

"I've made five toon leaders and five assistants since then. And none of them was you." Wiggin raised his eyebrows. "Was I right?"

"Yes, sir." But only because you didn't bother to give me a chance to prove myself before you made the assignments.

"So tell me how you've done in these eight battles."

Bean wanted to point out how time after time, his suggestions to Crazy Tom had made C toon the most effective in the army. How his tactical innovations and creative responses to flowing situations had been imitated by the other soldiers. But that would be brag and borderline insubordination. It wasn't what a soldier who wanted to be an officer would say. Either Crazy Tom had reported Bean's contribution or he hadn't. It wasn't Bean's place to report on anything about himself that wasn't public record. "Today was the first time they disabled me so early, but the computer listed me as getting eleven hits before I had to stop. "I've never had less than five hits in a battle. I've also completed every assignment I've been given."

"Why did they make you a soldier so young, Bean?"

"No younger than you were." Technically not true, but close enough.

"But why?"

What was he getting at? It was the teachers' decision. Had he found out that Bean was the one who composed the roster? Did he know that Bean had chosen himself? "I don't know."

"Yes you do, and so do I."

No, Wiggin wasn't asking specifically about why \*Bean\* was made a soldier. He was asking why launchies were suddenly getting promoted so young. "I've tried to guess, but they're just guesses." Not that Bean's guesses were ever just guesses -- but then, neither were Wiggin's. "You're -- very good. They knew that, they pushed you ahead --"

"Tell me \*why\*, Bean."

And now Bean understood the question he was really asking. "Because they need us, that's why." He sat on the floor and looked, not into Wiggin's face, but at his feet. Bean knew things that he wasn't supposed to know. That the teachers didn't know he knew. And in all likelihood, there were teachers monitoring this conversation. Bean couldn't let his face give away how much he really understood. "Because they need somebody to beat the Buggers. That's the only thing they care about."

"It's important that you know that, Bean."

Bean wanted to demand, Why is it important that \*I\* know it? Or are you just saying that people in general should know it? Have you finally seen and understood who I am? That I'm \*you\*, only smarter and less likable, the better strategist but the weaker commander? That if you fail, if you break, if you get sick and die, then I'm the one? Is that why I need to know this?

"Because," Wiggin went on, "most of the boys in this school think the game is important \*for itself\*, but it isn't. It's only important because it helps them find kids who might grow up to be real commanders, in the real war. But as for the game, screw that. That's what they're doing. Screwing up the game."

"Funny," said Bean. "I thought they were just doing it to us." No, if Wiggin thought Bean needed to have this explained to him, he did \*not\* understand who Bean really was. Still, it was Bean in Wiggin's quarters, having this conversation with him. That was something.

"A game nine weeks earlier than it should have come. A game every day. And now two games in the same day. Bean, I don't know what the teachers are doing, but my army is getting tired, and I'm getting tired, and they don't care at all about the rules of the game. I've pulled the old charts up from the computer. No one has ever destroyed so many enemies and kept so many of his own soldiers whole in the history of the game."

What was this, brag? Bean answered as brag was meant to be answered. "You're the best, Ender."

Wiggin shook his head. If he heard the irony in Bean's voice, he didn't respond to it. "Maybe. But it was no accident that I got the soldiers I got. Launchies, rejects from other armies, but put them together and my worst soldier could be a toon leader in another army. They've loaded things my way, but now they're loading it all against me. Bean, they want to break us down."

So Wiggin did understand how his army had been selected, even if he didn't know who had done the selecting. Or maybe he knew everything, and this was all that he cared to show Bean at this time. It was hard to guess how much of what Wiggin did was calculated and how much merely intuitive. "They can't break you."

"You'd be surprised." Wiggin breathed sharply, suddenly, as if there were a stab of pain, or he had to catch a sudden breath in a wind; Bean looked at him and realized that the impossible was happening. Far from baiting him, Ender Wiggin was actually confiding in him. Not much. But a

little. Ender was letting Bean see that he was human. Bringing him into the inner circle. Making him ... what? A counselor? A confidant?

"Maybe you'll be surprised," said Bean.

"There's a limit to how many clever new ideas I can come up with every day. Somebody's going to come up with something to throw at me that I haven't thought of before, and I won't be ready."

"What's the worst that could happen?" asked Bean. "You lose one game."

"Yes. That's the worst that could happen. I can't lose *\*any\** games. Because if I lose *\*any\** ..."

He didn't complete the thought. Bean wondered what Ender imagined the consequences would be. Merely that the legend of Ender Wiggin, perfect soldier, would be lost? Or that his army would lose confidence in him, or in their own invincibility? Or was this about the larger war, and losing a game here in Battle School might shake the confidence of the teachers that Ender was the commander of the future, the one to lead the fleet, if he could be made ready before the Bugger invasion arrived?

Again, Bean did not know how much the teachers knew about what Bean had guessed about the progress of the wider war. Better to keep silence.

"I need you to be clever, Bean," said Ender. "I need you to think of solutions to problems we haven't seen yet. I want you to try things that no one has ever tried because they're absolutely stupid."

So what is this about, Ender? What have you decided about me, that brings me into your quarters tonight? "Why me?"

"Because even though there are some better soldiers than you in Dragon Army -- not many, but some -- there's nobody who can think better and faster than you."

He *\*had\** seen. And after a month of frustration, Bean realized that it was better this way. Ender had seen his work in battle, had judged him by what he did, not by his reputation in classes or the rumors about his having the highest scores in the history of the school. Bean had earned this evaluation, and it had been given him by the only person in this school whose high opinion Bean longed for.

Ender held out his desk for Bean to see. On it were twelve names. Two or three soldiers from each toon. Bean immediately knew how Ender had chosen them. They were all good soldiers, confident and reliable. But not the flashy ones, the stunts, the show-offs. They were, in fact, the ones that Bean valued most highly among those who were not toon leaders. "Choose five of these," said Ender. "One from each toon. They're a special squad, and you'll train them. Only during the extra practice sessions. Talk to me about what you're training them to do. Don't spend too long on any one thing. Most of the time you and your squad will be part of the whole army, part of your regular

toons. But when I need you. When there's something to be done that only you can do."

There was something else about these twelve. "These are all new. No veterans."

"After last week, Bean, all our soldiers are veterans. Don't you realize that on the individual soldier standings, all forty of our soldiers are in the top fifty? That you have to go down seventeen places to find a soldier who *\*isn't\** a Dragon?"

"What if I can't think of anything?" asked Bean.

"Then I was wrong about you."

Bean grinned. "You weren't wrong."

The lights went out.

"Can you find your way back, Bean?"

"Probably not."

"Then stay here. If you listen very carefully, you can hear the good fairy come in the night and leave our assignment for tomorrow."

"They won't give us another battle tomorrow, will they?" Bean meant it as a joke, but Ender didn't answer.

Bean heard him climb into bed.

Ender was still small for a commander. His feet didn't come near the end of the bunk. There was plenty of room for Bean to curl up at the foot of the bed. So he climbed up and then lay still, so as not to disturb Ender's sleep. If he was sleeping. If he was not lying awake in the silence, trying to make sense of ... what?

For Bean, the assignment was merely to think of the unthinkable -- stupid ploys that might be used against them, and ways to counter them; equally stupid innovations they might introduce in order to sow confusion among the other armies and, Bean suspected, get them sidetracked into imitating completely nonessential strategies. Since few of the other commanders understood why Dragon Army was winning, they kept imitating the nonce tactics used in a particular battle instead of seeing the underlying method Ender used in training and organizing his army. As Napoleon said, the only thing a commander ever truly controls is his own army -- training, morale, trust, initiative, command and, to a lesser degree, supply, placement, movement, loyalty, and courage in battle. What the enemy will do and what chance will bring, those defy all planning. The commander must be able to change his plans abruptly when obstacles or opportunities appear. If his army isn't ready and willing to respond to his will, his cleverness comes to nothing.

The less effective commanders didn't understand this. Failing to recognize that Ender won because he and his army responded fluidly and instantly to change, they could only think to imitate the specific tactics they saw him use. Even if Bean's creative gambits were irrelevant to the outcome of the battle, they would lead other commanders to waste time imitating irrelevancies. Now and then something he came up with might actually be useful. But by and large, he was a sideshow.

That was fine with Bean. If Ender wanted a sideshow, what mattered was that he had chosen Bean to create that show, and Bean would do it as well as it could be done.

But if Ender was lying awake tonight, it was not because he was concerned about Dragon Army's battles tomorrow and the next day and the next. Ender was thinking about the Buggers and how he would fight them when he got through his training and was thrown into war, with the real lives of real men depending on his decisions, with the survival of humanity depending on the outcome.

In that scheme, what is my place? thought Bean. I'm glad enough that the burden is on Ender, not because I could not bear it -- maybe I could -- but because I have more confidence that Ender can bring it off than that I could. Whatever it is that makes men love the commander who decides when they will die, Ender has that, and if I have it no one has yet seen evidence of it. Besides, even without genetic alteration, Ender has abilities that the tests didn't measure for, that run deeper than mere intellect.

But he shouldn't have to bear all this alone. I can help him. I can forget geometry and astronomy and all the other nonsense and concentrate on the problems he faces most directly. I'll do research into the way other animals wage war, especially swarming hive insects, since the Formics resemble ants the way we resemble primates.

And I can watch his back.

Bean thought again of Bonzo Madrid. Of the deadly rage of bullies in Rotterdam.

Why have the teachers put Ender in this position? He's an obvious target for the hatred of the other boys. Kids in Battle School had war in their hearts. They hungered for triumph. They loathed defeat. If they lacked these attributes, they would never have been brought here. Yet from the start, Ender had been set apart from the others -- younger but smarter, the leading soldier and now the commander who makes all other commanders look like babies. Some commanders responded to defeat by becoming submissive -- Carn Carby, for instance, now praised Ender behind his back and studied his battles to try to learn how to win, never realizing that you had to study Ender's training, not his battles, to understand his victories. But most of the other commanders were resentful, frightened, ashamed, angry, jealous, and it was in their character to translate such feelings into violent action ... if they were sure of victory.

Just like the streets of Rotterdam. Just like the bullies, struggling for supremacy, for rank, for respect. Ender has stripped Bonzo naked. It cannot be borne. He'll have his revenge, as surely as Achilles avenged his humiliation.

And the teachers understand this. They intend it. Ender has clearly mastered every test they set for him -- whatever Battle School usually taught, he was done with. So why didn't they move him on to the next level? Because there was a lesson they were trying to teach, or a test they were trying to get him to pass, which was not within the usual curriculum. Only this particular test could end in death. Bean had felt Bonzo's fingers around his throat. This was a boy who, once he let himself go, would relish the absolute power that the murderer achieves at his victim's moment of death.

They're putting Ender into a street situation. They're testing him to see if he can survive.

They don't know what they're doing, the fools. The street is not a test. The street is a lottery.

I came out a winner -- I was alive. But Ender's survival won't depend on his ability. Luck plays too large a role. Plus the skill and resolve and power of the opponent.

Bonzo may be unable to control the emotions that weaken him, but his presence in Battle School means that he is not without skill. He was made a commander because a certain type of soldier will follow him into death and horror. Ender is in mortal danger. And the teachers, who think of us as children, have no idea how quickly death can come. Look away for only a few minutes, step away far enough that you can't get back in time, and your precious Ender Wiggin, on whom all your hopes are pinned, will be quite, quite dead. I saw it on the streets of Rotterdam. It can happen just as easily in your nice clean rooms here in space.

So Bean set aside classwork for good that night, lying at Ender's feet. Instead, he had two new courses of study. He would help Ender prepare for the war he cared about, with the Buggers. But he would also help him in the street fight that was being set up for him.

It wasn't that Ender was oblivious, either. After some kind of fracas in the battleroom during one of Ender's early freetime practices, Ender had taken a course in self-defense, and knew something about fighting man to man. But Bonzo would not come at him man to man. He was too keenly aware of having been beaten. Bonzo's purpose would not be a rematch, it would not be vindication. It would be punishment. It would be elimination. He would bring a gang.

And the teachers would not realize the danger until it was too late. They still didn't think of anything the children did as "real."

So after Bean thought of clever, stupid things to do with his new squad, he also tried to think of ways to set Bonzo up so that, in the crunch, he would have to take on Ender Wiggin alone or not at all. Strip away Bonzo's support. Destroy the morale, the reputation of any bully who might go along with him.

This is one job Ender *\*can't\** do. But it can be done.

PART FIVE -- LEADER

## CHAPTER 17 -- DEADLINE

"I don't even know how to interpret this. The mind game had only one shot at Bean, and it puts up this one kid's face, and he goes off the charts with -- what, fear? Rage? Isn't there anybody who knows how this so-called game works? It ran Ender through a wringer, brought in those pictures of his brother that it couldn't possibly have had, only it got them. And this one -- was it some deeply insightful gambit that leads to powerful new conclusions about Bean's psyche? Or was it simply the only person Bean knew whose picture was already in the Battle School files?"

"Was that a rant, or is there any particular one of those questions you want answered?"

"What I want you to answer is this question: How the hell can you tell me that something was 'very significant' if you have no idea what it signifies!"

"If someone runs after your car, screaming and waving his arms, you know that something significant is intended, even if you can't hear a word he's saying."

"So that's what this was? Screaming?"

"That was an analogy. The image of Achilles was extraordinarily important to Bean."

"Important positive, or important negative?"

"That's too cut-and-dried. If it was negative, are his negative feelings because Achilles caused some terrible trauma in Bean? Or negative because having been torn away from Achilles was traumatic, and Bean longs to be restored to him?"

"So if we have an independent source of information that tells us to keep them apart ..."

"Then either that independent source is really really right ..."

"Or really really wrong."

"I'd be more specific if I could. We only had a minute with him."

"That's disingenuous. You've had the mind game linked to all his work with his teacher-identity."

"And we've reported to you about that. It's partly his hunger to have control -- that's how it began - - but it has since become a way of taking responsibility. He has, in a way, \*become\* a teacher. He has also used his inside information to give himself the illusion of belonging to the community."

"He does belong."

"He has only one close friend, and that's more of a big brother, little brother thing."

"I have to decide whether I can put Achilles into Battle School while Bean is there, or give up one of them in order to keep the other. Now, from Bean's response to Achilles's face, what counsel can you give me."

"You won't like it."

"Try me."

"From that incident, we can tell you that putting them together will be either a really really bad thing, or --"

"I'm going to have to take a long, hard look at your budget."

"Sir, the whole purpose of the program, the way it works, is that the computer makes connections we would never think of, and gets responses we weren't looking for. It's not actually under our control."

"Just because a program isn't out of control doesn't mean intelligence is present, either in the program or the programmer."

"We don't use the word 'intelligence' with software. We regard that as a naive idea. We say that it's 'complex.' Which means that we don't always understand what it's doing. We don't always get conclusive information."

"Have you *ever* gotten conclusive information about anything?"

"*I* chose the wrong word this time. 'Conclusive' isn't ever the goal when we are studying the human mind."

"Try 'useful.' Anything useful?"

"Sir, I've told you what we know. The decision was yours before we reported to you, and it's still your decision now. Use our information or not, but is it sensible to shoot the messenger?"

"When the messenger won't tell you what the hell the message *is*, my trigger finger gets twitchy. Dismissed."

\*\*\*

Nikolai's name was on the list that Ender gave him, but Bean ran into problems immediately.

"I don't want to," said Nikolai.

It had not occurred to Bean that anyone would refuse.

"I'm having a hard enough time keeping up as it is."

"You're a good soldier."

"By the skin of my teeth. With a big helping of luck."

"That's how *\*all\** good soldiers do it."

"Bean, if I lose one practice a day from my regular toon, then I'll fall behind. How can I make it up? And one practice a day with you won't be enough. I'm a smart kid, Bean, but I'm not Ender. I'm not you. That's the thing that I don't think you really get. How it feels *\*not\** to be you. Things just aren't as easy and clear."

"It's not easy for me, either."

"Look, I know that, Bean. And there are some things I can do for you. This isn't one of them. Please."

It was Bean's first experience with command, and it wasn't working. He found himself getting angry, wanting to say Screw you and go on to someone else. Only he couldn't be angry at the only true friend he had. And he also couldn't easily take no for an answer. "Nikolai, what we're doing won't be hard. Stunts and tricks."

Nikolai closed his eyes. "Bean, you're making me feel bad."

"I don't want you to feel bad, Sinterklaas, but this is the assignment I was given, because Ender thinks Dragon Army needs this. You were on the list, his choice not mine."

"But you don't have to choose me."

"So I ask the next kid, and he says, 'Nikolai's on this squad, right?' and I say, No, he didn't want to. That makes them all feel like they can say no. And they'll *\*want\** to say no, because nobody wants to be taking orders from me."

"A month ago, sure, that would have been true. But they know you're a solid soldier. I've heard people talk about you. They respect you."

Again, it would have been so easy to do what Nikolai wanted and let him off the hook on this. And, as a friend, that would be the *\*right\** thing to do. But Bean couldn't think as a friend. He had to deal with the fact that he had been given a command and he had to make it work.

Did he really need Nikolai?

"I'm just thinking out loud, Nikolai, because you're the only one I can say this to, but see, I'm scared. I wanted to lead a toon, but that's because I didn't know anything about what leaders do. I've had a week of battles to see how Crazy Tom holds the group of us together, the voice he uses for

command. To see how Ender trains us and trusts us, and it's a dance, tiptoe, leap, spin, and I'm afraid that I'll fail, and there isn't \*time\* to fail, I have to make this work, and when you're with me, I know there's at least one person who isn't halfway hoping for this smart little kid to fail."

"Don't kid yourself," said Nikolai. "As long as we're being honest."

That stung. But a leader had to take that, didn't he? "No matter what you feel, Nikolai, you'll give me a chance," said Bean. "And because you're giving me a chance, the others will, too. I need ... loyalty."

"So do I, Bean."

"You need my loyalty as a friend, in order to let you, personally, be happy," said Bean. "I need loyalty as a leader, in order to fulfil the assignment given to us by our commander."

"That's mean," said Nikolai.

"Eh," said Bean. "Also true."

"You're mean, Bean."

"Help me, Nikolai."

"Looks like our friendship goes only one way."

Bean had never felt like this before -- this knife in his heart, just because of the words he was hearing, just because somebody else was angry with him. It wasn't just because he wanted Nikolai to think well of him. It was because he knew that Nikolai was at least partly right. Bean was using his friendship against him.

It wasn't because of that pain, however, that Bean decided to back off. It was because a soldier who was with him against his will would not serve him well. Even if he was a friend. "Look, if you won't, you won't. I'm sorry I made you mad. I'll do it without you. And you're right, I'll do fine. Still friends, Nikolai?"

Nikolai took his offered hand, held it. "Thank you," he whispered.

Bean went immediately to Shovel, the only one on Ender's list who was also from C toon. Shovel wasn't Bean's first choice -- he had just the slightest tendency to delay, to do things halfheartedly. But because he was in C toon, Shovel had been there when Bean advised Crazy Tom. He had observed Bean in action.

Shovel set aside his desk when Bean asked if they could talk for a minute. As with Nikolai, Bean clambered up onto the bunk to sit beside the larger boy. Shovel was from Cagnes-sur-Mer, a little town on the French Riviera, and he still had that open-faced friendliness of Provence. Bean liked him. Everybody liked him.

Quickly Bean explained what Ender had asked him to do -- though he didn't mention that it was just a sideshow. Nobody would give up a daily practice for a something that wouldn't be crucial to victory. "You were on the list Ender gave me, and I'd like you to --"

"Bean, what are you doing?"

Crazy Tom stood in front of Shovel's bunk.

At once Bean realized his mistake. "Sir," said Bean, "I should have talked to you first. I'm new at this and I just didn't think."

"New at what?"

Again Bean laid out what he had been asked to do by Ender.

"And Shovel's on the list?"

"Right."

"So I'm going to lose you \*and\* Shovel from my practices?"

"Just one practice per day."

"I'm the only toon leader who loses two."

"Ender said one from each toon. Five, plus me. Not my choice."

"Merda," said Crazy Tom. "You and Ender just didn't think of the fact that this is going to hit me harder than any of the other toon leaders. Whatever you're doing, why can't you do it with five instead of six? You and four others -- one from each of the other toons?"

Bean wanted to argue, but realized that going head to head wasn't going to get him anywhere. "You're right, I didn't think of that, and you're right that Ender might very well change his mind when he realizes what he's doing to your practices. So when he comes in this morning, why don't you talk to him and let me know what the two of you decide? In the meantime, though, Shovel might tell me no, and then the question doesn't matter anymore, right?"

Crazy Tom thought about it. Bean could see the anger ticking away in him. But leadership had changed Crazy Tom. He no longer blew up the way he used to. He caught himself. He held it in. He waited it out.

"OK, I'll talk to Ender. If Shovel wants to do it."

They both looked at Shovel.

"I think it'd be OK," said Shovel. "To do something weird like this."

"I won't let up on either of you," said Crazy Tom. "And you don't talk about your wacko toon during my practices. You keep it outside."

They both agreed to that. Bean could see that Crazy Tom was wise to insist on that. This special assignment would set the two of them apart from the others in C toon. If they rubbed their noses in it, the others could feel shut out of an elite. That problem wouldn't show up as much in any of the other toons, because there'd only be one kid from each toon in Bean's squad. No chat. Therefore no nose-rubbing.

"Look, I don't have to talk to Ender about this," said Crazy Tom. "Unless it becomes a problem. OK?"

"Thanks," said Bean.

Crazy Tom went back to his own bunk.

I did that OK, thought Bean. I didn't screw up.

"Bean?" said Shovel.

"Eh?"

"One thing."

"Eh."

"Don't call me Shovel."

Bean thought back. Shovel's real name was Ducheval. "You prefer 'Two Horses'? Sounds kind of like a Sioux warrior."

Shovel grinned. "That's better than sounding like the tool you use to clean the stable."

"Ducheval," said Bean. "From now on."

"Thanks. When do we start?"

"Freetime practice today."

"Bacana."

Bean almost danced away from Ducheval's bunk. He had done it. He had handled it. Once, anyway.

And by the time breakfast was over, he had all five on his team. With the other four, he checked with their team leaders first. No one turned him down. And he got his squad to promise to call Ducheval by his right name from then on.

\*\*\*

Graff had Dimak and Dap in his makeshift office in the battleroom bridge when Bean came. It was the usual argument between Dimak and Dap -- that is, it was about nothing, some trivial question of one violating some minor protocol or other, which escalated quickly into a flurry of formal complaints. Just another skirmish in their rivalry, as Dap and Dimak tried to gain some advantage for their proteges, Ender and Bean, while at the same time trying to keep Graff from putting them in the physical danger that both saw looming. When the knock came at the door, voices had been raised for some time, and because the knock was not loud, it occurred to Graff to wonder what might have been overheard.

Had names been mentioned? Yes. Both Bean and Ender. And also Bonzo. Had Achilles's name come up? No. He had just been referred to as "another irresponsible decision endangering the future of the human race, all because of some insane theory about games being one thing and genuine life-and-death struggles being another, completely unproven and unprovable except in the blood of some child!" That was Dap, who had a tendency to wax eloquent.

Graff, of course, was already sick at heart, because he agreed with both teachers, not only in their arguments against each other, but also in their arguments against his own policy. Bean was demonstrably the better candidate on all tests; Ender was just as demonstrably the better candidate based on his performance in actual leadership situations. And Graff *was* being irresponsible to expose both boys to physical danger.

But in both cases, the child had serious doubts about his own courage. Ender had his long history of submission to his older brother, Peter, and the mind game had shown that in Ender's unconscious, Peter was linked to the Buggers. Graff knew that Ender had the courage to strike, without restraint, when the time came for it. That he could stand alone against an enemy, without anyone to help him, and destroy the one who would destroy him. But Ender didn't know it, and he had to know.

Bean, for his part, had shown physical symptoms of panic before his first battle, and while he ended up performing well, Graff didn't need any psychological tests to tell him that the doubt was there. The only difference was, in Bean's case Graff shared his doubt. There *was* no proof that Bean would strike.

Self-doubt was the one thing that neither candidate could afford to have. Against an enemy that did not hesitate -- that *could* not hesitate -- there could be no pause for reflection. The boys had to face their worst fears, knowing that no one would intervene to help. They had to know that when failure would be fatal, they would not fail. They had to pass the test and know that they had passed it. And both boys were so perceptive that the danger could not be faked. It had to *be* real.

Exposing them to that risk was utterly irresponsible of Graff. Yet he knew that it would be just as irresponsible not to. If Graff played it safe, no one would blame him if, in the actual war, Ender or Bean failed. That would be small consolation, though, given the consequences of failure. Whichever way he guessed, if he was wrong, everybody on Earth might pay the ultimate price. The only thing that made it possible was that if either of them was killed, or damaged physically or mentally, the other was still there to carry on as the sole remaining candidate.

If both failed, what then? There were many bright children, but none who were that much better than commanders already in place, who had graduated from Battle School many years ago.

Somebody has to roll the dice. Mine are the hands that hold those dice. I'm not a bureaucrat, placing my career above the larger purpose I was put here to serve. I will not put the dice in someone else's hands, or pretend that I don't have the choice I have.

For now, all Graff could do was listen to both Dap and Dimak, ignore their bureaucratic attacks and maneuvers against him, and try to keep them from each other's throats in their vicarious rivalry.

That small knock at the door -- Graff knew before the door opened who it would be.

If he had heard the argument, Bean gave no sign. But then, that was Bean's specialty, giving no sign. Only Ender managed to be more secretive -- and he, at least, had played the mind game long enough to give the teachers a map of his psyche.

"Sir," said Bean.

"Come in, Bean." Come in, Julian Delphiki, longed-for child of good and loving parents. Come in, kidnapped child, hostage of fate. Come and talk to the Fates, who are playing such clever little games with your life.

"I can wait," said Bean.

"Captain Dap and Captain Dimak can hear what you have to say, can't they?" asked Graff.

"If you say so, sir. It's not a secret. I would like to have access to station supplies."

"Denied."

"That's not acceptable, sir."

Graff saw how both Dap and Dimak glanced at him. Amused at the audacity of the boy? "Why do you think so?"

"Short notice, games every day, soldiers exhausted and yet still being pressured to perform in class -- fine, Ender's dealing with it and so are we. But the only possible reason you could be doing this is to test our resourcefulness. So I want some resources."

"I don't remember your being commander of Dragon Army," said Graff. "I'll listen to a requisition for specific equipment from your commander."

"Not possible," said Bean. "He doesn't have time to waste on foolish bureaucratic procedures."

Foolish bureaucratic procedures. Graff had used that exact phrase in the argument just a few minutes ago. But Graff's voice had *\*not\** been raised. How long *\*had\** Bean been listening outside the door? Graff cursed himself silently. He had moved his office up here specifically because he knew Bean was a sneak and a spy, gathering intelligence however he could. And then he didn't even post a guard to stop the boy from simply walking up and listening at the door.

"And you do?" asked Graff.

"I'm the one he assigned to think of stupid things you might do to rig the game against us, and think of ways to deal with them."

"What do you think you're going to find?"

"I don't know," said Bean. "I just know that the only things we ever see are our uniforms and flash suits, our weapons and our desks. There are other supplies here. For instance, there's paper. We never get any except during written tests, when our desks are closed to us."

"What would you do with paper in the battleroom?"

"I don't know," said Bean. "Wad it up and throw it around. Shred it and make a cloud of dust out of it."

"And who would clean this up?"

"Not my problem," said Bean.

"Permission denied."

"That's not acceptable, sir," said Bean.

"I don't mean to hurt your feelings, Bean, but it matters less than a cockroach's fart whether you accept my decision or not."

"I don't mean to hurt *\*your\** feelings, sir, but you clearly have no idea what you're doing. You're improvising. Screwing with the system. The damage you're doing is going to take years to undo, and you don't care. That means that it doesn't matter what condition this school is in a year from now. That means that everybody who matters is going to be graduated soon. Training is being accelerated because the Buggers are getting too close for delays. So you're pushing. And you're especially pushing Ender Wiggin."

Graff felt sick. He knew that Bean's powers of analysis were extraordinary. So, also, were his powers of deception. Some of Bean's guesses weren't right -- but was that because he didn't know the truth, or because he simply didn't want them to know how much he knew, or how much he guessed? I never wanted you here, Bean, because you're too dangerous.

Bean was still making his case. "When the day comes that Ender Wiggin is looking for ways to stop the Buggers from getting to Earth and scouring the whole planet the way they started to back in the First Invasion, are you going to give him some bullshit answer about what resources he can or cannot use?"

"As far as you're concerned, the ship's supplies don't exist."

"As far as I'm concerned," said Bean, "Ender is *this* close to telling you to fry up your game and eat it. He's sick of it -- if you can't see that, you're not much of a teacher. He doesn't care about the standings. He doesn't care about beating other kids. All he cares about is preparing to fight the Buggers. So how hard do you think it will be for me to persuade him that your program here is crooked, and it's time to quit playing?"

"All right," said Graff. "Dimak, prepare the brig. Bean is to be confined until the shuttle is ready to take him back to Earth. This boy is out of Battle School."

Bean smiled slightly. "Go for it, Colonel Graff. I'm done here anyway. I've got everything *I* wanted here -- a first-rate education. I'll never have to live on the street again. I'm home free. Let me out of your game, right now, I'm ready."

"You won't be free on Earth, either. Can't risk having you tell these wild stories about Battle School," said Graff.

"Right. Take the best student you ever had here and put him in jail because he asked for access to the supply closet and you didn't like it. Come on, Colonel Graff. Swallow hard and back down. You need my cooperation more than I need yours."

Dimak could barely conceal his smile.

If only confronting Graff like this were sufficient proof of Bean's courage. And for all that Graff had doubts about Bean, he didn't deny that he was good at maneuver. Graff would have given almost anything not to have Dimak and Dap in the room at this moment.

"It was your decision to have this conversation in front of witnesses," said Bean.

What, was the kid a mind reader?

No, Graff had glanced at the two teachers. Bean simply knew how to read his body language. The kid missed nothing. That's why he was so valuable to the program.

Isn't this why we pin our hopes on these kids? Because they're good at maneuver?

And if I know anything about command, don't I know this -- that there are times when you cut your losses and leave the field?

"All right, Bean. One scan through supply inventory."

"With somebody to explain to me what it all is."

"I thought you already knew everything."

Bean was polite in victory; he did not respond to taunting. The sarcasm gave Graff a little compensation for having to back down. He knew that's all it was, but this job didn't have many perks.

"Captain Dimak and Captain Dap will accompany you," said Graff. "One scan, and either one of them can veto anything you request. They will be responsible for the consequences of any injuries resulting from your use of any item they let you have."

"Thank you, sir," said Bean. "In all likelihood I won't find anything useful. But I appreciate your fair-mindedness in letting us search the station's resources to further the educational objectives of the Battle School."

The kid had the jargon down cold. All those months of access to the student data, with all the notations in the files, Bean had clearly learned more than just the factual contents of the dossiers. And now Bean was giving him the spin that he should use in writing up a report about his decision. As if Graff were not perfectly capable of creating his own spin.

The kid is patronizing me. Little bastard thinks that he's in control.

Well, I have some surprises for him, too.

"Dismissed," said Graff. "All of you."

They got up, saluted, left.

Now, thought Graff, I have to second-guess all my future decisions, wondering how much my choices are influenced by the fact that this kid really pisses me off.

\*\*\*

As Bean scanned the inventory list, he was really searching primarily for something, anything, that might be made into a weapon that Ender or some of his army could carry to protect him from physical attack by Bonzo. But there was nothing that would be both concealable from the teachers and powerful enough to give smaller kids sufficient leverage over larger ones.

It was a disappointment, but he'd find other ways to neutralize the threat. And now, as long as he was scanning the inventory, \*was\* there anything that he might be able to use in the battleroom? Cleaning supplies weren't very promising. Nor would the hardware stocks make much sense in the battleroom. What, throw a handful of screws?

The safety equipment, though ...

"What's a deadline?" asked Bean.

Dimak answered. "Very fine, strong cord that's used to secure maintenance and construction workers when they're working outside the station."

"How long?"

"With links, we can assemble several kilometers of secure deadline," said Dimak. "But each coil unspools to a hundred meters."

"I want to see it."

They took him into parts of the station that children never went to. The decor was far more utilitarian here. Screws and rivets were visible in the plates on the walls. The intake ducts were visible instead of being hidden inside the ceiling. There were no friendly lightstripes for a child to touch and get directions to his barracks. All the palm pads were too high for a child to comfortably use. And the staff they passed saw Bean and then looked at Dap and Dimak as if they were crazy.

The coil was amazingly small. Bean hefted it. Light, too. He unspooled a few decameters of it. It was almost invisible. "This will hold?"

"The weight of two adults," said Dimak.

"It's so fine. Will it cut?"

"Rounded so smoothly it can't cut anything. Wouldn't do us any good if it went slicing through things. Like spacesuits."

"Can I cut it into short lengths?"

"With a blowtorch," said Dimak.

"This is what I want."

"Just one?" asked Dap, rather sarcastically.

"And a blowtorch," said Bean.

"Denied," said Dimak.

"I was joking," said Bean. He walked out of the supply room and started jogging down the corridor, retracing the route they had just taken.

They jogged after him. "Slow down!" Dimak called out.

"Keep up!" Bean answered. "I've got a toon waiting for me to train them with this."

"Train them to do what!"

"I don't know!" He got to the pole and slid down. It passed him right through to the student levels. Going this direction, there was no security clearance at all.

His toon was waiting for him in the battleroom. They'd been working hard for him the past few days, trying all kinds of lame things. Formations that could explode in midair. Screens. Attacks without guns, disarming enemies with their feet. Getting into and out of spins, which made them almost impossible to hit but also kept them from shooting at anybody else.

The most encouraging thing was the fact that Ender spent almost the entire practice time watching Bean's squad whenever he wasn't actually responding to questions from leaders and soldiers in the other toons. Whatever they came up with, Ender would know about it and have his own ideas about when to use it. And, knowing that Ender's eyes were on them, Bean's soldiers worked all the harder. It gave Bean more stature in their eyes, that Ender really did care about what they did.

Ender's good at this, Bean realized again for the hundredth time. He knows how to form a group into the shape he wants it to have. He knows how to get people to work together. And he does it by the most minimal means possible.

If Graff were as good at this as Ender, I wouldn't have had to act like such a bully in there today.

The first thing Bean tried with the deadline was to stretch it across the battleroom. It reached, with barely enough slack to allow knots to be tied at both ends. But a few minutes of experimentation showed that it would be completely ineffective as a tripwire. Most enemies would simply miss it; those that did run into it might be disoriented or flipped around, but once it was known that it was there, it could be used like part of a grid, which meant it would work to the advantage of a creative enemy.

The deadline was designed to keep a man from drifting off into space. What happens when you get to the end of the line?

Bean left one end fastened to a handhold in the wall, but coiled the other end around his waist several times. The line was now shorter than the width of the battleroom's cube. Bean tied a knot in the line, then launched himself toward the opposite wall.

As he sailed through the air, the deadline tautening behind him, he couldn't help thinking: I hope they were right about this wire not being capable of cutting. What a way to end -- sliced in half in the battleroom. \*That\* would be an interesting mess for them to clean up.

When he was a meter from the wall, the line went taut. Bean's forward progress was immediately halted at his waist. His body jackknifed and he felt like he'd been kicked in the gut. But the most surprising thing was the way his inertia was translated from forward movement into a sideways arc that whipped him across the battleroom toward where D toon was practicing. He hit the wall so hard he had what was left of his breath knocked out of him.

"Did you see that!" Bean screamed, as soon as he could breathe. His stomach hurt -- he might not have been sliced in half, but he would have a vicious bruise, he knew that at once, and if he hadn't had his flash suit on, he could well believe there would have been internal injuries. But he'd be OK, and the deadline had let him change directions abruptly in midair. "Did you see it! Did you see it!"

"Are you all right!" Ender shouted.

He realized that Ender thought he was injured. Slowing down his speech, Bean called out again, "Did you see how fast I went! Did you see how I changed direction!"

The whole army stopped practice to watch as Bean played more with the deadline. Tying two soldiers together got interesting results when one of them stopped, but it was hard to hold on. More effective was when Bean had Ender use his hook to pull a star out of the wall and put it into the middle of the battleroom. Bean tied himself and launched from the star; when the line went taut, the edge of the star acted as a fulcrum, shortening the length of the line as he changed direction. And as the line wrapped around the star, it shortened even more upon reaching each edge. At the end, Bean was moving so fast that he blacked out for a moment upon hitting the star. But the whole of Dragon Army was stunned at what they had seen. The deadline was completely invisible, so it looked as though this little kid had launched himself and then suddenly started changing direction and speeding up in midflight. It was seriously disturbing to see it.

"Let's do it again, and see if I can shoot while I'm doing it," said Bean.

\*\*\*

Evening practice didn't end till 2140, leaving little time before bed. But having seen the stunts Bean's squad was preparing, the army was excited instead of weary, fairly scampering through the corridors. Most of them probably understood that what Bean had come up with were stunts, nothing that would be decisive in battle. It was fun anyway. It was new. And it was Dragon.

Bean started out leading the way, having been given that honor by Ender. A time of triumph, and even though he knew he was being manipulated by the system -- behavior modification through public honors -- it still felt good.

Not so good, though, that he let up his alertness. He hadn't gone far along the corridor until he realized that there were too many Salamander uniforms among the other boys wandering around in

this section. By 2140, most armies were in their barracks, with only a few stragglers coming back from the library or the vids or the game room. Too many Salamanders, and the other soldiers were often big kids from armies whose commanders bore no special love toward Ender. It didn't take a genius to recognize a trap.

Bean jogged back and tagged Crazy Tom, Vlad, and Hot Soup, who were walking together. "Too many Salamanders," Bean said. "Stay back with Ender." They got it at once -- it was public knowledge that Bonzo was breathing out threats about what "somebody" ought to do to Ender Wiggin, just to put him in his place. Bean continued his shambling, easygoing run toward the back of the army, ignoring the smaller kids but tagging the other two toon leaders and all the seconds -- the older kids, the ones who might have some chance of standing up to Bonzo's crew in a fight. Not \*much\* of a chance, but all that was needed was to keep them from getting at Ender until the teachers intervened. No way could the teachers stand aloof if an out-and-out riot erupted. Or could they?

Bean passed right by Ender, got behind him. He saw, coming up quickly, Petra Arkanian in her Phoenix Army uniform. She called out. "Ho, Ender!"

To Bean's disgust, Ender stopped and turned around. The boy was too trusting.

Behind Petra, a few Salamanders fell into step. Bean looked the other way, and saw a few more Salamanders and a couple of set-faced boys from other armies, drifting down the corridor past the last of the Dragons. Hot Soup and Crazy Tom were coming quickly, with more toon leaders and the rest of the larger Dragons coming behind them, but they weren't moving fast enough. Bean beckoned, and he saw Crazy Tom pick up his pace. The others followed suit.

"Ender, can I talk to you," said Petra.

Bean was bitterly disappointed. Petra was the Judas. Setting Ender up for Bonzo -- who would have guessed? She \*hated\* Bonzo when she was in his army.

"Walk with me," said Ender.

"It's just for a moment," said Petra.

Either she was a perfect actress or she was oblivious, Bean realized. She only seemed aware of the other Dragon uniforms, never as much as glancing at anybody else. She isn't in on it after all, thought Bean. She's just an idiot.

At last, Ender seemed to be aware of his exposed position. Except for Bean, all the other Dragons were past him now, and that was apparently enough -- at last -- to make him uncomfortable. He turned his back on Petra and walked away, briskly, quickly closing the gap between him and the older Dragons.

Petra was angry for a moment, then jogged quickly to catch up with him. Bean stood his ground, looking at the oncoming Salamanders. They didn't even glance at him. They just picked up their pace, continuing to gain on Ender almost as fast as Petra was.

Bean took three steps and slapped the door of Rabbit Army barracks. Somebody opened it. Bean had only to say, "Salamander's making a move against Ender," and at once Rabbits started to pour out the door into the corridor. They emerged just as the Salamanders reached them, and started following along.

Witnesses, thought Bean. And helpers, too, if the fight seemed unfair.

Ahead of him, Ender and Petra were talking, and the larger Dragons fell in step around them. The Salamanders continued to follow closely, and the other thugs joined them as they passed. But the danger was dissipating. Rabbit Army and the older Dragons had done the job. Bean breathed a little easier. For the moment, at least, the danger was over.

Bean caught up with Ender in time to hear Petra angrily say, "How can you think I did? Don't you know who your friends are?" She ran off, ducked into a ladderway, scrambled upward.

Carn Carby of Rabbit caught up with Bean. "Everything OK?"

"I hope you don't mind my calling out your army."

"They came and got me. We seeing Ender safely to bed?"

"Eh."

Carn dropped back and walked along with the bulk of his soldiers. The Salamander thugs were now outnumbered about three to one. They backed off even more, and some of them peeled away and disappeared up ladderways or down poles.

When Bean caught up with Ender again, he was surrounded by his toon leaders. There was nothing subtle about it now -- they were clearly his bodyguards, and some of the younger Dragons had realized what was happening and were filling out the formation. They got Ender to the door of his quarters and Crazy Tom pointedly entered before him, then allowed him to go in when he certified that no one was lying in wait. As if one of them could palm open a commander's door. But then, the teachers had been changing a lot of the rules lately. Anything could happen.

Bean lay awake for a while, trying to think what he could do. There was no way they could be with Ender every moment. There was classwork -- armies were deliberately broken up then. Ender was the only one who could eat in the commanders' mess, so if Bonzo jumped him there ... but he wouldn't, not with so many other commanders around him. Showers. Toilet stalls. And if Bonzo assembled the right group of thugs, they'd slap Ender's toon leaders aside like balloons.

What Bean had to do was try to peel away Bonzo's support. Before he slept, he had a half-assed little plan that might help a little, or might make things work [sic -- should be worse], but at least it

was something, and it would be public, so the teachers couldn't claim after the fact, in their typical bureaucrat cover-my-butt way that they hadn't known anything was going on.

He thought he could do something at breakfast, but of course there was a battle first thing in the morning. Pol Slattery, Badger Army. The teachers had found a new way to mess with the rules, too. When Badgers were flashed, instead of staying frozen till the end of the game they thawed after five minutes, the way it worked in practice. But Dragons, once hit, stayed rigid. Since the battleroom was packed with stars -- plenty of hiding places -- it took a while to realize that they were having to shoot the same soldiers more than once as they maneuvered through the stars, and Dragon Army came closer to losing than it ever had. It was all hand to hand, with a dozen of the remaining Dragons having to watch batches of frozen Badgers, reshooting them periodically and meanwhile frantically looking around for some other Badger sneaking up from behind.

The battle took so long that by the time they got out of the battleroom, breakfast was over. Dragon Army was pissed off -- the ones who had been frozen early on, before they knew the trick, had spent more than an hour, some of them, floating in their rigid suits, growing more and more frustrated as the time wore on. The others, who had been forced to fight outnumbered and with little visibility against enemies who kept reviving, they were exhausted. Including Ender.

Ender gathered his army in the corridor and said, "Today you know everything. No practice. Get some rest. Have some fun. Pass a test."

They were all grateful for the reprieve, but still, they weren't getting any breakfast today and nobody felt like cheering. As they walked back to the barracks, some of them grumbled, "Bet they're serving breakfast to Badger Army right now."

"No, they got them up and served them breakfast before."

"No, they ate breakfast and then five minutes later they get to eat another."

Bean, however, was frustrated because he hadn't had a chance to carry out his plan at breakfast. It would have to wait till lunch.

The good thing was that because Dragon wasn't practicing, Bonzo's guys wouldn't know where to lie in wait for him. The bad thing was that if Ender went off by himself, there'd be nobody to protect him.

So Bean was relieved when he saw Ender go into his quarters. In consultation with the other toon leaders, Bean set up a watch on Ender's door. One Dragon sat outside the barracks for a half-hour shift, then knocked on the door and his replacement came out. No way was Ender going to go wandering off without Dragon Army knowing it.

But Ender never came out and finally it was lunchtime. All the toon leaders sent the soldiers on ahead and then detoured past Ender's door. Fly Molo knocked loudly -- actually, he slapped the door hard five times. "Lunch, Ender."

"I'm not hungry." His voice was muffled by the door. "Go on and eat."

"We can wait," said Fly. "Don't want you walking to the commanders' mess alone."

"I'm not going to eat any lunch at all," said Ender. "Go on and I'll see you after."

"You heard him," said Fly to the others. "He'll be safe in here while we eat."

Bean had noticed that Ender did not promise to stay in his room throughout lunch. But at least Bonzo's people wouldn't know where he was. Unpredictability was helpful. And Bean wanted to get the chance to make his speech at lunch.

So he ran to the messroom and did not get in line, but instead bounded up onto a table and clapped his hands loudly to get attention. "Hey, everybody!"

He waited until the group went about as close to silent as it was going to get.

"There's some of you here who need a reminder of a couple of points of I.F. law. If a soldier is ordered to do something illegal or improper by his commanding officer, he has a responsibility to refuse the order and report it. A soldier who obeys an illegal or improper order is fully responsible for the consequences of his actions. Just in case any of you here are too dim to know what that means, the law says that if some commander orders you to commit a crime, that's no excuse. You are forbidden to obey."

Nobody from Salamander would meet Bean's gaze, but a thug in Rat uniform answered in a surly tone. "You got something in mind, here, pinprick?"

"I've got \*you\* in mind, Lighter. Your scores are pretty much in the bottom ten percent in the school, so I thought you might need a little extra help."

"You can shut your facehole right now, that's the help I need!"

"Whatever Bonzo had you set to do last night, Lighter, you and about twenty others, what I'm telling you is \*if\* you'd actually tried something, every single one of you would have been out of Battle School on his ass. Iced. A complete failure, because you listened to Bonehead Madrid. Can I be any more clear than that?"

Lighter laughed -- it sounded forced, but then, he wasn't the only one laughing. "You don't even know what's going on, pinprick," one of them said.

"I know Bonehead's trying to turn you into a street crew, you pathetic losers. He can't beat Ender in the battleroom, so he's going to get a dozen tough guys to beat up one little kid. You all hear that? You know what Ender is -- the best damn commander ever to come through here. He might be the only one able to do what Mazer Rackham did and beat the Buggers when they come back, did you think of that? And these guys are so \*smart\* they want to beat his brains out. So when the Buggers come, and we've only got pus-brains like Bonzo Madrid to lead our fleets to defeat, then as

the Buggers scour the Earth and kill every last man, woman, and child, the survivors will all know that \*these\* fools are the ones who got rid of the one guy who could have led us to victory!"

The whole place was dead silent now, and Bean could see, looking at the ones he recognized as having been with Bonzo's group last night, that he was getting through to them.

"Oh, you \*forgot\* the Buggers, is that it? You forgot that this Battle School wasn't put here so you could write home to Mommy about your high standings on the scoreboard. So you go ahead and help Bonzo out, and while you're at it, why not just slit your own throats, too, cause that's what you're doing if you hurt Ender Wiggin. But for the rest of us -- well, how many here think that Ender Wiggin is the one commander we would all want to follow into battle? Come on, how many of you!"

Bean began to clap his hands slowly, rhythmically. Immediately, all the Dragons joined in. And very quickly, most of the rest of the soldiers were also clapping. The ones who weren't were conspicuous and could see how the others looked at them with scorn or hate.

Pretty soon, the whole room was clapping. Even the food servers.

Bean thrust both his hands straight up in the air. "The butt-faced Buggers are the only enemy! Humans are all on the same side! Anybody who raises a hand against Ender Wiggin is a Bugger-lover!"

They responded with cheers and applause, leaping to their feet.

It was Bean's first attempt at rabble-rousing. He was pleased to see that, as long as the cause was right, he was pretty damn good at it.

Only later, when he had his food and was sitting with C toon, eating it, did Lighter himself come up to Bean. He came up from behind, and the rest of C toon was on their feet, ready to take him on, before Bean even knew he was there. But Lighter motioned them to sit down, then leaned over and spoke right into Bean's ear. "Listen to this, Queen Stupid. The soldiers who are planning to take Wiggin apart aren't even \*here\*. So much for your stupid speech."

Then he was gone.

And, a moment later, so was Bean, with C toon gathering the rest of Dragon Army to follow behind him.

Ender wasn't in his quarters, or at least he didn't answer. Fly Molo, as A toon commander, took charge and divided them into groups to search the barracks, the game room, the vid room, the library, the gym.

But Bean called out for his squad to follow him. To the bathroom. That's the one place that Bonzo and his boys could plan on Ender having to go, eventually.

By the time Bean got there, it was all over. Teachers and medical staff were clattering down the halls. Dink Meeker was walking with Ender, his arm across Ender's shoulder, away from the bathroom. Ender was wearing only his towel. He was wet, and there was blood all over the back of his head and dripping down his back. It took Bean only a moment to realize that it was not his blood. The others from Bean's squad watched as Dink led Ender back to his quarters and helped him inside. But Bean was already on his way to the bathroom.

The teachers ordered him out of the way, out of the corridor. But Bean saw enough. Bonzo lying on the floor, medical staff doing CPR. Bean knew that you don't do that to somebody whose heart is beating. And from the inattentive way the others were standing around, Bean knew it was only a formality. Nobody expected Bonzo's heart to start again. No surprise. His nose had been jammed up inside his head. His face was a mass of blood. Which explained the bloody back of Ender's head.

All our efforts didn't amount to squat. But Ender won anyway. He knew this was coming. He learned self-defense. He used it, and he didn't do a half-assed job of it, either.

If Ender had been Poke's friend, Poke wouldn't have died.

And if Ender had depended on Bean to save him, he'd be just as dead as Poke.

Rough hands dragged Bean off his feet, pushed him against a wall. "What did you see!" demanded Major Anderson.

"Nothing," said Bean. "Is that Bonzo in there? Is he hurt?"

"This is none of your business. Didn't you hear us order you away?"

Colonel Graff arrived then, and Bean could see that the teachers around him were furious at him -- yet couldn't say anything, either because of military protocol or because one of the children was present.

"I think Bean has stuck his nose into things once too often," said Anderson.

"Are you going to send Bonzo home?" asked Bean. "Cause he's just going to try it again."

Graff gave him a withering glance. "I heard about your speech in the mess hall," said Graff. "I didn't know we brought you up here to be a politician."

"If you don't ice Bonzo and get him \*out\* of here, Ender's never going to be safe, and we won't stand for it!"

"Mind your own business, little boy," said Graff. "This is men's work here."

Bean let himself be dragged away by Dimak. Just in case they still wondered whether Bean saw that Bonzo was dead, he kept the act going just a little longer. "He's going to come after me, too," he said. "I don't want Bonzo coming after me."

"He's not coming after you," said Dimak. "He's going home. Count on it. But don't talk about this to anyone else. Let them find out when the official word is given out. Got it?"

"Yes, sir," said Bean.

"And where did you get all that nonsense about not obeying a commander who gives illegal orders?"

"From the Uniform Code of Military Conduct," said Bean.

"Well, here's a little fact for you -- nobody has ever been prosecuted for obeying orders."

"That," said Bean, "is because nobody's done anything so outrageous that the general public got involved."

"The Uniform Code doesn't apply to students, at least not that part of it."

"But it applies to teachers," said Bean. "It applies to \*you\*. Just in case you obeyed any illegal or improper orders today. By ... what, I don't know ... standing by while a fight broke out in a bathroom? Just because your commanding officer told you to let a big kid beat up on a little kid."

If that information bothered Dimak, he gave no sign. He stood in the corridor and watched as Bean went into the Dragon Army barracks.

It was crazy inside. Dragon Army felt completely helpless and stupid, furious and ashamed. Bonzo Madrid had outsmarted them! Bonzo had gotten Ender alone! Where were Ender's soldiers when he needed them?

It took a long time for things to calm down. Through it all, Bean just sat on his bunk, thinking his own thoughts. Ender didn't just win his fight. Didn't just protect himself and walk away. Ender killed him. Struck a blow so devastating that his enemy will never, never come after him again.

Ender Wiggin, you're the one who was born to be commander of the fleet that defends Earth from the Third Invasion. Because that's what we need -- someone who'll strike the most brutal blow possible, with perfect aim and with no regard for consequences. Total war.

Me, I'm no Ender Wiggin. I'm just a street kid whose only skill was staying alive. Somehow. The only time I was in real danger, I ran like a squirrel and took refuge with Sister Carlotta. Ender went alone into battle. I go alone into my hidey-hole. I'm the guy who makes big brave speeches standing on tables in the mess hall. Ender's the guy who meets the enemy naked and overpowers him against all odds.

Whatever genes they altered to make me, they weren't the ones that mattered.

Ender almost died because of me. Because I goaded Bonzo. Because I failed to keep watch at the crucial time. Because I didn't stop and think like Bonzo and figure out that he'd wait for Ender to be alone in the shower.

If Ender had died today, it would have been my fault all over again.

He wanted to kill somebody.

Couldn't be Bonzo. Bonzo was already dead.

Achilles. That's the one he needed to kill. And if Achilles had been there at that moment, Bean would have tried. Might have succeeded, too, if violent rage and desperate shame were enough to beat down any advantage of size and experience Achilles might have had. And if Achilles killed Bean anyway, it was no worse than Bean deserved, for having failed Ender Wiggin so completely.

He felt his bed bounce. Nikolai had jumped the gap between the upper bunks.

"It's OK," murmured Nikolai, touching Bean's shoulder.

Bean rolled onto his back, to face Nikolai.

"Oh," said Nikolai. "I thought you were crying."

"Ender won," said Bean. "What's to cry about?"

## CHAPTER 18 -- FRIEND

"This boy's death was not necessary."

"This boy's death was not foreseen."

"But it was foreseeable."

"You can always foresee things that already happened. These are children, after all. We did \*not\* anticipate this level of violence."

"I don't believe you. I believe that this is precisely the level of violence you anticipated. This is what you set up. You think that the experiment succeeded."

"I can't control your opinions. I can merely disagree with them."

"Ender Wiggin is ready to move on to Command School. That is my report."

"I have a separate report from Dap, the teacher assigned to watch him most closely. And that report -- for which there are to be \*no\* sanctions against Captain Dap -- tells me that Andrew Wiggin is 'psychologically unfit for duty.'"

"\*If\* he is, which I doubt, it is only temporary."

"How much time do you think we have? No, Colonel Graff, for the time being we have to regard your course of action regarding Wiggin as a failure, and the boy as ruined not only for our purposes but quite possibly for any other as well. So, if it can be done without further killings, I want the other one pushed forward. I want him here in Command School as close to immediately as possible."

"Very well, sir. Though I must tell you that I regard Bean as unreliable."

"Why, because you haven't turned him into a killer yet?"

"Because he is not human, sir."

"The genetic difference is well within the range of ordinary variation."

"He was manufactured, and the manufacturer was a criminal, not to mention a certified loon."

"I could see some danger if his \*father\* were a criminal. Or his mother. But his \*doctor\*? The boy is exactly what we need, as quickly as we can get him."

"He is unpredictable."

"And the Wiggin boy is not?"

"Less unpredictable, sir."

"Very carefully answered, considering that you just insisted that the murder today was 'not foreseeable.'"

"\*Not\* murder, sir!"

"Killing, then."

"The mettle of the Wiggin boy is proved, sir, while Bean's is not."

"I have Dimak's report -- for which, again, he is not to be --"

"Punished, I know, sir."

"Bean's behavior throughout this set of events has been exemplary."

"Then Captain Dimak's report was incomplete. Didn't he inform you that it was Bean who may have pushed Bonzo over the edge to violence by breaking security and informing him that Ender's army was composed of exceptional students?"

"That *\*was\** an act with unforeseeable consequences."

"Bean was acting to save his own life, and in so doing he shunted the danger onto Ender Wiggin's shoulders. That he later tried to ameliorate the danger does not change the fact that when Bean is under pressure, he turns traitor."

"Harsh language!"

"This from the man who just called an obvious act of self-defense 'murder'?"

"Enough of this! You are on leave of absence from your position as commander of Battle School for the duration of Ender Wiggin's so-called rest and recuperation. If Wiggin recovers enough to come to Command School, you may come with him and continue to have influence over the education of the children we bring here. If he does not, you may await your court-martial on Earth."

"I am relieved effective when?"

"When you get on the shuttle with Wiggin. Major Anderson will stand in as acting commander."

"Very well, sir. Wiggin *\*will\** return to training, sir."

"*\*If\** we still want him."

"When you are over the dismay we all feel at the unfortunate death of the Madrid boy, you will realize that I am right, and Ender is the only viable candidate, all the more now than before."

"I allow you that Parthian shot. And, if you are right, I wish you Godspeed on your work with the Wiggin boy. Dismissed."

\*\*\*

Ender was still wearing only his towel when he stepped into the barracks. Bean saw him standing there, his face a rictus of death, and thought: He knows that Bonzo is dead, and it's killing him.

"Ho, Ender," said Hot Soup, who was standing near the door with the other toon leaders.

"There gonna be a practice tonight?" asked one of the younger soldiers.

Ender handed a slip of paper to Hot Soup.

"I guess that means not," said Nikolai softly.

Hot Soup read it. "Those sons of bitches! Two at once?"

Crazy Tom looked over his shoulder. "Two armies!"

"They'll just trip over each other," said Bean. What appalled him most about the teachers was not the stupidity of trying to combine armies, a ploy whose ineffectiveness had been proved time after time throughout history, but rather the get-back-on-the-horse mentality that led them to put *\*more\** pressure on Ender at this of all times. Couldn't they see the damage they were doing to him? Was their goal to train him or break him? Because he was trained long since. He should have been promoted out of Battle School the week before. And now they give him one more battle, a completely meaningless one, when he's already over the edge of despair?

"I've got to clean up," said Ender. "Get them ready, get everybody together, I'll meet you there, at the gate." In his voice, Bean heard a complete lack of interest. No, something deeper than that. Ender doesn't *\*want\** to win this battle.

Ender turned to leave. Everyone saw the blood on his head, his shoulders, down his back. He left.

They all ignored the blood. They had to. "Two fart-eating armies!" cried Crazy Tom. "We'll whip their butts!"

That seemed to be the general consensus as they got into their flash suits.

Bean tucked the coil of deadline into the waist of his flash suit. If Ender ever needed a stunt, it would be for this battle, when he was no longer interested in winning.

As promised, Ender joined them at the gate before it opened -- just barely before. He walked down the corridor lined with his soldiers, who looked at him with love, with awe, with trust. Except Bean, who looked at him with anguish. Ender Wiggin was not larger than life, Bean knew. He was exactly life-sized, and so his larger-than-life burden was too much for him. And yet he was bearing it. So far.

The gate went transparent.

Four stars had been combined directly in front of the gate, completely blocking their view of the battleroom. Ender would have to deploy his forces blind. For all he knew, the enemy had already been let into the room fifteen minutes ago. For all he could possibly know, they were deployed just as Bonzo had deployed his army, only this time it would be completely effective, to have the gate ringed with enemy soldiers.

But Ender said nothing. Just stood there looking at the barrier.

Bean had halfway expected this. He was ready. What he did wasn't all that obvious -- he only walked forward to stand directly beside Ender at the gate. But he knew that was all it would take. A reminder.

"Bean," said Ender. "Take your boys and tell me what's on the other side of this star."

"Yes \*sir\*," said Bean. He pulled the coil of deadline from his waist, and with his five soldiers he made the short hop from the gate to the star. Immediately the gate he had just come through became the ceiling, the star their temporary floor. Bean tied the deadline around his waist while the other boys unspooled the line, arranging it in loose coils on the star. When it was about one-third played out, Bean declared it to be sufficient. He was guessing that the four stars were really eight -- that they made a perfect cube. If he was wrong, then he had way too much deadline and he'd crash into the ceiling instead of making it back behind the star. Worse things could happen.

He slipped out beyond the edge of the star. He was right, it was a cube. It was too dim in the room to see well what the other armies were doing, but they seemed to be deploying. There had been no head start this time, apparently. He quickly reported this to Ducheval, who would repeat it to Ender while Bean did his stunt. Ender would no doubt start bringing out the rest of the army at once, before the time clicked down to zero.

Bean launched straight down from the ceiling. Above him, his toon was holding the other end of the deadline secure, making sure it fed out properly and stopped abruptly.

Bean did not enjoy the wrenching of his gut when the deadline went taut, but there was kind of a thrill to the increase of speed as he suddenly moved south. He could see the distant flashing of the enemy firing up at him. Only soldiers from one half of the enemy's area were firing.

When the deadline reached the next edge of the cube, his speed increased again, and now he was headed upward in an arc that, for a moment, looked like it was going to scrape him against the ceiling. Then the last edge bit, and he scooted in behind the star and was caught deftly by his toon. Bean wiggled his arms and legs to show that he was none the worse for his ride. What the enemy was thinking about his magical maneuvers in midair he could only guess. What mattered was that Ender had \*not\* come through the gate. The timer must be nearly out.

Ender came alone through the gate. Bean made his report as quickly as possible. "It's really dim, but light enough you can't follow people easily by the lights on their suits. Worst possible for seeing. It's all open space from this star to the enemy side of the room. They've got eight stars making a square around their door. I didn't see anybody except the ones peeking around the boxes. They're just sitting there waiting for us."

In the distance, they heard the enemy begin catcalls. "Hey! We be hungry, come and feed us! Your ass is draggin'! Your ass is Dragon!"

Bean continued his report, but had no idea if Ender was even listening. "They fired at me from only one half their space. Which means that the two commanders are \*not\* agreeing and neither one has been put in supreme command."

"In a real war," said Ender, "any commander with brains at all would retreat and save this army."

"What the hell," said Bean. "It's only a game."

"It stopped being a game when they threw away the rules."

This wasn't good, thought Bean. How much time did they have to get their army through the gate? "So, you throw 'em away, too." He looked Ender in the eye, demanding that he wake up, pay attention, \*act\*.

The blank look left Ender's face. He grinned. It felt damn good to see that. "OK. Why not. Let's see how they react to a formation."

Ender began calling the rest of the army through the gate. It was going to get crowded on the top of that star, but there was no choice.

As it turned out, Ender's plan was to use another of Bean's stupid ideas, which he had watched Bean practice with his toon. A screen formation of frozen soldiers, controlled by Bean's toon, who remained unfrozen behind them. Having once told Bean what he wanted him to do, Ender joined the formation as a common soldier and left everything up to Bean to organize. "It's your show," he said.

Bean had never expected Ender to do any such thing, but it made a kind of sense. What Ender wanted was not to have this battle; allowing himself to be part of a screen of frozen soldiers, pushed through the battle by someone else, was as close to sleeping through it as he could get.

Bean set to work at once, constructing the screen in four parts consisting of one toon each. Each of toons A through C lined up four and three, arms interlocked with the men beside them, the upper row of three with toes hooked under the arms of the four soldiers below. When everybody was clamped down tight, Bean and his toon froze them. Then each of Bean's men took hold of one section of the screen and, careful to move very slowly so that inertia would not carry the screen out of their control, they maneuvered them out from above the star and slowly moved them down until they were just under it. Then they joined them back together into a single screen, with Bean's squad forming the interlock.

"When did you guys practice this?" asked Dumper, the leader of E toon.

"We've never done this before," Bean answered truthfully. "We've done bursting and linking with one-man screens, but seven men each? It's all new to us."

Dumper laughed. "And there's Ender, plugged into the screen like anybody. That's trust, Bean old boy."

That's despair, thought Bean. But he didn't feel the need to say \*that\* aloud.

When all was ready, E toon got into place behind the screen and, on Bean's command, pushed off as hard as they could.

The screen drifted down toward the enemy's gate at a pretty good clip. Enemy fire, though it was intense, hit only the already-frozen soldiers in front. E toon and Bean's squad kept moving, very slightly, but enough that no stray shot could freeze them. And they managed to do some return fire, taking out a few of the enemy soldiers and forcing them to stay behind cover.

When Bean figured they were as far as they could get before Griffin or Tiger launched an attack, he gave the word and his squad burst apart, causing the four sections of the screen also to separate and angle slightly so they were drifting now toward the corners of the stars where Griffin and Tiger were gathered. E toon went with the screens, firing like crazy, trying to make up for their tiny numbers.

After a count of three, the four members of Bean's squad who had gone with each screen pushed off again, this time angling to the middle and downward, so that they rejoined Bean and Ducheval, with momentum carrying them straight toward the enemy gate.

They held their bodies rigid, *\*not\** firing a shot, and it worked. They were all small; they were clearly drifting, not moving with any particular purpose; the enemy took them for frozen soldiers if they were noticed at all. A few were partially disabled with stray shots, but even when under fire they never moved, and the enemy soon ignored them.

When they got to the enemy gate, Bean slowly, wordlessly, got four of them with their helmets in place at the corners of the gate. They pressed, just as in the end-of-game ritual, and Bean gave Ducheval a push, sending him through the gate as Bean drifted upward again.

The lights in the battleroom went on. The weapons all went dead. The battle was over.

It took a few moments before Griffin and Tiger realized what had happened. Dragon only had a few soldiers who weren't frozen or disabled, while Griffin and Tiger were mostly unscathed, having played conservative strategies. Bean knew that if either of them had been aggressive, Ender's strategy wouldn't have worked. But having seen Bean fly around the star, doing the impossible, and then watching this weird screen approach so slowly, they were intimidated into inaction. Ender's legend was such that they dared not commit their forces for fear of falling into a trap. Only ... that *\*was\** the trap.

Major Anderson came into the room through the teachergate. "Ender," he called.

Ender was frozen; he could only answer by grunting loudly through clenched jaws. That was a sound that victorious commanders rarely had to make.

Anderson, using the hook, drifted over to Ender and thawed him. Bean was half the battleroom away, but he heard Ender's words, so clear was his speech, so silent was the room. "I beat you again, sir."

Bean's squad members glanced at him, obviously wondering if he was resentful at Ender for claiming credit for a victory that was engineered and executed entirely by Bean. But Bean understood what Ender was saying. He wasn't talking about the victory over Griffin and Tiger

armies. He was talking about a victory over the teachers. And *that* victory *was* the decision to turn the army over to Bean and sit it out himself. If they thought they were putting Ender to the ultimate test, making him fight two armies right after a personal fight for survival in the bathroom, he beat them -- he sidestepped the test.

Anderson knew what Ender was saying, too. "Nonsense, Ender," said Anderson. He spoke softly, but the room was so silent that his words, too, could be heard. "Your battle was with Griffin and Tiger."

"How stupid do you think I am?" said Ender.

Damn right, said Bean silently.

Anderson spoke to the group at large. "After that little maneuver, the rules are being revised to require that all of the enemy's soldiers must be frozen or disabled before the gate can be reversed."

"Rules?" murmured Ducheval as he came back through the gate. Bean grinned at him.

"It could only work once anyway," said Ender.

Anderson handed the hook to Ender. Instead of thawing his soldiers one at a time, and only then thawing the enemy, Ender entered the command to thaw everyone at once, then handed the hook back to Anderson, who took it and drifted away toward the center, where the end-of-game rituals usually took place.

"Hey!" Ender shouted. "What is it next time? My army in a cage without guns, with the rest of the Battle School against them? How about a little equality?"

So many soldiers murmured their agreement that the sound of it was loud, and not all came from Dragon Army. But Anderson seemed to pay no attention.

It was William Bee of Griffin Army who said what almost everyone was thinking. "Ender, if you're on one side of the battle, it won't be equal no matter what the conditions are."

The armies vocally agreed, many of the soldiers laughing, and Talo Momoe, not to be outclassed by Bee, started clapping his hands rhythmically. "Ender Wiggin!" he shouted. Other boys took up the chant.

But Bean knew the truth -- knew, in fact, what Ender knew. That no matter how good a commander was, no matter how resourceful, no matter how well-prepared his army, no matter how excellent his lieutenants, no matter how courageous and spirited the fight, victory almost always went to the side with the greater power to inflict damage. Sometimes David kills Goliath, and people never forget. But there were a lot of little guys Goliath had already mashed into the ground. Nobody sang songs about *those* fights, because they knew that was the likely outcome. No, that was the *inevitable* outcome, except for the miracles.

The Buggers wouldn't know or care how legendary a commander Ender might be to his own men. The human ships wouldn't have any magical tricks like Bean's deadline to dazzle the Buggers with, to put them off their stride. Ender knew that. Bean knew that. What if David hadn't had a sling, a handful of stones, and the time to throw? What good would the excellence of his aim have done him then?

So yes, it was good, it was right for the soldiers of all three armies to cheer Ender, to chant his name as he drifted toward the enemy gate, where Bean and his squad waited for him. But in the end it meant nothing, except that everyone would have too much hope in Ender's ability. It only made the burden on Ender heavier.

I would carry some of it if I could, Bean said silently. Like I did today, you can turn it over to me and I'll do it, if I can. You don't have to do this alone.

Only even as he thought this, Bean knew it wasn't true. If it could be done, Ender was the one who would have to do it. All those months when Bean refused to see Ender, hid from him, it was because he couldn't bear to face the fact that Ender was what Bean only wished to be -- the kind of person on whom you could put all your hopes, who could carry all your fears, and he would not let you down, would not betray you.

I want to be the kind of boy you are, thought Bean. But I don't want to go through what you've been through to get there.

And then, as Ender passed through the gate and Bean followed behind him, Bean remembered falling into line behind Poke or Sergeant or Achilles on the streets of Rotterdam, and he almost laughed as he thought, I don't want to have to go through what \*I've\* gone through to get here, either.

Out in the corridor, Ender walked away instead of waiting for his soldiers. But not fast, and soon they caught up with him, surrounded him, brought him to a stop through their sheer ebullience. Only his silence, his impassivity, kept them from giving full vent to their excitement.

"Practice tonight?" asked Crazy Tom.

Ender shook his head.

"Tomorrow morning then?"

"No."

"Well, when?"

"Never again, as far as I'm concerned."

Not everyone had heard, but those who did began to murmur to each other.

"Hey, that's not fair," said a soldier from B toon. "It's not our fault the teachers are screwing up the game. You can't just stop teaching us stuff because --"

Ender slammed his hand against the wall and shouted at the kid. "I don't care about the game anymore!" He looked at other soldiers, met their gaze, refused to let them pretend they didn't hear. "Do you understand that?" Then he whispered. "The game is over."

He walked away.

Some of the boys wanted to follow him, took a few steps. But Hot Soup grabbed a couple of them by the neck of their flash suits and said, "Let him be alone. Can't you see he wants to be alone?"

Of course he wants to be alone, thought Bean. He killed a kid today, and even if he doesn't know the outcome, he knows what was at stake. These teachers were willing to let him face death without help. Why should he play along with them anymore? Good for you, Ender.

Not so good for the rest of us, but it's not like you're our father or something. More like a brother, and the thing with brothers is, you're supposed to take turns being the keeper. Sometimes you get to sit down and be the brother who is kept.

Fly Molo led them back to the barracks. Bean followed along, wishing he could go with Ender, talk to him, assure him that he agreed completely, that he understood. But that was pathetic, Bean realized. Why should Ender care whether I understand him or not? I'm just a kid, just one of his army. He knows me, he knows how to use me, but what does he care whether I know him?

Bean climbed to his bunk and saw a slip of paper on it.

{Transfer -- Bean -- Rabbit Army -- Commander}

That was Carn Carby's army. Carn was being removed from command? He was a good guy -- not a great commander, but why couldn't they wait till he graduated?

Because they're through with this school, that's why. They're advancing everybody they think needs some experience with command, and they're graduating other students to make room for them. I might have Rabbit Army, but not for long, I bet.

He pulled out his desk, meaning to sign on as ^Graff and check the rosters. Find out what was happening to everybody. But the ^Graff log-in didn't work. Apparently they no longer considered it useful to permit Bean to keep his inside access.

From the back of the room, the older boys were raising a hubbub. Bean heard Crazy Tom's voice rising above the rest. "You mean I'm supposed to figure out how to beat Dragon Army?" Word soon filtered to the front. The toon leaders and seconds had all received transfer orders. Every single one of them was being given command of an army. Dragon had been stripped.

After about a minute of chaos, Fly Molo led the other toon leaders along between the bunks, heading toward the door. Of course -- they had to go tell Ender what the teachers had done to him now.

But to Bean's surprise, Fly stopped at his bunk and looked up at him, then glanced at the other toon leaders behind him.

"Bean, somebody's got to tell Ender."

Bean nodded.

"We thought ... since you're his friend ..."

Bean let nothing show on his face, but he was stunned. Me? Ender's friend? No more than anyone else in this room.

And then he realized. In this army, Ender had everyone's love and admiration. And they all knew they had Ender's trust. But only Bean had been taken inside Ender's confidence, when Ender assigned him his special squad. And when Ender wanted to stop playing the game, it was Bean to whom he had turned over his army. Bean was the closest thing to a friend they had seen Ender have since he got command of Dragon.

Bean looked across at Nikolai, who was grinning his ass off. Nikolai saluted him and mouthed the word \*commander\*.

Bean saluted Nikolai back, but could not smile, knowing what this would do to Ender. He nodded to Fly Molo, then slid off the bunk and went out the door.

He didn't go straight to Ender's quarters, though. Instead, he went to Carn Carby's room. No one answered. So he went on to Rabbit barracks and knocked. "Where's Carn?" he asked.

"Graduated," said It£ [Itu], the leader of Rabbit's A toon. "He found out about half an hour ago."

"We were in a battle."

"I know -- two armies at once. You won, right?"

Bean nodded. "I bet Carn wasn't the only one graduated early."

"A lot of commanders," said It£ [Itu]. "More than half."

"Including Bonzo Madrid? I mean, he graduated?"

"That's what the official notice said." It£ [Itu] shrugged. "Everybody knows that if anything, Bonzo was probably iced. I mean, they didn't even list his assignment. Just 'Cartagena.' His hometown. Is that iced or what? But let the teachers call it what they want."

"I'll bet the total who graduated was nine," said Bean. "Neh?"

"Eh," said It£ [Itu]. "Nine. So you know something?"

"Bad news, I think," said Bean. He showed It£ [Itu] his transfer orders.

"Santa merda," said It£ [Itu]. Then he saluted. Not sarcastically, but not enthusiastically, either.

"Would you mind breaking it to the others? Give them a chance to get used to the idea before I show up for real? I've got to go talk to Ender. Maybe he already knows they've just taken his entire leadership and given them armies. But if he doesn't, I've got to tell him."

"\*Every\* Dragon toon leader?"

"And every second." He thought of saying, Sorry Rabbit got stuck with me. But Ender would never have said anything self-belittling like that. And if Bean was going to be a commander, he couldn't start out with an apology. "I think Carn Carby had a good organization," said Bean, "so I don't expect to change any of the toon leadership for the first week, anyway, till I see how things go in practice and decide what shape we're in for the kind of battles we're going to start having now that most of the commanders are kids trained in Dragon."

It£ [Itu] understood immediately. "Man, that's going to be strange, isn't it? Ender trained all you guys, and now you've got to fight each other."

"One thing's for sure," said Bean. "I have no intention of trying to turn Rabbit into a copy of Ender's Dragon. We're not the same kids and we won't be fighting the same opponents. Rabbit's a good army. We don't have to copy anybody."

It£ [Itu] grinned. "Even if that's just bullshit, sir, it's first-rate bullshit. I'll pass it on." He saluted.

Bean saluted back. Then he jogged to Ender's quarters.

Ender's mattress and blankets and pillow had been thrown out into the corridor. For a moment Bean wondered why. Then he saw that the sheets and mattress were still damp and bloody. Water from Ender's shower. Blood from Bonzo's face. Apparently Ender didn't want them in his room.

Bean knocked on the door.

"Go away," said Ender softly.

Bean knocked again. Then again.

"Come in," said Ender.

Bean palmed the door open.

"Go away, Bean," said Ender.

Bean nodded. He understood the sentiment. But he had to deliver his message. So he just looked at his shoes and waited for Ender to ask him his business. Or yell at him. Whatever Ender wanted to do. Because the other toon leaders were wrong. Bean didn't have any special relationship with Ender. Not outside the game.

Ender said nothing. And continued to say nothing.

Bean looked up from the ground and saw Ender gazing at him. Not angry. Just ... watching. What does he see in me, Bean wondered. How well does he know me? What does he think of me? What do I amount to in his eyes?

That was something Bean would probably never know. And he had come here for another purpose. Time to carry it out.

He took a step closer to Ender. He turned his hand so the transfer slip was visible. He didn't offer it to Ender, but he knew Ender would see it.

"You're transferred?" asked Ender. His voice sounded dead. As if he'd been expecting it.

"To Rabbit Army," said Bean.

Ender nodded. "Carn Carby's a good man. I hope he recognizes what you're worth."

The words came to Bean like a longed-for blessing. He swallowed the emotion that welled up inside him. He still had more of his message to deliver.

"Carn Carby was graduated today," said Bean. "He got his notice while we were fighting our battle."

"Well," said Ender. "Who's commanding Rabbit then?" He didn't sound all that interested. The question was expected, so he asked it.

"Me," said Bean. He was embarrassed; a smile came inadvertently to his lips.

Ender looked at the ceiling and nodded. "Of course. After all, you're only four years younger than the regular age."

"It isn't funny," said Bean. "I don't know what's going on here." Except that the system seems to be running on sheer panic. "All the changes in the game. And now this. I wasn't the only one transferred, you know. They graduated half the commanders, and transferred a lot of our guys to command their armies."

"Which guys?" Now Ender did sound interested.

"It looks like -- every toon leader and every assistant."

"Of course. If they decide to wreck my army, they'll cut it to the ground. Whatever they're doing, they're thorough."

"You'll still win, Ender. We all know that. Crazy Tom, he said, 'You mean I'm supposed to figure out how to beat Dragon Army?' Everybody knows you're the best." His words sounded empty even to himself. He wanted to be encouraging, but he knew that Ender knew better. Still he babbled on. "They can't break you down, no matter what they --"

"They already have."

They've broken trust, Bean wanted to say. That's not the same thing. \*You\* aren't broken. \*They're\* broken. But all that came out of his mouth were empty, limping words. "No, Ender, they can't --"

"I don't care about their game anymore, Bean," said Ender. "I'm not going to play it anymore. No more practices. No more battles. They can put their little slips of paper on the floor all they want, but I won't go. I decided that before I went through the door today. That's why I had you go for the gate. I didn't think it would work, but I didn't care. I just wanted to go out in style."

I know that, thought Bean. You think I didn't know that? But if it comes down to style, you certainly got that. "You should've seen William Bee's face. He just stood there trying to figure out how he had lost when you only had seven boys who could wiggle their toes and he only had three who couldn't."

"Why should I want to see William Bee's face?" said Ender. "Why should I want to beat anybody?"

Bean felt the heat of embarrassment in his face. He'd said the wrong thing. Only ... he didn't know what the right thing was. Something to make Ender feel better. Something to make him understand how much he was loved and honored.

Only that love and honor were part of the burden Ender bore. There was nothing Bean could say that would not make it all the heavier on Ender. So he said nothing.

Ender pressed his palms against his eyes. "I hurt Bonzo really bad today, Bean. I really hurt him bad."

Of course. All this other stuff, that's nothing. What weighs on Ender is that terrible fight in the bathroom. The fight that your friends, your army, did nothing to prevent. And what hurts you is not the danger you were in, but the harm you did in protecting yourself.

"He had it coming," said Bean. He winced at his own words. Was that the best he could come up with? But what else could he say? No problem, Ender. Of course, he looked dead to \*me\*, and I'm

probably the only kid in this school who actually knows what death looks like, but ... no problem! Nothing to worry about! He had it coming!

"I knocked him out standing up," said Ender. "It was like he was dead, standing there. And I kept hurting him."

So he did know. And yet ... he didn't actually \*know\*. And Bean wasn't about to tell him. There were times for absolute honesty between friends, but this wasn't one of them.

"I just wanted to make sure he never hurt me again."

"He won't," said Bean. "They sent him home."

"Already?"

Bean told him what It£ [Itu] had said. All the while, he felt like Ender could see that he was concealing something. Surely it was impossible to deceive Ender Wiggin.

"I'm glad they graduated him," said Ender.

Some graduation. They're going to bury him, or cremate him, or whatever they're doing with corpses in Spain this year.

Spain. Pablo de Noches, who saved his life, came from Spain. And now a body was going back there, a boy who turned killer in his heart, and died for it.

I must be losing it, thought Bean. What does it matter that Bonzo was Spanish and Pablo de Noches was Spanish? What does it matter that anybody is anything?

And while these thoughts ran through Bean's mind, he babbled, trying to talk like someone who didn't know anything, trying to reassure Ender but knowing that if Ender believed that he knew nothing, then his words were meaningless, and if Ender realized that Bean was only faking ignorance, then his words were all lies. "Was it true he had a whole bunch of guys gang up on you?" Bean wanted to run from the room, he sounded so lame, even to himself.

"No," said Ender. "It was just him and me. He fought with honor."

Bean was relieved. Ender was turned so deeply inward right now that he didn't even register what Bean was saying, how false it was.

"I didn't fight with honor," said Ender. "I fought to win."

Yes, that's right, thought Bean. Fought the only way that's worth fighting, the only way that has any point. "And you did. Kicked him right out of orbit." It was as close as Bean could come to telling him the truth.

There was a knock on the door. Then it opened, immediately, without waiting for an answer. Before Bean could turn to see who it was, he knew it was a teacher -- Ender looked up too high for it to be a kid.

Major Anderson and Colonel Graff.

"Ender Wiggin," said Graff.

Ender rose to his feet. "Yes sir." The deadness had returned to his voice.

"Your display of temper in the battleroom today was insubordinate and is not to be repeated."

Bean couldn't believe the stupidity of it. After what Ender had been through -- what the teachers had \*put\* him through -- and they have to keep playing this oppressive game with him? Making him feel utterly alone even \*now\*? These guys were relentless.

Ender's only answer was another lifeless "Yes sir." But Bean was fed up. "I think it was about time somebody told a teacher how we felt about what you've been doing."

Anderson and Graff didn't show a sign they'd even heard him. Instead, Anderson handed Ender a full sheet of paper. Not a transfer slip. A full-fledged set of orders. Ender was being transferred out of the school.

"Graduated?" Bean asked.

Ender nodded.

"What took them so long?" asked Bean. "You're only two or three years early. You've already learned how to walk and talk and dress yourself. What will they have left to teach you?" The whole thing was such a joke. Did they really think anybody was fooled? You reprimand Ender for insubordination, but then you graduate him because you've got a war coming and you don't have a lot of time to get him ready. He's your hope of victory, and you treat him like something you scrape off your shoe.

"All I know is, the game's over," said Ender. He folded the paper. "None too soon. Can I tell my army?"

"There isn't time," said Graff. "Your shuttle leaves in twenty minutes. Besides, it's better not to talk to them after you get your orders. It makes it easier."

"For them or for you?" Ender asked.

He turned to Bean, took his hand. To Bean, it was like the touch of the finger of God. It sent light all through him. Maybe I am his friend. Maybe he feels toward me some small part of the ... feeling I have for him.

And then it was over. Ender let go of his hand. He turned toward the door.

"Wait," said Bean. "Where are you going? Tactical? Navigational? Support?"

"Command School," said Ender.

"\*Pre\*-command?"

"Command." Ender was out the door.

Straight to Command School. The elite school whose location was even a secret. Adults went to Command School. The battle must be coming very soon, to skip right past all the things they were supposed to learn in Tactical and Pre-Command.

He caught Graff by the sleeve. "Nobody goes to Command School until they're sixteen!" he said.

Graff shook off Bean's hand and left. If he caught Bean's sarcasm, he gave no sign of it.

The door closed. Bean was alone in Ender's quarters.

He looked around. Without Ender in it, the room was nothing. Being here meant nothing. Yet it was only a few days ago, not even a week, when Bean had stood here and Ender told him he was getting a toon after all.

For some reason what came into Bean's mind was the moment when Poke handed him six peanuts. It was life that she handed to him then.

Was it life that Ender gave to Bean? Was it the same thing?

No. Poke gave him life. Ender gave it meaning.

When Ender was here, this was the most important room in Battle School. Now it was no more than a broom closet.

Bean walked back down the corridor to the room that had been Carn Carby's until today. Until an hour ago. He palmed it -- it opened. Already programmed in.

The room was empty. Nothing in it.

This room is mine, thought Bean.

Mine, and yet still empty.

He felt powerful emotions welling up inside him. He should be excited, proud to have his own command. But he didn't really care about it. As Ender said, the game was nothing. Bean would do a

decent job, but the reason he'd have the respect of his soldiers was because he would carry some of Ender's reflected glory with him, a shrimpy little Napoleon flumping around wearing a man's shoes while he barked commands in a little tiny child's voice. Cute little Caligula, "Little Boot," the pride of Germanicus's army. But when he was wearing his father's boots, those boots were empty, and Caligula knew it, and nothing he ever did could change that. Was that his madness?

It won't drive \*me\* mad, thought Bean. Because I don't covet what Ender has or what he is. It's enough that \*he\* is Ender Wiggin. I don't have to be.

He understood what this feeling was, welling up in him, filling his throat, making tears stand out in his eyes, making his face burn, forcing a gasp, a silent sob. He bit on his lip, trying to let pain force the emotion away. It didn't help. Ender was gone.

Now that he knew what the feeling was, he could control it. He lay down on the bunk and went into the relaxing routine until the need to cry had passed. Ender had taken his hand to say good-bye. Ender had said, "I hope he recognizes what you're worth." Bean didn't really have anything left to prove. He'd do his best with Rabbit Army because maybe at some point in the future, when Ender was at the bridge of the flagship of the human fleet, Bean might have some role to play, some way to help. Some stunt that Ender might need him to pull to dazzle the Buggers. So he'd please the teachers, impress the hell out of them, so that they would keep opening doors for him, until one day a door would open and his friend Ender would be on the other side of it, and he could be in Ender's army once again.

## CHAPTER 19 -- REBEL

"Putting in Achilles was Graff's last act, and we know there were grave concerns. Why not play it safe and at least change Achilles to another army?"

"This is not necessarily a Bonzo Madrid situation for Bean."

"But we have no assurance that it's not, sir. Colonel Graff kept a lot of information to himself. A lot of conversations with Sister Carlotta, for instance, with no memo of what was said. Graff knows things about Bean and, I can promise you, about Achilles as well. I think he's laid a trap for us."

"Wrong, Captain Dimak. If Graff laid a trap, it was not for us."

"You're sure of that?"

"Graff doesn't play bureaucratic games. He doesn't give a damn about you and me. If he laid a trap, it's for Bean."

"Well that's my point!"

"I understand your point. But Achilles stays."

"Why?"

"Achilles' tests show him to be of a remarkably even temperament. He is no Bonzo Madrid. Therefore Bean is in no physical danger. The stress seems to be psychological. A test of character. And that is precisely the area where we have the very least data about Bean, given his refusal to play the mind game and the ambiguity of the information we got from his playing with his teacher log-in. Therefore I think this forced relationship with his bugbear is worth pursuing."

"Bugbear or nemesis, sir?"

"We will monitor closely. I will *\*not\** be keeping adults so far removed that we can't get there to intervene in time, the way Graff arranged it with Ender and Bonzo. Every precaution will be taken. I am not playing Russian roulette the way Graff was."

"Yes you are, sir. The only difference is that he knew he had only one empty chamber, and you don't know how many chambers are empty because he loaded the gun."

\*\*\*

On his first morning as commander of Rabbit Army, Bean woke to see a paper lying on his floor. For a moment he was stunned at the thought that he would be given a battle before he even met his army, but to his relief the note was about something much more mundane.

{Because of the number of new commanders, the tradition of not joining the commanders' mess until after the first victory is abolished. You are to dine in the commanders' mess starting immediately.}

It made sense. Since they were going to accelerate the battle schedule for everyone, they wanted to have the commanders in a position to share information right from the start. And to be under social pressure from their peers, as well.

Holding the paper in his hand, Bean remembered how Ender had held his orders, each impossible new permutation of the game. Just because this order made sense did not make it a good thing. There was nothing sacred about the game itself that made Bean resent changes in the rules and customs, but the way the teachers were manipulating them *\*did\** bother him.

Cutting off his access to student information, for instance. The question wasn't why they cut it off, or even why they let him have it for so long. The question was why the other commanders didn't have that much information all along. If they were supposed to be learning to lead, then they should have the tools of leadership.

And as long as they were changing the system, why not get rid of the really pernicious, destructive things they did? For instance, the scoreboards in the mess halls. Standings and scores! Instead of fighting the battle at hand, those scores made soldiers and commanders alike more cautious, less willing to experiment. That's why the ludicrous custom of fighting in formations had lasted so long

-- Ender can't have been the first commander to see a better way. But nobody wanted to rock the boat, to be the one who innovated and paid the price by dropping in the rankings. Far better to treat each battle as a completely separate problem, and to feel free to engage in battles as if they were \*play\* rather than work. Creativity and challenge would increase drastically. And commanders wouldn't have to worry when they gave an order to a toon or an individual whether they were causing a particular soldier to sacrifice his standing for the good of the army.

Most important, though, was the challenge inherent in Ender's decision to reject the game. The fact that he graduated before he could really go on strike didn't change the fact that if he had done so, Bean would have supported him in it.

Now that Ender was gone, a boycott of the game didn't make sense. Especially if Bean and the others were to advance to a point where they might be part of Ender's fleet when the real battles came. But they could take charge of the game, use it for their own purposes.

So, dressed in his new -- and ill-fitting -- Rabbit Army uniform, Bean soon found himself once again standing on a table, this time in the much smaller officers' mess. Since Bean's speech the day before was already the stuff of legend, there was laughter and some catcalling when he got up.

"Do people where you come from eat with their feet, Bean?"

"Instead of getting up on tables, why don't you just \*grow\*, Bean?"

"Put some stilts on so we can keep the tables clean!"

But the other new commanders who had, until yesterday, been toon leaders in Dragon Army, made no catcalls and did not laugh. Their respectful attention to Bean soon prevailed, and silence fell over the room.

Bean flung up an arm to point to the scoreboard that showed the standings. "Where's Dragon Army?" he asked.

"They dissolved it," said Petra Arkanian. "The soldiers have been folded into the other armies. Except for you guys who used to be Dragon."

Bean listened, keeping his opinion of her to himself. All he could think of, though, was two nights before, when she was, wittingly or not, the judas who was supposed to lure Ender into a trap.

"Without Dragon up there," said Bean, "that board means nothing. Whatever standing any of us gets would not be the same if Dragon were still there."

"There's not a hell of a lot we can do about it," said Dink Meeker.

"The problem isn't that Dragon is missing," said Bean. "The problem is that we shouldn't have that board at all. \*We're\* not each other's enemies. The \*Buggers\* are the only enemy. \*We're\* supposed to be allies. We should be learning from each other, sharing information and ideas. We

should feel free to experiment, trying new things without being afraid of how it will affect our standings. That board up there, that's the \*teachers'\* game, getting us to turn against each other. Like Bonzo. Nobody here is as crazy with jealousy as he was, but come on, he was what those standings were bound to create. He was all set to beat in the brains of our best commander, our best hope against the next Bugger invasion, and why? Because Ender humiliated him in the \*standings\* . Think about that! The standings were more important to him than the war against the Formics!"

"Bonzo was crazy," said William Bee.

"So let's \*not\* be crazy," said Bean. "Let's get those standings out of the game. Let's take each battle one at a time, a clean slate. Try anything you can think of to win. And when the battle is over, both commanders sit down and explain what they were thinking, why they did what they did, so we can learn from each other. No secrets! Everybody try everything! And screw the standings!"

There were murmurs of assent, and not just from the former Dragons.

"That's easy for you to say," said Shen. "\*Your\* standing right now is tied for last."

"And there's the problem, right there," said Bean. "You're suspicious of my motives, and why? Because of the standings. But aren't we all supposed to be commanders in the same fleet someday? Working together? Trusting each other? How sick would the I.F. be, if all the ship captains and strike force commanders and fleet admirals spent all their time worrying about their standings instead of working together to try to beat the Formics! I want to learn from you, Shen. I don't want to \*compete\* with you for some empty rank that the teachers put up on that wall in order to manipulate us."

"I'm sure you guys from Dragon are all concerned about learning from us losers," said Petra.

There it was, out in the open.

"Yes! Yes, I \*am\* concerned. Precisely because I've been in Dragon Army. There are nine of us here who know pretty much only what we learned from Ender. Well, brilliant as he was, he's not the only one in the fleet or even in the school who knows anything. I need to learn how \*you\* think. I don't need you keeping secrets from me, and you don't need me keeping secrets from you. Maybe part of what made Ender so good was that he kept all his toon leaders talking to each other, free to try things but only as long as we shared what we were doing."

There was more assent this time. Even the doubters were nodding thoughtfully.

"So what I propose is this. A unanimous rejection of that board up there, not only the one in here but the one in the soldiers' mess, too. We all agree not to pay attention to it, period. We ask the teachers to disconnect the things or leave them blank. If they refuse, we bring in sheets to cover it, or we throw chairs until we break it. We don't have to play \*their\* game. We can take charge of our own education and get ready to fight the \*real\* enemy. We have to remember, always, who the real enemy is."

"Yeah, the teachers," said Dink Meeker.

Everybody laughed. But then Dink Meeker stood up on the table beside Bean. "I'm the senior commander here, now they've graduated all the oldest guys. I'm probably the oldest soldier left in Battle School. So I propose that we adopt Bean's proposal right now, and I'll go to the teachers to demand that the boards be shut off. Is there anyone opposed?"

Not a sound.

"That makes it unanimous. If the boards are still on at lunch, let's bring sheets to cover them up. If they're still on at dinner, then forget using chairs to vandalize, let's just refuse to take our armies to any battles until the boards are off."

Alai spoke up from where he stood in the serving line. "\*That'll\* shoot our standings all to ..."

Then Alai realized what he was saying, and laughed at himself. "Damn, but they've got us brainwashed, haven't they!"

\*\*\*

Bean was still flushed with victory when, after breakfast, he made his way to Rabbit barracks in order to meet his soldiers officially for the first time. Rabbit was on a midday practice schedule, so he only had about half an hour between breakfast and the first classes of the morning. Yesterday, when he talked to It£ [Itu], his mind had been on other things, with only the most cursory attention to what was going on inside Rabbit barracks. But now he realized that, unlike Dragon Army, the soldiers in Rabbit were all of the regular age. Not one was even close to Bean's height. He looked like somebody's doll, and worse, he felt like that too, walking down the corridor between the bunks, seeing all these huge boys -- and a couple of girls -- looking down at him.

Halfway down the bunks, he turned to face those he had already passed. Might as well address the problem immediately.

"The first problem I see," said Bean loudly, "is that you're all way too tall."

Nobody laughed. Bean died a little. But he had to go on.

"I'm growing as fast as I can. Beyond that, I don't know what I can do about it."

Only now did he get a chuckle or two. But that was a relief, that even a few were willing to meet him partway.

"Our first practice together is at 1030. As to our first battle together, I can't predict that, but I can promise you this -- the teachers are \*not\* going to give me the traditional three months after my assignment to a new army. Same with all the other new commanders just appointed. They gave Ender Wiggin only a few weeks with Dragon before they went into battle -- and Dragon was a new

army, constructed out of nothing. Rabbit is a good army with a solid record. The only new person here is me. I expect the battles to begin in a matter of days, a week at most, and I expect battles to come frequently. So for the first couple of practices, you'll really be training me in your existing system. I need to see how you work with your toon leaders, how the toons work with each other, how you respond to orders, what commands you use. I'll have a couple of things to say that are more about attitude than tactics, but by and large, I want to see you doing things as you've always done them under Carn. It would help me, though, if you practiced with intensity, so I can see you at your sharpest. Are there any questions?"

None. Silence.

"One other thing. Day before yesterday, Bonzo and some of his friends were stalking Ender Wiggin in the halls. I saw the danger, but the soldiers in Dragon Army were mostly too small to stand up against the crew Bonzo had assembled. It wasn't an accident that when I needed help for my commander, I came to the door of Rabbit Army. This wasn't the closest barracks. I came to you because I knew that you had a fair-minded commander in Carn Carby, and I believed that his army would have the same attitude. Even if you didn't have any particular love for Ender Wiggin or Dragon Army, I knew that you would not stand by and let a bunch of thugs pound on a smaller kid that they couldn't beat fair and square in battle. And I was right about you. When you poured out of this barracks and stood as witnesses in the corridor, I was proud of what you stood for. I'm proud now to be one of you."

That did it. Flattery rarely fails, and never does if it's sincere. By letting them know they had already earned his respect, he dissipated much of the tension, for of course they were worried that as a former Dragon he would have contempt for the first army that Ender Wiggin beat. Now they knew better, and so he'd have a chance to win their respect as well.

It£ [Itu] started clapping, and the other boys joined in. It wasn't a long ovation, but it was enough to let him know the door was open, at least a crack.

He raised his hands to silence the applause -- just in time, since it was already dying down. "I'd like to speak to the toon leaders for a few minutes in my quarters. The rest of you are dismissed till practice."

Almost at once, It£ [Itu] was beside him. "Good job," he said. "Only one mistake."

"What was that?"

"You aren't the only new person here."

"They assigned one of the Dragon soldiers to Rabbit?" For a moment, Bean allowed himself to hope that it would be Nikolai. He could use a reliable friend.

No such luck.

"No, a Dragon soldier would be a veteran! I mean this guy is \*new\*. He just got to Battle School yesterday afternoon and he was assigned here last night, after you came by."

"A launchy? Assigned straight to an army?"

"Oh, we asked him about that, and he's had a lot of the same classwork. He went through a bunch of surgeries down on Earth, and he studied through it all, but --"

"You mean he's recovering from surgery, too?"

"No, he walks fine, he's -- look, why don't you just meet him? All I need to know is, do you want to assign him to a toon or what?"

"Eh, let's see him."

It£ [Itu] led him to the back of the barracks. There he was, standing beside his bunk, several inches taller than Bean remembered, with legs of even length now, both of them straight. The boy he had last seen fondling Poke, minutes before her dead body went into the river.

"Ho, Achilles," said Bean.

"Ho, Bean," said Achilles. He grinned winningly. "Looks like you're the big guy here."

"So to speak," said Bean.

"You two know each other?" said It£ [Itu].

"We knew each other in Rotterdam," said Achilles.

They can't have assigned him to me by accident. I never told anybody but Sister Carlotta about what he did, but how can I guess what she told the I.F.? Maybe they put him here because they thought both of us being from the Rotterdam streets, from the same crew -- the same family -- I might be able to help him get into the mainstream of the school faster. Or maybe they knew that he was a murderer who was able to hold a grudge for a long, long time, and strike when least expected. Maybe they knew that he planned for my death as surely as he planned for Poke's. Maybe he's here to be my Bonzo Madrid.

Except that I haven't taken any personal defense classes. And I'm half his size -- I couldn't jump high enough to hit him in the nose. Whatever they were trying to accomplish by putting Ender's life at risk, Ender always had a better chance of surviving than I will.

The only thing in my favor is that Achilles wants to survive and prosper more than he wants vengeance. Since he can hold a grudge forever, he's in no hurry to act on it. And, unlike Bonzo, he'll never allow himself to be goaded into striking under circumstances where he'd be identifiable as the killer. As long as he thinks he needs me and as long as I'm never alone, I'm probably safe.

Safe. He shuddered. Poke felt safe, too.

"Achilles was \*my\* commander there," said Bean. "He kept a group of us kids alive. Got us into the charity kitchens."

"Bean is too modest," said Achilles. "The whole thing was his idea. He basically taught us the whole idea of working together. I've studied a lot since then, Bean. I've had a year of nothing but books and classes -- when they weren't cutting into my legs and pulverizing and regrowing my bones. And I finally know enough to understand just what a leap you helped us make. From barbarism into civilization. Bean here is like a replay of human evolution."

Bean was not so stupid as to fail to recognize when flattery was being used on him. At the same time, it was more than a little useful to have this new boy, straight from Earth, already know who Bean was and show respect for him.

"The evolution of the pygmies, anyway," said Bean.

"Bean was the toughest little bastard you ever saw on the street, I got to tell you."

No, this was not what Bean needed right now. Achilles had just crossed the line from flattery into possession. Stories about Bean as a "tough little bastard" would, of necessity, set Achilles up as Bean's superior, able to evaluate him. The stories might even be to Bean's credit -- but they would serve more to validate Achilles, make him an insider far faster than he would otherwise have been. And Bean did not want Achilles to be inside yet.

Achilles was already going on, as more soldiers gathered closer to hear. "The way I got recruited into Bean's crew was --"

"It wasn't my crew," said Bean, cutting him off. "And here in Battle School, we don't tell stories about home and we don't listen to them either. So I'd appreciate it if you never spoke again of anything that happened Rotterdam, not while you're in my army."

He'd done the nice bit during his opening speech. But now was the time for authority.

Achilles didn't show any sign of embarrassment at the reprimand. "I get it. No problem."

"It's time for you to get ready to go to class," said Bean to the soldiers. "I need to confer with my toon leaders only." Bean pointed to Ambul, a Thai soldier who, according to what Bean read in the student reports, would have been a toon leader long ago, except for his tendency to disobey stupid orders. "You, Ambul. I assign you to get Achilles to and from his correct classes and acquaint him with how to wear a flash suit, how it works, and the basics of movement in the battleroom. Achilles, you are to obey Ambul like God until I assign you to a regular toon."

Achilles grinned. "But I don't obey God."

You think I don't know that? "The correct answer to an order from me is 'Yes sir.'"

Achilles's grin faded. "Yes sir."

"I'm glad to have you here," Bean lied.

"Glad to be here, sir," said Achilles. And Bean was reasonably sure that while Achilles was \*not\* lying, his reason for being glad was very complicated, and certainly included, by now, a renewed desire to see Bean die.

For the first time, Bean understood the reason Ender had almost always acted as if he was oblivious to the danger from Bonzo. It was a simple choice, really. Either he could act to save himself, or he could act to maintain control over his army. In order to hold real authority, Bean had to insist on complete obedience and respect from his soldiers, even if it meant putting Achilles down, even if it meant increasing his personal danger.

And yet another part of him thought: Achilles wouldn't be here if he didn't have the ability to be a leader. He performed extraordinarily well as our papa in Rotterdam. It's my responsibility now to get him up to speed as quickly as possible, for the sake of his potential usefulness to the I.F. I can't let my personal fear interfere with that, or my hatred of him for what he did to Poke. So even if Achilles is evil incarnate, my job is to turn him into a highly effective soldier with a good shot at becoming a commander.

And in the meantime, I'll watch my back.

## CHAPTER 20 -- TRIAL AND ERROR

"You brought him up to Battle School, didn't you?"

"Sister Carlotta, I'm on a leave of absence right now. That means I've been sacked, in case you don't understand how the I.F. handles these things."

"Sacked! A miscarriage of justice. You ought to be shot."

"If the Sisters of St. Nicholas had convents, your abbess would make you do serious penance for that un-Christian thought."

"You took him out of the hospital in Cairo and directly into space. Even though I warned you."

"Didn't you notice that you telephoned me on a regular exchange? I'm on Earth. Someone else is running Battle School."

"He's a serial murderer now, you know. Not just the girl in Rotterdam. There was a boy there, too, the one Helga called Ulysses. They found his body a few weeks ago."

"Achilles has been in medical care for the past year."

"The coroner estimates that the killing took place at least that long ago. The body was hidden behind some long-term storage near the fish market. It covered the smell, you see. And it goes on. A teacher at the school I put him in."

"Ah. That's right. \*You\* put him in a school long before I did."

"The teacher fell to his death from an upper story."

"No witnesses. No evidence."

"Exactly."

"You see a trend here?"

"But that's \*my\* point. Achilles does not kill carelessly. Nor does he choose his victims at random. Anyone who has seen him helpless, crippled, beaten -- he can't bear the shame. He has to expunge it by getting absolute power over the person who dared to humiliate him."

"You're a psychologist now?"

"I laid the facts before an expert."

"The supposed facts."

"I'm not in court, Colonel. I'm talking to the man who put this killer in school with the child who came up with the original plan to humiliate him. Who called for his death. My expert assured me that the chance of Achilles \*not\* striking against Bean is zero."

"It's not as easy as you think, in space. No dock, you see."

"Do you know how I knew you had taken him into space?"

"I'm sure you have your sources, both mortal and heavenly."

"My dear friend, Dr. Vivian Delamar, was the surgeon who reconstructed Achilles's leg."

"As I recall, you recommended her."

"Before I knew what Achilles really was. When I found out, I called her. Warned her to be careful. Because my expert also said that she was in danger."

"The one who restored his leg? Why?"

"No one has seen him more helpless than the surgeon who cuts into him as he lies there drugged to the gills. Rationally, I'm sure he knew it was wrong to harm this woman who did him so much good. But then, the some would apply to Poke, the first time he killed. \*If\* it was the first time."

"So ... Dr. Vivian Delamar. You alerted her. What did she see? Did he murmur a confession under anaesthetic?"

"We'll never know. He killed her."

"You're joking."

"I'm in Cairo. Her funeral is tomorrow. They were calling it a heart attack until I urged them to look for a hypodermic insertion mark. Indeed they found one, and now it's on the books as a murder. Achilles \*does\* know how to read. He learned which drugs would do the job. How he got her to sit still for it, I don't know."

"How can I believe this, Sister Carlotta? The boy is generous, gracious, people are drawn to him, he's a born leader. People like that don't kill."

"Who are the dead? The teacher who mocked him for his ignorance when he first arrived in the school, showed him up in front of the class. The doctor who saw him laid out under anaesthetic. The street girl whose crew took him down. The street boy who vowed to kill him and made him go into hiding. Maybe the coincidence argument would sway a jury, but it shouldn't sway you."

"Yes, you've convinced me that the danger might well be real. But I already alerted the teachers at Battle School that there might be some danger. And now I really am not in charge of Battle School."

"You're still in \*touch\*. If you give them a more urgent warning, they'll take steps."

"I'll give the appropriate warning."

"You're lying to me."

"You can tell that over the phone?"

"You \*want\* Bean exposed to danger!"

"Sister ... yes, I do. But not this much of it. Whatever I can do, I'll do."

"If you let Bean come to harm, God will have an accounting from you."

"He'll have to get in line, Sister Carlotta. The I.F. court-martial takes precedence."

\*\*\*

Bean looked down into the air vent in his quarters and marveled that he had ever been small enough to fit in there. What was he then, the size of a rat?

Fortunately, with a room of his own now he wasn't limited to the outflow vents. He put his chair on top of his table and climbed up to the long, thin intake vents along the wall on the corridor side of his room. The vent trim pried out as several long sections. The paneling above it was separate from the riveted wall below. And it, too, came off fairly easily. Now there was room enough for almost any kid in Battle School to shinny in to the crawl space over the corridor ceiling.

Bean stripped off his clothes and once again crawled into the air system.

It was more cramped this time -- it was surprising how much he'd grown. He made his way quickly to the maintenance area near the furnaces. He found how the lighting systems worked, and carefully went around removing lightbulbs and wall glow units in the areas he'd be needing. Soon there was a wide vertical shaft that was utterly dark when the door was closed, with deep shadows even when it was open. Carefully he laid his trap.

\*\*\*

Achilles never ceased to be astonished at how the universe bent to his will. Whatever he wished seemed to come to him. Poke and her crew, raising him above the other bullies. Sister Carlotta, bringing him to the priests' school in Bruxelles. Dr. Delamar, straightening his leg so he could \*run\*, so he looked no different from any other boy his age. And now here he was in Battle School, and who should be his first commander but little Bean, ready to take him under his wing, help him rise within this school. As if the universe were created to serve him, with all the people in it tuned to resonate with his desires.

The battleroom was cool beyond belief. War in a box. Point the gun, the other kid's suit freezes. Of course, Ambul had made the mistake of demonstrating this by freezing Achilles and then laughing at his consternation at floating in the air, unable to move, unable to change the direction of his drift. People shouldn't do that. It was wrong, and it always gnawed at Achilles until he was able to set things right. There should be more kindness and respect in the world.

Like Bean. It looked so promising at first, but then Bean started putting him down. Making sure the others saw that Achilles \*used\* to be Bean's papa, but now he was just a soldier in Bean's army. There was no need for that. You don't go putting people down. Bean had changed. Back when Poke first put Achilles on his back, shaming him in front of all those little children, it was Bean who showed him respect. "Kill him," Bean had said. He knew, then, that tiny boy, he knew that even on his back, Achilles was dangerous. But he seemed to have forgotten that now. In fact, Achilles was pretty sure that Bean must have told Ambul to freeze his flash suit and humiliate him in the practice room, setting him up for the others to laugh at him.

I was your friend and protector, Bean, because you showed respect for me. But now I have to weigh that in the balance with your behavior here in Battle School. No respect for me at all.

The trouble was, the students in Battle School were given nothing that could be used as a weapon, and everything was made completely safe. No one was ever alone, either. Except the commanders. Alone in their quarters. That was promising. But Achilles suspected that the teachers had a way of tracking where every student was at any given time. He'd have to learn the system, learn how to evade it, before he could start setting things to rights.

But he knew this: He'd learn what he needed to learn. Opportunities would appear. And he, being Achilles, would see those opportunities and seize them. Nothing could interrupt his rise until he held all the power there was to hold within his hands. Then there would be perfect justice in the world, not this miserable system that left so many children starving and ignorant and crippled on the streets while others lived in privilege and safety and health. All those adults who had run things for thousands of years were fools or failures. But the universe obeyed Achilles. He and he alone could correct the abuses.

On his third day in Battle School, Rabbit Army had its first battle with Bean as commander. They lost. They would not have lost if Achilles had been commander. Bean was doing some stupid touchy-feely thing, leaving things up to the toon leaders. But it was obvious that the toon leaders had been badly chosen by Bean's predecessor. If Bean was to win, he needed to take tighter control. When he tried to suggest this to Bean, the child only smiled knowingly -- a maddeningly superior smile -- and told him that the key to victory was for each toon leader and, eventually, each soldier to see the whole situation and act independently to bring about victory. It made Achilles want to slap him, it was so stupid, so wrongheaded. The one who knew how to order things did not leave it up to others to create their little messes in the corners of the world. He took the reins and pulled, sharp and hard. He whipped his men into obedience. As Frederick the Great said: The soldier must fear his officers more than he fears the bullets of the enemy. You could not rule without the naked exercise of power. The followers must bow their heads to the leader. They must *surrender* their heads, using only the mind and will of the leader to rule them. No one but Achilles seemed to understand that this was the great strength of the Buggers. They had no individual minds, only the mind of the hive. They submitted perfectly to the queen. We cannot defeat the Buggers until we learn from them, become like them.

But there was no point in explaining this to Bean. He would not listen. Therefore he would never make Rabbit Army into a hive. He was working to create chaos. It was unbearable.

Unbearable -- yet, just when Achilles thought he couldn't bear the stupidity and waste any longer, Bean called him to his quarters.

Achilles was startled, when he entered, to find that Bean had removed the vent cover and part of the wall panel, giving him access to the air-duct system. This was not at all what Achilles had expected.

"Take your clothes off," said Bean.

Achilles smelled an attempt at humiliation.

Bean was taking off his own uniform. "They track us through the uniforms," said Bean. "If you aren't wearing one, they don't know where you are, except in the gym and the battleroom, where they have really expensive equipment to track each warm body. We aren't going to either of those places, so strip."

Bean was naked. As long as Bean went first, Achilles could not be shamed by doing the same.

"Ender and I used to do this," said Bean. "Everybody thought Ender was such a brilliant commander, but the truth is he knew all the plans of the other commanders because we'd go spying through the air ducts. And not just the commanders, either. We found out what the teachers were planning. We always knew it in advance. Not hard to win that way."

Achilles laughed. This was too cool. Bean might be a fool, but this Ender that Achilles had heard so much about, *he* knew what he was doing.

"It takes two people, is that it?"

"To get where I can spy on the teachers, there's a wide shaft, pitch black. I can't climb down. I need somebody to lower me down and haul me back up. I didn't know who in Rabbit Army I could trust, and then ... there you were. A friend from the old days."

It was happening again. The universe, bending to his will. He and Bean would be alone. No one would be tracking where they were. No one would know what had happened.

"I'm in," said Achilles.

"Boost me up," said Bean. "You're tall enough to climb up alone."

Clearly, Bean had come this way many times before. He scampered through the crawl space, his feet and butt flashing in the spill from the corridor lights. Achilles noted where he put his hands and feet, and soon was as adept at Bean at picking his way through. Every time he used his leg, he marveled at the use of it. It went where he wanted it to go, and had the strength to hold him. Dr. Delamar might be a skilled surgeon, but even she said that she had never seen a body respond to the surgery as Achilles' did. His body knew how to be whole, expected to be strong. All the time before, those crippled years, had been the universe's way of teaching Achilles the unbearability of disorder. And now Achilles was perfect of body, ready to move ahead in setting things to rights.

Achilles very carefully noted the route they took. If the opportunity presented itself, he would be coming back alone. He could not afford to get lost, or give himself away. No one could know that he had ever been in the air system. As long as he gave them no reason, the teachers would never suspect him. All they knew was that he and Bean were friends. And when Achilles grieved for the child, his tears would be real. They always were, for there was a nobility to these tragic deaths. A grandeur as the great universe worked its will through Achilles's adept hands.

The furnaces roared as they came into a room where the framing of the station was visible. Fire was good. It left so little residue. People died when they accidentally fell into fire. It happened all the time. Bean, crawling around alone ... it would be good if they went near the furnace.

Instead, Bean opened a door into a dark space. The light from the opening showed a black gap not far inside. "Don't step over the edge of that," Bean said cheerfully. He picked up a loop of very fine cord from the ground. "It's a deadline. Safety equipment. Keeps workmen from drifting off into space when they're working on the outside of the station. Ender and I set it up -- it goes over a beam up there and keeps me centered in the shaft. You can't grip it in your hands, it cuts too easily if it slides across your skin. So you loop it tight around your body -- no sliding, see? -- and brace yourself. The gravity's not that intense, so I just jump off. We measured it out, so I stop right at the level of the vents leading to the teachers' quarters."

"Doesn't it hurt when you stop?"

"Like a bitch," said Bean. "No pain no gain, right? I take off the deadline, I snag it on a flap of metal and it stays there till I get back. I'll tug on it three times when I get it back on. Then you pull me back up. But \*not\* with your hands. You go out the door and walk out there. When you get to place where we came in, go around the beam there and go till you touch the wall. Just wait there until I can get myself swinging and land back here on this ledge. Then I unloop myself and you come back in and we leave the deadline for next time. Simple, see?"

"Got it," said Achilles.

Instead of walking to the wall, it would be simple enough to just keep walking. Get Bean floating in the air where he couldn't get hold of anything. Plenty of time, then, to find a way to tie it off inside that dark room. With the roar of the furnaces and fans, nobody would hear Bean calling for help. Then Achilles would have time to explore. Figure out how to get into the furnaces. Swing Bean back, strangle him, carry the body to the fire. Drop the deadline down the shaft. Nobody would find it. Quite possibly no one would ever find Bean, or if they did, his soft tissues would be consumed. All evidence of strangulation would be gone. Very neat. There'd be some improvisation, but there always was. Achilles could handle little problems as they came up.

Achilles looped the deadline over his head, then drew it tight under his arms as Bean climbed into the loop at the other end.

"Set," said Achilles.

"Make sure it's tight, so it doesn't have any slack to cut you when I hit bottom."

"Yes, it's tight."

But Bean had to check. He got a finger under the line. "Tighter," said Bean.

Achilles tightened it more.

"Good," said Bean. "That's it. Do it."

Do it? Bean was the one who was supposed to do it.

Then the deadline went taut and Achilles was lifted off his feet. With a few more yanks, he hung in the air in the dark shaft. The deadline dug harshly into his skin.

When Bean said "do it" he was talking to someone else. Someone who was already here, lying in wait. The traitorous little bastard.

Achilles said nothing, however. He reached up to see if he could touch the beam above him, but it was out of reach. Nor could he climb the line, not with bare hands, not with the line drawn taut by his own body weight.

He wriggled on the line, starting himself swinging. But no matter how far he went in any direction, he touched nothing. No wall, no place where he might find purchase.

Time to talk.

"What's this about, Bean?"

"It's about Poke," said Bean.

"She's dead, Bean."

"You kissed her. You killed her. You put her in the river."

Achilles felt the blood run hot into his face. No one saw that. He was guessing. But then ... how did he know that Achilles had kissed her first, unless he saw?

"You're wrong," said Achilles.

"How sad if I am. Then the wrong man will die for the crime."

"Die? Be serious, Bean. You aren't a killer."

"But the hot dry air of the shaft will do it for me. You'll dehydrate in a day. Your mouth's already a little dry, isn't it? And then you'll just keep hanging here, mummifying. This is the intake system, so the air gets filtered and purified. Even if your body stinks for a while, nobody will smell it. Nobody will see you -- you're above where the light shines from the door. And nobody comes in here anyway. No, the disappearance of Achilles will be the mystery of Battle School. They'll tell ghost stories about you to frighten the launchies."

"Bean, I didn't do it."

"I saw you, Achilles, you poor fool. I don't care what you say, I saw you. I never thought I'd have the chance to make you pay for what you did to her. Poke did nothing but good to you. I told her to kill you, but she had mercy. She made you king of the streets. And for that you killed her?"

"I didn't kill her."

"Let me lay it out for you, Achilles, since you're clearly too stupid to see where you are. First thing is, you forgot where you were. Back on Earth, you were used to being a lot smarter than everybody around you. But here in Battle School, *\*everybody\** is as smart as you, and most of us are smarter. You think Ambul didn't see the way you looked at him? You think he didn't know he was marked for death after he laughed at you? You think the other soldiers in Rabbit doubted me when I told them about you? They'd already seen that there was something wrong with you. The adults might have missed it, they might buy into the way you suck up to them, but *\*we\** didn't. And since we just had a case of one kid trying to kill another, nobody was going to put up with it again. Nobody was going to wait for you to strike. Because here's the thing -- we don't give a shit about fairness here. We're soldiers. Soldiers do not give the other guy a sporting chance. Soldiers shoot in the back, lay traps and ambushes, lie to the enemy and outnumber the other bastard every chance they get. Your kind of murder only works among civilians. And you were too cocky, too stupid, too insane to realize that."

Achilles knew that Bean was right. He had miscalculated grossly. He had forgotten that when Bean said for Poke to kill him, he had not just been showing respect for Achilles. He had also been trying to get Achilles killed.

This just wasn't working out very well.

"So you have only two ways for this to end. One way, you just hang there, we take turns watching to make sure you don't figure some way out of this, until you're dead and then we leave you and go about our lives. The other way, you confess to everything -- and I mean everything, not just what you think I already know -- and you keep confessing. Confess to the teachers. Confess to the psychiatrists they send you to. Confess your way into a mental hospital back on Earth. We don't care which you choose. All that matters is that you never again walk freely through the corridors of Battle School. Or anywhere else. So ... what will it be? Dry out on the line, or let the teachers know just how crazy you are?"

"Bring me a teacher, I'll confess."

"Didn't you hear me explain how stupid we're not? You confess now. Before witnesses. With a recorder. We don't bring some teacher up here to see you hanging there and feel all squishy sorry for you. Any teacher who comes here will know exactly what you are, and there'll be about six marines to keep you subdued and sedated because, Achilles, they don't play around here. They don't give people chances to escape. You've got no rights here. You don't get rights again until you're back on Earth. Here's your last chance. Confession time."

Achilles almost laughed out loud. But it was important for Bean to think that he had won. As, for the moment, he had. Achilles could see now that there was no way for him to remain in Battle

School. But Bean wasn't smart enough just to kill him and have done. No, Bean was, completely unnecessarily, allowing him to live. And as long as Achilles was alive, then time would move things his way. The universe would bend until the door was opened and Achilles went free. And it would happen sooner rather than later.

You shouldn't have left a door open for me, Bean. Because I *\*will\** kill you someday. You and everyone else who has seen me helpless here.

"All right," said Achilles. "I killed Poke. I strangled her and put her in the river."

"Go on."

"What more? You want to know how she wet herself and took a shit while she was dying? You want to know how her eyes bugged out?"

"One murder doesn't get you psychiatric confinement, Achilles. You know you've killed before."

"What makes you think so?"

"Because it didn't bother you."

It never bothered, not even the first time. You just don't understand power. If it *\*bothers\** you, you aren't fit to *\*have\** power. "I killed Ulysses, of course, but just because he was a nuisance."

"And?"

"I'm not a mass murderer, Bean."

"You live to kill, Achilles. Spill it all. And then convince me that it really *\*was\** all."

But Achilles had just been playing. He had already decided to tell it all.

"The most recent was Dr. Vivian Delamar," he said. "I told her not to do the operations under total anaesthetic. I told her to leave me alert, I could take it even if there was pain. But she had to be in control. Well, if she really loved control so much, why did she turn her back on me? And why was she so stupid as to think I really had a gun? By pressing hard in her back, I made it so she didn't even feel the needle go in right next to where the tongue depressors were poking her. Died of a heart attack right there in her own office. Nobody even knew I'd been in there. You want more?"

"I want it all, Achilles."

It took twenty minutes, but Achilles gave them the whole chronicle, all seven times he had set things right. He liked it, actually, telling them like this. Nobody had ever had a chance to understand how powerful he was till now. He wanted to see their faces, that's the only thing that was missing. He wanted to see the disgust that would reveal their weakness, their inability to look power in the face. Machiavelli understood. If you intend to rule, you don't shrink from killing.

Saddam Hussein knew it -- you have to be willing to kill with your own hand. You can't stand back and let others do it for you all the time. And Stalin understood it, too -- you can never be loyal to anybody, because that only weakens you. Lenin was good to Stalin, gave him his chance, raised him out of nothing to be the keeper of the gate to power. But that didn't stop Stalin from imprisoning Lenin and then killing him. That's what these fools would never understand. All those military writers were just armchair philosophers. All that military history -- most of it was useless. War was just one of the tools that the great men used to get and keep their power. And the only way to stop a great man was the way Brutus did it.

Bean, you're no Brutus.

Turn on the light. Let me see the faces,

But the light did not go on. When he was finished, when they left, there was only the light through the door, silhouetting them as they left. Five of them. All naked, but carrying the recording equipment. They even tested it, to make sure it had picked up Achilles's confession. He heard his own voice, strong and unwavering. Proud of what he'd done. That would prove to the weaklings that he was "insane." They would keep him alive. Until the universe bent things to his will yet again, and set him free to reign with blood and horror on Earth. Since they hadn't let him see their faces, he'd have no choice. When all the power was in his hands, he'd have to kill everyone who was in Battle School at this time. That would be a good idea, anyway. Since all the brilliant military minds of the age had been assembled here at one time or another, it was obvious that in order to rule safely, Achilles would have to get rid of everyone whose name had ever been on a Battle School roster. Then there'd be no rivals. And he'd keep testing children as long as he lived, finding any with the slightest spark of military talent. Herod understood how you stay in power.

## PART SIX -- VICTOR

### CHAPTER 21 -- GUESSWORK

"We're not waiting any longer for Colonel Graff to repair the damage done to Ender Wiggin. Wiggin doesn't need Tactical School for the job he'll be doing. And we need the others to move on at once. \*They\* have to get the feel of what the old ships can do before we bring them here and put them on the simulators, and that takes time."

"They've only had a few games."

"I shouldn't have allowed them as much time as I have. ISL is two months away from you, and by the time they're done with Tactical, the voyage from there to FleetCom will be four months. That gives them only three months in Tactical before we have to bring them to Command School. Three months in which to compress three years of training."

"I should tell you that Bean seems to have passed Colonel Graff's last test."

"Test? When I relieved Colonel Graff, I thought his sick little testing program ended as well."

"We didn't know how dangerous this Achilles was. We had been warned of *\*some\** danger, but ... he seemed so likable ... I'm not faulting Colonel Graff, you understand, *\*he\** had no way of knowing."

"Knowing what?"

"That Achilles is a serial killer."

"That should make Graff happy. Ender's count is up to two."

"I'm not joking, sir. Achilles has seven murders on his tally."

"And he passed the screening?"

"He knew how to answer the psychological tests."

"Please tell me that none of the seven took place at Battle School."

"Number eight would have. But Bean got him to confess."

"Bean's a priest now?"

"Actually, sir, it was deft strategy. He outmaneuvered Achilles -- led him into an ambush, and confession was the only escape."

"So Ender, the nice middle-class American boy, kills the kid who wants to beat him up in the bathroom. And Bean, the hoodlum street kid, turns a serial killer over to law enforcement."

"The more significant thing for our purposes is that Ender was good at building teams, but he beat Bonzo hand to hand, one on one. And then Bean, a loner who had almost no friends after a year in the school, he beats Achilles by assembling a team to be his defense and his witnesses. I have no idea if Graff predicted these outcomes, but the result was that his tests got each boy to act not only against our expectations, but also against his own predilections."

"Predilections. Major Anderson."

"It will all be in my report."

"Try to write the entire thing without using the word *\*predilection\** once."

"Yes, sir."

"I've assigned the destroyer Condor to take the group."

"How many do you want, sir?"

"We have need of a maximum of eleven at any one time. We have Carby, Bee, and Momoe on their way to Tactical already, but Graff tells me that of those three, only Carby is likely to work well with Wiggin. We do need to hold a slot for Ender, but it wouldn't hurt to have a spare. So send ten."

"\*Which\* ten?"

"How the hell should I know? Well ... Bean, him for sure. And the nine others that you think would work best with either Bean or Ender in command, whichever one it turns out to be."

"One list for both possible commanders?"

"With Ender as the first choice. We want them all to train together. Become a team."

\*\*\*

The orders came at 1700. Bean was supposed to board the Condor at 1800. It's not as if he had anything to pack. An hour was more time than they gave Ender. So Bean went and told his army what was happening, where he was going.

"We've only had five games," said It£ [Itu].

"Got to catch the bus when it comes to the stop, neh?" said Bean.

"Eh," said It£ [Itu].

"Who else?" asked Ambul.

"They didn't tell me. Just ... Tactical School."

"We don't even know where it is."

"Somewhere in space," said It£ [Itu].

"No, really?" It was lame, but they laughed. It wasn't all that hard a good-bye. He'd only been with Rabbit for eight days.

"Sorry we didn't win any for you," said It£ [Itu].

"We would have won, if I'd wanted to," said Bean.

They looked at him like he was crazy.

"I was the one who proposed that we get rid of the standings, stop caring who wins. How would it look if we do that and I win every time?"

"It would look like you really did care about the standings," said It£ [Itu].

"That's not what bothers me," said another toon leader. "Are you telling me you set us up to \*lose\*?"

"No, I'm telling you I had a different priority. What do we learn from beating each other? Nothing. We're never going to have to fight human children. We're going to have to fight Buggers. So what do we need to learn? How to coordinate our attacks. How to respond to each other. How to feel the course of the battle, and take responsibility for the whole thing even if you don't have command. \*That's\* what I was working on with you guys. And if we \*won\*, if we went in and mopped up the walls with them, using \*my\* strategy, what does that teach \*you\*? You already worked with a good commander. What you needed to do was work with each other. So I put you in tough situations and by the end you were finding ways to bail each other out. To make it work."

"We never made it work well enough to win."

"That's not how I measured it. You made it work. When the Buggers come again, they're going to make things go wrong. Besides the normal friction of war, they're going to be doing stuff we couldn't think of because they're not human, they don't think like us. So plans of attack, what good are they then? We try, we do what we can, but what really counts is what you do when command breaks down. When it's just you with your squadron, and you with your transport, and you with your beat-up strike force that's got only five weapons among eight ships. How do you help each other? How do you make do? That's what I was working on. And then I went back to the officers' mess and told them what I learned. What you guys showed me. I learned stuff from them, too. I told you all the stuff I learned from them, right?"

"Well, you could have told us what you were teaming from us," said It£ [Itu]. They were all still a bit resentful.

"I didn't have to \*tell\* you. You learned it."

"At least you could have told us it was OK not to win."

"But you were supposed to \*try\* to win. I didn't tell you because it only works if you think it counts. Like when the Buggers come. It'll count then, for real. That's when you get really smart, when losing means that you and everybody you ever cared about, the whole human race, will die. Look, I didn't think we'd have long together. So I made the best use of the time, for you and for me. You guys are all ready to take command of armies."

"What about you, Bean?" asked Ambul. He was smiling, but there was an edge to it. "You ready to command a fleet?"

"I don't know. It depends on whether they want to win." Bean grinned.

"Here's the thing, Bean," said Ambul. "Soldiers don't like to lose."

"And \*that\*," said Bean, "is why losing is a much more powerful teacher than winning."

They heard him. They thought about it. Some of them nodded.

"\*If\* you live," Bean added. And grinned at them.

They smiled back.

"I gave you the best thing I could think of to give you during this week," said Bean. "And learned from you as much as I was smart enough to learn. Thank you." He stood and saluted them.

They saluted back.

He left.

And went to Rat Army barracks.

"Nikolai just got his orders," a toon leader told him.

For a moment Bean wondered if Nikolai would be going to Tactical School with him. His first thought was, No way is he ready. His second thought was, I wish he could come. His third thought was, I'm not much of a friend, to think first how he doesn't deserve to be promoted.

"What orders?" Bean asked.

"He's got him an army. Hell, he wasn't even a toon leader here. Just \*got\* here last week."

"Which army?"

"Rabbit." The toon leader looked at Bean's uniform again. "Oh. I guess he's replacing \*you\*."

Bean laughed and headed for the quarters he had just left.

Nikolai was sitting inside with the door open, looking lost.

"Can I come in?"

Nikolai looked up and grinned. "Tell me you're here to take your army back."

"I've got a hint for you. Try to win. They think that's important."

"I couldn't believe you lost all five."

"You know, for a school that doesn't list standings anymore, everybody sure keeps track."

"I keep track of \*you\*."

"Nikolai, I wish you were coming with me."

"What's happening, Bean? Is this it? Are the Buggers here?"

"I don't know."

"Come on, you figure these things out."

"If the Buggers were really coming, would they leave all you guys here in the station? Or send you back to Earth? Or evacuate you to some obscure asteroid? I don't know. Some things point to the end being really close. Other things seem like nothing important's going to happen anywhere around here."

"So maybe they're about to launch this huge fleet against the Bugger world and you guys are supposed to grow up on the voyage."

"Maybe," said Bean. "But the time to launch \*that\* fleet was right after the Second Invasion."

"Well, what if they didn't find out where the Bugger home world \*was\* until now?"

That stopped Bean cold. "Never crossed my mind," said Bean. "I mean, they must have been sending signals home. All we had to do was track that direction. Follow the light, you know. That's what it says in the manuals."

"What if they don't communicate by light?"

"Light may take a year to go a light-year, but it's still faster than anything else."

"Anything else that we know about," said Nikolai. Bean just looked at him.

"Oh, I know, that's stupid. The laws of physics and all that. I just -- you know, I keep thinking, that's all. I don't like to rule things out just because they're impossible."

Bean laughed. "Merda, Nikolai, I should have let you talk more and me talk less back when we slept across from each other."

"Bean, you know I'm not a genius."

"All geniuses here, Nikolai."

"I was scraping by."

"So maybe you're not a Napoleon, Nikolai. Maybe you're just an Eisenhower. Don't expect me to cry for you."

It was Nikolai's turn to laugh.

"I'll miss you, Bean."

"Thanks for coming with me to face Achilles, Nikolai."

"Guy gave me nightmares."

"Me too."

"And I'm glad you brought the others along too. Itf [Itu], Ambul, Crazy Tom, I felt like we could've used six more, and Achilles was hanging from a wire. Guys like him, you can understand why they invented hanging."

"Someday," said Bean, "you're going to need me the way I needed you. And I'll be there."

"I'm sorry I didn't join your squad, Bean."

"You were right," said Bean. "I asked you because you were my friend, and I thought I needed a friend, but I should have \*been\* a friend, too, and seen what \*you\* needed."

"I'll never let you down again."

Bean threw his arms around Nikolai. Nikolai hugged him back.

Bean remembered when he left Earth. Hugging Sister Carlotta. Analyzing. This is what she needs. It costs me nothing. Therefore I'll give her the hug.

I'm not that kid anymore.

Maybe because I was able to come through for Poke after all. Too late to help her, but I still got her killer to admit it. I still got him to pay something, even if it can never be enough.

"Go meet your army, Nikolai," said Bean. "I've got a spaceship to catch."

He watched Nikolai go out the door and knew, with a sharp pang of regret, that he would never see his friend again.

\*\*\*

Dimak stood in Major Anderson's quarters.

"Captain Dimak, I watched Colonel Graff indulge your constant complaints, your resistance to his orders, and I kept thinking, Dimak might be right, but I would never tolerate such lack of respect if \*I\* were in command. I'd throw him out on his ass and write 'insubordinate' in about forty places in his dossier. I thought I should tell you that before you make your complaint."

Dimak blinked.

"Go ahead, I'm waiting."

"It isn't so much a complaint as a question."

"Then ask your question."

"I thought you were supposed to choose a team that was equally compatible with Ender \*and\* with Bean."

"The word \*equally\* was never used, as far as I can recall. But even if it was, did it occur to you that it might be impossible? I could have chosen forty brilliant children who would all have been proud and eager to serve under Andrew Wiggin. How many would be \*equally\* proud and eager to serve under Bean?"

Dimak had no answer for that.

"The way I analyze it, the soldiers I chose to send on this destroyer are the students who are emotionally closest and most responsive to Ender Wiggin, while also being among the dozen or so best commanders in the school. These soldiers also have no particular animosity toward Bean. So if they find him placed over them, they'll probably do their best for him."

"They'll never forgive him for not being Ender."

"I guess that will be Bean's challenge. Who else should I have sent? Nikolai is Bean's friend, but he'd be out of his depth. Someday he'll be ready for Tactical School, and then Command, but not yet. And what other friends does Bean have?"

"He's won a lot of respect."

"And lost it again when he lost all five of his games."

"I've explained to you why he --"

"Humanity doesn't need explanations, Captain Dimak! It needs winners! Ender Wiggin had the fire to win. Bean is capable of losing five in a row as if they didn't even matter."

"They didn't matter. He learned what he needed to learn from them."

"Captain Dimak, I can see that I'm falling into the same trap that Colonel Graff fell into. You have crossed the line from teaching into advocacy. I would dismiss you as Bean's teacher, were it not for the fact that the question is already moot. I'm sending the soldiers I decided on already. If Bean is really so brilliant, he'll figure out a way to work with them."

"Yes sir," said Dimak.

"If it's any consolation, do remember that Crazy Tom was one of the ones Bean brought along to hear Achilles' confession. Crazy Tom \*went\*. That suggests that the better they know Bean, the more seriously they take him."

"Thank you, sir."

"Bean is no longer your responsibility, Captain Dimak. You did well with him. I salute you for it. Now ... get back to work."

Dimak saluted.

Anderson saluted.

Dimak left.

\*\*\*

On the destroyer Condor, the crew had no idea what to do with these children. They all knew about the Battle School, and both the captain and the pilot were Battle School graduates. But after perfunctory conversation -- What army were you in? Oh, in my day Rat was the best, Dragon was a complete loser, how things change, how things stay the same -- there was nothing more to say.

Without the shared concerns of being army commanders, the children drifted into their natural friendship groups. Dink and Petra had been friends almost from their first beginnings in Battle School, and they were so senior to the others that no one tried to penetrate that closed circle. Alai and Shen had been in Ender Wiggin's original launch group, and Vlad and Dumper, who had commanded B and E toons and were probably the most worshipful of Ender, hung around with them. Crazy Tom, Fly Molo, and Hot Soup had already been a trio back in Dragon Army. On a personal level, Bean did not expect to be included in any of these groups, and he wasn't particularly excluded, either; Crazy Tom, at least, showed real respect for Bean, and often included him in conversation. If Bean belonged to any of these groups, it was Crazy Tom's.

The only reason the division into cliques bothered him was that this group was clearly being assembled, not just randomly chosen. Trust needed to grow between them all, strongly if not equally. But they had been chosen for Ender -- any idiot could see that -- and it was not Bean's place to suggest that they play the onboard games together, learn together, do anything together. If Bean tried to assert any kind of leadership, it would only build more walls between him and the others than already existed.

There was only one of the group that Bean didn't think belonged there. And he couldn't do anything about that. Apparently the adults did not hold Petra responsible for her near-betrayal of Ender in the corridor the evening before Ender's life-or-death struggle with Bonzo. But Bean was not so sure. Petra was one of the best of the commanders, smart, able to see the big picture. How could she possibly have been fooled by Bonzo? Of course she couldn't have been hoping for Ender's destruction. But she had been careless, at best, and at worst might have been playing some kind of game that Bean did not yet understand. So he remained suspicious of her. Which wasn't good, to have such mistrust, but there it was.

Bean passed the four months of the voyage in the ship's library, mostly. Now that they were out of Battle School, he was reasonably sure that they weren't being spied on so intensely. The destroyer simply wasn't equipped for it. So he no longer had to choose his reading material with an eye to what the teachers would make of his selections.

He read no military history or theory whatsoever. He had already read all the major writers and many of the minor ones and knew the important campaigns backward and forward, from both sides. Those were in his memory to be called upon whenever he needed them. What was missing from his memory was the big picture. How the world worked. Political, social, economic history. What happened in nations when they weren't at war. How they got into and out of wars. How victory and defeat affected them. How alliances were formed and broken.

And, most important of all, but hardest to find: What was going on in the world today. The destroyer library had only the information that had been current when last it docked at Interstellar Launch -- ISL -- which is where the authorized list of documents was made available for download. Bean could make requests for more information, but that would require the library computer to make requisitions and use communications bandwidth that would have to be justified. It would be noticed, and then they'd wonder why this child was studying matters that could have no possible concern for him.

From what he could find on board, however, it was still possible to piece together the basic situation on Earth, and to reach some conclusions. During the years before the First Invasion, various power blocs had jockeyed for position, using some combination of terrorism, "surgical" strikes, limited military operations, and economic sanctions, boycotts, and embargos [sic -- should be embargoes] to gain the upper hand or give firm warnings or simply express national or ideological rage. When the Buggers showed up, China had just emerged as the dominant world power, economically and militarily, having finally reunited itself as a democracy. The North Americans and Europeans played at being China's "big brothers," but the economic balance had finally shifted.

What Bean saw as the driving force of history, however, was the resurgent Russian Empire. Where the Chinese simply took it for granted that they were and should be the center of the universe, the Russians, led by a series of ambitious demagogues and authoritarian generals, felt that history had cheated them out of their rightful place, century after century, and it was time for that to end. So it was Russia that forced the creation of the New Warsaw Pact, bringing its effective borders back to the peak of Soviet power -- and beyond, for this time Greece was its ally, and an

intimidated Turkey was neutralized. Europe was on the verge of being neutralized, the Russian dream of hegemony from the Pacific to the Atlantic at last within reach.

And then the Formics came and cut a swath of destruction through China that left a hundred million dead. Suddenly land-based armies seemed trivial, and questions of international competition were put on hold.

But that was only superficial. In fact, the Russians used their domination of the office of the Polemarch to build up a network of officers in key places throughout the fleet. Everything was in place for a vast power play the moment the Buggers were defeated -- or before, if they thought it was to their advantage. Oddly, the Russians were rather open about their intentions -- they always had been. They had no talent for subtlety, but they made up for it with amazing stubbornness. Negotiations for anything could take decades. And meanwhile, their penetration of the fleet was nearly total. Infantry forces loyal to the Strategos would be isolated, unable to get to the places where they were needed because there would be no ships to carry them.

When the war with the Buggers ended, the Russians clearly planned that within hours they would rule the fleet and therefore the world. It was their destiny. The North Americans were as complacent as ever, sure that destiny would work everything out in their favor. Only a few demagogues saw the danger. The Chinese and the Muslim world were alert to the danger, and even they were unable to make any kind of stand for fear of breaking up the alliance that made resistance to the Buggers possible.

The more he studied, the more Bean wished that he did not have to go to Tactical School. This war would belong to Ender and his friends. And while Bean loved Ender as much as any of them, and would gladly serve with them against the Buggers, the fact was that they didn't need him. It was the next war, the struggle for world domination, that fascinated him. The Russians *could* be stopped, if the right preparations were made.

But then he had to ask himself: *Should* they be stopped? A quick, bloody, but effective coup which would bring the world under a single government -- it would mean the end of war among humans, wouldn't it? And in such a climate of peace, wouldn't all nations be better off?

So, even as Bean developed his plan for stopping the Russians, he tried to evaluate what a worldwide Russian Empire would be like.

And what he concluded was that it would not last. For along with their national vigor, the Russians had also nurtured their astonishing talent for misgovernment, that sense of personal entitlement that made corruption a way of life. The institutional tradition of competence that would be essential for a successful world government was nonexistent. It was in China that those institutions and values were most vigorous. But even China would be a poor substitute for a genuine world government that transcended any national interest. The wrong world government would eventually collapse under its own weight.

Bean longed to be able to talk these things over with someone -- with Nikolai, or even with one of the teachers. It slowed him down to have his own thoughts move around in circles -- without

outside stimulation it was hard to break free of his own assumptions. One mind can think only of its own questions; it rarely surprises itself. But he made progress, slowly, during that voyage, and then during the months of Tactical School.

Tactical was a blur of short voyages and detailed tours of various ships. Bean was disgusted that they seemed to concentrate entirely on older designs, which seemed pointless to him -- why train your commanders in ships they won't actually be using in battle? But the teachers treated his objection with contempt, pointing out that ships were ships, in the long run, and the newest vessels had to be put into service patrolling the perimeters of the solar system. There were none to spare for training children.

They were taught very little about the art of piloting, for they were not being trained to fly the ships, only to command them in battle. They had to get a sense of how the weapons worked, how the ships moved, what could be expected of them, what their limitations were. Much of it was rote learning ... but that was precisely the kind of learning Bean could do almost in his sleep, being able to recall anything that he had read or heard with any degree of attention.

So throughout Tactical School, while he performed as well as anyone, his real concentration was still on the problems of the current political situation on Earth. For Tactical School was at ISL, and so the library there was constantly being updated, and not just with the material authorized for inclusion in finite ships' libraries. For the first time, Bean began to read the writings of current political thinkers on Earth. He read what was coming out of Russia, and once again was astonished at how nakedly they pursued their ambitions. The Chinese writers saw the danger, but being Chinese, made no effort to rally support in other nations for any kind of resistance.

To the Chinese, once something was known in China, it was known everywhere that mattered. And the Euro-American nations seemed dominated by a studied ignorance that to Bean appeared to be a death wish. Yet there were some who were awake, struggling to create coalitions.

Two popular commentators in particular came to Bean's attention. Demosthenes at first glance seemed to be a rabble-rouser, playing on prejudice and xenophobia. But he was also having considerable success in leading a popular movement. Bean didn't know if life under a government headed by Demosthenes would be any better than living under the Russians, but Demosthenes would at least make a contest out of it. The other commentator that Bean took note of was Locke, a lofty, high-minded fellow who nattered about world peace and forging alliances -- yet amid his apparent complacency, Locke actually seemed to be working from the same set of facts as Demosthenes, taking it for granted that the Russians were vigorous enough to "lead" the world, but unprepared to do so in a "beneficial" way. In a way, it was as if Demosthenes and Locke were doing their research together, reading all the same sources, learning from all the same correspondents, but then appealing to completely different audiences.

For a while, Bean even toyed with the possibility that Locke and Demosthenes were the same person. But no, the writing styles were different, and more importantly, they thought and analyzed differently. Bean didn't think anyone was smart enough to fake that.

Whoever they were, these two commentators were the people that seemed to see the situation most accurately, and so Bean began to conceive of his essay on strategy in the post-Formic world as a letter to both Locke and Demosthenes. A private letter. An anonymous letter. Because his observations should be known, and these two seemed to be in the best position to bring Bean's ideas to fruition.

Resorting to old habits, Bean spent some time in the library watching several officers log on to the net, and soon had six log-ins that he could use. He then wrote his letter in six parts, using a different log-in for each part, and then sent the parts to Locke and Demosthenes within minutes of each other. He did it during an hour when the library was crowded, and made sure that he himself was logged on to the net on his own desk in his barracks, ostensibly playing a game. He doubted they'd be counting his keystrokes and realize that he wasn't actually doing anything with his desk during that time. And if they did trace the letter back to him, well, too bad. In all likelihood, Locke and Demosthenes would not try to trace him -- in his letter he asked them not to. They would either believe him or not; they would agree with him or not; beyond that he could not go. He had spelled out for them exactly what the dangers were, what the Russian strategy obviously was, and what steps must be taken to ensure that the Russians did not succeed in their preemptive strike.

One of the most important points he made was that the children from Battle, Tactical, and Command School had to be brought back to Earth as quickly as possible, once the Buggers were defeated. If they remained in space, they would either be taken by the Russians or kept in ineffectual isolation by the I.F. But these children were the finest military minds that humanity had produced in this generation. If the power of one great nation was to be subdued, it would require brilliant commanders in opposition to them.

Within a day, Demosthenes had an essay on the nets calling for the Battle School to be dissolved at once and all those children brought home. "They have kidnapped our most promising children. Our Alexanders and Napoleons, our Rommels and Pattons, our Caesars and Fredericks and Washingtons and Saladins are being kept in a tower where we can't reach them, where they can't help their own people remain free from the threat of Russian domination. And who can doubt that the Russians intend to seize those children and use them? Or, if they can't, they will certainly try, with a single well-placed missile, to blast them all to bits, depriving us of our natural military leadership." Delicious demagoguery, designed to spark fear and outrage. Bean could imagine the consternation in the military as their precious school became a political issue. It was an emotional issue that Demosthenes would not let go of and other nationalists all over the world would fervently echo. And because it was about children, no politician could dare oppose the principle that all the children in Battle School would come home the \*moment\* the war ended. Not only that, but on this issue, Locke lent his prestigious, moderate voice to the cause, openly supporting the principle of the return of the children. "By all means, pay the piper, rid us of the invading rats -- and then bring our children home."

I saw, I wrote, and the world changed a little. It was a heady feeling. It made all the work at Tactical School seem almost meaningless by comparison. He wanted to bound into the classroom and tell the others about his triumph. But they would look at him like he was crazy. They knew nothing about the world at large, and took no responsibility for it. They were closed into the military world.

Three days after Bean sent his letters to Locke and Demosthenes, the children came to class and found that they were to depart immediately for Command School, this time joined by Carn Carby, who had been a class ahead of them in Tactical School. They had spent only three months at ISL, and Bean couldn't help wondering if his letters had not had some influence over the timing. If there was some danger that the children might be sent home prematurely, the I.F. had to make sure their prize specimens were out of reach.

## CHAPTER 22 -- REUNION

"I suppose I should congratulate you for undoing the damage you did to Ender Wiggin."

"Sir, I respectfully disagree that I did any damage."

"Ah, good then, I \*don't\* have to congratulate you. You do realize that your status here will be as observer."

"I hope that I will also have opportunities to offer advice based on my years of experience with these children."

"Command School has worked with children for years."

"Respectfully, sir, Command School has worked with adolescents. Ambitious, testosterone-charged, competitive teenagers. And quite aside from that, we have a lot riding on these particular children, and I know things about them that must be taken into account."

"All those things should be in your reports."

"They are. But with all respect, is there anyone there who has memorized my reports so thoroughly that the appropriate details will come to mind the instant they're needed?"

"I'll listen to you, Colonel Graff. And please stop assuring me of how respectful you are whenever you're about to tell me I'm an idiot."

"I thought that my leave of absence was designed to chasten me. I'm trying to show that I've been chastened."

"Are there any of these details about the children that come to mind right now?"

"An important one, sir. Because so much depends on what Ender does or does not know, it is vital that you isolate him from the other children. During actual practices he can be there, but under no circumstances can you allow free conversation or sharing of information."

"And why is that?"

"Because if Bean ever comes to know about the ansible, he'll leap straight to the core situation. He may figure it out on his own as it is -- you have no idea how difficult it is to conceal information from him. Ender is more trusting -- but Ender can't do his job \*unless\* he knows about the ansible. You see? He and Bean cannot be allowed to have any free time together. Any conversation that is not on point."

"But if this is so, then Bean is not capable of being Ender's backup, because then he would \*have\* to be told about the ansible."

"It won't matter then."

"But you yourself were the author of the proposition that only a child --"

"Sir, none of that applies to Bean."

"Because?"

"Because he's not human."

"Colonel Graff, you make me tired."

\*\*\*

The voyage to Command School was four long months, and this time they were being trained continuously, as thorough an education in the mathematics of targeting, explosives, and other weapons-related subjects as could be managed on board a fast-moving cruiser. Finally, too, they were being forged again into a team, and it quickly became clear to everyone that the leading student was Bean. He mastered everything immediately, and was soon the one whom the others turned to for explanations of concepts they didn't grasp at once. From being the lowest in status on the first voyage, a complete outsider, Bean now became an outcast for the opposite reason -- he was alone in the position of highest status.

He struggled with the situation, because he knew that he needed to be able to function as part of the team, not just as a mentor or expert. Now it became vital that he take part in their downtime, relaxing with them, joking, joining in with reminiscences about Battle School. And about even earlier times.

For now, at last, the Battle School tabu against talking about home was gone. They all spoke freely of mothers and fathers who by now were distant memories, but who still played a vital role in their lives.

The fact that Bean had no parents at first made the others a little shy with him, but he seized the opportunity and began to speak openly about his entire experience. Hiding in the toilet tank in the clean room. Going home with the Spanish custodian. Starving on the streets as he scouted for his opportunity. Telling Poke how to beat the bullies at their own game. Watching Achilles, admiring

him, fearing him as he created their little street family, marginalized Poke, and finally killed her. When he told them of finding Poke's body, several of them wept. Petra in particular broke down and sobbed.

It was an opportunity, and Bean seized it. Naturally, she soon fled the company of others, taking her emotions into the privacy of her quarters. As soon afterward as he could, Bean followed her.

"Bean, I don't want to talk."

"I do," said Bean. "It's something we have to talk about. For the good of the team."

"Is that what we are?" she asked.

"Petra, you know the worst thing I've ever done. Achilles was dangerous, I knew it, and I still went away and left Poke alone with him. She died for it. That burns in me every day of my life. Every time I start to feel happy, I remember Poke, how I owe my life to her, how I could have saved her. Every time I love somebody, I have that fear that I'll betray them the same way I did her."

"Why are you telling me this, Bean?"

"Because you betrayed Ender and I think it's eating at you."

Her eyes flashed with rage. "I did not! And it's eating at *\*you\**, not me!"

"Petra, whether you admit it to yourself or not, when you tried to slow Ender down in the corridor that day, there's no way you didn't know what you were doing. I've seen you in action, you're sharp, you see everything. In some ways you're the best tactical commander in the whole group. It's absolutely impossible that you didn't see how Bonzo's thugs were all there in the corridor, waiting to beat the crap out of Ender, and what did you do? You tried to slow him down, peel him off from the group."

"And you stopped me," said Petra. "So it's moot, isn't it?"

"I have to know why."

"You don't have to know squat."

"Petra, we have to fight shoulder to shoulder someday. We have to be able to trust each other. I don't trust you because I don't know why you did that. And now you won't trust me because you know I don't trust *\*you\**."

"Oh what a tangled web we weave."

"What the hell does that mean?"

"My father said it. Oh what a tangled web we weave when first we practice to deceive."

"Exactly. Untangle this for me."

"You're the one who's weaving a web for me, Bean. You know things you don't tell the rest of us. You think I don't see that? So you want me to restore your trust in me, but you don't tell me anything useful."

"I opened my soul to you," said Bean.

"You told me about your \*feelings\*." She said it with utter contempt. "So good, it's a relief to know you have them, or at least to know that you think it's worth pretending to have them, nobody's quite sure about that. But what you don't ever tell us is what the hell is actually going on here. We think you know."

"All I have are guesses."

"The teachers told you things back in Battle School that none of the rest of us knew. You knew the name of every kid in the school, you knew things about us, all of us. You knew things you had no business knowing."

Bean was stunned to realize that his special access had been so noticeable to her. Had he been careless? Or was she even more observant than he had thought? "I broke into the student data," said Bean.

"And they didn't catch you?"

"I think they did. Right from the start. Certainly they knew about it later." And he told her about choosing the roster for Dragon Army.

She flopped down on her bunk and addressed the ceiling. "You chose them! All those rejects and those little launchy bastards, \*you\* chose them!"

"Somebody had to. The teachers weren't competent to do it."

"So Ender had the best. He didn't \*make\* them the best, they already \*were\* the best."

"The best that weren't already in armies. I'm the only one who was a launchy when Dragon was formed who's with this team now. You and Shen and Alai and Dink and Carn, you weren't in Dragon, and you're obviously among the best. Dragon won because they were good, yes, but also because Ender knew what to do with them."

"It still turns one little corner of my universe upside down."

"Petra, this was a trade."

"Was it?"

"Explain why you weren't a judas back in Battle School."

"I was a judas," said Petra. "How's that for an explanation?"

Bean was sickened. "You can say it like that? Without shame?"

"Are you stupid?" asked Petra. "I was doing the same thing you were doing, trying to save Ender's life. I knew Ender had trained for combat, and those thugs hadn't. I was also trained. Bonzo had been working these guys up into a frenzy, but the fact is, they didn't like Bonzo very much, he had just pissed them off at Ender. So if they got in a few licks against Ender, right there in the corridor where Dragon Army and other soldiers would get into it right away, where Ender would have me beside him in a limited space so only a few of them could come at us at once -- I figured that Ender would get bruised, get a bloody nose, but he'd come out of it OK. And all those walking scabies would be satisfied. Bonzo's ranting would be old news. Bonzo would be alone again. Ender would be safe from anything worse."

"You were gambling a lot on your fighting ability."

"And Ender's. We were both damn good then, and in excellent shape. And you know what? I think Ender understood what I was doing, and the only reason he didn't go along with it was you."

"Me?"

"He saw you plunging right into the middle of everything. You'd get your head beaten in, that was obvious. So he had to avoid the violence then. Which means that because of you, he got set up the next day when it really *\*was\** dangerous, when Ender was completely alone with no one for backup."

"So why didn't you explain this before?"

"Because you were the only one besides Ender who knew I was setting him up, and I didn't really care what you thought then, and I'm not that concerned about it now."

"It was a stupid plan," said Bean.

"It was better than yours," said Petra.

"Well, I guess when you look at how it all turned out, we'll never know how stupid your plan was. But we sure know that mine was shot to hell."

Petra flashed him a brief, insincere grin. "Now, do you trust me again? Can we go back to the intimate friendship we've shared for so long?"

"You know something, Petra? All that hostility is wasted on me. In fact, it's bad aim on your part to even try it. Because I'm the best friend you've got here."

"Oh really?"

"Yes, really. Because I'm the only one of these boys who ever chose to have a girl as his commander."

She paused a moment, staring at him blankly before saying, "I got over the fact that I'm a girl a long time ago."

"But they didn't. And you know they didn't. You know that it bothers them all the time, that you're not really one of the guys. They're your friends, sure, at least Dink is, but they all like you. At the same time, there were what, a dozen girls in the whole school? And except for you, none of them were really topflight soldiers. They didn't take you seriously,"

"Ender did," said Petra.

"And I do," said Bean. "The others all know what happened in the corridor, you know. It's not like it was a secret. But you know why they haven't had this conversation with you?"

"Why?"

"Because \*they\* all figured you were an idiot and didn't realize how close you came to getting Ender pounded into the deck. I'm the only one who had enough respect for you to realize that you would never make such a stupid mistake by accident."

"I'm supposed to be flattered?"

"You're supposed to stop treating me like the enemy. You're almost as much of an outsider in this group as I am. And when it comes down to actual combat, you need someone who'll take you as seriously as you take yourself."

"Do me no favors."

"I'm leaving now."

"About time."

"And when you think about this more and you realize I'm right, you don't have to apologize. You cried for Poke, and that makes us friends. You can trust me, and I can trust you, and that's all."

She was starting some retort as he left, but he didn't stick around long enough to hear what it was. Petra was just that way -- she had to act tough. Bean didn't mind. He knew they'd said the things they needed to say.

\*\*\*

Command School was at FleetCom, and the location of FleetCom was a closely guarded secret. The only way you ever found out where it was was to be assigned there, and very few people who had been there ever came back to Earth.

Just before arrival, the kids were briefed. FleetCom was in the wandering asteroid Eros. And as they approached, they realized that it really was *\*in\** the asteroid. Almost nothing showed on the surface except the docking station. They boarded the shuttlebug, which reminded them of schoolbuses, and took the five-minute ride down to the surface. There the shuttlebug slid inside what looked like a cave, A snakelike tube reached out to the bug and enclosed it completely. They got out of the shuttlebug into near-zero gravity, and a strong air current sucked them like a vacuum cleaner up into the bowels of Eros.

Bean knew at once that this place was not shaped by human hands. The tunnels were all too low -- and even then, the ceilings had obviously been raised after the initial construction, since the lower walls were smooth and only the top half-meter showed tool marks. The Buggers made this, probably when they were mounting the Second Invasion. What was once their forward base was now the center of the International Fleet. Bean tried to imagine the battle required to take this place. The Buggers scuttering along the tunnels, the infantry coming in with low-power explosives to burn them out. Flashes of light. And then cleanup, dragging the Formic bodies out of the tunnels and bit by bit converting it into a human space.

This is how we got our secret technologies, thought Bean. The Buggers had gravity-generating machines. We learned how they worked and built our own, installing them in the Battle School and wherever else they were needed. But the I.F. never announced the fact, because it would have frightened people to realize how advanced their technology was.

What else did we learn from them?

Bean noticed how even the children hunched a little to walk through the tunnels. The headroom was at least two meters, and not one of the kids was nearly that tall, but the proportions were all wrong for human comfort, so the roof of the tunnels seemed oppressively low, ready to collapse. It must have been even worse when we first arrived, before the roofs were raised.

Ender would thrive here. He'd hate it, of course, because he was human. But he'd also use the place to help him get inside the minds of the Buggers who built it. Not that you could ever really understand an alien mind. But this place gave you a decent chance to try.

The boys were bunked up in two rooms; Petra had a smaller room to herself. It was even more bare here than Battle School, and they could never escape the coldness of the stone around them. On Earth, stone had always seemed solid. But in space, it seemed downright porous. There were bubble holes all through the stone, and Bean couldn't help feeling that air was leaking out all the time. Air leaking out, and cold leaking in, and perhaps something else, the larvae of the Buggers chewing like earthworms through the solid stone, crawling out of the bubble holes at night when the room was dark, crawling over their foreheads and reading their minds and ...

He woke up, breathing heavily, his hand clutching his forehead. He hardly dared to move his hand. Had something been crawling on him?

His hand was empty.

He wanted to go back to sleep, but it was too close to reveille for him to hope for that. He lay there thinking. The nightmare was absurd -- there could not possibly be any Buggers alive here. But something made him afraid. Something was bothering him, and he wasn't sure what.

He thought back to a conversation with one of the technicians who serviced the simulators. Bean's had malfunctioned during practice, so that suddenly the little points of light that represented his ships moving through three-dimensional space were no longer under his control. To his surprise, they didn't just drift on in the direction of the last orders he gave. Instead, they began to swarm, to gather, and then changed color as they shifted to be under someone else's control.

When the technician arrived to replace the chip that had blown, Bean asked him why the ships didn't just stop or keep drifting. "It's part of the simulation," the technician said. "What's being simulated here is not that you're the pilot or even the captain of these ships. You're the admiral, and so inside each ship there's a simulated captain and a simulated pilot, and so when your contact got cut off, they acted the way the real guys would act if they lost contact. See?"

"That seems like a lot of trouble to go to."

"Look, we've had a lot of time to work on these simulators," said the technician. "They're *\*exactly\** like combat."

"Except," said Bean, "the time-lag."

The technician looked blank for a moment. "Oh, right. The time-lag. Well, that just wasn't worth programming in." And then he was gone.

It was that moment of blankness that was bothering Bean. These simulators were as perfect as they could make them, *\*exactly\** like combat, and yet they didn't include the time-lag that came from lightspeed communications. The distances being simulated were large enough that most of the time there should be at least a slight delay between a command and its execution, and sometimes it should be several seconds. But no such delay was programmed in. All communications were being treated as instantaneous. And when Bean asked about it, his question was blown off by the teacher who first trained them on the simulators. "It's a simulation. Plenty of time to get used to the lightspeed delay when you train with the real thing."

That sounded like typically stupid military thinking even at the time, but now Bean realized it was simply a lie. If they programmed in the behavior of pilots and captains when communications were cut off, they could very easily have included the time-lag. The reason these ships were simulated with instantaneous response was because that *\*was\** an accurate simulation of conditions they would meet in combat.

Lying awake in the darkness, Bean finally made the connection. It was so obvious, once he thought of it. It wasn't just gravity control they got from the Buggers. It was faster-than-light communication. It's a big secret from people on Earth, but our ships can talk to each other instantaneously.

And if the ships can, why not FleetCom here on Eros? What was the range of communication? Was it truly instantaneous regardless of distance, or was it merely faster than light, so that at truly great distances it began to have its own time-lag?

His mind raced through the possibilities, and the implications of those possibilities. Our patrol ships will be able to warn us of the approaching enemy fleet long before it reaches us. They've probably known for years that it was coming, and how fast. That's why we've been rushed through our training like this -- they've known for years when the Third Invasion would begin.

And then another thought. If this instantaneous communication works regardless of distance, then we could even be talking to the invasion fleet we sent against the Formic home planet right after the Second Invasion. If our starships were going near lightspeed, the relative time differential would complicate communication, but as long as we're imagining miracles, that would be easy enough to solve. We'll know whether our invasion of their world succeeded or not, moments afterward. Why, if the communication is really powerful, with plenty of bandwidth, FleetCom could even watch the battle unfold, or at least watch a simulation of the battle, and ...

A simulation of the battle. Each ship in the expeditionary force sending back its position at all times. The communications device receives that data and feeds it into a computer and what comes out is ... the simulation we've been practicing with.

We are training to command ships in combat, not here in the solar system, but light-years away. They sent the pilots and the captains, but the admirals who will command them are still back here. At FleetCom. They had generations to find the right commanders, and we're the ones.

It left him gasping, this realization. He hardly dared to believe it, and yet it made far better sense than any of the other more plausible scenarios. For one thing, it explained perfectly why the kids had been trained on older ships. The fleet they would be commanding had launched decades ago, when those older designs were the newest and the best.

They didn't rip us through Battle School and Tactical School because the Bugger fleet is about to reach our solar system. They're in a hurry because *our* fleet is about to reach the Buggers' world.

It was like Nikolai said. You can't rule out the impossible, because you never know which of your assumptions about what was possible might turn out, in the real universe, to be false. Bean hadn't been able to think of this simple, rational explanation because he had been locked in the box of thinking that lightspeed limited both travel *and* communication. But the technician let down just the tiniest part of the veil they had covering the truth, and because Bean finally found a way to open his mind to the possibility, he now knew the secret.

Sometime during their training, anytime at all, without the slightest warning, without ever even telling us they're doing it, they can switch over and we'll be commanding real ships in a real battle. We'll think it's a game, but we'll be fighting a war.

And they don't tell us because we're children. They think we can't handle it. Knowing that our decisions will cause death and destruction. That when we lose a ship, real men die. They're keeping it a secret to protect us from our own compassion.

Except me. Because now I know.

The weight of it suddenly came upon him and he could hardly breathe, except shallowly. Now I know. How will it change the way I play? I can't let it, that's all. I was already doing my best -- knowing this won't make me work harder or play better. It might make me do worse. Might make me hesitate, might make me lose concentration. Through their training, they had all learned that winning depended on being able to forget everything but what you were doing at that moment. You could hold all your ships in your mind at once -- but only if any ship that no longer matters could be blocked out completely. Thinking about dead men, about torn bodies having the air sucked out of their lungs by the cold vacuum of space, who could still play the game knowing that this was what it really meant?

The teachers were right to keep this secret from us. That technician should be court-martialed for letting me see behind the curtain.

I can't tell anyone. The other kids shouldn't know this. And if the teachers know that I know it, they'll take me out of the game.

So I have to fake it.

No. I have to disbelieve it. I have to forget that it's true. It *\*isn't\** true.

The truth is what they've been telling us. The simulation is simply ignoring lightspeed. They trained us on old ships because the new ones are all deployed and can't be wasted. The fight we're preparing for is to repel invading Formics, not to invade their solar system. This was just a crazy dream, pure self-delusion. Nothing goes faster than light, and therefore information can't be transmitted faster than light.

Besides, if we really did send an invasion fleet that long ago, they don't need little kids to command them. Mazer Rackham must be with that fleet, no way would it have launched without him. Mazer Rackham is still alive, preserved by the relativistic changes of near-lightspeed travel. Maybe it's only been a few years to him. And he's ready. We aren't needed.

Bean calmed his breathing. His heartrate slowed. I can't let myself get carried away with fantasies like that. I would be so embarrassed if anyone knew the stupid theory I came up with in my sleep. I can't even tell this as a dream. The game is as it always was.

Reveille sounded over the intercom. Bean got out of bed -- a bottom bunk, this time -- and joined in as normally as possible with the banter of Crazy Tom and Hot Soup, while Fly Molo kept his morning surliness to himself and Alai did his prayers. Bean went to mess and ate as he normally ate. Everything was normal. It didn't mean a thing that he couldn't get his bowels to unclench at the normal time. That his belly gnawed at him all day, and at mealtime he was faintly nauseated. That was just lack of sleep.

Near the end of three months on Eros, their work on the simulators changed. There would be ships directly under their control, but they also had others under them to whom they had to give commands out loud, besides using the controls to enter them manually. "Like combat," said their supervisor.

"In combat," said Alai, "we'd know who the officers serving under us were."

"That would matter if you depended on them to give you information. But you do not. All the information you need is conveyed to your simulator and appears in the display. So you give your orders orally as well as manually. Just assume that you will be obeyed. Your teachers will be monitoring the orders you give to help you learn to be explicit and immediate. You will also have to master the technique of switching back and forth between crosstalk among yourselves and giving orders to individual ships. It's quite simple, you see. Turn your heads to the left or right to speak to each other, whichever is more comfortable for you. But when your face is pointing straight at the display, your voice will be carried to whatever ship or squadron you have selected with your controls. And to address all the ships under your control at once, head straight forward and duck your chin, like this."

"What happens if we raise our heads?" asked Shen.

Alai answered before the teacher could. "Then you're talking to God."

After the laughter died down, the teacher said, "Almost right, Alai. When you raise your chin to speak, you'll be talking to *your* commander."

Several spoke at once. "*Our* commander?"

"You did not think we were training all of you to be supreme commander at once, did you? No no. For the moment, we will assign one of you at random to be that commander, just for practice. Let's say ... the little one. You. Bean."

"I'm supposed to be commander?"

"Just for the practices. Or is he not competent? You others will not obey him in battle?"

The others answered the teacher with scorn. Of course Bean was competent. Of course they'd follow him.

"But then, he never did win a battle when he commanded Rabbit Army," said Fly Molo.

"Excellent. That means that you will all have the challenge of making this little one a winner in spite of himself. If you do not think \*that\* is a realistic military situation, you have not been reading history carefully enough."

So it was that Bean found himself in command of the ten other kids from Battle School. It was exhilarating, of course, for neither he nor the others believed for one moment that the teacher's choice had been random. They knew that Bean was better at the simulator than anybody. Petra was the one who said it after practice one day. "Hell, Bean, I think you have this all in your head so clear you could close your eyes and still play." It was almost true. He did not have to keep checking to see where everyone was. It was all in his head at once.

It took a couple of days for them to handle it smoothly, taking orders from Bean and giving their own orders orally along with the physical controls. There were constant mistakes at first, heads in the wrong position so that comments and questions and orders went to the wrong destination. But soon enough it became instinctive.

Bean then insisted that others take turns being in the command position. "I need practice taking orders just like they do," he said. "And learning how to change my head position to speak up and sideways." The teacher agreed, and after another day, Bean had mastered the technique as well as any of the others.

Having other kids in the master seat had another good effect as well. Even though no one did so badly as to embarrass himself, it was clear that Bean was sharper and faster than anyone else, with a keener grasp of developing situations and a better ability to sort out what he was hearing and remember what everybody had said.

"You're not \*human\*," said Petra. "\*Nobody\* can do what you do!"

"Am so human," said Bean mildly. "And I know somebody who can do it better than me."

"Who's that?" she demanded.

"Ender."

They all fell silent for a moment.

"Yeah, well, he ain't here," said Vlad.

"How do \*you\* know?" said Bean. "For all we know, he's been here all along."

"That's stupid," said Dink. "Why wouldn't they have him practice with us? Why would they keep it a secret?"

"Because they like secrets," said Bean. "And maybe because they're giving him different training. And maybe because it's like Sinterklaas. They're going to bring him to us as a present."

"And maybe you're full of merda," said Dumper.

Bean just laughed. Of course it would be Ender. This group was assembled for Ender. Ender was the one all their hopes were resting on. The reason they put Bean in that master position was because Bean was the substitute. If Ender got appendicitis in the middle of the war, it was Bean they'd switch the controls to. Bean who'd start giving commands, deciding which ships would be sacrificed, which men would die. But until then, it would be Ender's choice, and for Ender, it would only be a game. No deaths, no suffering, no fear, no guilt. Just ... a game.

Definitely it's Ender. And the sooner the better.

The next day, their supervisor told them that Ender Wiggin was going to be their commander starting that afternoon. When they didn't act surprised, he asked why. "Because Bean already told us."

\*\*\*

"They want me to find out how you've been getting your inside information, Bean." Graff looked across the table at the painfully small child who sat there looking at him without expression.

"I don't have any inside information," said Bean.

"You knew that Ender was going to be the commander."

"I \*guessed\*," said Bean. "Not that it was hard. Look at who we are. Ender's closest friends. Ender's toon leaders. He's the common thread. There were plenty of other kids you could have brought here, probably about as good as us. But these are the ones who'd follow Ender straight into space without a suit, if he told us he needed us to do it."

"Nice speech, but you have a history of sneaking."

"Right. \*When\* would I be doing this sneaking? When are any of us alone? Our desks are just dumb terminals and we never get to see anybody else log on so it's not like I can capture another identity. I just do what I'm told all day every day. You guys keep assuming that we kids are stupid, even though you chose us because we're really, really smart. And now you sit there and accuse me of having to \*steal\* information that any idiot could guess."

"Not \*any\* idiot."

"That was just an expression."

"Bean," said Graff, "I think you're feeding me a line of complete bullshit."

"Colonel Graff, even if that were true, which it isn't, so what? So I found out Ender was coming. I'm secretly monitoring your dreams. So \*what\*? He'll still come, he'll be in command, he'll be

brilliant, and then we'll all graduate and I'll sit in a booster seat in a ship somewhere and give commands to grownups in my little-boy voice until they get sick of hearing me and throw me out into space."

"I don't care about the fact that you knew about Ender. I don't care that it was a guess."

"I know you don't care about those things."

"I need to know what else you've figured out."

"Colonel," said Bean, sounding very tired, "doesn't it occur to you that the very fact that you're asking me this question *tells* me there's something else for me to figure out, and therefore greatly increases the chance that I *will* figure it out?"

Graff's smile grew even broader. "That's just what I told the ... officer who assigned me to talk to you and ask these questions. I told him that we would end up telling you more, just by having the interview, than you would ever tell us, but he said, 'The kid is *six*, Colonel Graff.'"

"I think I'm seven."

"He was working from an old report and hadn't done the math."

"Just tell me what secret you want to make sure I don't know, and I'll tell you if I already knew it."

"Very helpful."

"Colonel Graff, am I doing a good job?"

"Absurd question. Of course you are."

"If I do know anything that you don't want us kids to know, have I talked about it? Have I told any of the other kids? Has it affected my performance in any way?"

"No."

"To me that sounds like a tree falling in the forest where no one can hear. If I *do* know something, because I figured it out, but I'm not telling anybody else, and it's not affecting my work, then why would you waste time finding out whether I know it? Because after this conversation, you may be sure that I'll be looking very hard for any secret that might be lying around where a seven-year-old might find it. Even if I do find such a secret, though, I *still* won't tell the other kids, so it *still* won't make a difference. So why don't we just drop it?"

Graff reached under the table and pressed something.

"All right," said Graff. "They've got the recording of our conversation and if that doesn't reassure them, nothing will."

"Reassure them of what? And who is 'them'?"

"Bean, this part is not being recorded."

"Yes it is," said Bean.

"I turned it off."

"Puh-leeze."

In fact, Graff was not altogether sure that the recording *\*was\** off. Even if the machine he controlled was off, that didn't mean there wasn't another.

"Let's walk," said Graff.

"I hope not outside."

Graff got up from the table -- laboriously, because he'd put on a lot of weight and they kept Eros at full gravity -- and led the way out into the tunnels.

As they walked, Graff talked softly. "Let's at least make them work for it," he said.

"Fine," said Bean.

"I thought you'd want to know that the I.F. is going crazy because of an apparent security leak. It seems that someone with access to the most secret archives wrote letters to a couple of net pundits who then started agitating for the children of Battle School to be sent home to their native countries."

"What's a pundit?" asked Bean.

"My turn to say puh-leeze, I think. Look, I'm not accusing you. I just happen to have seen a text of the letters sent to Locke and Demosthenes -- they're both being closely watched, as I'm sure you would expect -- and when I read those letters -- interesting the differences between them, by the way, very cleverly done -- I realized that there was not really any top secret information in there, beyond what any child in Battle School knows. No, the thing that's really making them crazy is that the political analysis is dead on, even though it's based on insufficient information. From what is publicly known, in other words, the writer of those letters couldn't have figured out what he figured out. The Russians are claiming that somebody's been spying on them -- and lying about what they found, of course. But I accessed the library on the destroyer Condor and found out what you were reading. And then I checked your library use on the ISL while you were in Tactical School. You've been a busy boy."

"I try to keep my mind occupied."

"You'll be happy to know that the first group of children has already been sent home."

"But the war's not over."

"You think that when you start a political snowball rolling, it will always go where you wanted it to go? You're smart but you're naive, Bean. Give the universe a push, and you don't know which dominoes will fall. There are always a few you never thought were connected. Someone will always push back a little harder than you expected. But still, I'm happy that you remembered the other children and set the wheels in motion to free them."

"But not us."

"The I.F. has no obligation to remind the agitators on Earth that Tactical School and Command School are still full of children."

"I'm not going to remind them."

"I know you won't. No, Bean, I got a chance to talk to you because you panicked some of the higher-ups with your educated guess about who would command your team. But I was hoping for a chance to talk to you because there are a couple of things I wanted to tell you. Besides the fact that your letter had pretty much the desired effect."

"I'm listening, though I admit to no letter."

"First, you'll be fascinated to know the identity of Locke and Demosthenes."

"Identity? Just one?"

"One mind, two voices. You see, Bean, Ender Wiggin was born third in his family. A special waiver, not an illegal birth. His older brother and sister are just as gifted as he is, but for various reasons were deemed inappropriate for Battle School. But the brother, Peter Wiggin, is a very ambitious young man. With the military closed off to him, he's gone into politics. Twice."

"He's Locke \*and\* Demosthenes," said Bean.

"He plans the strategy for both of them, but he only writes Locke. His sister Valentine writes Demosthenes."

Bean laughed. "Now it makes sense."

"So both your letters went to the same people."

"If I wrote them."

"And it's driving poor Peter Wiggin crazy. He's really tapping into all his sources inside the fleet to find out who sent those letters. But nobody in the Fleet knows, either. The six officers whose

log-ins you used have been ruled out. And as you can guess, \*nobody\* is checking to see if the only seven-year-old ever to go to Tactical School might have dabbled in political epistolary in his spare time."

"Except you."

"Because, by God, I'm the only person who understands exactly how brilliant you children actually are."

"How brilliant are we?" Bean grinned.

"Our walk won't last forever, and I won't waste time on flattery. The other thing I wanted to tell you is that Sister Carlotta, being unemployed after you left, devoted a lot of effort to tracking down your parentage. I can see two officers approaching us right now who will put an end to this unrecorded conversation, and so I'll be brief. You have a name, Bean. You are Julian Delphiki."

"That's Nikolai's last name."

"Julian is the name of Nikolai's father. And of your father. Your mother's name is Elena. You are identical twins. Your fertilized eggs were implanted at different times, and your genes were altered in one very small but significant way. So when you look at Nikolai, you see yourself as you would have been, had you not been genetically altered, and had you grown up with parents who loved you and cared for you."

"Julian Delphiki," said Bean.

"Nikolai is among those already heading for Earth. Sister Carlotta will see to it that, when he is repatriated to Greece, he is informed that you are indeed his brother. His parents already know that you exist -- Sister Carlotta told them. Your home is a lovely place, a house on the hills of Crete overlooking the Aegean. Sister Carlotta tells me that they are good people, your parents. They wept with joy when they learned that you exist. And now our interview is coming to an end. We were discussing your low opinion of the quality of teaching here at Command School."

"How did you guess."

"You're not the only one who can do that."

The two officers -- an admiral and a general, both wearing big false smiles -- greeted them and asked how the interview had gone.

"You have the recording," said Graff. "Including the part where Bean insisted that it was still being recorded."

"And yet the interview continued."

"I was telling him," said Bean, "about the incompetence of the teachers here at Command School."

"Incompetence?"

"Our battles are always against exceptionally stupid computer opponents. And then the teachers insist on going through long, tedious analyses of these mock combats, even though no enemy could possibly behave as stupidly and predictably as these simulations do. I was suggesting that the only way for us to get decent competition here is if you divide us into two groups and have us fight each other."

The two officers looked at each other. "Interesting point," said the general.

"Moot," said the admiral. "Ender Wiggin is about to be introduced into your game. We thought you'd want to be there to greet him."

"Yes," said Bean. "I do."

"I'll take you," said the admiral.

"Let's talk," the general said to Graff.

On the way, the admiral said little, and Bean could answer his chat without thought. It was a good thing. For he was in turmoil over the things that Graff had told him. It was almost not a surprise that Locke and Demosthenes were Ender's siblings. If they were as intelligent as Ender, it was inevitable that they would rise into prominence, and the nets allowed them to conceal their identity enough to accomplish it while they were still young. But part of the reason Bean was drawn to them had to be the sheer familiarity of their voices. They must have sounded like Ender, in that subtle way in which people who have lived long together pick up nuances of speech from each other. Bean didn't realize it consciously, but unconsciously it would have made him more alert to those essays. He should have known, and at some level he did know.

But the other, that Nikolai was really his brother -- how could he believe that? It was as if Graff had read his heart and found the lie that would penetrate most deeply into his soul and told it to him. I'm Greek? My brother happened to be in my launch group, the boy who became my dearest friend? Twins? Parents who love me?

Julian Delphiki?

No, I can't believe this. Graff has never dealt honestly with us. Graff was the one who did not lift a finger to protect Ender from Bonzo. Graff does nothing except to accomplish some manipulative purpose.

My name is Bean. Poke gave me that name, and I won't give it up in exchange for a lie.

\*\*\*

They heard his voice, first, talking to a technician in another room. "How can I work with squadron leaders I never see?"

"And why would you need to see them?" asked the technician.

"To know who they are, how they think --"

"You'll learn who they are and how they think from the way they work with the simulator. But even so, I think you won't be concerned. They're listening to you right now. Put on the headset so you can hear them."

They all trembled with excitement, knowing that he would soon hear their voices as they now heard his.

"Somebody say something," said Petra.

"Wait till he gets the headset on," said Dink.

"How will we know?" asked Vlad.

"Me first," said Alai.

A pause. A new faint hiss in their earphones.

"Salaam," Alai whispered.

"Alai," said Ender.

"And me," said Bean. "The dwarf."

"Bean," said Ender.

Yes, thought Bean, as the others talked to him. That's who I am. That's the name that is spoken by the people who know me.

## CHAPTER 23 -- ENDER'S GAME

"General, you are the Strategos. You have the authority to do this, and you have the obligation."

"I don't need disgraced former Battle School commandants to tell me my obligations."

"If you do not arrest the Polemarch and his conspirators --"

"Colonel Graff, if I \*do\* strike first, then I will bear the blame for the war that ensues."

"Yes, you would, sir. Now tell me, which would be the better outcome -- everybody blames you, but we win the war, or nobody blames you, because you've been stood up against a wall and shot after the Polemarch's coup results in worldwide Russian hegemony?"

"I will not fire the first shot."

"A military commander not willing to strike preemptively when he has firm intelligence --"

"The politics of the thing --"

"If you let them win it's the end of politics!"

"The Russians stopped being the bad guys back in the twentieth century!"

"Whoever is doing the bad things, that's the bad guy. You're the sheriff, sir, whether people approve of you or not. Do your job."

\*\*\*

With Ender there, Bean immediately stepped back into his place among the toon leaders. No one mentioned it to him. He had been the leading commander, he had trained them well, but Ender had always been the natural commander of this group, and now that he was here, Bean was small again.

And rightly so, Bean knew. He had led them well, but Ender made him look like a novice. It wasn't that Ender's strategies were better than Bean's -- they weren't, really. Different sometimes, but more often Bean watched Ender do exactly what he would have done.

The important difference was in the way he led the others. He had their fierce devotion instead of the ever-so-slightly-resentful obedience Bean got from them, which helped from the start. But he also earned that devotion by noticing, not just what was going on in the battle, but what was going on in his commanders' minds. He was stern, sometimes even snappish, making it clear that he expected better than their best. And yet he had a way of giving an intonation to innocuous words, showing appreciation, admiration, closeness. They felt known by the one whose honor they needed. Bean simply did not know how to do that. His encouragement was always more obvious, a bit heavy-handed. It meant less to them because it felt more calculated. It \*was\* more calculated. Ender was just ... himself. Authority came from him like breath.

They flipped a genetic switch in me and made me an intellectual athlete. I can get the ball into the goal from anywhere on the field. But knowing \*when\* to kick. Knowing how to forge a team out of a bunch of players. What switch was it that was flipped in Ender Wiggin's genes? Or is that something deeper than the mechanical genius of the body? Is there a spirit, and is what Ender has a gift from God? We follow him like disciples. We look to him to draw water from the rock.

Can I learn to do what he does? Or am I to be like so many of the military writers I've studied, condemned to be second-raters in the field, remembered only because of their chronicles and explanations of other commanders' genius? Will I write a book after this, telling all about how Ender did it?

Let Ender write that book. Or Graff. I have work to do here, and when it's done, I'll choose my own work and do it as well as I can. If I'm remembered only because I was one of Ender's companions, so be it. Serving with Ender is its own reward.

But ah, how it stung to see how happy the others were, and how they paid no attention to him at all, except to tease him like a little brother, like a mascot. How they must have hated it when he was their leader.

And the worst thing was, that's how Ender treated him, too. Not that any of them were ever allowed to see Ender. But during their long separation, Ender had apparently forgotten how he once relied on Bean. It was Petra that he leaned on most, and Alai, and Dink, and Shen. The ones who had never been in an army with him. Bean and the other toon leaders from Dragon Army were still used, still trusted, but when there was something hard to do, something that required creative flair, Ender never thought of Bean.

Didn't matter. Couldn't think about that. Because Bean knew that along with his primary assignment as one of the squadron chiefs, he had another, deeper work to do. He had to watch the whole flow of each battle, ready to step in at any moment, should Ender falter. Ender seemed not to guess that Bean had that kind of trust from the teachers, but Bean knew it, and if sometimes it made him a little distracted in fulfilling his official assignments, if sometimes Ender grew impatient with him for being a little late, a little inattentive, that was to be expected. For what Ender did not know was that at any moment, if the supervisor signaled him, Bean could take over and continue Ender's plan, watching over all of the squadron leaders, saving the game.

At first, that assignment seemed empty -- Ender was healthy, alert. But then came the change.

It was the day after Ender mentioned to them, casually, that he had a different teacher from theirs. He referred to him as "Mazer" once too often, and Crazy Tom said, "He must have gone through hell, growing up with that name."

"When he was growing up," said Ender, "the name wasn't famous."

"Anybody that old is dead," said Shen.

"Not if he was put on a lightspeed ship for a lot of years and then brought back."

That's when it dawned on them. "Your teacher is \*the\* Mazer Rackham?"

"You know how they say he's a brilliant hero?" said Ender.

Of course they knew.

"What they don't mention is, he's a complete hard-ass."

And then the new simulation began and they got back to work.

Next day, Ender told them that things were changing. "So far we've been playing against the computer or against each other. But starting now, every few days Mazer himself and a team of experienced pilots will control the opposing fleet. Anything goes."

A series of tests, with Mazer Rackham himself as the opponent. It smelled fishy to Bean.

These aren't tests, these are setups, preparations for the conditions that might come when they face the actual Bugger fleet near their home planet.

The I.F. is getting preliminary information back from the expeditionary fleet, and they're preparing us for what the Buggers are actually going to throw at us when battle is joined.

The trouble was, no matter how bright Mazer Rackham and the other officers might be, they were still human. When the real battle came, the Buggers were bound to show them things that humans simply couldn't think of.

Then came the first of these "tests" -- and it was embarrassing how juvenile the strategy was. A big globe formation, surrounding a single ship.

In this battle it became clear that Ender knew things that he wasn't telling them. For one thing, he told them to ignore the ship in the center of the globe. It was a decoy. But how could Ender know that? Because he knew that the Buggers would \*show\* a single ship like that, and it was a lie. Which means that the Buggers expect us to go for that one ship.

Except, of course, that this was not really the Buggers, this was Mazer Rackham. So why would Rackham expect the Buggers to expect humans to strike for a single ship?

Bean thought back to those vids that Ender had watched over and over in Battle School -- all the propaganda film of the Second Invasion.

They never showed the battle because there wasn't one. Nor did Mazer Rackham command a strike force with a brilliant strategy. Mazer Rackham hit a single ship and the war was over. That's why there's no video of hand-to-hand combat. Mazer Rackham killed the queen. And now he expects the Buggers to show a central ship as a decoy, because that's how we won last time.

Kill the queen, and all the Buggers are defenseless. Mindless. That's what the vids meant. Ender knows that, but he also knows that the Buggers know that we know it, so he doesn't fall for their sucker bait.

The second thing that Ender knew and they didn't was the use of a weapon that hadn't been in any of their simulations till this first test. Ender called it "Dr. Device" and then said nothing more about

it -- until he ordered Alai to use it where the enemy fleet was most concentrated. To their surprise, the thing set off a chain reaction that leapt from ship to ship, until all but the most outlying Formic ships were destroyed. And it was an easy matter to mop up those stragglers. The playing field was clear when they finished.

"Why was their strategy so stupid?" asked Bean.

"That's what I was wondering," said Ender. "But we didn't lose a ship, so that's OK."

Later, Ender told them what Mazer said -- they were simulating a whole invasion sequence, and so he was taking the simulated enemy through a learning curve. "Next time they'll have learned. It won't be so easy."

Bean heard that and it filled him with alarm. An invasion sequence? Why a scenario like that? Why not warmups before a single battle?

Because the Buggers have more than one world, thought Bean. Of course they do. They found Earth and expected to turn it into yet another colony, just as they've done before.

We have more than one fleet. One for each Formic world.

And the reason they can learn from battle to battle is because they, too, have faster-than-light communication across interstellar space.

All of Bean's guesses were confirmed. He also knew the secret behind these tests. Mazer Rackham wasn't commanding a simulated Bugger fleet. It was a real battle, and Rackham's only function was to watch how it flowed and then coach Ender afterward on what the enemy strategies meant and how to counter them in future.

That was why they were giving most of their commands orally. They were being transmitted to real crews of real ships who followed their orders and fought real battles. Any ship we lose, thought Bean, means that grown men and women have died. Any carelessness on our part takes lives. Yet they don't tell us this precisely because we can't afford to be burdened with that knowledge. In wartime, commanders have always had to learn the concept of "acceptable losses." But those who keep their humanity never really accept the idea of acceptability, Bean understood that. It gnaws at them. So they protect us child-soldiers by keeping us convinced that it's only games and tests.

Therefore I can't let on to anyone that I do know. Therefore I must accept the losses without a word, without a visible qualm. I must try to block out of my mind the people who will die from our boldness, whose sacrifice is not of a mere counter in a game, but of their lives.

The "tests" came every few days, and each battle lasted longer. Alai joked that they ought to be fitted with diapers so they didn't have to be distracted when their bladder got full during a battle. Next day, they were fitted out with catheters. It was Crazy Tom who put a stop to that. "Come on, just get us a jar to pee in. We can't play this game with something hanging off our dicks." Jars it

was, after that. Bean never heard of anyone using one, though. And though he wondered what they provided for Petra, no one ever had the courage to brave her wrath by asking.

Bean began to notice some of Ender's mistakes pretty early on. For one thing, Ender was relying too much on Petra. She always got command of the core force, watching a hundred different things at once, so that Ender could concentrate on the feints, the ploys, the tricks. Couldn't Ender see that Petra, a perfectionist, was getting eaten alive by guilt and shame over every mistake she made? He was so good with people, and yet he seemed to think she was really tough, instead of realizing that toughness was an act she put on to hide her intense anxiety. Every mistake weighed on her. She wasn't sleeping well, and it showed up as she got more and more fatigued during battles.

But then, maybe the reason Ender didn't realize what he was doing to her was that he, too, was tired. So were all of them. Fading a little under the pressure, and sometimes a lot. Getting more fatigued, more error-prone as the tests got harder, as the odds got longer.

Because the battles were harder with each new "test," Ender was forced to leave more and more decisions up to others. Instead of smoothly carrying out Ender's detailed commands, the squadron leaders had more and more of the battle to carry on their own shoulders. For long sequences, Ender was too busy in one part of the battle to give new orders in another. The squadron leaders who were affected began to use crosstalk to determine their tactics until Ender noticed them again. And Bean was grateful to find that, while Ender never gave him the interesting assignments, some of the others talked to him when Ender's attention was elsewhere. Crazy Tom and Hot Soup came up with their own plans, but they routinely ran them past Bean. And since, in each battle, he was spending half his attention observing and analyzing Ender's plan, Bean was able to tell them, with pretty good accuracy, what they should do to help make the overall plan work out. Now and then Ender praised Tom or Soup for decisions that came from Bean's advice. It was the closest thing to praise that Bean heard.

The other toon leaders and the older kids simply didn't turn to Bean at all. He understood why; they must have resented it greatly when the teachers placed Bean above them during the time before Ender was brought in. Now that they had their true commander, they were never again going to do anything that smacked of subservience to Bean. He understood -- but that didn't keep it from stinging.

Whether or not they wanted him to oversee their work, whether or not his feelings were hurt, that was still his assignment and he was determined never to be caught unprepared. As the pressure became more and more intense, as they became wearier and wearier, more irritable with each other, less generous in their assessment of each other's work, Bean became all the more attentive because the chances of error were all the greater.

One day Petra fell asleep during battle. She had let her force drift too far into a vulnerable position, and the enemy took advantage, tearing her squadron to bits. Why didn't she give the order to fall back? Worse yet, Ender didn't notice soon enough, either. It was Bean who told him: Something's wrong with Petra.

Ender called out to her. She didn't answer. Ender flipped control of her two remaining ships to Crazy Tom and then tried to salvage the overall battle. Petra had, as usual, occupied the core position, and the loss of most of her large squadron was a devastating blow. Only because the enemy was overconfident during mop-up was Ender able to lay a couple of traps and regain the initiative. He won, but with heavy losses.

Petra apparently woke up near the end of the battle and found her controls cut off, with no voice until it was all over. Then her microphone came on again and they could hear her crying, "I'm sorry, I'm sorry. Tell Ender I'm sorry, he can't hear me, I'm so sorry ..."

Bean got to her before she could return to her room. She was staggering along the tunnel, leaning against the wall and crying, using her hands to find her way because she couldn't see through her tears. Bean came up and touched her. She shrugged off his hand.

"Petra," said Bean. "Fatigue is fatigue. You can't stay awake when your brain shuts down."

"It was *\*my\** brain that shut down! You don't know how that feels because you're always so smart you could do all our jobs and play chess while you're doing it!"

"Petra, he was relying on you too much, he never gave you a break --"

"He doesn't take breaks either, and I don't see him --"

"Yes you *\*do\**. It was obvious there was something wrong with your squadron for several seconds before somebody called his attention to it. And even then, he tried to rouse you before assigning control to somebody else. If he'd acted faster you would have had six ships left, not just two."

"*\*You\** pointed it out to him. You were watching me. Checking up on me."

"Petra, I watch everybody."

"You said you'd trust me, but you don't. And you shouldn't, nobody should trust me."

She broke into uncontrollable sobbing, leaning against the stone of the wall.

A couple of officers showed up then, led her away. Not to her room.

\*\*\*

Graff called him in soon afterward. "You handled it just right," said Graff. "That's what you're there for."

"I wasn't quick either," said Bean.

"You were watching. You saw where the plan was breaking down, you called Ender's attention to it. You did your job. The other kids don't realize it and I know that has to gall you --"

"I don't care what they notice --"

"But you did the job. On that battle you get the save."

"Whatever the hell that means."

"It's baseball. Oh yeah. That wasn't big on the streets of Rotterdam."

"Can I please go sleep now?"

"In a minute. Bean, Ender's getting tired. He's making mistakes. It's all the more important that you watch everything. Be there for him. You saw how Petra was."

"We're all getting fatigued."

"Well, so is Ender. Worse than anyone. He cries in his sleep. He has strange dreams. He's talking about how Mazer seems to know what he's planning, spying on his dreams."

"You telling me he's going crazy?"

"I'm telling you that the only person he pushed harder than Petra is himself. Cover for him, Bean. Back him up."

"I already am."

"You're angry all the time, Bean."

Graff's words startled him. At first he thought, No I'm not! Then he thought, Am I?

"Ender isn't using you for anything important, and after having run the show that has to piss you off, Bean. But it's not Ender's fault. Mazer has been telling Ender that he has doubts about your ability to handle large numbers of ships. That's why you haven't been getting the complicated, interesting assignments. Not that Ender takes Mazer's word for it. But everything you do, Ender sees it through the lens of Mazer's lack of confidence."

"Mazer Rackham thinks I --"

"Mazer Rackham knows exactly what you are and what you can do. But we had to make sure Ender didn't assign you something so complicated you couldn't keep track of the overall flow of the game. And we had to do it without telling Ender you're his backup."

"So why are you telling me this?"

"When this test is over and you go on to real commands, we'll tell Ender the truth about what you were doing, and why Mazer said what he said. I know it means a lot to you to have Ender's confidence, and you don't feel like you have it, and so I wanted you to know why. We did it."

"Why this sudden bout of honesty?"

"Because I think you'll do better knowing it."

"I'll do better *\*believing\** it whether it's true or not. You could be lying. So do I really know anything at all from this conversation?"

"Believe what you want, Bean."

\*\*\*

Petra didn't come to practice for a couple of days. When she came back, of course Ender didn't give her the heavy assignments anymore. She did well at the assignments she had, but her ebullience was gone. Her heart was broken.

But dammit, she had *\*slept\** for a couple of days. They were all just the tiniest bit jealous of her for that, even though they'd never willingly trade places with her. Whether they had any particular god in mind, they all prayed: Let it not happen to me. Yet at the same time they also prayed the opposite prayer: Oh, let me sleep, let me have a day in which I don't have to think about this game.

The tests went on. How many worlds did these bastards colonize before they got to Earth? Bean wondered. And are we sure we have them all? And what good does it do to destroy their fleets when we don't have the forces there to occupy the defeated colonies? Or do we just leave our ships there, shooting down anything that tries to boost from the surface of the planet?

Petra wasn't the only one to blow out. Vlad went catatonic and couldn't be roused from his bunk. It took three days for the doctors to get him awake again, and unlike Petra, he was out for the duration. He just couldn't concentrate.

Bean kept waiting for Crazy Tom to follow suit, but despite his nickname, he actually seemed to get saner as he got wearier. Instead it was Fly Molo who started laughing when he lost control of his squadron. Ender cut him off immediately, and for once he put Bean in charge of Fly's ships. Fly was back the next day, no explanation, but everyone understood that he wouldn't be given crucial assignments now.

And Bean became more and more aware of Ender's decreasing alertness. His orders came after longer and longer pauses now, and a couple of times his orders weren't clearly stated. Bean immediately translated them into a more comprehensible form, and Ender never knew there had been confusion. But the others were finally becoming aware that Bean was following the whole battle, not just his part of it. Perhaps they even saw how Bean would ask a question during a battle, make some comment that alerted Ender to something that he needed to be aware of, but never in a way that sounded like Bean was criticizing anybody. After the battles one or two of the older kids

would speak to Bean. Nothing major. Just a hand on his shoulder, on his back, and a couple of words. "Good game." "Good work." "Keep it up." "Thanks, Bean."

He hadn't realized how much he needed the honor of others until he finally got it.

\*\*\*

"Bean, this next game, I think you should know something."

"What?"

Colonel Graff hesitated. "We couldn't get Ender awake this morning. He's been having nightmares. He doesn't eat unless we make him. He bites his hand in his sleep -- bites it bloody. And today we couldn't get him to wake up. We were able to hold off on the ... test ... so he's going to be in command, as usual, but ... not as usual."

"I'm ready. I always am."

"Yeah, but ... look, advance word on this test is that it's ... there's no ..."

"It's hopeless."

"Anything you can do to help. Any suggestion."

"This Dr. Device thing, Ender hasn't let us use it in a long time."

"The enemy learned enough about how it works that they never let their ships get close enough together for a chain reaction to spread. It takes a certain amount of mass to be able to maintain the field. Basically, right now it's just ballast. Useless."

"It would have been nice if you'd told \*me\* how it works before now."

"There are people who don't want us to tell you anything, Bean. You have a way of using every scrap of information to guess ten times more than we want you to know. It makes them a little leery of giving you those scraps in the first place."

"Colonel Graff, you know that I know that these battles are real. Mazer Rackham isn't making them up. When we lose ships, real men die."

Graff looked away.

"And these are men that Mazer Rackham knows, neh?"

Graff nodded slightly.

"You don't think Ender can sense what Mazer is feeling? I don't know the guy, maybe he's like a rock, but \*I\* think that when he does his critiques with Ender, he's letting his ... what, his anguish... Ender feels it. Because Ender is a lot more tired \*after\* a critique than before it. He may not know what's really going on, but he knows that something terrible is at stake. He knows that Mazer Rackham is really upset with every mistake Ender makes."

"Have you found some way to sneak into Ender's room?"

"I know how to listen to Ender. I'm not wrong about Mazer, am I?"

Graff shook his head.

"Colonel Graff, what you don't realize, what nobody seems to remember -- that last game in Battle School, where Ender turned his army over to me. That wasn't a strategy. He was quitting. He was through. He was on strike. You didn't find that out because you graduated him. The thing with Bonzo finished him. I think Mazer Rackham's anguish is doing the same thing to him now. I think even when Ender doesn't \*consciously\* know that he's killed somebody, he knows it deep down, and it burns in his heart."

Graff looked at him sharply.

"I know Bonzo was dead. I saw him. I've seen death before, remember? You don't get your nose jammed into your brain and lose two gallons of blood and get up and walk away. You never told Ender that Bonzo was dead, but you're a fool if you think he doesn't know. And he knows, thanks to Mazer, that every ship we've lost means good men are dead. He can't stand it, Colonel Graff."

"You're more insightful than you get credit for, Bean," said Graff.

"I know, I'm the cold inhuman intellect, right?" Bean laughed bitterly. "Genetically altered, therefore I'm just as alien as the Buggers."

Graff blushed. "No one's ever said that."

"You mean you've never said it in front of me. Knowingly. What you don't seem to understand is, sometimes you have to just tell people the truth and ask them to do the thing you want, instead of trying to trick them into it."

"Are you saying we should tell Ender the game is real?"

"No! Are you insane? If he's this upset when the knowledge is unconscious, what do you think would happen if he \*knew\* that he knew? He'd freeze up."

"But you don't freeze up. Is that it? You should command this next battle?"

"You still don't get it, Colonel Graff. I don't freeze up because it isn't my battle. I'm helping. I'm watching. But I'm free. Because it's Ender's game."

Bean's simulator came to life.

"It's time," said Graff. "Good luck."

"Colonel Graff, Ender may go on strike again. He may walk out on it. He might give up. He might tell himself, It's only a game and I'm sick of it, I don't care what they do to me, I'm done. That's in him, to do that. When it seems completely unfair and utterly pointless."

"What if I promised him it was the last one?"

Bean put on his headset as he asked, "Would it be true?"

Graff nodded.

"Yeah, well, I don't think it would make much difference. Besides, he's Mazer's student now, isn't he?"

"I guess. Mazer was talking about telling him that it was the final exam."

"Mazer is Ender's teacher now," Bean mused. "And you're left with me. The kid you didn't want."

Graff blushed again. "That's right," he said. "Since you seem to know everything. I didn't want you."

Even though Bean already knew it, the words still hurt.

"But Bean," said Graff, "the thing is, I was wrong." He put a hand on Bean's shoulder and left the room.

Bean logged on. He was the last of the squadron leaders to do so.

"Are you there?" asked Ender over the headsets.

"All of us," said Bean. "Kind of late for practice this morning, aren't you?"

"Sorry," said Ender. "I overslept."

They laughed. Except Bean.

Ender took them through some maneuvers, warming up for the battle. And then it was time. The display cleared.

Bean waited, anxiety gnawing at his gut.

The enemy appeared in the display.

Their fleet was deployed around a planet that loomed in the center of the display. There had been battles near planets before, but every other time, the world was near the edge of the display -- the enemy fleet always tried to lure them away from the planet.

This time there was no luring. Just the most incredible swarm of enemy ships imaginable. Always staying a certain distance away from each other, thousands and thousands of ships followed random, unpredictable, intertwining paths, together forming a cloud of death around the planet.

This is the home planet, thought Bean. He almost said it aloud, but caught himself in time. This is a \*simulation\* of the Bugger defense of their home planet.

They've had generations to prepare for us to come. All the previous battles were nothing. These Formics can lose any number of individual Buggers and they don't care. All that matters is the queen. Like the one Mazer Rackham killed in the Second Invasion. And they haven't put a queen at risk in any of these battles. Until now.

That's why they're swarming. There's a queen here.

Where?

On the planet surface, thought Bean. The idea is to keep us from getting to the planet surface.

So that's precisely where we need to go. Dr. Device needs mass. Planets have mass. Pretty simple.

Except that there was no way to get this small force of human ships through that swarm and near enough to the planet to deploy Dr. Device. For if there was anything that history taught, it was this: Sometimes the other side is irresistibly strong, and then the only sensible course of action is to retreat in order to save your force to fight another day.

In this war, however, there would be no other day. There was no hope of retreat. The decisions that lost this battle, and therefore this war, were made two generations ago when these ships were launched, an inadequate force from the start. The commanders who set this fleet in motion may not even have known, then, that this was the Buggers' home world. It was no one's fault. They simply didn't have enough of a force even to make a dent in the enemy's defenses. It didn't matter how brilliant Ender was. When you have only one guy with a shovel, you can't build a dike to hold back the sea.

No retreat, no possibility of victory, no room for delay or maneuver, no reason for the enemy to do anything but continue to do what they were doing.

There were only twenty starships in the human fleet, each with four fighters. And they were the oldest design, sluggish compared to some of the fighters they'd had in earlier battles. It made sense -- the Bugger home world was probably the farthest away, so the fleet that got there now had left before any of the other fleets. Before the better ships came on line.

Eighty fighters. Against five thousand, maybe ten thousand enemy ships. It was impossible to determine the number. Bean saw how the display kept losing track of individual enemy ships, how the total count kept fluctuating. There were so many it was overloading the system. They kept winking in and out like fireflies.

A long time passed -- many seconds, perhaps a minute. By now Ender usually had them all deployed, ready to move. But still there was nothing from him but silence.

A light blinked on Bean's console. He knew what it meant. All he had to do was press a button, and control of the battle would be his. They were offering it to him, because they thought that Ender had frozen up.

He hasn't frozen up, thought Bean. He hasn't panicked. He has simply understood the situation, exactly as I understand it. There *is* no strategy. Only he doesn't see that this is simply the fortunes of war, a disaster that can't be helped. What he sees is a test set before him by his teachers, by Mazer Rackham, a test so absurdly unfair that the only reasonable course of action is to refuse to take it.

They were so clever, keeping the truth from him all this time. But now was it going to backfire on them. If Ender understood that it was not a game, that the real war had come down to this moment, then he might make some desperate effort, or with his genius he might even come up with an answer to a problem that, as far as Bean could see, had no solution. But Ender did not understand the reality, and so to him it was like that day in the battleroom, facing two armies, when Ender turned the whole thing over to Bean and, in effect, refused to play.

For a moment Bean was tempted to scream the truth. It's not a game, it's the real thing, this is the last battle, we've lost this war after all! But what would be gained by that, except to panic everyone?

Yet it was absurd to even contemplate pressing that button to take over control himself. Ender hadn't collapsed or failed. The battle was unwinnable; it should not even be fought. The lives of the men on those ships were not to be wasted on such a hopeless Charge of the Light Brigade. I'm not General Burnside at Fredericksburg. I don't send my men off to senseless, hopeless, meaningless death.

If I had a plan, I'd take control. I have no plan. So for good or ill, it's Ender's game, not mine.

And there was another reason for not taking over.

Bean remembered standing over the supine body of a bully who was too dangerous to ever be tamed, telling Poke, Kill him now, kill him.

I was right. And now, once again, the bully must be killed. Even though I don't know how to do it, we *can't* lose this war. I don't know how to win it, but I'm not God, I don't see everything. And maybe Ender doesn't *see* a solution either, but if anyone can find one, if anyone can make it happen, it's Ender.

Maybe it isn't hopeless. Maybe there's some way to get down to the planet's surface and wipe the Buggers out of the universe. Now is the time for miracles. For Ender, the others will do their best work. If I took over, they'd be so upset, so distracted that even if I came up with a plan that had some kind of chance, it would never work because their hearts wouldn't be in it.

Ender has to try. If he doesn't, we all die. Because even if they weren't going to send another fleet against us, after this they'll *have* to send one. Because we beat all their fleets in every battle till now. If we don't win this one, with finality, destroying their capability to make war against us, then they'll be back. And this time they'll have figured out how to make Dr. Device themselves.

We have only the one world. We have only the one hope.

Do it, Ender.

There flashed into Bean's mind the words Ender said in their first day of training as Dragon Army: Remember, the enemy's gate is down. In Dragon Army's last battle, when there was no hope, that was the strategy that Ender had used, sending Bean's squad to press their helmets against the floor around the gate and win. Too bad there was no such cheat available now.

Deploying Dr. Device against the planet's surface to blow the whole thing up, that might do the trick. You just couldn't get there from here.

It was time to give up. Time to get out of the game, to tell them not to send children to do grownups' work. It's hopeless. We're done.

"Remember," Bean said ironically, "the enemy's gate is down."

Fly Molo, Hot Soup, Vlad, Dumper, Crazy Tom -- they grimly laughed. They had been in Dragon Army. They remembered how those words were used before.

But Ender didn't seem to get the joke.

Ender didn't seem to understand that there was no way to get Dr. Device to the planet's surface.

Instead, his voice came into their ears, giving them orders. He pulled them into a tight formation, cylinders within cylinders.

Bean wanted to shout, Don't do it! There are real men on those ships, and if you send them in, they'll die, a sacrifice with no hope of victory.

But he held his tongue, because, in the back of his mind, in the deepest corner of his heart, he still had hope that Ender might do what could not be done. And as long as there was such a hope, the lives of those men were, by their own choice when they set out on this expedition, expendable.

Ender set them in motion, having them dodge here and there through the ever-shifting formations of the enemy swarm.

Surely the enemy sees what we're doing, thought Bean. Surely they see how every third or fourth move takes us closer and closer to the planet.

At any moment the enemy could destroy them quickly by concentrating their forces. So why weren't they doing it?

One possibility occurred to Bean. The Buggers didn't dare concentrate their forces close to Ender's tight formation, because the moment they drew their ships that close together, Ender could use Dr. Device against them.

And then he thought of another explanation. Could it be that there were simply too many Bigger ships? Could it be that the queen or queens had to spend all their concentration, all their mental strength just keeping ten thousand ships swarming through space without getting too close to each other?

Unlike Ender, the Bigger queen couldn't turn control of her ships over to subordinates. She *\*had\** no subordinates. The individual Buggers; were like her hands and her feet. Now she had hundreds of hands and feet, or perhaps thousands of them, all wiggling at once.

That's why she wasn't responding intelligently. Her forces were too numerous. That's why she wasn't making the obvious moves, setting traps, blocking Ender from taking his cylinder ever closer to the planet with every swing and dodge and shift that he made.

In fact, the maneuvers the Buggers were making were ludicrously wrong. For as Ender penetrated deeper and deeper into the planet's gravity well, the Buggers were building up a thick wall of forces *\*behind\** Ender's formation.

They're blocking our retreat!

At once Bean understood a third and most important reason for what was happening. The Buggers had learned the wrong lessons from the previous battles. Up to now, Ender's strategy had always been to ensure the survival of as many human ships as possible. He had always left himself a line of retreat. The Buggers, with their huge numerical advantage, were finally in a position to guarantee that the human forces would not get away.

There was no way, at the beginning of this battle, to predict that the Buggers would make such a mistake. Yet throughout history, great victories had come as much because of the losing army's errors as because of the winner's brilliance in battle. The Buggers have finally, finally learned that we humans value each and every individual human life. We don't throw our forces away because every soldier is the queen of a one-member hive. But they've learned this lesson just in time for it to be hopelessly wrong -- for we humans *\*do\**, when the cause is sufficient, spend our own lives. We throw ourselves onto the grenade to save our buddies in the foxhole. We rise out of the trenches and charge the entrenched enemy and die like maggots under a blowtorch. We strap bombs on our

bodies and blow ourselves up in the midst of our enemies. We are, when the cause is sufficient, insane.

They don't believe we'll use Dr. Device because the only way to use it is to destroy our own ships in the process. From the moment Ender started giving orders, it was obvious to everyone that this was a suicide run. These ships were not made to enter an atmosphere. And yet to get close enough to the planet to set off Dr. Device, they had to do exactly that.

Get down into the gravity well and launch the weapon just before the ship burns up. And if it works, if the planet is torn apart by whatever force it is in that terrible weapon, the chain reaction will reach out into space and take out any ships that might happen to survive.

Win or lose, there'd be no human survivors from this battle.

They've never seen us make a move like that. They don't understand that, yes, humans will always act to preserve their own lives -- except for the times when they don't. In the Buggers' experience, autonomous beings do not sacrifice themselves. Once they understood our autonomy, the seed of their defeat was sown.

In all of Ender's study of the Buggers, in all his obsession with them over the years of his training, did he somehow come to *\*know\** that they would make such deadly mistakes?

I did not know it. I would not have pursued this strategy. I *\*had\** no strategy. Ender was the only commander who could have known, or guessed, or unconsciously hoped that when he flung out his forces the enemy would falter, would trip, would fall, would fail.

Or *\*did\** he know at all? Could it be that he reached the same conclusion as I did, that this battle was unwinnable? That he decided not to play it out, that he went on strike, that he quit? And then my bitter words, "the enemy's gate is down," triggered his futile, useless gesture of despair, sending his ships to certain doom because he did not know that there were real ships out there, with real men aboard, that he was sending to their deaths? Could it be that he was as surprised as I was by the mistakes of the enemy? Could our victory be an accident?

No. For even if my words provoked Ender into action, he was still the one who chose *\*this\** formation, *\*these\** feints and evasions, *\*this\** meandering route. It was Ender whose previous victories taught the enemy to think of us as one kind of creature, when we are really something quite different. He pretended all this time that humans were rational beings, when we are really the most terrible monsters these poor aliens could ever have conceived of in their nightmares. They had no way of knowing the story of blind Samson, who pulled down the temple on his own head to slay his enemies.

On those ships, thought Bean, there are individual men who gave up homes and families, the world of their birth, in order to cross a great swatch of the galaxy and make war on a terrible enemy. Somewhere along the way they're bound to understand that Ender's strategy requires them all to die. Perhaps they already have. And yet they obey and will continue to obey the orders that come to them. As in the famous Charge of the Light Brigade, these soldiers give up their lives,

trusting that their commanders are using them well. While we sit safely here in these simulator rooms, playing an elaborate computer game, they are obeying, dying so that all of humankind can live.

And yet we who command them, we children in these elaborate game machines, have no idea of their courage, their sacrifice. We cannot give them the honor they deserve, because we don't even know they exist.

Except for me.

There sprang into Bean's mind a favorite scripture of Sister Carlotta's. Maybe it meant so much to her because she had no children. She told Bean the story of Absalom's rebellion against his own father, King David. In the course of a battle, Absalom was killed. When they brought the news to David, it meant victory, it meant that no more of his soldiers would die. His throne was safe. His \*life\* was safe. But all he could think about was his son, his beloved son, his dead boy.

Bean ducked his head, so his voice would be heard only by the men under his command. And then, for just long enough to speak, he pressed the override that put his voice into the ears of all the men of that distant fleet. Bean had no idea how his voice would sound to them; would they hear his childish voice, or were the sounds distorted, so they would hear him as an adult, or perhaps as some metallic, machinelike voice? No matter. In some form the men of that distant fleet would hear his voice, transmitted faster than light, God knows how.

"O my son Absalom," Bean said softly, knowing for the first time the kind of anguish that could tear such words from a man's mouth. "My son, my son Absalom. Would God I could die for thee, O Absalom, my son. My sons!"

He had paraphrased it a little, but God would understand. Or if he didn't, Sister Carlotta would.

Now, thought Bean. Do it now, Ender. You're as close as you can get without giving away the game. They're beginning to understand their danger. They're concentrating their forces. They'll blow us out of the sky before our weapons can be launched --

"All right, everybody except Petra's squadron," said Ender. "Straight down, as fast as you can. Launch Dr. Device against the planet. Wait till the last possible second. Petra, cover as you can."

The squadron leaders, Bean among them, echoed Ender's commands to their own fleets. And then there was nothing to do but watch. Each ship was on its own.

The enemy understood now, and rushed to destroy the plummeting humans. Fighter after fighter was picked off by the intrushing ships of the Formic fleet. Only a few human fighters survived long enough to enter the atmosphere.

Hold on, thought Bean. Hold on as long as you can.

The ships that launched too early watched their Dr. Device burn up in the atmosphere before it could go off. A few other ships burned up themselves without launching.

Two ships were left. One was in Bean's squadron.

"Don't launch it," said Bean into his microphone, head down. "Set it off inside your ship. God be with you."

Bean had no way of knowing whether it was his ship or the other that did it. He only knew that both ships disappeared from the display without launching. And then the surface of the planet started to bubble. Suddenly a vast eruption licked outward toward the last of the human fighters, Petra's ships, on which there might or might not still be men alive to see death coming at them. To see their victory approach.

The simulator put on a spectacular show as the exploding planet chewed up all the enemy ships, engulfing them in the chain reaction. But long before the last ship was swallowed up, all the maneuvering had stopped. They drifted, dead. Like the dead Bugger ships in the vids of the Second Invasion. The queens of the hive had died on the planet's surface. The destruction of the remaining ships was a mere formality. The Buggers were already dead.

\*\*\*

Bean emerged into the tunnel to find that the other kids were already there, congratulating each other and commenting on how cool the explosion effect was, and wondering if something like that could really happen.

"Yes," said Bean. "It could."

"As if you know," said Fly Molo, laughing.

"Of course I know it could happen," said Bean. "It *did* happen."

They looked at him uncomprehendingly. When did it happen? I never heard of anything like that. Where could they have tested that weapon against a planet? I know, they took out Neptune!

"It happened just now," said Bean. "It happened at the home world of the Buggers. We just blew it up. They're all dead."

They finally began to realize that he was serious. They fired objections at him. He explained about the faster-than-light communications device. They didn't believe him.

Then another voice entered the conversation. "It's called the ansible."

They looked up to see Colonel Graff standing a ways off, down the tunnel.

Is Bean telling the truth? Was that a real battle?

"They were all real," said Bean. "All the so-called tests. Real battles. Real victories. Right, Colonel Graff? We were fighting the real war all along."

"It's over now," said Graff. "The human race will continue. The Buggers won't."

They finally believed it, and became giddy with the realization. It's over. We won. We weren't practicing, we were actually commanders.

And then, at last, a silence fell.

"They're *\*all\** dead?" asked Petra.

Bean nodded.

Again they looked at Graff. "We have reports. All life activity has ceased on all the other planets. They must have gathered their queens back on their home planet. When the queens die, the Buggers die. There is no enemy now."

Petra began to cry, leaning against the wall. Bean wanted to reach out to her, but Dink was there. Dink was the friend who held her, comforted her.

Some soberly, some exultantly, they went back to their barracks. Petra wasn't the only one who cried. But whether the tears were shed in anguish or in relief, no one could say for sure.

Only Bean did not return to his room, perhaps because Bean was the only one not surprised. He stayed out in the tunnel with Graff.

"How's Ender taking it?"

"Badly," said Graff. "We should have broken it to him more carefully, but there was no holding back. In the moment of victory."

"All your gambles paid off," said Bean.

"I know what happened, Bean," said Graff. "Why did you leave control with him? How did you know he'd come up with a plan?"

"I didn't," said Bean. "I only knew that I had no plan at all."

"But what you said -- 'the enemy's gate is down.' That's the plan Ender used."

"It wasn't a plan," said Bean. "Maybe it made him think of a plan. But it was him. It was Ender. You put your money on the right kid."

Graff looked at Bean in silence, then reached out and put a hand on Bean's head, tousled his hair a little. "I think perhaps you pulled each other across the finish line."

"It doesn't matter, does it?" said Bean. "It's finished, anyway. And so is the temporary unity of the human race."

"Yes," said Graff. He pulled his hand away, ran it through his own hair. "I believed in your analysis. I tried to give warning. \*If\* the Strategos heeded my advice, the Polemarch's men are getting arrested here on Eros and all over the fleet."

"Will they go peacefully?" asked Bean.

"We'll see," said Graff.

The sound of gunfire echoed from some distant tunnel.

"Guess not," said Bean.

They heard the sound of men running in step. And soon they saw them, a contingent of a dozen armed marines.

Bean and Graff watched them approach. "Friend or foe?"

"They all wear the same uniform," said Graff. "You're the one who called it, Bean. Inside those doors" -- he gestured toward the doors to the kids' quarters -- "those children are the spoils of war. In command of armies back on Earth, they're the hope of victory. \*You\* are the hope."

The soldiers came to a stop in front of Graff. "We're here to protect the children, sir," said their leader.

"From what?"

"The Polemarch's men seem to be resisting arrest, sir," said the soldier. "The Strategos has ordered that these children be kept safe at all costs."

Graff was visibly relieved to know which side these troops were on. "The girl is in that room over there. I suggest you consolidate them all into those two barrack rooms for the duration."

"Is this the kid who did it?" asked the soldier, indicating Bean.

"He's one of them."

"It was Ender Wiggin who did it," said Bean. "Ender was our commander."

"Is he in one of those rooms?" asked the soldier.

"He's with Mazer Rackham," said Graff. "And this one stays with me."

The soldier saluted. He began positioning his men in more advanced positions down the tunnel, with only a single guard outside each door to prevent the kids from going out and getting lost somewhere in the fighting.

Bean trotted along beside Graff as he headed purposefully down the tunnel, beyond the farthest of the guards.

"If the Strategos did this right, the ansibles have already been secured. I don't know about you, but I want to be where the news is coming in. And going out."

"Is Russian a hard language to learn?" asked Bean.

"Is that what passes for humor with you?" asked Graff.

"It was a simple question."

"Bean, you're a great kid, but shut up, OK?"

Bean laughed. "OK."

"You don't mind if I still call you Bean?"

"It's my name."

"Your name should have been Julian Delphiki. If you'd had a birth certificate, that's the name that would have been on it."

"You mean that was true?"

"Would I lie about something like that?"

Then, realizing the absurdity of what he had just said, they laughed. Laughed long enough to still be smiling when they passed the detachment of marines protecting the entrance to the ansible complex.

"You think anybody will ask me for military advice?" asked Bean. "Because I'm going to get into this war, even if I have to lie about my age and enlist in the marines."

## CHAPTER 24 -- HOMECOMING

"I thought you'd want to know. Some bad news."

"There's no shortage of that, even in the midst of victory."

"When it became clear that the IDL had control of Battle School and was sending the kids home under I.F. protection, the New Warsaw Pact apparently did a little research and found that there was one student from Battle School who wasn't under our control. Achilles."

"But he was only there a couple of days."

"He passed our tests. He got in. He was the only one they could get."

"Did they? Get him?"

"All the security there was designed to keep inmates inside. Three guards dead, all the inmates released into the general population. They've all been recovered, except one."

"So he's loose."

"I wouldn't call it loose, exactly. They intend to use him."

"Do they know what he is?"

"No. His records were sealed. A juvenile, you see. They weren't coming for his dossier."

"They'll find out. They don't like serial killers in Moscow, either."

"He's hard to pin down. How many died before any of us suspected him?"

"The war is over for now."

"And the jockeying for advantage in the next war has begun."

"With any luck, Colonel Graff, I'll be dead by then."

"I'm not actually a colonel anymore, Sister Carlotta."

"They're really going to go ahead with that court-martial?"

"An investigation, that's all. An inquiry."

"I just don't understand why they have to find a scapegoat for victory."

"I'll be fine. The sun still shines on planet Earth."

"But never again on *their* tragic world."

"Is your God also their God, Sister Carlotta? Did he take them into heaven?"

"He's not \*my\* God, Mr. Graff. But I am his child, as are you. I don't know whether he looks at the Formics and sees them, too, as his children."

"Children. Sister Carlotta, the things I did to these children."

"You gave them a world to come home to."

"All but one of them."

\*\*\*

It took days for the Polemarch's men to be subdued, but at last Fleetcom was entirely under the Strategos's command, and not one ship had been launched under rebel command. A triumph. The Hegemon resigned as part of the truce, but that only formalized what had already been the reality.

Bean stayed with Graff throughout the fighting, as they read every dispatch and listened to every report about what was happening elsewhere in the fleet and back on Earth. They talked through the unfolding situation, tried to read between the lines, interpreted what was happening as best they could. For Bean, the war with the Buggers was already behind him. All that mattered now was how things went on Earth. When a shaky truce was signed, temporarily ending the fighting, Bean knew that it would not last. He would be needed. Once he got to Earth, he could prepare himself to play his role. Ender's war is over, he thought. This next one will be mine.

While Bean was avidly following the news, the other kids were confined to their quarters under guard, and during the power failures in their part of Eros they did their cowering in darkness. Twice there were assaults on that section of the tunnels, but whether the Russians were trying to get at the kids or merely happened to probe in that area, looking for weaknesses, no one could guess.

Ender was under much heavier guard, but didn't know it. Utterly exhausted, and perhaps unwilling or unable to bear the enormity of what he had done, he remained unconscious for days.

Not till the fighting stopped did he come back to consciousness.

They let the kids get together then, their confinement over for now. Together they made the pilgrimage to the room where Ender had been under protection and medical care. They found him apparently cheerful, able to joke. But Bean could see a deep weariness, a sadness in Ender's eyes that it was impossible to ignore. The victory had cost him deeply, more than anybody.

More than me, thought Bean, even though I knew what I was doing, and he was innocent of any bad intent. He tortures himself, and I move on. Maybe because to me the death of Poke was more important than the death of an entire species that I never saw. I knew her -- she has stayed with me in my heart. The Buggers I never knew. How can I grieve for them?

Ender can.

After they filled Ender in on the news about what happened while he slept, Petra touched his hair. "You OK?" she asked. "You scared us. They said you were crazy, and we said \*they\* were crazy."

"I'm crazy," said Ender. "But I think I'm OK."

There was more banter, but then Ender's emotions overflowed and for the first time any of them could remember, they saw Ender cry. Bean happened to be standing near him, and when Ender reached out, it was Bean and Petra that he embraced. The touch of his hand, the embrace of his arm, they were more than Bean could bear. He also cried.

"I missed you," said Ender. "I wanted to see you so bad."

"You saw us pretty bad," said Petra. She was not crying. She kissed his cheek.

"I saw you magnificent," said Ender. "The ones I needed most, I used up soonest. Bad planning on my part."

"Everybody's OK now," said Dink. "Nothing was wrong with any of us that five days of cowering in blacked-out rooms in the middle of a war couldn't cure."

"I don't have to be your commander anymore, do I?" asked Ender. "I don't want to command anybody again."

Bean believed him. And believed also that Ender never \*would\* command in battle again. He might still have the talents that brought him to this place. But the most important ones didn't have to be used for violence. If the universe had any kindness in it, or even simple justice, Ender would never have to take another life. He had surely filled his quota.

"You don't have to command anybody," said Dink, "but you're always our commander."

Bean felt the truth of that. There was not one of them who would not carry Ender with them in their hearts, wherever they went, whatever they did.

What Bean didn't have the heart to tell them was that on Earth, both sides had insisted that they be given custody of the hero of the war, young Ender Wiggin, whose great victory had captured the popular imagination. Whoever had him would not only have the use of his fine military mind -- they thought -- but would also have the benefit of all the publicity and public adulation that surrounded him, that filled every mention of his name.

So as the political leaders worked out the truce, they reached a simple and obvious compromise. All the children from Battle School would be repatriated. Except Ender Wiggin.

Ender Wiggin would not be coming home. Neither party on Earth would be able to use him. That was the compromise.

And it had been proposed by Locke. By Ender's own brother.

When he learned that it made Bean seethe inside, the way he had when he thought Petra had betrayed Ender. It was wrong. It couldn't be borne.

Perhaps Peter Wiggin did it to keep Ender from becoming a pawn. To keep him free. Or perhaps he did it so that Ender could not use his celebrity to make his own play for political power. Was Peter Wiggin saving his brother, or eliminating a rival for power?

Someday I'll meet him and find out, thought Bean. And if he betrayed his brother, I'll destroy him.

When Bean shed his tears there in Ender's room, he was weeping for a cause the others did not yet know about. He was weeping because, as surely as the soldiers who died in those fighting ships, Ender would not be coming home from the war.

"So," said Alai, breaking the silence. "What do we do now? The Bugger War's over, and so's the war down there on Earth, and even the war here. What do we do now?"

"We're kids," said Petra. "They'll probably make us go to school. It's a law. You have to go to school till you're seventeen."

They all laughed until they cried again.

They saw each other off and on again over the next few days. Then they boarded several different cruisers and destroyers for the voyage back to Earth. Bean knew well why they traveled in separate ships. That way no one would ask why Ender wasn't on board. If Ender knew, before they left, that he was not going back to Earth, he said nothing about it.

\*\*\*

Elena could hardly contain her joy when Sister Carlotta called, asking if she and her husband would both be at home in an hour. "I'm bringing you your son," she said.

Nikolai, Nikolai, Nikolai. Elena sang the name over and over again in her mind, with her lips. Her husband Julian, too, was almost dancing as he hurried about the house, making things ready. Nikolai had been so little when he left. Now he would be so much older. They would hardly know him. They would not understand what he had been through. But it didn't matter. They loved him. They would learn who he was all over again. They would not let the lost years get in the way of the years to come.

"I see the car!" cried Julian.

Elena hurriedly pulled the covers from the dishes, so that Nikolai could come into a kitchen filled with the freshest, purest food of his childhood memories. Whatever they ate in space, it couldn't be as good as this.

Then she ran to the door and stood beside her husband as they watched Sister Carlotta get out of the front seat.

Why didn't she ride in back with Nikolai?

No matter. The back door opened, and Nikolai emerged, unfolding his lanky young body. So tall he was growing! Yet still a boy. There was a little bit of childhood left for him.

Run to me, my son!

But he didn't run to her. He turned his back on his parents.

Ah. He was reaching into the back seat. A present, perhaps?

No. Another boy.

A smaller boy, but with the same face as Nikolai. Perhaps too careworn for a child so small, but with the same open goodness that Nikolai had always had. Nikolai was smiling so broadly he could not contain it. But the small one was not smiling. He looked uncertain. Hesitant.

"Julian," said her husband.

Why would he say his own name?

"Our second son," he said. "They didn't all die, Elena. One lived."

All hope of those little ones had been buried in her heart. It almost hurt to open that hidden place. She gasped at the intensity of it.

"Nikolai met him in Battle School," he went on. "I told Sister Carlotta that if we had another son, you meant to name him Julian."

"You knew," said Elena.

"Forgive me, my love. But Sister Carlotta wasn't sure then that he was ours. Or that he would ever be able to come home. I couldn't bear it, to tell you of the hope, only to break your heart later."

"I have two sons," she said.

"If you want him," said Julian. "His life has been hard. But he's a stranger here. He doesn't speak Greek. He's been told that he's coming just for a visit. That legally he is not our child, but rather a ward of the state. We don't have to take him in, if you don't want to, Elena."

"Hush, you foolish man," she said. Then, loudly, she called out to the approaching boys. "Here are my two sons, home from the wars! Come to your mother! I have missed you both so much, and for so many years!"

They ran to her then, and she held them in her arms, and her tears fell on them both, and her husband's hands rested upon both boys' heads.

Her husband spoke. Elena recognized his words at once, from the gospel of St. Luke. But because he had only memorized the passage in Greek, the little one did not understand him. No matter. Nikolai began to translate into Common, the language of the fleet, and almost at once the little one recognized the words, and spoke them correctly, from memory, as Sister Carlotta had once read it to him years before.

"Let us eat, and be merry: for this my son was dead, and is alive again; he was lost, and is found." Then the little one burst into tears and clung to his mother, and kissed his father's hand.

"Welcome home, little brother," said Nikolai. "I told you they were nice."

THE END

#### ACKNOWLEDGMENTS

One book was particularly useful in preparing this novel: Peter Paret, ed., *Makers of Modern Strategy: From Machiavelli to the Nuclear Age* (Princeton University Press, 1986). The essays are not all of identical quality, but they gave me a good idea of the writings that might be in the library in Battle School.

I have nothing but fond memories of Rotterdam, a city of kind and generous people. The callousness toward the poor shown in this novel would be impossible today, but the business of science fiction is sometimes to show impossible nightmares.

I owe individual thanks to:

Erin and Phillip Absher, for, among other things, the lack of vomiting on the shuttle, the size of the toilet tank, and the weight of the lid;

Jane Brady, Laura Morefield, Oliver Withstandley, Matt Tolton, Kathryn H. Kidd, Kristine A. Card, and others who read the advance manuscript and made suggestions and corrections. Some annoying contradictions between *Ender's Game* and this book were thereby averted; any that remain are not errors at all, but merely subtle literary effects designed to show the difference in perception and memory between the two accounts of the same event. As my programmer friends would say, there are no bugs, only features;

Tom Doherty, my publisher; Beth Meacham, my editor; and Barbara Bova, my agent, for responding so positively to the idea of this book when I proposed it as a collaborative project and then realized I wanted to write it entirely myself. And if I still think *Urchin* was the better title for this book, it doesn't mean that I don't agree that my second title, *Ender's Shadow*, is the more marketable one;

My assistants, Scott Allen and Kathleen Bellamy, who at various times defy gravity and perform other useful miracles;

My son Geoff, who, though he is no longer the five-year-old he was when I wrote the novel Ender's Game, is still the model for Ender Wiggin;

My wife, Kristine, and the children who were home during the writing of this book: Emily, Charlie Ben, and Zina. Their patience with me when I was struggling to figure out the right approach to this novel was surpassed only by their patience when I finally found it and became possessed by the story. When I brought Bean home to a loving family I knew what it should look like, because I see it every day.

**THE SHADOW OF THE HEGEMON**

Re: What are you doing to protect the children?

Dear Admiral Chamrajnagar,

I was given your idname by a mutual friend who once worked for you but now is a glorified dispatcher -- I'm sure you know whom I mean. I realize that your primary responsibility now is not so much military as logistical, and your thoughts are turned to space rather than the political situation on Earth. After all, you decisively defeated the nationalist forces led by your predecessor in the League War, and that issue seems settled. The IF remains independent and for that we are all grateful.

What no one seems to understand is that peace on Earth is merely a temporary illusion. Not only is Russia's long-pent expansionism still a driving force, but also many other nations have aggressive designs on their neighbors. The forces of the Strategos are being disbanded, the Hegemony is rapidly losing all authority, and Earth is poised on the edge of cataclysm.

The most powerful resource of any nation in the wars to come will be the children trained in Battle, Tactical, and Command School. While it is perfectly appropriate for these children to serve their native countries in future wars, it is inevitable that at least some nations that lack such IF-certified geniuses or who believe that rivals have more-gifted commanders will inevitably take preemptive action, either to secure that enemy resource for their own use or, in any event, to deny the enemy the use of that resource. In short, these children are in grave danger of being kidnapped or killed.

I recognize that you have a hands-off policy toward events on Earth, but it was the IF that identified these children and trained them, thus making them targets. Whatever happens to these children, the IF has ultimate responsibility. It would go a long way toward protecting them if you were to issue an order placing these children under Fleet protection, warning any nation or group attempting to harm or interfere with them that they would face swift and harsh military retribution. Far from regarding this as interference in Earthside affairs, most nations would welcome this action, and, for whatever it is worth, you would have my complete support in all public forums.

I hope you will act immediately. There is no time to waste.

Respectfully,

Locke

Nothing looked right in Armenia when Petra Arkanian returned home. The mountains were dramatic, of course, but they had not really been part of her childhood experience. It was not until she got to Maralik that she began to see things that should mean something to her. Her father had met her in Terevan while her mother remained at home with her eleven-year-old brother and the new baby -- obviously conceived even before the population restrictions were relaxed when the war ended. They had no doubt watched Petra on television. Now, as the flivver took Petra and her father along the narrow streets, he began apologizing. "It won't seem much to you, Pet, after seeing the world."

"They didn't show us the world much, Papa. There were no windows in Battle School."

"I mean, the spaceport, and the capital, all the important people and wonderful buildings ..."

"I'm not disappointed, Papa." She had to lie in order to reassure him. It was as if he had given her Maralik as a gift, and now was unsure whether she liked it. She didn't know yet whether she would like it or not. She hadn't liked Battle School, but she got used to it. There was no getting used to Eros, but she had endured it. How could she dislike a place like this, with open sky and people wandering wherever they wanted?

Yet she was disappointed. For all her memories of Maralik were the memories of a five-year-old, looking up at tall buildings, across wide streets where large vehicles loomed and fled at alarming speeds. Now she was much older, beginning to come into her womanly height, and the cars were smaller, the streets downright narrow, and the buildings -- designed to survive the next earthquake, as the old buildings had not -- were squat. Not ugly -- there was grace in them, given the eclectic styles that were somehow blended here, Turkish and Russian, Spanish and Riviera, and, most incredibly, Japanese -- it was a marvel to see how they were still unified by the choice of colors, the closeness to the street, the almost uniform height as all strained against the legal maximums.

She knew of all this because she had read about it on Eros as she and the other children sat out the League War. She had seen pictures on the nets. But nothing had prepared her for the fact that she had left here as a five-year-old and now was returning at fourteen.

"What?" she said. For Father had spoken and she hadn't understood him.

"I asked if you wanted to stop for a candy before we went home, the way we used to."

Candy. How could she have forgotten the word for candy?

Easily, that's how. The only other Armenian in Battle School had been three years ahead of her and graduated to Tactical School so they overlapped only for a few months. She had been seven when she got from Ground School to Battle School, and he was ten, leaving without ever having commanded an army. Was it any wonder that he didn't want to jabber in Armenian to a little kid from home? So in effect she had gone without speaking Armenian for nine years. And the

Armenian she had spoken then was a five-year-old's language. It was so hard to speak it now, and harder still to understand it.

How could she tell Father that it would help her greatly if he would speak to her in Fleet Common - English, in effect? He spoke it, of course -- he and Mother had made a point of speaking English at home when she was little, so she would not be handicapped linguistically if she was taken into Battle School. In fact, as she thought about it, that was part of her problem. How often had Father actually called candy by the Armenian word? Whenever he let her walk with him through town and they stopped for candy, he would make her ask for it in English, and call each piece by its English name. It was absurd, really -- why would she need to know, in Battle School, the English names of Armenian candies?

"What are you laughing for?"

"I seem to have lost my taste for candy while I was in space, Father. Though for old time's sake, I hope you'll have time to walk through town with me again. You won't be as tall as you were the last time."

"No, nor will your hand be as small in mine." He laughed, too. "We've been robbed of years that would be precious now, to have in memory."

"Yes," said Petra. "But I was where I needed to be."

Or was I? I'm the one who broke first. I passed all the tests, until the test that mattered, and there I broke first. Ender comforted me by telling me he relied on me most and pushed me hardest, but he pushed us all and relied upon us all and I'm the one who broke. No one ever spoke of it; perhaps here on Earth not one living soul knew of it. But the others who had fought with her knew it. Until that moment when she fell asleep in the midst of combat, she had been one of the best. After that, though she never broke again, Ender also never trusted her again. The others watched over her, so that if she suddenly stopped commanding her ships, they could step in. She was sure that one of them had been designated, but never asked who. Dink? Bean? Bean, yes -- whether Ender assigned him to do it or not, she knew Bean would be watching, ready to take over. She was not reliable. They did not trust her. She did not trust herself.

Yet she would keep that secret from her family, as she kept it in talking to the prime minister and the press, to the Armenian military and the schoolchildren who had been assembled to meet the great Armenian hero of the Formic War. Armenia needed a hero. She was the only candidate out of this war. They had shown her how the online textbooks already listed her among the ten greatest Armenians of all time. Her picture, her biography, and quotations from Colonel Graff, from Major Anderson, from Mazer Rackham.

And from Ender Wiggin. "It was Petra who first stood up for me at risk to herself. It was Petra who trained me when no one else would. I owe everything I accomplished to her. And in the final campaign, in battle after battle she was the commander I relied upon."

Ender could not have known how those words would hurt. No doubt he meant to reassure her that he did rely upon her. But because she knew the truth, his words sounded like pity to her. They sounded like a kindly lie.

And now she was home. Nowhere on Earth was she so much a stranger as here, because she ought to feel at home here, but she could not, for no one knew her here. They knew a bright little girl who was sent off amid tearful good-byes and brave words of love. They knew a hero who returned with the halo of victory around her every word and gesture. But they did not know and would never know the girl who broke under the strain and in the midst of battle simply ... fell asleep. While her ships were lost, while real men died, she slept because her body could stay awake no more. That girl would remain hidden from all eyes.

And from all eyes would be hidden also the girl who watched every move of the boys around her, evaluating their abilities, guessing at their intentions, determined to take any advantage she could get, refusing to bow to any of them. Here she was supposed to become a child again -- an older one, but a child nonetheless. A dependent.

After nine years of fierce watchfulness, it would be restful to turn over her life to others, wouldn't it?

"Your mother wanted to come. But she was afraid to come." He chuckled as if this were amusing. "Do you understand?"

"No," said Petra.

"Not afraid of you," said Father. "Of her firstborn daughter she could never be afraid. But the cameras. The politicians. The crowds. She is a woman of the kitchen. Not a woman of the market. Do you understand?"

She understood the Armenian easily enough, if that's what he was asking, because he had caught on, he was speaking in simple language and separating his words a little so she would not get lost in the stream of conversation. She was grateful for this, but also embarrassed that it was so obvious she needed such help.

What she did not understand was a fear of crowds that could keep a mother from coming to meet her daughter after nine years.

Petra knew that it was not the crowds or the cameras that Mother was afraid of. It was Petra herself. The lost five-year-old who would never be five again, who had had her first period with the help of a Fleet nurse, whose mother had never bent over her homework with her, or taught her how to cook. No, wait. She had baked pies with her mother. She had helped roll out the dough. Thinking back, she could see that her mother had not actually let her do anything that mattered. But to Petra it had seemed that she was the one baking. That her mother trusted her.

That turned her thoughts to the way Ender had coddled her at the end, pretending to trust her as before but actually keeping control.

And because that was an unbearable thought, Petra looked out the window of the flivver. "Are we in the part of town where I used to play?"

"Not yet," said Father. "But nearly. Maralik is still not such a large town."

"It all seems new to me," said Petra.

"But it isn't. It never changes. Only the architecture. There are Armenians all over the world, but only because they were forced to leave to save their lives. By nature, Armenians stay at home. The hills are the womb, and we have no desire to be born." He chuckled at his joke.

Had he always chuckled like that? It sounded to Petra less like amusement than like nervousness. Mother was not the only one afraid of her.

At last the flivver reached home. And here at last she recognized where she was. It was small and shabby compared to what she had remembered, but in truth she had not even thought of the place in many years. It stopped haunting her dreams by the time she was ten. But now, coming home again, it all returned to her, the tears she had shed in those first weeks and months in Ground School, and again when she left Earth and went up to Battle School. This was what she had yearned for, and at last she was here again, she had it back ... and knew that she no longer needed it, no longer really wanted it. The nervous man in the car beside her was not the tall god who had led her through the streets of Maralik so proudly. And the woman waiting inside the house would not be the goddess from whom came warm food and a cool hand on her forehead when she was sick.

But she had nowhere else to go.

Her mother was standing at the window as Petra emerged from the flivver. Father palmed the scanner to accept the charges. Petra raised a hand and gave a small wave to her mother, a shy smile that quickly grew into a grin. Her mother smiled back and gave her own small wave in reply. Petra took her father's hand and walked with him to the house.

The door opened as they approached. It was Stefan, her brother. She would not have known him from her memories of a two-year-old, still creased with baby fat. And he, of course, did not know her at all. He beamed the way the children from the school group had beamed at her, thrilled to meet a celebrity but not really aware of her as a person. He was her brother, though, and so she hugged him and he hugged her back. "You're really Petra!" he said.

"You're really Stefan!" she answered. Then she turned to her mother. She was still standing at the window, looking out.

"Mother?"

The woman turned, tears streaking her cheeks. "I'm so glad to see you, Petra," she said.

But she made no move to come to Petra, or even to reach out to her.

"But you're still looking for the little girl who left nine years ago," said Petra.

Mother burst into tears, and now she reached out her arms and Petra strode to her, to be enfolded in her embrace. "You're a woman now," said Mother. "I don't know you, but I love you."

"I love you too, Mother," said Petra. And was pleased to realize that it was true.

They had about an hour, the four of them -- five, once the baby woke up. Petra shunted aside their questions -- "Oh, everything about me has already been published or broadcast. It's you that I want to hear about" -- and learned that her father was still editing textbooks and supervising translations, and her mother was still the shepherd of the neighborhood, watching out for everyone, bringing food when someone was sick, taking care of children while parents ran errands, and providing lunch for any child who showed up. "I remember once that Mother and I had lunch alone, just the two of us," Stefan joked. "We didn't know what to say, and there was so much food left over."

"It was already that way when I was little," Petra said. "I remember being so proud of how the other kids loved my mother. And so jealous of the way she loved them!"

"Never as much as I loved my own girl and boy," said Mother. "But I do love children, I admit it, every one of them is precious in the sight of God, every one of them is welcome in my house."

"Oh, I've known a few you wouldn't love," said Petra.

"Maybe," said Mother, not wishing to argue, but plainly not believing that there could be such a child.

The baby gurgled and Mother lifted her shirt to tuck the baby to her breast.

"Did I slurp so noisily?" asked Petra.

"Not really," said Mother.

"Oh, tell the truth," said Father. "She woke the neighbors."

"So I was a glutton."

"No, merely a barbarian," said Father. "No table manners."

Petra decided to ask the delicate question boldly and have done with it. "The baby was born only a month after the population restrictions were lifted."

Father and Mother looked at each other, Mother with a beatific expression, Father with a wince. "Yes, well, we missed you. We wanted another little girl."

"You would have lost your job," said Petra.

"Not right away," said Father.

"Armenian officials have always been a little slow about enforcing those laws," said Mother.

"But eventually, you could have lost everything."

"No," said Mother. "When you left, we lost half of everything. Children are everything. The rest is ... nothing."

Stefan laughed. "Except when I'm hungry. Food is something!"

"You're always hungry," said Father.

"Food is always something," said Stefan.

They laughed, but Petra could see that Stefan had had no illusions about what the birth of this child would have meant. "It's a good thing we won the war."

"Better than losing it," said Stefan.

"It's nice to have the baby and obey the law, too," said Mother.

"But you didn't get your little girl."

"No," said Father. "We got our David."

"We didn't need a little girl after all," said Mother. "We got you back."

Not really, thought Petra. And not for long. Four years, maybe fewer, and I'll be off to university. And you won't miss me by then, because you'll know that I'm not the little girl you love, just this bloody-handed veteran of a nasty military school that turned out to have real battles to fight.

After the first hour, neighbors and cousins and friends from Father's work began dropping by, and it was not until after midnight that Father had to announce that tomorrow was not a national holiday and he needed to have some sleep before work. It took yet another hour to shoo everyone out of the house, and by then all Petra wanted was to curl up in bed and hide from the world for at least a week.

But by the end of the next day, she knew she had to get out of the house. She didn't fit into the routines. Mother loved her, yes, but her life centered around the baby and the neighborhood, and while she kept trying to engage Petra in conversation, Petra could see that she was a distraction, that it would be a relief for Mother when Petra went to school during the day as Stefan did, returning only at the scheduled time. Petra understood, and that night announced that she wanted to register for school and begin class the next day.

"Actually," said Father, "the people from the IF said that you could probably go right on to university."

"I'm fourteen," said Petra. "And there are serious gaps in my education."

"She never even heard of Dog," said Stefan.

"What?" said Father. "What dog?"

"Dog," said Stefan. "The zip orchestra. You know."

"Very famous group," said Mother. "If you heard them, you'd take the car in for major repairs."

"Oh, that Dog," said Father. "I hardly think that's the education Petra was talking about."

"Actually, it is," said Petra.

"It's like she's from another planet," said Stefan. "Last night I realized she never heard of anybody."

"I am from another planet. Or, properly speaking, asteroid."

"Of course," said Mother. "You need to join your generation."

Petra smiled, but inwardly she winced. Her generation? She had no generation, except the few thousand kids who had once been in Battle School, and now were scattered over the surface of the Earth, trying to find out where they belonged in a world at peace.

School would not be easy, Petra soon discovered. There were no courses in military history and military strategy. The mathematics was pathetic compared to what she had mastered in Battle School, but with literature and grammar she was downright backward -- her knowledge of Armenian was indeed childish, and while she was fluent in the version of English used in Battle School -- including the slang that the kids used there -- she had little knowledge of the rules of grammar and no understanding at all of the mixed Armenian and English slang that the kids used with each other at school.

Everyone was very nice to her, of course -- the most popular girls immediately took possession of her, and the teachers treated her like a celebrity. Petra allowed herself to be led around and shown everything, and studied the chatter of her new friends very carefully, so she could learn the slang and hear how school English and Armenian were nuanced. She knew that soon enough the popular girls would tire of her -- especially when they realized how bluntly outspoken Petra was, a trait that she had no intention of changing. Petra was quite used to the fact that people who cared about the social hierarchy usually ended up hating her and, if they were wise, fearing her, since pretensions didn't last long in her presence. She would find her real friends over the next few weeks -- if, in fact, there were any here who would value her for what she was. It didn't matter. All the friendships here, all the social concerns seemed so trivial to her. There was nothing at stake here, except each student's own social life and academic future, and what did that matter? Petra's previous schooling

had all been conducted in the shadow of war, with the fate of humanity riding on the outcome of her studies and the quality of her skills. Now, what did it matter? She would read Armenian literature because she wanted to learn Armenian, not because she thought it actually mattered what some expatriate like Saroyan thought about the lives of children in a long-lost era of a far-off country.

The only part of school that she truly loved was physical education. To have sky over her head as she ran, to have the track lie flat before her, to be able to run and run for the sheer joy of it and without a clock ticking out her allotted time for aerobic exercise -- such a luxury. She could not compete, physically, with most of the other girls. It would take time for her body to reconstruct itself for high gravity, for despite the great pains that the IF went to to make sure that soldiers' bodies did not deteriorate too much during long months and years in space, nothing trained you for living on a planet's surface except living there. But Petra didn't care that she was one of the last to complete every race, that she couldn't leap even the lowest hurdle. It felt good simply to run freely, and her weakness gave her goals to meet. She would be competitive soon enough. That was one of the aspects of her innate personality that had taken her to Battle School in the first place -- that she had no particular interest in competition because she always started from the assumption that, if it mattered, she would find a way to win.

And so she settled in to her new life. Within weeks she was fluent in Armenian and had mastered the local slang. As she had expected, the popular girls dropped her in about the same amount of time, and a few weeks later, the brainy girls had cooled toward her as well. It was among the rebels and misfits that she found her friends, and soon she had a circle of confidants and co-conspirators that she called her "jeesh," her private army. Not that she was the commander or anything, but they were all loyal to each other and amused at the antics of the teachers and the other students, and when a school counselor called her in to tell her that the administration was growing concerned about the fact that Petra seemed to be associating with an anti-social element in school, she knew that she was truly at home in Maralik.

Then one day she came home from school to find the front door locked. She carried no house key -- no one did in their neighborhood because no one locked up, or even, in good weather, closed their doors. She could hear the baby crying inside the house, so instead of making her mother come to the front door to let her in, she walked around back and came into the kitchen to find that her mother was tied to a chair, gagged, her eyes wide and frantic with fear.

Before Petra had time to react, a hypostick was slapped against her arm and, without ever seeing who had done it, she slipped into darkness.

Bean

Re: Do not write to me again

Mr. Peter Wiggin,

Did you really think I would not have the resources to know who you are? You may be the author of the "Locke Proposal," giving you a reputation as a peacemaker, but you are also partly responsible for the world's present instability by your jingoist use of your sister's identity as Demosthenes. I have no illusions about your motives.

It is outrageous of you to suggest that I jeopardize the neutrality of the International Fleet in order to take control of children who have completed their military service with the IF. If you attempt to manipulate public opinion to force me to do so, I will expose your identity as both Locke and Demosthenes.

I have changed my idname and have informed our mutual friend that he is not to attempt to relay communication between you and me again. The only comfort you are entitled to take from my letter is this: The IF will not interfere with those trying to assert hegemony over other nations and peoples -- not even you.

Chamrajnagar

The disappearance of Petra Arkanian from her home in Armenia was worldwide news. The headlines were full of accusations hurled by Armenia against Turkey, Azerbaijan, and every other Turkish-speaking nation, and the stiff or fiery denials and counter-accusations that came in reply. There were the tearful interviews with her mother, the only witness, who was sure the kidnapers were Azerbaijani. "I know the language, I know the accent, and that's who took my little girl!"

Bean was with his family on the second day of their vacation at the beach on the island of Ithaca, but this was Petra, and he read the nets and watched the vids avidly, along with his brother, Nikolai. They both reached the same conclusion right away. "It wasn't any of the Turkish nations," Nikolai announced to their parents. "That's obvious." Father, who had been working in government for many years, agreed. "Real Turks would have made sure to speak only Russian."

"Or Armenian," said Nikolai.

"No Turk speaks Armenian," said Mother. She was right, of course, since real Turks would never deign to learn it, and those in Turkish countries who did speak Armenian were, by definition, not really Turks and would never be trusted with a delicate assignment like kidnapping a military genius.

"So who was it?" said Father. "Agents provocateurs, trying to start a war?"

"My bet is on the Armenian government," said Nikolai. "Put her in charge of their military."

"Why kidnap her when they could employ her openly?" asked Father.

"Taking her out of school openly," said Nikolai, "would be an announcement of Armenia's military intentions. It might provoke preemptive actions by surrounding Turkey or Azerbaijan."

There was superficial plausibility in what Nikolai was saying, but Bean knew better. He had already foreseen this possibility back when all the militarily gifted children were still in space. At that time the main danger had come from the Polemarch, and Bean wrote an anonymous letter to a couple of opinion leaders on Earth, Locke and Demosthenes, urging them to get all the Battle School children back to Earth so they couldn't be seized or killed by the Polemarch's forces in the League War. The warning had worked, but now that the League War was over, too many governments had begun to think and act complacently, as if the world now had peace instead of a fragile ceasefire. Bean's original analysis still held. It was Russia that was behind the Polemarch's coup attempt in the League War, and it was likely to be Russia that was behind the kidnapping of Petra Arkanian.

Still, he didn't have any hard evidence of this and knew of no way to get it -- now that he wasn't inside a Fleet installation, he had no access to military computer systems. So he kept his skepticism to himself, and made a joke out of it. "I don't know, Nikolai," he said. "Since staging this kidnapping is having an even more destabilizing effect, I'd have to say that if she was taken by her own government, it proves they really really need her, because it was a deeply dumb thing to do."

"If they're not dumb," said Father, "who did it?"

"Somebody who's ambitious to fight and win wars and smart enough to know they need a brilliant commander," said Bean. "And either big enough or invisible enough or far enough away from Armenia not to care about the consequences of kidnaping her. In fact, I'll bet that whoever took her would be perfectly delighted if war broke out in the Caucasus."

"So you think it's some large and powerful nation close by?" asked Father. Of course, there was only one large and powerful nation close to Armenia.

"Could be, but there's no telling," said Bean. "Anybody who needs a commander like Petra wants a world in turmoil. Enough turmoil, and anybody might emerge on top. Plenty of sides to play off against each other." And now that Bean had said it, he began to believe it. Just because Russia was the most aggressive nation before the League War didn't mean that other nations weren't going to get into the game.

"In a world in chaos," said Nikolai, "the army with the best commander wins."

"If you want to find the kidnapper, look for the country that talks most about peace and conciliation," said Bean, playing with the idea and saying whatever came to mind.

"You're too cynical," said Nikolai. "Some who talk about peace and conciliation merely want peace and conciliation."

"You watch -- the nations that offer to arbitrate are the ones that think they should rule the world, and this is just one more move in the game."

Father laughed. "Don't read too much into that," he said. "Most of the nations that are always offering to arbitrate are trying to recover lost status, not gain new power. France. America. Japan. They're always meddling just because they used to have the power to back it up and they haven't caught on yet that they don't anymore."

Bean smiled. "You never know, do you, Papa. The very fact that you dismiss the possibility that they could be the kidnappers makes me regard them as all the more likely candidates."

Nikolai laughed and agreed.

"That's the problem with having two Battle School graduates in the house," said Father. "You think because you understand military thinking that you understand political thinking, too."

"It's all maneuver and avoiding battle until you have overwhelming superiority," said Bean.

"But it's also about the will to power," said Father. "And even if individuals in America and France and Japan have the will to power, the people don't. Their leaders will never get them moving. You have to look at nations on the make. Aggressive peoples who think they have a grievance, who think they're undervalued. Belligerent, snappish."

"A whole nation of belligerent, snappish people?" asked Nikolai.

"Sounds like Athens," said Bean.

"A nation that takes that attitude toward other nations," said Father. "Several self-consciously Islamic nations have the character to make such a play, but they'd never kidnap a Christian girl to lead their armies."

"They might kidnap her to prevent her own nation from using her," said Nikolai. "Which brings us back to Armenia's neighbors."

"It's an interesting puzzle," said Bean, "which we can figure out later, after we get to wherever we're going."

Father and Nikolai looked at him as if he were crazy. "Going?" asked Father.

It was Mother who understood. "They're kidnaping Battle School graduates. Not just that, but a member of Ender's team from the actual battles."

"And one of the best," said Bean.

Father was skeptical. "One incident doesn't make a pattern."

"Let's not wait to see who's next," said Mother. "I'd rather feel silly later for overreacting than grieve because we dismissed the possibility."

"Give it a few days," said Father. "It will all blow over."

"We've already given it six hours," said Bean. "If the kidnappers are patient, they won't strike again for months. But if they're impatient, they're already in motion against all their other targets. For all we know, the only reason Nikolai and I aren't in the bag already is because we threw off their plans by going on vacation."

"Or else," said Nikolai, "our being here on this island gives them the perfect opportunity."

"Father," said Mother, "why don't you call for some protection?"

Father hesitated.

Bean understood why. The political game was a delicate one, and anything Father did right now could have repercussions throughout his career. "You won't be perceived as asking for special privileges for yourself," said Bean. "Nikolai and I are a precious national resource. I believe the prime minister is on record as saying that several times. Letting Athens know where we are and suggesting they protect us and get us out of here is a good idea."

Father got on the cellphone.

He got only a System Busy response.

"That's it," said Bean. "There's no way the phone system can be too busy here on Ithaca. We need a boat."

"An airplane," said Mother."

"A boat," said Nikolai. "And not a rental. They're probably waiting for us to put ourselves in their hands, so there won't be a struggle."

"Several of the nearby houses have boats," said Father. "But we don't know these people."

"They know us," said Nikolai. "Especially Bean. We are war heroes, you know."

"But any house around here could be the very one from which they're watching us," said Father. "If they're watching us. We can't trust anybody."

"Let's get in our bathing suits," said Bean, "and walk to the beach and then wander as far as we can before we cut inland and find somebody with a boat."

Since no one had a better plan, they put it into action at once. Within two minutes they were out the door, carrying no wallets or purses, though Father and Mother slipped a few identification papers and credit cards into their suits. Bean and Nikolai laughed and teased each other as usual, and

Mother and Father held hands and talked quietly, smiling at their sons ... as usual. No sign of alarm. Nothing to cause anyone watching to spring into action.

They were only about a quarter mile up the beach when they heard an explosion -- loud, as if it were close, and the shockwave made them stumble. Mother fell. Father helped her up as Bean and Nikolai looked back.

"Maybe it's not our house," said Nikolai.

"Let's not go back and check," said Bean.

They began to jog up the beach, matching their speed to Mother, who was limping a little from having skinned one knee and twisted the other when she fell. "Go on ahead," she said.

"Mother," said Nikolai, "taking you is the same as taking us, because we'd do whatever they wanted to get you back."

"They don't want to take us," said Bean. "Petra they wanted to use. Me they want dead."

"No," said Mother.

"He's right," said Father. "You don't blow up a house in order to kidnap the occupants."

"But we don't know it was our house!" Mother insisted.

"Mother," said Bean. "It's basic strategy. Any resource you can't get control of, you destroy so your enemy can't have it."

"What enemy?" Mother said. "Greece has no enemies!"

"When somebody wants to rule the world," said Nikolai, "eventually everyone is his enemy."

"I think we should run faster," said Mother.

They did.

As they ran, Bean thought through what Mother had said. Nikolai's answer was right, of course, but Bean couldn't help but wonder: Greece might have no enemies, but I have. Somewhere in this world, Achilles is alive. Supposedly he's in custody, a prisoner because he is mentally ill, because he has murdered again and again. Graff promised that he would never be set free. But Graff was court-martialed -- exonerated, yes, but retired from the military. He's now Minister of Colonization, no longer in a position to keep his promise about Achilles. And if there's one thing Achilles wants, it's me, dead.

Kidnaping Petra, that's something Achilles would think of. And if he was in a position to cause that to happen -- if some government or group was listening to him -- then it would have been a simple enough matter for him to get the same people to kill Bean.

Or would Achilles insist on being there in person?

Probably not. Achilles was not a sadist. He killed with his own hands when he needed to, but would never put himself at risk. Killing from a distance would actually be preferable. Using other hands to do his work.

Who else would want Bean dead? Any other enemy would seek to capture him. His test scores from Battle School were a matter of public record since Graff's trial. The military in every nation knew that he was the kid who in many ways had topped Ender himself. He would be the one most desired. He would also be the one most feared, if he were on the other side in a war. Any of them might kill him if they knew they couldn't take him. But they would try to take him first. Only Achilles would prefer his death.

But he said nothing of this to his family. His fears about Achilles would sound too paranoid. He wasn't sure whether he believed them himself. And yet, as he ran along the beach with his family, he grew more certain with every step that whoever had kidnaped Petra was in some way under Achilles' influence.

They heard the rotors of helicopters before they saw them, and Nikolai's reaction was instantaneous. "Inland now!" he shouted. They scrambled for the nearest wooden stairway leading up the cliff from the beach.

They were only halfway up before the choppers came into view. There was no point in trying to hide. One of the choppers set down on the beach below them, the other on the bluff above.

"Down is easier than up," said Father. "And the choppers do have Greek military insignia."

What Bean didn't point out, because everyone knew it, was that Greece was part of the New Warsaw Pact, and it was quite possible that Greek military craft might be acting under Russian command.

In silence they walked back down the stairs. Hope and despair and fear tugged at them by turns.

The soldiers who spilled out of the chopper were wearing Greek Army uniforms.

"At least they're not trying to pretend they're Turks," said Nikolai.

"But how would the Greek Army know to come rescue us?" said Mother. "The explosion was only a few minutes ago."

The answer came quickly enough, once they got to the beach. A colonel that Father knew slightly came to meet them, saluting them. No, saluting Bean, with the respect due to a veteran of the Formic War.

"I bring you greetings from General Thrakos," said the colonel. "He would have come himself, but there was no time to waste when the warning came."

"Colonel Dekanos, we think our sons might be in danger," said Father.

"We realized that the moment word came of the kidnapping of Petra Arkanian," said Dekanos. "But you weren't at home and it took a few hours to find out where you were."

"We heard an explosion," said Mother.

"If you had been inside the house," said Dekanos, "you'd be as dead as the people in the surrounding houses. The army is securing the area. Fifteen choppers were sent up to search for you -- we hoped -- or, if you were dead, the perpetrators. I have already reported to Athens that you are alive and well."

"They were jamming the cellphone," said Father.

"Whoever did this has a very effective organization," said Dekanos. "Nine other children, it turns out, were taken within hours of Petra Arkanian."

"Who?" demanded Bean.

"I don't know the names yet," said Dekanos. "Only the count."

"Were any of the others simply killed?" asked Bean.

"No," said Dekanos. "Not that I've heard, anyway."

"Then why did they blow up our house?" Mother demanded.

"If we knew why," said Dekanos, "we'd know who. And vice-versa."

They were belted into their seats. The chopper rose from the beach -- but not very high. By now the other choppers were ranged around them and above them. Flying escort.

"Ground troops are continuing the search for the perpetrators," said Dekanos. "But your survival is our highest priority."

"We appreciate that," said Mother.

But Bean was not all that appreciative. The Greek military would, of course, put them in hiding and protect them carefully. But no matter what they did, the one thing they could not do was conceal

the knowledge of his location from the Greek government itself. And the Greek government had been part of the Russia-dominated Warsaw Pact for generations now, since before the Formic War. Therefore Achilles -- if it was Achilles, if it was Russia he worked for, if, if -- would be able to find out where they were. Bean knew that it was not enough for him to be in protection. He had to be in true concealment, where no government could find him, where no one but himself would know who he was.

The trouble was, he was not only still a child, he was a famous child. Between his youth and his celebrity, it would be almost impossible for him to move unnoticed through the world. He would have to have help. So for the time being, he had to remain in military custody and simply hope that it would take him less time to get away than it would take Achilles to get to him.

If it was Achilles.

Re: Danger

I have no idea where you are and that's good, because I believe you are in grave danger, and the harder it is to find you, the better.

Since I'm no longer with the IF, I'm not kept abreast of things there. But the news is full of the kidnaping of most of the children who served with Ender in Command School. That could have been done by anybody, there is no shortage of nations or groups that might conceive and carry out such a project. What you may not know is that there was no attempt to kidnap one of them. From a friend of mine I have learned that the beach house in Ithaca where Bean and his family were vacationing was simply blown up -- with so much force that the neighboring houses were also flattened and everyone in them killed. Bean and his family had already escaped and are under the protection of the Greek military. Supposedly this is a secret, in hopes that the assassins will think they succeeded, but in fact, like most governments, Greece leaks like a colander, and the assassins probably already know more than I do about where Bean is.

There is only one person on Earth who would prefer Bean dead.

That means that the people who got Achilles out of that mental hospital are not just using him -- he is making, or at least influencing, their decisions to fit his private agenda. The danger to you is grave. The danger to Bean, more so. He must go into deep hiding, and he cannot go alone. To save his life and yours, the only thing I can think of is to get both of you off planet. We are within months of launching our first colony ships. If I am the only one to know your real identities, we can keep you safe until launch. But we must get Bean out of Greece as quickly as possible. Are you with me?

Do not tell me where you are. We will work out how to meet.

How stupid did they think she was?

It took Petra only about half an hour to realize that these people weren't Turkish. Not that she was some kind of expert on language, but they'd be babbling along and every now and then out would pop a word of Russian. She didn't understand Russian either, except for a few loan words in Armenian, and Azerbaijani had loan words like that, too, but the thing is, when you say a Russian loan word in Armenian, you give it an Armenian pronunciation. These clowns would switch to an easy, native-sounding Russian accent when they hit those words. She would have to have been a gibbon in the slow-learner class not to realize that the Turkish pose was just that, a pose.

So when she decided she'd learned all she could with her eyes closed, listening, she spoke up in Fleet Common. "Aren't we across the Caucasus yet? When do I get to pee?"

Someone said an expletive.

"No, pee," she answered. She opened her eyes and blinked. She was on the floor of some ground vehicle. She started to sit up.

A man pushed her back down with his foot.

"Oh, that's clever. Keep me out of sight as we coast along the tarmac, but how will you get me into the airplane without anyone seeing? You want me to come out walking and acting normal so nobody gets all excited, right?"

"You'll act that way when we tell you to or we'll kill you," said the man with the heavy foot.

"If you had the authority to kill me, I'd be dead back in Maralik." She started to rise again. Again the foot pushed her back down.

"Listen carefully," she said. "I've been kidnapped because somebody wants me to plan a war for them. That means I'm going to be meeting with the top brass. They're not stupid enough to think they'll get anything decent from me without my willing cooperation. That's why they wouldn't let you kill my mother. So when I tell them that I won't do anything for them until I have your balls in a paper bag, how long do you think it will take them to decide what's more important to them? My brain or your balls?"

"We do have the authority to kill you."

It took her only moments to decide why such authority might have been given to morons like these. "Only if I'm in imminent danger of being rescued. Then they'd rather have me dead than let somebody else get the use of me. Let's see you make a case for that here on the runway at the Gyuniri airport."

A different rude word this time.

Somebody spurted out a sentence of Russian. She caught the gist of it from the intonation and the bitter laughter afterward. "They warned you she was a genius."

Genius, hell. If she was so smart, why hadn't she anticipated the possibility that somebody would make a grab for the kids who won the war? And it had to be kids, not just her, because she was too far down the list for somebody outside Armenia to make her their only choice. When the front door was locked, she should have run for the cops instead of puttering around to the back door. And that was another stupid thing they did, locking the front door. In Russia you had to lock your doors, they probably thought that was normal. They should have done better research. Not that it helped her now, of course. Except that she knew they weren't all that careful and they weren't all that bright. Anybody can kidnap someone who's taking no precautions.

"So Russia makes her play for world domination, is that it?" she asked.

"Shut up," said the man in the seat in front of her.

"I don't speak Russian you know, and I won't learn."

"You don't have to," said a woman.

"Isn't that ironic?" said Petra. "Russia plans to take over the world, but they have to speak English to do it."

The foot on her belly pressed down harder.

"Remember your balls in a bag," she said.

A moment, and then the foot let up.

She sat up, and this time no one pushed her down.

"Untape me so I can get myself up on the seat. Come on! My arms hurt in this position! Haven't you learned anything since the days of the KGB? Unconscious people don't have to have their circulation cut off. Fourteen-year-old Armenian girls can probably be overpowered quite easily by big strong Russian goons."

By now the tape was off and she was sitting beside Heavy-foot and a guy who never looked at her, just kept watching out the left window, then the right, then the left again. "So this is Gyuniri airport?"

"What, you don't recognize it?"

"I've never been here before. When would I? I've only taken two airplane trips in my life, one out of Terevan when I was five, and the other coming back, nine years later."

"She knew it was Gyuniri because it's the closest airport that doesn't fly commercial jets," said the woman. She spoke without any tone in her voice -- not contempt, not deference. Just ... flat.

"Whose bright idea was this? Because captive generals don't strategize all that well."

"First, why in the world do you think anyone would tell us?" said the woman. "Second, why don't you shut up and find things out when they matter?"

"Because I'm a cheerful, talkative extrovert who likes to make friends," said Petra.

"You're a bossy, nosy introvert who likes to piss people off," said the woman.

"Oh, you actually did some research."

"No, just observation." So she did have a sense of humor. Maybe.

"You'd better just pray you can get over the Caucasus before you have to answer to the Armenian Air Force."

Heavy-foot made a derisory noise, proving that he didn't recognize irony when he heard it.

"Of course, you'll probably have only a small plane, and we'll probably fly out over the Black Sea. Which means that IF satellites will know exactly where I am."

"You're not IF personnel anymore," said the woman.

"Meaning they don't care what happens to you," said Heavy-foot.

By now they had pulled to a stop beside a small plane. "A jet, I'm impressed," said Petra. "Does it have any weaponry? Or is it just wired with explosives so that if the Armenian Air Force does start to force you down, you can blow me up and the whole plane with me?"

"Do we have to tie you again?" asked the woman.

"That would look really good to the people in the control tower."

"Get her out," said the woman.

Stupidly, the men on both sides of her opened their doors and got out, leaving her a choice of exits. So she chose Heavy-foot because she knew he was stupid, whereas the other man was anyone's guess. And, yes, he truly was stupid, because he held her by only one arm as he used his other hand to close the door. So she lurched to one side as if she had stumbled, drawing him off balance, and then, still using his grip to support her weight, she did a double kick, one in the groin and one in the knee. She landed solidly both times, and he let go of her very nicely before falling to the ground, writhing, one hand clutching his crotch and the other trying to slide his kneecap back around to the front of his knee,

Did they think she'd forgotten all her hand-to-hand unarmed combat training? Hadn't she warned him that she'd have his balls in a bag?

She made a good run for it, and she was feeling pretty good about how much speed she had picked up during her months of running at school, until she realized that they weren't following her. And that meant they knew they didn't have to.

No sooner had she noticed this than she felt something sharp pierce the skin over her right shoulder blade. She had time to slow down but not to stop before she collapsed into unconsciousness again.

This time they kept her drugged until they reached their destination, and since she never saw any scenery except the walls of what seemed to be an underground bunker, she had no guesses about where they might have taken her. Somewhere in Russia, that's all. And from the soreness of the bruises on her arms and legs and neck and the scrapes on her knees and palms and nose, she guessed that they hadn't been too careful with her. The price she paid for being a bossy, nosy introvert. Or maybe it was the part about pissing people off.

She lay on her bunk until a doctor came in and treated her scrapes with a special no-anesthetic blend of alcohol and acid, or so it seemed. "Was that just in case it didn't hurt enough?" she asked.

The doctor didn't answer. Apparently they had warned the woman what happened to those who spoke to her.

"The guy I kicked in the balls, did they have to amputate them?"

Still no answer. Not even a trace of amusement. Could this possibly be the one educated person in Russia who didn't speak Common?

Meals were brought to her, lights went on and off, but no one came to speak to her and she was not allowed out of her room. She heard nothing through the heavy doors, and it became clear that her punishment for her misbehavior on the trip was going to be solitary confinement for a while.

She resolved not to beg for mercy. Indeed, once it became clear to her that she was in isolation, she accepted it and isolated herself still further, neither speaking nor responding to the people who came and went. They never tried to speak to her, either, so the silence of her world was complete.

They did not understand how self-contained she was. How her mind could show her more than mere reality ever could. She could recall memories by the sheaf, by the bale. Whole conversations. And then new versions of those conversations, in which she was actually able to say the clever things that she only really thought of later.

She could even relive every moment of the battles on Eros. Especially the battle where she fell asleep in the middle. How tired she was. How she struggled frantically to stay awake. How she could feel her mind being so sluggish that she began to forget where she was, and why, and even who she was.

To escape from this endlessly repeating scene, she tried to think of other things. Her parents, her little brother. She could remember everything they had said and done since she returned, but after a while the only memories that mattered to her were the early ones from before Battle School. Memories she had suppressed for nine years, as best she could. All the promises of the family life that was lost to her. The good-bye when her mother wept and let her go. Her father's hand as he led her to the car. That hand had always meant that she was safe, before. But this time that hand led her to a place where she never felt safe again. She knew she had chosen to go -- but she was only a child, and she knew that this was what was expected of her. That she should not succumb to the temptation to run to her weeping mother and cling to her and say no, I won't do it, let someone else become a soldier, I want to stay here and bake with Mama and play mother to my own little dolls. Not go off into space where I can learn how to kill strange and terrible creatures -- and, by the way, humans as well, who trusted me and then I fell ... a ... sleep.

Being alone with her memories was not all that happy for her.

She tried fasting, simply ignoring the food they brought her, the liquids too, nothing by mouth. She expected someone to speak to her then, to cajole. But no. The doctor came in, slapped an injection into her arm, and when she woke up her hand was sore where the I.V. had been and she realized that there was no point in refusing to eat.

She hadn't thought to keep a calendar at first, but after the I.V. she did keep a calendar on her own body, pressing a fingernail into her wrist until it bled. Seven days on the left wrist, then switch to the right, and all she had to remember in her head was the number of weeks.

Except she didn't bother going for three. She realized that they were going to outwait her because, after all, they had the others they had kidnapped, and no doubt some of them were cooperating, so it was perfectly all right with them if she stayed in her cell and got farther and farther behind so that when she finally did emerge, she'd be the worst of them at whatever it was they were doing.

Fine, what did she care? She was never going to help them anyway.

But if she was to have any chance to get free of these people and this place, she had to be out of this room and into a place where she could earn enough trust to be able to get free.

Trust. They'd expect her to lie, they'd expect her to plot. Therefore she had to be as convincing as possible. Her long time in solitary was a help, of course -- everyone knew that isolation caused untold mental pressures. Another thing that helped was that it was undoubtedly known to them by now, from the other children, that she was the first one who broke under pressure during the battles on Eros. So they would be predisposed to believe a breakdown now.

She began to cry. It wasn't hard. There were plenty of real tears pent up in her. But she shaped those emotions, made it into a whimpering cry that went on and on and on. Her nose filled with mucus, but she did not blow it. Her eyes streamed with tears but she did not wipe them. Her pillow got soaked with tears and covered with snot but she did not evade the wet place. Instead she rolled her hair right through it as she turned over, did it again and again until her hair was matted with

mucus and her face stiff with it. She made sure her crying did not get more desperate -- let no one think she was trying to get attention. She toyed with the idea of falling silent when anyone came into the room, but decided against it -- she figured it would be more convincing to be oblivious to other people's coming and going.

It worked. Someone came in after a day of this and slapped her with another injection. And this time when she woke up, she was in a hospital bed with a window that showed a cloudless northern sky. And sitting by her bed was Dink Meeker.

"Ho Dink," she said.

"Ho Petra. You pasted these conchos over real good."

"One does what one can for the cause," she said. "Who else?"

"You're the last to come out of solitary. They got the whole team from Eros, Petra. Except Ender, of course. And Bean."

"He's not in solitary?"

"No, they didn't keep it a secret who was still in the box. We thought you made a pretty fine showing."

"Who was second longest?"

"Nobody cares. We were all out in the first week. You lasted five."

So it had been two and a half weeks before she started her calendar.

"Because I'm the stupid one."

"Stubborn is the right word."

"Know where we are?"

"Russia."

"I meant where in Russia."

"Far from any borders, they assure us."

"What are our resources?"

"Very thick walls. No tools. Constant observation. They weigh our bodily wastes, I'm not kidding."

"What have they got us doing?"

"Like a really dumbed-down Battle School. We put up with it for a long time till Fly Molo finally gave up and when one of the teachers was quoting one of Von Clausewitz's stupider generalizations, Fly continued the quotation, sentence after sentence, paragraph after paragraph, and the rest of us joined in as best we could -- I mean, nobody has a memory like Fly, but we do OK -- and they finally got the idea that we could teach the stupid classes to them. So now it's just ... war games."

"Again? You think they're going to spring it on us later that the games are real?"

"No, this is just planning stuff. Strategy for a war between Russia and Turkmenistan. Russia and an alliance between Turkmenistan, Kasakhstan,, Azerbaijan, and Turkey. War with the United States and Canada. War with the old NATO alliance except Germany. War with Germany. On and on. China. India. Really stupid stuff, too, like between Brazil and Peru, which makes no sense but maybe they were testing our compliance or something."

"All this in five weeks?"

"Three weeks of kuso classes, and then two weeks of war games. When we finish our plan, see, they run it on the computer to show us how it went. Someday they're going to catch on that the only way to do this that isn't a waste of time is to have one of us making the plan for the opponent as well."

"My guess is you just told them."

"I've told them before but they're hard to persuade. Typical military types. Makes you understand why the whole concept of Battle School was developed in the first place. If the war had been up to adults, there'd be Buggers at every breakfast table in the world by now."

"But they are listening?"

"I think they record it all and play it back at slow speeds to see if we're passing messages subvocally."

Petra smiled.

"So why did you finally decide to cooperate?" he asked.

She shrugged. "I don't think I decided."

"Hey, they don't pull you out of the room until you express really sincere interest in being a good, compliant little kid."

She shook her head. "I don't think I did that."

"Yeah, well, whatever you did, you were the last of Ender's jeesh to break, kid."

A short buzzer sounded.

"Time's up," said Dink. He got up, leaned over, kissed her brow, and left the room.

Six weeks later, Petra was actually enjoying the life. By complying with the kids' demands, their captors had finally come up with some decent equipment. Software that allowed them very realistic head-to-head strategic and tactical war-gaming. Access to the nets so they could do decent research into terrains and capabilities so their wargaming had some realism -- though they knew every message they sent was censored, because of the number of messages that were rejected for one obscure reason or another. They enjoyed each other's company, exercised together, and by all appearances seemed to be completely happy and compliant Russian commanders.

Yet Petra knew, as they all knew, that every one of them was faking. Holding back. Making dumb mistakes which, if they were made in combat, would lead to gaps that a clever enemy could exploit. Maybe their captors realized this, and maybe they didn't. At least it made them all feel better, though they never spoke of it. But since they were all doing it, and cooperating by not exposing those weaknesses by exploiting them in the games, they could only assume that everyone felt the same about it.

They chatted comfortably about a lot of things -- their disdain for their captors, memories of Ground School, Battle School, Command School. And, of course, Ender. He was out of the reach of these bastards, so they made sure to mention him a lot, to talk about how the IF was bound to use him to counter all these foolish plans the Russians were making. They knew they were blowing smoke, that the IF wouldn't do anything, they even said so. But still, Ender was there, the ultimate trump card.

Till the day one of the erstwhile teachers told them that a colony ship had gone, with Ender and his sister Valentine aboard.

"I didn't even know he had a sister," said Hot Soup.

No one said anything, but they all knew that this was impossible. They had all known Ender had a sister. But ... whatever Hot Soup was doing, they'd play along and see what the game was.

"No matter what they tell us, one thing we know," said Hot Soup. "Wiggin is still with us."

Again, they weren't sure what he meant by this. After the briefest pause, though, Shen clapped his hand to his chest and cried out, "In our hearts forever."

"Yes," said Hot Soup. "Ender is in our hearts."

Just the tiniest extra emphasis on the name "Ender."

But he had said Wiggin before.

And before that, he had called attention to the fact that they all knew Ender had a sister. They also knew that Ender had a brother. Back on Eros, while Ender was in bed recovering from his breakdown after finding out the battles had been real, Mazer Rackham had told them some things about Ender. And Bean had told them more, as they were trapped together while the League War played itself out. They had listened as Bean expounded on what Ender's brother and sister meant to him, that the reason Ender had been born at all during the days of the two-child law was because his brother and sister were so brilliant, but the brother was too dangerously aggressive and the sister too passively compliant. How Bean knew all this he wouldn't tell, but the information was indelibly planted in their memories, tied as it was with those tense days after their victory over the Formics and before the defeat of the Polemarch in his attempt to take over the IF.

So when Hot Soup said "Wiggin is still with us," he had not been referring to Ender or Valentine, because they most assuredly were not "with us."

Peter, that was the brother's name. Peter Wiggin. Hot Soup was telling them that he was one whose mind was perhaps as brilliant as Ender's, and he was still on Earth. Maybe, if they could somehow contact him on the outside, he would ally himself with his brother's battle companions. Maybe he could find a way to get them free.

The game now was to find some way to communicate with him.

Sending email would be pointless -- the last thing they needed to do was have their captors see a bunch of email addressed to every possible variant of Peter Wiggin's name at every single mailnet that they could think of. And sure enough, by that evening Alai was telling them some tall tale about a genie in a bottle that had washed up on the shore. Everyone listened with feigned interest, but they knew the real story had been stated right at the beginning, when Alai said, "The fisherman thought maybe the bottle had a message from some castaway, but when he popped the cork, a cloud of smoke came out and ..." and they got it. What they had to do was send a message in a bottle, a message that would go indiscriminately to everyone everywhere, but which could only be understood by Ender's brother, Peter.

But as she thought about it, Petra realized that with all these other brilliant brains working to reach Peter Wiggin, she might as well work on an alternative plan. Peter Wiggin was not the only one outside who might help them. There was Bean. And while Bean was almost certainly in hiding, so that he would have far less freedom of action than Peter Wiggin, that didn't mean they couldn't still find him.

She thought about it for a week in every spare moment, rejecting idea after idea.

Then she thought of one that might get past the censors.

She worked out the text of her message very carefully in her head, making sure that it was phrased and worded exactly right. Then, with that memorized, she figured the binary code of each letter in standard two-byte format, and memorized that. Then she started the really hard stuff. All done in her head, so nothing was ever committed to paper or typed into the computer, where a keystroke monitor could report to their captors whatever she wrote.

In the meantime, she found a complex black-and-white drawing of a dragon on a netsite somewhere in Japan and saved it as a small file. When she finally had the message fully encoded in her mind, it took only a few minutes of fiddling with the drawing and she was done. She added it as part of her signature on every letter she sent. She spent so little time on it that she did not think it would look to her captors like anything more than a harmless whim. If they asked, she could say she added the picture in memory of Ender's Dragon Army in Battle School.

Of course, it wasn't just a picture of a dragon anymore. Now there was a little poem under it.

Share this dragon.

If you do,

lucky end for

them and you.

She would tell them, if they asked, that the words were just an ironic joke. If they didn't believe her, they would strip off the picture and she'd have to find another way.

She sent it on every letter from then on. Including to the other kids. She got it back from them on messages after that, so they had picked up on what she was doing and were helping. Whether their captors were actually letting it leave the building or not, she had no way of knowing -- at first. Finally, though, she started getting it back on messages from outside. A single glance told her that she had succeeded -- her coded message was still embedded in the picture. It hadn't been stripped out.

Now it was just a question of whether Bean would see it and look at it closely enough to realize that there was a mystery to solve.

Re: Quandary

You know better than anyone how vital it is to maintain the independence of the Fleet from the machinations of politicians. That was my reason for rejecting "Locke's" suggestion. But in the event I was wrong. Nothing jeopardizes Fleet independence more than the prospect of one nation becoming dominant, especially if, as seems likely, the particular nation is one that has already shown a disposition to take over the IF and use it for nationalist purposes.

I'm afraid I was rather harsh with Locke. I dare not write to him directly, because, while Locke would be reliable, one can never know what Demosthenes would do with an official letter of apology from the Polemarch. Therefore please arrange for him to be notified that my threat is rescinded and I wish him well.

I do learn from my mistakes. Since one of Wiggin's companions remains outside the control of the aggressor, prudence dictates that young Delphiki be protected. Since you are Earthside and I am not, I give you brevet command over an IFM contingent and any other resources you need, orders forthcoming through level 6 backchannels (of course). I give you specific instructions not to tell me or anyone else of the steps you have taken to protect Delphiki or his family. There is to be no record in the IF system or that of any government.

By the way, trust no one in the Hegemony. I always knew they were a nest of careerists, but recent experience shows that the careerist is now being replaced by worse: the ideologue rampant.

Act swiftly. It appears that we are either on the verge of a new war, or the League War never quite ended after all.

How many days can you stay closed in, surrounded by guards, before you start to feel like a prisoner? Bean never felt claustrophobic in Battle School. Not even on Eros, where the low ceilings of the Buggers' tunnels teetered over them like a car slipping off its jack. Not like this, closed up with his family, pacing the four-room apartment. Well, not actually pacing it. He just felt like pacing it, and instead sat still, controlling himself, trying to think of some way to get control of his own life.

Being under someone else's protection was bad enough -- he had never liked that, though it had happened before, when Poke protected him on the streets of Rotterdam, and then when Sister Carlotta saved him from certain death by taking him in and sending him to Battle School. But both those times, there were things he could do to make sure everything went right. This was different. He knew something was going to go wrong, and there was nothing he could do about it.

The soldiers guarding this apartment, surrounding the building, they were all good, loyal men, Bean had no reason to doubt that. They weren't going to betray him. Probably. And the bureaucracy that was keeping his location a secret -- no doubt it would just be an honest oversight, not a conscious betrayal, that would give his address to his enemies.

And in the meantime, Bean could only wait, pinned down by his protectors. They were the web, holding him in place for the spider. And there wasn't a thing he could say to change this situation. If Greece were fighting a war, they'd set Bean and Nikolai to work, making plans, charting strategies. But when it came to a matter of security, they were just children, to be protected and taken care of. It would do no good for Bean to explain that his best protection was to get out of here, get off completely on his own, make a life for himself on the streets of some city where he could be nameless and faceless and lost and safe. Because they looked at him and saw nothing but a little kid. And who listens to little kids?

Little kids have to be taken care of.

By adults who don't have it in their power to keep those little kids safe.

He wanted to throw something through the window and jump down after it.

Instead he sat still. He read books. He signed on to the nets using one of his many names and cruised around, looking for whatever dribbles of information oozed through the military security systems of every nation, hoping for something to tell him where Petra and Fly Molo and Vlad and Dumper were being held. Some country that was showing signs of a little more cockiness because they thought they had the winning hand now. Or a country that was acting more cautious and methodical because finally somebody with a brain was running their strategy.

But it was pointless because he knew he wasn't going to find it this way. The real information never got onto the net until it was too late to do anything about it. Somebody knew. The facts he needed to find his way to his friends were available in a dozen sites -- he knew that, knew it, because that's the way it always was, the historians would find it and wonder for a thousand pages at a time: Why didn't anybody notice? Why didn't anybody put it together? Because the people who had the information were too dim to know what they had, and the people who could have understood it were locked in an apartment in an abandoned resort that even tourists didn't want to come to anymore.

The worst thing was that even Mother and Father were getting on his nerves. After a childhood with no parents, the best thing that had ever happened to him was when Sister Carlotta's research found his biological parents. The war ended, and when all the other kids got to go home to their families, Bean wasn't left over. He got to go home to his family, too. He had no childhood memories of them, of course. But Nikolai had, and Nikolai let Bean borrow them as if they were his own.

They were good people, his mother and his father. They never made him feel as if he were an intruder, a stranger, even a visitor. It was as if he had always belonged with them. They liked him. They loved him. It was a strange, exhilarating feeling to be with people who didn't want anything from you except your happiness, who were glad just to have you around.

But when you're already going crazy from confinement, it doesn't matter how much you like somebody, how much you love them, how grateful you are for their kindness to you. They will make you nuts. Everything they do grates on you like a bad song that won't get out of your head. You just want to scream at them to shut. Up. But you don't, because you love them and you know that you're probably driving them crazy too and as long as there's no hope of release you've got to keep things calm ...

And then finally there comes a knock on the door and you open it up and you realize that something different is finally going to happen.

It was Colonel Graff and Sister Carlotta at the door. Graff in a suit now, and Sister Carlotta in an extravagant auburn wig that made her look really stupid but also kind of pretty. The whole family recognized them at once, except that Nikolai had never met Sister Carlotta. But when Bean and his

family got up to greet them, Graff held up a hand to stop them and Carlotta put her finger to her lips. They came inside and closed the door after them and beckoned the family to gather in the bathroom.

It was a tight fit, the six of them in there. Father and Mother ended up standing in the shower while Graff hung a tiny machine from the overhead light. Once it was in place and the red light began blinking, Graff spoke softly.

"Hi," he said. "We came to get you out of this place."

"Why all the precautions in here?" asked Father.

"Because part of the security system here is to listen in on everything said in this apartment."

"To protect us, they spy on us?" asked Mother.

"Of course they do," said Father.

"Since anything we say here might leak into the system," said Graff, "and would most certainly leak right back out of the system, I brought this little machine, which hears every sound we make and produces countersounds that nullify them so we pretty much can't be heard."

"Pretty much?" asked Bean.

"That's why we won't go into any details," said Graff. "I'll tell you only this much. I'm the minister of Colonization, and we have a ship that leaves in a few months. Just time enough to get you off Earth, up to the ISL, and over to Eros for the launch."

But even as he said it, he was shaking his head, and Sister Carlotta was grinning and shaking her head, too, so that they would know that this was all a lie. A cover story.

"Bean and I have been in space before, Mother," said Nikolai, playing along. "It's not so bad."

"It's what we fought the war for," Bean chimed in. "The Formics wanted Earth because it was just like the worlds they already lived on. So now that they're gone, we get their worlds, which should be good for us. It's only fair, don't you think?"

Of course their parents both understood what was happening, but Bean knew Mother well enough by now that he wasn't surprised that she had to ask a completely useless and dangerous question just to be sure.

"But we're not really ..., " she began. Then Father's hand gently covered her mouth.

"It's the only way to keep us safe," Father said. "Once we're going at lightspeed, it'll seem like a couple of years to us, while decades pass on Earth. By the time we reach the other planet, everybody who wants us dead will be dead themselves."

"Like Joseph and Mary taking Jesus into Egypt," said Mother.

"Exactly," said Father.

"Except they got to go back to Nazareth."

"If Earth destroys itself in some stupid war," said Father, "it won't matter to us anymore, because we'll be part of a new world. Be happy about this, Elena. It means we can stay together." Then he kissed her.

"Time to go, Mr. and Mrs. Delphiki. Bring the boys, please." Graff reached up and yanked the damper from the ceiling light.

The soldiers who waited for them in the hall wore the uniform of the IF. Not a Greek uniform was in sight. And these young men were armed to the teeth. As they walked briskly to the stairs -- no elevators, no doors that might suddenly open to leave them trapped in a box for an enemy to toss in a grenade or a few thousand projectiles -- Bean watched the way the soldier in the lead watched everything, checked every corner, the light under every door in the hall, so that nothing could surprise him. Bean also saw how the man's body moved inside his clothes, with a kind of contained strength that made his clothes seem like kleenex, he could rip through the fabric just by tugging at it a little, because nothing could hold him in except his own self-control. It was like his sweat was pure testosterone. This was what a man was supposed to be. This was a soldier.

I was never a soldier, thought Bean. He tried to imagine himself the way he had been in Battle School, strapping on cut-down flashsuit pieces that never fit him right. He always looked like somebody's pet monkey dressed up as a human for the joke of it. Like a toddler who got clothes out of his big brother's dresser. The man in front of him, that's what Bean wanted to be when he grew up. But try as he might, he could never imagine himself actually being big. No, not even being full size. He would always be looking up at the world. He might be male, he might be human, or at least humanesque, but he would never be a manly. No one would ever look at him and say, Now, that's a man.

Then again, this soldier had never given orders that changed the course of history. Looking great in a uniform wasn't the only way to earn your place in the world.

Down the stairs, three flights, and then a pause for just a moment well back from the emergency exit while two of the soldiers came out and watched for the signal from the men in the IF chopper waiting thirty meters away. The signal came. Graff and Sister Carlotta led the way, still a brisk walk. They looked neither left nor right, just focused on the helicopter. They got in, sat down, buckled up, and the chopper tilted and rose from the grass and flew low out over the water.

Mother was all for demanding to know the real plan but again, Graff cut off all discussion with a cheerful bellow of, "Let's wait to discuss this until we can do it without shouting!"

Mother didn't like it. None of them did. But there was Sister Carlotta smiling her best nun smile, like a sort of Virgin-in-training. How could they help but trust her?

Five minutes in the air and then they set down on the deck of a submarine. It was a big one, with the stars and stripes of the United States, and it occurred to Bean that since they didn't know what country had kidnaped the other kids, how could they be sure they weren't just walking into the hands of their enemies?

But once they got down inside the ship, they could see that while the crew was in U.S. uniforms, the only people carrying weapons were the IF soldiers who had brought them and a half dozen more who had been waiting for them with the sub. Since power came from the barrel of a gun, and the only guns on the ship were under Graff's command, Bean's mind was eased a little.

"If you try to tell us that we can't talk here," Mother began -- but to her consternation Graff again held up a hand, and Sister Carlotta again made a shushing gesture as Graff beckoned them to follow their lead soldier through the narrow corridors of the sub.

Finally the six of them were packed once more into a tiny space -- this time the executive officer's cabin -- and once again they waited while Graff hung his noise damper and turned it on. When the light started blinking, Mother was the first to speak.

"I'm trying to figure out how we can tell we aren't being kidnaped just like the others," she said dryly.

"You got it," said Graff. "They were all taken by a group of terrorist nuns, aided by fat old bureaucrats."

"He's joking," said Father, trying to soothe Mother's immediate wrath.

"I know he's joking. I just don't think it's funny. After all we've been through, and then we're supposed to go along without a word, without a question, just ... trusting."

"Sorry," said Graff. "But you were already trusting the Greek government back where you were. You've got to trust somebody, so why not us?"

"At least the Greek Army explained things to us and pretended we had a right to make some decisions," said Mother.

They didn't explain things to me and Nikolai, Bean wanted to say.

"Come, children, no bickering," said Sister Carlotta. "The plan is very simple. The Greek Army continues to guard that apartment building as if you were still inside it, taking meals in and doing laundry. This fools no one, probably, but it makes the Greek government feel like they're part of the program. In the meantime, four passengers answering your description but flying under assumed names are taken to Eros where they embark on the first colony ship and only then, when the ship is

launched, is an announcement made that for their protection, the Delphiki family have opted for permanent emigration and a new life in a new world."

"And where are we really?" asked Father.

"I don't know," said Graff very simply.

"And neither do I," said Sister Carlotta.

Bean's family looked at them in disbelief.

"I guess that means we won't be staying in the sub," said Nikolai, "because then you'd absolutely know where we are."

"It's a double blind," said Bean. "They're splitting us up. I'll go one way, you'll go another."

"Absolutely not," said Father.

"We've had enough of a divided family," said Mother.

"It's the only way," said Bean. "I knew it already. I ... want it that way."

"You want to leave us?" said Mother.

"It's me they want to kill," said Bean.

"We don't know that!" said Mother.

"But we're pretty sure," said Bean. "If I'm not with you, then even if you're found, they'll probably leave you alone."

"And if we're divided," said Nikolai, "it changes the profile of what they're looking for. Not a mother and father and two boys. Now it's a mother and father and one boy. And a grandma and her grandchild." Nikolai grinned at Sister Carlotta.

"I was rather hoping to be taken for an aunt," she said.

"You talk as if you already know the plan!" said Mother.

"It was obvious," said Nikolai. "From the moment they told us the cover story in the bathroom. Why else would Colonel Graff bring Sister Carlotta?"

"It wasn't obvious to me," said Mother.

"Or to me," said Father. "But that's what happens when your sons are both brilliant military minds."

"How long?" Mother demanded. "When will it end? When do we get to have Bean back with us?"

"I don't know," said Graff.

"He can't know, Mother," said Bean. "Not until we know who did the kidnappings and why. When we know what the threat actually is, then we can judge when we've taken sufficient countermeasures to make it safe for us to come partway out of hiding."

Mother suddenly burst into tears. "And you want this, Julian?"

Bean put his arms around her. Not because he felt any personal need to do it, but because he knew she needed that gesture from him. Living with a family for a year had not given him the full complement of normal human emotional responses, but at least it had made him more aware of what they ought to be. And he did have one normal reaction -- he felt a little guilty that he could only fake what Mother needed, instead of having it come from the heart. But such gestures never came from the heart, for Bean. It was a language he had learned too late for it to come naturally to him. He would always speak the language of the heart with an awkward foreign accent.

The truth was that even though he loved his family, he was eager to get to a place where he could get to work making the contacts he needed to get the information that would let him find his friends. Except for Ender, he was the only one from Ender's Jeesh that was outside and free. They needed him, and he'd wasted enough time already.

So he held his mother, and she clung to him, and she shed many tears. He also embraced his father, but more briefly; and he and Nikolai only punched each other's arms. All foreign gestures to Bean, but they knew he meant to mean them, and took them as if they were real.

The sub was fast. They weren't very long at sea before they reached a crowded port -- Salonika, Bean assumed, though it could have been any other cargo port on the Aegean. The sub never actually entered the harbor. Instead, it surfaced between two ships moving in a parallel track toward the harbor. Mother, Father, Nikolai, and Graff were transferred to a freighter along with two of the soldiers, who were now in civilian clothes, as if that could conceal the soldierly way they acted. Bean and Carlotta stayed behind. Neither group would know where the other was. There would be no effort to contact each other. That had been another hard realization for Mother. "Why can't we write?"

"Nothing is easier to track than email," said Father. "Even if we use disguised online identities, if someone finds us, and we're writing regularly to Julian, then they'll see the pattern and track him down."

Mother understood it then. With her head, if not her heart.

Down inside the sub, Bean and Sister Carlotta sat down at a tiny table in the mess.

"Well?" said Bean.

"Well," said Sister Carlotta.

"Where are we going?" asked Bean.

"I have no idea," said Sister Carlotta. "They'll transfer us to another ship at another port, and we'll get off, and I have these false identities that we're supposed to use, but I really have no idea where we should go from there."

"We have to keep moving. No more than a few weeks in any one place," said Bean. "And I have to get on the nets with new identities every time we move, so no one can track the pattern."

"Do you seriously think someone will catalogue all the email in the entire world and follow up on all the ones that move around?" asked Sister Carlotta.

"Yes," said Bean. "They probably already do, so it's just a matter of running a search."

"But that's billions of emails a day."

"That's why it takes so many clerks to check all the email addresses on the file cards in the central switchboard," said Bean. He grinned at Sister Carlotta.

She did not grin back. "You really are a snotty and disrespectful little boy," she said.

"You're really leaving it up to me to decide where we go?"

"Not at all. I'm merely waiting to make a decision until we both agree."

"Oh, now, that's a cheap excuse to stay down here in this sub with all these great-looking men."

"Your level of banter has become even more crude than it was when you lived on the streets of Rotterdam," she said, coolly analytical.

"It's the war," said Bean. "It ... it changes a man."

She couldn't keep a straight face any longer. Even though her laugh was only a single bark, and her smile lasted only a moment longer, it was enough. She still liked him. And he, to his surprise, still liked her, even though it had been years since he lived with her while she educated him to a level where Battle School would take him. He was surprised because, at the time he lived with her, he had never let himself realize that he liked her. After Poke's death, he hadn't been willing to admit to himself that he liked anybody. But now he knew the truth. He liked Sister Carlotta just fine.

Of course, she would probably get on his nerves after a while, too, just like his parents had. But at least when that happened, they could pick up and move. There wouldn't be soldiers keeping them indoors and away from the windows.

And if it ever became truly annoying, Bean could leave and strike out on his own. He'd never say that to Sister Carlotta, because it would only worry her. Besides, she was bound to know it already. She had all the test data. And those tests had been designed to tell everything about a person. Why, she probably knew him better than he knew himself.

Of course, he knew that back when he took the tests, there was hardly an honest answer on any of the psychological tests. He had already read enough psychology by the time he took them that he knew exactly what answers were needed to show the profile that would probably get him into Battle School. So in fact she didn't know him from those tests at all.

But then, he didn't have any idea what his real answers would have been, then or now. So it isn't as if he knew himself any better.

And because she had observed him, and she was wise in her own way, she probably did know him better than he knew himself.

What a laugh, though. To think that one human being could ever really know another. You could get used to each other, get so habituated that you could speak their words right along with them, but you never knew why other people said what they said or did what they did, because they never even knew themselves. Nobody understands anybody.

And yet somehow we live together, mostly in peace, and get things done with a high enough success rate that people keep trying. Human beings get married and a lot of the marriages work, and they have children and most of them grow up to be decent people, and they have schools and businesses and factories and farms that have results at some level of acceptability -- all without having a clue what was going on inside anybody's head.

Muddling through, that's what human beings do.

That was the part of being human that Bean hated the most.

Ambition

To: Locke%espinoza@polnet.gov

From: Graff%%@colmin.gov

Re: Correction

I have been asked to relay a message that a threat of exposure has been rescinded, with apologies. Nor should you be alarmed that your identity is widely known. Your identity was penetrated at my direction several years ago, and while multiple persons then under my command were made aware of who you are, it is a group that has neither reason nor disposition to violate confidentiality. The only exception has now been chastened by circumstance. On a personal level, let me say that I have no doubt of your capacity to achieve your ambition. I can only hope that, in the event of success,

you will choose to emulate Washington, MacArthur, or Augustus rather than Napoleon, Alexander, or Hitler.

Colmin

Now and then Peter was almost overwhelmed by a desire to tell somebody what was actually happening in his life. He never succumbed to the desire, of course, since to tell it would be to undo it. But especially now that Valentine had gone, it was almost unbearable to sit there reading a personal letter from the Minister of Colonization and not shout for the other students in the library to come and see.

When he and Valentine had first broken through and placed essays or, in Valentine's case, diatribes on some of the major political nets, they had done a little hugging and laughing and jumping around. But it never took long for Valentine to remember how much she loathed half the positions she was forced to espouse in her Demosthenes persona, and her resulting gloom would calm him down as well. Peter missed her, of course, but he did not miss the arguments, the whining about having to be the bad guy. She could never see how the Demosthenes persona was the interesting one, the most fun to work with. Well, when he was done with it he'd give it back to her -- long before she got to whatever planet it was that she and Ender were heading for. She'd know by then that even at his most outrageous, Demosthenes was a catalyst, making things happen.

Valentine. Stupid to choose Ender and exile over Peter and life. Stupid to get so angry over the obvious necessity of keeping Ender off planet. For his own protection, Peter told her, and hadn't events proven it? If he'd come home as Valentine demanded, he'd be a captive somewhere, or dead, depending on whether his captors had been able to get him to cooperate. I was right, Valentine, as I've always been right about everything. But you'd rather be nice than right, you'd rather be liked than powerful, and you'd rather be in exile with the brother who worships you than share power with the brother who made you influential.

Ender was already gone, Valentine. When they took him away to Battle School, he was never coming home -- not the precious little Enderpoo that you adored and petted and watched over like a little mommy playing with a doll. They were going to make a soldier out of him, a killer -- did you even look at the video they showed during Graff's court-martial? -- and if something named Andrew Wiggin came home, it would not be the Ender you sentimentalized to the point of nausea. He'd be a damaged, broken, useless soldier whose war was finished. Pushing to have him sent off to a colony was the kindest thing I could have done for our erstwhile brother. Nothing would have been sadder than having his biography include the ruin that his life would have become here on Earth, even if nobody bothered to kidnap him. Like Alexander, he'll go out with a flash of brilliant light and live forever in glory, instead of withering away and dying in miserable obscurity, getting trotted out for parades now and then. I was the kind one!

Good riddance to both of you. You would have been drags on my boat, thorns in my side, pains in my ass.

But it would have been fun to show Valentine the letter from Graff -- Graff himself! Even though he hid his private access code, even though he was condescending in his urging Peter to emulate the

nice guys of history -- as if anybody ever planned to create an ephemeral empire like Napoleon's or Hitler's -- the fact was that even knowing that Locke, far from being some elder statesman speaking anonymously from retirement, was just an underage college student, Graff still thought Peter was worth talking to. Still worth giving advice to, because Graff knew that Peter Wiggin mattered now and would matter in the future. Damn right, Graff!

Damn right, everybody! Ender Wiggin may have saved your asses against the Buggers, but I'm the one who's going to save humanity's collective rectum from its own colostomy. Because human beings have always been more dangerous to the survival of the human race than anything else except the complete destruction of planet Earth, and now we're taking steps to evade even that by spreading our seed -- including little Enderseed himself -- to other worlds. Does Graff have any idea how hard I worked to make his little Ministry of Colonization come into existence in the first place? Has anybody bothered to track the history of the good ideas that have actually become law to see how many times the trail leads back to Locke?

They actually consulted with me when they were deciding whether to offer you the title of Colmin with which you so affectedly sign your emails. Bet you didn't know that, Mr. Minister. Without me, you might have been signing your letters with stupid good-luck dragon pictures like half the morons on the net these days.

And for a few minutes it just about killed him that nobody could know about this letter except himself and Graff.

And then ...

The moment passed. His breathing returned to normal. His wiser self prevailed. It's better not to be distracted by the interference of personal fame. In due course his name would be revealed, he'd take his place in a position of authority instead of mere influence. For now, anonymity would do.

He saved the message from Graff, and then sat there staring at the display.

His hand was trembling.

He looked at it as if it were someone else's hand. What in the world is that about, he wondered. Am I such a celebrity hound that getting a letter from a top Hegemony official makes me shake like a teenager at a pop concert?

No. The cool realist took over. He was not trembling out of excitement. That, as always, was transitory, already gone.

He was trembling out of fear.

Because somebody was assembling a team of strategists. The top kids from the Battle School program. The ones they chose to fight the final battle to save humanity. Somebody had them and meant to use them. And sooner or later, that somebody would be Peter's rival, head to head with

him, and Peter would have to outthink not only that rival, but also the kids he had managed to bend to his will.

Peter hadn't made it into Battle School. He didn't have what it took. For one reason or another, he was cut from the program without ever leaving home. So every kid who went to Battle School was more likely to make a good strategist and tactician than Peter Wiggin, and Peter's principal rival for hegemony had collected around himself the very best of them all.

Except for Ender, of course. Ender, whom I could have brought home if I had pulled the right strings and manipulated public opinion the other way. Ender, who was the best of all and might have been standing by my side. But no, I sent him away. For his own damn good. For his own safety. And now here I am, facing the struggle that my whole life has been devoted to, and all I've got to face the best of the Battle School is ... me.

His hand trembled. So what? He'd be crazy not to be just a little bit afraid.

But when that moron Chamrajnagar threatened to expose him and bring the whole thing crashing down, just because he was too stupid to see how Demosthenes was necessary in order to bring about results that Locke's persona could never reach for -- he had spent weeks in hell over that. Watching as the Battle School kids were kidnaped. Unable to do anything, to say anything pertinent. Oh, he answered letters that some people sent, he did enough investigating to satisfy himself that only Russia had the resources to bring it off. But he dared not use Demosthenes to demand that the IF be investigated for its failure to protect these children. Demosthenes could only make some routine suppositions about how it was bound to be the Warsaw Pact that had taken the kids -- but of course everyone expected Demosthenes to say that, he was a well-known russophobe, it meant nothing. All because some short-sighted, stupid, self-serving admiral had decided to interfere with the one person on Earth who seemed to care about trying to keep the world from another visit from Attila the Hun. He wanted to scream at Chamrajnagar: I'm the one who writes essays while the other guy kidnaps children, but because you know who I am and you have no clue who he is, you reach out to stop me? That was about as bright as the pinheads who handed the government of Germany to Hitler because they thought he would be "useful" to them.

Now Chamrajnagar had relented. Sent a cowardly apology through someone else so he could avoid letting Peter have a letter with his signature on it. Too late anyway. The damage was done. Chamrajnagar had not only done nothing, he had kept Peter from doing anything, and now Peter faced a chess game where his side of the board had nothing but pawns, and the other player had a double complement of knights, rooks, and bishops.

So Peter's hand trembled. And he sometimes caught himself wishing that he weren't in this thing so utterly, absolutely alone. Did Napoleon, in his tent alone, wonder what the hell he was doing, betting everything, over and over again, on the ability of his army to do the impossible? Didn't Alexander, once in a while, wish there were someone else he could trust to make a decision or two?

Peter's lip curled in self-contempt. Napoleon? Alexander? It was the other guy who had a stableful of steeds like that to ride. While I have had it certified by the Battle School testing program that I am about as militarily talented as, say, John F. Kennedy, that U.S. President who lost his PT boat

through carelessness and got a medal for it because his father had money and political pull, and then became President and made an unbroken string of stupid moves that never hurt him much politically because the press loved him so much.

That's me. I can manipulate the press. I can paint public opinion, nudge and pull and poke and inject things into it, but when it comes to war -- and it will come to war -- I'm going to look about as clever as the French when the blitzkrieg rolled through.

Peter looked around the reading room. Not much of a library. Not much of a school. But because he entered college early, being a certifiably gifted pupil, and not caring a whit about his formal education, he had gone to the hometown branch of the state university. For the first time he found himself envying the other students who were studying there. All they had to worry about was the next test, or keeping their scholarship, or their dating life.

I could have a life like theirs.

Right. He'd have to kill himself if he ever came to care what some teacher thought of an essay he wrote, or what some girl thought about the clothes he wore, or whether one soccer team could beat another.

He closed his eyes and leaned back in his chair. All this self-doubt was pointless. He knew he would never stop until he was forced to stop. From childhood on, he knew that the world was his to change, if he found the right levers to pull. Other children bought the stupid idea that they had to wait until they grew up to do anything important. Peter knew better from the start. He could never have been fooled the way Ender was into thinking he was playing a game. For Peter, the only game worth playing was the real world. The only reason Ender was fooled was because he let other people shape reality for him. That had never been Peter's problem.

Except that all Peter's influence on the real world had been possible only because he could hide behind the anonymity of the net. He had created a persona -- two personas -- that could change the world because nobody knew they were children and therefore ignorable. But when it came to armies and navies clashing in the real world, the influence of political thinkers receded. Unless, like Winston Churchill, they were recognized as being so wise and so right that when the crisis came, the reins of real power were put in their hands. That was fine for Winston -- old, fat, and full of booze as he was, people still took him seriously. But as far as anyone who saw Peter Wiggin could know, he was still a kid.

Still, Winston Churchill had been the inspiration for Peter's plan. Make Locke seem so prescient, so right about everything, that when war began, public fear of the enemy and public trust in Locke would overwhelm their disdain for youth and allow Peter to reveal the face behind the mask and, like Winston, take his place as leader of the good guys.

Well, he had miscalculated. He had not guessed that Chamrajnagar already knew who he was. Peter wrote to him as the first step in a public campaign to get the Battle School children under the protection of the fleet. Not so that they would actually be removed from their home countries -- he never expected any government to allow that -- but so that, when someone moved against them, it

would be widely known that Locke had sounded the warning. But Chamrajnagar had forced Peter to keep Locke silent, so no one knew that Locke had foreseen the kidnappings but Chamrajnagar and Graff. The opportunity had been missed.

Peter wouldn't give up. There was some way to get back on track. And sitting there in the library in Greensboro, North Carolina, leaning back in a chair with his eyes closed like any other weary student, he'd think of it.

\*

They roused Ender's jeesh out of bed at 0400 and assembled them in the dining room. No one explained anything, and they were forbidden to talk. So they waited for five minutes, ten, twenty. Petra knew that the others were bound to be thinking the same things she was thinking: The Russians had caught on that they were sabotaging their own battle plans. Or maybe somebody had noticed the coded message in the dragon picture. Whatever it was, it wasn't going to be nice.

Thirty minutes after they were roused, the door opened. Two soldiers came in and stood at attention. And then, to Petra's utter surprise, in walked ... a kid. No older than they were. Twelve? Thirteen? Yet the soldiers were treating him with respect. And the kid himself moved with the easy confidence of authority. He was in charge here. And he loved it.

Had Petra seen him before? She didn't think so. Yet he looked at them as if he knew them. Well, of course he did -- if he had authority here, he had no doubt been observing them for the weeks they'd been in captivity.

A child in charge. Had to be a Battle School kid -- why else would a government give such power to somebody so young? From his age they had to be contemporaries. But she couldn't place him. And her memory was very, very good.

"Don't worry," said the boy. "The reason you don't know me is that I came to Battle School late, and I was only there a little while before you all left for Tactical. But I know you." He grinned. "Or is there someone here who did know me when I came in? Don't worry, I'll be studying the vid later. Looking for that little shock of recognition. Because if any of you did know me, well, then I'll know something more about you. I'll know that I saw you once before, silhouetted in the dark, walking away from me, leaving me for dead."

With that, Petra knew who he was. Knew because Crazy Tom had told them about it -- how Bean had set a trap for this boy that he knew in Rotterdam, and with the help of four other kids had hung him up in an air shaft until he confessed to a dozen murders or so. They left him there, gave the recording to the teachers, and told them where he was. Achilles.

The only member of Ender's Jeesh that had been with Bean that day was Crazy Tom. Bean had never talked about it, and no one asked. It made Bean a figure of mystery, that he had come from a life so dark and frightening that it was peopled with monsters like Achilles. What none of them had ever expected was to find Achilles, not in a mental institution or a prison, but here in Russia with soldiers under his command and themselves as his prisoners.

When Achilles studied the vids, it was possible that Crazy Tom would show recognition. And when he told his story, he would no doubt see recognition on all their faces. She had no idea what this meant, but she knew it couldn't be good. One thing was certain -- she wasn't going to let Crazy Tom face the consequences alone.

"We all know who you are," said Petra. "You're Achilles. And nobody left you for dead, the way Bean told it. They left you for the teachers. To arrest and send you back to Earth. To a mental institution, no doubt. Bean even showed us your picture. If anybody recognized you, it was from that."

Achilles turned to her and smiled. "Bean would never tell that story. He would never show my picture."

"Then you don't know Bean," said Petra. She hoped the others would realize that admitting they heard it from Crazy Tom would be dangerous to him. Probably fatal, with this oomay in charge of the triggers. Bean wasn't here, so naming him as the source made sense.

"Oh, yes, you're quite the team," said Achilles. "Passing signals to each other, sabotaging the plans you submit, thinking we'll be too stupid to notice. Did you really think we'd set you to work on real plans before we turned you?"

As usual, Petra couldn't shut up. But she didn't really want to, either. "Trying to see which of us felt like outsiders, so you could turn them?" she said. "What a joke -- there were no outsiders in Ender's jeesh. The only outsider here is you."

In fact, though, she knew perfectly well that Carn Carby, Shen, Vlad, and Fly Molo felt like outsiders, for various reasons. She felt like one herself. Her words were designed only to urge them all to maintain solidarity.

"So now you divide us up and start working on us," said Petra. "Achilles, we know your moves before you make them."

"You really can't hurt my pride," said Achilles. "Because I don't have any. All I care about is uniting humanity under one government. Russia is the only nation, the only people who have the will to greatness and the power to back it up. You're here because some of you might be useful in that effort. If we think you have what it takes, we'll invite you to join us. The rest of you, we'll just keep on ice till the war is over. The real losers, well, we'll send you home and hope your home government uses you against us." He grinned. "Come on, don't look so grim. You know you were going crazy back home. You didn't even know those people. You left them when you were so little you still got shit on your fingers when you wiped your ass. What did they know about you? What did you know about them? That they let you go. Me, I didn't have any families, Battle School just meant three meals a day. But you, they took away everything from you. You don't owe them anything. What you've got is your mind. Your talent. You've been tagged for greatness. You won their war with the Buggers for them. And they sent you home so your parents could go back to raising you?"

Nobody said anything. Petra was sure they all had as much contempt for his spiel as she did. He knew nothing about them. He'd never be able to divide them. He'd never win their loyalty. They knew too much about him. And they didn't like being held against their will.

He knew it, too. Petra saw it in his eyes, the rage dancing there as he realized that they had nothing but contempt for him.

At least he could see her contempt, because he zeroed in on her, took a few steps closer, smiling ever more kindly.

"Petra, it's so nice to meet you," he said. "The girl who tested so aggressive they had to check your DNA to make sure you weren't really a boy."

Petra felt the blood drain from her face. Nobody was supposed to know about that. It was a test the psychiatrists in Ground School had ordered when they decided her contempt for them was a symptom of dysfunction instead of what they deserved for asking her such stupid questions. It wasn't even supposed to be in her file. But apparently a record existed somewhere. Which was, of course, the message Achilles intended to get across to them: He knew everything. And, as a side benefit, it would start the others wondering just how puffed up she was.

"Eight of you. Only two missing from the glorious victory. Ender, the great one, the genius, the keeper of the holy grail -- he's off founding a colony somewhere. We'll all be in our fifties by the time he gets there, and he'll still be a little kid. We're going to make history. He is history." Achilles smirked at his pun.

But Petra knew that mocking Ender wasn't going to play with this group. Achilles no doubt assumed that the eight of them were also-rans, runners-up, the ones who wanted to have Ender's job and had to sit there and watch him do it. He assumed that they were all burning with envy -- because he would have been eaten alive with it. But he was wrong. He didn't understand them at all. They missed Ender. They were Ender's jeesh. And this yelda actually thought that he could forge them into a team the way Ender had.

"And then there's Bean," Achilles went on. "The youngest of you, the one whose test scores made you all look like halfwits, he could teach the rest of you classes in how to lead armies -- except you probably wouldn't understand him, he's such a genius. Where could he be? Anybody miss him?"

Nobody answered. This time, though, Petra knew that the silence hid a different set of feelings. There had been some resentment of Bean. Not because of his brilliance, or at least no one admitted resenting him for that. What annoyed them was the way he just assumed he knew better than anyone. And that awkward time before Ender arrived on Eros, when Bean was the acting commander of the jeesh, that was hard on some of them, taking orders from the youngest of them. So maybe Achilles had guessed right about that.

Except that nobody was proud of those feelings, and bringing them out in the open didn't exactly make them love Achilles. Of course, it might be shame he was trying to provoke. Achilles might be smarter than they thought.

Probably not. He was so out of his league in trying to scope this group of military prodigies that he might as well be wearing a clown suit and throwing water balloons for all the respect he was going to get.

"Ah, yes, Bean," said Achilles. "I'm sorry to inform you that he's dead."

This was apparently too much for Crazy Tom, who yawned and said, "No he's not."

Achilles looked amused. "You think you know more about it than I do?"

"We've been on the nets," said Shen. "We'd know."

"You've been away from your desks since 2200. How do you know what's been happening while you slept?" Achilles glanced at his watch. "Oops, you're right. Bean is still alive right now. And for another fifteen minutes or so. Then ... whoosh! A nice little rocket straight to his little bedroom to blow him up right on his little bed. We didn't even have to buy his location from the Greek military. Our friends there gave us the information for free."

Petra's heart sank. If Achilles could arrange for them to be kidnaped, he could certainly arrange for Bean to be killed. Killing was always easier than taking someone alive.

Did Bean already notice the message in the dragon, decode it, and pass along the information? Because if he's dead, there's no one else who'll be able to do it.

Immediately she was ashamed that the news of Bean's death made her think first of herself. But it didn't mean she didn't care about the kid. It meant that she trusted him so much that she had pinned all her hopes on him. If he died, those hopes died with him. It was not indecent of her to think of that.

To say it out loud, that would be indecent. But you can't help the thoughts that come to mind.

Maybe Achilles was lying. Or maybe Bean would survive, or get away. And if he died, maybe he'd already decoded the message. Maybe he hadn't. There was nothing Petra could do to change the outcome.

"What, no tears?" said Achilles. "And here I thought you were such close friends. I guess that was all hero-hype." He chuckled. "Well, I'm done with you for now." He turned to a soldier by the door. "Travel time."

The soldier left. They heard a few words of Russian and at once sixteen soldiers came in and divided up, one pair to each of the kids.

"You're being separated now," said Achilles. "Wouldn't want anyone to start thinking of a rescue operation. You can still email each other. We want your creative synergy to continue. After all,

you're the finest little military minds that humanity was able to squeeze out in its hour of need. We're all really proud of you, and we look forward to seeing your finest work in the near future."

One of the kids farted loudly.

Achilles only grinned, winked at Petra, and left.

Ten minutes later they were all in separate vehicles, being driven away to points unknown, somewhere in the vast reaches of the largest country on the face of the Earth.

Re: Leak

Your Excellency, I write to you myself because I was most vociferously opposing to your plan to take young Julian Delphiki from our protection. I was wrong as we learnt from the missile assault on former apartment today leaving two soldiers dead. We are follow your previous advice by public release that Julian was killed in attack. His room was target in late night and he would die instead of soldiers sleeping there. Penetration of our system very deep, obviously. We trust no one now. You were just in time and I regret my making of delay. My pride in Hellene military made me blind. You see I speak Common a little after all, no more bluffing between me and true friend to Greece. Because of you and not me a great national resource is not destroy.

If Bean had to be in hiding, there were worse places he could be than Araraquara. The town, named for a species of parrot, had been kept as something of a museum piece, with cobbled streets and old buildings. They weren't particularly beautiful old buildings or picturesque houses--even the cathedral was rather dull, and not particularly ancient, having been finished in the twentieth century. Still, there was the sense of a quieter way of life that had once been common in Brasil. The growth that had turned nearby Ribeirido Preto into a sprawling metropolis had pretty much passed Araraquara by. And even though the people were modern enough--you heard as much Common on the streets as Portuguese these days--Bean felt at home here in a way that he had never felt in Greece, where the desire to be fully European and fully Greek at the same time distorted public life and public spaces.

"It won't do to feel too much at home," said Sister Carlotta. "We can't stay anywhere for long."

"Achilles is the devil," said Bean. "Not God. He can't reach everywhere. He can't find us without some kind of evidence."

"He doesn't have to reach everywhere," said Sister Carlotta. "Only where we are."

"His hate for us makes him blind," said Bean.

"His fear makes him unnaturally alert."

Bean grinned-it was an old game between them. "It might not be Achilles who took the other kids."

"It might not be gravity that holds us to Earth," said Sister Carlotta, "but rather an unknown force with identical properties."

Then she grinned, too.

Sister Carlotta was a good traveling companion. She had a sense of humor. She understood his jokes and he enjoyed hers. But most of all, she liked to spend hours and hours without saying a thing, doing her work while he did his own. When they did talk, they were evolving a kind of oblique language where they both already knew everything that mattered so they only had to refer to it and the other would understand. Not that this implied they were kindred spirits or deeply attuned. It's just that their lives only touched at a few key points-they were in hiding, they were cut off from friends and family, and the same enemy wanted them dead. There was no one to gossip about because they knew no one. There was no chat because they had no interests beyond the projects at hand: trying to figure out where the other kids were being held, trying to determine what nation Achilles was serving (which would no doubt soon be serving him), and trying to understand the shape the world was taking so they could interfere with it, perhaps bending the course of history to a better end.

That was Sister Carlotta's goal, at least, and Bean was willing to take part in it, given that the same research required for the first two projects was identical to the research required for the last. He wasn't sure that he cared about the shape of history in the future.

He said that to Sister Carlotta once, and she only smiled. "Is it the world outside yourself you don't care about," she said, "or the future as a whole, including your own?"

"Why should I care about narrowing down which things in particular I don't care about?"

"Because if you didn't care about your own future, you wouldn't care whether you were alive to see it, and you wouldn't be going through all this nonsense to stay alive."

"I'm a mammal," said Bean. "I try to live forever whether I actually want to or not."

"You're a child of God, so you care what happens to his children whether you admit it to yourself or not."

It was not her glib response that bothered him, because he expected it-he had provoked it, really, no doubt (he told himself) because he liked the reassurance that if there was a God, then Bean mattered to him. No, what bothered him was the momentary darkness that passed across her face. A fleeting expression, barely revealed, which he would not have noticed had he not known her face so well, and had darkness so rarely been expressed on it.

Something that I said made her feel sad. And yet it was a sadness that she wants to conceal from me. What did I say? That I'm a mammal? She's used to my gibes about her religion. That I might

not want to live forever? Perhaps she worries that I'm depressed. That I try to live forever, despite my desires? Perhaps she fears that I'll die young. Well, that was why they were in Araraquara-to prevent his early death. And hers, too, for that matter. He had no doubt, though, that if a gun were pointed at him, she would leap in front of him to take the bullet. He did not understand why. He would not do the same for her, or for anyone. He would try to warn her, or pull her out of the way, or interfere with the shooter, whatever he could do that left them both a reasonable chance of survival. But he would not deliberately die to save her.

Maybe it was a thing that women did. Or maybe that grown-ups did for children. To give your life to save someone else. To weigh your own survival and decide that it mattered less to you than the survival of another. Bean could not fathom how anyone could feel that way. Shouldn't the irrational mammal take over, and force them to act for their own survival? Bean had never tried to suppress his own survival instinct, but he doubted that he could even if he tried. But then, maybe older people were more willing to part with their lives, having already spent the bulk of their starting capital. Of course, it made sense for parents to sacrifice themselves for the sake of their children, particularly parents too old to make more babies. But Sister Carlotta had never had children. And Bean was not the only one that she would die for. She would leap out to take a bullet for a stranger. She valued her own life less than anyone's. And that made her utterly alien to him.

Survival, not of the fittest, but of myself-that is the purpose at the core of my being. That is the reason, ultimately, that I do all the things that I've done. There have been moments when I felt compassion when, alone of Ender's jeesh, I knowingly sent men to their certain deaths, I felt a deep sorrow for them. But I sent them, and they went. Would I, in their place, have gone as they did, obeying an order? Dying to save unknown future generations who would never know their names?

Bean doubted it.

He would gladly serve humanity if it happened also to serve himself. Fighting the Formics alongside Ender and the other kids, that made sense because saving humanity included saving Bean. And if by managing to stay alive somewhere in the world, he was also a thorn in the side of Achilles, making him less cautious, less wise, and therefore easier to defeat-well, it was a pleasant bonus that Bean's pursuit of his own survival happened also to give the human race a chance to defeat the monster. And since the best way to survive would be to find Achilles and kill him first, he might turn out to be one of the great benefactors of human history. Though now that he thought about it, he couldn't remember a single assassin who was remembered as a hero. Brutus, perhaps. His reputation had had its ups and downs. Most assassins, though, were despised by history. Probably because successful assassins tended to be those whose target was not particularly dangerous to anyone. By the time everyone agreed that a particular monster was well worth assassinating, the monster had far too much power and paranoia to leave any possibility of an assassination actually being carried out.

He got nowhere when he tried to discuss it with Sister Carlotta.

"I can't argue with you so I don't know why you bother. I only know that I won't help you plot his assassination."

"You don't consider it self-defense?" said Bean. "What is this, one of those stupid vids where the hero can never actually kill a bad guy who isn't actually pointing a gun at him right that very moment?"

"It's my faith in Christ," said Carlotta. "Love your enemy, do good to those who hate you."

"Well, where does that leave us? The nicest thing we could do for Achilles would be to post our address on the nets and wait for him to send someone to kill us."

"Don't be absurd," said Carlotta. "Christ said be good to your enemies. It wouldn't be good for Achilles to find us, because then he'd kill us and have even more murders to answer for before the judgment bar of God. The best thing we can do for Achilles is to keep him from killing us. And if we love him, we'll stop him from ruling the world while we're at it, since power like that would only compound his opportunities to sin."

"Why don't we love the hundreds and thousands and millions of people who'll die in the wars he's planning to launch?"

"We do love them," said Carlotta. "But you're confused the way so many people are, who don't understand the perspective of God. You keep thinking that death is the most terrible thing that can happen to a person, but to God, death just means you're coming home a few moments ahead of schedule. To God, the dreadful outcome of a human life is when that person embraces sin and rejects the joy that God offers. So of all the millions who might die in a war, each individual life is tragic only if it ends in sin."

"So why are you going to such trouble to keep me alive?" asked Bean, thinking he knew the answer.

"You want me to say something that will weaken my case," said Carlotta. "Like telling you that I'm human and so I want to prevent your death right now because I love you. And that's true, I have no children but you're as close as I come to having any, and I would be stricken to the soul if you died at the hands of that twisted boy. But in truth, Julian Delphiki, the reason I work so hard to prevent your death is because, if you died today, you would probably go to hell."

To his surprise, Bean was stung by this. He understood enough of what Carlotta believed that he could have predicted this attitude, but the fact that she put it into words still hurt. "I'm not going to repent and get baptized, so I'm bound to go to hell, therefore no matter when I die I'm doomed," he said.

"Nonsense. Our understanding of doctrine is not perfect, and no matter what the popes have said, I don't believe for a moment that God is going to damn for eternity the billions of children he allowed to be born and die without baptism. No, I think you're likely to go to hell because, despite all your brilliance, you are still quite amoral. Sometime before you die, I pray most earnestly that you will learn that there are higher laws that transcend mere survival, and higher causes to serve. When you give yourself to such a great cause, my dear boy, then I will not fear your death, because

I know that a just God will forgive you for the oversight of not having recognized the truth of Christianity during your lifetime."

"You really are a heretic," said Bean. "None of those doctrines would pass muster with any priest."

"They don't even pass muster with me," said Carlotta. "But I don't know a soul who doesn't maintain two separate lists of doctrines-the ones that they believe that they believe; and the ones that they actually try to live by. I'm simply one of the rare ones who knows the difference. You, my boy, are not."

"Because I don't believe in any doctrines."

"That," said Carlotta with exaggerated smugness, "is proof positive of my assertion. You are so convinced that you believe only what you believe that you believe, that you remain utterly blind to what you really believe without believing you believe it."

"You were born in the wrong century," said Bean. "You could make Thomas Aquinas tear out his hair. Nietzsche and Derrida would accuse you of obfuscation. Only the Inquisition would know what to do with you-toast you nice and brown."

"Don't tell me you've actually read Nietzsche and Derrida. Or Aquinas, for that matter."

"You don't have to eat the entire turd to know that it's not a crab cake."

"You arrogant impossible boy."

"But Geppetta, I'm not a real boy."

"You're certainly not a puppet, or not my puppet, anyway. Go outside and play now, I'm busy."

Sending him outside was not a punishment, however. Sister Carlotta knew that. From the moment they got their desks linked to the nets, they had both spent most of every day indoors, gathering information. Carlotta, whose identity was shielded by the firewalls in the Vatican computer system, was able to continue all her old relationships and thus had access to all her best sources, taking care only to avoid saying where she was or even what time zone she was in. Bean, however, had to create a new identity from scratch, hiding behind a double blind of mail servers specializing in anonymity, and even then he kept no identity for longer than a week. He formed no relationships and therefore could develop no sources. When he needed specific information, he had to ask Carlotta to help him find it, and then she had to determine whether it was something she might legitimately ask, or whether it was something that might be a clue that she had Bean with her. Most of the time she decided she dared not ask. So Bean was crippled in his research. Still, they shared what information they could, and despite his disadvantages, there was one advantage that remained to him: The mind looking at his data was his own. The mind that had scored higher than anyone else on the Battle School tests. Unfortunately, Truth did not care much about such credentials. It refused to give up and reveal itself just because it realized you were bound to find it eventually.

Bean could only take so many hours of frustration before he had to get up and go outside. It wasn't just to get away from his work, however. "The climate agrees with me," he told Sister Carlotta on their second day, when, dripping with sweat, he headed for his third shower since waking. "I was born to live with heat and humidity."

At first she had insisted on going everywhere with him. But after a few days he was able to persuade her of several things. First, he looked old enough not to be accompanied by his grandmother everywhere he went-"Avo Carlotta" was what he called her here, their cover story. Second, she would be no protection for him anyway, since she had no weapons and no defensive skills. Third, he was the one who knew how to live on the streets, and even though Araraquara was hardly the kind of dangerous place that Rotterdam had been when he was younger, he had already mapped in his mind a hundred different escape routes and hiding places, just by reflex. When Carlotta realized that she would need his protection a lot more than he would need hers, she relented and allowed him to go out alone, as long as he did his best to remain inconspicuous.

"I can't stop people from noticing the foreign boy."

"You don't look that foreign," she said. "Mediterranean body types are common here. Just try not to speak a lot. Always look like you have an errand but never like you're in a hurry. But then, it was you who taught me that that was how to avoid attracting attention."

And so here he was today, weeks after they arrived in Brasil, wandering the streets of Araraquara and wondering what great cause might make his life worthwhile in Carlotta's eyes. For despite all her faith, it was her approval, not God's, that seemed like it might be worth striving for, as long as it didn't interfere with his project of staying alive. Was it enough to be a thorn in Achilles' side? Enough to look for ways to oppose him? Or was there something else he should be doing?

At the crest of one of Araraquara's many hills there was a sorvete shop run by a Japanese-Brazilian family. The family had been in business there for centuries, as their sign proclaimed, and Bean was both amused and moved by this, in light of what Carlotta had said. For this family, making flavored frozen desserts to eat from a cone or cup was the great cause that gave them continuity through the ages. What could be more trivial than that? And yet Bean came here, again and again, because their recipes were, in fact, delicious, and when he thought about how many other people for these past two or three hundred years must have paused and taken a moment's pleasure in the sweet and delicate flavors, in the feel of the smooth sorvete in their mouths, he could not disdain that cause. They offered something that was genuinely good, and people's lives were better because they offered it. It was not a noble cause that would get written up in the histories. But it was not nothing, either. A person could do worse than spend some large percentage of his life in a cause like that.

Bean wasn't even sure what it meant to give himself to a cause. Did that mean turning over his decision-making to someone else? What an absurd idea. In all likelihood there was no one smarter than him on Earth, and though that did not mean he was incapable of error, it certainly meant he'd have to be a fool to turn over his decisions to someone even more likely to be wrong.

Why he was wasting time on Carlotta's sentiment-ridden philosophy of life he didn't know. Doubtless that was one of his mistakes—the emotional human aspect of his mentality overriding the inhumanly aloof brilliance that, to his chagrin, only sometimes controlled his thinking.

The sorvete cup was empty. Apparently he had eaten it all without noticing. He hoped his mouth had enjoyed every taste of it, because the eating was done by reflex while he thought his thoughts.

Bean discarded the cup and went his way. A bicyclist passed him. Bean saw how the cyclist's whole body bounced and rattled and vibrated from the cobblestones. That is human life, thought Bean. So bounced around that we can never see anything straight.

Supper was beans and rice and stringy beef in the pensao's public dining room. He and Carlotta ate together in near silence, listening to other people's conversations and the clanking and clinking of dishes and silverware. Any real conversation between them would doubtless leak some memorable bit of information that might raise questions and attract attention. Like, why did a woman who talked like a nun have a grandson? Why did this child who looked to be six talk like a philosophy professor half the time? So they ate in silence except for conversations about the weather.

After supper, as always, they each signed

on to the nets to check their mail. Carlotta's mail was interesting and real. All of Bean's correspondents, this week anyway, thought he was a woman named Lettie who was working on her dissertation and needed information, but who had no time for a personal life and so rebuffed with alacrity any attempt at friendly and personal conversation. But so far, there was no way to find Achilles' signature in any nation's behavior. While most countries simply did not have the resources to kidnap Ender's jeesh in such a short time, of those that did have the resources, there was not one that Bean could rule out because they lacked the arrogance or aggressiveness or contempt for law to do it. Why, it could even have been done by Brasil itself—for all he knew, his former companions from the Formic War might be imprisoned somewhere in Araraquara. They might hear in the early morning the rumble of the very garbage truck that picked up the sorvete cup that he threw away today.

"I don't know why people spread these things," said Carlotta.

"What?" asked Bean, grateful for the break from the eye-blearing work he was doing.

"Oh, these stupid superstitious good-luck dragons. There must be a dozen different dragon pictures now."

"Oh, e," said Bean. "They're everywhere, I just don't notice them anymore. Why dragons, anyway?"

"I think this is the oldest of them. At least it's the one I saw first, with the little poem," said Carlotta. "If Dante were writing today, I'm sure there'd be a special place in his hell for people who start these things."

"What poem?"

" 'Share this dragon,' " Carlotta recited. " 'If you do, lucky end for them and you.' "

"Oh, yeah, dragons always bring a lucky end. I mean, what does that poem actually say? That you'll die lucky? That it'll be lucky for you to end?" Carlotta chuckled.

Bored with his correspondence, Bean kept the nonsense going. "Dragons aren't always lucky. They had to discontinue Dragon Army in Battle School, it was so unlucky. Till they revived it for Ender, and no doubt they gave it to him because people thought it was bad luck and they were trying to stack everything against him."

Then a thought passed through his mind, ever so briefly, but it woke him from his lethargy.

"Forward me that picture."

"I bet you already have it on a dozen letters."

"I don't want to search. Send me that one."

"You're still that Lettie person? Haven't you been that one for two weeks now?"

"Five days."

It took a few minutes for the message to be routed to him, but when it finally showed up in his mail, he looked closely at the image.

"Why in the world are you paying attention to this?" asked Carlotta.

He looked up to see her watching him.

"I don't know. Why are you paying attention to the way I'm paying attention to it?" He grinned at her.

"Because you think it matters. I may not be as smart as you are about most things, but I'm very much smarter than you are about you. I know when you're intrigued."

"Just the juxtaposition of the image of a dragon with the word 'end.' Endings really aren't considered all that lucky. Why wouldn't the person write 'luck will come' or 'lucky fate' or something else? Why 'lucky end'?"

"Why not?"

"End. Ender. Ender's army was Dragon."

"Now, that's a little far-fetched."

"Look at the drawing," said Bean. "Right in the middle, where the bitmap is so complicated-there's one line that's damaged. The dots don't line up at all. It's virtually random."

"It just looks like noise to me."

"If you were being held captive but you had computer access, only every bit of mail you sent out was scrutinized, how would you send a message?" asked Bean.

"You don't think this could be a message from--do you?"

"I have no idea. But now that I've thought of it, it's worth looking don't you think?"

By now Bean had pasted the dragon image into a graphics program and was studying that line of pixels. "Yes, this is random, the whole line. Doesn't belong here, and it's not just noise because the rest of the image is still completely intact except for this other line that's partly broken. Noise would be randomly distributed."

"See what it is, then," said Carlotta. "You're the genius, I'm the nun."

Soon Bean had the two lines isolated in a separate file and was studying the information as raw code. Viewed as one-byte or twobyte text code, there was nothing that remotely resembled language, but of course it couldn't, could it, or it would never have got out. So if it was a message, then it had to be in some kind of code.

For the next few hours Bean wrote programs to help him manipulate the data contained in those lines. He tried mathematical schemes and graphic reinterpretations, but in truth he knew all along that it wouldn't be anything that complex. Because whoever created it would have had to do it without the aid of a computer. It had to be something relatively simple, designed only to keep a cursory examination from revealing what it was.

And so he kept coming back to ways of reinterpreting the binary code as text. Soon enough he came upon a scheme that seemed promising. Two-byte text code, but shifted right by one position for each character, except when the right shift would make it correspond with two actual bytes in memory, in which case double shift. That way a real character would never show up if someone looked at the file with an ordinary view program.

When he used that method on the one line, it came up as text characters only, which was not likely to happen by chance. But the other line came up random-seeming garbage.

So he left-shifted the other line, and it, too, became nothing but text characters.

"I'm in," he said. "And it is a message."

"What does it say?"

"I haven't the faintest idea."

Carlotta got up and came to look over his shoulder. "It's not even language. It doesn't divide into words."

"That's deliberate," said Bean. "If it divided into words it would look like a message and invite decoding. The easy way that any amateur can decode language is by checking word lengths and the frequency of appearance of certain letter patterns. In Common, you look for letter groupings that could be 'a' and 'the' and 'and,' that sort of thing.

"And you don't even know what language it's in."

"No, but it's bound to be Common, because they know they're sending it to somebody who doesn't have a key. So it has to be decodable, and that means Common."

"So they're making it easy and hard at the same time?"

"Yes. Easy for me, hard for everyone else."

"Oh, come now. You think this was written to you?"

"Ender. Dragon. I was in DragonArmy, unlike most of them. And whom else would they be writing to? I'm outside, they're in. They know that everyone is there but me. And I'm the only person that they'd know they could reach without tipping their hand to everybody else."

"What, did you have some private code?"

"Not really, but what we have is common experience, the slang of Battle School, things like that. You'll see. When I crack it, it'll be because I recognize a word that nobody else would recognize."

"If it's from them."

"It is," said Bean. "It's what I'd do. Get word out. This picture is like a virus. It goes everywhere and gets its code into a million places, but nobody knows it's a code because it looks like something that most people think they already understand. It's a fad, not a message. Except to me."

"Almost thou persuadest me," said Carlotta.

"I'll crack it before I go to bed."

"You're too little to drink that much coffee. It'll give you an aneurysm."

She went back to her own mail.

Since the words weren't separated, Bean had to look for other patterns that might give things away. There were no obvious repeated two-letter or three-letter patterns that didn't lead to obvious dead ends. That didn't surprise him. If he had been composing such a message, he would have dropped

out all the articles and conjunctions and prepositions and pronouns that he possibly could. Not only that, but most of the words were probably deliberately misspelled to avoid repetitive patterns. But some words would be spelled correctly, and they would be designed to be unrecognizable to most people who weren't from the Battle School culture.

There were only two places where the same character was apparently doubled, one in each line. That might just be the result of one word ending with the same letter that began another, but Bean doubted it. Nothing would be left to chance in this message. So he wrote a little program that would take the doubled letters in one word and, beginning with "aa," show him what the surrounding letters might be to see if anything looked plausible to him. And he started with the doubled letters in the shorter line, because that pair was surrounded by another pair, in a 1221 pattern.

The obvious failures, like "xddx" and "pffp," took no time, but he had to investigate all the variants on "abba" and "adda" and "deed" and "effe" to see what they did to the message. Some were promising and he saved them for later exploration.

"Why is it in Greek now?" asked Carlotta.

She was looking over his shoulder again. He hadn't heard her get up and come over behind him.

"I converted the original message to Greek characters so that I wouldn't get distracted by trying to read meanings into letters I hadn't decoded yet. The ones I'm actually working on are in Roman letters."

At that moment, his program showed the letters "iggi."

"Piggies," said Sister Carlotta.

"Maybe, but it doesn't flag anything for me." He started cycling through the dictionary matches with "iggi," but none of them did any better than "piggies" had.

"Does it have to be a word?" said Carlotta.

"Well, if it's a number, then this is a dead end," said Bean.

"No, I mean, why not a name?"

Bean saw it at once. "How blind can I be." He plugged the letters w and n to the positions before and after "iggi" and then spread the results through the whole message, making the program show hyphens for the undeciphered letters. The two lines now read

```
---n-----g---n---n---n---i----n --- g  
-n-n-wiggin---
```

"That doesn't look right for Common," said Carlotta. "There should be a lot more i's than that."

"I'm assuming that the message deliberately leaves out letters as much as possible, especially vowels, so it won't look like Common."

"So how will you know when you've decoded it?"

"When it makes sense."

"It's bedtime. I know, you're not sleeping till you've solved it." He barely noticed that she moved away from behind him. He was busy trying the other doubled letter. This time he had a more complicated job, because the letters before and after the double pair were different. It meant far more combinations to try, and being able to eliminate g, i, n, and w didn't speed up the process all that much.

Again, there were quite a few readings that he saved-more than before-but nothing rang a bell until he got to 'Jees." The word that Ender's companions in the final battle used for themselves. "Jeesh." Could it be? It was definitely a word that might be used as a flag.

h--n--jeesh-g-\_en--s--ns--n ---- si --- n --- s--g  
-n-n-wiggin ---

If those twenty-seven letters were right, then he had only thirty left to solve. He rubbed his eyes, sighed, and set to work.

It was noon when the smell of oranges woke him. Sister Carlotta was peeling a mexerica orange. "People are eating these things on the street and spitting the pulp on the sidewalk. You can't chew it up enough to swallow it. But the juice is the best orange you'll ever taste in your life."

Bean got out of bed and took the segment she offered him. She was right. She handed him a bowl to spit the pulp into. "Good breakfast," said Bean.

"Lunch," she said. She held up a paper. "I take it you consider this to be a solution?"

It was what he had printed out before going to bed.

hlpndrjeeshtgdrenrusbnstun6rmysiz4Ontrysbtg  
bnfndwigginptr

"Oh," said Bean. "I didn't print out the one with the word breaks." Putting another mexerica segment in his mouth, Bean padded on bare feet to the computer, called up the right file, and printed it. He brought it back, handed it to Carlotta, spat out pulp, and took his own mexerica from her shopping bag and began peeling.

"Bean," she said. "I'm a normal mortal. I get 'help' and is this 'Ender'?"

Bean took the paper from her.

hlp ndr jeesh tgdr en rus bns tun 6 rmy siz 40  
n try sbtg  
bn fnd wiggin ptr

"The vowels are left out as much as possible, and there are other misspellings. But what the first line says is, 'Help. Ender's jeesh is together in Russia-' "

"T-g-d-r is 'together'? And 'in' is spelled like French?"

"Exactly," said Bean. "I understood it and it doesn't look like Common." He went on interpreting. "The next part was confusing for a long time, until I realized that the 6 and the 40 were numbers. I got almost all the other letters before I realized that. The thing is, the numbers matter, but there's no way to guess them from context. So the next few words are designed to give a context to the numbers. It says 'Bean's toon was 6'-that's because Ender divided Dragon Army into five toons instead of the normal four, but then he gave me a sort of ad hoc toon, and if you added it to the count, it was number six.

Only who would know that except for somebody from Battle School? So only somebody like me would get the number. Same thing with the next one. 'Army size 40.' Everyone in Battle School knew that there were forty soldiers in every army. Unless you counted the commander, in which case it was forty-one, but see, it doesn't matter, because that digit is trivial."

"How do you know that?"

"Because the next letter is n. For 'north.' The message is telling their location. They know they're in Russia. And because they can apparently see the sun or at least shadows on the wall, and they know the date, they can calculate their latitude, more or less. Six-four-zero north. Sixty-four north."

"Unless it means something else."

"No, the message is meant to be obvious."

"To you."

"Yes, to me. The rest of that line is 'try sabotage.' I think that means that they're trying to screw up whatever the Russians are trying to make them do. So they're pretending to go along but really gumming up the works. Very smart to get that on record. The fact that Graff was court-martialed after winning the Formic War suggests that they'd better get it on record that they were not collaborating with the enemy-in case the other side wins."

"But Russia isn't at war with anybody."

"The Polemarch was Russian, and Warsaw Pact troops were at the heart of his side in the League War. You've got to remember, Russia was the country that was most on the make before the Formics came and started tearing up real estate and forced humanity to unite under the Hegemon and create the International Fleet. They have always felt cheated out of their destiny, and now that

the Formics are gone, it makes sense that they'd be eager to get back on the fast track. They don't think of themselves as bad guys, they think of themselves as the only people with the will and the resources to unite the world for real, permanently. They think they're doing a good thing."

"People always do."

"Not always. But yes, to wage war you have to be able to sell your own people on the idea that either you're fighting in self-defense, or you're fighting because you deserve to win, or you're fighting in order to save other people. The Russian people respond to an altruistic sales pitch as easily as anybody else."

"So what about the second line?"

" 'Bean find Wiggin Peter.' They're suggesting that I look for Ender's older brother. He didn't go off on the colony ship with Ender and Valentine. And he's been a player, under the net identity of Locke. And I suppose he's running Demosthenes, too, now that Valentine is gone."

"You knew about that?"

"I knew a lot of things," said Bean. "But the main thing is that they're right. Achilles is hunting for me and he's hunting for you, and he's got all the rest of Ender's jeesh, but he doesn't even know Ender's brother exists and he wouldn't care if he did. But you know and I know that Peter Wiggin would have been in Battle School except for a little character flaw. And for all we know, that character flaw may be exactly what he needs to be a good match against Achilles."

"Or it may be exactly the flaw that makes it so a victory for Peter is no better than a victory for Achilles, in terms of the amount of suffering in the world."

"Well, we won't know until we find him, will we?" said Bean.

"To find him, Bean, you'd have to reveal who you are."

"Yes," said Bean. "Isn't this exciting?" He did an exaggerated wriggle like a little kid being taken to the zoo.

"This is your life you're playing with."

"You're the one who wanted me to find a cause."

"Peter Wiggin isn't a cause, he's dangerous. You haven't heard what Graff had to say about him."

"On the contrary," said Bean. "How do you think I learned about him?"

"But he might be no better than Achilles!"

"I know of several ways already that he's better than Achilles. First, he's not trying to kill us. Second, he's already got a huge network of contacts with people all over the world, some of whom know he's as young as he is but most of whom have no idea. Third, he's ambitious just like Achilles is, only Achilles has already assembled almost all of the children who were tagged as the most brilliant military commanders in the world, while Peter Wiggin will have only one. Me. Do you think he's dumb enough not to use me?"

"Use you. That's the operative word here, Bean."

"Well, aren't you being used in your cause?"

"By God, not by Peter Wiggin."

"I'll bet Peter Wiggin sends a lot clearer messages than God does," said Bean. "And if I don't like what he's doing, I can always quit."

"With someone like Peter, you can't always quit."

"He can't make me think of what I don't want to think about. Unless he's a remarkably stupid genius, he'll know that."

"I wonder if Achilles knows that, as he's trying to squeeze brilliance out of the other children."

"Exactly. Between Peter Wiggin and Achilles, what are the odds that Wiggin could be worse?"

"Oh, it's hard to imagine how that could be."

"So let's start thinking of a way to contact Locke without giving away our identity and our location."

"I'm going to need more mexerica oranges before we leave Brasil," said Carlotta.

Only then did he notice that the two of them had already blown through the whole bagful. "Me too," he said.

As she left, the empty bag in hand, she paused at the door. "You did very well with that message, Julian Delphiki."

"Thanks, Grandma Carlotta."

She left smiling.

Bean held up the message and scanned it again. The only part of the message that he hadn't fully interpreted for her was the last word. He didn't think "ptr" meant Peter. That would have been redundant. "Wiggin" was enough to identify him. No, the "ptr" at the end was a signature. This

message was from Petra. She could have tried to write directly to Peter Wiggin. But she had written to Bean, coding it in a way that Peter would never have understood.

She's relying on me.

Bean knew how the others in Ender's jeesh had resented him. Not a lot, but a little. When they were all in Command School on Eros, before Ender arrived, the military had made Bean the acting commander in all their test battles, even though he was the youngest of them all, even younger than Ender. He knew he'd done a good job, and won their respect. But they never liked taking orders from him and were undisguisedly happy when Ender arrived and Bean was dropped back to be one of them. Nobody ever said, "Good job, Bean," or "Hey, you did OK." Except Petra.

She had done for him on Eros the same thing that Nikolai had done for him in Battle School—provided him with a kind word now and then. He was sure that neither Nikolai nor Petra ever realized how important their casual generosity had been to him. But he remembered that when he needed a friend, the two of them had been there for him. Nikolai had turned out, by the workings of not-entirely-coincidental fate, to be his brother. Did that make Petra his sister?

It was Petra who reached out to him now. She trusted him to recognize the message, decode it, and act on it.

There were files in the Battle School record system that said that Bean was not human, and he knew that Graff at least sometimes felt that way because he had overheard those words from his own lips. He knew that Carlotta loved him but she loved Jesus more and anyway, she was old and thought of him as a child. He could rely on her, but she did not rely on him.

In his Earthside life before Battle School, the only friend Bean had ever had was a girl named Poke, and Achilles had murdered her long before. Murdered her only moments after Bean left her, and moments before he realized his mistake and rushed back to warn her and instead found her body floating in the Rhine. She died trying to save Bean, and she died because Bean couldn't be relied upon to take as much care to save her.

Petra's message meant that maybe he had another friend who needed him after all. And this time, he would not turn his back. This time it was his turn to save his friend, or die trying. How's that for a cause, Sister Carlotta?

GOING PUBLIC

To:Demosthenes%Tecumseh@freeamerica.org, Locke%erasmus@polnet.gov

From: dontbother@firewall.set Re: Achilles heel

Dear Peter Wiggin,

A message smuggled to me from the kidnapped children confirms they are (or were, at the time of sending) together, in Russia near the sixty-fourth parallel, doing their best to sabotage those trying to exploit their military talents. Since they will doubtless be separated and moved frequently, the exact location is unimportant, and I am quite sure you already knew Russia was the only country with both the ambition and the means to acquire all the members of Ender's jeesh.

I'm sure you recognize the impossibility of releasing these children through military intervention-at the slightest sign of a plausible effort to extract them, they will be killed in order to deprive an enemy of such assets. But it might be possible to persuade either the Russian government or some if not all of those holding the individual children that releasing them is in Russia's best interest. This might be accomplished by exposing the individual who is almost certainly behind this audacious action, and your two identities are uniquely situated to accuse him in a way that will be taken seriously.

Therefore I suggest that you do a bit of research into a break-in at a highsecurity institution for the criminally insane in Belgium during the League War. Three guards were killed and the inmates were released. All but one were recaptured quickly. The one who got away was once a student at Battle School. He is behind the kidnapping. When it is revealed that this psychopath has control of these children, it will cause grave misgivings inside the Russian command system. It will also give them a scapegoat if they decide to return the children.

Don't bother trying to trace this email identity. It already never existed. If you can't figure out who I am and how to contact me from the research you're about to do, then we don't have much to talk about anyway.

Peter's heart sank when he opened the letter to Demosthenes and saw that it had also been sent to Locke. The salutation "Dear Peter Wiggin" only confirmed it-someone besides the office of the Polemarch had broken his identities. He expected the worst-some kind of blackmail or a demand that he support this or that cause.

To his surprise, the message was nothing of the kind. It came from someone who claimed to have received a message from the kidnapped kids-and gave him a tantalizing path to follow. Of course he immediately searched the news archives and found the break-in at a high-security mental hospital near Genk. Finding the name of the inmate who got away was much harder, requiring that, as Demosthenes, he ask for help from a law enforcement contact in Germany, and then, as Locke, for additional help from a friend in the Anti-Sabotage Committee in the Office of the Hegemon.

It yielded a name that made Peter laugh, since it was in the subject line of the email that prompted this search. Achilles, pronounced "ahSHEEL" in the French manner. An orphan rescued from the streets of Rotterdam by, of all things, a Catholic nun working for the procurement section of the Battle School. He was given surgery to correct a crippled leg, then taken up to Battle School, where he lasted only a few days before being exposed as a serial killer by some of the other students, though in fact he had not killed anyone in the Battle School.

The list of his victims was interesting. He had a pattern of killing anyone who had ever made him feel or seem helpless or vulnerable. Including the doctor who had repaired his leg. Apparently he wasn't much for gratitude.

Putting together the information, Peter could see that his unknown correspondent was right. If in fact this sicko was running the operation that was using these kids for military planning, it was almost certain that the Russian officers working with him did not know his criminal record. Whatever agency liberated Achilles from the mental hospital would not have shared that information with the military who were expected to work with him. There would be outrage that would be heard at the highest levels of the Russian government.

And even if the government did not act to get rid of Achilles and release the kids, the Russian Army jealously guarded its independence from the rest of the government, especially the intelligence-and-dirty-jobs agencies. There was a good chance that some of these children might "escape" before the government acted-indeed, such unauthorized actions might force the government to make it official and pretend that the "early releases" had been authorized.

It was always possible, of course, that Achilles would kill one or more of the kids as soon as he was exposed. At least Peter would not have to face those particular children in battle. And now that he knew something about Achilles, Peter was in a much better position to face him in a head-to-head struggle. Achilles killed with his own hands. Since that was a very stupid thing to do, and Achilles did not test stupid, it had to be an irresistible compulsion. People with irresistible compulsions could be terrifying enemies-but they could also be beaten.

For the first time in weeks, Peter felt a glimmer of hope. This was how his work as Locke and Demosthenes paid off-people with certain kinds of secret information that they wanted to make public found ways to hand it to Peter without his even having to ask for it. Much of his power came from this disorganized network of informants. It never bothered his pride that he was being "used" by this anonymous correspondent. As far as Peter was concerned, they were using each other. And besides, Peter had earned the right to get such helpful gifts.

Still, Peter always looked gift horses in the mouth. As either Locke or Demosthenes, he emailed friends and contacts in various government agencies, trying to get confirmation of various aspects of the story he was preparing to write. Could the break-in at the mental institution have been carried out by Russian agents? Did satellite surveillance show any kind of activity near the sixty-fourth parallel that might correspond with the arrival or departure of the ten kidnapped kids? Was anything known about the whereabouts of Achilles that would contradict the idea of his being in control of the whole kidnap operation?

It took a couple of days to get the story right. He tried it first as a column by Demosthenes, but he soon realized that since Demosthenes was constantly putting out warnings about Russian plots, he might not be taken very seriously. It had to be Locke who published this. And that would be dangerous, because up to now Locke had been scrupulous about not seeming to take sides against Russia. That would now make it more likely that his exposure of Achilles would be taken seriously-but it ran a grave risk of costing Locke some of his best contacts in Russia. No matter how much a Russian might despise what his government was doing, the devotion to Mother Russia

ran deep. There was a line you couldn't cross. For more than a few of his contacts there, publishing this piece would cross that line.

Until he hit upon the obvious solution. Before submitting the piece to International Aspects, he would send copies to his Russian contacts to give a heads-up on what was coming. Of course the expose would fly through the Russian military. It was possible that the repercussions would begin even before his column officially appeared. And his contacts would know he wasn't trying to hurt Russia-he was giving them a chance to clean house, or at least put a spin on the story before it ran.

It wasn't a long story, but it named names and opened doors that other reporters could follow up on. And they would follow up. From the first paragraph, it was dynamite.

The mastermind behind the kidnapping of Ender's "jeesh" is a serial killer named Achilles. He was taken from a mental institution during the League War in order to bring his dark genius to bear on Russian military strategy. He has repeatedly murdered with his own hands, and now ten brilliant children who once saved the world are completely at his mercy. What were the Russians thinking when they gave power to this psychopath? Or was Achilles' bloody record concealed even from them?

There it was-in the first paragraph, right along with the accusation, Locke was generously providing the spin that would allow the Russian government and military to extricate themselves from this mess.

It took twenty minutes to send the individual messages to all his Russian contacts. In each message, he warned them that they had only about six hours before he had to turn in his column to the editor at International Aspects. IA's fact-checkers would add another hour or two to the delay, but they would find complete confirmation of

Peter pushed SEND, SEND, SEND.

Then he settled down to pore over the data to figure out how it revealed to him the identity of his correspondent. Another mental patient? Hardly likely-they were all brought back into confinement. An employee of the mental hospital? Impossible for someone like that to find out who was behind Locke and Demosthenes. Someone in law enforcement? More likely-but few names of investigators were offered in the news stories. Besides, how could he know which of the investigators had tipped him off? No, his correspondent had promised, in effect, a unique solution. Something in the data would tell him exactly who his informant was, and exactly how to reach him. Emailing investigators indiscriminately would serve only to risk exposing Peter with no guarantee that any of the people he contacted would be the right one.

The one thing that did not happen as he searched for his correspondent's identity was any kind of response from any of his Russian friends. If the story had been wrong, or if the Russian military had already known about Achilles' history and wanted to cover it up, he would have been getting constant emails urging him not to run the story, then demanding, and finally threatening him. So the fact that no one wrote him at all served as all the confirmation he needed from the Russian end.

As Demosthenes, he was anti-Russian. As Locke, he was reasonable and fair to all nations. As Peter, though, he was envious of the Russian sense of national identity, the cohesiveness of Russians when they felt their country was in danger. If Americans had ever had such powerful bonds, they had expired long before Peter was born. To be Russian was the most powerful part of a person's identity. To be American was about as important as being a Rotarian-very important if you were elected to high office, but barely noticeable in most citizens' sense of who they were. That was why Peter never planned his future with America in mind. Americans expected to get their way, but they had no passion for anything. Demosthenes could stir up anger and resentment, but it amounted to spitefulness, not purpose. Peter would have to root himself elsewhere. Too bad Russia wasn't available to him. It was a nation that had a vast will to greatness, coupled with the most extraordinary run of stupid leadership in history, with the possible exception of the kings of Spain. And Achilles had got there first.

Six hours after sending the article to his Russian contacts, he pushed SEND once more, submitting it to his editor. As he expected, three minutes later he got a response.

You're sure?

To which Peter replied, "Check it. My sources confirm."

Then he went to bed.

And woke up almost before he had gone to sleep. He couldn't have closed his book, and then his eyes, for more than a couple of minutes before he realized that he had been looking in the wrong direction for his informant. It wasn't one of the investigators who tipped him off. It was someone connected to the I.F. at the highest level, someone who knew that Peter Wiggin was Locke and Demosthenes. But not Graff or Chamrajnagar-they would not have left hints about who they really were. Someone else, someone in whom they confided, perhaps.

But no one from the I.F. had turned up in the information about Achilles' escape. Except for the nun who found Achilles in the first place.

He reread the message. Could this have come from a nun? Possibly, but why would she be sending the information so anonymously? And why would the kidnapped children smuggle a message to her?

Had she recruited one of them?

Peter got out of bed and padded to his desk, where he called up the information on all the kidnapped children. Every one of them came to Battle School through the normal testing process; none had been found by the nun, and so none of them would have any reason to smuggle a message to her.

What other connection could there be? Achilles was an orphan on the streets of Rotterdam when Sister Carlotta identified him as having military talent-he couldn't have had any family connections.

Unless he was like that Greek kid from Ender's jeesh who was killed in a missile attack a few weeks ago, the supposed orphan whose real family was identified while he was in Battle School.

Orphan. Killed in a missile attack. What was his name? Julian Delphiki. Called Bean. A name he picked up when he was an orphan ... where? Rotterdam. Just like Achilles.

It was not a stretch to imagine that Sister Carlotta found both Bean and Achilles. Bean was one of Ender's companions on Eros during the last battle. He was the only one who, instead of being kidnapped, had been killed. Everyone assumed it was because he was so heavily protected by the Greek military that the would-be kidnappers gave up and settled for keeping rival powers from using him. But what if there was never any intention to kidnap him, because Achilles already knew him and, more to the point, Bean knew too much about Achilles?

And what if Bean was not dead at all? What if he was living in hiding, protected by the widespread belief that he was dead? It was absolutely believable that the captive kids would choose him to receive their smuggled message, since he was the only one of their group, besides Ender himself, who wasn't in captivity with them. And who else would have such a powerful motive to work to get them out, along with the proven mental ability to think of a strategy like the one the informant had laid out in his letter?

A house of cards, that's what he was building, one leap after another-but each intuitive jump felt absolutely right. That letter was written by Bean. Julian Delphiki. And how would Peter contact him? Bean could be anywhere, and there was no hope of contacting him since anybody who knew he was alive would be all the more certain to pretend that he was dead and refuse to accept a message for him.

Again, the solution should be obvious from the data, and it was. Sister Carlotta.

Peter had a contact in the Vatican-a sparring partner in the wars of ideas that flared up now and then among those who frequented the discussions of international relations on the nets. It was already morning in Rome, though barely. But if anyone was at his desk early in Italy, it would be a hardworking monk attached to the Vatican foreignaffairs office.

Sure enough, an answer came back within fifteen minutes.

Sister Carlotta's location is protected. Messages can be forwarded. I will not read what you send via me. (You can't work here if you don't know how to keep your eyes closed. )

Peter composed his message to Bean and sent it-to Sister Carlotta. If anyone knew how to reach Julian Delphiki in hiding, it would be the nun who had first found him. It was the only possible solution to the challenge his informant had given him.

Finally he went back to bed, knowing that he wouldn't sleep long-he'd undoubtedly keep waking through the night and checking the nets to see the reaction to his column.

What if no one cared? What if nothing happened? What if he had fatally compromised the Locke persona, and for no gain?

As he lay in bed, pretending to himself that he might sleep, he could hear his parents snoring in their room across the hall. It was both strange and comforting to hear them. Strange that he could be worrying about whether something he had written might not cause an international incident, and yet he was still living in his parents' house, their only child left at home. Comforting because it was a sound he had known since infancy, that comforting assurance that they were alive, they were close by, and the fact that he could hear them meant that when monsters leapt from the dark corners of the room, they would hear him screaming.

The monsters had taken on different faces over the years, and hid in corners of rooms far from his own, but that noise from his parents' bedroom was proof that the world had not ended yet.

Peter wasn't sure why, but he knew that the letter he had just sent to Julian Delphiki, via Sister Carlotta, via his friend in the Vatican, would put an end to his long idyll, playing at world affairs while having his mother do his laundry. He was finally putting himself into play, not as the cool and distant commentator Locke or the hotblooded demagogue Demosthenes, both of them electronic constructs, but as Peter Wiggin, a young man of flesh and blood, who could be caught, who could be harmed, who could be killed.

If anything should have kept him awake, it was that thought. But instead he felt relieved. Relaxed. The long waiting was almost over. He fell asleep and did not wake until his mother called him to breakfast. His father was reading a newsprint at breakfast. "What's the headline, Dad?" asked Peter.

"They're saying that the Russians kidnapped those kids. And put them under the control of a known murderer. Hard to believe, but they seem to know all about this Achilles guy. Got busted out of a mental hospital in Belgium. Crazy world we live in. Could have been Ender." He shook his head.

Peter could see how his mother froze for just a moment at the mention of Ender's name. Yes, yes, Mother, I know he's the child of your heart and you grieve every time you hear his name. And you ache for your beloved daughter Valentine who has left Earth and will never return, not in your lifetime. But you still have your firstborn with you, your brilliant and good-looking son Peter, who is bound to produce brilliant and beautiful grandchildren for you someday, along with a few other things like, oh, who knows, maybe bringing peace to Earth by unifying it under one government? Will that console you just a little bit?

Not likely.

"The killer's name is ... Achilles?"

"No last name. Like some kind of pop singer or something."

Peter cringed inside. Not because of what his father had said, but because Peter had come this close to correcting his father's pronunciation of "Achilles." Since Peter couldn't be sure that any of the

rag mentioned the French pronunciation of Achilles' name, how would he explain knowing the correct pronunciation to Father?

"Has Russia denied it, of course?" asked Peter.

Father scanned the newsprint again. "Nothing about it in this story," he said.

"Cool," said Peter. "Maybe that means it's true."

"If it was true," said Father, "they would deny it. That's the way Russians are."

As if Father knew anything at all about the "way Russians are."

Got to move out, thought Peter, and live on my own. I'm in college. I'm trying to spring ten prisoners from custody a third of the way around the world. Maybe I should use some of the money I've been earning as a columnist to pay rent. Maybe I should do it right away, so that if Achilles finds out who I am and comes to kill me, I won't bring danger down on my family.

Only Peter knew even as he formed this thought that there was another, darker thought hidden deep inside himself: Maybe if I get out of here, they'll blow up the house when I'm not there, the way they must have done with Julian Delphiki. Then they'll think I'm dead and I'll be safe for a while.

No, I don't wish for my parents to die! What kind of monster would wish for that? I don't want that.

But one thing Peter never did was lie to himself, or at least not for long. He didn't wish for his parents to die, certainly not violently in an attack aimed at him. But he knew that if it did happen, he'd prefer not to be with them at the time. Better, of course, if no one was home. But ... me first.

Ah yes. That was what Valentine hated about him. Peter had almost forgotten. That's why Ender was the son that everyone loved. Sure, Ender wiped out a whole species of aliens, not to mention offing a kid in a bathroom in Battle School. But he wasn't selfish like Peter.

"You aren't eating, Peter," said Mother.

"Sorry," said Peter. "I'm getting some test results back today, and I was brooding I guess."

"What subject?" asked Mother.

"World history," said Peter.

"Isn't it strange to realize that when they write history books in the future, your brother's name will always be mentioned?" said Mother.

"Not strange," said Peter. "That's just one of the perks you get when you save the world."

Behind his jocularly, though, he made a much grimmer promise to his mother. Before you die, Mother, you'll see that while Ender's name shows up in a chapter or two, it will be impossible to discuss this century or the next without mentioning my name on almost every page.

"Got to run," said Father. "Good luck with the test."

"Already took the test, Dad. I'm just getting the grade today."

"That's what I meant. Good luck on the grade."

"Thanks," said Peter.

He went back to eating while Mother walked Father to the door so they could kiss good-bye.

I'll have that someday, thought Peter. Someone who'll kiss me good-bye at the door. Or maybe just someone to put a blindfold over my head before they shoot me. Depending on how things turn out.

BREAD VAN

Re: satrep

Satellite reports from date Delphiki family killed: Nine vehicles simultaneous departure from northern Russia location, 64 latitude. Encrypted destination list attached. Genuine dispersal? Decoy? What's our best strategy, my friend? Eliminate or rescue? Are they children or weapons of mass destruction? Hard to know. Why did that bastard Locke get Ender Wiggin sent away? We could use that boy now I think. As for why only nine, not ten vehicles: maybe one is dead or sick. Maybe one has turned. Maybe two have turned and were sent together. All guesswork. I only see raw satdat, not intelnetcom. reports. If you have other sources on that, feed some back to me?

Custer

Petra knew that loneliness was the tool they were using against her. Don't let the girl talk to any human at all, then when one shows up she'll be so grateful she'll blurt confessions, she'll believe lies, she'll make friends with her worst enemy.

Weird how you can know exactly what the enemy is doing to you and it still works. Like a play her parents took her to her second week back home after the war. It had a four-year-old girl on the stage asking her mother why her father wasn't home yet. The mother is trying to find a way to tell her that the father was killed by an Azerbaijani terrorist bomb-a secondary bomb that went off to kill people trying to rescue survivors of the first, smaller blast. Her father died as a hero, trying to save a child trapped in the wreckage even after the police shouted at him to stay away, there was probably going to be a second blast. The mother finally tells the child.

The little girl stamps her foot angrily and says, "He's my papa! Not that little boy's papa!" And the mother says, "That little boy's mama and papa weren't there to help him. Your father did what he hoped somebody else would do for you, if he couldn't be there for you." And the little girl starts to cry and says, "Now he isn't ever going to be there for me. And I don't want somebody else. I want my papa.

Petra sat there watching this play, knowing exactly how cynical it was. Use a child, play on the yearning for family, tie it to nobility and heroism, make the villains the ancestral enemy, and make the child say childishly innocent things while crying. A computer could have written it. But it still worked. Petra cried like a baby, just like the rest of the audience.

That's what isolation was doing to her and she knew it. Whatever they were hoping for, it would probably work. Because human beings are just machines, Petra knew that, machines that do what you want them to do, if you only know the levers to pull. And no matter how complex people might seem, if you just cut them off from the network of people who give shape to their personality, the communities that form their identity, they'll be reduced to that set of levers. Doesn't matter how hard they resist, or how well they know they're being manipulated. Eventually, if you take the time, you can play them like a piano, every note right where you expect it. Even me, thought Petra.

All alone, day after day. Working on the computer, getting assignments by mail from people who gave no hint of personality. Sending messages to the others in Ender's jeesh, but knowing that their letters, too, were being censored of all personal references. Just data getting transferred back and forth. No netsearches now. She had to file her request and wait for an answer filtered through the people who controlled her. All alone.

She tried sleeping too much, but apparently they drugged her water-they got her so hopped up she couldn't sleep at all. So she stopped trying to play passive resistance games. Just went along, becoming the machine they wanted her to be, pretending to herself that by only pretending to be a machine, she wouldn't actually become one, but knowing at the same time that whatever people pretend to be, they become.

And then comes the day when the door opens and somebody walks in.

Vlad.

He was from Dragon Army. Younger than Petra, and a good guy, but she didn't know him all that well. The bond between them, though, was a big one: Vlad was the only other kid in Ender's jeesh who broke the way Petra did, had to be pulled out of the battles for a day. Everybody was kind to them but they both knew-it made them the weak ones. Objects of pity. They all got the same medals and commendations, but Petra knew that their medals meant less than the others, their commendations were empty, because they were the ones who hadn't cut it while the others did. Not that Petra had ever talked about it with Vlad. She just knew that he knew the same things she knew, because he had been down the same long dark tunnel.

And here he was.

"Ho, Petra," he said.

"Ho, Vlad," she answered. She liked hearing her own voice. It still worked. Liked hearing his, too.

"I guess I'm the new instrument of torture they're using on you," said Vlad.

He said it with a smile. That told Petra that he wanted it to seem like a joke. Which told her that it wasn't really a joke at all.

"Really?" she said. "Traditionally, you're simply supposed to kiss me and let someone else do the torture."

"It's not really torture. It's the way out."

"Out of what?"

"Out of prison. It's not what you think, Petra. The hegemony is breaking up, there's going to be war. The question is whether it drives the world down into chaos or leads to one nation ruling all the others. And if it's one nation, which nation should it be?"

"Let me guess. Paraguay."

"Close," said Vlad. He grinned. "I know, it's easier for me. I'm from Belarus, we make a big deal about being a separate country, but in our hearts, we don't mind the thought of Russia being the country that comes out on top. Nobody outside of Belarus gives a lobster tit about how we're not really Russians. So sure, I wasn't hard to talk into it. And you're Armenian, and they spent a lot of years being oppressed by Russia in the old Communist days. But Petra, just how Armenian are you? What's really good for Armenia anyway? That's what I'm supposed to say to you, anyway. To get you to see that Armenia benefits if Russia comes out on top. No more sabotage. Really help us get ready for the real war. You cooperate, and Armenia gets a special place in the new order. You get to bring in your whole country. That's not nothing, Petra. And if you don't help, that doesn't do a thing for anybody. Doesn't help you. Doesn't help Armenia. Nobody ever knows what a hero you were."

"Sounds like a death threat."

"Sounds like a threat of loneliness and obscurity. You weren't born to be nobody, Petra. You were born to shine. This is a chance to be a hero again. I know you think you don't care, but come on, admit it-it was great being Ender's jeesh."

"And now we're what's-his-name's jeesh. He'll really share the glory with us," said Petra.

"Why not? He's still the boss, he doesn't mind having heroes serve under him."

"Vlad, he'll make sure nobody knows any of us existed, and he'll kill us when he's done with us." She hadn't meant to speak so honestly. She knew it would get back to Achilles. She knew it would guarantee that her prophecy would come true. But there it was—the lever worked. She was so grateful to have a friend there, even one who had obviously been coopted, that she couldn't help but blurt.

"Well, Petra, what can I say? I told them, you're the tough one. I told you what's on offer. Think about it. There's no hurry. You've got plenty of time to decide."

"You're going?"

"That's the rule," said Vlad. "You say no, I go. Sorry."

He got up.

She watched him go out the door. She wanted to say something clever and brave. She wanted some name to call him to make him feel bad for throwing in his lot with Achilles. But she knew that anything she said would be used against her one way or another. Anything she said would reveal another lever to the lever-pullers. What she'd already said was bad enough.

So she kept her silence and watched the door close and lay there on her bed until her computer beeped and she went to it and there was another assignment and she went to work and solved it and sabotaged it just like usual and thought, This is going rather well after all, I didn't break or anything.

And then she went to bed and cried herself to sleep. For a few minutes, though, just before she slept, she felt that Vlad was her truest, dearest friend and she would have done anything for him, just to have him back in the room with her.

Then that feeling passed and she had one last fleeting thought: If they were really all that smart, they would have known that I'd feel like that, right that moment; and Vlad would have come in and I would have leapt from my bed and thrown my arms around him and told him yes, I'll do it, I'll work with you, thank you for coming to me like that, Vlad, thank you.

Only they missed their chance.

As Ender had once said, most victories came from instantly exploiting your enemy's stupid mistakes, and not from any particular brilliance in your own plan. Achilles was very clever. But not perfect. Not allknowing. He may not win. I may even get out of here without dying.

Peaceful at last, she fell asleep.

They woke her in darkness.

"Get up."

No greeting. She couldn't see who it was. She could hear footsteps outside her door. Boots. Soldiers?

She remembered talking to Vlad. Rejecting his offer. He said there was no hurry; she had plenty of time to decide. But here they were, rousting her in the middle of the night. To do what?

Nobody was laying a hand on her. She dressed in darkness-they didn't hurry her. If this was supposed to be some sort of torture session or interrogation they wouldn't wait for her to dress, they'd make sure she was as uncomfortable, as off-balance as possible.

She didn't want to ask questions, because that would seem weak. But then, not asking questions was passive.

"Where are we going now?"

No answer. That was a bad sign. Or was it? All she knew about these things was from the few fictional war vids she'd seen in Battle School and a few spy movies in Armenia. None of it ever seemed believable to her, yet here she was in a real spy-movie situation and her only source of information about what to expect was those stupid fictional vids and movies. What happened to her superior reasoning ability? The talents that got her into Battle School in the first place? Apparently those only worked when you thought you were playing games in school. In the real world, fear sets in and you fall back on lame made-up stories written by people who had no idea how things like this really worked.

Except that the people doing these things to her had also seen the same dumb vids and movies, so how did she know they weren't modeling their actions and attitudes and even their words on what they'd seen in the movies? It's not like anybody had a training course on how to look tough and mean when you were rousting a pubescent girl in the middle of the night. She tried to imagine the instruction manual. If she is going to be transported to another location, tell her to hurry, she's keeping everyone waiting. If she's going to be tortured, make snide comments about how you hope she got plenty of rest. If she is going to be drugged, tell her that it won't hurt a bit, but laugh snidely so she'll think you're lying. If she is going to be executed, say nothing.

Oh, this is good, she told herself Talk yourself into fearing the absolute worst. Make sure you're as close to a state of panic as possible.

"I've got to pee," she said.

No answer.

"I can do it here. I can do it in my clothes. I can do it naked. I can do it in my clothes or naked wherever we're going. I can dribble it along the way. I can write my name in the snow. It's harder for girls, it requires a lot more athletic activity, but we can do it."

Still no answer.

"Or you can let me go to the bathroom."

"All right," he said.

"Which?"

"Bathroom." He walked out the door.

She followed him. Sure enough, there were soldiers out there. Ten of them. She stopped in front of one burly soldier and looked up at his face. "It's a good thing they brought you. If it had just been those other guys, I would have made my stand and fought to the death. But with you here, I had no choice but to give myself up. Good work, soldier."

She turned and walked on toward the bathroom. Wondering if she had seen just the faintest hint of a smile on that soldier's face. That wasn't in the movie script, was it? Oh, wait. The hero was supposed to have a smart mouth. She was right in character. Only now she understood that all those clever remarks that heroes made were designed to conceal their raw fear. Insouciant heroes aren't brave or relaxed. They're just trying not to embarrass themselves in the moments before they die.

She got to the bathroom and of course he came right in with her. But she'd been in Battle School and if she'd had a shy bladder she would have died of urea poisoning long ago. She dropped trou, sat on the john, and let go. The guy was out the door long before she was ready to flush.

There was a window. There were ceiling air ducts. But she was in the middle of nowhere and it's not like she had anywhere she could run. How did they do this in the vids? Oh, yeah. A friend would have already placed a weapon in some concealed location and the hero would find it, assemble it, and come out firing. That's what was wrong with this whole situation. No friends.

She flushed, rearranged her clothing, washed her hands, and walked back out to her friendly escorts.

They walked her outside to a convoy, of sorts. There were two black limousines and four escort vehicles. She saw two girls about her size and hair color get into the back of each of the limos. Petra, by contrast, was kept close to the building, under the eaves, until she was at the back of a bakery van. She climbed in. None of her guards came with her. There were two men in the back of the van, but they were in civilian clothes. "What am I, bread?" she asked.

"We understand your need to feel that you're in control of the situation through humor," said one of the men.

"What, a psychiatrist? This is worse than torture. What happened to the Geneva convention?"

The psychiatrist smiled. "You're going home, Petra."

"To God? Or Armenia?"

"At this moment, neither. The situation is still ... flexible."

"I'd say it's flexible, if I'm going home to a place where I've never been before."

"Loyalties have not yet been sorted out. The branch of government that kidnapped you and the other children was acting without the knowledge of the army or the elected government-"

"Or so they say," said Petra.

"You understand my situation perfectly."

"So who are you loyal to?"

"Russia."

"Isn't that what they'll all say?"

"Not the ones who turned our foreign policy and military strategy over to a homicidal maniac child."

"Are those three equal accusations?" asked Petra. "Because I'm guilty of being a child. And homicide, too, in some people's opinion."

"Killing buggers was not homicide."

"I suppose it was insecticide." The psychiatrist looked baffled. Apparently he didn't know Common well enough to understand a wordplay that nine-year-olds thought was endlessly funny in Battle School.

The van began to move.

"Where are we going, since it's not home?"

"We're going into hiding to keep you out of the hands of this monster child until the breadth of this conspiracy can be discovered and the conspirators arrested."

"Or vice versa," said Petra.

The psychiatrist looked baffled again. But then he understood. "I suppose that's possible. But then, I'm not an important man. How would they know to look for me?"

"You're important enough that you have soldiers who obey you."

"They're not obeying me. We're all obeying someone else."

"And who is that?"

"If, through some misfortune, you were retaken by Achilles and his sponsors, you won't be able to answer that question."

"Besides, you'd all be dead before they could get to me, so your names wouldn't matter anyway, right?"

He looked at her searchingly. "You seem cynical about this. We are risking our lives to save you."

"You're risking my life, too."

He nodded slowly. "Do you want to return to your prison?"

"I just want you to be aware that being kidnapped a second time isn't exactly the same thing as being set free. You're so sure that you're smart enough and your people are loyal enough to bring this off. But if you're wrong, I could get killed. So yes, you're taking risks-but so am I, and nobody asked me."

"I ask you now."

"Let me out of the van right here," said Petra. "I'll take my chances alone."

"No," said the psychiatrist.

"I see. So I am still a prisoner."

"You are in protective custody."

"But I am a certified strategic and tactical genius," said Petra, "and you're not. So why are you in charge of me?"

He had no answer.

"I'll tell you why," said Petra. "Because this is not about saving the little children who were stolen away by the evil wicked child. This is about saving Mother Russia a lot of embarrassment. So it isn't enough for me to be safe. You have to return me to Armenia under just the right circumstances, with just the right spin, that the faction of the Russian government that you serve will be exonerated of all guilt."

"We are not guilty."

"My point is not that you're lying about that, but that you regard that as a much higher priority than saving me. Because I assure you, riding along in this van, I fully expect to be retaken by Achilles and his ... what did you call them? Sponsors."

"And why do you suppose that this will happen?"

"Does it matter why?"

"You're the genius," said the psychiatrist. "Apparently you have already seen some flaw in our plan."

"The flaw is obvious. Far too many people know about it. The decoy limousines, and soldiers, the escorts. You're sure that not one of those people is a plant? Because if any of them is reporting to Achilles' sponsors, then they already know which vehicle really has me in it, and where it's going."

"They don't know where it's going."

"They do if the driver is the one who was planted by the other side."

"The driver doesn't know where we're going."

"He's just going around in circles?"

"He knows the first rendezvous point, that's all."

Petra shook her head. "I knew you were stupid, because you became a talk-therapy shrink, which is like being a minister of a religion in which you get to be God."

The psychiatrist turned red. Petra liked that. He was stupid, and he didn't like hearing it, but he definitely needed to hear it because he clearly had built his whole life around the idea that he was smart, and now that he was playing with live ammunition, thinking he was smart was going to get him killed.

"I suppose you're right, that the driver does know where we're going first, even if he doesn't know where we plan to go from the first rendezvous." The psychiatrist shrugged elaborately. "But that can't be helped. You have to trust someone."

"And you decided to trust this driver because ... ?"

The psychiatrist looked away.

Petra looked at the other man. "You're talkative."

"I am think," said the man in halting Common, "you make Battle School teachers crazy with talk."

"Ah," said Petra. "You're the brains of the outfit."

The man looked puzzled, but also offended—he wasn't sure how he had been insulted, since he probably didn't know the word outfit, but he knew an insult had been intended.

"Petra Arkanian," said the psychiatrist, "since you're right that I don't know the driver all that well, tell me what I should have done. You have a better plan than trusting him?"

"Of course," said Petra. "You tell him the rendezvous point, plan with him very carefully how he'll drive there."

"I did that," said the psychiatrist.

"I know," said Petra. "Then, at the last minute, just as you're loading me into the van, you take the wheel and make him ride in one of the limousines. And then you drive to a different place entirely. Or better yet, you take me to the nearest town and turn me loose and let me take care of myself."

Again, the psychiatrist looked away. Petra was amused at how transparent his body language was. You'd think a shrink would know how to conceal his own tells.

"These people who kidnapped you," said the psychiatrist, "they are a tiny minority, even within the intelligence organizations they work for. They can't be everywhere."

Petra shook her head. "You're a Russian, you were taught Russian history, and you actually believe that the intelligence service can't be everywhere and hear everything? What, did you spend your entire childhood watching American vids?"

The psychiatrist had had enough. Putting on his finest medical airs, he delivered his ultimate put-down. "And you're a child who never learned decent respect. You may be brilliant in your native abilities, but that doesn't mean you understand a political situation you know nothing about."

"Ah," said Petra. "The you're-just-a-child, you-don't-have-as-much-experience argument."

"Naming it doesn't mean it's untrue."

"I'm sure you understand the nuances of political speeches and maneuvers. But this is a military operation."

"It is a political operation," the psychiatrist corrected her. "No shooting."

Again, Petra was stunned at the man's ignorance. "Shooting is what happens when military operations fail to achieve their purposes through maneuver. Any operation that's intended to physically deprive the enemy of a valued asset is military."

"This operation is about freeing an ungrateful little girl and sending her home to her mama and papa," said the psychiatrist.

"You want me to be grateful? Open the door and let me out."

"The discussion is over," said the psychiatrist. "You can shut up"

"Is that how you end your sessions with your patients?"

"I never said I was a psychiatrist," said the psychiatrist.

"Psychiatry was your education," said Petra. "And I know you had a practice for a while, because real people don't talk like shrinks when they're trying to reassure a frightened child. Just because you got involved in politics and changed careers doesn't mean you aren't still the kind of bonehead who goes to witch-doctor school and thinks he's a scientist."

The man's fury was barely contained. Petra enjoyed the momentary thrill of fear that ran through her. Would he slap her? Not likely. As a psychiatrist, he would probably fall back on his one limitless resource-professional arrogance.

"Laymen usually sneer at sciences they don't understand," said the psychiatrist.

"That," said Petra, "is precisely my point. When it comes to military operations, you're a complete novice. A layman. A bonehead. And I'm the expert. And you're too stupid to listen to me even now."

"Everything is going smoothly," said the psychiatrist. "And you'll feel very foolish and apologize as you thank me when you get on the plane to return to Armenia."

Petra only smiled tightly. "You didn't even look in the cab of this delivery van to make sure it was the same driver before we drove off."

"Someone else would have noticed if the driver changed," said the psychiatrist. But Petra could tell she had finally made him uneasy.

"Oh, yes, I forgot, we trust your fellow conspirators to see all and miss nothing, because, after all, they aren't psychiatrists."

"I'm a psychologist," he said.

"Ouch," said Petra. "That must have hurt, to admit you're only half-educated."

The psychologist turned away from her. What was the term the shrinks in Ground School used for that behavior-avoidance? Denial? She almost asked him, but decided to leave well enough alone.

And people thought she couldn't control her tongue.

They rode for a while in bristling silence.

But the things she said must have been working on him, nagging at him. Because after a while he got up and walked to the front and opened the door between the cargo area and the cab.

A deafening gunshot rang through the closed interior, and the psychiatrist fell back. Petra felt hot brains and stinging bits of bone spatter her face and arms. The man across from her started reaching for a weapon under his coat, but he was shot twice and slumped over dead without touching it.

The door from the cab opened the rest of the way. It was Achilles standing there, holding the gun in his hand. He said something.

"I can't hear you," said Petra. "I can't even hear my own voice."

Achilles shrugged. Speaking louder and mouthing the words carefully, he tried again. She refused to look at him.

"I'm not going to try to listen to you," she said, "while I still have his blood all over me."

Achilles set down the gun—far out of her reach—and pulled off his shirt. Bare-chested, he handed it to her, and when she refused to take it, he started wiping her face with it until she snatched it out of his hands and did the job herself.

The ringing in her ears was fading, too. "I'm surprised you didn't wait to kill them until you'd had a chance to tell them how smart you are," said Petra.

"I didn't need to," said Achilles. "You already told them how dumb they were."

"Oh, you were listening?"

"Of course the compartment back here was wired for sound," said Achilles. "And video."

"You didn't have to kill them," said Petra.

"That guy was going for his gun," said Achilles.

"Only after his friend was dead."

"Come now," said Achilles. "I thought Ender's whole method was the preemptive use of ultimate force. I only do what I learned from your hero."

"I'm surprised you did this one yourself," said Petra.

"What do you mean, 'this one'?" said Achilles.

"I assumed you were stopping the other rescues, too."

"You forget," said Achilles, "I've already had months to evaluate you. Why keep the others, when I can have the best?"

11 "Are you flirting with me?" She said it with as much disdain as she could muster. Those words usually worked to shut down a boy who was being smug. But he only laughed.

"I don't flirt," he said.

"I forgot," said Petra. "You shoot first, and then flirting isn't necessary."

That got to him a little-made him pause a moment, brought the slightest hint of a quickening of breath. It occurred to Petra that her mouth was indeed going to get her killed. She had never actually seen someone get shot before, except in movies and vids. Just because she thought of herself as the protagonist of this biographical vid she was trapped in didn't mean she was safe. For all she knew, Achilles meant to kill her, too.

Or did he? Could he have really meant that she was the only one of the team he was keeping? Vlad would be so disappointed.

"How did you happen to choose me?" she asked, changing the

"Like I said, you're the best."

"That is such kuso," said Petra. "The exercises I did for you weren't any better than anyone else's."

"Oh, those battle plans, those were just to keep you busy while the real tests were going on. Or rather, to make you think you were keeping us busy."

"What was this real test, then, since I supposedly succeeded at it better than anyone else?"

"Your little dragon drawing," said Achilles.

She could feel the blood drain from her face. He saw it and laughed.

"Don't worry," said Achilles. "You won't be punished. That was the test, to see which of you would succeed in getting a message outside."

"And my prize is staying with you?" She said it with all the disgust she could put in her voice.

"Your prize," said Achilles, "is staying alive."

She felt sick at heart. "Even you wouldn't kill all the others, for no reason."

"If they're killed, there's a reason. If there's a reason, they'll be killed. No, we suspected that your dragon drawing would have some meaning to someone. But we couldn't find a code in it."

"There wasn't a code in it," said Petra.

"Oh yes there was," said Achilles. "You somehow encoded it in such a way that someone was able to recognize it and decode it. I know this because the news stories that suddenly appeared, triggering this whole crisis, had some specific information that was more or less correct. One of the messages you guys tried to send must have gotten through. So we went back over every email sent by every one of you, and the only thing that couldn't be accounted for was your dragon clip art."

"If you can read a message in that," said Petra, "then you're smarter than I am."

"On the contrary," said Achilles. "You're smarter than I am, at least about strategy and tactics-like evading the enemy while keeping in close communication with allies. Well, not all that close, since it took them so long to publish the information you sent."

"You bet on the wrong horse," said Petra. "It wasn't a message, and therefore however they got the news it must have come from one of the other guys."

Achilles only laughed. "You're a stubborn liar, aren't you?"

"I'm not lying when I tell you that if I have to keep riding with these corpses in this compartment, I'm going to get sick."

He smiled. "Vomit away."

"So your pathology includes a weird need to hang around with the dead," said Petra. "You'd better be careful-you know where that leads. First you'll start dating them, and then one day you'll bring a dead person home to meet your mother and father. Oops. I forgot, you're an orphan."

"So I brought them to show you."

"Why did you wait so long to shoot them?" asked Petra.

"I wanted it set up just right. So I could shoot the one while he was standing in the doorway. So his body would block any returning fire from the other guy. And besides, I was also enjoying the way you took them apart. You know, arguing with them like you did. Sounded like you hate shrinks almost as much as I do. And you were never even committed to a mental institution. I would have applauded several of your best bon mots, only I might have been overheard."

"Who's driving this van?" asked Petra, ignoring his flattery. -

"Not me," said Achilles. "Are you?"

"How long are you planning to keep me imprisoned?" asked Petra.

"As long as it takes."

"As long as it takes to do what?" ."

"Conquer the world together, you and I. Isn't that romantic? Or, well, it will be romantic, when it happens."

"It will never be romantic," said Petra. "Nor will I help you conquer your dandruff problem, let alone the world."

"Oh, you'll cooperate," said Achilles. "I'll kill the other members of Ender's jeesh, one by one, until you give in."

"You don't have them," said Petra. "And you don't know where they are. They're safe from you."

Achilles grinned mock-sheepishly. "There's just no fooling Genius Girl, is there? But, you see, they're bound to surface somewhere, and when they do, they'll die. I don't forget."

"That's one way to conquer the world," said Petra. "Kill every body one by one until you're the only one left."

"Your first job," said Achilles, "is to decode that message you sent out."

"What message?"

Achilles picked up his gun and pointed it at her

"Kill me and you'll always wonder if I really sent out a message at all," said Petra.

"But at least I won't have to listen to your smug voice lying to me," said Achilles. "That would almost be a consolation."

"You seem to be forgetting that I wasn't a volunteer on this expedition. If you don't like listening to me, let me go."

"You're so sure of yourself," said Achilles. "But I know you better than you know yourself."

"And what is it you think you know about me?" asked Petra.

"I know that you'll eventually give in and help me,"

"Well, I know you better than you know yourself, too," said Petra.

"Oh, really?"

"I know that eventually you'll kill me. Because you always do. So let's just skip all the boring stuff in between. Kill me now. End the suspense."

"No," said Achilles. "Things like that are much better as a surprise. Don't you think? At least, that's the way God always did it."

"Why am I even talking to you?" asked Petra.

"Because you're so lonely after being in solitary for all these months that you'd do anything for human company. Even talk to me!"

She hated that he was probably right. "Human company apparently you're under the delusion that you qualify."

"Oh, you're mean," said Achilles, laughing. "Look, I'm bleeding."

"You've got blood on your hands, all right."

"And you've got it all over your face," said Achilles. "Come on, it'll be fun."

"And here I thought nothing would ever be more tedious than solitary confinement."

"You're the best, Petra," said Achilles. "Except for one."

"Bean," said Petra.

"Ender," said Achilles. "Bean is nothing. Bean is dead."

Petra said nothing.

Achilles looked at her searchingly. "No smart remarks?"

"Bean is dead and you're alive," said Petra. "There's no justice."

The van slowed down and stopped.

"There," said Achilles. "Our lively conversation made the time fly by."

Fly. She heard an airplane overhead. Landing or taking off?

"Where are we flying?" she asked.

"Who says we're flying anywhere?"

"I think we're flying out of the country," said Petra, speaking the ideas as they came to her. "I think you realized that you were going to lose your cushy job here in Russia, and you're sneaking out of the country."

"You're really very good. You keep setting a new standard for cleverness," said Achilles.

"And you keep setting a new standard for failure."

He hesitated a moment, then went on as if she hadn't spoken. "They're going to pit the other kids against me," he said. "You already know them. You know their weaknesses. Whoever I'm up against, you're going to advise me."

"Never."

"We're in this together," said Achilles. "I'm a nice guy. You'll like me, eventually."

"Oh, I know," said Petra. "What's not to like?"

"Your message," said Achilles. "You wrote it to Bean, didn't you?"

"What message?" said Petra.

"That's why you don't believe he's dead."

"I believe he's dead," said Petra. But she knew her earlier hesitation had given her away.

"Or else you wonder-if he got your message before I had him killed, why did it take so long after he died to have it hit the news? And here's the obvious answer, Pet. Somebody else figured it out. Somebody else decoded it. And that really pisses me off. So don't tell me what the message said. I'm going to decode it myself. It can't be that hard."

"Downright easy," said Petra. "After all, I'm dumb enough to end up as your prisoner. So dumb, in fact, that I never sent anybody a message."

"When I do decode it, though, I hope it won't say anything disparaging about me. Because then I'd have to beat the shit out of you."

"You're right," said Petra. "You are a charmer."

Fifteen minutes later, they were on a small private jet, flying south by southeast. It was a luxurious vehicle, for its size, and Petra wondered if it belonged to one of the intelligence services or to some faction in the military or maybe to some crime lord. Or maybe all three at once.

She wanted to study Achilles, watch his face, his body language. But she didn't want him to see her showing interest in him. So she looked out the window, wondering as she did so whether she wasn't just doing the same thing the dead psychologist had done-looking away to avoid facing bitter truth.

When the chime announced that they could unbelt themselves, Petra got up and headed for the bathroom. It was small, but compared to commercial airplane toilets it was downright commodious. And it had cloth towels and real soap.

She did her best with a damp towel to wipe blood and body matter from her clothes. She had to keep wearing the dirty clothing but she could at least get rid of the visible chunks. The towel was so

foul by the time she finished the job that she tossed it and got a fresh one to start in on her face and hands. She scrubbed until her face was red and raw, but she got it all off. She even soaped her hair and washed it as best she could in the tiny sink. It was hard to rinse, pouring one cup of water at a time over her head.

The whole time, she kept thinking of the fact that the psychiatrist's last minutes were spent listening to her tell him how stupid he was and point out the worthlessness of his life's work. And yes, she was right, as his death proved, but that didn't change the fact that however impure his motives might have been, he was trying to save her from Achilles. He had given his life in that effort, however badly planned it might have been. All the other rescues went off smoothly, and they were probably just as badly planned as hers. So much depended on chance. Everybody was stupid about some things. Petra was stupid about the things she said to people who had power over her. Goading them. Daring them to punish her. She did it even though she knew it was stupid. And wasn't it even stupider to do something stupid that you know is stupid? What did he call her? An ungrateful little girl.

He tagged me, all right.

As bad as she felt about his death, as horrified over what she had seen, as frightened as she was to be in Achilles' control, as lonely as she had been for these past weeks, she still couldn't figure out a way to cry about it. Because deeper than all these feelings was something even stronger. Her mind kept thinking of ways to get word to some-one about where she was. She had done it once, she could do it again, right? She might feel bad, she might be a miserable specimen of human life, she might be in the midst of a traumatic childhood experience, but she was not going to submit to Achilles for one moment longer than she had to.

The plane lurched suddenly, throwing her against the toilet. She half-fell onto it-there wasn't room to fall down all the way-but she couldn't get up because the plane had gone into a steep dive, and for a few moments she found herself gasping as the oxygen-rich air was replaced by cold upper-level air that left her dizzy.

The hull was breached. They've shot us down.

And for all that she had an indomitable will to live, she couldn't help but think: Good for them. Kill Achilles now, and no matter who else is on the plane, it'll be a great day for humanity.

But the plane soon leveled out, and the air was breathable before she blacked out. They must not have been very high when it happened.

She opened the bathroom door and stepped back into the main cabin.

The side door was partway open. And standing a couple of meters back from it was Achilles, the wind whipping at his hair and clothes. He was posing, as if he knew just how fine a figure he cut, standing there on the brink of death.

She approached him, glancing at the door to make sure she stayed well back from it, and to see how high they were. Not very, compared to cruising altitude, but higher than any building or bridge or dam. Anyone who fell from this plane would die.

Could she get behind him and push?

He smiled broadly when she got near.

"What happened?" she shouted over the noise of the wind.

"It occurred to me," he yelled back, "that I made a mistake bring-ing you with me."

He opened the door on purpose. He opened it for her.

Just as she began to step back, his hand lashed out and seized her by the wrist.

The intensity of his eyes was startling. He didn't look crazy. He looked ... fascinated. Almost as if he found her amazingly beautiful. But of course it wasn't her. It was his power over her that fascinated him. It was himself that he loved so intensely.

She didn't try to pull away. Instead, she twisted her wrist so that she also gripped him.

"Come on, let's jump together," she shouted. "That would be the most romantic thing we could do."

He leaned close. "And miss out on all the history we're going to make together?" he said. Then he laughed. "Oh, I see, you thought I was going to throw you out of the plane. No, Pet, I took hold of you so that I could anchor you while you close the door. Wouldn't want the wind to suck you out, would we?"

"I have a better idea," said Petra. "I'll be the anchor, you close the door."

"But the anchor has to be the stronger, heavier one," said Achilles. "And that's me."

"Let's just leave it open, then," said Petra.

"Can't fly all the way to Kabul with the door open."

What did it mean, his telling her their destination? Did it mean that he trusted her a little? Or that it didn't matter what she knew, since he had decided she was going to die?

Then it occurred to her that if he wanted her dead, she would die. It was that simple. So why worry about it? If he wanted to kill her by pushing her out the door, how was that different from a bullet in the brain? Dead was dead. And if he didn't plan to kill her, the door needed to be closed, and having him serve as anchor was the second-best plan.

"Isn't there somebody in the crew who can do this?" she asked.

"There's just the pilot," said Achilles. "Can you land a plane?"

She shook her head.

"So he stays in the cockpit, and we close the door."

"I don't mean to be a nag," said Petra, "but opening the door was a really stupid thing to do."

He grinned at her.

Holding tight to his wrist, she slid along the wall toward the door. It was only partially open, the kind of door that worked by sliding up. So she didn't have to reach very far out of the plane. Still, the cold wind snatched at her arm and made it very hard to get a grip on the door handle to pull it down into place. And even when she got it down into position, she simply didn't have the strength to overcome the wind resistance and pull it snug.

Achilles saw this, and now that the door wasn't open enough for anyone to fall out and the wind could no longer suck anybody out, he let go of her and of the bulkhead and joined her in pulling at the handle.

If I push instead of pulling, thought Petra, the wind will help me, and maybe we'll both get sucked right out.

Do it, she told herself. Do it. Kill him. Even if you die doing it, it's worth it. This is Hitler, Stalin, Genghis, Attila all rolled into one.

But it might not work. He might not get sucked out. She might die alone, pointlessly. No, she would have to find a way to destroy him later, when she could be sure it would work.

At another level, she knew that she simply wasn't ready to die. No matter how convenient it might be for the rest of humanity, no matter how richly Achilles deserved to die, she would not be his executioner, not now, not if she had to give her own life to kill him. If that made her a selfish coward, so be it.

They pulled and pulled and finally, with a whoosh, the door passed the threshold of wind resistance and locked nicely into place. Achilles pulled the lever that locked it.

"Traveling with you is always such an adventure," said Petra.

"No need to shout," said Achilles. "I can hear you just fine."

"Why can't you just run with the bulls at Pamplona, like any normal self-destructive person?" asked Petra.

He ignored her gibe. "I must value you more than I thought." He said it as if it took him rather by surprise.

"You mean you still have a spark of humility? You might actually need someone else?"

Again he ignored her words. "You look better without blood all over your face."

"But I'll never be as pretty as you."

"Here's my rule about guns," said Achilles. "When people are getting shot, always stand behind the shooter. It's a lot less messy there."

"Unless people are shooting back."

Achilles laughed. "Pet, I never use a gun when someone might shoot back."

"And you're so well-mannered, you always open a door for a lady."

His smile faded. "Sometimes I get these impulses," he said. "But they're not irresistible."

"Too bad. And here you had such a good insanity defense going."

His eyes blazed for a moment. Then he went back to his seat.

She cursed herself. Goading him like this, how is it different from jumping out of the airplane?

Then again, maybe it was the fact that she spoke to him without cringing that made him value her.

Fool, she said to herself. You are not equipped to understand this boy-you're not insane enough. Don't try to guess why he does what he does, or how he feels about you or anybody or anything. Study him so you can learn how he makes his plans, what he's likely to do, so that someday you can defeat him. But don't ever try to understand. If you can't even understand yourself, what hope do you have of comprehending somebody as deformed as Achilles?

They did not land in Kabul. They landed in Tashkent, refueled, and then went over the Himalayas to New Delhi.

So he lied to her about their destination. He hadn't trusted her after all. But as long as he refrained from killing her, she could endure a little mistrust.

## COMMUNING WITH THE DEAD

To: Carlotta%agape@vatican.net/orders/sisters/ind

From: Locke%erasmus@polnet.gov

Re: An answer for your dead friend

If you know who I really am, and you have contact with a certain person purported to be dead, please inform that person that I have done my best to fulfill expectations. I believe further collaboration is possible, but not through intermediaries. If you have no idea what I'm talking about, then please inform me of that, as well, so I can begin my search again.

Bean came home to find that Sister Carlotta had packed their bags.

"Moving day?" he asked.

They had agreed that either one of them could decide that it was time to move on, without having to defend the decision. It was the only way to be sure of acting on any unconscious cues that someone was closing in on them. They didn't want to spend their last moments of life listening to each other say, "I knew we should have left three days ago!" "Well why didn't you say so?" "Because I didn't have a reason."

"We have two hours till the flight."

"Wait a minute," said Bean. "You decide we're going, I decide the destination." That was how they'd decided to keep their movements random.

She handed him the printout of an email. It was from Locke. "Greensboro, North Carolina, in the U.S.," she said.

"Perhaps I'm not decoding this right," said Bean, "but I don't see an invitation to visit him."

"He doesn't want intermediaries," said Carlotta. "We can't trust his email to be untraced."

Bean took a match and burned the email in the sink. Then he crumbled the ashes and washed them down the drain. "What about Petra?"

"Still no word. Seven of Ender's jeesh released. The Russians are simply saying that Petra's place of captivity has not yet been discovered."

"Kuso," said Bean.

"I know," said Carlotta, "but what can we do if they won't tell us? I'm afraid she's dead, Bean. You've got to realize that's the likeliest reason for them to stonewall."

Bean knew it, but didn't believe it. "You don't know Petra," he said.

"You don't know Russia," said Carlotta.

"Most people are decent in every country," said Bean.

"Achilles is enough to tip the balance wherever he goes."

Bean nodded. "Rationally, I have to agree with you. Irrationally expect to see her again someday."

"If I didn't know you so well, I might interpret that as a sign of your faith in the resurrection." Bean picked up his suitcase. "Am I bigger, or is this smaller?" "The case is the same size," said Carlotta. "I think I'm growing." "Of course you're growing. Look at your pants." "I'm still wearing them," said Bean. "More to the point, look at your ankles."

"Oh." There was more ankle showing than when he bought them.

Bean had never seen a child grow up, but it bothered him that in the weeks they had been in Araraquara, he had grown at least five centimeters. If this was puberty, where were the other changes that were supposed to go along with it?

"We'll buy you new clothes in Greensboro," said Sister Carlotta.

Greensboro. "The place where Ender grew up."

"And where he killed for the first time," said Sister Carlotta.

"You just won't let go of that, will you?" said Bean.

"When you had Achilles in your power, you didn't kill him."

Bean didn't like hearing himself compared to Ender that way. Not when it showed Ender at a disadvantage. "Sister Carlotta, we'd have a whole lot less difficulty right now if I had killed him."

"You showed mercy. You turned the other cheek. You gave him a chance to make something worthwhile out of his life."

"I made sure he'd get committed to a mental institution."

"Are you so determined to believe in your own lack of virtue?"

"Yes," said Bean. "I prefer truth to lies."

"There," said Carlotta. "Yet another virtue to add to my list."

Bean laughed in spite of himself. "I'm glad you like me," he said.

"Are you afraid to meet him?"

"Who?"

"Ender's brother."

"Not afraid," said Bean.

"How do you feel, then?"

"Skeptical," said Bean.

"He showed humility in that email," said Sister Carlotta. "He wasn't sure that he'd figured things out exactly right."

"Oh, there's a thought. The humble Hegemon."

"He's not Hegemon yet," said Carlotta.

"He got seven of Ender's jeesh released, just by publishing a column. He has influence. He has ambition. And now to learn he has humility-well, it's just too much for me."

"Laugh all you want. Let's go out and find a cab."

There was no last-minute business to take care of. They had paid cash for everything, owed nothing. They could walk away.

They lived on money drawn from accounts Graff had set up for them. There was nothing about the account Bean was using now to tag it as belonging to Julian Delphiki- It held his military salary, including his combat and retirement bonuses. The I.F. had given all of Ender's jeesh very large trust funds that they couldn't touch till they came of age. The saved-up pay and bonuses were just to tide them over during their childhood. Graff had assured him that he would not run out of money while he was in hiding.

Sister Carlotta's money came from the Vatican. One person there knew what she was doing. She, too, would have money enough for her needs. Neither of them had the temperament to exploit the situation. They spent little, Sister Carlotta because she wanted nothing more, Bean because he knew that any kind of flamboyance or excess would mark him in people's memories. He always had to seem to be a child running errands for his grandmother, not an undersized war hero cashing in on his back pay.

Their passports caused them no problems, either. Again, Graff had been able to pull strings for them. Given the way they looked-both of Mediterranean ancestry-they carried passports from Catalonia. Carlotta knew Barcelona well, and Catalan was her childhood language. She barely spoke it now, but no matter-hardly anyone did. And no one would be surprised that her grandson couldn't speak the language at all. Besides, how many Catalans would they meet in their travels? Who would try to test their story? If someone got too nosy, they'd simply move on to some other city, some other country.

They landed in Miami, then Atlanta, then Greensboro. They were exhausted and slept the night at an airport hotel. The next day, they logged in and printed out guides to the county bus system. It was a fairly modern system, enclosed and electric, but the map made no sense to Bean.

"Why don't any of the buses go through here?" he asked.

"That's where the rich people live," said Sister Carlotta.

"They make them all live together in one place?"

"They feel safer," said Carlotta. "And by living close together, they have a better chance of their children marrying into other rich families."

"But why don't they want buses?"

"They ride in individual vehicles. They can afford the fees. It gives them more freedom to choose their own schedule. And it shows everyone just how rich they are."

"It's still stupid," said Bean. "Look how far the buses have to go out of their way."

"The rich people didn't want their streets to be enclosed in order to hold a bus system."

"So what?" asked Bean.

Sister Carlotta laughed. "Bean, isn't there plenty of stupidity in the military, too?"

"But in the long run, the guy who wins battles gets to make the decisions."

"Well, these rich people won the economic battles. Or their grandparents did. So now they get their way most of the time."

"Sometimes I feel like I don't know anything."

"You've lived half your life in a tube in space, and before that you lived on the streets of Rotterdam."

"I've lived in Greece with my family and in Araraquara, too. I should have figured this out."

„That was Greece. And Brazil. This is America."

"So money rules in America, but not those other places?"

"No, Bean. Money rules almost everywhere. But different cultures have different ways of displaying it. In Araraquara, for instance, they made sure that the tram lines ran out to the rich neighborhoods. Why? So the servants could come to work. In America, they're more afraid of criminals coming to steal, so the sign of wealth is to make sure that the only way to reach them is by private car or on foot."

"Sometimes I miss Battle School."

"That's because in Battle School, you were one of the very richest in the only coin that mattered there."

Bean thought about that. As soon as the other kids realized that, young and small as he was, he could outperform them in every class, it gave him a kind of power. Everyone knew who he was. Even those who mocked him had to give him a grudging respect. But. . . "I didn't always get my way."

"Graff told me some of the outrageous things you did," said Carlotta. "Climbing through the air ducts to eavesdrop. Breaking into the computer system."

"But they caught me."

"Not as soon as they'd like to have caught you. And were you punished? No. Why? Because you were rich."

"Money and talent aren't the same thing."

"That's because you can inherit money that was earned by your ancestors," said Sister Carlotta. "And everybody recognizes the value of money, while only select groups recognize the value of talent."

"So where does Peter live?"

She had the addresses of all the Wiggin families. There weren't many-the more common spelling had an s at the end. "But I don't think this will help us," said Carlotta. "We don't want to meet him at home."

"Why not?"

"Because we don't know whether his parents are aware of what he's doing or not. Graff was pretty sure they don't know. If two foreigners come calling, they're going to start to wonder what their son is doing on the nets."

"Where, then?"

"He could be in secondary school. But given his intelligence, I'd bet on his being in college." She was accessing more information as she spoke. "Colleges colleges colleges. Lots of them in town. The biggest first, the better for him to disappear in . . ."

"Why would he need to disappear? Nobody knows who he is."

"But he doesn't want anyone to realize that he spends no time on his schoolwork. He has to look like an ordinary kid his age. He should be spending all his free time with friends. Or with girls. Or with friends looking for girls. Or with friends trying to distract themselves from the fact that they can't find any girls."

"For a nun, you seem to know a lot about this."

"I wasn't born a nun."

"But you were born a girl."

"And no one is a better observer of the folkways of the adolescent male than the adolescent female."

"What makes you think he doesn't do all those things?"

"Being Locke and Demosthenes is a fulltime job."

"So why do you think he's in college at all?"

"Because his parents would be upset if he stayed home all day, reading and writing email."

Bean wouldn't know about what might make parents upset. He'd only known his parents since the end of the war, and they'd never found anything serious to criticize about him. Or maybe they never felt like he was really theirs. They didn't criticize Nikolai much, either. But ... more than they did Bean. There simply hadn't been enough time together for them to feel as comfortable, as parental, with their new son Julian.

"I wonder how my parents are doing."

"If anything was wrong, we would have heard," said Carlotta.

"I know," said Bean. "That doesn't mean I can't wonder."

She didn't answer, just kept working her desk, bringing new pages into the display. "Here he is," she said. "A nonresident student. No address. Just email and a campus box."

"What about his class schedule?" asked Bean.

"They don't post that."

Bean laughed. "And that's supposed to be a problem?"

"No, Bean, you aren't going to crack their system. I can't think of a better way for you to attract attention than to trip some trap and get a mole to follow you home."

"I don't get followed by moles."

"You never see the ones that follow you."

"It's just a college, not some intelligence service."

"Sometimes people with the least that is worth stealing are the most concerned with giving the appearance of having great treasures hidden away."

"Is that from the Bible?"

"No, it's from observation."

"So what do we do?"

"Your voice is too young," said Sister Carlotta. "I'll work the phone."

She talked her way to the head registrar of the university. "He was a very nice boy to carry all my things after the wheel broke on my cart, and if these keys are his I want to get them back to him right away, before he worries.... No I will not drop them in the mail, how would that be 'right away'? Nor will I leave them with you, they might not be his, and then what would I do? If they are his keys, he will be very glad you told me where his classes are, and if they aren't his keys, then what harm will it cause? ... All right, I'll wait."

Sister Carlotta lay back on the bed. Bean laughed at her. "How did a nun get so good at lying?"

She held down the MUTE button. "It isn't lying to tell a bureaucrat whatever story it takes to get him to do his job properly."

"But if he does his job properly, he won't give you any information about Peter."

"If he does his job properly, he'll understand the purpose of the rules and therefore know when it is appropriate to make exceptions."

"People who understand the purpose of the rules don't become bureaucrats," said Bean. "That's something we learned really fast in Battle School."

"Exactly," said Carlotta. "So I have to tell him the story that will help him overcome his handicap." Abruptly she refocused her attention on the phone. "Oh, how very nice. Well, that's fine. I'll see him there."

She hung up the phone and laughed. "Well, after all that, the registrar emailed him. His desk was connected, he admitted that he had lost his keys, and he wants to meet the nice old lady at Yum-Yum."

"What is that?" asked Bean.

"I haven't the slightest idea, but the way she said it, I figured that if I were an old lady living near campus, I'd already know." She was already deep in the city directory. "Oh, it's a restaurant near campus. Well, this is it. Let's go meet the boy who would be king."

"Wait a minute," said Bean. "We can't go straight there."

"Why not?"

"We have to get some keys."

Sister Carlotta looked at him like he was crazy. "I made up the bit about the keys, Bean."

"The registrar knows that you're meeting Peter Wiggin to give him back his keys. What if he happens to be going to Yum-Yum right now for lunch? And he sees us meet Peter, and nobody gives anybody any keys?"

"We don't have a lot of time."

"OK, I have a better idea. Just act flustered and tell him that in your hurry to get there to meet him, you forgot to bring the keys, so he should come back to the house with you."

"You have a talent for this, Bean."

"Deception is second nature to me."

The bus was on time and moved briskly, this being an off-peak time, and soon they were on campus. Bean was better at translating maps into real terrain, so he led the way to Yum-Yum.

The place looked like a dive. Or rather, it was trying to look like a dive from an earlier era. Only it really was rundown and under-maintained, so it was a dive trying to look like a nice restaurant decorated to look like a dive. Very complicated and ironic, Bean decided, remembering what Father used to say about a neighborhood restaurant near their house on Crete: Abandon lunch, all ye who enter here.

The food looked like common-people's restaurant food everywhere—more about delivering fats and sweets than about flavor or nutrition. Bean wasn't picky, though. There were foods he liked better than others, and he knew something of the difference between fine cuisine and plain fare, but after the streets of Rotterdam and years of dried and processed food in space, anything that delivered the calories and nutrients was fine with him. But he made the mistake of going for the ice cream. He had just come from Araraquara, where the sorvete was memorable, and the American stuff was too fatty, the flavors too syrupy. "Mmmm, deliciosa," said Bean.

"Fecha a boquinha, menino," she answered. "E nao fala portugues aqui."

"I didn't want to critique the ice cream in a language they'd understand."

"Doesn't the memory of starvation make you more patient?"

"Does everything have to be a moral question?"

"I wrote my dissertation on Aquinas and Tillich," said Sister Carlotta. "All questions are philosophical."

"In which case, all answers are unintelligible."

"And you're not even in grad school yet."

A tall young man slid onto the bench beside Bean. "Sorry I'm late," he said. "You got my keys?"

"I feel so foolish," said Sister Carlotta. "I came all the way here and then I realized I left them back home. Let me buy you some ice cream and then you can walk home with me and get them."

Bean looked up at Peter's face in profile. The resemblance to Ender was plain, but not close enough that anyone could ever mistake one for the other.

So this is the kid who brokered the ceasefire that ended the League War. The kid who wants to be Hegemon. Good looking, but not movie-star handsome-people would like him, but still trust him. Bean had studied the vids of Hitler and Stalin. The difference was palpable-Stalin never had to get elected; Hitler did. Even with that stupid mustache, you could see it in Hitler's eyes, that ability to see into you, that sense that whatever he said, wherever he looked, he was speaking to you, looking at you, that he cared about you. But Stalin, he looked like the liar that he was. Peter was definitely in the charismatic category. Like Hitler.

Perhaps an unfair comparison, but those who coveted power invited such thoughts. And the worst was seeing the way Sister Carlotta played to him. True, she was acting a part, but when she spoke to him, when that gaze was fixed on her, she preened a little, she warmed to him. Not so much that she'd behave foolishly, but she was aware of him with a heightened intensity that Bean didn't like. Peter had the seducer's gift. Dangerous.

"I'll walk home with you," said Peter. "I'm not hungry. Have you already paid?"

"Of course," said Sister Carlotta. "This is my grandson, by the way. Delfino."

Peter turned to notice Bean for the first time-though Bean was quite sure Peter had sized him up thoroughly before he sat down. "Cute kid," he said. "How old is he? Does he go to school yet?"

"I'm little," said Bean cheerfully, "but at least I'm not a yelda."

"All those vids of Battle School life," said Peter. "Even little kids are picking up that stupid polyglot slang."

"Now, children, you must get along, I insist on it." Sister Carlotta led the way to the door. "My grandson is visiting this country for the first time, young man, so he doesn't understand American banter."

"Yes I do," said Bean, trying to sound like a petulant child and finding it quite easy, since he really was annoyed.

"He speaks English pretty well. But you better hold his hand crossing this street, the campus trams zoom through here like Daytona."

Bean rolled his eyes and submitted to having Carlotta hold his hand across the street. Peter was obviously trying to provoke him, but why? Surely he wasn't so shallow as to think humiliating Bean would give him some advantage. Maybe he took pleasure in making other people feel small.

Finally, though, they were away from campus and had taken enough twists and turns to make sure they weren't being followed.

"So you're the great Julian Delphiki," said Peter.

"And you're Locke. They're touting you for Hegemon when Sakata's term is over. Too bad you're only virtual."

"I'm thinking of going public soon," said Peter.

"Ah, that's why you got the plastic surgery to make you so pretty," said Bean.

"This old face?" said Peter. "I only wear it when I don't care how I look."

"Boys," said Sister Carlotta. "Must you display like baby chimps?"

Peter laughed easily. "Come on, Mom, we was just playin'. Can't we still go to the movies?"

"Off to bed without supper, the lot of you," said Sister Carlotta.

Bean had had enough of this. "Where's Petra?" he demanded.

Peter looked at him as if he were insane. "I don't have her."

"You have sources," said Bean. "You know more than you're telling me."

"You know more than you're telling me, too," said Peter. "I thought we were working on trusting each other, and then we open the floodgates of wisdom."

"Is she dead?" said Bean, not willing to be deflected.

Peter looked at his watch. "At this moment. I don't know."

Bean stopped walking. Disgusted, he turned to Sister Carlotta. "We wasted a trip," he said. "And risked our lives for nothing."

"Are you sure?" said Sister Carlotta.

Bean looked back at Peter, who seemed genuinely bemused. "He wants to be Hegemon," said Bean, "but he's nothing." Bean walked away. He had memorized the route, of course, and knew how to get to the bus station without Sister Carlotta's help. Ender had ridden these buses as a child younger than Bean. It was the only consolation for the bitter disappointment of finding out that Peter was a gameplaying fool.

No one called after him, and he did not look back.

Bean took, not the bus to the hotel, but the one that passed nearest the school Ender had attended just before being taken into Battle School. The whole story of Ender's life had come out in the inquiry into Graff's conduct: Ender's first killing had taken place here, a boy named Stilson who had set on Ender with his gang. Bean had been there for Ender's second killing, which was pretty much the same situation as the first. Ender-alone, outnumbered, surrounded talked his way into single combat and then fought to destroy his enemy so no will to fight would remain. But he had known it here, at the age of six.

I knew things at that age, thought Bean. And younger, too. Not how to kill-that was beyond me, I was too small. But how to live, that was hard.

For me it was hard, but not for Ender. Bean walked through the neighborhoods of modest old houses and even more modest new ones-but to him they were all miracles. Not that he hadn't had plenty of chances, living with his family in Greece after the war, to see how most children grew up. But this was different. This was the place that had spawned Ender Wiggin.

I had more native talent for war than Ender had. But he was still the better commander. Was this the difference? He grew up where he never worried about finding another meal, where people praised him and protected him. I grew up where if I found a scrap of food I had to worry that another street kid might kill me for it. Shouldn't that have made me the one who fought desperately, and Ender the one who held back?

It wasn't the place. Two people in identical situations would

never make exactly the same choices. Ender is who he is, and I am who I am. It was in him to destroy the Formics. It was in me to stay alive.

So what's in me now? I'm a commander without an army. I have a mission to perform, but no knowledge of how to perform it. Petra, if she's still alive, is in desperate peril, and she counts on me to free her. The others are all free. She alone remains hidden. What has Achilles done to her? I will not have Petra end like Poke.

There it was. The difference between Ender and Bean. Ender came out of his bitterest battle of childhood undefeated. He had done what was required. But Bean had not even realized the danger his friend Poke was in until too late. If he had seen in time how immediate her peril was, he could have warned her, helped her. Saved her. Instead, her body was tossed into the Rhine, to be found bobbing like so much garbage among the wharves.

And it was happening again.

Bean stood in front of the Wiggin house. Ender had never spoken of it, nor had pictures of it been shown at the court of inquiry. But it was exactly what Bean had expected. A tree in the front yard, with wooden slats nailed into the trunk to form a ladder to the platform in a high crotch of the tree. A tidy, well-tended garden. A place of peace and refuge. What did Ender ever know of fear?

Where is Petra's garden? For that matter, where is mine?

Bean knew he was being unreasonable. If Ender had come back to Earth, he too would no doubt be in hiding, if Achilles hadn't simply killed him straight off. And even as things stood, he couldn't help but wonder if Ender might not prefer to be living as Bean was, on Earth, in hiding, than where he was now, in space, bound for another world and a life of permanent exile from the world of his birth.

A woman came out of the front door of the house. Mrs. Wiggin?

"Are you lost?" she asked.

Bean realized that in his disappointment-no, call it despair-he had forgotten his vigilance. This house might be watched. Even if it was not, Mrs. Wiggin herself might remember him, this young boy who appeared in front of her house during school hours.

"Is this where Ender Wiggin grew up?"

A cloud passed across her face, just momentarily, but Bean saw how her expression saddened before her smile could be put back. "Yes, it is," she said. "But we don't give tours."

For reasons Bean could not understand, on impulse he said, "I was with him. In the last battle. I fought under him."

Her smile changed again, away from mere courtesy and kindness, toward something like warmth and pain. "Ali," she said. "A veteran." And then the warmth faded and was replaced by worry. "I know all the faces of Ender's companions in that last battle. You're the one who's dead. Julian Delphiki."

Just like that, his cover was blown-and he had done it to himself, by telling her that he was in Ender's jeesh. What was he thinking? There were only eleven of them. "Obviously, there's someone who wants to kill me," he said. "If you tell anyone I came here, it will help him do it."

"I won't tell. But it was careless of you to come here."

"I had to see," said Bean, wondering if that was anything like a true explanation.

She didn't wonder. "That's absurd," she said. "You wouldn't risk your life to come here without a reason." And then it came together in her mind. "Peter's not home right now."

"I know," Bean said. "I was just with him at the university." And then he realized-there was no reason for her to think he was coming to see Peter, unless she had some idea of what Peter was doing. "You know," he said.

She closed her eyes, realizing now what she had confessed. "Either we are both very great fools," she said, "or we must have trusted each other at once, to let our guard down so readily."

"We're only fools if the other can't be trusted," said Bean.

"We'll find out, won't we?" Then she smiled. "No use leaving you standing out here on the street, for people to wonder why a child your size is not in school."

He followed her up the walkway to the front door. When Ender left home, did he walk down this path? Bean tried to imagine the scene. Ender never came home. Like Bonzo, the other casualty of the war. Bonzo, killed; Ender, missing in action; and now Bean coming up the walk to Ender's home. Only this was no sentimental visit with a grieving family. It was a different war now, out war it was, and she had another son at risk these days.

She was not supposed to know what he was doing. Wasn't that the whole point of Peter's having to camouflage his activities by pretending to be a student?

She made him a sandwich without even asking, as if she simply assumed that a child would be hungry. It was, of all things, that plain American cliché, peanut butter on white bread. Had she made such sandwiches for Ender?

"I miss him," said Bean, because he knew that would make her like him.

"If he had been here," said Mrs. Wiggin, "he probably would have been killed. When I read what ... Locke ... wrote about that boy from Rotterdam, I couldn't imagine he would have let Ender live. You knew him, too, didn't you. What's his name,?"

"Achilles," said Bean.

"You're in hiding," she said. "But you seem so young."

"I travel with a nun named Sister Carlotta," said Bean. "We claim we're grandmother and grandson."

"I'm glad you're not alone."

"Neither is Ender."

Tears came to her eyes. "I suppose he needed Valentine more than we did."

On impulse-again, an impulsive act instead of a calculated decision-Bean reached out and set his hand in hers. She smiled at him.

The moment passed. Bean realized again how dangerous it was to be here. What if this house was under surveillance? The I.F. knew about Peter-what if they were observing the house?

"I should go," said Bean.

"I'm glad you came by," she said. "I must have wanted very much to talk to someone who knew Ender without being envious of him."

"We were all envious," said Bean. "But we also knew he was the best of us."

"Why else would you envy him, if you didn't think he was better?"

Bean laughed. "Well, when you envy somebody, you tell yourself he isn't really better after all."

"So ... did the other children envy his abilities?" asked Mrs. Wiggin. "Or only the recognition he received?"

Bean didn't like the question, but then remembered who it was that was asking. "I should turn that question back on you. Did Peter envy his abilities? Or only the recognition?"

She stood there, considering whether to answer or not. Bean knew that family loyalty worked against her saying anything. "I'm not just idly asking," Bean said. "I don't know how much you know about what Peter's doing. . ."

"We read everything he publishes," said Mrs. Wiggin. "And then we're very careful to act as if we hadn't a clue what's going on in the world."

"I'm trying to decide whether to throw in with Peter," said Bean. "And I have no way of knowing what to make of him. How much to trust him."

"I wish I could help you," said Mrs. Wiggin. "Peter marches to a different drummer. I've never really caught the rhythm."

"Don't you like him?" asked Bean, knowing he was too blunt, but knowing also that he wasn't going to get many chances like this, to talk to the mother of a potential ally---or rival.

"I love him," said Mrs. Wiggin. "He doesn't show us much of himself. But that's only fair-we never showed our children much of ourselves, either."

"Why not?" asked Bean. He was thinking of the openness of his mother and father, the way they knew Nikolai, and Nikolai knew them. It had left him almost gasping, the unguardedness of their conversations with each other. Clearly the Wiggin household did not have that custom.

"It's very complicated," said Mrs. Wiggin.

"Meaning that you think it's none of my business."

"On the contrary, I know it's very much your business." She sighed and sat back down. "Come on, let's not pretend this is only a doorstep conversation. You came here to find out about Peter. The easy answer is simply to tell you that we don't know a thing. He never tells anyone anything they want to know, unless it would be useful to him for them to know it."

"But the hard answer?"

"We've been hiding from our children, almost from the start," said Mrs. Wiggin. "We can hardly be surprised or resentful when they learned at a very early age to be secretive."

"What were you hiding?"

"We don't tell our children, and I should tell you?" But she answered her own question at once. "If Valentine and Ender were here, I think we would talk to them. I even tried to explain some of this to Valentine before she left to join Ender in ... space. I did a very bad job, because I had never put it in words before. Let me just ... let me start by saying ... we were going to have a third child anyway, even if the I.F. hadn't asked us to."

Where Bean had grown up, the population laws hadn't meant much—the street children of Rotterdam were all extra people and knew perfectly well that by law not one of them should have been born but when you're starving, it's hard to care much about whether you're going to get into the finest schools. Still, when the laws were repealed, he read about them and knew the significance of their decision to have a third child. "Why would you do that?" asked Bean. "It would hurt all your children. It would end your careers."

"We were very careful not to have careers," said Mrs. Wiggin. "Not careers that we'd hate to give up. What we had was only jobs. You see, we're religious people."

"There are lots of religious people in the world."

"But not in America," said Mrs. Wiggin. "Not the kind of fanatic that does something so selfish and antisocial as to have more than two children, just because of some misguided religious ideas. And when Peter tested so high as a toddler, and they started monitoring him well, that was a disaster for us. We had hoped to be ... unobtrusive. To disappear. We're very bright people, you know."

"I wondered why the parents of such geniuses didn't have noted careers of their own," said Bean. "Or at least some kind of standing in the intellectual community."

"Intellectual community," said Mrs. Wiggin scornfully. "America's intellectual community has never been very bright. Or honest. They're all sheep, following whatever the intellectual fashion of the decade happens to be. Demanding that everyone follow their dicta in lockstep. Everyone has to

be open-minded and tolerant of the things they believe, but God forbid they should ever concede, even for a moment, that someone who disagrees with them might have some fingerhold on truth."

She sounded bitter.

"I sound bitter," she said.

"You've lived your life," said Bean. "So you think you're smarter than the smart people."

She recoiled a bit. "Well, that's the kind of comment that explains why we never discuss our faith with anyone."

"I didn't mean it as an attack," said Bean. "I think I'm smarter than anybody I've ever met, because I am. I'd have to be dumber than I am not to know it. You really believe in your religion, and you resent the fact that you had to hide it from others. That's all I was saying."

"Not religion, religions," she said. "My husband and I don't even share the same doctrine. Having a large family in obedience to God, that was about the only thing we agreed on. And even at that, we both had elaborate intellectual justifications for our decision to defy the law. For one thing, we didn't think it would hurt our children at all. We meant to raise them in faith, as believers."

"So why didn't you?"

"Because we're cowards after all," said Mrs. Wiggin. "With the I.F. watching, we would have had constant interference. They would have intervened to make sure we didn't teach our children anything that would prevent them from fulfilling the role that Ender and you ended up fulfilling. That's when we started hiding our faith. Not really from our children, just from the Battle School people. We were so relieved when Peter's monitor was taken away. And then Valentine's. We thought we were done. We were going to move to a place where we wouldn't be so badly treated, and have a third child, and a fourth, as many as we could have before they arrested us. But then they came to us and requisitioned a third child. So we didn't have to move. You see? We were lazy and frightened. If the Battle School was going to give us a cover to allow us to have one more child, then why not?"

"But then they took Ender."

"And by the time they took him, it was too late. To raise Peter and Valentine in our faith. If you don't teach children when they're little, it's never really inside them. You have to hope they'll come to it later, on their own. It can't come from the parents, if you don't begin when they're little."

"Indoctrinating them."

"That's what parenting is," said Mrs. Wiggin. "Indoctrinating your children in the social patterns that you want them to live by. The intellectuals have no qualms about using the schools to indoctrinate our children in their foolishness."

"I wasn't trying to provoke you," said Bean.

"And yet you use words that imply criticism."

"Sorry," said Bean.

"You're still a child," said Mrs. Wiggin. "No matter how bright you are, you still absorb a lot of the attitudes of the ruling class. I don't like it, but there you are. When they took Ender away, and we finally could live without constant scrutiny of every word that we said to our children, we realized that Peter was already completely indoctrinated in the foolishness of the schools. He would never have gone along with our earlier plan. He would have denounced us. We would have lost him. So do you cast off your firstborn child in order to give birth to a fourth or fifth or sixth? Peter seemed sometimes not to have any conscience at all. If ever anyone needed to believe in God, it was Peter, and he didn't."

"He probably wouldn't have anyway," said Bean.

"You don't know him," said Mrs. Wiggin. "He lives by pride. If we had made him proud of being a secret believer, he would have been valiant in that struggle. Instead he's ... not."

"So you never even tried to convert him to your beliefs?" asked Bean.

"Which ones?" asked Mrs. Wiggin. "We had always thought that the big struggle in our family would be over which religion to teach them, his or mine. Instead we had to watch over Peter and find ways to help him find ... decency. No, something much more important than that. Integrity. Honor. We monitored him the way that the Battle School had monitored all three of them. It took all our patience to keep our hands off when he forced Valentine to become Demos-thenes. It was so contrary to her spirit. But we soon saw that it was not changing her-that her nobility of heart was, if anything, stronger through resistance to Peter's control."

"You didn't try to simply block him from what he was doing?"

She laughed harshly. "Oh, now, you're supposed to be the smart one. Could someone have blocked you? And Peter failed to get into Battle School because he was too ambitious, too rebellious, too unlikely to fulfill assignments and follow orders. We were supposed to influence him by forbidding him or blocking him?"

"No, I can see you couldn't," said Bean. "But you did nothing at all?"

"We taught him as best we could," said Mrs. Wiggin. "Comments at meals. We could see how he tuned us out, how he despised our opinions. It didn't help that we were trying so hard to conceal that we knew everything he'd written as Locke; our conversations really were ... abstract. Boring, I suppose. And we didn't have those intel-lectual credentials. Why should he respect us? But he heard our ideas. Of what nobility is. Goodness and honor. And whether he believed us at some level or simply found such things within himself, we've seen him grow. So ... you ask me if you can trust him, and I can't answer, because ... trust him to do what? To act as you want him to? Never."

To act according to some predictable pattern? I should laugh. But we've seen signs of honor. We've seen him do things that were very hard, but that seemed to be not just for show, but because he really believed in what he was doing. Of course, he might have simply been doing things that would make Locke seem virtuous and admirable. How can we know, when we can't ask him?"

"So you can't talk to him about what matters to you, because you know he'll despise you, and he can't talk to you about what matters to him, because you've never shown him that you actually have the understanding to grasp what he's thinking."

Tears sprang to her eyes and glistened there. "Sometimes I miss Valentine so much. She was so breathtakingly honest and good."

"So she told you she was Demosthenes?"

"No," said Mrs. Wiggin. "She was wise enough to know that if she didn't keep Peter's secret, it would split the family apart forever. No, she kept that hidden from us. But she made sure we knew just what kind of person Peter was. And about everything else in her life, everything Peter left for her to decide for herself, she told us that, and she listened to us, too, she cared what we thought."

"So you told her what you believe?"

"We didn't tell her about our faith," said Mrs. Wiggin. "But we taught her the results of that faith. We did the best we could."

"I'm sure you did," said Bean.

"I'm not stupid," said Mrs. Wiggin. "I know you despise us, just as we know Peter despises us."

"I don't," said Bean.

"I've been lied to enough to recognize it when you do it."

"I don't despise you for ... I don't despise you at all," said Bean. "But you have to see that the way you all hide from each other, Peter growing up in a family where nobody tells anybody anything that matters-that doesn't make me really optimistic about ever being able to trust him. I'm about to put my life in his hands. And now I find out that in his whole life, he's never had an honest relationship with anybody."

Her eyes grew cold and distant then. "I see that I've provided you with useful information. Perhaps you should go now."

"I'm not judging you," said Bean.

"Don't be absurd, of course you are," said Mrs. Wiggin.

"I'm not condemning you, then."

"Don't make me laugh. You condemn us, and you know what? I agree with you. I condemn us too. We set out to do God's will, and we've ended up damaging the one child we have left to us. He's grimly determined to make his mark in the world. But what sort of mark will it be?"

"An indelible one," said Bean. "If Achilles doesn't destroy him first."

"We did some things right," said Mrs. Wiggin. "We gave him the freedom to test his own abilities. We could have stopped him from publishing, you know. He thinks he outsmarted us, but only because we played incredibly dumb. How many parents would have let their teenage son meddle in world affairs? When he wrote against ... against letting Ender come home-you don't know how hard it was for me not to claw his arrogant little eyes out .....

For the first time, he saw something of the rage and frustration she must have been going through. He thought: This is how Peter's mother feels about him. Maybe orphanhood wasn't such a drawback.

"But I didn't, did IT' said Mrs. Wiggin.

"Didn't what?"

"Didn't stop him. And he turned out to be right. Because if Ender were here on Earth, he'd either be dead, or he would have been one of the kidnapped children, or he'd be in hiding like you. But I still ... Ender is his brother, and he exiled him from Earth forever. And I couldn't help but remember the terrible threats he made when Ender was still little, and lived with us. He told Ender and Valentine then that someday he would kill Ender, and pretend that it was an accident."

"Ender's not dead."

"My husband and I have wondered, in the dark nights when we try to make sense of what has happened to our family, to all our dreams, we've wondered if Peter got Ender exiled because he loved him and knew the dangers he'd face if he returned to Earth. Or if he exiled him because he feared that if Ender came home Peter would kill him, just as he threatened to-so then, exiling Ender could be viewed as a sort of, I don't know, an elementary kind of self-control. Still, a very selfish thing, but still showing a sort of vague respect for decency. That would be progress."

"Or maybe none of the above."

"Or maybe we're all guided by God in this, and God has brought you here."

"So Sister Carlotta says."

"She might be right."

"I don't much care either way," said Bean. "If there is a God, I think he's pretty lousy at his job."

"Or you don't understand what his job is."

"Believe me, Sister Carlotta is the nunnish equivalent of a Jesuit. Let's not even get into trading sophistries, I've been trained by an expert and, as you say, you're not in practice."

"Julian Delphiki," said Mrs. Wiggin, "I knew when I saw you out on the front sidewalk that I not only could, I must tell you things that I have spoken of to no one but my husband, and I've even said things that I've never said to him. I've told you things that Peter never imagined that I knew or thought or saw or felt. If you have a low opinion of my mothering, please keep in mind that whatever you know, you know because I told you, and I told you because I think that someday Peter's future may depend on your knowing what he's going to do, or how to help him. Or-Peter's future as a decent human being might depend on his helping you. So I bared my heart to you. For Peter's sake. And I face your scorn, Julian Delphiki, for Peter's sake as well. So don't fault my love for my son. Whether he thinks he cares or not, he grew up with parents who love him and have done everything we could for him. Including lie to him about what we believe, what we know, so that he can move through his world like Alexander, boldly reaching for the ends of the earth, with the complete freedom that comes from having parents who are too stupid to stop you. Until you've had a child of your own and sacrificed for that child and twisted your life into a pretzel, into a knot for him, don't you dare to judge me and what I've done."

"I'm not judging you," said Bean. "Truly I'm not. As you said, I'm just trying to understand Peter."

"Well, do you know what I think?" said Mrs. Wiggin. "I think you've been asking all the wrong questions. 'Can I trust him?' " She mimicked him scornfully. "Whether you trust somebody or distrust him has a lot more to do with the kind of person you are than the kind of person he is. The real question you ought to be asking is, Do you really want Peter Wiggin to rule the world? Because if you help him, and he somehow lives through all this, that's where it will lead. He won't stop until he achieves that. And he'll bum up your future along with anybody else's, if it will help him reach that goal. So ask yourself, will the world be a better place with Peter Wiggin as Hegemon? And not some benign ceremonial figurehead like the ineffectual toad who holds that office now. I mean Peter Wiggin as the Hegemon who reshapes this world into whatever form he wants it to have."

" But you're assuming that I care whether the world is a better place," said Bean. "What if all I care about is my own survival or advancement? Then the only question that would matter is, Can I use Peter to advance my own plans?"

She laughed and shook her head. "Do you believe that about yourself? Well, you are a child."

"Pardon me, but did I ever pretend to be anything else?"

"You pretend," said Mrs. Wiggin, "to be a person of such enormous value that you can speak of 'allying' with Peter Wiggin as if you brought armies with you."

"I don't bring armies," said Bean, "but I bring victory for whatever army he gives me."

"Would Ender have been like you, if he had come home? Arrogant? Aloof?"

"Not at all," said Bean. "But I never killed anybody."

"Except buggers," said Mrs. Wiggin.

"Why are we at war with each other?" said Bean.

"I've told you everything about my son, about my family, and you've given me nothing back. Except your ... sneer."

"I'm not sneering," said Bean. "I like you."

"Oh, thank you very much."

"I can see in you the mother of Ender Wiggin," said Bean. "You understand Peter the way Ender understood his soldiers. The way Ender understood his enemies. And you're bold enough to act instantly when the opportunity presents itself. I show up on your doorstep, and you give me all this. No, ma'am, I don't despise you at all. And you know what I think? I think that, perhaps without even realizing it yourself, you believe in Peter completely. You want him to succeed. You think he should rule the world. And you've told me all this, not because I'm such a nice little boy, but because you think that by telling me, you'll help Peter move that much closer toward ultimate victory."

She shook her head. "Not everybody thinks like a soldier."

"Hardly anyone does," said Bean. "Precious few soldiers, for that matter."

"Let me tell you something, Julian Delphiki. You didn't have a mother and father, so you need to be told. You know what I dread most? That Peter will pursue these ambitions of his so relentlessly that he'll never have a life."

"Conquering the world isn't a life?" asked Bean.

"Alexander the Great," said Mrs. Wiggin. "He haunts my nightmares for Peter. All his conquests, his victories, his grand achievements-they were the acts of an adolescent boy. By the time he got around to marrying, to having a child, it was too late. He died in the midst of it. And he probably wouldn't have done a very good job of it either. He was already too powerful before he even tried to find love. That's what I fear for Peter."

"Love? That's what this all comes down to?"

"No, not just love. I'm talking about the cycle of life. I'm talking about finding some alien creature and deciding to marry her and stay with her forever, no matter whether you even like each other or not a few years down the road. And why will you do this? So you can make babies together, and try to keep them alive and teach them what they need to know so that someday they'll have babies, and

keep the whole thing going. And you'll never draw a secure breath until you have grandchildren, a double handful of them, because then you know that your line won't die out, your influence will continue. Selfish, isn't it? Only it's not selfish, it's what life is for. It's the only thing that brings happiness, ever, to anyone. All the other things-victories, achievements, honors, causes-they bring only momentary flashes of pleasure. But binding yourself to another person and to the children you make together, that's life. And you can't do it if your life is centered on your ambitions. You'll never be happy. It will never be enough, even if you rule the world."

"Are you telling me? Or telling Peter?" asked Bean.

"I'm telling you what I truly want for Peter," said Mrs. Wiggin. "But if you're a tenth as smart as you think you are, you'll get that for yourself. Or you'll never have real joy in this life."

"Excuse me if I'm missing something here," said Bean, "but as far as I can tell, marrying and having children has brought you nothing but grief. You've lost Ender, you've lost Valentine, and you spent your life pissed off at Peter or fretting about him."

"Yes," she said. "Now you're getting it."

"Where's the joy? That's what I'm not getting."

"The grief is the joy," said Mrs. Wiggin. "I have someone to grieve for. Whom do you have?"

Such was the intensity of their conversation that Bean had no barrier in place to block what she said. It stirred something inside him. All the memories of people that he'd loved--despite the fact that he refused to love anyone. Poke. Nikolai. Sister Carlotta. Ender. His parents, when he finally met them. "I have someone to grieve for," said Bean.

"You think you do," said Mrs. Wiggin. "Everyone thinks they do, until they take a child into their heart. Only then do you know what it is to be a hostage to love. To have someone else's life matter more than your own."

"Maybe I know more than you think," said Bean.

"Maybe you know nothing at all," said Mrs. Wiggin.

They faced each other across the table, a loud silence between them. Bean wasn't even sure they'd been quarreling. Despite the heat of their exchange, he couldn't help but feel that he'd just been given a strong dose of the faith that she and her husband shared with each other.

Or maybe it really was objective truth, and he simply couldn't grasp it because he wasn't married.

And never would be. If there was ever anyone whose life virtually guaranteed that he'd be a terrible father, it was Bean. Without ever exactly saying it aloud, he'd always known that he would never marry, never have children.

But her words had this much effect: For the first time in his life, he found himself almost wishing that it were not SO.

In that silence, Bean heard the front door open, and Peter's and Sister Carlotta's voices. At once Bean and Mrs. Wiggin rose to their feet, feeling and looking guilty, as if they had been caught in some kind of clandestine rendezvous. Which, in a way, they had.

"Mother, I've met a traveler," said Peter when he came into the room.

Bean heard the beginning of Peter's lie like a blow to the face for Bean knew that the person Peter was lying to knew his story was false, and yet would lie in return by pretending to believe.

This time, though, the lie could be nipped in the bud.

"Sister Carlotta," said Mrs. Wiggin. "I've heard so much about you from young Julian here. He says you are the world's only Jesuit nun."

Peter and Sister Carlotta looked at Bean in bafflement. What was he doing there? He almost laughed at their consternation, in part because he couldn't have answered that question himself.

"He came here like a pilgrim to a shrine," said Mrs. Wiggin. "And he very bravely told me who he really is. Peter, you must be very careful not to tell anyone that this is one of Ender's companions. Julian Delphiki. He wasn't killed in that explosion, after all. Isn't that wonderful? We must make him welcome here, for Ender's sake, but he's still in danger, so it has to be our secret who he is."

"Of course, Mother," said Peter. He looked at Bean, but his eyes betrayed nothing of what he was feeling. Like the cold eyes of a rhinoceros, unreadable, yet with enormous danger behind them all the same.

Sister Carlotta, though, was obviously appalled. "After all our security precautions," she said, "and you just blurt it out? And this house is bound to be watched."

"We had a good conversation," said Bean. "That's not possible in the midst of lies."

"It's my life you were risking here, too, you know," said Carlotta.

Mrs. Wiggin touched her arm. "Do stay here with us, won't you? We have room in our house for visitors."

"We can't," said Bean. "She's right. Coming here at all has compromised us both. We'll probably want to fly out of Greensboro first thing in the morning."

He glanced at Sister Carlotta, knowing that she would understand that he was really saying they should leave by train that night. Or by bus the day after tomorrow. Or rent an apartment under assumed names and stay here for a week. The lying had begun again, for safety's sake.

"At least stay for dinner?" asked Mrs. Wiggin. "And meet my husband? I think he'll be just as intrigued as I was to meet a boy who is so famously dead."

Bean saw Peter's eyes glaze over. He understood why-to Peter, a dinner with his parents would be an excruciating social exercise during which nothing important could be said. Wouldn't all your lives be simpler if you could all just tell each other the truth? But Mrs. Wiggin had said that Peter needed to feel that he was on his own. If he knew that his parents knew of his secret activities, that would infantilize him, apparently. Though if he were really the sort of man that could rule the world, surely he could deal with knowing that his parents were in on his secrets.

Not my decision. I gave my word.

"We'd be glad to," said Bean. "Though there's a danger of having your house blown up because we're in it."

"Then we'll eat out," said Mrs. Wiggin. "See how simple things can be? If something's going to be blown up, let it be a restaurant. They carry insurance for that sort of thing."

Bean laughed. But Peter didn't. Because, Bean realized, Peter doesn't know how much she knows, and therefore he thinks her comment was idiocy instead of irony.

"Not Italian food," said Sister Carlotta.

"Oh, of course not," said Mrs. Wiggin. "There's never been a decent Italian restaurant in Greensboro."

With that, the conversation turned to safe and meaningless topics. Bean took a certain relish in watching how Peter squirmed at the utter waste of time that such chitchat represented. I know more about your mother than you do, thought Bean. I have more respect for her.

But you're the one she loves.

Bean was annoyed to notice the envy in his own heart. Nobody's immune from those petty human emotions, he knew that. But somehow he had to learn how to distinguish between true observations and what his envy told him. Peter had to learn the same. The trust that Bean had given so easily to Mrs. Wiggin would have to be earned step by step between him and Peter. Why?

Because he and Peter were so alike. Because he and Peter were natural rivals. Because he and Peter could so easily be deadly enemies.

As I am a second Ender in his eyes, is he a second Achilles in mine? If there were no Achilles in the world, would I think of Peter as the evil I must destroy?

And if we do defeat Achilles together, will we then have to turn and fight each other, undoing all our triumphs, destroying everything we've built?

Re: allegiance

Let's make one thing clear. I never "joined" with Achilles. From all I could see, Achilles was speaking for Mother Russia. It was Mother Russia that I agreed to serve, and that is a decision I did not and do not regret. I believe the artificial divisions among the peoples of Greater Slavia serve only to keep any of us from achieving our potential in the world. In the chaos that has resulted from the exposure of Achilles' true nature, I would be glad of any opportunity to serve. The things I learned in Battle School could well make a difference to the future of our people. If my link with Achilles makes it impossible for me to be of service, so be it. But it would be a shame if we all suffered from that last act of sabotage by a psychopath. It is precisely now that I am most needed. Mother Russia will find no more loyal son than this one.

For Peter, the dinner at Leblon with his parents and Bean and Carlotta consisted of long periods of excruciating boredom interrupted by short passages of sheer panic. Nothing that anyone was saying mattered in the slightest. Because Bean was passing himself off as little more than a tourist visiting Ender's shrine, all anyone could talk about was Ender Ender Ender. But inevitably the conversation would skirt topics that were highly sensitive, things that might give away what Peter was really doing and the role that Bean might end up playing.

The worst was when Sister Carlotta—who, nun or not, clearly knew how to be a malicious bitch when she wanted to—began probing Peter about his studies at UNCG, even though she knew perfectly well that his schoolwork there was merely a cover for far more important matters. "I'm just surprised, I suppose, that you spend your time on a regular course of study when clearly you have abilities that should be used on a broader stage," she said.

"I need the degree, just like anyone else," said Peter, writhing inside.

"But why not study things that will prepare you to play a role on the great stage of world affairs?"

Ironically, it was Bean who rescued him. "Come now, Grandmother," he said. "A man of Peter Wiggin's ability is ready to do anything he wants, whenever he wants. Formal study is just busywork to him anyway. He's only doing it to prove to other people that he's able to live by the rules when he needs to. Right, Peter?"

"Close enough," Peter said. "I'm even less interested in my studies than you all are, and you shouldn't be interested in them at all."

"Well, if you hate it so much, why are we paying for tuition?" asked Father.

"We're not," Mother reminded him. "Peter has such a nice scholarship that they're paying him to attend there."

"Not getting their money's worth, though, are they?" said Father. "They're getting what they want," said Bean. "For the rest of his life, whatever Peter here accomplishes, it will be mentioned that he studied at UNCG. He'll be a walking advertisement for them. I'd call that a pretty good return on investment, wouldn't you?"

The kid had mastered the kind of language Father understood. Peter had to credit Bean with knowing his audience when he spoke. Still, it annoyed Peter that Bean had so easily sussed what kind of idiots his parents were, and how easily they could be pandered to. It was as if, by pulling Peter's conversational irons out of the fire, Bean was rubbing it in about Peter's still being a child living at home, while Bean was out dealing with life more directly. It made Peter chafe all the more.

Only at the end of the dinner, as they left the Brazilian restaurant and headed for the Market/Holden station, did Bean drop his bombshell. "You know that since we've compromised ourselves here, we have to go back into hiding at once." Peter's parents made little noises of sympathy, and then Bean said, "What I was wondering was, why doesn't Peter go with us? Get out of Greensboro for a while? Would YOU like to, Peter? Do you have a passport?"

"No, he doesn't," said Mother, at exactly the same moment that Peter said, "Of course I do."

"You do?" asked Mother.

"Just in case," said Peter. He didn't add: I have six passports from four countries, as a matter of fact, and ten different bank identities with funds from my writing gigs socked away.

"But you're in the middle of a semester," said Father.

"I can take a leave whenever I want," said Peter. "It sounds interesting. Where are you going?"

"We don't know," said Bean. "We don't decide until the last minute. But we can email you and tell you where we are."

"Campus email addresses aren't secure," said Father helpfully.

"No email is really secure, is it?" asked Mother.

"It will be a coded message," said Bean. "Of course."

"It doesn't sound very sensible to me," said Father. "Peter may think his studies are just busywork, but in fact you have to have that degree just to get started in life. You need to stick to something long term and finish it, Peter. If your transcript shows that you did your education in fits and starts, that won't look good to the best companies."

"What career do you think I'm going to pursue?" Peter asked, annoyed. "Some kind of corporate dull bob?"

"I really hate it when you use that ersatz Battle School slang," said Father. "You didn't go there, and it makes you sound like some kind of teenage wannabe."

"I don't know about that," said Bean, before Peter could blow up. "I was there, and I think that stuff is just part of the language. I mean, the word 'wannabe' was once slang, wasn't it? It can grow into the language just by people using it."

"It makes him sound like a kid," said Father, but it was just a parting shot, Father's pathetic need to have the last word.

Peter said nothing. But he wasn't grateful to Bean for taking his side. On the contrary, the kid really pissed him off. It's like Bean thought he could come into Peter's life and intervene between him and his parents like some kind of savior. It diminished Peter in his own eyes. None of the people who wrote to him or read his work as Locke or Demosthenes ever condescended to him, because they didn't know he was a kid. But the way Bean was acting was a warning of things to come. If Peter did come out under his real name, he would immediately have to start dealing with condescension. People who had once trembled at the idea of coming under Demosthenes' scrutiny, people who had once eagerly sought Locke's imprimatur, would now poo-poo anything Peter wrote, saying, Of course a child would think that way, or, more kindly but no less devastatingly, When he has more experience, he'll come to see that.... Adults were always saying things like that. As if experience actually had some correlation with increased wisdom; as if most of the stupidity in the world were not propounded by adults.

Besides, Peter couldn't help but feel that Bean was enjoying it, that he loved having Peter at such a disadvantage. Why had the little weasel gone to his house? Oh, pardon, to Ender's house, naturally. But he knew it was Peter's house, and to come home and find Bean sitting there talking to his mother, that was like catching a burglar in the act. He hadn't liked Bean from the beginning--especially not after the petulant way he walked off just because Peter didn't immediately answer the question he was asking. Admittedly, Peter had been teasing him a little, and there was an element of condescension about ittoying with the little kid before telling him what he wanted to know. But Bean's retaliation had gone way overboard. Especially this miserable dinner.

And yet ...

Bean was the real thing. The best that Battle School had produced. Peter could use him. Peter might actually even need him, precisely because he could not yet afford to come out publicly as himself. Bean had the credibility despite his size and age, because he'd fought the fight. He could actually do things instead of having to pull strings in the background or try to manipulate government decisions by influencing public opinion. If Peter could secure some kind of working alliance with him, it might go a long way toward compensating for his impotence. If only Bean weren't so insufferably smug.

Can't let my personal feelings interfere with the work at hand.

"Tell you what," Peter said. "Mom and Dad, you've got stuff to do tomorrow, but my first class isn't till noon. Why don't I go with these two wherever they're spending the night and talk through the possibility of maybe taking a field trip with them."

"I don't want you just taking off and leaving your mother to worry about what's happening to you," said Father. "I think it's very clear to all of us that young Mr. Delphiki here is a trouble magnet, and I think your mother has lost enough children without having to worry about something even worse happening to you."

It made Peter cringe the way Father always talked as if it were only Mother who would be worried, only Mother who cared what happened to him. And if it was true—who could tell, with Father?—that was even worse. Either Father didn't care what happened to Peter, or he did care but was such a git that he couldn't admit it.

"I won't leave town without checking in with Mommy," said

"You don't need to be sarcastic," said Father.

"Dear," said Mother, "Peter isn't five, to be rebuked in front of company." Which, of course, made him seem to be maybe six years old. Thanks so much for helping, Mom.

"Aren't families complicated?" said Sister Carlotta.

Oh, thanks, thou holy bitch, said Peter silently. You and Bean are the ones who complicated the situation, and now you make smug little comments about how much better it is for unconnected people like you. Well, these parents are my cover. I didn't pick them, but I have to use them. And for you to mock my situation only shows your ignorance. And, probably, your envy, seeing how you are never going to have children or even get laid in your whole life, Mrs. Jesus.

"Poor Peter has the worst of both worlds," said Mother. "He's the oldest, so he was always held to a higher standard, and yet he's the last of our children left at home, which means he also gets babied more than he can bear. It's so awful, the fact that parents are mere human beings and constantly make mistakes. I think sometimes Peter wishes he had been raised by robots."

Which made Peter want to slide right down into the sidewalk and spend the rest of his life as an invisible patch of concrete. I converse with spies and military officers, with political leaders and power brokers—and my mother still has the power to humiliate me at will!

"Do what you want," said Father. "It's not like you're a minor. We can't stop you."

"We could never stop him from doing what he wanted even when he was a minor," said Mother.

Damn right, thought Peter.

"The curse of having children who are smarter than you," said Father, "is that they think their superior rational process is enough to compensate for their lack of experience."

If I were a little brat like Bean, that comment would have been the last straw. I would have walked away and not come home for a week, if ever. But I'm not a child and I can control my personal resentments and do what's expedient. I'm not going to throw off my camouflage out of pique.

At the same time, I can't be faulted, can I, for wondering if there's any chance that my father might have a stroke and go permanently mute.

They were at the station. With a round of good-byes, Father and Mother took the bus north toward home, and Peter got on an eastbound bus with Bean and Carlotta.

And, as Peter expected, they got off at the first stop and crossed over to catch the westbound bus. They really made a religion out of paranoia.

Even when they got back to the airport hotel, they did not enter the building. Instead they walked through the shopping mall that had once been a parking garage back when people drove cars to the airport. "Even if they bug the mall," said Bean, "I doubt they can afford the manpower to listen to everything people say."

"If they're bugging your room," said Peter, "that means they're already on to you."

"Hotels routinely bug their rooms," said Bean. "To catch vandals and criminals in the act. It's a computer scan, but nothing stops the employees from listening in."

"This is America," said Peter.

"You spend way too much time thinking about global affairs," said Bean. "If you ever do have to go underground, you won't have a clue how to survive."

"You're the one who invited me to join you in hiding," said Peter. "What was that nonsense about? I'm not going anywhere. I have too much work to do."

"Ah, yes," said Bean. "Pulling the world's strings from behind a curtain. The trouble is, the world is about to move from politics to war, and your strings are going to be snapped."

"It's still politics."

"But the decisions are made on the battlefield, not in the conference rooms."

"I know," said Peter. "That's why we should work together."

"I can't think why," said Bean. "The one thing I asked you for information about where Petra is-you tried to sell me instead of just giving it to me. Doesn't sound like you want an ally. Sounds like you want a customer."

"Boys," said Sister Carlotta. "Bickering isn't how this is going to work."

"If it's going to work," said Peter, "it's going to work however Bean and I make it work. Between us."

Sister Carlotta stopped cold, grabbed Peter's shoulder, and drew him close. "Get this straight right now, you arrogant twit. You're not the only brilliant person in the world, and you're far from being the only one who thinks he pulls all the strings. Until you have the courage to come out from behind the veil of these ersatz personalities, you don't have much to offer those of us who are working in the real world."

"Don't ever touch me like that again," said Peter.

"Oh, the personage is sacred?" said Sister Carlotta. "You really do live on Planet Peter, don't you?"

Bean interrupted before Peter could answer the bitch. "Look, we gave you everything we had on Ender's jeesh, no strings attached."

"And I used it. I got most of them out, and pretty damn fast, too."

"But not the one who sent the message," said Bean. "I want Petra."

"And I want world peace," said Peter. "You think too small."

"I may think too small for you," said Bean, "but you think too small for me. Playing your little computer games, juggling stories back and forth-well, my friend trusted me and asked me for help. She was trapped with a psychopathic killer and she doesn't have anyone but me who cares a rat's ass what happens to her."

"She has her family," murmured Sister Carlotta. Peter was pleased to learn that she corrected Bean, too. An all-purpose bitch.

"You want to save the world, but you're going to have to do it one battle at a time, one country at a time. And you need people like me, who get our hands dirty," said Bean.

"Oh, spare me your delusions," said Peter. "You're a little boy in hiding."

"I'm a general who's between armies," said Bean. "If I weren't, you wouldn't be talking to me."

"And you want an army so you can go rescue Petra," said Peter.

"So she's alive?"

"How would I know?"

"I don't know how you'd know. But you know more than you're telling me, and if you don't give me what you have, right now, you arrogant oomay, I'm done with you, I'll leave you here playing your

little net games, and go find somebody who's not afraid to come out of Mama's house and take some risks."

Peter was almost blind with rage. For a moment.

And then he calmed himself, forced himself to stand outside the situation. What was Bean showing him? That he cared more for personal loyalty than for longterm strategy. That was dangerous, but not fatal. And it gave Peter leverage, knowing what Bean cared about more than personal advancement.

"What I know about Petra," said Peter, "is that when Achilles disappeared, so did she. My sources inside Russia tell me that the only liberation team that was interfered with was the one rescuing her. The driver, a bodyguard, and the team leader were shot dead. There was no evidence that Petra was injured, though they know she was present for one of the killings."

"How do they know?" asked Bean.

"The spatter pattern from a head shot had been blocked in a silhouette about her size on the inside wall of the van. She was covered with the man's blood. But there was no blood from her body."

"They know more than that."

"A small private jet, which once belonged to a crimelord but was confiscated and used by the intelligence service that sponsored Achilles, took off from a nearby airfield and flew, after a refueling stop, to India. One of the airport maintenance personnel said that it looked to him like a honeymoon trip. Just the pilot and the young couple. But no luggage."

"So he has her with him," said Bean.

"In India," said Sister Carlotta.

"And my sources in India have gone silent," said Peter.

"Dead?" asked Bean.

"No, just careful," said Peter. "The most populous country on Earth. Ancient enmities. A chip on the national shoulder from being treated like a second-class country by everyone."

"The Polemarch is an Indian," said Bean.

"And there's reason to believe he's been passing I.F. data to the Indian military," said Peter. "Nothing that can be proved, but Chamrajnagar is not as disinterested as he pretends to be."

"So you think Achilles may be just what India wants to help them launch a war."

"No," said Peter. "I think India may be just what Achilles wants to help him launch an empire. Petra is what they want to help them launch a war."

"So Petra is the passport Achilles used to get into a position of power in India."

"That would be my guess," said Peter. "That's all I know, and all I guess. But I can also tell you that your chance of getting in and rescuing her is nil."

"Pardon me," said Bean, "but you don't know what I'm capable of doing."

"When it comes to intelligence-gathering," said Peter, "the Indians aren't in the same league as the Russians. I don't think your paranoia is needed anymore. Achilles isn't in a position to do anything to you right now."

"Just because Achilles is in India," said Bean, "doesn't mean that he's limited to knowing only what the Indian intelligence service can find out for him."

"The agency that's been helping him in Russia is being taken over and probably will be shut down," said Peter.

"I know Achilles," said Bean, "and I can promise you-if he really is in India, working for them, then it is absolutely certain that he has already betrayed them and has connections and fallback positions in at least three other places. And at least one of them will have an intelligence service with excellent worldwide reach. If you make the mistake of thinking Achilles is limited by borders and loyalties, he'll destroy you."

Peter looked down at Bean. He wanted to say, I already knew all that. But it would be a lie if he said that. He hadn't known that about Achilles, except in the abstract sense that he tried never to underestimate an opponent. Bean's knowledge of Achilles was better than his. "Thank you," said Peter. "I wasn't taking that into account."

"I know," said Bean ungraciously. "It's one of the reasons I think you're headed for failure. You think you know more than you actually know."

"But I listen," said Peter. "And I learn. Do you?"

Sister Carlotta laughed. "I do believe that the two most arrogant boys in the world have finally met, and they don't much like what they see."

Peter did not even glance at her, and neither did Bean. "Actually," said Peter, "I do like what I see."

"I wish I could say the same," said Bean.

"Let's keep walking," said Peter. "We've been standing in one place too long."

"At least he's picking up on our paranoia," said Sister Carlotta.

"Where will India make its move?" asked Peter. "The obvious thing would be war with Pakistan."

"Again?" said Bean. "Pakistan would be an indigestible lump. It would block India from further expansion, just trying to get the Muslims under control. A terrorist war that would make the old struggle with the Sikhs look like a child's birthday party."

"But they can't move anywhere else as long as they have Pakistan poised to plunge a dagger in their back," said Peter.

Bean grinned. "Burma? But is it worth taking?"

"It's on the way to more valuable prizes, if China doesn't object," said Peter. "But are you just ignoring the Pakistan problem?"

"Molotov and Ribbentrop," said Bean.

The men who negotiated the nonaggression pact between Russia and Germany in the 1930s that divided Poland between them and freed Germany to launch World War II. "I think it will have to be deeper than that," said Peter. "I think, at some level, an alliance."

"What if India offers Pakistan a free hand against Iran? It can go for the oil. India is free to move east. To scoop up the countries that have long been under her cultural influence. Burma. Thailand. Not Muslim countries, so Pakistan's conscience is clear."

"Is China going to sit and watch?" asked Peter.

"They might if India tosses them Vietnam," said Bean. "The world is ripe to be divided up among the great powers. India wants to be one. With Achilles directing their strategy, with Chamrajnagar feeding them information, with Petra to command their armies, they can play on the big stage. And then, when Pakistan has exhausted itself fighting Iran . . ."

The inevitable betrayal. If Pakistan didn't strike first. "That's too far down the line to predict now," said Peter.

"But it's the way Achilles thinks," said Bean. "Two betrayals ahead. He was using Russia, but maybe he already had this deal with India in place. Why not? In the long run, the whole world is the tail, and India is the dog."

More important than Bean's particular conclusions was the fact that Bean had a good eye. He lacked detailed intelligence, of course how would he get that?-but he saw the big picture. He thought the way a global strategist had to think.

He was worth talking to.

"Well, Bean," said Peter, "here's my problem. I think I can get you in position to help block Achilles. But I can't trust you not to do something stupid."

"I won't mount a rescue operation for Petra until I know it will succeed."

"That's a foolish thing to say. You never know a military operation will succeed. And that's not what worries me. I'm sure if you mounted a rescue, it would be a well-planned and well-executed one."

"So what worries you about me?" asked Bean.

"That you're making the assumption that Petra wants to be rescued."

"She does," said Bean.

"Achilles seduces people," said Peter. "I've read his files, his history. This kid has a golden voice, apparently. He makes people trust him--even people who know he's a snake. They think, He won't betray me, because we have such a special closeness."

"And then he kills them. I know that," said Bean.

"But does Petra? She hasn't read his file. She didn't know him on the streets of Rotterdam. She didn't even know him in the brief time he was in Battle School."

She knows him now," said Bean.

"You're sure of that?" asked Peter.

"But I'll promise you-I won't try to rescue her until I've been in communication with her."

Peter mulled this over for a moment. "She might betray you."

"No," said Bean.

"Trusting people will get you killed," said Peter. "I don't want you to bring me down with you."

"You have it backward," said Bean. "I don't trust anybody, except to do what they think is necessary. What they think they have to do. But I know Petra, and I know the kind of thing she'll think she has to do. It's me I'm trusting, not her."

"And he can't bring you down," said Sister Carlotta, "because you're not up."

Peter looked at her, making little effort to conceal his contempt. "I am where I am," he said. "And it's not down."

"Locke is where Locke is," said Carlotta. "And Demosthenes. But Peter Wiggin is nowhere. Peter Wiggin is nothing."

"What's your problem?" Peter demanded. "Is it bothering you that your little puppet here might actually be cutting a few of the strings you pull?"

"There are no strings," said Carlotta. "And you're too stupid, apparently, to realize that I'm the one who believes in what you're doing, not Bean. He couldn't care less who rules the world. But I do. Arrogant and condescending as you are, I've already made up my mind that if anybody's going to stop Achilles, it's you. But you're fatally weakened by the fact that you are ripe to be blackmailed by the threat of exposure. Chamrajnagar knows who you are. He's feeding information to India. Do you really think for one moment that Achilles won't find out-and soon, if not already exactly who is behind Locke? The one who got him booted out of Russia? Do you really think he isn't already working on plans to kill you?"

Peter blushed with shame. To have this nun tell him what he should have realized by himself was humiliating. But she was right he wasn't used to thinking of physical danger.

"That's why we wanted you to come with us," said Bean.

"Your cover is already blown," said Sister Carlotta.

"The moment I go public as a kid," said Peter Wiggin, "most of my sources will dry up."

"No," said Sister Carlotta. "It all depends on how you come out."

"Do you think I haven't thought this through a thousand times?" said Peter. "Until I'm old enough. . ."

"No," said Sister Carlotta. "Think for a minute, Peter. National governments have just gone through a nasty little scuffle over ten children that they want to have command their armies. You're the older brother of the greatest of them all. Your youth is an asset. And if you control the way the information comes out, instead of having somebody else expose you. . ."

"It will be a momentary scandal," said Peter. "No matter how my identity comes out, there'll be a flurry of commentary on it, and then I'll be old news--only I'll have been fired from most of my writing gigs. People won't return my calls or answer my mail. I really will be a college student then."

"That sounds like something you decided years ago," said Sister Carlotta, "and haven't looked at with fresh eyes since then."

"Since this seems to be tell-Peter-he's-stupid day, let's hear your plan."

Sister Carlotta grinned at Bean. "Well, I was wrong. He actually can listen to other people."

"I told you," said Bean.

Peter suspected that this little exchange was designed merely to make him think Bean was on his side. "Just tell me your plan and skip the sucking-up phase."

"The term of the current Hegemon will end in about eight months," said Sister Carlotta. "Let's get several influential people to start floating the name of Locke as the replacement."

"That's your plan? The office of Hegemon is worthless."

"Wrong," said Sister Carlotta, "and wrong. The office is not worthless--eventually you'll have to have it in order to make you the legitimate leader of the world against the threat posed by Achilles. But that's later. Right now, we float the name of Locke, not so you'll get the office, but so that you can have an excuse to publically announce, as Locke, that you can't be considered for such an office because you are, after all, merely a teenager. You tell people that you're Ender Wiggin's older brother, that you and Valentine worked for years to try to hold the League together and to prepare for the League War so that your little brother's victory didn't lead to the selfdestruction of humanity. But you are still too young to take an actual office of public trust. See how it works? Now your announcement won't be a confession or a scandal. It will be one more example of how nobly you place the interest of world peace and good order ahead of your own personal ambition."

"I'll still lose some of my contacts," said Peter.

"But not many. The news will be positive. It will have the right spin. All these years, Locke has been the brother of the genius Ender Wiggin. A prodigy."

"And there's no time to waste," said Bean. "You have to do it before Achilles can strike. Because you will be exposed within a few months."

"Weeks," said Sister Carlotta.

Peter was furious with himself. "Why didn't I see this? It's obvious."

"You've been doing this for years," said Bean. "You had a pattern that worked. But Achilles has changed everything. You've never had anybody gunning for you before. What matters to me is not that you failed to see it on your own. What matters is that when we pointed it out to you, you were willing to hear it."

"So I've passed your little test?" said Peter nastily.

"Just as I hope I'll pass yours," said Bean. "If we're going to work together, we have to be able to tell each other the truth. Now I know you'll listen to me. You just have to take my word for it that I'll listen to you. But I listen to her, don't IT"

Peter was churning with dread. They were right, the time had come, the old pattern was over. And it was frightening. Because now he had to put everything on the line, and he might fail.

But if he didn't act now, if he didn't risk everything, he would certainly fail. Achilles' presence in the equation made it inevitable.

"So how," said Peter, "will we get this groundswell started so I can decline the honor of being a candidate for the Hegemony?"

"Oh, that's easy," said Carlotta. "If you give the OK, then by tomorrow there can be news stories about how a highly placed source at the Vatican confirms that Locke's name is being floated as a possible successor when the current Hegemon's term expires."

"And then," said Bean, "a highly placed officer in the Hegemony the Minister of Colonization, to be exact, though no one will say that-will be quoted as saying that Locke is not just a good candidate, he's the best candidate, and may be the only candidate, and with the support of the Vatican he thinks Locke is the frontrunner."

"You've planned this all out," said Peter.

"No," said Sister Carlotta. "It's just that the only two people we know are my highly placed friend in the Vatican and our good friend ex-Colonel Graff."

"We're committing all our assets," said Bean, "but they'll be enough. The moment those stories run-tomorrow-you be ready to reply for the next morning's nets. At the same time that everybody's giving their first reactions to your brand-new frontrunner status, the world will be reading your announcement that you refuse to be considered for such an office because your youth would make it too difficult for you to wield the authority that the office of Hegemon requires."

"And that," said Sister Carlotta, "is the very thing that gives you the moral authority to be accepted as Hegemon when the time comes."

"By declining the office," said Peter, "I make it more likely that I'll get it."

"Not in peacetime," said Carlotta. "Declining an office in peacetime takes you out of the running. But there's going to be war. And then the fellow who sacrificed his own ambition for the good of the world will look better and better. Especially when his last name is Wiggin."

Do they have to keep bringing up the fact that my relationship to Ender is more important than my years of work?

"You aren't against using that family connection, are you?" asked Bean.

"I'll do what it takes," said Peter, "and I'll use whatever works. But ... tomorrow?"

"Achilles got to India yesterday, right?" said Bean. "Every day we delay this is a day that he has a chance to expose you. Do you think he'll wait? You exposed him-he'll crave the turnabout, and Chainrajnagar won't be shy about telling him, will he?"

"No," said Peter. "Chamrajnagar has already shown me how he feels about me. He'll do nothing to protect me."

"So here we are once again," said Bean. "We're giving you something, and you're going to use it. Are you going to help me? How can I get into a position where I have troops to train and command? Besides going back to Greece, I mean."

"No, not Greece," said Peter. "They're useless to you, and they'll end up doing only what Russia permits. No freedom of action."

"Where, then?" said Sister Carlotta. "Where do you have influence?"

"In all modesty," said Peter, "at this moment, I have influence everywhere. Day after tomorrow, I may have influence nowhere."

"So let's act now," said Bean. "Where?"

"Thailand," said Peter. "Burma has no hope of resisting an Indian attack, or of putting together an alliance that might have a chance. But Thailand is historically the leader of southeast Asia. The one nation that was never colonized. The natural leader of the Taispeaking peoples in the surrounding nations. And they have a strong military."

"But I don't speak the language," said Bean.

"Not a problem," said Peter. "The Thai have been multilingual for centuries, and they have a long history of allowing foreigners to take positions of power and influence in their government, as long as they're loyal to Thailand's interests. You have to throw in your lot with them. They have to trust you. But it seems plain enough that you know how to be loyal."

"Not at all," said Bean. "I'm completely selfish. I survive. That's all I do."

"But you survive," said Peter, "by being absolutely loyal to the few people you depend on. I read just as much about you as I did about Achilles."

"What was written about me reflects the fantasies of the newspeople," said Bean.

"I'm not talking about the news," said Peter. "I read Carlotta's memos to the I.F. about your childhood in Rotterdam."

They both stopped walking. Ali, have I surprised you? Peter couldn't help but take pleasure in knowing that he had shown that he, too, knew some things about them.

"Those memos were eyes only," said Carlotta. "There should have been no copies."

"Ali, but whose eyes?" said Peter. "There are no secrets to people with the right friends."

"I haven't read those memos," said Bean.

Carlotta looked searchingly at Peter. "Some information is worthless except to destroy," she said.

And now Peter wondered what secrets she had about Bean. Because when he spoke of "memos," he in fact was thinking of a report that had been in Achilles' file, which had drawn on a couple of those memos as a source about life on the streets of Rotterdam. The comments about Bean had been merely ancillary matters. He really hadn't read the actual memos. But now he wanted to, because there was clearly something that she didn't want Bean to know.

And Bean knew it, too.

"What's in those memos that you don't want Peter to tell me?" Bean demanded.

"I had to convince the Battle School people that I was being impartial about you," said Sister Carlotta. "So I had to make negative statements about you in order to get them to believe the positive ones."

"Do you think that would hurt my feelings?" said Bean.

"Yes, I do," said Carlotta. "Because even if you understand the reason why I said some of those things, you'll never forget that I said them."

"They can't be worse than what I imagine," said Bean.

"It's not a matter of being bad or worse. They can't be too bad or you wouldn't have got into Battle School, would you? You were too young and they didn't believe your test scores and they knew there wouldn't be time to train you unless you really were ... what I said. I just don't want you to have my words in your memory. And if you have any sense, Bean, you'll never read them."

"Toguro," said Bean. "I've been gossiped about by the person I trust most, and it's so bad she begs me not to try to find out."

"Enough of this nonsense," said Peter. "We've all faced some nasty blows today. But we've got an alliance started here, haven't we? You're acting in my interest tonight, getting that groundswell started so I can reveal myself on the world's stage. And I've got to get you into Thailand, in a position of trust and influence, before I expose myself as a teenager. Which of us gets to sleep first, do you think?"

"Me," said Sister Carlotta. "Because I don't have any sins on my conscience."

"Kuso," said Bean. "You have all the sins of the world on your mind."

"You're confusing me with somebody else," said Sister Carlotta.

To Peter their banter sounded like family chatter--old jokes, repeated because they're comfortable.

Why didn't his own family have any of that? Peter had bantered with Valentine, but she had never really opened up to him and played that way. She always resented him, even feared him. And their parents were hopeless. There was no clever banter there, there were no shared jokes and memories.

Maybe I really was raised by robots, Peter thought.

"Tell your parents we really appreciated the dinner," said Bean.

"Home to bed," said Sister Carlotta.

"You won't be sleeping in your hotel tonight, will you?" said Peter. "You'll be leaving."

"We'll email you how to contact us," said Bean.

"You'll have to leave Greensboro yourself, you know," said Sister Carlotta. "Once you reveal your identity, Achilles will know where you are. And even though India has no reason to kill you, Achilles does. He kills anyone who has even seen him in a position of helplessness. You actually put him in that position. You're a dead man, as soon as he can reach you."

Peter thought of the attempt that had been made on Bean's life. "He was perfectly happy to kill your parents right along with you, wasn't he?" Peter asked.

"Maybe," said Bean, "you should tell your mom and dad who you are before they read about it on the nets. And then help them get out of town."

"At some point we have to stop hiding from Achilles and face him openly."

"Not until you have a government committed to keeping you alive," said Bean. "Until then, you stay in hiding. And your parents, too."

"I don't think they'll even believe me," said Peter. "My parents, I mean. When I tell them that I'm really Locke. What parents would? They'll probably try to commit me as delusional."

"Trust them," said Bean. "I think you think they're stupid. But I can assure you that they're not. Or at least your mother isn't. You got your brains from somebody. They'll deal with this."

So it was that when Peter got home at ten o'clock, he went to his parents' room and knocked on their door.

"What is it?" asked Father.

"Are you awake?" Peter asked.

"Come in," said Mother.

They chatted mindlessly for a few minutes about dinner and Sister Carlotta and that delightful little Julian Delphiki, so hard to believe that a child that young could possibly have done all that he had done in his short life. And on and on, until Peter interrupted them.

"I have something to tell you," said Peter. "Tomorrow, some friends of Bean's and Carlotta's will be starting a phony movement to get Locke nominated as Hegemon. You know who Locke is? The political commentator?"

They nodded.

"And the next morning," Peter went on, "Locke is going to come out with a statement that he has to decline such an honor because he's just a teenage boy living in Greensboro, North Carolina."

"Yes?" said Father.

Did they really not get it? "It's me, Dad," said Peter. "I'm Locke."

They looked at each other. Peter waited for them to say something stupid.

"Are you going to tell them that Valentine was Demosthenes, too?" asked Mother.

For a moment he thought she was saying that as a joke, that she thought that the only thing more absurd than Peter being Locke would be Valentine being Demosthenes.

Then he realized that there was no irony in her question at all. It was an important point, and one he needed to address-the contradiction between Locke and Demosthenes had to be resolved, or there would still be something for Chamrajnagar and Achilles to expose. And blaming Valentine for Demosthenes right from the start was an important thing to do.

But not as important to him as the fact that Mother knew it. "How long have you known?" he asked.

"We've been very proud of what you've accomplished," said Father.

"As proud as we've ever been of Ender," Mother added.

Peter almost staggered under the emotional blow. They had just told him the thing that he had wanted most to hear his entire life, without ever quite admitting it to himself. Tears sprang to his eyes.

"Thanks," he murmured. Then he closed the door and fled to his room. Somehow, fifteen minutes later, he got enough control of his emotions that he could write the letters he had to write to Thailand, and begin writing his self-exposure essay.

They knew. And far from thinking him a second-rater, a disappointment, they were as proud of him as they had ever been of Ender.

His whole world was about to change, his life would be transformed, he might lose everything, he might win everything. But all he could feel that night, as he finally went to bed and drifted off to sleep, was utter, foolish happiness.

BANGKOK

Posted on Military History Forum by HectorVictorious@firewall.net

Topic: Who Remembers Briseis?

When I read the Iliad, I see the same things everyone else does-the poetry, of course, and the information about heroic bronze-age warfare. But I see something else, too. It might have been Helen whose face launched a thousand ships, but it was Briseis who almost wrecked them. She was a powerless captive, a slave, and yet Achilles almost tore the Greek alliance apart because he wanted her.

The mystery that intrigues me is: Was she extraordinarily beautiful? or was it her mind that Achilles coveted? No, seriously: Would she have been happy for long as Achilles' captive? Would she, perhaps, have gone to him willingly? or remained a surly, resistant slave?

Not that it would have mattered to Achilles-he would have used his captive the same way, regardless of her feelings. But one imagines Briseis taking note of the tale about Achilles' heel and slipping that information to someone within the walls of Troy .

Briseis, if only I could have heard from you!

-Hector Victorious

Bean amused himself by leaving messages for Petra scattered all over the forums that she might visit-if she was alive, if Achilles allowed her to browse the nets, if she realized that a topic heading like "Who Remembers Briseis?" was a reference to her, and if she was free to reply as his message covertly begged her to do. He wooed her under other names of women loved by military leaders: Guinevere, Josephine, Roxane-even Barsine, the Persian wife of Alexander that Roxane murdered soon after his death. And he signed himself with the name of a nemesis or chief rival or successor: Mordred, Hector, Wellington, Cassander.

He took the dangerous step of allowing these identities to continue to exist, each consisting only of a forwarding order to another anonymous net identity that held all mail it received as encrypted postings on an open board with no-tracks protocols. He could visit and read the postings without leaving a trace. But firewalls could be pierced, protocols broken.

He could afford to be a little more careless now about his online identities, if only because his real-world location was now known to people whose trustworthiness he could not assess. Do you worry about the fifth lock on the back door, when the front door is open?

They had welcomed him generously in Bangkok. General Naresuan promised him that no one would know his real identity, that he would be given soldiers to train and intelligence to analyze and his advice would be sought constantly as the Thai military prepared for all kinds of future contingencies. "We are taking seriously Locke's assessment that India will soon pose a threat to Thai security, and we will of course want your help in preparing contingency plans." All so warm

and courteous. Bean and Carlotta were installed in a general officer-level apartment on a military base, given unlimited privileges concerning meals and purchases, and then ... ignored.

No one called. No one consulted. The promised intelligence did not flow. The promised soldiers were never assigned.

Bean knew better than to even inquire. The promises were not forgotten. If he asked about them, Naresuan would be embarrassed, would feel challenged. That would never do. Something had happened. Bean could only imagine what.

At first, of course, he feared that Achilles had gotten to the Thai government somehow, that his agents now knew exactly where Bean was, that his death was imminent.

That was when he sent Carlotta away.

It was not a pleasant scene. "You should come with me," she said. "They won't stop you. Walk away."

"I'm not leaving," said Bean. "Whatever has gone wrong is probably local politics. Somebody here doesn't like having me around maybe Naresuan himself, maybe someone else."

"If you feel safe enough to stay," said Sister Carlotta, "then there's no reason for me to go."

"You can't pass yourself off as my grandmother here," said Bean. "The fact that I have a guardian weakens me."

"Spare me the scene you're trying to play," said Carlotta. "I know there are reasons why you'd be better off without me, and I know there are ways that I could help you greatly."

"If Achilles knows where I am already, then his penetration of Bangkok is deep enough that I'll never get away," said Bean. "You might. The information that an older woman is with me might not have reached him yet. But it will soon, and he wants you dead as much as he wants to kill me. I don't want to have to worry about YOU here."

"I'll go," said Carlotta. "But how do I write to you, since you never keep the same address?"

He gave her the name of his folder on the no-tracks board he was using, and the encryption key. She memorized it.

"One more thing," said Bean. "In Greensboro, Peter said something about reading your memos."

"I think he was lying," said Carlotta.

"I think the way you reacted proved that whether he read them or not, there were memos, and you don't want me to read them."

"There were, and I don't," said Carlotta.

"And that's the other reason I want you to leave," said Bean.

The expression on her face turned fierce. "You can't trust me when I tell you that there is nothing in those memos that you need to know right now?"

"I need to know everything about myself My strengths, my weaknesses. You know things about me that you told Graff and you didn't tell me. You're still not telling me. You think of yourself as my master, able to decide things for me. That means we're not partners after all."

"Very well," said Carlotta. "I am acting in your best interest, but I understand that you don't see it that way." Her manner was cold, but Bean knew her well enough to recognize that it was not anger she was controlling, but grief and frustration. It was a cold thing to do, but for her own sake he had to send her away and keep her from being in close contact with him until he understood what was going on here in Bangkok. The contretemps about the memos made her willing to go. And he really was annoyed.

She was out the door in fifteen minutes and on her way to the airport. Nine hours later he found a posting from her on his encrypted board: She was in Manila, where she could disappear within the Catholic establishment there. Not a word about their quarrel, if that's what it had been. Only a brief reference to "Locke's confession," as the newspeople were calling it. "Poor Peter," wrote Carlotta. "He's been hiding for so long, it's going to be hard for him to get used to having to face the consequences of his words."

To her secure address at the Vatican, Bean replied, "I just hope Peter has the brains to get out of Greensboro. What he needs right now is a small country to run, so he can get some administrative and political experience. Or at least a city water department."

And what I need, thought Bean, is soldiers to command. That's why I came here.

For weeks after Carlotta left, the silence continued. It became obvious, soon enough, that whatever was going on had nothing to do with Achilles, or Bean would be dead by now. Nor could it have had anything to do with Locke being revealed as Peter Wiggin-the freeze-out had already begun before Peter published his declaration.

Bean busied himself with whatever tasks seemed meaningful. Though he had no access to military-level maps, he could still access the publicly available satellite maps of the terrain between India and the heart of Thailand-the rough mountain country of northern and eastern Burma, the Indian Ocean coastal approaches. India had a substantial fleet, by Indian Ocean standards-might they attempt to run the Strait of Malacca and strike at the heart of Thailand from the gulf. All possibilities had to be prepared for.

Some basic intelligence about the makeup of the Indian and Thai military was available on the nets. Thailand had a powerful air force-there was a chance of achieving air dominance, if they could protect their bases. Therefore it would be essential to have the capability of laying down emergency

airstrips in a thousand different places, an engineering feat well within the reach of the Thai military-if they trained for it now and dispersed crews and fuel and spare parts throughout the country. That, along with mines, would be the best protection against a coastal landing.

The other Indian vulnerability would be supply lines and lanes of advance. Since India's military strategy would inevitably depend on throwing vast, irresistible armies against the enemy, the defense was to keep those vast armies hungry and harry them constantly from the air and from raiding parties. And if, as was likely, the Indian Army reached the fertile plain of the Chao Phraya or the Aoray Plateau, they had to find the land utterly stripped, the food supplies dispersed and hidden-those that weren't destroyed.

It was a brutal strategy, because the Thai people would suffer along with the Indian Army-indeed, they would suffer more. So the destruction had to be set up so it would only take place at the last minute. And, as much as possible, they had to be able to evacuate women and children to remote areas or even to camps in Laos and Cambodia. Not that borders would stop the Indian army, but terrain might. Having many isolated targets for the Indians would force them to divide their forces. Then-and only then-would it make sense for the Thai military to take on smaller portions of the Indian army in hit-and-run engagements or, where possible, in pitched battles where the Thai side would have temporary numerical parity and superior air support.

Of course, for all Bean knew this was already the longstanding Thai military doctrine and if he made these suggestions he would only annoy them-or make them feel that he had contempt for them.

So he worded his memo very carefully. Lots of phrases like, "No doubt you already have this in place," and "as I'm sure you have long expected." Of course, even those phrases could backfire, if they hadn't thought of these things-it would sound patronizing. But he had to do something to break this stalemate of silence.

He read the memo over and over, revising each time. He waited days to send it, so he could see it in new perspectives. Finally, certain that it was as rhetorically inoffensive as he could make it, he put it into an email and sent it to the Office of the Chakri-the supreme military commander. It was the most public and potentially embarrassing way he could deliver the memo, since mail to that address was inevitably sorted and read by aides. Even printing it out and carrying it by hand would have been more subtle. But the idea was to stir things up; if Naresuan wanted him to be subtle, he would have given him a private email address to write to.

Fifteen minutes after he sent the memo, his door unceremoniously opened and four military police came in. "Come with us, sir," said the sergeant in charge.

Bean knew better than to delay or to ask questions. These men knew nothing but the instructions they had been given, and Bean would find out what those were by waiting to see what they did.

They did not take him to the office of the Chakri. Instead he was taken to one of the temporary buildings that had been set up on the old parade grounds-the Thai military had only recently given up marching as part of the training of soldiers and the display of military might. Only three hundred

years after the American Civil War had proven that the days of marching in formation into battle were over. For military organizations, that was about the normal time lag. Sometimes Bean half-expected to find some army somewhere that was still training its soldiers to fight with sabers from horseback.

There was no label, not even a number, on the door they led him to. And when he came inside, none of the soldier-clerks even looked up at him. His arrival was both expected and unimportant, their attitude said. Which meant, of course, that it was very important, or they would not be so studiously perfect about not noticing him.

He was led to an office door, which the sergeant opened for him. He went in; the military police did not. The door closed behind him.

Seated at the desk was a major. This was an awfully high rank to have manning a reception desk, but today, at least, that seemed to be the man's duty. He depressed the button on an intercom. "The package is here," he said.

"Send it in." The voice that came back sounded young. So young that Bean understood the situation at once.

Of course. Thailand had contributed its share of military geniuses to Battle School. And even though none of Ender's jeesh had been of Thai parentage, Thailand, like many east and south Asian countries, was overrepresented in the population of Battle School as a whole.

There had even been three Thai soldiers who served with Bean in Dragon Army. Bean remembered every kid in that army very well, along with his complete dossier, since he was the one who had drawn up the list of soldiers who should make up Ender's army. Since most countries seemed to value their returning Battle School graduates in proportion to their closeness to Ender Wiggin, it was most likely one of those three who had been given a position of such influence here that he would be able to intercept a memo to the Chakri so quickly. And of the three, the one Bean would expect to see in the most prominent position, taking the most aggressive role, was ...

Surrey. Suriyawong. "Surly," as they called him behind his back, since he always seemed to be pissed off about something.

And there he was, standing behind a table covered with maps.

Bean saw, to his surprise, that he was actually almost as tall as Suriyawong. Surrey had not been very big, but everyone towered over Bean in Battle School. Bean was catching up. He might not spend his whole life hopelessly undersized. It was a promising thought.

There was nothing promising about Surrey's attitude, though. "So the colonial powers have decided to use India and Thailand to fight their surrogate wars," he said.

Bean knew at once what had gotten under Suriyawong's skin. Achilles was a Belgian Walloon by birth, and Bean, of course, was Greek. "Yes, of course," said Bean. "Belgium and Greece are bound to fight out their ancient differences on bloody battlefields in Burma."

"Just because you were in Ender's jeesh," said Suriyawong, "does not mean that you have any understanding of the military situation of Thailand."

"My memo was designed to show how limited my knowledge was, because Chakri Naresuan has not provided me with the access to intelligence that he indicated I would receive when I arrived."

"If we ever need your advice, we'll provide you with intelligence."

"If you only provide me with the intelligence you think I need," said Bean, "then my advice will only consist of telling you what you already know, and I might as well go home now."

"Yes," said Suriyawong. "That would be best."

"Suriyawong," said Bean, "you don't really know me."

"I know you were always an emossin' little showoff who always had to be smarter than everybody else."

"I was smarter than everybody else," said Bean. "I've got the test scores to prove it. So what? That didn't mean they made me commander of Dragon Army. It didn't mean Ender made me a toon leader. I know just how worthless being smart is, compared with being good at command. I also know just how ignorant I am here in Thailand. I didn't come here because I thought Thailand would be prostrate without my brilliant mind to lead you into battle. I came here because the most dangerous human on this planet is running the show in India and by my best calculations, Thailand is going to be his primary target. I came here because if Achilles is going to be stopped from setting up his tyranny over the world, this is where it has to be done. And I thought, like George Washington in the American revolution, you might actually welcome a Lafayette or a Steuben to help in the cause."

"If your foolish memo was an example of your 'help,' you can leave now."

"So you already have the capability of making temporary airstrips within the amount of time that a fighter is in the air? So they can land at an airstrip that didn't exist when they took off?"

"That is an interesting idea and we're having the engineers look at it and evaluate the feasibility."

Bean nodded. "Good. That tells me all I needed to know. I'll stay."

"No, you will not!"

"I'll stay because, despite the fact that you're pissed off that I'm here, you still recognized a good idea when you heard it and put it into play. You're not an idiot, and therefore you're worth working with."

Suriyawong slapped the table and leaned over it, furious. "You condescending little oomay, I'm not your moose."

Bean answered him calmly. "Suriyawong, I don't want your job. I don't want to run things here. I just want to be useful. Why not use me the way Ender did? Give me a few soldiers to train. Let me think of weird things to do and figure out how to do them. Let me be ready so that when the war comes, and there's some impossible thing you need done, you can call me in and say, Bean, I need you to do something to slow down this army for a day, and I've got no troops anywhere near there. And I'll say, Are they drawing water from a river? Good, then let's give their whole army dysentery for a week. That should slow them down. And I'll get in there, get a bioagent into the water, bypass their water purification system, and get out. Or do you already have a water-drugging diarrhea team?"

Suriyawong held his expression of cold anger for a few moments, and then it broke. He laughed. "Come on, Bean, did you make that up on the spot, or have you really planned an operation like that?"

"Made it up just now," said Bean. "But it's kind of a fun idea, don't you think? Dysentery has changed the course of history more than once."

"Everybody immunizes their soldiers against the known bioagents. And there's no way of stopping downstream collateral damage."

"But Thailand is bound to have some pretty hot and heavy bio research, right?"

"Purely defensive," said Suriyawong. Then he smiled and sat down. "Sit, sit. You really are content to take a background position?"

"Not only content, but eager," said Bean. "If Achilles knew I was here, he'd find a way to kill me. The last thing I need is to be prominent-until we actually get into combat, at which time it might be a nice psychological blow to give Achilles the idea that I'm running things. It won't be true, but it might make him even crazier to think it's me he's facing. I've outmaneuvered him before. He's afraid of me."

"It's not my own position I was trying to protect," said Suriyawong. Bean understood this to mean that of course it was his position he was protecting. "But Thailand kept its independence when every other country in this area was ruled by Europeans. We're very proud of keeping foreigners out."

"And yet," said Bean, "Thailand also has a history of letting foreigners in-and using them effectively."

"As long as they know their place," said Suriyawong.

"Give me a place, and I'll remember to stay in it," said Bean.

"What kind of contingent do you want to work with?"

What Bean asked for wasn't a large number of men, but he wanted to draw them from every branch of service. Only two fighterbombers, two patrol boats, a handful of engineers, a couple of light armored vehicles to go along with a couple of hundred soldiers and enough choppers to carry everything but the boats and planes. "And the power to requisition odd things that we think of. Rowboats, for instance. High explosives so we can train in making cliffs fall and bridges collapse. Whatever I think of."

"But you don't actually commit to combat without permission."

"Permission," said Bean, "from whom?"

"Me," said Suriyawong.

"But you're not Chakri," said Bean.

"The Chakri," said Suriyawong, "exists to provide me with everything I ask for. The planning is entirely in my hands."

"Glad to know who's aboon here." Bean stood up. "For what it's worth, I was most help to Ender when I had access to everything he knew."

"In your dreams," said Suriyawong.

Bean grinned. "I'm dreaming of good maps," said Bean. "And an accurate assessment of the current situation of the Thai military."

Suriyawong thought about that for a long moment.

"How many of your soldiers are you sending into battle blindfolded?" asked Bean. "I hope I'm the only one."

"Until I'm sure you really are my soldier," said Suriyawong, "the blindfold stays on. But ... you can have the maps."

"Thank you," said Bean.

He knew what Suriyawong feared: that Bean would use any information he got to come up with alternate strategies and persuade the Chakri that he would do a better job as chief strategist than Suriyawong. For it was patently untrue that Suriyawong was the aboon here. Chakri Naresuan might trust him and had obviously delegated great responsibility to him. But the authority remained

in Naresuan's hands, and Suriyawong served at his pleasure. That's why Suriyawong feared Bean—he could be replaced.

He'd find out soon enough that Bean was not interested in palace politics. If he remembered correctly, Suriyawong was of the royal family—though the last few polygynist kings of Siam had had so many children that it was hard to imagine that there were many Thais who were not royal to one degree or another. Chulalongkorn had established the principle, centuries ago, that princes had a duty to serve, but not a right to high office. Suriyawong's life belonged to Thailand as a matter of honor, but he would hold his position in the military only as long as his superiors considered him the best for the job.

Now that Bean knew who it was who had been keeping him down, it would be easy enough to destroy Surrey and take his place. After all, Suriyawong had been given the responsibility to carry out Naresuan's promises to Bean. He had deliberately disobeyed the Chakri's orders. All Bean really needed to do was use a back doorsome connection of Peter's, probably—to get word to Naresuan that Suriyawong had blocked Bean from getting what he needed, and there would be an inquiry and the first seeds of doubt about Suriyawong would be planted.

But Bean did not want Suriyawong's job.

He wanted a fighting force that he could train to work together so smoothly, so resourcefully, so brilliantly that when he made contact with Petra and found out where she was, he could go in and get her out alive. With or without Surly's permission. He'd help the Thai military as best he could, but Bean had his own objectives, and they had nothing to do with building a career in Bangkok.

"One last thing," said Bean. "I have to have a name here, something that won't alert anyone outside Thailand that I'm a child and a foreigner—that might be enough to tip off Achilles about who I am."

"What name do you have in mind? How about Sua--it means tiger."

"I have a better name," said Bean. "Borommakot."

Suriyawong looked puzzled for a moment, till he remembered the name from the history of Ayudhya, the ancient Tai city-state of which Siam was the successor. "That was the nickname of the uparat who stole the throne from Aphai, the rightful successor."

"I was just thinking of what the name means," said Bean. "'In the urn. Awaiting cremation.'" He grinned. "As far as Achilles is concerned, I'm just a walking dead man."

Suriyawong relaxed. "Whatever. I thought as a foreigner you might appreciate having a shorter name."

"Why? I don't have to say it."

"You have to sign it."

"I'm not issuing written orders, and the only person I'll be reporting to is you. Besides, Borommakot is fun to say."

"You know your Thai history," said Suriyawong.

"Back in Battle School," said Bean. "I got fascinated with Thailand. A nation of survivors. The ancient Tai people managed to take over vast reaches of the Cambodian Empire and spread throughout southeast Asia, all without anybody noticing. They were conquered by Burma and emerged stronger than ever. When other countries were falling under European domination, Thailand managed to expand its borders for a surprisingly long time, and even when it lost Cambodia and Laos, it held its core. I think Achilles is going to find what everybody else has found-the Thai are not easily conquered, and, once conquered, not easily ruled."

"Then you have some idea of the soul of the Thai," said Suriyawong. "But no matter how long you study us, you will never be one of us."

"You're mistaken," said Bean. "I already am one of you. A survivor, a free man, no matter what."

Suriyawong took this seriously. "Then as one free man to another, welcome to the service of Thailand."

They parted amicably, and by the end of the day, Bean saw that Suriyawong intended to keep his word. He was provided with a list of soldiers-four preexisting fifty-man companies with fair records, so they weren't giving him the dregs. And he would have his helicopters, his jets, his patrol boats to train with.

He should have been nervous, preparing to face soldiers who were bound to be skeptical about having him as their commander. But he had been in that situation before, in Battle School. He would win over these soldiers by the simplest expedient of all. Not flattery, not favors, not folksy friendliness. He would win their loyalty by showing them that he knew what to do with an army, so they would have the confidence that when they went into battle, their lives would not be wasted in some doomed enterprise. He would tell them, from the start, "I will never lead you into an action unless I know we can win it. Your job is to become such a brilliant fighting force that there is no action I can't lead you into. We're not in this for glory. We're in this to destroy the enemies of Thailand any way we can."

They'd get used to being led by a little Greek boy soon enough.

ISLAMABAD

TO: GuillaumeLeBon%Egalite@Haiti.gov

From: Locke%erasmus@polnet.gov

Re: Terms for Consultation

M. LeBon, I appreciate how difficult it was for you to approach me. I believe that I could offer you worthwhile views and suggestions, and, more to the point, I believe you are committed to acting

courageously on behalf of the people you govern and therefore any suggestions I made would have an excellent chance of being put into effect.

But the terms you suggest are unacceptable to me. I will not come to Haiti by dark of night or masked as a tourist or student, lest anyone find out that you are consulting a teenage boy from America. I am still the author of every word written by Locke, and it is as that widely known figure, whose name is on the proposals that ended the League War, that I will come openly to consult with you. If my previous reputation were not reason enough for you to be able to invite me openly, then the fact that I am the brother of Ender Wiggin, on whose shoulders the fate of all humanity so recently was placed, should set a precedent you can follow without embarrassment. Not to mention the presence of children from Battle School in almost every military headquarters on Earth. The sum you offered is a princely one. But it will never be paid, for under the terms you suggested, I will not come, and if you invite me openly, I will certainly come but will accept no payment not even for my expenses while I am in your country. As a foreigner, I could not possibly match your deep and abiding love for the people of Haiti, but I care very much that every nation and people on Earth share in the prosperity and freedom that are their birthright, and I will accept no fee for helping in that cause.

By bringing me openly, you decrease your personal risk, for if my suggestions are unpopular, you can lay the blame on me. And the personal risk I take by coming openly is far greater, for if the world judges my proposals to be unsound or if, in implementing them, you discover them to be unworkable, I will publicly bear the discredit. I speak candidly, because these are realities we both must face: Such is my confidence that my suggestions will be excellent and that you will be able to implement them effectively. When we have finished our work, you can play Cincinnatus and retire to your farm, while I will play Solon and leave the shores of Haiti, both of us confident that we have given your people a fair chance to take their proper place in the world.

Sincerely,  
Peter Wiggin

Petra never forgot for an instant that she was a captive and a slave. But, like most captives, like most slaves, as she lived from day to day she became accustomed to her captivity and found ways to be herself within the tight boundaries around her.

She was guarded every moment, and her desk was crippled so she could send no outgoing messages. There would be no repetition of her message to Bean. And even when she saw that someone could it be Bean, not killed after all?-was trying to speak to her, leaving messages on every military, historical, and geographic forum that spoke about women held in bondage to some warrior or other, she did not let it fret her. She could not answer, so she would waste no time trying.

Eventually the work that was forced on her became a challenge that she found interesting for its own sake. How to mount a campaign against Burma and Thailand and, eventually, Vietnam that would sweep all resistance before it, yet never provoke China to intervene. She saw at once that the vast size of the Indian Army was its greatest weakness, for the supply lines would be impossible to defend. So, unlike the other strategists Achilles was using-mostly Indian Battle School graduates-Petra did not bother with the logistics of a sledgehammer campaign. Eventually the Indian forces

would have to divide anyway, unless the Burmese and Thai armies simply lined up to be slaughtered. So she planned an unpredictable campaign--dazzling thrusts by small, mobile forces that could live off the land. The few pieces of mobile armor would race forward, supplied with petrol by air tankers.

She knew her plan was the only one that made sense, and not just because of the intrinsic problems it solved. Any plan that involved putting ten million soldiers so near to the border with China would provoke Chinese intervention. Her plan would never put enough soldiers near China to constitute a threat. Nor would her plan lead to a war of attrition that would leave both sides exhausted and weak. Most of India's strength would remain in reserve, ready to strike wherever the enemy showed weakness.

Achilles gave copies of her plan to the others, of course--he called it "cooperation," but it functioned as an exercise in one-upmanship. All the others had quickly climbed into Achilles' pocket, and now were eager to please him. They sensed, of course, that Achilles wanted Petra humiliated, and duly gave him what he wanted. They mocked her plan as if any fool could see it was hopeless, even though their criticisms were specious and her main points were never even addressed. She bore it, because she was a slave, and because she knew that eventually, some of them were bound to catch on to the way Achilles manipulated them and used them. But she knew that she had done a brilliant job, and it would be a delicious irony if the Indian Army--no, be honest, if Achilles--did not use her plan, and marched head-on to destruction.

It did not bother her conscience to have come up with an effective strategy for Indian expansion in southeast Asia. She knew it would never be used. Even her strategy of small, quick strike forces did not change the fact that India could not afford a two-front war. Pakistan would not let the opportunity pass if India committed itself to an eastern war.

Achilles had simply chosen the wrong country to try to lead into war. Tikal Chapekar, the Indian prime minister, was an ambitious man with delusions of the nobility of his cause. He might very well believe in Achilles' persuasions and long to begin an attempt to "unify" southeast Asia. A war might even begin. But it would founder quickly as Pakistan prepared to attack in the west. Indian adventurism would evaporate as it always had.

She even said as much to Achilles when he visited her one morning after her plans had been so resoundingly rejected by her fellow strategists. "Follow whatever plan you like, nothing will ever work as you think it will."

Achilles simply changed the subject--when he visited her, he preferred to reminisce with her as if they were a couple of old people remembering their childhoods together. Remember this about Battle School? Remember that? She wanted to scream in his face that he had only been there for a few days before Bean had him chained up in an air shaft, confessing to his crimes. He had no right to be nostalgic for Battle School. All he was accomplishing was to poison her own memories of the place, for now when Battle School came up, she just wanted to change the subject, to forget it completely.

Who would have imagined that she would ever think of Battle School as her era of freedom and happiness? It certainly hadn't seemed that way at the time.

To be fair, her captivity was not painful. As long as Achilles was in Hyderabad, she had the run of the base, though she was never unobserved. She could go to the library and do research-though one of her guards had to thumb the ID pad, verifying that she had logged on as herself, with all the restrictions that implied, before she could access the nets. She could run through the dusty countryside that was used for military maneuvers-and sometimes could almost forget the other footfalls keeping syncopated rhythm with her own. She could eat what she wanted, sleep when she wanted. There were times when she almost forgot she wasn't free. There were far more times when, knowing she was not free, she almost decided to stop hoping that her captivity would ever end.

It was Bean's messages that kept her hope alive. She could not answer him, and therefore stopped thinking of his messages as actual communications. Instead they were something deeper than mere attempts at making contact. They were proof that she had not been forgotten. They were proof that Petra Arkanian, Battle School brat, still had a friend who respected her and cared for her enough to refuse to give up. Each message was a cool kiss to her fevered brow.

And then one day Achilles came to her and told her he was going on a trip.

She assumed at once that this meant she would be confined to her room, locked down and under guard, until Achilles returned.

"No locks this time," said Achilles. "You're coming with me."

"So it's someplace inside India?"

"In one sense yes," said Achilles. "In another, no."

"I'm not interested in your games," she said, yawning. "I'm not going."

"Oh, you won't want to miss this," said Achilles. "And even if you did, it wouldn't matter, because I need you, so you'll be there."

"What can you possibly need me for?"

"Oh, well, when you put it that way, I suppose I should be more precise. I need you to see what takes place at the meeting."

"Why? Unless there's a successful assassination attempt, there's nothing I want to see you do."

"The meeting," said Achilles, "is in Islamabad."

Petra had no smart reply to that. The capital of Pakistan. It was unthinkable. What possible business could Achilles have there? And why would he bring her?

They flew-which of course reminded her of the eventful flight that had brought her to India as Achilles' prisoner. The open door should I have pulled him out with me and brought him brutally down to earth?

During the flight Achilles showed her the letter he had sent to Ghaffar Wahabi, the "prime minister" of Pakistan-actually, of course, the military dictator ... or Sword of Islam, if you preferred it that way. The letter was a marvel of deft manipulation. It would never have attracted any attention in Islamabad, however, if it had not come from Hyderabad, the headquarters of the Indian Army. Even though Achilles' letter never actually said so, it would be assumed in Pakistan that Achilles came as an unofficial envoy of the Indian government.

How many times had an Indian military plane landed at this military airbase near Islamabad? How many times had Indian soldiers in uniform been allowed to set foot on Pakistani soil-bearing their sidearms, no less? And all to carry a Belgian boy and an Armenian girl to talk to whatever lower-level official the Pakistanis decided to fob off on them.

A bevy of stone-faced Pakistani officials led them to a building a short distance from where their plane was being refueled. Inside, on the second floor, the leading official said, "Your escort must remain outside."

"Of course," said Achilles. "But my assistant comes in with me. I must have a witness to remind me in case my memory flags."

The Indian soldiers stood near the wall at full attention. Achilles and Petra walked through the open door.

There were only two people in the room, and she recognized one of them immediately from his pictures. With a gesture, he indicated where they should sit.

Petra walked to her chair in silence, never taking her eyes off Ghaffar Wahabi, the prime minister of Pakistan. She sat beside and slightly behind Achilles, as a lone Pakistani aide sat just at Wahabi's right hand. This was no lower-level official. Somehow, Achilles' letter had opened all the doors, right to the very top.

They needed no interpreter, for Common was, though not their birth language, a childhood acquisition for both of them, and they spoke without accent. Wahabi seemed skeptical and distant, but at least he did not play any humiliation games-he did not keep them waiting, he ushered them into the room himself, and he did not challenge Achilles in any way.

"I have invited you because I wish to hear what you have to say," said Wahabi. "So please begin."

Petra wanted so badly for Achilles to do something horribly wrong-to simper and beam, or to try to strut and show off his intelligence.

"Sir, I'm afraid that it may sound at first as if I am trying to teach Indian history to you, a scholar in that field. It is from your book that I learned everything I'm about to say."

"It is easy to read my book," said Wahabi. "What did you learn from it that I do not already know?"

"The next step," said Achilles. "The step so obvious that I was stunned when you did not take it."

"So this is a book review?" asked Wahabi. But with those words he smiled faintly, to take away the edge of hostility.

"Over and over again, you show the great achievements of the Indian people, and how they are overshadowed, swallowed up, ignored, despised. The civilization of the Indus is treated as a poor also-ran to Mesopotamia and Egypt and even that latecomer China. The Aryan invaders brought their language and religion and imposed it on the people of India. The Moguls, the British, each with their overlay of beliefs and institutions. I must tell you that your book is regarded with great respect in the highest circles of the Indian government, because of the impartial way you treated the religions brought to India by invaders."

Petra knew that this was not idle flattery. For a Pakistani scholar, especially one with political ambitions, to write a history of the subcontinent without praising the Muslim influence and condemning the Hindu religion as primitive and destructive was brave indeed.

Wahabi raised a hand. "I wrote then as a scholar. Now I am the voice of the people. I hope my book has not led you into a quixotic quest for reunification of India. Pakistan is determined to remain pure.

"Please do not leap to conclusions," said Achilles. "I agree with you that reunification is impossible. Indeed, it is a meaningless term. Hindu and Muslim were never united except under an oppressor, so how could they be reunited?"

Wahabi nodded, and waited for Achilles to go on.

"What I saw throughout your account," said Achilles, "was a profound sense of the greatness inherent in the Indian people. Great religions have been born here. Great thinkers have arisen who have changed the world. And yet for two hundred years, when people think of the great powers, India and Pakistan are never on the list. And they never have been. And this makes you angry, and it makes you sad."

"More sad than angry," said Wahabi, "but then, I'm an old man, and my temper has abated."

"China rattles its swords, and the world shivers, but India is barely glanced at. The Islamic world trembles when Iraq or Turkey or Iran or Egypt swings one way or another, and yet Pakistan, stalwart for its entire history, is never treated as a leader. Why?"

"If I knew the answer," said Wahabi, "I would have written a different book."

"There are many reasons in the distant past," said Achilles, "but they all come down to one thing. The Indian people could never act together."

"Again, the language of unity," said Wahabi.

"Not at all," said Achilles. "Pakistan cannot take his rightful place of leadership in the Muslim world, because whenever he looks to the west, Pakistan hears the heavy steps of India behind him. And India cannot take her rightful place as the leader of the east, because the threat of Pakistan looms behind her."

Petra admired the deft way Achilles made his choice of pronouns seem casual, uncalculated-India the woman, Pakistan the man.

"The spirit of God is more at home in India and Pakistan than any other place. It is no accident that great religions have been born here, or have found their purest form. But Pakistan keeps India from being great in the east, and India keeps Pakistan from being great in the west."

"True, but insoluble," said Wahabi.

"Not so," said Achilles. "Let me remind you of another bit of history, from only a few years before Pakistan's creation as a state. In Europe, two great nations faced each other-Stalin's Russia and Hitler's Germany. These two leaders were great monsters. But they saw that their enmity had chained them to each other. Neither could accomplish anything as long as the other threatened to take advantage of the slightest opening."

"You compare India and Pakistan to Hitler and Stalin?"

"Not at all," said Peter, "because so far, India and Pakistan have shown less sense and less self-control than either of those monsters."

Wahabi turned to his aide. "As usual, India has found a new way to insult us." The aide arose to help him to his feet.

"Sir, I thought you were a wise man," said Achilles. "There is no one here to see you posture. No one to quote what I have said. You have nothing to lose by hearing me out, and everything to lose by leaving."

Petra was stunned to hear Achilles speak so sharply. Wasn't this taking his non-flatterer approach a little far? Any normal person would have apologized for the unfortunate comparison with Hitler and Stalin. But not Achilles. Well, this time he had surely gone too far. If this meeting failed, his whole strategy would come to nothing, and the tension he was under had led to this misstep.

Wahabi did not sit back down. "Say what you have to say, and be quick," he said.

"Hitler and Stalin sent their foreign ministers, Ribbentrop and Molotov, and despite the hideous denunciations that each had made against the other, they signed a nonaggression pact and divided Poland between them. It's true that a couple of years later, Hitler abrogated this pact, which led to millions of deaths and Hitler's eventual downfall, but that is irrelevant to your situation, because

unlike Hitler and Stalin, you and Chapekar are men of honor-you are of India, and you both serve God faithfully."

"To say that Chapekar and I both serve God is blasphemy to one or the other of us, or both," said Wahabi.

"God loves this land and has given the Indian people greatness," said Achilles-so passionately that if Petra had not known better, she might have believed he had some kind of faith. "Do you really believe it is the will of God that both Pakistan and India remain in obscurity and weakness, solely because the people of India have not yet awakened to the will of Allah?"

"I do not care what atheists and madmen say about the will of Allah."

Good for you, thought Petra.

"Nor do I," said Achilles. "But I can tell you this. If you and Chapekar signed an agreement, not of unity, but of nonaggression, you could divide Asia between you. And if the decades pass and there is peace between these two great Indian nations, then will the Hindu not be proud of the Muslim, and the Muslim proud of the Hindu? Will it not be possible then for Hindus to hear the teachings of the Quran, not as the book of their deadly enemy, but rather as the book of their fellow Indians, who share with India the leadership of Asia? If you don't like the example of Hitler and Stalin, then look at Portugal and Spain, ambitious colonizers who shared the Iberian Peninsula. Portugal, to the west, was smaller and weaker-but it was also the bold explorer that opened up the seas. Spain sent one explorer, and he was Italian-but he discovered a new world."

Petra again saw the subtle flattery at work. Without saying so directly, Achilles had linked Portugal-the weaker but braver nation-to Pakistan, and the nation that prevailed through dumb luck to India.

"They might have gone to war and destroyed each other, or weakened each other hopelessly. Instead they listened to the Pope, who drew a fine on the earth and gave everything east of it to Portugal and everything west of it to Spain. Draw your line across the Earth, Ghaffar Wahabi. Declare that you will not make war against the great Indian people who have not yet heard the word of Allah, but will instead show to all the world the shining example of the purity of Pakistan. While in the meantime, Tikal Chapekar will unite eastern Asia under Indian leadership, which they have long hungered for. Then, in the happy day when the Hindu people heed the Book, Islam will spread in one breath from New Delhi to Hanoi."

Wahabi slowly sat back down.

Achilles said nothing.

Petra knew then that his boldness had succeeded.

"Hanoi," said Wahabi. "Why not Beijing?"

"On the day that the Indian Muslims of Pakistan are made guardians of the sacred city, on that day the Hindus may imagine entering the forbidden city."

Wahabi laughed. "You are outrageous."

"I am," said Achilles. "But I'm right. About everything. About the fact that this is what your book was pointing to. That this is the obvious conclusion, if only India and Pakistan are blessed to have, at the same time, leaders with such vision and courage."

"And why does this matter to you?" said Wahabi.

"I dream of peace on Earth," said Achilles.

"And so you encourage Pakistan and India to go to war?"

"I encourage you to agree not to go to war with each other."

"Do you think Iran will peacefully accept Pakistan's leadership? Do you think the Turks will embrace us? It will have to be by conquest that we create this unity."

"But you will create it," said Achilles. "And when Islam is united under Indian leadership, it will no longer be humiliated by other nations. One great Muslim nation, one great Hindu nation, at peace with each other and too powerful for any other nation to dare to attack. That is how peace comes to Earth. God willing."

"Inshallah," echoed Wahabi. "But now it is time for me to know by what authority you say these things. You hold no office in India. How do I know you have not been sent to lull me while Indian armies amass for yet another unprovoked assault?"

Petra wondered if Achilles had planned to get Wahabi to say something so precisely calculated to give him the perfect dramatic moment, or if it was just chance. For Achilles' only answer to Wahabi was to draw from his portfolio a single sheet of paper, bearing a small signature at the bottom in blue ink.

"What is that?" said Wahabi.

"My authority," said Achilles. He handed the paper to Petra. She arose and carried it to the middle of the room, where Wahabi's aide took it from her hand.

Wahabi perused it, shaking his head. "And this is what he signed?"

"He more than signed it," said Achilles. "Ask your satellite team to tell you what the Indian Army is doing even as we speak."

"They are withdrawing from the border?"

"Someone has to be the first to offer trust. It's the opportunity you've been waiting for, you and all your predecessors. The Indian Army is withdrawing. You could send your troops forward. You could turn this gesture of peace into a bloodbath. Or you could give the orders to move your troops west and north. Iran is waiting for you to show them the purity of Islam. The Caliphate of Istanbul is waiting for you to unshackle it from the chains of the secular government of Turkey. Behind you, you will have only your brother Indians, wishing you well as you show the greatness of this land that God has chosen, and that finally is ready to rise."

"Save the speech," said Wahabi. "You understand that I have to verify that this signature is genuine, and that the Indian troops are moving in the direction that you say."

"You will do what you have to do," said Achilles. "I will return to India now."

"Without waiting for my answer?"

"I haven't asked you a question," said Achilles. "Tikal Chapekar has asked that question, and it is to him you must give your answer. I am only the messenger."

With that, Achilles rose to his feet. Petra did, too. Achilles strode boldly to Wahabi and offered his hand. "I hope you will forgive me, but I could not bear to return to India without being able to say that the hand of Ghaffar Wahabi touched mine."

Wahabi reached out and took Achilles' hand. "Foreign meddler," said Wahabi, but his eyes twinkled, and Achilles smiled in reply.

Could this possibly have worked? Petra wondered. Molotov and Ribbentrop had to negotiate for weeks, didn't they? Achilles did this in a single meeting.

What were the magic words?

But as they walked out of the room, escorted again by the four Indian soldiers who had come with them-her guards-Petra realized there had been no magic words. Achilles had simply studied both men and recognized their ambitions, their yearning for greatness. He had told them what they most wanted to hear. He gave them the peace that they had secretly longed for.

She had not been there for the meeting with Chapekar that led to Achilles' getting that signed nonaggression pact and the promise to withdraw, but she could imagine it. "You must make the first gesture," Achilles must have said. "It's true that the Muslims might take advantage of it, might attack. But you have the largest army in the world, and govern the greatest people. Let them attack, and you will absorb the blow and then return to roll over them like water bursting from a dam. And no one will criticize you for taking a chance on peace."

And now it finally struck home. The plans she had been drawing up for the invasion of Burma and Thailand were not mere foolery. They would be used. Hers or someone else's. The blood would begin to flow. Achilles would get his war.

I didn't sabotage my plans, she realized. I was so sure they could not be used that I didn't bother to build weaknesses into them. They might actually work.

What have I done?

And now she understood why Achilles had brought her along. He wanted to strut in front of her, of course-for some reason, he felt the need to have someone witness his triumphs. But it was more than that. He also wanted to rub her face in the fact that he was actually going to do what she had so often said could not be done.

Worst of all, she found herself hoping that her plan would be used, not because she wanted Achilles to win his war, but because she wanted to stick it to the other Battle School brats who had mocked her plan so mercilessly.

I have to get word to Bean somehow. I have to warn him, so he can get word to the governments of Burma and Thailand. I have to do something to subvert my own plan of attack, or their destruction will be on my shoulders.

She looked at Achilles, who was dozing in his seat, oblivious to the miles racing by beneath him, returning him to the place where his wars of conquest would begin. If she could only remove his murders from the equation, on balance he would be quite a remarkable boy. He was a Battle School discard with the label "psychopath" attached to him, and yet somehow he had gotten not one but three major world governments to do his bidding.

I was a witness to this most recent triumph, and I'm still not sure how he brought it off.

She remembered the story from her childhood, about Adam and Eve in the garden, and the talking snake. Even as a little girl she had said-to the consternation of her family-What kind of idiot was Eve, to believe a snake? But now she understood, for she had heard the voice of the snake and had watched as a wise and powerful man had fallen under its spell.

Eat the fruit and you can have the desires of your heart. It's not evil, it's noble and good. You'll be praised for it.

And it's delicious.

WARNINGS

To: Carlotta%agape@vatican.net/orders/ sisters/ind From: Graff%bonpassage@colmin.gov Re: Found?

I think we've found Petra. A good friend in Islamabad who is aware of my interest in finding her tells me that a strange envoy from New Delhi came for a brief meeting with Wahabi yesterday-a teenage boy who could only be Achilles; and a teenage girl of the right description who said nothing. Petra? I think it likely.

Bean needs to know what I've learned. First, my friend tells me that this meeting was almost immediately followed by orders to the Pakistani military to move back from the border with India. Couple that with the already-noted Indian removal from that frontier, and I think we're witnessing the impossible-after two centuries of intermittent but chronic warfare, a real attempt at peace. And it seems to have been done by or with the help of Achilles. (Since so many of our colonists are Indian, there are those in my ministry who fear that an outbreak of peace on the subcontinent might jeopardize our work!)

Second, for Achilles to bring Petra along on this sensitive mission implies that she is not an unwilling participant in his projects. Given that in Russia Vlad also was seduced into working with Achilles, however briefly, it is not unthinkable that even as confirmed a skeptic as Petra might have become a true believer while in captivity. Bean must be made aware of this possibility, for he may be hoping to rescue someone who does not wish to be rescued.

Third, tell Bean that I can make contacts in Hyderabad, among former Battle School students working in the Indian high command. I will not ask them to compromise their loyalty to their country, but I will ask about Petra and find out what, if anything, they have seen or heard. I think old school loyalty may trump patriotic secrecy on this point.

Bean's little strike force was all that he could have hoped for. These were not elite soldiers the way Battle School students had been-they were not selected for the ability to command. But in some ways this made them easier to train. They weren't constantly analyzing and second-guessing. In Battle School, too, many soldiers kept trying to show off to everyone, so they could enhance their reputation in the schoolcommanders constantly had to struggle to keep their soldiers focused on the overall goal of the army.

Bean knew from his studies that in real-world armies, the opposite was more usually the problem-that soldiers tried not to do brilliantly at anything, or learn too quickly, for fear of being thought a suckup or show-off by their fellow soldiers. But the cure for both problems was the same. Bean worked hard to earn a reputation for tough, fair judgment.

He played no favorites, made no friends, but always noticed excellence and commented on it. His praise, however, was not effusive. Usually he would simply make a note about it in front of others. "Sergeant, your team made no mistakes." Only when an accomplishment was exceptional did he praise it explicitly, and then only with a terse "Good."

As he expected, the rarity of his praise as well as its fairness soon made it the most valued coin in his strike force. Soldiers who did good work did not have special privileges and were given no special authority, so they were not resented by the others. The praise was not effusive, so it never embarrassed them. Instead, they were admired by the others, and emulated. And the focus of the soldiers became the earning of Bean's recognition.

That was true power. Frederick the Great's dictum that soldiers had to fear their officers more than they feared the enemy was stupid. Soldiers needed to believe they had the respect of their officers, and to value that respect more than they valued life itself. Moreover, they had to know that their

officers' respect was justified-that they really were the good soldiers their officers believed them to be.

In Battle School, Bean had used his brief time in command of an army to teach himself-he led his men to defeat every time, because he was more interested in learning what he could learn than in racking up points. This was demoralizing to his soldiers, but he didn't care-he knew that he would not be with them long, and that the time of the Battle School was nearly over. Here in Thailand, though, he knew that the battles coming up were real, the stakes high, and his soldiers' lives would be on the line. Victory, not information, was the goal. And, behind that obvious motive, there lay an even deeper one. Sometime in the coming war-or even before, if he was lucky-he would be using a portion of this strike force to make a daring rescue attempt, probably deep inside India. There would be zero tolerance for error. He would bring Petra out. He would succeed.

He drove himself as hard as he drove any of his men. He made it a point to train alongside them-a child going through all the exercises the men went through. He ran with them, and if his pack was lighter it was only because he needed to carry fewer calories in order to survive. He had to carry smaller, lighter weapons, but no one begrudged him that-besides, they saw that his bullets went to the mark as often as theirs. There was nothing he asked them to do that he did not do himself. And when he was not as good as his men, he had no qualms about going to one of the best of them and asking him for criticism and advice-which he then followed.

This was unheard of, for a commander to risk allowing himself to appear unskilled or weak in front of his men. And Bean would not have done it, either, because the benefits did not usually outweigh the risks. However, he was planning to go along with them on difficult maneuvers, and his training had been theoretical and game-centered. He had to become a soldier, so he could be there to deal with problems and emergencies during operations, so he could keep up with them, and so that, in a pinch, he could join effectively in a fight.

At first, because of his youth and small stature, some of the soldiers had tried to make things easier for him. His refusal had been quiet but firm. "I have to learn this too," he would say, and that was the end of the discussion. Naturally, the soldiers watched him all the more intensely, to see how he measured up to the high standard he set for them. They saw him tax his body to the utmost. They saw that he shrank from nothing, that he came out of mudwork slimier than anyone, that he went over obstacles just as high as anyone's, that he ate no better food and slept on no better a patch of ground on maneuvers.

They did not see how much he modeled this strike force on the Battle School armies. With two hundred men, he divided them into five companies of forty. Each company, like Ender's Battle School army, was divided into five toons of eight men each. Every toon was expected to be able to carry out operations entirely on its own; every company was expected to be able to deal with complete independence. At the same time, he made sure that they became skilled observers, and trained them to see the kinds of things he needed them to see.

"You are my eyes," he said. "You need to see what I would look for and what you would see. I will always tell you what I am planning and why, so you will know if you see a problem I didn't anticipate, which might change my plan. Then you will make sure I know. My best chance of

keeping you all alive is to know everything that is in your heads during battle, just as your best chance of staying alive is to know everything that is in my head."

Of course, he knew that he could not tell them everything. No doubt they understood this as well. But he spent an inordinate amount of time, by standard military doctrine, telling his men the reasoning behind his orders, and he expected his company and toon commanders to do the same with their men. "That way, when we give you an order without any reasons, you will know that it's because there's no time for explanation, that you must act now-but that there is a good reason, which we would tell you if we could."

Once when Suriyawong came to observe his training of his troops, he asked Bean if this was how he recommended training soldiers throughout the whole army.

"Not a chance," said Bean.

"If it works for you, why wouldn't it work everywhere?"

"Usually you don't need it and can't afford the time," said Bean.

"But you can?"

"These soldiers are going to be called on to do the impossible. They aren't going to be sent to hold a position or advance against an enemy posting. They're going to be sent to do difficult, complicated things right under the eyes of the enemy, under circumstances where they can't go back for new instructions but have to adapt and succeed. That is impossible if they don't understand the purpose behind all their orders. And they have to know exactly how their commanders think so that trust is perfect-and so they can compensate for their commanders' inevitable weaknesses."

"Your weaknesses?" asked Suriyawong.

"Hard to believe, Suriyawong, but yes, I have weaknesses."

That earned a faint smile from Surly-a rare prize. "Growing pains?" asked Suriyawong.

Bean looked down at his ankles. He had already had new uniforms made twice, and it was time for a third go. He was almost as tall now as Suriyawong had been when Bean first arrived in Bangkok half a year before. Growing caused him no pain. But it worried him, since it seemed unconnected with any other sign of puberty. Why, after all these years of being undersized, was his body now so determined to catch up?

He experienced none of the problems of adolescence-not the clumsiness that comes from having limbs that swing farther than they used to, not the rush of hormones that clouded judgment and distracted attention. So if he grew enough to carry better weapons, that could only be a plus.

"Someday I hope to be as fine a man as you," said Bean.

Suriyawong grunted. He knew that Surly would take it as a joke. He also knew that, somewhere deeper than consciousness, Suriyawong would also take it at face value, for people always did. And it was important for Suriyawong to have the constant reassurance that Bean respected his position and would do nothing to undermine him.

That had been months ago, and Bean was able to report to Suriyawong a long list of possible missions that his men had been trained for and could perform at any time. It was his declaration of readiness.

Then came the letter from Graff. Carlotta forwarded it to him as soon as she got it. Petra was alive. She was probably with Achilles in Hyderabad.

Bean immediately notified Suriyawong that an intelligence source of a friend of his verified an apparent nonaggression pact between India and Pakistan, and a movement of troops away from the shared border-along with his opinion that this guaranteed an invasion of Burma within three weeks.

As to the other matters in the letter, Graff's assertion that Petra might have gone over to Achilles' cause was, of course, absurd-if Graff believed that, he didn't know Petra. What alarmed Bean was that she had been so thoroughly neutralized that she could seem to be on Achilles' side. This was the girl who always spoke her mind no matter how much abuse it caused to come down on her head. If she had fallen silent, it meant she was in despair.

Isn't she getting my messages? Has Achilles cut her off from information so thoroughly that she doesn't even roam the nets? That would explain her failure to answer. But still, Petra was used to standing alone. That wouldn't explain her silence.

It had to be her own strategy for mastery. Silence, so that Achilles would forget how much she hated him. Though surely she knew him well enough by now to know that he never forgot anything. Silence, so that she could avoid even deeper isolation-that was possible. Even Petra could keep her mouth shut if every time she spoke up it cut her off from more and more information and opportunities.

Finally, though, Bean had to entertain the possibility that Graff was right. Petra was human. She feared death like anyone else. And if she had, in fact, witnessed the death of her two guardians in Russia, and if Achilles had committed the killings with his own hands which Bean believed likely-then Petra was facing something she had never faced before. She could speak up to idiotic commanders and teachers in Battle School because the worst that could happen was reprimands. With Achilles, what she had to fear was death.

And the fear of death changed the way a person saw the world, Bean knew that. He had lived his first years of life under the constant pressure of that fear. Moreover, he had spent a considerable time specifically under Achilles' power. Even though he never forgot the danger Achilles posed, even Bean had come to think Achilles wasn't such a bad guy, that in fact he was a good leader, doing brave and bold things for his "family" of street urchins. Bean had admired him and learned from him-right up to the moment when Achilles murdered Poke.

Petra, fearing Achilles, submitting to his power, had to watch him closely just to stay alive. And, watching him, she would come to admire him. It's a common trait of primates to become submissive and even worshipful toward one who has the power to kill them. Even if she fought off those feelings, they would still be there.

But she'll awaken from it, when she's out from under that power. I did. She will. So even if Graff is right, and Petra has become some thing of a disciple to Achilles, she will turn heretic once I get her out. Still, the fact remained-he had to be prepared to bring her out even if she resisted rescue or tried to betray them.

He added dartguns and will-bending drugs to his army's arsenal and training.

Naturally, he would need more hard data than he had if he was to mount an operation to rescue her. He wrote to Peter, asking him to use some of his old Demosthenes contacts in the U.S. to get what intelligence data they had on Hyderabad. Beyond that, Bean really had no resources to tap without giving away his location. Because it was a sure thing that he couldn't ask Suriyawong for information about Hyderabad. Even if Suriyawong was feeling favorably disposed-and he had been sharing more information with Bean lately-there was no way to explain why he could possibly need information about the Indian high command base at Hyderabad.

Only after days of waiting for Peter, while training his men and himself in the use of darts and drugs, did Bean realize another important implication of discovering that Petra might actually be cooperating with Achilles. Because none of their strategy was geared to the kind of campaign Petra might design.

He requested a meeting with both Suriyawong and the Chakri. After all these months of never seeing the Chakri's face, he was surprised that the meeting was granted-and without delay. He sent his request when he got up at five in the morning. At seven, he was in the Chakri's office, with Suriyawong beside him.

Suriyawong only had time to mumble, with annoyance, the words "What is this?" before the Chakri started the meeting.

"What is this?" said the Chakri. He smiled at Suriyawong; he knew he was echoing Suriyawong's question. But Bean also knew that it was a smile of mockery. You couldn't control this Greek boy after all.

"I just found out information that you both need to know," said Bean. Of course, this implied that Suriyawong; might not have recognized the importance of the information, so that Bean had to bring it to Chakri Naresuan directly. "I meant no lack of respect. Only that you must be aware of this immediately."

"What possible information can you have," said Chakri Naresuan, "that we don't already know?"

"Something that I learned from a well-connected friend," said Bean. "All our assumptions were based on the idea of the Indian Army using the obvious strategy-to overwhelm Burmese and Thai

defenses with huge armies. But I just learned that Petra Arkanian, one of Ender Wiggin's jeesh, may be working with the Indian Army. I never thought she would collaborate with Achilles, but the possibility exists. And if she's directing the campaign, it won't be a flood of soldiers at all."

"Interesting," said the Chakri. "What strategy would she use?"

"She would still overwhelm you with numbers, but not with massed armies. Instead there would be probing raids, incursions by smaller forces, each one designed to strike, draw your attention, and then fade. They don't even have to retreat. They just live off the land until they can re-form later. Each one is easily beaten, except that there's nothing to beat. By the time we get there, they're gone. No supply lines. No vulnerabilities, just probe after probe until we can't respond to them all. Then the probes start getting bigger. When we get there, with our thinly stretched forces, the enemy is waiting. One of our groups destroyed, then another."

The Chakri looked at Suriyawong. "What Borommakot says is possible," said Suriyawong. "They can keep up such a strategy forever. We never damage them, because they have an infinite supply of troops, and they risk little on each attack. But every loss we suffer is irreplaceable, and every retreat gives them ground."

"So why wouldn't this Achilles think of such a strategy on his own?" asked the Chakri. "He's a very bright boy, they say."

"It's a cautious strategy," said Bean. "One that is very frugal with the lives of the soldiers. And it's slow."

"And Achilles is never careful with the lives of his soldiers?"

Bean thought back to his days in Achilles' "family" on the streets of Rotterdam. Achilles was, in fact, careful of the lives of the other children. He took great pains to make sure they were not exposed to risk. But that was because his power base absolutely depended on losing none of them. If any of the children had been hurt, the others would have melted away. That would not be the case with the Indian Army. Achilles would spend them like autumn leaves.

Except that Achilles' goal was not to rule India. It was to rule the world. So it did matter that he earn a reputation as a beneficent leader. That he seem to value the lives of his people.

"Sometimes he is, when it suits him," said Bean. "That's why he would follow such a plan if Petra outlined it for him."

"So what would it mean," said the Chakri, "if I told you that the attack on Burma has just been launched, and it is a massive frontal assault by huge Indian forces, just as you originally outlined in your first memo to us?"

Bean was stunned. Already? The apparent nonaggression pact between India and Pakistan was only a few days old. They could not possibly have amassed troops that quickly.

Bean was surprised to see that Suriyawong also had been unaware that war had begun.

"It was an extremely well-planned campaign," said the Chakri. "The Burmese only had a day's warning. The Indian troops moved like smoke. Whether it is your evil friend Achilles or your brilliant friend Petra or the mere simpletons of the Indian high command, they managed it superbly."

"What it means," said Bean, "is that Petra is not being listened to. Or that she is deliberately sabotaging the Indian Army's strategy. I'm relieved to know this, and I apologize for raising a warning that was not needed. May I ask, sir, if Thailand is coming into the war now?"

"Burma has not asked for help," said the Chakri.

"By the time Burma asks Thailand for help," said Bean, "the Indian Army will be at our borders."

"At that point," said the Chakri, "we will not wait for them to ask."

"What about China?" asked Bean.

The Chakri blinked twice before answering. "What about China?"

"Have they warned India? Have they responded in any way?"

"Matters with China are handled by a different branch of government," said the Chakri.

"India may have twice the population of China," said Bean, "but the Chinese Army is better equipped. India would think twice before provoking Chinese intervention."

"Better equipped," said the Chakri. "But is it deployed in a usable way? Their troops are kept along the Russian border. It would take weeks to bring them down here. If India plans a lightning strike, they have nothing to fear from China."

"As long as the I.F. keeps missiles from flying," said Suriyawong. "And with Chamrajnagar as Polemarch, you can be sure no missiles will attack India."

"Oh, that's another new development," said the Chakri. "ChamraJnagar submitted his resignation from the I.F. ten minutes after the attack on Burma was launched. He will return to Earth-to India-to accept his new appointment as leader of a coalition government that will guide the newly enlarged Indian empire. For of course, by the time a ship can bring him back to Earth, the war will be over, one way or another."

"Who is the new Polemarch?" asked Bean.

"That is the dilemma," said the Chakri. "There are those who wonder whom the Hegemon can nominate, considering that no one can quite trust anyone now. Some are wondering why the

Hegemon should name a Polemarch at all. We've done without a Strategos since the League War. Why do we need the I.F. at all?"

"To keep the missiles from flying," said Suriyawong.

"That is the only serious argument in favor of keeping the I.F.," said the Chakri. "But many governments believe that the I.F. should be reduced to the role of policing above the atmosphere. There is no reason for any but a tiny fraction of the I.F.'s strength to be retained. And as for the colonization program, many are saying it is a waste of money, when war is erupting here on Earth. Well, enough of this little school class. There is grown-up work to be done. You will be consulted if we find that you are needed."

The Chakri's dismissive air was surprising. It revealed a high level of hostility to both of these Battle School graduates, not just the foreign one.

It was Suriyawong who challenged the Chakri on this. "Under what circumstances would we be called upon?" he asked. "Either the plans I drew up will work or they won't. If they work, you won't call on me. If they don't, you'll regard that as proof that I didn't know what I was doing, and you still won't call on me."

The Chakri pondered this for a few moments. "Why, I'd never thought of it that way. I believe you're right."

"No, you're wrong," said Suriyawong. "Nothing ever goes as planned during a war. We have to be able to adapt. I and the other Battle School graduates are trained for that. We should be kept informed of every development. Instead, you have cut me off from the intelligence that is flowing in. I should have seen this information the moment I woke up and looked at my desk. Why are you cutting me off?"

For the same reason you cut me off, Bean thought. So that when victory comes, all the credit can flow to the Chakri. "The Battle School children advised in the planning stages, but of course during the actual war, we did not leave it up to the children." And if things went badly, "We faithfully executed the plans drawn up by the Battle School children, but apparently schoolwork did not prepare them for the real world." The Chakri was covering his ass.

Suriyawong seemed to understand this also, for he gave no more argument. He arose. "Permission to leave, sir," he said.

"Granted. To you, too, Borommakot. Oh, and we'll probably be taking back the soldiers Suriyawong gave you to play with. Restoring them to their original units. Please prepare them to leave at once."

Bean also rose to his feet. "So Thailand is entering the war?"

"You will be informed of anything you need to know, when you need to know it."

As soon as they were outside the Chakri's office, Suriyawong sped up his pace. Bean had to run to catch up.

"I don't want to talk to you," said Suriyawong.

"Don't be a big baby about it," said Bean scornfully. "He's only doing to you what you already did to me. Did I run off and pout?"

Suriyawong stopped and whirled on Bean. "You and your stupid meeting!"

"He already cut you off," said Bean. "Already. Before I even asked to meet."

Suriyawong knew that Bean was right. "So I'm stripped of influence."

"And I never had any," said Bean. "What are we going to do about it?"

"Do?" said Suriyawong. "If the Chakri forbids it, no one will obey my orders. Without authority, I'm just a boy, still too young to enlist in the army."

"What we'll do first," said Bean, "is figure out what this all means."

"It means the Chakri is an oomay careerist," said Suriyawong.

"Come, let's walk out of the building."

"They can draw our words out of the open air, too, if they want," said Suriyawong.

"They have to try to do that. Here, anything we say is automatically recorded."

So Suriyawong walked with Bean out of the building that housed the highest of the Thai high command, and together they wandered toward the married officers' housing, to a park with playground equipment for the children of junior officers. When they sat on the swings, Bean realized that he was actually getting a little too big for them.

"Your strike force," said Suriyawong. "Just when it might have been most needed, it'll be dispersed."

"No it won't," said Bean.

"And why not?"

"Because you drew it from the garrison protecting the capital. Those troops won't be sent away. So they'll remain in Bangkok. The important thing is to keep all our materiel together and within easy reach. Do you think you still have authority for that?"

"As long as I call it routine cycling into storage," said Suriyawong, "I suppose so."

"And you'll know where these men are assigned, so when we need to, we can call them back to us."

"If I try that, I'll be cut off from the net," said Suriyawong.

"If we try that," said Bean, "it will be because the net doesn't matter."

"Because the war is lost."

"Think about it," said Bean. "Only a stupid careerist would openly disdain you like this. He wanted to shame and discourage you. Have you given him some offense?"

"I always give offense," said Suriyawong. "That's why everyone called me Surly behind my back in Battle School. The only person I know who is more arrogant than I seem is you."

"Is Naresuan a fool?" asked Bean.

"I had not thought so," said Suriyawong.

"So this is a day for people who are not fools to act like fools."

"Are you saying I am also a fool?"

"I was saying that Achilles is apparently a fool."

"Because he is attacking with massed forces? You told us that was what we should expect. Apparently Petra did not give him the better plan."

"Or he's not using it."

"But he'd have to be a fool not to use it," said Suriyawong.

"So if Petra gave him the better plan, and he declined to use it, then he and the Chakri are both fools today. As when the Chakri pretended that he has no influence over foreign policy."

"About China, you mean?" Suriyawong thought about this for a moment. "You're right, of course he has influence. But perhaps he simply didn't want us to know what the Chinese were doing. Perhaps that was why he was so sure he didn't need us, that he didn't need to enter Burma. Because he knows the Chinese are coming in."

"So," said Bean. "While we sit here, watching the war, we will learn much from the plain events as they unfold. If China intervenes to stop the Indians before Achilles ever gets to Thailand, then we know Chakri Naresuan is a smart careerist, not a stupid one. But if China does not intervene, then we have to wonder why Naresuan, who is not a foolish man, has chosen to act like one."

"What do you suspect him of?" asked Suriyawong.

"As for Achilles," said Bean, "no matter how we construe these events, he has been a fool."

"No, he's only a fool if Petra actually gave him the better plan and he's ignoring it."

"On the contrary," said Bean. "He's a fool no matter what. To enter into this war with even the possibility that China will intervene, that is foolish in the extreme."

"So perhaps he knows that China will not intervene, and then the Chakri would be the only fool," said Suriyawong.

"Let's watch and see."

"I'll watch and grind my teeth," said Suriyawong.

"Watch with me," said Bean. "Let's drop this stupid competition between us. You care about Thailand. I care about figuring out what Achilles is doing and stopping him. At this moment, those two concerns coincide almost perfectly. Let's share everything we know."

"But you know nothing."

"I know nothing that you know," said Bean. "And you know nothing that I know."

"What can you possibly know?" said Suriyawong. "I'm the eemo who cut you off from the intelligence net."

"I knew about the deal between India and Pakistan."

"So did we."

"But you didn't tell me," said Bean. "And yet I knew."

Suriyawong nodded. "Even if the sharing is mostly one way, from me to you, it's long overdue, don't you think?"

"I'm not interested in what's early or late," said Bean. "Only what happens next."

They went to the officers' mess and had lunch, then walked back to Suriyawong's building, dismissed his staff for the rest of the day, and, with the building to themselves, sat in Suriyawong's office and watched the progress of the war on Worldnet. Burmese resistance was brave but futile.

"Poland in 1939," said Bean.

"And here in Thailand," said Suriyawong, "we're being as timid as France and England."

"At least China isn't invading Burma from the north, the way Russia invaded Poland from the east," said Bean.

"Small mercies," said Suriyawong.

But Bean wondered. Why doesn't China step in? Beijing wasn't saying anything to the press. No comment, about a war on their doorstep? What does China have up its sleeve?

"Maybe Pakistan wasn't the only country to sign a nonaggression pact with India," said Bean.

"Why? What would China gain?" asked Suriyawong.

"Vietnam?" said Bean.

"Worthless, compared to the menace of having India poised with a vast army at the underbelly of China."

Soon, to distract themselves from the news-and from their loss of any kind of influence-they stopped paying attention to the vids and reminisced about Battle School. Neither of them brought up the really bad experiences, only the funny things, the ridiculous things, and they laughed their way into the evening, until it was dark outside.

This afternoon with Suriyawong, now that they were friends, reminded Bean of home-in Crete, with his parents, with Nikolai. He tried to keep from thinking about them most of the time, but now, laughing with Suriyawong, he was filled with a bittersweet longing. He had that one year of something like a normal life, and now it was over. Blown to bits like the house they had been vacationing in. Like the government-protected apartment Graff and Sister Carlotta had taken them away from in the nick of time.

Suddenly a thrill of fear ran through Bean. He knew something, though he could not say how. His mind had made some connection and he didn't understand how, but he had no doubt that he was right.

"Is there any way out of this building that can't be seen from the outside?" asked Bean, in a whisper so faint he could hardly hear himself.

Suriyawong, who had been in the middle of a story about Major Anderson's penchant for nose-picking when he thought nobody was watching, looked at him like he was crazy. "What, you want to play hide-and-see?"

Bean continued to whisper. "A way out."

Suriyawong took the hint and whispered back. "I don't know. I always use the doors. Like most doors, they're visible from both sides."

"A sewer line? A heating duct?"

"This is Bangkok. We don't have heating ducts."

"Any way out."

Suriyawong's whisper changed back to voice. "I'll look at the blueprints. But tomorrow, man, tomorrow. It's getting late and we talked right through dinner."

Bean grabbed his shoulder, forced him to look into his eyes.

"Suriyawong," he whispered, even more softly "I'm not joking. Right now, out of this building unobserved."

Finally Suriyawong got it: Bean was genuinely afraid. His whisper was quiet again. "Why, what's happening?"

"Just tell me how."

Suriyawong closed his eyes. "Flood drainage," he whispered. "Old ditches. They just laid these temporary buildings down on top of the old parade ground. There's a shallow ditch that runs right under the building. You can hardly tell it's there, but there's a gap."

"Where can we get under the building from inside?"

Suriyawong rolled his eyes. "These temporary buildings are made of lint." To prove his point, he pulled away the corner of the large rug in the middle of the room, rolled it back, and then, quite easily, pried up a floor section.

Underneath it was sod that had died from lack of sunlight. There were no gaps between floor and sod.

"Where's the ditch?" asked Bean.

Suriyawong thought again. "I think it crosses the hall. But the carpet is tacked down there."

Bean turned up the volume of the vid and went out the door of Suriyawong's office and through the anteroom to the hall. He pried up a corner of the carpet and ripped. Carpet fluff flew, and Bean kept pulling until Suriyawong stopped him. "I think about here," he said.

They pulled up another floor section. This time there was a depression in the yellowed sod.

"Can you get through that?" asked Bean.

"Hey, you're the one with the big head," said Suriyawong.

Bean threw himself down. The ground was damp-this was Bangkok-and he was clammy and filthy in moments as he wriggled along. Every floor joist was a challenge, and a couple of times he had to dig with his army-issue knife to make way for his head. But he made good progress anyway, and wriggled out into the darkness only a few minutes later. He stayed down, though, and saw that Suriyawong, despite not knowing what was going on, did not raise his head when he emerged from under the building, but continued to creep along just as Bean was doing. They kept going until they reached the next point where the old eroded ditch went under another temporary building.

"Please tell me we're not going under another building."

Bean looked at the pattern of lights from the moon, from nearby porches and area lights. He had to count on his enemies being at least a little careless. If they were using infrared, this escape was meaningless. But if they were just eyeballing the place, watching the doors, he and Surly were already where slow, easy movement wouldn't be seen.

Bean started to roll himself up the incline.

Suriyawong grabbed him by the boot. Bean looked at him. Suriyawong pantomimed rubbing his cheeks, his forehead, his ears.

Bean had forgotten. His Greek skin was lighter than Suriyawong's. He would catch more light.

He rubbed his face, his ears, his hands with damp soil from under the grass. Suriyawong nodded.

They rolled-at a deliberate pace-up out of the ditch and wriggled slowly along the base of the building until they were around the corner. Here there were bushes to offer some shelter. They stood in the shadows for a moment, then walked, casually, away from the building as if they had just emerged from the door. Bean hoped not to be visible to anyone watching Suriyawong's building, but even if they could be seen, they shouldn't attract any attention, as long as no one noticed that they seemed to be just a little undersized.

Not until they were a quarter mile away did Suriyawong finally speak. "Do you mind telling me the name of this game?"

"Staying alive," said Bean.

"I never knew paranoid schizophrenia could strike so fast."

"They've tried twice," said Bean. "And they had no qualms about killing my family along with me."

"But we were just talking," said Suriyawong. "What did you see?"

"Nothing."

"Or hear?"

"Nothing," said Bean. "I had a feeling."

"Please don't tell me that you're a psychic."

"No, I'm not. But something about the events of the past few hours must have made some unconscious connection. I listen to my fears. I act on them."

"And this works?"

"I'm still alive," said Bean. "I need a public computer. Can we get off the base?"

"It depends on how all-pervasive this plot against you is," said Suriyawong. "You need a bath, by the way."

"What about some place with ordinary public computer access?"

"Sure, there are visitor facilities near the tram station entrance. But would it be ironic if your assassins were using it?"

"My assassins aren't visitors," said Bean.

This bothered Suriyawong. "You don't even know if anybody's really out to kill you, but you're sure it's somebody in the Thai Army?"

"It's Achilles," said Bean. "And Achilles isn't in Russia. India doesn't have any intelligence service that could carry out an operation like this inside the high command. So it has to be somebody that Achilles has corrupted."

"Nobody here is in the pay of India," said Suriyawong.

"Probably not," said Bean. "But India isn't the only place Achilles has friends by now. He was in Russia for a while. He has to have made other connections."

"It's so hard to take this seriously, Bean," said Suriyawong. "If you suddenly start laughing and say Gotcha that time, I will kill you."

"I might be wrong," said Bean, "but I'm not joking."

They got to the visitor facility and found no one using any of the computers. Bean logged on using one of his many false identities and wrote a message to Graff and Sister Carlotta.

You know who this is. I believe an attempt is about to be made on my life. Would you send immediate messages to contacts within the Thai government, warning them that such an attempt is coming and tell them that it involves conspirators inside the Chakri's inner circle. No one else could have the access. And I believe the Chakri had prior knowledge. Any Indians supposedly involved are fall guys.

"You can't write that," said Suriyawong. "You have no evidence to accuse Naresuan. I'm annoyed with him, but he's a loyal Thai."

"He's a loyal Thai," said Bean, "but you can be loyal and still want me dead."

"But not me," said Suriyawong.

"If you want it to look like the evil action of outsiders," said Bean, "then a brave Thai has to die along with me. What if they make our deaths look as if an Indian strike force did it? That would be provocation for a declaration of war, wouldn't it?"

"The Chakri doesn't need a provocation."

"He does if he wants the Burmese to believe that Thailand isn't just grabbing for a piece of Burma." Bean went back to his note.

Please tell them that Suriyawong and I are alive. We will come out of hiding when we see Sister Carlotta with at least one high government official who Suriyawong would recognize on sight. Please act immediately. If I am wrong, you will be embarrassed. If I am right, you will have saved my life.

"I'm sick to my stomach thinking of how humiliated I'm going to be. Who are these people you're writing to?"

"People I trust. Like you."

Then, before sending the message, he added Peter's "Locke" address to the destination box.

"You know Ender Wiggin's brother?" asked Suriyawong.

"We've met."

Bean logged off.

"What now?" asked Suriyawong.

"We hide somewhere, I guess," said Bean.

Then they heard an explosion. Windows rattled. The floor trembled. The power flickered. The computers began to reboot.

"Got that done just in time," said Bean.

"Was that it?" asked Suriyawong.

"E," said Bean. "I think we're dead."

"Where do we hide?"

"If they did the deed, it's because they think we were still in there. So they won't be watching for us now. We can go to my barracks. My men will hide me."

"You're willing to bet my life on that?" asked Suriyawong.

"Yes," said Bean. "My track record of keeping you alive is pretty good so far."

As they walked out of the building, they saw military vehicles rushing toward where gray smoke was billowing up into the moonlit night. Others were heading for the entrances to the base. No one would be getting in or out.

By the time they reached the barracks where Bean's strike force was quartered, they could hear bursts of gunfire. "Now they're killing all the fake Indian spies this will be blamed on," said Bean. "The Chakri will regretfully inform the government that they all resisted capture and none were taken alive."

"Again you accuse him," said Suriyawong. "Why? How did you know this would happen?"

"I think I knew because there were too many smart people acting stupidly," said Bean. "Achilles and the Chakri. And he treated us angrily. Why? Because killing us bothered him. So he had to convince himself that we were disloyal children who had been corrupted by the I.F. We were a danger to Thailand. Once he hated us and feared us, killing us was justified."

"That's a long stretch from there to knowing they were about to kill us."

"They were probably set to do it at my quarters. But I stayed with you. It was quite possible they were planning for another opportunity the Chakri would summon us to meet him somewhere, and we'd be killed instead. But when we stayed for hours and hours in your quarters, they realized this was the perfect opportunity. They had to check with the Chakri and get his consent to do it ahead of schedule. They probably had to rush to get the Indian stooges into place-they might even be genuine captured spies. Or they might be drugged Thai criminals who will have incriminating documents found on them."

"I don't care who they are," said Suriyawong. "I still don't understand how you knew."

"Neither do I," said Bean. "Most of the time, I analyze things very quickly and understand exactly why I know what I know. But sometimes my unconscious mind runs ahead of my conscious mind. It happened that way in the last battle, with Ender. We were doomed to defeat. I couldn't see a solution. And yet I said something, an ironic statement, a bitter joke-and it contained within it exactly the solution Ender needed. From then on, I've been trying to heed those unconscious processes that give me answers. I've thought back over my life and seen other times when I said things that were not really justified by my conscious analysis. Like the time when we stood over

Achilles as he lay on the ground, and I told Poke to kill him. She wouldn't do it, and I couldn't persuade her, because I truly didn't understand why. Yet I understood what he was. I knew he had to die, or he would kill her."

"You know what I think?" said Suriyawong. "I think you heard something outside. Or noticed something subliminally on the way in. Somebody watching. And that's what triggered you."

Bean could only shrug. "You may well be right. As I said, I don't know."

It was after hours, but Bean could still palm his way through the locks to get in without setting off alarms. They hadn't bothered to deauthorize him. His entry into the building would show up on a computer somewhere, but it was a drone program and by the time any human looked at it, Bean's friends should have things well in motion.

Bean was glad to see that even though his men were in their home barracks on the grounds of the Thai high command base, they had not slacked in their discipline. No sooner were they inside the door than both Bean and Suriyawong were seized and pressed against the wall while they were checked for weapons.

"Good work," said Bean.

"Sir!" said the surprised soldier.

"And Suriyawong," said Bean.

"Sir!" said both the sentries.

A few others had been wakened by the scuffle.

"No lights," Bean said quickly. "And no loud talking. Weapons loaded. Prepare to move out on a moment's notice."

"Move out?" said Suriyawong.

"If they realize we're in here and decide to finish the job," said Bean, "this place is indefensible."

While some soldiers quietly woke the sleepers and all were busy dressing and loading their weapons, Bean had one of the sentries lead them to a computer. "You sign on," he said to the soldier.

As soon as he had logged on, Bean took his place and wrote, using the soldier's identity, to Graff, Carlotta, and Peter.

Both packages safe and awaiting pickup. Please come right away before packages are returned to sender.

Bean sent out one toon, divided into four pairs, to reconnoiter. When each pair returned another pair from another toon replaced them. Bean wanted to have enough warning to get these men out of the barracks before any kind of assault could be mounted.

In the meanwhile, they turned on a vid and watched the news. Sure enough, here came the first report. Indian agents had apparently penetrated the Thai command base and blown up a temporary building, killing Suriyawong, Thailand's most distinguished Battle School graduate, who had headed military doctrine and strategic planning for the past year and a half, since returning from space. It was a great national tragedy. There was no confirmation yet, but preliminary reports indicated that some of the Indian agents had been killed by the heroic soldiers defending Suriyawong. A visiting Battle School graduate had also been killed.

Some of Bean's soldiers chuckled, but, soon enough they were all grim-faced. The fact that the reporters had been told Bean and Suriyawong were dead meant that whoever made the report believed they were both inside the offices at an hour when the only way anyone could know that was if the bodies had been found, or the building had been under observation. Since the bodies had obviously not been found, whoever was writing the official reports from the Chakri's office must have been part of the plot.

"I can understand someone wanting to kill Borommakot," said Suriyawong. "But why would anyone want to kill me?"

The soldiers laughed. Bean smiled.

Patrols returned and went out, again, again. No movement toward the barracks. The news carried the initial response from various commentators. India apparently wanted to cripple the Thai military by eliminating the nation's finest military mind. This was intolerable. The government would have no choice now but to declare war and join Burma in the struggle against Indian aggression.

Then new information came. The Prime Minister had declared that he would take personal control of this disaster. Someone in the military had obviously slipped badly to allow a foreign penetration of the high command's own base. Therefore, to protect the Chakri's reputation and make sure there was no hint of a cover-up of military errors, Bangkok city police would be supervising the investigation, and Bangkok city fire officials would investigate the wreckage of the exploded building.

"Good job," said Suriyawong. "The Prime Minister's cover story is strong and the Chakri won't resist letting police onto the base."

"If the fire investigators arrive soon enough," said Bean, "they might even prevent the Chakri's men from entering the building as soon as it cools enough from the fire. So they won't even know we weren't there."

Sirens moving through the base announced the arrival of the police and fire department. Bean kept waiting for the sound of gunfire. But it never came.

Instead, two of the patrols came rushing back.

"Someone is coming, but not soldiers. Bangkok police, sixteen of them, with a civilian."

"Just one?" asked Bean. "Is one of them a woman?"

"Not a woman, and just one. I believe, sir, that it is the Prime Minister himself"

Bean sent out more patrols to see if any military forces were within range.

"How did they know we were here?" asked Suriyawong.

"Once they took control of the Chakri's office," said Bean, "they could use the military personnel files to find out that the soldier who sent that last email was in this barracks when he sent it."

"So it's safe to come out?"

"Not yet," said Bean.

A patrol returned. "The Prime Minister wishes to enter this barracks alone, sir."

"Please," said Bean. "Invite him in."

"So you're sure he's not wired up with explosives to kill us all?" asked Suriyawong. "I mean, your paranoia has kept us alive so far."

As if in answer, the vid showed Chakri driving away from the main entrance to the base, under police escort. The reporter was explaining that Naresuan had resigned as Chakri, but the Prime Minister insisted that he merely take a leave of absence. In the meantime, the Minister of Defense was taking direct personal control of the Chakri's office, and generals from the field were being brought in to staff other positions of trust. Until then, the police had control of the command system. "Until we know how these Indian agents penetrated our most sensitive base," the Minister of Defense said, "we cannot be sure of our security."

The Prime Minister entered the barracks.

"Suriyawong," he said. He bowed deeply.

"Mr. Prime Minister," said Suriyawong, bowing noticeably less deeply. Ah, the vanity of a Battle School graduate, thought Bean.

"A certain nun is flying here as quickly as she can," said the Prime Minister, "but we hoped that you might trust me enough to come out without waiting for her arrival. She was on the opposite side of the world, you see."

Bean strode forward and spoke in his not-bad Thai. "Sir," he said, "I believe Suriyawong and I are safer here with these loyal troops than we would be anywhere else in Bangkok."

The Prime Minister looked at the soldiers standing, fully armed, at attention. "So someone has a private army right in the middle of this base," he said.

"I did not make my meaning clear," said Bean. "These soldiers are absolutely loyal to you. They are yours to command, because you are Thailand at this moment, sir."

The Prime Minister bowed, very slightly, and turned to the soldiers. "Then I order you to arrest this foreigner."

Immediately Bean's arms were gripped by the soldiers nearest to him, as another soldier patted him down for weapons.

Suriyawong's eyes widened, but he gave no other sign of surprise. The Prime Minister smiled. "You may release him now," he said. "The Chakri warned me, before he took his voluntary leave of absence, that these soldiers had been corrupted and were no longer loyal to Thailand. I see now that he was misinformed. And since that is the case, I believe you are right. You are safer here, under their protection, until we explore the limits of the conspiracy. In fact, I would appreciate it if I could deputize a hundred of your men to serve with my police force as it takes control of this base."

"I urge you to take all but eight of them," said Bean.

"Which eight?" asked the Prime Minister.

"Any of these toons of eight, sir, could stand for a day against the Indian Army."

This was, of course, absurd, but it had a fine ring to it, and the men loved hearing him say it.

"Then, Suriyawong," said the Prime Minister, "I would appreciate your taking command of all but eight of these men and leading them in taking control of this base in my name. I will assign one policeman to each group, so that they can clearly be identified as acting under my authority. And one group of eight will, of course, remain with you for your protection at all times."

"Yes sir," said Suriyawong.

"I remember saying in my last campaign," said the Prime Minister, "that the children of Thailand held the keys to our national survival. I had no idea at the time how literally and how quickly that would be fulfilled."

"When Sister Carlotta arrives," said Bean, "you can tell her that she is no longer needed, but I would be glad to see her if she has the time."

"I'll tell her that," said the Prime Minister. "Now let's get to work. We have a long night ahead of us."

Everyone was quite solemn as Suriyawong called out the toon leaders. Bean was impressed that he knew who they were by name and face. Suriyawong might not have sought out Bean's company very much, but he had done an excellent job of keeping track of what Bean was doing. Only when everyone had moved out on their assign merits each toon with its own cop like a battle flag, did Suriyawong and the Prime Minister allow themselves to smile. "Good work," said the Prime Minister.

"Thank you for believing our message," said Bean.

"I wasn't sure I could believe Locke," said the Prime Minister, "and the Hegemon's Minister of Colonization is, after all, just a politician now. But when the Pope telephoned me personally, I had no choice but to believe. Now I must go out and tell the people the absolute truth about what happened here."

"That Indian agents did indeed attempt to kill me and an unnamed foreign visitor," asked Suriyawong, "but we survived because of quick action by heroic soldiers of the Thai Army? Or did the unnamed foreign visitor die?"

"I fear that he died," Bean suggested. "Blown to bits in the explosion."

"In any event," said Suriyawong, "you will assure the people, the enemies of Thailand have learned tonight that the Thai military may be challenged, but we cannot be defeated."

"I'm glad you were trained for the military, Suriyawong," said the Prime Minister. "I would not want to face you as an opponent in a political campaign."

"It is unthinkable that we would be opponents," said Suriyawong, 66 since we could not possibly disagree on any subject."

Everyone got the irony, but no one laughed. Suriyawong left with the Prime Minister and eight soldiers. Bean remained in the barracks with the last toon, and together they watched as the lies unfolded on the vid.

And as the news droned on, Bean thought of Achilles. Somehow he had found out Bean was alive-but that would be the Chakri, of course. But if the Chakri had turned to Achilles' side, why was he spinning the story of Suriyawong's death as a pretext for war with India? It made no sense. Having Thailand in the war from the beginning could only work against India. Add that to India's use of the clunky, obvious, life-wasting strategy of mass attack, and it began to look as though Achilles were some kind of idiot.

He was not an idiot. Therefore he was playing some sort of deeper game, and despite the much-vaunted cleverness of his unconscious mind, Bean did not yet know what it was. And Achilles would know soon enough, if he did not know already, that Bean was not dead. He's in a killing mood, thought Bean. Petra, thought Bean. Help me find a way to save you.

## HYDERABAD

Posted on the International Politics Forum by EnsiRaknor@TurkMilNet.gov

Topic: Where is Locke when we need him?

Am I the only one who wishes we had Locke's take on the recent developments in India? With India across the Burmese border and Pakistani troops massing in Baluchistan, threatening Iran and the gulf, we need a new way of looking at south Asia. The old models clearly don't work.

What I want to know is, did IntPolFor drop Locke's column when Peter Wiggin came forward as the author, or did Wiggin resign? Because if it was IPF's decision, it was, to put it bluntly, a stupid one. We never knew who Locke was—we listened to him because he made sense, and time after time he was the only one who made sense out of problematical situations, or at least was the first to see clearly what was going on. What does it matter if he's a teenager, an embryo, or a talking pig?

For that matter, as the Hegemon's term is near expiration, I am more and more uneasy with the current Hegemon-designate. Whoever suggested Locke almost a year ago had the right idea. Only now let's put him in office under his own name. What Ender Wiggin did in the Formic War, Peter Wiggin might be able to do in the conflagration that looms—put an end to it.

Reply 14, by Talleyrandophile@polnet.gov

I don't mean to be suspicious, but how do we know you're not Peter Wiggin, trying to put his name into play again?

Reply 14.1, by EnsiRaknor@TurkMilNet.gov

I don't mean to get personal, but Turkish Military Network IDs aren't given out to American teenagers doing consultation work in Haiti. I realize that international politics can make paranoids seem sane, but if Peter Wiggin could write under this ID, he must already run the world. But perhaps who I am does make a difference. I'm in my twenties now, but I'm a Battle School grad. So maybe that's why the idea of putting a kid in charge of things doesn't sound so crazy to me.

Virlomi knew who Petra was the moment she first showed up in Hyderabad—they had met before. Even though she was considerably older, so her time in Battle School overlapped Petra's by only a year, in those days Virlomi took notice of every girl in the place. An easy task, since Petra's arrival brought the total number of girls to ninefive of whom graduated at the same time as Virlomi. It seemed as though having girls in the school were regarded as an experiment that had failed.

Back in Battle School, Petra had been a tough launchy with a smart mouth, who proudly refused all offers of advice. She seemed determined to make it as a girl among boys, meeting the same standards, taking their guff without help. Virlomi understood. She had had the same attitude herself, at first. She just hoped that Petra would not have to have such painful experiences as those Virlomi had had before finally realizing that the hostility of boys was, in most cases, insuperable, and a girl needed all the friends she could get.

Petra was memorable enough that of course Virlomi recognized her name when the stories of Ender's jeesh came out after the war. The one girl among them, the Armenian Joan of Arc. Virlomi read the articles and smiled. So Petra had been as tough as she thought she'd be. Good for her.

Then Ender's jeesh was kidnapped or killed, and when the kidnapped ones were returned from Russia, Virlomi was heartsick to see that the only one whose fate remained unknown was Petra Arkanian.

Only she didn't have long to grieve. For suddenly the team of Indian Battle School graduates had a new commander, whom they immediately recognized as the same Achilles that Locke had accused of being a psychopathic killer. And soon they found that he was frequently shadowed by a silent, tired-looking girl whose name was never spoken.

But Virlomi knew her. Petra Arkanian.

Whatever Achilles' motive in keeping her name to himself, Virlomi didn't like it and so she made sure that everyone on the strategy team knew that this was the missing member of Ender's jeesh. They said nothing about Petra to Achilles, of course-merely responded to his instructions and reported to him as required. And soon enough Petra's silent presence was treated as if it were ordinary. The others hadn't known her.

But Virlomi knew that if Petra was silent, it meant something quite dreadful. It meant Achilles had some hold over her. A hostagesome kidnapped family member? Threats? Or something else? Had Achilles somehow overmastered Petra's will, which had once seemed so indomitable?

Virlomi took great pains to make sure that Achilles did not notice her paying special attention to Petra. But she watched the younger girl, learning all she could. Petra used her desk as the others did, and took part in reading intelligence reports and everything else that was sent to all of them. But something was wrong, and it took a while for Virlomi to realize what it was-Petra never typed anything at all while she was logged on to the system. There were a lot of netsites that required passwords or at least registration to sign on. But after typing her password to simply log on in the morning, Petra never typed again.

She's been blocked, Virlomi realized. That's why she never emails any of us. She's a prisoner here. She can't pass messages outside. And she doesn't talk to any of us because she's been forbidden to.

When she wasn't logged on, though, she must have been working furiously, because now and then Achilles would send a message to all of them, detailing new directions their planning should go. The language in these messages was not Achilles'-it was easy to spot the shift in style. He was getting these strategic insights-and they were good ones-from Petra, who was one of the nine who were chosen to save humanity from the Formics. One of the finest minds on Earth. And she was enslaved by this psychopathic Belgian.

So, while the others admired the brilliant strategies they were developing for aggressive war against Burma and Thailand, as Achilles' memos whipped up their enthusiasm for "India finally rising to take her rightful place among the nations," Virlomi grew more and more skeptical. Achilles cared

nothing for India, no matter how good his rhetoric sounded. And when she found herself tempted to believe in him, she had only to look at Petra to remember what he was.

Because the others all seemed to buy into Achilles' version of India's future, Virlomi kept her opinions to herself. And she watched and waited for Petra to look at her, so she could give her a wink or a smile.

The day came. Petra looked. Virlomi smiled.

Petra looked away as casually as if Virlomi had been a chair and not a person trying to make contact.

Virlomi was not discouraged. She kept trying for eye contact until finally one day Petra passed near her on the way to a water fountain and slipped and caught herself on Virlomi's chair. In the midst of the noise of Petra's scuffling feet, Virlomi clearly heard her words: "Stop it. He's watching."

And that was it. Confirmation of what Virlomi had suspected about Achilles, proof that Petra had noticed her, and a warning that her help was not needed.

Well, that was nothing new. Petra never needed help, did she?

Then came the day, only a month ago, when Achilles sent a memo around ordering that they needed to update the old plans—the original strategy of mass assault, throwing huge armies with their huge supply lines against the Burmese. They were all stunned. Achilles gave no explanation, but he seemed unusually taciturn, and they all got the message. The brilliant strategy had been set aside by the adults. Some of the finest military minds in the world had come up with the strategy, and the adults were going to ignore them.

Everyone was outraged, but they soon settled back into the routine of work, trying to get the old plans into shape for the coming war. Troops had moved, supplies had been replenished in one area or fallen short in another. But they worked out the logistics. And when they received Achilles'—or, as Virlomi assumed, Petra's—plan for moving the bulk of the army from the Pakistani border to face the Burmese, they admired the brilliance of it, fitting the needs of the army into the existing rail and air traffic so that from satellites, no unusual movements would be visible until suddenly the armies were on the border, forming up. At most the enemy would have two days' notice; if they were careless, only a single day before it became obvious.

Achilles left on one of his frequent trips, only this time Petra disappeared too. Virlomi feared for her. Had she served her purpose, and now that he was done with her, would he kill her?

But no. She came back the same night, when Achilles did.

And the next morning, word came to begin the movement of troops. Following Petra's deft plan to get them to the Burmese border. And then, ignoring Petra's equally deft plan, they would launch their clumsy mass attack.

It makes no sense, thought Virlomi.

Then she got the email from the Hegemony Minister of Colonization--Colonel Graff, that old sabeek.

I'm sure you're aware that one of our Battle School graduates, Petra Arkanian, was not returned with the others who took part with Ender Wiggin in the final battle. I am very interested in locating her, and believe she may have been transported against her will to a place within the borders of India. If you know anything about her whereabouts and present condition, could you let someone know? I'm sure you'd want someone to do the same for you.

Almost immediately there came an email from Achilles.

I'm sure you understand that because this is wartime, any attempt to convey information to someone outside the Indian military will be regarded as espionage and treason, and you will be killed forthwith.

So Achilles was definitely keeping Petra incommunicado, and cared very much that she remain hidden to outsiders.

Virlomi did not even have to think about what she would do. This had nothing to do with Indian military security. So, while she took his death threat seriously, she did not believe there was anything morally wrong with attempting to circumvent it.

She could not write directly to Colonel Graff. Nor could she send any kind of message containing any reference, however oblique, to Petra. Any email going out from Hyderabad was going to be scrutinized. And, now that Virlomi thought about it, she and the other Battle School graduates ensconced here in the Planning and Doctrine Division were only slightly more free than Petra. She could not leave the grounds. She could not have contact with anyone who was not military with a high-level security clearance.

Spies have radio equipment or dead drops, thought Virlomi. But how do you go about becoming a spy when you have no way to reach outside but writing letters, yet there's no one you can write a letter to and no way to say what you need to say without getting caught?

She might have thought of a solution on her own. But Petra simplified the process for her by coming up behind her at the drinking fountain. As Virlomi straightened up from drinking and Petra slipped in to take her place, Petra said, "I am Briseis."

And that was all.

The reference was obvious--everyone in Battle School knew the Iliad. And with Achilles being their overseer at the moment, the Briseis references was obvious. And yet it was not. Briseis had been held by someone else, and Achilles--the original one--had been furious because he felt slighted that he didn't have her. So what could she mean by saying she was Briseis?

It had to do with the letter from Graff and Achilles' warning. So it must be a key, a way to get word out about Petra. And to get word out required the net. So Briseis must mean something to someone out on the net. Perhaps there was some kind of coded electronic dead drop, keyed on the name Briseis. Perhaps Petra had already found someone to contact, but could not do it because she was cut off from the nets.

Virlomi didn't bother doing a general search. If someone out there was looking for Petra, the message would have to be at a site that Petra would be able to find without deviating from legitimate military research. Which meant that Virlomi probably already knew the site where the message was waiting.

The problem she was officially working on at the moment was to determine the most efficient way to minimize risk to supply helicopters while not consuming too much fuel. The problem was so technical that there was no way she could explain doing historical or theoretical research.

But Sayagi, a Battle School graduate five years her senior, was working on problems of pacifying and winning the allegiance of local populations in occupied countries. So Virlomi went to him. "I've gone greeyaz on my algorithms."

"You want my help?" he asked.

"No, no, I just need to set it aside for a couple of hours so I can come back to it fresh. Anything I can help you look for?"

Of course Sayagi had received the same messages as Virlomi, and he was sharp enough not to take Virlomi's offer at face value.

"I don't know, what kind of thing could you do?"

"Any historical research? Or theoretical? On the nets?" She was tipping him to what she needed. And he understood.

"Toguro. I hate that stuff. I need data on failed approaches to pacification and conciliation. Besides killing or deporting everybody and moving in a new population."

"What do you already have?"

"You're wide open, I've been avoiding it."

"Thanks. You want a report or just links?"

"Paste-ups are enough. No links, though. That's too much like doing the work myself."

A perfectly innocent exchange. Virlomi had her cover now.

She went back to her desk and began browsing the historical and theoretical sites. She never actually ran a search on the name "Briseis"-that would be too obvious, the monitoring software would pick that right up and Achilles, if he saw it, would make the connection. Instead, Virlomi browsed through the sites, looking at subject headings.

Briseis showed up on the second site she tried.

It was a posting from someone calling himself Hector Victorious. Hector was not exactly an auspicious name-he was a hero, and the only person who was any kind of match for Achilles, but in the end Hector was killed and Achilles dragged his corpse around the walls of Troy.

Still, the message was clear, if you knew to think of Briseis as a codename for Petra.

Virlomi worked her way through several other postings, pretending to read them while actually composing her reply to Hector Victorious. When she was ready, she went back and typed it in, knowing as she did it that it might well be the cause of her own immediate execution.

I vote for her remaining a resistant slave. Even if she was forced into silence, she would find a way to hold on to her soul. 'As for slipping a message to someone inside Troy, how do you know she didn't? And what good would it have done? It wasn't that long afterward that everyone in Troy was dead. Or didn't you ever hear of the Trojan horse? I know-Briseis should have warned the Trojans to beware of Greeks bearing gifts. Or found a friendly native to do it for her.

She signed it with her own name and email address. After all, this was supposed to be a perfectly innocent posting. Indeed, she worried that it might be too innocent. What if the person who was looking for Petra didn't realize that her references to Briseis resisting and being forced into silence were actually eyewitness reports? Or that the "friendly native" reference was to Virlomi herself?

But her address inside the Indian military network should alert whoever this was to pay special attention.

Now, of course, with the message posted, Virlomi had to continue going through the motions of doing the useless research that Sayagi had "asked" her to do. It would be a couple of tedious hours-wasted time, if no one got the message.

Petra tried not to be obvious about watching what Virlomi was doing. After all, if Virlomi was as smart as she needed to be in order to bring this off, she wouldn't do anything that was worth watching. But Petra saw when Virlomi went over to Sayagi and talked for a while. And Petra noticed that Virlomi seemed to be browsing when she got back to her desk, mousing through online pages instead of writing or calculating. Was she going to spot those HectorVictorious postings?

Either she would or she wouldn't. Petra couldn't allow herself to think about it any more. Because in a way it would be better for everyone if Virlomi simply didn't get it. Who knew how subtle Achilles was? For all Petra knew, those postings might be traps designed to catch her getting someone else to help her. That could be fatal all the way around.

But Achilles couldn't be everywhere. He was bright, he was suspicious, he played a deep game. But he was only one person and he couldn't think of everything. Besides, how important was Petra to him, really? He hadn't even used her campaign strategy. Surely he kept her around as a vanity, nothing more.

The reports coming back from the front were just what one might expect-Burmese resistance was only token, since they were massing their main forces in places where the terrain favored them. Canyons. River crossings.

All futile, of course. No matter where the Burmese made their stand, the Indian Army would simply flow around them. There weren't enough Burmese soldiers to make serious efforts at more than a handful of places, while there were so many Indians that they could press forward at every point, leaving only enough men at the Burmese strong points to keep them pinned down while the bulk of the Indian Army completed the takeover of Burma and moved on toward the mountain passes into Thailand.

That's where the challenge would begin, of course. For Indian supply lines would stretch all the way across Burma by then, and the Thai Air Force was formidable, especially since they had been observed testing a new temporary airfield system that could be built in many cases during the time a bomber was airborne. Not really worth it, bombing airfields when they could be replaced in two or three hours.

So even though the intelligence reports from inside Thailand were very good--detailed, accurate, and recent-on the most important points they didn't matter. There were few meaningful targets, given the strategy the Thai were using.

Petra knew Suriyawong, the Battle School grad who was running strategy and doctrine in Bangkok. He was good. But to Petra it looked a little suspicious that the new Thai strategy began, abruptly, only a few weeks after Petra and Achilles arrived in India from Russia. Suriyawong had already been in place in Bangkok for a year. Why the sudden change? It might be that someone had tipped them off about Achilles' presence in Hyderabad and what that might mean. Or it might be that someone else had joined Suriyawong and influenced his thinking.

Bean.

Petra refused to believe that he was dead. Those messages had to be from him. And even though Suriyawong was perfectly capable of thinking of the new Thai strategy himself, it was such a comprehensive set of changes, without any sign of gradual development, that it cried out for the obvious explanation-it came from a fresh set of eyes. Who else but Bean?

The trouble was, if it was Bean, Achilles' intelligence sources inside Thailand were so good that it was quite possible Bean would be spotted. And if Achilles' earlier attempt to kill Bean had failed, there was no chance that Achilles would refrain from trying again.

She couldn't think about that. If he had saved himself once, he could do it again. After all, maybe someone had excellent intelligence sources inside India, too.

And it might not be Bean leaving those Briseis messages. It might be Dink Meeker, for instance. Only that really wasn't Dink's style. Bean had always been something of a sneak. Dink was confrontational. He would go on the nets proclaiming that he knew Petra was in Hyderabad and demanding that she be released at once. Bean was the one who had figured out that the Battle School kept track of where students were by monitoring transmitters in their clothing. Take off all your clothes and go around buck naked, and the Battle School administrators wouldn't have a clue where you were. Not only had Bean thought of it, he had done it, climbing around in airshafts in the middle of the night. When he told her about it, as they waited around on Eros for the League War to settle down so they could go home, Petra hadn't really believed him at first. Not until he looked her coldly in the eye and said, "I don't joke, and if I did, this isn't particularly funny."

"I didn't think you were joking," said Petra. "I thought you were bragging."

"I was," said Bean. "But I wouldn't waste my time bragging about things I hadn't actually done."

That was Bean-admitting his faults right along with his virtues. No false modesty, and no vanity, either. If he bothered to talk to you at all, he never shaped his words to make himself look better or worse than he was.

She hadn't really known him in Battle School. How could she? She was older, and even though she noticed him and spoke to him a few times-she always made a point of speaking to new kids who were getting the pariah treatment, since she knew they needed friends, even if it was only a girl-she simply hadn't had much reason to talk to him.

And then there was the disastrous time when Petra had been suckered into trying to give Ender a warning-which turned out to be bogus, and in fact Ender's enemies were using Petra's attempt to warn Ender as the opportunity to jump him and beat him up. Bean was the one who saw through it and broke it up. And, quite naturally, he leapt to the conclusion that Petra was part of the conspiracy against Ender. He had continued to suspect her for quite a while. Petra wasn't really sure when he finally believed in her innocence. But it had been a barrier between them for a long time on Eros. So it wasn't until after the war ended that they even had a chance to get to know each other.

That was when Petra realized what Bean really was. It was hard to see past his small size and think of him as anything other than a preschooler or launchy or something. Even though everyone knew that he was the one that would have been chosen to take Ender's place, if Ender had broken under the strain of battle. A lot of them resented the fact. But Petra didn't. She knew Bean was the best of Ender's jeesh. It didn't bother her.

What was Bean, really? A dwarf. That's what she had to realize. With adult dwarfs, you could see in their faces that they were older than their size would indicate. But because Bean was still a child, and had none of the short-limbed deformations of dwarfism, he looked like the age his size implied. If you talked to him like a child, though, he tuned you out. Petra never had done that, so except when he thought she was a traitor to Ender, Bean always treated her with respect.

The funny thing was, it was all based on a misunderstanding. Bean thought Petra talked to him like a regular human being because she was so mature and wise that she didn't treat him like a little kid. But the truth was, she did treat him exactly the way she treated little kids. It's just that she always treated little kids like adults. So she got credit for being understanding, when in fact she was just lucky.

By the time the war was over, though, it didn't matter. They knew they were going home—all of them, it turned out, but Ender—and once they got back to Earth, they expected they wouldn't see each other again. So there was a kind of freedom, caution tossed to the wind. You could say what you wanted. You didn't have to take offense at anything because it wouldn't matter in a few months. It was the first time they could actually have fun.

And the person Petra enjoyed the most was Bean.

Dink, who had been close to Petra for a while in Battle School, was a little miffed by the way Petra was always with Bean. He even accused her—obliquely, because he didn't want to get frozen out completely—of having something romantic going on with Bean. Well, of course he thought that way—puberty had already struck Dink Meeker, and like all boys that age, he thought everybody's mental processes were infused with testosterone.

It was something else, though, between Petra and Bean. Not brother and sister, either. Not mother-son or any other weird psychofake analogy she could think of. She just... liked him. She had spent so long having to prove to prickly, envious, and frightened boys that she was, in fact, smarter and better at everything than they were, that it took her quite by surprise to be with someone so arrogant, so absolutely sure of his own brilliance, that he didn't feel at all threatened by her. If she knew something that he didn't know, he listened, he watched, he learned. The only other person she'd known who was like that with her was Ender.

Ender. She missed him terribly sometimes. She had tutored him—and taken a lot of heat from Bonzo Madrid, their commander at the time, for doing it. And as it became clear what Ender was, and she joined gladly with those who followed him, obeyed him, gave themselves to him, she nevertheless had a secret place in her memory where she kept the knowledge that she had been Ender's friend at a time when no one else had the courage. She had made a difference in his life, and even when others thought she had betrayed him, Ender never thought that.

She loved Ender with a helpless mixture of worship and longing that led to foolish dreams of impossible futures, tying her life with his until they died. She fantasized about raising children together, the most brilliant children in the world. About being able to stand beside the greatest human being in the world—for so she thought he was—and having everybody recognize that he had chosen her to stand with him forever.

Dreams. After the war, Ender was beaten down. Broken. Finding out that he had actually caused the extermination of the Formics was more than he could bear. And because she, too, had broken during the war, her shame kept her away from him until it was too late, until they had divided Ender from the rest of them.

Which is why she knew that her feelings toward Bean were completely different. No such dreams and fantasies. Just a sense of complete acceptance. She belonged with Bean, not the way a wife belonged with a husband or, God forbid, a girlfriend with a boyfriend, but rather the way a left hand belonged with the right. They simply fit. Nothing exciting about it, nothing to write home about. But it could be counted on. She imagined that, of all the Battle School kids, of all the members of Ender's jeesh, it would be Bean that she would remain close to.

Then they got off the shuttle and were dispersed throughout the world. And even though Armenia and Greece were relatively close together----compared to, say, Shen in Japan or Hot Soup in China--they never saw each other, they never even wrote. She knew that Bean was going home to meet a family that he had never known, and she was busy trying to get involved with her own family again. She didn't exactly pine for him, or he for her. And besides, they didn't need to hang out together or chat all the time for her to know that, left hand with right hand, they were still friends, still belonged together. That when she needed someone, the first person she should call on was Bean.

In a world that didn't have Ender Wiggin in it, that meant he was the person she loved most. That she would miss most if anything happened to him.

Which is why she could pretend that she wasn't going to worry about Bean getting folded by Achilles, but it wasn't true. She worried all the time. Of course, she worried about herself, too--and maybe a little more about herself than about him. But she'd already lost one love in her life, and even though she told herself that these childhood friendships wouldn't matter in twenty years, she didn't want to lose the other.

Her desk beeped at her.

There was a message in the display.

When did I designate this as naptime? Come see me.

Only Achilles wrote with such peremptory rudeness. She hadn't been napping. She had been thinking. But it wasn't worth arguing with him about it.

She logged off and got up from her desk.

It was evening, getting dark outside. Her mind really had wandered. Most of the others on the day shift in Planning and Doctrine had already left, and the night response team was coming in. A couple of the day shift were still at their desks, though.

She caught a glance from Virlomi one of the late ones. The girl looked worried. That meant she probably had done something in response to the Briseis posting, and now feared repercussions. Well, she was right to worry. Who knew how Achilles would speak or write or act if he was planning to kill somebody? Petra's personal opinion was that he was always planning to kill someone, so there was no difference in his behavior to warn you if you were next. Go home and try to get some sleep, Virlomi. Even if Achilles has caught you trying to help me and has decided to

have you killed, you won't be able to do anything about it, so you might as well sleep the sleep of a child. Petra left the big barn of a room they all worked in and moved through the corridors as if in a trance. Had she been asleep when Achilles wrote to her? Who cared.

As far as Petra knew, she was the only one in Planning and Doctrine who even knew where Achilles' office was. She had been in it often, but was not impressed by the privilege. She had the freedom of a slave or a captive. Achilles let her intrude on his privacy because he didn't think of her as a person.

One wall of his office was a 2D computer display, now showing a detailed map of the India-Burma border region. As reports came in from troops in the field and from satellites, it was updated by clerks, so Achilles could glance at it any time and see the best available intelligence on placement. Apart from that, the room was spartan. Two chairs-not comfortable ones-a table, a bookcase, and a cot. Petra suspected that somewhere on the base there was a comfortable suite of rooms with a soft bed that was never used. Whatever else Achilles was, he wasn't a hedonist. He never cared much about personal comfort, not that she had seen, anyway.

He didn't take his eyes off the map when she came in-but she was used to that. When he made a point of ignoring her, she took it as his perverse way of paying attention to her. It was when he looked right at her without seeing her that she felt truly invisible.

"The campaign's going very well," said Achilles.

"It's a stupid plan, and the Thai are going to cut it to shreds."

"They had a sort of coup a few minutes ago," said Achilles. "The commander of the Thai military blew up young Suriyawong. Terrible case of professional jealousy, apparently."

Petra tried to keep from showing her sadness at Suriyawong's death and her disgust at Achilles. "You're not seriously expecting me to believe you had nothing to do with it?"

"Well, they're blaming it on Indian spies, of course. But there were no Indian spies involved."

"Not even the Chakri?"

"Definitely not spying for India," said Achilles.

"For whom, then?"

Achilles laughed. "You're so untrusting. My Briseis."

She had to work at staying relaxed, at not betraying anything when he called her that.

"Ah, Pet, you are my Briseis, don't you realize?"

"Not really," said Petra. "Briseis was in somebody else's tent."

"Oh, I have your body with me, and I get the product of your brain, but your heart still belongs to someone else."

"It belongs to me," said Petra.

"It belongs to Hector," said Achilles. "But ... how can I bear to tell you this? Suriyawong was not alone in his office when the building was blown to bits. Another person contributed scraps of flesh and bone and a fine aerosol of blood to the general gore. Unfortunately, this means I can't drag his body around the walls of Troy."

Petra was sick inside. Had he heard her tell Virlomi, "I am Briseis"? And whom was he talking about, saying those things about Hector?

"Just tell me what you're talking about or don't," said Petra.

"Oh, don't tell me you haven't seen those little messages all over the forums," said Achilles. "About Briseis, and Guinevere, and every other tragic romantic heroine who got trapped with some overbearing bunduck."

"What about them?"

"You know who wrote them," said Achilles.

"Do IT"

"I forgot. You refuse to play guessing games. All right, it was Bean, and you knew that."

Petra felt unwanted emotions welling up-she suppressed them. If those messages were posted by Bean, then he had lived through the previous assassination attempt. But that would mean Bean was "HectorVictorious," and Achilles' little allegory meant that Bean was indeed in Bangkok, and Achilles had spotted him and tried again to kill him. He had died along with Suriyawong.

"I'm glad to have you to tell me what I know. It saves my having to actually use my own memory."

"I know it's tearing you up, my poor Pet. The funny thing is, dear Briseis, Bean was just a bonus. It was Suriyawong that we targeted from the start."

"Fine. Congratulations. You're a genius. Whatever it is you want me to say so you'll shut up and let me get some dinner."

Talking rudely to Achilles was the only illusion of freedom Petra was able to retain. She figured it amused him. And she wasn't dumb enough to talk to him that way in front of anyone else.

"You had your heart set on Bean saving you, didn't you?" said Achilles. "That's why when old Graff sent that stupid request for information, you tipped that Virloomi kid to try responding to Bean."

Petra tasted despair. Achilles really did monitor everything.

"Come on, the water fountain's the most obvious place to bug," said Achilles.

"I thought you had important things to do."

"Nothing's more important in my life than you, Pet," said Achilles. "If I could just get you to come into my tent."

"You've kidnapped me twice. You watch me wherever I go. I don't know how I could be farther in your tent than I am."

"In ... my ... tent," said Achilles. "You're still my enemy."

"Oh, I forgot, I'm supposed to be so eager to please my captor that I surrender my volition to you."

"If I wanted that, I'd have you tortured, Pet," said Achilles. "But I don't want you that way."

"How kind of you."

"No, if I can't have you freely with me, as my friend and ally, then I'll just kill you. I'm not into torture."

"After you've used my work."

"But I'm not using your work," said Achilles.

"Oh, that's right. Because Suriyawong is dead, so you don't need to worry now about having any real opposition."

Achilles laughed. "Sure. That's it."

Which meant, of course, that she hadn't understood at all.

"It's easy to fool a person you keep living in a box. I only know what you tell me."

"But I tell you everything," said Achilles, "if only you were bright enough to get it."

Petra closed her eyes. She kept thinking of poor Suriyawong. So serious all the time. He had done his best for his country, and then it was his own commander-in-chief who killed him. Did he know? I hope not.

If she kept thinking of poor Suriyawong, she wouldn't have to think of Bean at all.

"You're not listening," said Achilles.

"Oh, thanks for telling me that," said Petra. "I thought I was."

Achilles was about to say something else, but then he cocked his head. The hearing aid he wore was a radio receiver tied to his desk. Somebody had just started talking to him.

Achilles turned from her to his desk. He typed a few things, read a few things. His face showed no emotion-but that was a real change, since he had been smiling and pleasant until the voice came. Something had gone wrong. Indeed, Petra knew him well enough now that she thought she recognized the signs of anger. Or maybe-she wondered, she hoped-fear.

"They aren't dead," Petra said.

"I'm busy," he said.

She laughed. "That's the message, isn't it? Once again, your assassins have piffed it. If you want a job done right, Achilles, you've got to do it yourself."

He turned away from the desk display and looked her in the eye. "He sent out a message from the barracks of his strike force there in Thailand. Of course the Chakri saw it."

"Not dead," said Petra. "He just keeps beating you."

"Narrowly escaping with his life while my plans are never interfered with at all . . ."

"Come on, you know he got you booted out of Russia."

Achilles raised his eyebrows. "So you admit you sent a coded message."

"Bean doesn't need coded messages to beat you," she said.

Achilles rose from his chair and walked over to her. She braced herself for a slap. But he planted a hand in her chest and shoved the chair over backward.

Her head hit the floor. It left her dazed, lights flashing through her peripheral vision. And then a wave of pain and nausea.

"He sent for dear old Sister Carlotta," said Achilles. His voice betrayed no emotion. "She's flying around the world to help him. Isn't that nice of her?"

Petra could barely comprehend what he was saying. The only thought she could hold on to was: Don't let there be any permanent brain damage. That was her whole self. She'd rather die than lose the brilliance that made her who she was.

"But that gives me time to set up a little surprise," said Achilles. "I think I'll make Bean very sorry that he's alive."

Petra wanted to say something to that, but she couldn't remember what. Then she couldn't remember what he had said. "What?"

"Oh, is your poor little head swimming, my Pet? You should be more careful with the way you lean back on that chair."

Now she remembered what he had said. A surprise. For Sister Carlotta. To make Bean sorry he's alive.

"Sister Carlotta is the one who got you off the streets of Rotterdam," said Petra. "You owe her everything. Your leg operation. Going to Battle School."

"I owe her nothing," said Achilles. "You see, she chose Bean. She sent him. Me, she passed over. I'm the one who brought civilization to the streets. I'm the one who kept her precious little Bean alive. But him she sends up into space, and me she leaves in the dirt."

"Poor baby," said Petra.

He kicked her, hard, in the ribs. She gasped.

"And as for Virlomi," he said, "I think I can use her to teach you a lesson about disloyalty to me."

"That's the way to bring me into your tent," said Petra.

Again he kicked her. She tried not to groan, but it came out anyway. This passive resistance strategy was not working.

He acted as if he hadn't done it. "Come on, why are you lying there? Get up."

"Just kill me and have done with it," she said. "Virlomi was just trying to be a decent human being."

"Virlomi was warned what would happen."

"Virlomi is nothing to you but a way to hurt me."

"You're not that important. And if I want to hurt you, I know how." He made as if to kick her again. She stiffened, curled away from the blow. But it didn't come. Instead he reached down a hand to her. "Get up, my Pet. The floor is no place to nap."

She reached up and took his hand. She let him bear most of her weight as she rose up, so he was pulling hard.

Fool, she thought. I was trained for personal combat. You weren't in Battle School long enough to get that training.

As soon as her legs were under her, she shoved upward. Since that was the direction he had been pulling, he lost his balance and went over backward, falling over the legs of her chair.

He did not hit his head. He immediately tried to scramble to his feet. But she knew how to respond to his movements, kicking sharply at him with her heavy army-issue shoes, shifting her weight so that her kicks never came at the place he was protecting. Every kick hurt him. He tried to scramble backward, but she pressed on, relentless, and because he was using his arms to help him scuttle across the floor, she was able to kick him in the head, a solid blow that rocked him back and laid him out.

Not unconscious, but a little dizzy. Well, see how you like it.

He tried to do some kind of street-fighting move, kicking out with his legs while his eyes were looking elsewhere, but it was pathetic. She easily jumped over his legs and landed a scuffing kick right up between his legs.

He cried out in pain.

"Come on, get up," she said. "You're going to kill Virlomi, so kill me first. Do it. You're the killer. Get your gun. Come on."

And then, without her quite seeing how he did it, there was indeed a gun in his hand.

"Kick me again," he said through gritted teeth. "Kick me faster than this bullet."

She didn't move.

"I thought you wanted to die," he said.

She could see it now. He wouldn't shoot her. Not till he had shot Virlomi in front of her.

She had missed her chance. While he was down, before he got the gun-from the back of his waistband? from under the furniture?-she should have snapped his neck. This wasn't a wrestling match, this was her chance to put an end to him. But her instinct had taken over, and her instinct was not to kill, only to disable her opponent, because that's what she had practiced in Battle School.

Of all the things I could have learned from Ender, the killer instinct, going for the final blow from the start, why was that the one I overlooked?

Something Bean had explained about Achilles. Something Graff had told him, after Bean had gotten him shipped back to Earth. That Achilles had to kill anyone who had ever seen him helpless.

Even the doctor who had repaired his gimp leg, because she'd seen him laid out under anaesthetic and taken a knife to him.

Petra had just destroyed whatever feeling it was that had made him keep her alive. Whatever he had wanted from her, he wouldn't want it now. He wouldn't be able to bear having her around. She was dead.

Yet, no matter what else was going on, she was still a tactician. Thick headed as she was, her mind could still do this dance. The enemy saw things this way; so change it so he sees them another way.

Petra laughed. "I never thought you'd let me do that," she said.

He slowly, painfully, was getting to his feet, the gun trained on her.

She went on. "You always had to be el supremo, like the bunducks in Battle School. I never thought you had the guts to be like Ender or Bean, till now."

Still he said nothing. But he was standing there. He was listening.

"Crazy, isn't it? But Bean and Ender, they were so little. And they didn't care. Everybody looking down at them, me towering over them, they were the only guys in Battle School who weren't terrified of having somebody see a girl be better than them, bigger than them." Keep it going, keep spinning it. "They put Ender in Bonzo's army too early, he hadn't been trained. Didn't know how to do anything. And Bonzo gave orders, nobody was to work with him. So here I had this little kid, helpless, didn't know anything. That's what I like, Achilles. Smarter than me, but smaller. So I taught him. Chisel Bonzo, I didn't care. He was like you've always been, constantly showing me who's boss. But Ender knew how to let me run it. I taught him everything. I would have died for him."

"You're sick," said Achilles.

"Oh, you're going to tell me you didn't know that? You had the gun the whole time, why did you let me do that, if it wasn't-if you weren't trying to . . ."

"Trying to what?" he said. He was keeping his voice steady, but the craziness was plainly visible, and his voice trembled just a little. She had pushed him past the borders of sanity, deep into his madness. It was Caligula she was seeing now. But he was listening. If she found the right story to put on what just happened, maybe he would settle for ... something else. Making his horse consul. Making Petra ...

"Weren't you trying to seduce me?" she said.

"You don't even have your tits yet," he said.

"I don't think it's tits you're looking for," she said. "Or you would never have dragged me around with you in the first place. What was all that talk about wanting me in your tent? Loyal? You

wanted me to belong to you. And all the time you did that sabeek stuff, pushing me around-that just made me feel contempt for you. I was looking down on you the whole time. You were nothing, just another sack of testosterone, another chimp hooting and beating his chest. But then you let me-you did let me, didn't you? You don't expect me to believe I really could have done that?"

A faint smile touched the comers of his lips.

"Doesn't that spoil it, if you think I did it on purpose?" he said.

She strode to him, right to the barrel of the gun, and, letting it press into her abdomen, she reached up, grabbed him by the neck, and pulled his head down to where she could kiss him.

She had no idea how to do it, except what she'd seen in movies. But she was apparently doing it well enough. The gun stayed in her belly, but his other arm wrapped around her, pulled her closer.

In the back of her mind, she remembered what Bean told her that the last thing he had seen Achilles do before killing Bean's friend Poke was kiss her. Bean had had nightmares about it. Achilles kissing her, and then in the middle of the kiss, strangling her. Not that Bean actually saw that part. Maybe it didn't happen that way at all.

But no matter how you cut it, Achilles was a dangerous boy to kiss. And there, was that gun in her belly. Maybe this was the moment he longed for. Maybe his dreams were about this-kissing a girl, and blowing a hole in her body while he did.

Well, blow away, she thought. Before I watch you kill Virlomi for the crime of having compassion for me and courage enough to act, I'd rather be dead myself. I'd rather kiss you than watch you kill her, and there's nothing in the world that could disgust me more than having to pretend that you're the ... thing ... I love.

The kiss ended. But she did not let go of him. She would not step back, she would not break this embrace. He had to believe that she wanted him. That she was in his emossin' tent.

He was breathing lightly, quickly. His heartbeat was rapid. Prelude to a kill? Or just the aftermath of a kiss.

"I said I'd kill anyone who tried to answer Graff," he said. "I have to."

"She didn't answer Graff, did she?" said Petra. "I know you have to keep control of things, but you don't have to be a strutting yelda about it. She doesn't know you know what she did."

"She'll think she got away with it."

"But I'll know," said Petra, "that you weren't afraid to give me what I want."

"What, you think you've found some way to make me do what you want?" he said.

Now she could back away from him. "I thought I'd found a man who didn't have to prove he was big by pushing people around. I guess I was wrong. Do what you want. Men like you disgust me." She put as much contempt into her voice, onto her face, as she could. "Here, prove you're a man. Shoot me. Shoot everybody. I've known real men. I thought you were one of them."

He lowered the gun. She did not show her relief. Just kept her eyes looking into his.

"Don't ever think you've got me figured out," he said.

"I don't care whether I figure you out or not," she said. "All I care about is, you're the first man since Ender and Bean who had guts enough to let me stand over him."

"Is that what you're going to say?" he asked.

"Say? Who to? I don't have any friends out there. The only person worth talking to in this whole place is you."

He stood there, breathing heavily again, a bit of the craziness back in his eyes.

What am I saying wrong?

"You're going to bring this off," she said. "I don't know how you're going to do it, but I can taste it. You're going to run the whole show. They're all going to be under you, Achilles. Governments, universities, corporations, all eager to please you. But when we're alone, where nobody else can see, we'll both know that you're strong enough to keep a strong woman with you."

"You?" said Achilles. "A woman?"

"If I'm not a woman, what were you doing with me in here?"

"Take off your clothes," he said.

The craziness was still there. He was testing her somehow. Waiting for her to show ...

To show that she was faking. That she was really afraid of him, after all. That her story was all a lie, designed to trick him.

"No," she said. "You take off yours."

And the craziness faded.

He smiled.

He tucked the gun into the back of his pants.

"Get out of here," he said. "I've got a war to run."

"It's night," she said. "Nobody's moving."

"There's a lot more to this war than the armies," said Achilles.

"When do I get to stay in your tent?" she asked. "What do I have to do?" She could hardly believe she was saying this, when all she wanted was to get out.

"You have to be the thing I need," he said. "And right now, you're not." .

He walked to his desk, sat down.

"And pick up your chair on the way out."

He started typing. Orders? For what? To kill whom?

She didn't ask. She picked up the chair. She walked out.

And kept walking, through the corridors to the room where she slept alone. Knowing, with every step, that she was monitored. There would be vids. He would check them, to see how she acted. To see if she meant what she'd said. So she couldn't stop and press her face against the wall and cry. She had to be ... what? How would this play in a movie or a vid if she were a woman who was frustrated because she wanted to be with her man?

I don't know! she screamed inside. I'm not an actress!

And then, a much quieter voice in her head answered. Yes you are. And a pretty good one. Because for another few minutes, maybe another hour, maybe another night, you're alive.

No triumph, either. She couldn't seem to gloat, couldn't show relief. Frustration, annoyance-and some pain where he kicked her, where her head hit the floor-that's all she could show.

Even alone in her bed, the lights off, she lay there, pretending, lying. Hoping that whatever she did in her sleep would not provoke him. Would not bring that crazy frightened searching look into his eyes.

Not that it would be any guarantee, of course. There was no sign of craziness when he shot those men in the bread van back in Russia. Don't ever think you've got me figured out, he said.

You win, Achilles. I don't think I've got you figured out. But I've learned how to play one lousy string. That's something.

I also knocked you onto the floor, beat the goffno out of you, kicked you in your little kintamas, and made you think you liked it. Kill me tomorrow or whenever you want-my shoe going into your face, you can't take that away from me.

In the morning, Petra was pleased to find that she was still alive, considering what she had done the night before. Her head ached, her ribs were sore, but nothing was broken.

And she was starving. She had missed dinner the night before, and perhaps there was something about beating up her jailer that made her especially hungry. She didn't usually eat breakfast, so she had no accustomed place to sit. At other meals, she sat by herself, and others, respecting her solitude or fearing Achilles' displeasure, did not sit with her.

But today, on impulse, she took her tray to a table that had only a couple of empty spots. The conversation grew quiet when she first sat down, and a few people greeted her. She smiled back at them, but then concentrated on her food. Their conversation resumed.

"There's no way she got off the base."

"So she's still here."

"Unless someone took her."

"Maybe it's a special assignment or something."

"Sayagi says he thinks she's dead."

A chill ran through Petra's body.

"Who?" she asked.

The others glanced at her, but then glanced away. Finally one of them said, "Virlomi."

Virlomi was gone. And no one knew where she was.

He killed her. He said he would, and he did. The only thing I gained by what I did last night was that he didn't do it in front of me.

I can't stand this. I'm done. My life is not worth living. To be his captive, to have him kill anyone who tries to help me in any way . . .

No one was looking at her. Nor were they talking.

They know Virlomi tried to answer Graff, because she must have said something to Sayagi when she walked over to him yesterday. And now she's gone.

Petra knew she had to eat, no matter how sick at heart she felt, no matter how much she wanted to cry, to run screaming from the room, to fall on the floor and beg their forgiveness for ... for what? For being alive when Virlomi was dead.

She finished all she could bear to eat, and left the mess hall.

But as she walked through the corridors to the room where they all worked, she realized: Achilles would not have killed her like this. There was no point in killing her if the others didn't get to see her arrested and taken away. It wouldn't do what he needed it to do, if she just disappeared in the night.

At the same time, if she had escaped, he couldn't announce it. That would be even worse. So he would simply remain silent, and leave the impression with everyone that she was probably dead.

Petra imagined Virlomi walking boldly out of the building, her sheer bravado carrying the day. Or perhaps, dressed as one of the women who cleaned floors and windows, she had slipped out unnoticed. Or had she climbed a wall, or run a minefield? Petra didn't even know what the perimeter looked like, or how closely guarded it might be. She had never been given a tour. Wishful thinking, that's all this is, she told herself as she sat down to the day's work. Virlomi is dead, and Achilles is simply waiting to announce it, to make us all suffer from not knowing.

But as the day wore on, and Achilles did not appear, Petra began to believe that perhaps she had gotten away. Maybe Achilles was staying away because he didn't want anyone speculating about any visible bruises he might have. Or maybe he's having some scrotal problems and he's having some doctor check him out-though heaven help him if Achilles decided that having a doctor handle his injured testes was worthy of the death penalty.

Maybe he was staying away because Virlomi was gone and Achilles did not want them to see him frustrated and helpless. When he caught her and could drag her into the room and shoot her dead in front of them, then he could face them.

And as long as that didn't happen, there was a chance Virlomi was alive.

Stay that way, my friend. Run far and don't pause for anything. Cross some border, find some refuge, swim to Sri Lanka, fly to the moon. Find some miracle, Virlomi, and live.

MURDER

Re: Please forward

The attached file is encrypted. Please wait twelve hours after the time of sending and if you don't hear from me, forward it to Bean. He'll know the key.

It took less than four hours to secure and inspect the entire high command base in Bangkok. Computer experts would be probing to try to find out whom it was that Naresuan had been communicating with outside, and whether he was in fact involved with a foreign power or this gambit was a private venture. When Suriyawong's work with the Prime Minister was finished, he came alone to the barracks where Bean was waiting.

Most of Bean's soldiers had already returned, and Bean had sent most of them to bed. He still watched the news in a desultory fashion nothing new was being said, so he was interested only in seeing how the talking heads were spinning it. In Thailand, everything was charged with patriotic fervor. Abroad, of course, it was a different story. All the Common broadcasts were taking a more skeptical view that Indian operatives had really made the assassination attempt.

"Why would India want to provoke Thai entry into the war?"

"They know Thailand will come in eventually whether Burma asks them or not. So they felt they had to deprive Thailand of its best Battle School graduate."

"Is one child so dangerous?"

"Maybe you should ask the Formics. If you can find any."

And on and on, everyone trying to appear smart-or at least smarter than the Indian and Thai governments, which was the game the media always played. What mattered to Bean was how this would affect Peter. Was there any mention of the possibility that Achilles was running the show in India? Not a breath. Anything yet about Pakistani troop movements near Iran? The "Bangkok bombing" had driven that slow-moving story off the air. Nobody was giving this any global implications. As long as the I.F. was there to keep the nukes from flying, it was still just politics as usual in south Asia.

Except it wasn't. Everybody was so busy trying to look wise and unsurprised that nobody was standing up and screaming that this whole set of events was completely different from anything that had gone before. The most populous nation in the world has dared to turn its back on a two-hundred-year-old enemy and invade the small, weak country to its east. Now India was attacking Thailand. What did that mean? What was India's goal? What possible benefit could there be?

Why weren't they talking about these things?

"Well," said Suriyawong, "I don't think I'm going to go to sleep very soon."

"Everything all cleaned up?"

"More like everybody who worked closely with the Chakri has been sent home and put under house arrest while the investigation continues."

"That means the entire high command."

"Not really," said Suriyawong. "The best field commanders are out in the field. Commanding. One of them will be brought in as acting Chakri."

"They should give it to you."

"They should, but they won't. Aren't you just a little hungry?"

"It's late."

"This is Bangkok."

"Well, not really," said Bean. "This is a military base."

"When is your friend's flight due in?"

"Morning. Just after dawn."

"Ouch. She's going to be out of sorts. You going to meet her at the airport?"

"I didn't think about it."

"Let's go get dinner," said Suriyawong. "Officers do it all the time. We can take a couple of strike force soldiers with us to make sure we don't get hassled for being children."

"Achilles isn't going to give up on killing me."

"Us. He aimed at us this time."

"He might have a backup."

"Bean, I'm hungry. Are you hungry?" Suriyawong turned to the members of the team that had been with him. "Any of you hungry?"

"Not really," said one of them. "We ate at the regular time."

"Sleepy," said another.

"Anybody awake enough to go into the city with us?"

Immediately all of them stepped forward.

"Don't ask perfect soldiers whether they want to protect their CO," said Bean.

"Designate a couple to go with us and let the others sleep," said Suriyawong.

"Yes sir," said Bean. He turned to the men. "Honest assessment. Which of you will be least impaired by failing to get enough sleep tonight?"

"Will we be allowed sleep tomorrow?" asked one.

"Yes," said Bean. "So it's a matter of how much it affects you to get off your rhythm."

"I'll be fine." Four others felt the same way. So Bean chose the two nearest. "Two of you keep watch for two more hours, then go back to the normal watch rotation."

Outside the building, with their two bodyguards walking five meters behind them, Bean and Suriyawong finally had a chance to talk candidly. First, though, Suriyawong had to know. "You really keep a regular watch rotation even here at the base?"

"Was I wrong?" asked Bean.

"Obviously not, but ... you really are paranoid."

"I know I have an enemy who wants me dead. An enemy who happens to be hopping from one powerful position to another."

"More powerful each time," said Suriyawong. "In Russia, he didn't have the power to start a war."

"He might not in India, either," said Bean.

"There's a war," said Suriyawong. "You're saying it isn't his?"

"It's his," said Bean. "But he's probably still having to persuade adults to go along with him."

"Win a few, and they hand you your own army," said Suriyawong.

"Win a few more, and they hand you the country," said Bean. "As Napoleon and Washington showed."

"How many do you have to win to get the world?"

Bean let the question hang.

"Why did he go after us?" asked Suriyawong. "I think you're right, that this operation at least was entirely Achilles'. It's not the kind of thing the Indian government goes for. India is a democracy. Folding children doesn't play well. No way he got approval."

"It might not even be India," said Bean. "We don't really know anything."

"Except that it's Achilles," said Suriyawong. "Think about the stuff that doesn't make sense. A second-rate, obvious campaign strategy that we're probably going to be able to take apart. A nasty bit of business like this that can only soil India's reputation in the rest of the world."

"Obviously he's not acting in India's best interest," said Bean. "But they think he is, if he's really the one who brought off this deal with Pakistan. He's acting for himself. And I can see what he gains by kidnapping Ender's jeesh and by trying to kill you."

"Fewer rivals?"

"No," said Bean. "He makes Battle School grads look like the most important weapons in the war."

"But he's not a Battle School grad."

"He was in Battle School, and he's that age. He doesn't want to have to wait till he grows up to be king of the world. He wants everyone to believe that a child should lead them. If you're worth killing, if Ender's jeesh is worth stealing . . ." It also helps Peter Wiggin, Bean realized. He didn't go to Battle School, but if children are plausible world leaders, his own track record as Locke raises him above any other contenders. Military ability is one thing. Ending the League War was a much stronger qualification. It trumped "psychopathic Battle School expulsee" hands down.

"Do you think that's all?" asked Suriyawong.

"What's all?" asked Bean. He had lost the thread. "Oh, you mean is that enough to explain why Achilles would want you dead?" Bean thought about it. "I don't know. Maybe. But it doesn't tell us why he's setting up India for a much bloodier war than it has to fight."

"What about this," said Suriyawong. "Make everybody fear what war will bring, so they want to strengthen the Hegemony to keep the war from spreading."

"That's fine, except nobody's going to nominate Achilles as Hegemon."

"Good point. Are we ruling out the possibility that Achilles is just stupid?"

"Yes, that's not a possibility."

"What about Petra, could she have fooled him into sticking with this obvious but somewhat dumb and wasteful strategy?"

"That is possible, except that Achilles is very sharp at reading people. I don't know if Petra could lie to him. I never saw her lie to anybody. I don't know if she can."

"Never saw her lie to anybody?" asked Suriyawong.

Bean shrugged. "We became very good friends, at the end of the war. She speaks her mind. She may hold something back sometimes, but she tells you she's doing it. No smoke, no mirrors. The door's either open or it's shut."

"Lying takes practice," observed Suriyawong.

"Like the Chakri?"

"You don't get to that position by pure military ability. You have to make yourself look very good to a lot of people. And hide a lot of things you're doing."

"You're not suggesting Thailand's government is corrupt," said Bean.

"I'm suggesting Thailand's government is political. I hope this doesn't surprise you. Because I'd heard that you were bright."

They got a car to take them into town-Suriyawong had always had the authority to requisition a car and a driver, he just never used it till now.

"So where do we eat?" asked Bean. "It's not like I have a restaurant guide with me."

"I grew up in families with better chefs than any restaurant," said Suriyawong.

"So we go to your house?"

"My family lives near Chiang Mai."

"That's going to be a battle zone."

"Which is why I think they're actually in Vientiane, though security rules would keep them from telling me. My father is running a network of dispersed munitions factories." Suriyawong grinned. "I had to make sure I siphoned off some of these defense jobs for my family."

"In other words, he was best man for the task."

"My mother was best for the task, but this is Thailand. Our love affair with Western culture ended a century ago."

They ended up having to ask the soldiers, and they only knew the kind of place they could afford to eat. So they found themselves eating at a tiny all-night diner in a part of town that wasn't the worst, but wasn't the nicest, either. And the whole thing was so cheap it felt practically free.

Suriyawong and the soldiers went down on the food as if it were the best meal they'd ever had.

"Isn't this great?" asked Suriyawong. "When my parents had company, and they were eating all the fancy stuff in the dining room with visitors, we kids would eat in the kitchen, the stuff the servants ate. This stuff. Real food."

No doubt that's why the Americans at Yum-Yum in Greensboro loved what they got there, too. Childhood memories. Food that tasted like safety and love and getting rewarded for good behavior. A treat we're going out. Bean didn't have any such memories, of course. He had no nostalgia for picking up food wrappers and licking the sugar off the plastic and then trying to get at any of it that rubbed off on his nose. What was he nostalgic for? Life in Achilles' "family"? Battle School? Not likely. And his time with his family in Greece had come too late to be part of his early childhood memories. He liked being in Crete, he loved his family, but no, the only good memories of his childhood were in Sister Carlotta's apartment when she took him off the street and fed him and kept

him safe and helped him prepare to take the Battle School tests-his ticket off Earth, to where he'd be safe from Achilles.

It was the only time in his childhood when he felt safe. And even

though he didn't believe it or understand it at the time, he felt loved, too. If he could sit down in some restaurant and eat a meal like the ones Sister Carlotta prepared there in Rotterdam, he'd probably feel the way those Americans felt about Yum-Yum, or these Thais felt about this place.

"Our friend Borommakot doesn't really like the food," said Suriyawong. He spoke in Thai, because Bean had picked up the language quite readily, and the soldiers weren't as comfortable in Common.

"He may not like it," said one soldier, "but it's making him grow."

"Soon he'll be as tall as you," said the other.

"How tall do Greeks get?" asked the first.

Bean froze.

So did Suriyawong.

The two soldiers looked at them with some alarm. "What, did you see something?"

"How did you know he was Greek?" asked Suriyawong.

The soldiers glanced at each other and then suppressed their smiles.

"I guess they're not stupid," said Bean.

"We saw all the vids on the Bugger War, we saw your face, you think you're not famous? Don't you know?"

"But you never said anything," said Bean.

"That would have been rude."

Bean wondered how many people made him in Araraquara and Greensboro, but were too polite to say anything.

It was three in the morning when they got to the airport. The plane was due in about six. Bean was too keyed up to sleep. He assigned himself to keep watch, and let the soldiers and Suriyawong doze.

So it was Bean who noticed when a flurry of activity began around the podium about forty-five minutes before the flight was supposed to arrive. He got up and went to ask what was going on.

"Please wait, we'll make an announcement," said the ticket agent. "Where are your parents? Are they here?"

Bean sighed. So much for fame. Suriyawong, at least, should have been recognized. Then again, everyone here had been on duty all night and probably hadn't heard any of the news about the assassination attempt, so they wouldn't have seen Suriyawong's face flashed in the vids again and again. He went back to waken one of the soldiers so he could find out, adult to adult, what was going on.

His uniform probably got him information that a civilian wouldn't have been told. He came back looking grim. "The plane went down," he said.

Bean felt his heart plummet. Achilles? Had he found a way to get to Sister Carlotta?

It couldn't be. How could he know? He couldn't be monitoring every airplane flight in the world.

The message Bean had sent via the computer in the barracks. The Chakri might have seen it. If he hadn't been arrested by then. He might have had time to relay the information to Achilles, or whatever intermediary they used. How else could Achilles have known that Carlotta would be coming?

"It's not him this time," said Suriyawong, when Bean told him what he was thinking. "There are plenty of reasons a plane can drop out of radar."

"She didn't say it disappeared," said the soldier. "She said it went down."

Suriyawong looked genuinely stricken. "Borommakot, I'm sorry." Then Suriyawong went to a telephone and contacted the Prime Minister's office. Being Thailand's pride and joy, who had just survived an assassination attempt, had its benefits. In a very few minutes they were escorted into the meeting room at the airport where officials from the government and the military were conferring, linked to aviation authorities and investigating agencies worldwide.

The plane had gone down over southern China. It was an Air Shanghai flight, and China was treating it as an internal matter, refusing to allow outside investigators to come to the crash site. But air traffic satellites had the story—there was an explosion, a big one, and the plane was in small fragments before any part of it reached the ground. No chance of survivors.

Only one faint hope remained. Maybe she hadn't made a connection somewhere. Maybe she wasn't on board.

But she was.

I could have stopped her, thought Bean. When I agreed to trust the Prime Minister without waiting for Carlotta to arrive, I could have sent word at once to have her go home. But instead he waited around and watched the vids and then went out for a night on the town. Because he wanted to see her. Because he had been frightened and he needed to have her with him.

Because he was too selfish even to think of the danger he was exposing her to. She flew under her own name-she had never done that when they were together. Was that his fault?

Yes. Because he had summoned her with such urgency that she didn't have time to do things covertly. She just had the Vatican arrange her flights, and that was it. The end of her life.

The end of her ministry, that's how she'd think about it. The jobs left undone. The work that someone else would have to do.

All he'd done, ever since she met him, was steal time from her, keep her from the things that really mattered in her life. Having to do her work on the run, in hiding, for his sake. Whenever he needed her, she dropped everything. What had he ever done to deserve it? What had he ever given her in return? And now he had interrupted her work permanently. She would be so annoyed. But even now, if he could talk to her, he knew what she'd say.

It was always my choice, she'd say. You're part of the work God gave me. Life ends, and I'm not afraid to return to God. I'm only afraid for you, because you keep yourself such a stranger to him.

If only he could believe that she was still alive somehow. That she was there with Poke, maybe, taking her in now the way she took Bean in so many years ago. And the two of them laughing and reminiscing about clumsy old Bean, who just had a way of getting people killed.

Someone touched his arm. "Bean," whispered Suriyawong. "Bean, let's get you out of here."

Bean focused and realized that there were tears running down his cheeks. "I'm staying," he said.

"No," said Suriyawong. "Nothing's going to happen here. I mean let's go to the official residence. That's where the diplomatic greyyaz is flying."

Bean wiped his eyes on his sleeves, feeling like a little kid as he did it. What a thing to be seen doing in front of his men. But that was just too bad-it would be a far worse sign of weakness to try to conceal it or pathetically ask them not to tell. He did what he did, they saw what they saw, so be it. If Sister Carlotta wasn't worth some tears from someone who owed her as much as Bean did, then what were tears for, and when should they be shed?

There was a police escort waiting for them. Suriyawong thanked their bodyguards and ordered them back to the barracks. "No need to get up till you feel like it," he said.

They saluted Suriyawong. Then they turned to Bean and saluted him. Sharply. In best military fashion. No pity. Just honor. He returned their salute the same way-no gratitude, just respect.

The morning in the official residence was infuriating and boring by turns. China was being intransigent. Even though most of the passengers were Thai businessmen and tourists, it was a Chinese plane over Chinese airspace, and because there were indications that it might have been a ground-to-air missile attack rather than a planted bomb, it was being kept under tight military security.

Definitely Achilles, Bean and Suriyawong agreed. But they had talked enough about Achilles that Bean agreed to let Suriyawong brief the Thai military and state department leaders who needed to have all the information that might make sense of this.

Why would India want to blow up a passenger plane flying over China? Could it really have been solely to kill a nun who was coming to visit a Greek boy in Bangkok? That was simply too far-fetched to believe. Yet, bit by bit, and with the help of the Minister of Colonization, who could take them through details about Achilles' psychopathology that hadn't even been in Locke's reporting on him, they began to understand that yes, indeed, this might well have been a kind of defiant message from Achilles to Bean, telling him that he might have gotten away this time, but Achilles could still kill whomever he wanted.

While Suriyawong was briefing them, however, Bean was taken upstairs to the private residence, where the Prime Minister's wife very kindly led him to a guest bedroom and asked him if he had a friend or family member she should send for, or if he wanted a minister or priest of some religion or other. He thanked her and said that all he really needed was some time alone.

She closed the door behind her, and Bean cried silently until he was exhausted, and then, curled up on a mat on the floor, he went to sleep.

When he awoke it was still bright daylight beyond the louvered shutters. His eyes were still sore from crying. He was still exhausted. He must have woken up because his bladder was full. And he was thirsty. That was life. Pump it in, pump it out. Sleep and wake, sleep and wake. Oh, and a little reproduction here and there. But he was too young, and Sister Carlotta had opted out of that side of life. So for them the cycle had been pretty much the same. Find some meaning in life. But what? Bean was famous. His name would live in history books forever. Probably just as part of a list in the chapter on Ender Wiggin, but that was fine, that was more than most people got. When he was dead he wouldn't care.

Carlotta wouldn't be in any history books. Not even a footnote. Well, no, that wasn't true. Achilles was going to be famous, and she was the one who found him. More than a footnote after all. Her name would be remembered, but always because it was linked with the koncho who killed her because she had seen how helpless he was and saved him from the life of the street.

Achilles killed her, but of course, he had my help.

Bean forced himself to think of something else. He could already feel that burning in his eyelids that meant tears were about to flow. That was done. He needed to keep his wits about him. Very important to keep thinking.

There was a courtesy computer in the room, with standard netlinks and some of Thailand's leading connection software. Soon Bean was signed on in one of his less-used identities. Graff would know things that the Thai government wasn't getting. So would Peter. And they would write to him.

Sure enough, there were messages from both of them encrypted on one of his dropsites. He pulled them both off.

They were the same. An email forwarded from Sister Carlotta herself.

Both of them said the same thing. The message had arrived at nine in the morning, Thailand time. They were supposed to wait twelve hours in case Sister Carlotta herself contacted them to retract the message. But when they learned with independent confirmation that there was no chance she was alive, they decided not to wait. Whatever the message was, Sister Carlotta had set it up so that if she didn't take an active step to block it, every day, it would automatically go to Graff and to Peter to send on to him.

Which meant that every day of her life, she had thought of him, had done something to keep him from seeing this, and yet had also made sure that he would see whatever it was that this message contained.

Her farewell. He didn't want to read it. He had cried himself out. There was nothing left.

And yet she wanted him to read it. And after all she had done for him, he could surely do this for her.

The file was double-encrypted. Once he had opened it with his own decoding, it remained encoded by her. He had no idea what the password would be, and therefore it had to be something that she would expect him to think of.

And because he would only be trying to find the key after she was dead, the choice was obvious. He entered the name Poke and the decryption proceeded at once.

It was, as he expected, a letter to him.

Dear Julian, Dear Bean, Dear Friend,

Maybe Achilles killed me, maybe he didn't. You know how I feel about vengeance. Punishment belongs to God, and besides, anger makes people stupid, even people as bright as you. Achilles must be stopped because of what he is, not because of anything he did to me. My manner of death is meaningless to me. Only my manner of life mattered, and that is for my Redeemer to judge.

But you already know these things, and that is not why I wrote this letter. There is information about you that you have a right to know. It's not pleasant information, and I was going to wait to tell you until you already had some inkling. I was not about to let my death keep you in ignorance, however. That would be giving either Achilles or the random chances of life-whichever caused my sudden death too much power over you.

You know that you were born as part of an illegal scientific experiment using embryos stolen from your parents. You have preternatural memories of your own astonishing escape from the slaughter of your siblings when the experiment was terminated. What you did at that age tells anyone who knows the story that you are extraordinarily intelligent. What you have not known, until now, is why you are so intelligent, and what it implies about your future.

The person who stole your frozen embryo was a scientist, of sorts. He was working on the genetic enhancement of human intelligence. He based his experiment on the theoretical work of a Russian scientist named Anton. Though Anton was under an order of intervention and could not tell me directly, he courageously found a way to circumvent the programming and tell me of the genetic change that was made in you. (Though Anton was under the impression that the change could only be made in an unfertilized egg, this was really only a technical problem, not a theoretical one.)

There is a double key in the human genome. One of the keys deals with human intelligence. If turned one way, it places a block on the ability of the brain to function at peak capacity. In you, Anton's key has been turned. Your brain was not frozen in its growth. It did not stop making new neurons at an early age. Your brain continues to grow and make new connections. Instead of having a limited capacity, with patterns formed during early development, your brain adds new capacities and new patterns as they are needed. You are mentally like a one-year-old, but with experience. The mental feats that infants routinely perform, which are far greater than anything that adults manage, will always remain within your reach. For your entire life, for instance, you will be able to master new languages like a native speaker. You will be able to make and maintain connections with your own memory that are unlike those of anyone else. You are, in other words, uncharted or perhaps self-charted territory.

But there is a price for that unfettering of your brain. You have probably already guessed it. If your brain keeps growing, what happens to your head? How does all that brain matter stay inside?

Your head continues to grow, of course. Your skull has never fully closed. I have had your skull measurements tracked, naturally. The growth is slow, and much of the growth of your brain has involved the creation of more but smaller neurons. Also, there has been some thinning of your skull, so you may or may not have noticed the growth in the circumferences of your head-but it is real.

You see, the other side of Anton's key involves human growth. If we did not stop growing, we would die very young. Yet to live long requires that we give up more and more of our intelligence, because our brains must lock down and stop growing earlier in our life cycle. Most human beings fluctuate within a fairly narrow range. You are not even on the charts.

Bean, Julian, my child, you will die very young. Your body will continue to grow, not the way puberty would do it, with one growth spurt and then an adult height. As one scientist put it, you will never reach adult height, because there is no adult height. There is only height at time of death. You will steadily grow taller and larger until your heart gives out or your spine collapses. I tell you this bluntly, because there is no way to soften this blow.

No one knows what course your growth will take. At first I took great encouragement from the fact that you seemed to be growing more slowly than originally estimated. I was told that by the age of puberty, you would have caught up with other children your age-but you did not. You remained far behind them. So I hoped that perhaps he was wrong, that you might live to age forty or fifty, or even thirty. But in the year you were with your family, and in the time we have been together, you have been measured and your growth rate is accelerating. All indications are that it will continue to accelerate. If you live to be twenty, you will have defied all rational expectations. If you die before

the age of fifteen, it will be only a mild surprise. I shed tears as I write these words, because if ever there was a child who could serve humanity by having a long adult life, it is you. No, I will be honest, my tears are because I think of you as being, in so many ways, my own son, and the only thing that makes me glad about the fact that you are learning of your future through this letter is that it means I have died before you. The worst fear of every loving parent, you see, is that they will have to bury a child. We nuns and priests are spared that grief. Except when we take it upon ourselves, as I so foolishly and gladly have done with you.

I have full documentation of all the findings of the team that has been studying you. They will continue to study you, if you allow them. The netlink is at the end of this letter. They can be trusted, because they are decent people, and because they also know that if the existence of their project becomes known, they will be in grave danger, for research into the genetic enhancement of human intelligence remains against the law. It is entirely your choice whether you cooperate. They already have valuable data. You may live your life without reference to them, or you may continue to provide them with information. I am not terribly interested in the science of it. I worked with them because I needed to know what would happen to you.

Forgive me for keeping this information from you. I know that you think you would have preferred to know it all along. I can only say, in my defense, that it is good for human beings to have a period of innocence and hope in their lives. I was afraid that if you knew this too soon, it would rob you of that hope. And yet to deprive you of this knowledge robbed you of the freedom to decide how to spend the years you have. I was going to tell you soon.

There are those who have said that because of this small genetic difference, you are not human. That because Anton's key requires two changes in the genome, not one, it could never have happened randomly, and therefore you represent a new species, created in the laboratory. But I tell you, you and Nikolai are twins, not separate species, and I, who have known you as well as any other person, have never seen anything from you but the best and purest of humanity. I know you will not accept my religious terminology, but you know what it means to me. You have a soul, my child. The Savior died for you as for every other human being ever born. Your life is of infinite worth to a loving God. And to me, my son.

You will find your own purpose for the time you have left to live. Do not be reckless with your life, just because it will not be long. But do not guard it overzealously, either. Death is not a tragedy to the one who dies. To have wasted the life before that death, that is the tragedy. Already you have used your years better than most. You will yet find many new purposes, and you will accomplish them. And if anyone in heaven heeds the voice of this old nun, you will be well watched over by angels and prayed for by many saints.

With love, Carlotta

Bean erased the letter. He could pull it from his dropsite and decode it again, if he needed to refer back to it. But it was burned into his memory. And not just as text on a desk display. He had heard it in Carlotta's voice, even as his eyes moved across the words that the desk put up before him.

He turned off the desk. He walked to the window and opened it. He looked out over the garden of the official residence. In the distance he could see airplanes making their approach to the airport, as others, having just taken off, rose up into the sky. He tried to picture Sister Carlotta's soul rising up like one of those airplanes. But the picture kept changing to an Air Shanghai flight coming in to land, and Sister Carlotta walking off the plane and looking him up and down and saying, "You need to buy new pants."

He went back inside and lay down on his mat, but not to sleep. He did not close his eyes. He stared at the ceiling and thought about death and life and love and loss. And as he did, he thought he could feel his bones grow.

## DECISIONS

## TREACHERY

To: Demosthenes%Tecumseh@freemercia.org  
From: Unready%cincinnatus@anon.set  
Re: Air Shanghai

The pinheads running this show have decided not to share satellite info on Air Shanghai with anyone outside the military, claiming that it involves vital interests of the United States. The only other countries with satellites capable of seeing what ours can see are China, Japan, and Brazil, and of these only China has a satellite in position to see it. So the Chinese know. And when I'm done with this letter, you'll know, and you'll know how to use the information. I don't like seeing big countries beat up on little ones, except when the big country is mine. So sue me.

The Air Shanghai flight was brought down by a ground-to-air missile, which was fired from INSIDE THAILAND. However, computer time-lapse tracking of movements in that area of Thailand show that the only serious candidate for how the ground-to-air missile got to its launch site is a utility truck whose movements originated in, get this, China.

Details: The truck (little white Vietnamese-made "Hog-type vehicle) originated at a warehouse in Gejiu (which has already been tagged as a munitions clearinghouse) and crossed the Vietnamese border between Jinping, China, and Sinh Ho, Vietnam. It then crossed the Laotian border via the Ded Tay Chang pass. It traversed the widest part of Laos and entered Thailand near Tha Li, but at this point moved off the main roads. It passed near enough to the point from which the missile was launched for it to have been offloaded and transported manually to the site. And get this: All this movement happened MORE THAN A MONTH AGO.

I don't know about you, but to me and everybody else here, that looks like China wants a "provocation" to go to war against Thailand. Bangkok-bound Air Shanghai jet, carrying mostly Thai passengers, is shot down, over China, by a g-to-a launched from Thailand. China can make it look as though the Thai Army was trying to create a fake provocation against them, when in fact the reverse is the case. Very complicated, but the Chinese know they can show satellite proof that the missile was launched from inside Thai-land. They can also prove that it had to have radar assistance from sophisticated military tracking systems-which will imply, in the Chinese version,

that the Thai military was behind it, though WE know it means the Chinese military was in control. And when the Chinese ask for independent corroboration, you can count on it: our beloved government, since it loves business better than honor, will back up the Chinese story, never mentioning the movements of that little truck. Thus America will stay in the good graces of its trading partner. And Thailand gets chiseled.

Do your thing, Demosthenes. Get this out into the public domain before our government can play toady. Just try to find a way to do it that doesn't point at me. This isn't just job-losing territory. I could go to jail.

When Suriyawong came to see if Bean wanted any dinner-a nine o'clock repast for the officers on duty, not an official meal with the P.M.-Bean almost followed him right down. He needed to eat, and now was as good a time as any. But he realized that he had not read any of his email after getting Sister Carlotta's last letter, so he told Suriyawong to start without him but save him a place.

He checked the dropsite that Peter had used to forward Carlotta's message, and found a more recent letter from Peter. This one included the text of a letter from one of Demosthenes' contacts inside the U.S. satellite intelligence service, and combined with Peter's own analysis of the situation, it made everything clear to Bean. He fired off a quick response, taking Peter's suspicions a step further, and then headed down to dinner.

Suriyawong and the adult officers-several of them field generals who had been summoned to Bangkok because of the crisis in the high command-were laughing. They fell silent when Bean entered the room. Ordinarily, he might have tried to put them at ease. Just because he was grieving did not change the fact that in the midst of crises, humor was needed to break the tension. But at this moment their silence was useful, and he used it.

"I just received information from one of my best sources of intelligence," Bean said. "You in this room are those who most need to hear it. But if the Prime Minister could also join us, it would save time."

One of the generals started to protest that a foreign child did not summon the Prime Minister of Thailand, but Suriyawong stood and bowed deeply to him. The man stopped talking. "Forgive me, sir," said Suriyawong, "but this foreign boy is Julian Delphiki, whose analysis of the final battle with the Formics led directly to Ender's victory."

Of course the general knew that already, but Suriyawong, by allowing him to pretend that he had not know, gave him a way to backpedal without losing face.

"I see," said the general. "Then perhaps the Prime Minister will not be offended at this summons."

Bean helped Suriyawong smooth things over as best he could. "Forgive me for having spoken with such rudeness. You were right to rebuke me. I can only hope you will excuse me for being forgetful of proper manners. The woman who raised me was on the Air Shanghai flight."

Again, the general certainly knew this; again, it allowed him to bow and murmur his commiseration. Proper respect had been shown to everyone. Now things could proceed.

The Prime Minister left his dinner with various high officials of the Chinese government, and stood against the wall, listening, as Bean relayed what he had learned from Peter about the source of the missile that brought down the jet.

"I have been in consultation off and on all day with the foreign minister of China," said the Prime Minister. "He has said nothing about the missile being launched from inside Thailand."

"When the Chinese government is ready to act on this provocation," said Bean, "they will pretend to have just discovered it."

The Prime Minister looked pained. "Could it not have been Indian operatives trying to make it seem that it was a Chinese venture?"

"It could have been anyone," said Bean. "But it was Chinese."

The prickly general spoke up. "How do you know this, if the satellite does not confirm it?"

"It would make little sense for it to be Indian," said Bean. "The only countries that could possibly detect the truck would be China and the U.S., which is well known to be in China's pocket. But China would know that they had not fired the missile, and they would know that Thailand had not fired it, so what would be the point?"

"It makes no sense for China to do it, either," said the Prime Minister.

"Sir," said Bean, "nothing makes sense in any of the things that have happened in the last few days. India has made a nonaggression pact with Pakistan and both nations have moved their troops away from their shared border. Pakistan is moving against Iran. India has invaded Burma, not because Burma is a prize, but because it stands between India and Thailand, which is. But India's attack makes no sense-right, Suriyawong?"

Suriyawong instantly understood that Bean was asking him to share in this, so that it would not all come from a European. "As Bean and I told the Chakri yesterday, the Indian attack on Burma is not just stupidly designed, it was deliberately stupidly designed. India has commanders wise enough and well-enough trained to know that sending masses of soldiers across the border, with the huge supply problem they represent, creates an easy target for our strategy of harassment. It also leaves them fully committed. And yet they have launched precisely such an attack."

"So much the better for us," said the prickly general.

"Sir," said Suriyawong, "it is important for you to understand that they have the services of Petra Arkanian, and both Bean and I know that Petra would never sign off on the strategy they're using. So that is obviously not their strategy."

"What does this have to do with the Air Shanghai flight?" asked the Prime Minister.

"Everything," said Bean. "And with the attempt on Suriyawong's and my life last night. The Chakri's little game was meant to provoke Thailand into an immediate entry into the war with India. And even though the ploy did not work, and the Chakri was exposed, we are still maintaining the fiction that it was an Indian provocation. Your meet-ings with the Chinese foreign minister are part of your effort to involve the Chinese in the war against India-no, don't tell me that you can't confirm or deny it, it's obvious that's what such meetings would have to be about. And I'll bet the Chinese are telling you that they are mass-ing troops on the Burmese border in order to attack the Indians sud-denly, when they are most exposed."

The Prime Minister, who had indeed been opening his mouth to speak, held his silence.

"Yes, of course they are telling you this. But the Indians also know that the Chinese are massing on the Burmese border, and yet they proceed with their attack on Burma, and their forces are almost fully committed, making no provision for defense against a Chinese attack from the north. Why? Are we going to pretend that the Indians are that stupid?"

It was Suriyawong who answered as it dawned on him. "The Indi-ans also have a nonaggression pact with China. They think the Chi-nese troops are massing at the border in order to attack us. They and the Indians have divided up southeast Asia."

"So this missile that the Chinese launched from Thailand to shoot down their own airliner over their own territory," said the Prime Min-ister, "that will be their excuse to break off negotiations and attack us by surprise?"

"No one is surprised by Chinese treachery," said one of the generals.

"But that's not the whole picture," said Bean. "Because we have not yet accounted for Achilles."

"He's in India," said Suriyawong. "He planned the attempt to kill us last night."

"And we know he planned that attempt," said Bean, "because I was there. He wanted you dead as a provocation, but he gave approval for it to happen last night because we would both be killed in the same explosion. And we know that he is behind the downing of the Air Shanghai jet, because even though the missile was in place for a month, ready to be fired, this was not yet the right moment to create the provocation. The Chinese foreign minister is still in Bangkok. Thailand has not yet had several days to commit its troops to battle, depleting our supplies and sending most of our forces on missions far to the northwest. Chinese troops have not yet fully deployed to the north of us. That missile should not have been fired for several days, at least. But it was fired this morning because Achilles knew Sister Carlotta was on that airplane, and he could not pass up the opportunity to kill her."

"But you said the missile was a Chinese operation," said the Prime Minister. "Achilles is in India."

"Achilles is in India, but is Achilles working for India?"

"Are you saying he's working for China?" asked the Prime Minister.

"Achilles is working for Achilles," said Suriyawong. "But yes, now the picture is clear."

"Not to me," said the prickly general.

Suriyawong eagerly explained. "Achilles has been setting India up from the beginning. While Achilles is still in Russia, he doubt-less used the Russian intelligence service to make contacts inside China. He promised he could hand them all of south and southeast Asia in a single blow. Then he goes to India and sets up a war in which India's army is fully committed in Burma. Until now, China has never been able to move against India, because the Indian Army was concentrated in the west and northwest, so that as Chinese troops came over the passes of the Himalayas, they were easily fought off by Indian troops. Now, though, the entire Indian Army is exposed, far from the heartland of India. If the Chinese can achieve a surprise attack and destroy that army, India will be defenseless. They will have no choice but to surrender. We're just a sideshow to them. They will attack us in order to lull the Indians into complacency."

"So they don't intend to invade Thailand?" asked the Prime Minister.

"Of course they do," said Bean. "They intend to rule from the Indus to the Mekong. But the Indian army is the main objective. Once that is destroyed, there is nothing in their way."

"And all this," said the prickly general, "we deduce from the fact that a certain Catholic nun was on the airplane?"

"We deduce this," said Bean, "from the fact that Achilles is controlling events in China, Thailand, and India. Achilles knew Sister Carlotta was on that plane because the Chakri intercepted my message to the Prime Minister. Achilles is running this show. He's betraying everybody to everybody else. And in the end, he stands at the top of a new empire that contains more than half the population of the world. China, India, Burma, Thailand, Vietnam. Everyone will have to accommodate this new superpower."

"But Achilles does not run China," said the Prime Minister. "As far as we know, he has never been in China."

"The Chinese no doubt think they're using him," said Bean. "But I know Achilles, and my guess is that within a year, the Chinese leaders will find themselves either dead or taking their orders from him."

"Perhaps," said the Prime Minister, "I should go warn the Chinese foreign minister of the great danger he is in."

The prickly general stood up. "This is what comes of allowing children to play at world affairs. They think that real life is like a computer game, a few mouse clicks and nations rise and fall."

"This is precisely how nations rise and fall," said Bean. "France in 1804. Napoleon remaking the map of Europe in the early 1800s, creating kingdoms so his brothers would have someplace to rule. The victors in World War 1, cutting up kingdoms and drawing insane lines on the map that would lead to war again and again. The Japanese conquest of most of the western Pacific in December of 1941. The collapse of the Soviet Empire in 1989. Events can be sudden indeed."

"But those were great forces at work," said the general.

"Napoleon's whims were not a great force. Nor was Alexander, toppling empires wherever he went. There was nothing inevitable about Greeks reaching the Indus."

"I don't need history lessons from you."

Bean was about to retort that yes, apparently he did-but Suriyawong shook his head. Bean got the message.

Suriyawong was right. The Prime Minister was not convinced, and the only generals who were speaking up were the ones who were downright hostile to Bean's and Suriyawong's ideas. If Bean continued to push, he would merely find himself marginalized in the coming war. And he needed to be in the thick of things, if he was to be able to use the strike force he had so laboriously created.

"Sir," said Bean to the general, "I did not mean to teach you anything. You have nothing to learn from me. I have merely offered you the information I received, and the conclusions I drew from it. If these conclusions are incorrect, I apologize for wasting your time. And if we proceed with the war against India, I ask only for the chance to serve Thailand honorably, in order to repay your kindness to me."

Before the general could say anything-and it was plain he was going to make a haughty reply-the Prime Minister intervened. "Thank you for giving us your best-Thailand survives in this difficult place because our people and our friends offer everything they have in the service of our small but beautiful land. Of course we will want to use you in the coming war. I believe you have a small strike force of highly trained and versatile Thai soldiers. I will see to it that your force is assigned to a commander who will find good use for that force, and for you."

It was a deft announcement to the generals at that table that Bean and Suriyawong were under his protection. Any general who attempted to quash their participation would simply find that they were assigned to another command. Bean could not have hoped for more.

"And now," said the Prime Minister, "while I am happy to have spent this quarter hour in your company, gentlemen, I have the foreign minister of China no doubt wondering why I am so rude as to stay away for all this time."

The Prime Minister bowed and left.

At once the prickly general and the others who were most skeptical returned to the joking conversation that Bean's arrival had interrupted, as if nothing had happened.

But General Phet Noi, who was field commander of all Thai forces in the Malay Peninsula, beckoned to Suriyawong and Bean. Suriyawong picked up his plate and moved to a place beside Phet Noi, while Bean paused only to fill his own plate from the pots on serving table before joining them.

"So you have a strike force," said Phet Noi.

"Air, sea, and land," said Bean.

"The main. Indian offensive," said Phet Noi, "is in the north. My army will be watching for Indian landings on the coast, but our role will be vigilance, not combat. Still, I think that if your strike force launched its missions from the south, you would be less likely to become tangled up in raids originating in the much more important northern commands."

Phet Noi obviously knew that his own command was the one least important to the conduct of the war-but he was as determined to get involved as Bean and Suriyawong were. They could help each other. For the rest of the meal, Bean and Suriyawong conversed earnestly with Phet Noi, discussing where in the Malay panhandle of Thailand the strike force might best be stationed. Finally, they were the last three at table.

"Sir," said Bean, "now that we're alone, the three of us, there is something I must tell you."

"Yes?"

"I will serve you loyally, and I will obey your orders. But if the opportunity comes, I will use my strike force to accomplish an objective that is not, strictly speaking, important to Thailand."

"And that is?"

"My friend Petra Arkanian is the hostage-no, I believe she is the virtual slave-of Achilles. Every day she lives in constant danger. When I have the information necessary to make success likely, I will use my strike force to bring her out of Hyderabad."

Phet Noi thought about this, his face showing nothing. "You know that Achilles may be holding on to her precisely because she is the bait that will lure you into a trap."

"That is possible," said Bean, "but I don't believe that it's what Achilles is doing. He believes he is able to kill anyone, anywhere. He doesn't need to set traps for me. To lie in wait is a sign of weakness. I believe he's holding on to Petra for his own reasons."

"You know him," said Phet Noi, "and I do not." He reflected for a moment. "As I listened to what you said about Achilles and his plans and treacheries, I believed that events might unfold exactly as you said. What I could not see was how Thailand could possibly turn this into victory. Even with advance warning, we can't prevail against China in the field of battle. China's supply lines into Thailand would be short. Almost a quarter of the population of Thailand is Chinese in origin, and

while most of them are loyal Thai citizens, a large fraction of them still regard China as their homeland. China would not lack for saboteurs and collaborators within our country, while India has no such connection. How can we prevail?"

"There is only one way," said Bean. "Surrender at once."

"What?" said Suriyawong.

"Prime Minister Paribatra should go to the Chinese foreign minister, declare that Thailand wishes to be an ally of China. We will put most of our military temporarily under Chinese command to be used against the Indian aggressors as needed, and will supply not only our own armies, but the Chinese armies as well, to the limit of our abilities. Chinese merchants will have unrestricted access to Thai markets and manufacturing."

"But that would be shameful," said Suriyawong.

"It was shameful," said Bean, "when Thailand allied itself with Japan during World War 11, but Thailand survived and Japanese troops did not occupy Thailand. It was shameful when Thailand bowed to the Europeans and surrendered Laos and Cambodia to France, but the heart of Thailand remained free. If Thailand doesn't preemptively ally itself to China and give China a free hand, then China will rule here anyway, but Thailand itself will utterly lose its freedom and its national existence, for many years at least, and perhaps forever."

"Am I listening to an oracle?" asked Phet Noi.

"You are listening to the fears of your own heart," said Bean. "Sometimes you have to feed the tiger so it won't devour you."

"Thailand will never do this," said Phet Noi.

"Then I suggest you make arrangements for your escape and life in exile," said Bean, "because when the Chinese take over, the ruling class is destroyed."

They all knew Bean was talking about the conquest of Taiwan. All government officials and their families, all professors, all journalists, all writers, all politicians and their families were taken from Taiwan to reeducation camps in the western desert, where they were set to work performing manual labor, they and their children, for the rest of their lives. None of them ever returned to Taiwan. None of their children ever received approval for education beyond the age of fourteen. The method had been so effective in pacifying Taiwan that there was no chance they would not use the same method in their conquests now.

"Would I be a traitor, to plan for defeat by creating my own escape route?" Phet Noi wondered aloud.

"Or would you be a patriot, keeping at least one Thai general and his family out of the hands of the conquering enemy?" asked Bean.

"Is our defeat certain, then?" asked Suriyawong.

"You can read a map," said Bean. "But miracles happen."

Bean left them to their silent thoughts and returned to his room, to report to Peter on the likely Thai response.

ON A BRIDGE

TO: Chamrajnagar@sacredriver@ifcom.gov From: Wiggin@resistance@haiti.gov

Re: For the sake of India, please do not set foot on Earth

Esteemed Polemarch Chamrajnagar,

For reasons that will be made clear by the attached essay, which I will soon publish, I fully expect that you will return to Earth just in time to be caught up in India's complete subjugation by China.

If your return to India had any chance of preserving her independence, you would bear any risk and return, regardless of any advice. And if your establishing a government in exile could accomplish anything for your native land, who would try to persuade you to do otherwise?

But India's strategic position is so exposed, and China's relentlessness in conquest is so well known, that you must know both courses of action are futile.

Your resignation as Polemarch does not take effect until you reach Earth. If you do not board the shuttle, but instead return to IFCOM, you remain Polemarch. You are the only possible Polemarch who could secure the International Fleet. A new commander could not distinguish between Chinese who are loyal to the Fleet and those whose first allegiance is to their now-dominant homeland. The I.F. must not fall under the sway of Achilles. You, as Polemarch, could reassign suspect Chinese to innocuous postings, preventing any Chinese grab for control. If you return to Earth, and Achilles has influence over your successor as Polemarch, the I.F. will become a tool of conquest.

If you remain as Polemarch, you will be accused, as an Indian, of planning to pursue vengeance against China. Therefore, to prove your impartiality and avoid suspicion, you will have to remain utterly aloof from all Earthside wars and struggles. You can trust me and my allies to maintain the resistance to Achilles regardless of the apparent odds, if for no other reason than this: His ultimate triumph means our immediate death.

Stay in space and, by doing so, allow the possibility of humanity escaping the domination of a madman. In return, I vow to do all in my power to free India from Chinese rule and return it to self-rule.

Sincerely, Peter Wiggin

The soldiers around her knew perfectly well who Virloomi was. They also knew the reward that had been offered for her capture--or her dead body. The charge was treason and espionage. But from the start, as she passed through the checkpoint at the entrance of the base at Hyderabad, the common soldiers had believed in her and befriended her.

"You will hear me accused of spying or worse," she said, "but it isn't true. A treacherous foreign monster rules in Hyderabad, and he wants me dead for personal reasons. Help me."

Without a word, the soldiers walked her away from where the cameras might spot her, and waited. When an empty supply truck came up, they stopped it and while some of them talked to the driver, the others helped her get in. The truck drove through, and she was out.

Ever since, she had turned to the footsoldiers for help. Officers might or might not let compassion or righteousness interfere with obedience or ambition--the common soldiers had no such qualms. She was transported in the midst of a crush of soldiers on a crowded train, offered so much food smuggled out of mess halls that she could not eat it all, and given bunk space while weary men slept on the floor. No one laid a hand on her except to help her, and none betrayed her.

She moved across India to the east, toward the war zone, for she knew that her only hope, and the only hope for Petra Arkanian, was for her to find, or be found by, Bean.

Virloomi knew where Bean would be: making trouble for Achilles wherever and however he could. Since the Indian Army had chosen the dangerous and foolish strategy of committing all its manpower to battle, she knew that the effective counterstrategy would be harassment and disruption of supply lines. And Bean would come to whatever point on the supply line was most crucial and yet most difficult to

So, as she neared the front, Virloomi went over in her mind the map she had memorized. To move large amounts of supplies and munitions quickly from India to the troops sweeping through the great plain where the Irrawaddy flowed, there were two general routes. The northern route was easier, but far more exposed to raids. The southern route was harder, but more protected. Bean would be working on disrupting the southern route.

Where? There were two roads over the mountains from Imphal in India to Kalemio in Burma. They both passed through narrow canyons and crossed deep gorges. Where would it be hardest to rebuild a blown bridge or a collapsed highway? On both routes, there were candidate locations. But the hardest to rebuild was on the western route, a long stretch of road carved out of rock along the edge of a steep defile, leading to a bridge over a deep gorge. Bean would not just blow up this bridge, Virloomi thought, because it would not be that hard to span. He would also collapse the road in several places, so the engineers wouldn't be able to get to the place where the bridge must be anchored without first blasting and shaping a new road.

So that is where Virloomi went, and waited.

Water she found flowing cleanly through the side ravines. She was given food by passing soldiers, and soon learned that they were looking for her. Word had spread that the Woman-in-hiding needed

food. And still no officer knew to look for her, and still no assassin from Achilles came to kill her. Poor as the soldiers were, apparently the reward did not tempt them. She was proud of her people even as she mourned for them, to have such a man as Achilles rule over them.

She heard of daring raids at easier spots on the eastern road, and traffic on the western road grew heavier, the roads trembling day and night as India burned up her fuel reserves supplying an army far larger than the war required. She asked the soldiers if they had heard of Thai raiders led by a child, and they laughed bitterly. "Two children," they said. "One white, one brown. They come in their helicopters, they destroy, they leave. Whomever they touch, they kill. Whatever they see, they destroy."

Now she began to worry. What if the one that came to take this bridge was not Bean, but the other one? No doubt another Battle School grad-Suriyawong came to mind-but would Bean have told him about her letter? Would he have any idea that she held within her head the plan of the base at Hyderabad? That she knew where Petra was?

Yet she had no choice. She would have to show herself, and hope.

So the days passed, waiting for the sound of the helicopters coming, bringing the strike force that would destroy this road.

Suriyawong had never been a commander in Battle School. They closed down the program before he rose to that position. But he had dreamed of command, studied it, planned it, and now, working with Bean in command of this or that configuration of their strike force, he finally understood the terror and exhilaration of having men listen to you, obey you, throw themselves into action and risk death because they trust you. Each time, because these men were so well-trained and resourceful and their tactics so effective, he brought back his whole complement. Injuries, but no deaths. Aborted missions, sometimes but no deaths.

"It's the aborted missions," said Bean, "that earn you their trust. When you see that it's more dangerous than we anticipated, that it requires attrition to get the objective, then show the men you value their lives more than the objective of the moment. Later, when you have no choice but to commit them to grave risk, they'll know it's because this time it's worth dying. They know you won't spend them like a child, on candy and trash."

Bean was right, which hardly surprised Suriyawong. Bean was not just the smartest, he had also watched Ender close at hand, had been Ender's secret weapon in Dragon Army, had been his backup commander on Eros. Of course he knew what leadership was.

What surprised Suriyawong was Bean's generosity. Bean had created this strike force, and trained these men, had earned their trust. Throughout that time, Suriyawong had been of little help, and had shown outright hostility at times. Yet Bean included Suriyawong, entrusted him with command, encouraged the men to help Suriyawong learn what they could do. Through it all, Bean had never treated Suriyawong as a subordinate or inferior, but rather had deferred to him as his superior officer.

In return, Suriyawong never commanded Bean to do anything. Rather they reached a consensus on most things, and when they could not agree, Suriyawong deferred to Bean's decision and supported him in it.

Bean has no ambition, Suriyawong realized. He has no wish to be better than anyone else, or to rule over anyone, or to have more honor.

Then, on the missions where they worked together, Suriyawong saw something else: Bean had no fear of death.

Bullets could be flying, explosives could be near detonation, and Bean would move without fear and with only token concealment. It was as if he dared the enemy to shoot him, dared their own explosives to defy him and go off before he was ready.

Was this courage? Or did he wish for death? Had Sister Carlotta's death taken away some of his will to live? To hear him talk, Suriyawong would not have supposed it. Bean was too grimly determined to rescue Petra for Suriyawong to believe that he wanted to die. He had something urgent to live for. And yet he showed no fear of battle.

It was as if he knew the day that he would die, and this was not that day.

He certainly hadn't stopped caring about anything. Indeed, the quiet, icy, controlled, arrogant Bean that Suriyawong had known before had become, since the day Carlotta died, impatient and agitated. The calm he showed in battle, in front of the men, was certainly not there when he was alone with Suriyawong and Phet Noi. And the favorite object of his curses was not Achilles-he almost never spoke of Achilles-but Peter Wiggin.

"He's had everything for a month! And he does these little things-persuading Chamrajnagar not to return to Earth yet, persuading Ghaffar Wahabi not to invade Iran-and he tells me about them, but the big thing, publishing Achilles' whole treacherous strategy, he won't do that-and he tells me not to do it myself! Why not? If the Indian government could be forced to see how Achilles plans to betray them, they might be able to pull enough of their army out of Burma to make a stand against the Chinese. Russia might be able to intervene. The Japanese fleet might threaten Chinese trade. At the very least, the Chinese themselves might see Achilles for what he is, and jettison him even as they follow his plan! And all he says is, It's not the right moment, it's too soon, not yet, you have to trust me, I'm with you on this, right to the end."

He was scarcely kinder in his execrations of the Thai generals running the war---or ruining it, as he said. Suriyawong had to agree with him-the whole plan depended on keeping Thai forces dispersed, but now that the Thai Air Force had control of the air over Burma, they had concentrated their armies and airbases in forward positions. "I told them what the danger was," said Bean, "and they still gather their forces into one convenient place."

Phet Noi listened patiently; Suriyawong, too, gave up trying to argue with him. Bean was right. People were behaving foolishly, and not out of ignorance. Though of course they would say, later, "But we didn't know Bean was right."

To which Bean already had his answer: "You didn't know I was wrong! So you should have been prudent!"

The only thing different in Bean's diatribes was that he went hoarse for a week, and when his voice came back, it was lower. For a kid who had always been so tiny, even for his age, puberty-if that's what this was--certainly had struck him young. Or maybe he had just stretched out his vocal cords with all his ranting.

But now, on a mission, Bean was silent, the calm of battle already on him. Suriyawong and Bean boarded their choppers last, making sure all their men were aboard; one last salute to each other, and then they ducked inside and the door closed and the choppers rose into the air. They jetted along near the surface of the Indian Ocean, the chopper blades folded and enclosed until they got near Cheduba Island, today's staging area. Then the choppers dispersed, rose into the air, cut the jets, and opened their blades for vertical landing.

Now they would leave behind their reserves-the men and choppers that could bring out anyone stranded by a mechanical problem or unforeseen complication. Bean and Suriyawong never rode together-one chopper failure should not behead the mission. And each of them had redundant equipment, so that either could complete the whole mission. More than once, the redundancy had saved lives and missions-Phet Noi made sure they were always equipped because, as he said, "You give the materiel to the commanders who know how to use it."

Bean and Suriyawong were too busy to chat in the staging area, but they did come together for a few moments, as they watched the reserve team camouflage their choppers and scrim their solar collectors. "You know what I wish?" said Bean.

"You mean besides wanting to be an astronaut when you grow up?" said Suriyawong.

"That we could scrub this mission and take off for Hyderabad."

"And get ourselves killed without ever seeing a sign of Petra, who has probably already been moved to someplace in the Himalayas."

"That's the genius of my plan," said Bean. "I take a herd of cattle hostage and threaten to shoot a cow a day till they bring her back."

"Too risky. The cows always make a break for it." But SuriyaWong knew that to Bean, the inability to do anything for Petra was a constant ache. "We'll do it. Peter's looking for someone who'll give him current information about Hyderabad."

"Like he's working on publishing Achilles' plans." The favorite diatribe. Only because they were on mission, Bean remained calm, ironic rather than furious.

"All done," said Suriyawong.

"See you in the mountains."

It was a dangerous mission. The enemy couldn't watch every kilometer of highway, but they had learned to converge quickly when the Thai choppers were spotted, and their strike force was having to finish their missions with less and less time to spare. And this spot was likely to be defended. That was why Bean's contingent-four of the five companies-would be deployed to clear away any defenders and protect Suriyawong's group while they laid the charges and blew up the road and the bridge.

All was going according to plan-indeed, better than expected, because the enemy seemed not to know they were there-when one of the men pointed out, "There's a woman on the bridge."

"A civilian?"

"You need to see," said the soldier.

Suriyawong left the spot where the explosives were being placed and climbed back up to the bridge. Sure enough, a young Indian woman was standing there, her arms stretched out toward either side of the ravine.

"Has anyone mentioned to her that the bridge is going to explode, and we don't actually care if anyone's on it?"

"Sir," said the soldier, "she's asking for Bean."

"By name?"

He nodded.

Suriyawong looked at the woman again. A very young woman. Her clothing was filthy, tattered. Had it once been a military uniform? It certainly wasn't the way local women dressed.

She looked at him. "Suriyawong," she called.

Behind him, he could hear several soldiers exhale or gasp in surprise or wonder. How did this Indian woman know? It worried Suriyawong a little. The soldiers were reliable in almost everything, but if they once got godstuff into their heads, it could complicate everything.

"I'm Suriyawong," he said.

"You were in Dragon Army," she said. "And you work with Bean."

"What do you want?" he demanded.

"I want to talk with you privately, here on the bridge."

"Sir, don't go," said the soldier. "Nobody's shooting, but we've spotted a half-dozen Indian soldiers. You're dead if you go out there."

What would Bean do?

Suriyawong stepped out onto the bridge, boldly but not in any hurry. He waited for the gunshot, wondering if he would feel the pain of impact before he heard the sound. Would the nerves of his ears report to his brain faster than the nerves of whatever body part the bullet tore into? Or would the sniper hit him in the head, mooting the point?

No bullet. He came near her, and stopped when she said, "This is as close as you should come, or they'll worry and shoot you."

"You control those soldiers?" asked Suriyawong

"Don't you know me yet?" she said. "I'm Virloomi. I was ahead of you in Battle School."

He knew the name. He would never have recognized her face. "You left before I got there."

"Not many girls in Battle School. I thought the legend would live on."

"I heard of you."

"I'm a legend here, too. My people aren't firing because they think I know what I'm doing out here. And I thought you recognized me, because your soldiers on both sides of this ravine have refrained from shooting any of the Indian soldiers, even though I know they've spotted them."

"Maybe Bean recognized you," said Suriyawong. "In fact, I've heard your name more recently. You're the one who wrote back to him, aren't you? You were in Hyderabad."

"I know where Petra is."

"Unless they've moved her."

"Do you have any better sources? I tried to think of any way I could to get a message to Bean without getting caught. Finally I realized there was no computer solution. I had to bring the message in my head."

"So come with us."

"Not that simple," she said. "If they think I'm a captive, you'll never get out of here. Handheld g-to-a."

"Ouch," said Suriyawong. "Ambush. They knew we were coming?"

"No," said Virlomi. "They knew I was here. I didn't say anything, but they all knew that the Woman-in-hiding was at this bridge, so they figured that the gods were protecting this place."

"And the gods needed g-to-a missiles?"

"No, I'm the one they're protecting. The gods have the bridge, the men have me. So here's the deal. You pull your explosives off the bridge. Abort the mission. They see that I have the power to make the enemy go away without harming anything. And then they watch me call one of your departing choppers down to me, and I get on of my own free will. That's the only way you're getting out of here. Not really anything I designed, but I don't see any other way out."

"I always hate aborting missions," said Suriyawong. But before she could argue, he laughed and said, "No, don't worry, it's fine. It's a good plan. If Bean were down here on this bridge, he'd agree in a heartbeat."

Suriyawong walked back to his men. "No, it's not a god or a holy woman. She's Virlomi, a Battle School grad, and she has intelligence that's more valuable than this bridge. We're aborting the mission."

The soldier took this in, and Suriyawong could see him trying to factor the magical element in with the orders.

"Soldier," said Suriyawong, "I have not been bewitched. This woman knows the groundplan of the Indian Army high command base in Hyderabad."

"Why would an Indian give that to us?" the soldier asked.

"Because the bunduck who's running the Indian side of the war has a prisoner there who's vital to the war."

Now it was making sense to the soldier. The magic element receded. He pulled his satrad off his belt and punched in the abort code. All the other satrads immediately vibrated in the preset pattern.

At once the explosives teams began dismantling. If they were to evacuate without dismantling, a second code, for urgency, would be sent. Suriyawong did not want any part of their materiel to fall into Indian hands. And he thought a more leisurely pace might be better.

"Soldier, I need to seem to be hypnotized by this woman," he said. "I am not hypnotized, but I'm faking it so the Indian soldiers all around us will think she's controlling me. Got that?"

"Yes sir."

"So while I walk back toward her, you call Bean and tell him that I need all the choppers but mine to evacuate, so the Indians can see they're gone. Then say 'Petra.' Got that? Tell him nothing else, no matter what he asks. We may be monitored, if not here, then in Hyderabad." Or Beijing, but he didn't want to complicate things by saying that.

"Yes sir."

Suriyawong turned his back on the soldier, walked three paces closer to Virlomi, and then prostrated himself before her.

Behind him, he could hear the soldier saying exactly what he had been told to say.

And after a very little while, choppers began to rise into the air from both sides of the ravine. Bean's troops were on the way out.

Suriyawong got up and returned to his men. His company had come in two choppers. "All of you get in the chopper with the explosives," he said. "Only the pilot and co-pilot stay in the other chopper."

The men obeyed immediately, and within three minutes Suriyawong was alone at his end of the bridge. He turned and bowed once again to Virlomi, then walked calmly to his chopper and climbed aboard.

"Rise slowly," he told the pilot, "and then pass slowly near the woman in the middle of the bridge, doorside toward her. At no point is any weapon to be trained on her. Nothing remotely threatening."

Suriyawong watched through the window. Virlomi was not signaling.

"Rise higher, as if we were leaving," said Suriyawong.

The pilot obeyed.

Finally, Virlomi began waving her arms, beckoning with both of them, slowly, as if she were reeling them back in with each movement of her arms.

"Slow down and then begin to descend toward her. I want no chance of error. The last thing we need is some downdraft to get her caught in the blades."

The pilot laughed grimly and brought the chopper like a dancer down onto the bridge, far enough away that Virlomi wasn't actually under the blades, but close enough that it would be only a few steps for her to come aboard.

Suriyawong ran to the door and opened it.

Virlomi did not just walk to the chopper. She danced to it, making ritual-like circling movements with each step.

On impulse, he got out of the chopper and prostrated himself again. When she got near enough, he said-loud enough to be heard over the chopper blades-"Walk on me!"

She did, planting her bare feet on his shoulders and walking down his back. Suriyawong didn't know how they could have communicated more clearly to the Indian soldiers that not only had Virlomi saved their bridge, she had also taken control of this chopper.

She was inside.

He got up, turned slowly, and sauntered onto the chopper.

The sauntering ended the moment he was inside. He rammed the door lever up into place and shouted, "I want jets as fast as you can!"

The chopper rose dizzily. "Strap down," Suriyawong ordered Virlomi. Then, seeing she wasn't familiar with the inside of this craft, he pushed her into place and put the ends of her harness into her hands. She got it at once and finished the job while he hurled himself into his place and got his straps in place just as the chopper cut the blades and plummeted for a moment before the jets kicked in. Then they rocketed down the ravine and out of range of the handheld g-to-a missiles.

"You just made my day," said Suriyawong.

"Took you long enough," said Virlomi. "I thought this bridge was one of the first places you'd hit."

"We figured that's what people would think, so we kept not coming here."

"Greeyaz," she said. "I should have remembered to think completely ass-backward in order to predict what Battle School brats would do."

Bean had known the moment he saw her on the bridge that she had to be Virlomi, the Indian Battle Schooler who had answered his Briseis posting. He could only trust that Suriyawong would realize what was happening before he found the need to shoot somebody. And Surly had not let him down.

When they got back to the staging area, Bean barely greeted Virlomi before he started giving orders. "I want the whole staging area dismantled. Everybody's coming with us." While the company commanders saw to that, Bean ordered one of the chopper communications team to set up a net connection for him.

"That's satellite," the soldier said. "We'll be located right away."

"We'll be gone before anyone can react," said Bean.

Only then did he start explaining to Suriyawong and Virlomi. "We're fully equipped, right?"

"But not fully fueled."

"I'll take care of that," he said. "We're going to Hyderabad right now."

"But I haven't even drawn up the plans."

"Time for that in the air," he said. "This time we ride together, Suriyawong. Can't be helped-we both have to know the whole plan."

"We've waited this long," said Suriyawong. "What's the hurry now?"

"Two things," said Bean. "How long do you think it'll be before word reaches Achilles that our strike force picked up an Indian woman who was waiting for us on a bridge? Second thing-I'm going to force Peter Wiggin's hand. All hell is going to break loose, and we're riding the wave."

"What's the objective?" asked Virlomi. "To save Petra? To kill Achilles?"

"To bring out every Battle School kid who'll come with us."

"They'll never leave India," she said. "I may decide to stay myself."

"Wrong on both counts," said Bean. "I give India less than a week before Chinese troops have control of New Delhi and Hyderabad and any other city they want."

"Chinese?" asked Virlomi. "But there's some kind of--"

"Nonaggression pact?" said Bean. "Arranged by Achilles?"

"He's been working for China all along," said Suriyawong. "The Indian Army is exposed, undersupplied, exhausted, demoralized."

"But ... if China comes in on the side of the Thai, isn't that what you want?"

Suriyawong gave a sharp, bitter laugh. "China comes in on the side of China. We tried to warn our own people, but they're sure they have a deal with Beijing."

Virlomi understood at once. Battle School-trained, she knew how to think the way Bean and Suriyawong did. "So that's why Achilles didn't use Petra's plan."

Bean and Suriyawong laughed and gave short little bows to each other.

"You knew about Petra's plan?"

"We assumed there'd be a better plan than the one India's using."

"So you have a plan to stop China?" said Virlomi.

"Not a chance," said Bean. "China might have been stopped a month ago, but nobody listened." He thought of Peter and barely stanching the fury. "Achilles himself may still be stopped, or at least weakened. But our goal is to keep the Indian Battle School team from falling into Chinese hands."

Our Thai friends already have escape routes planned. So when we get to Hyderabad, we not only need to find Petra, we need to offer escape to anyone who'll come. Will they listen to you?"

"We'll see, won't we?" said Virlomi.

"The connection's ready," said a soldier. "I didn't actually link yet, because that's when the clock starts ticking."

"Do it," said Bean. "I've got some things to say to Peter Wiggin."

I'm coming, Petra. I'm getting you out.

As for Achilles, if he happens to come within my reach, there'll be no mercy this time, no relying on someone else to keep him out of circulation. I'll kill him without discussion. And my men will have orders to do the same.

Re: Now, or I will

I'm in a battlefield situation and I need two things from you, now.

First, I need permission from the Sri Lankan government to land at the base at Kilinochchi to refuel, ETA less than an hour. This is a nonmilitary rescue mission to retrieve Battle School graduates in imminent danger of capture, torture, enslavement, or at the very least imprisonment.

Second, to justify this and all other actions I'm about to take; to persuade those Battle Schoolers to come with me; and to create confusion in Hyderabad, I need you to publish now. Repeat, NOW. Or I will publish my own article, here attached, which specifically names you as a coconspirator with the Chinese, as proven by your failure to publish what you know in a timely manner. Even though I don't have Locke's worldwide reach, I have a nice little email list of my own, and my article will get attention. Yours, however, would have far faster results, and I would prefer it to come from you.

Pardon my threat. I can't afford to play any more of your "wait for the right time" games. I'm getting Petra out.

Re: Done

Confirmed: Sri Lanka grants landing permission/refueling privileges at Kilinochchi for aircraft on humanitarian mission. Thai markings?

Confirmed: my essay released as of now, worldwide push distribution. This includes urgent fyi push into the systems at Hyderabad and Bangkok.

Your threat was sweetly loyal to your friend, but not necessary. This was the time I was waiting for. Apparently you didn't realize that the moment I published, Achilles would have to move his operations, and would probably take Petra with him. How would you have found her, if I had published a month ago?

Re: Done

Confirm: Thai markings

As to your excuse: Kuso. If that had been your reason for delay, you would have told me a month ago. I know the real reason, even if you don't, and it makes me sick.

For two weeks after Virlomi disappeared, Achilles had not once come into the planning room- which no one minded, especially after the reward was issued for Virlomi's return. No one dared speak of it openly, but all were glad she had escaped Achilles' vengeance. They were all aware, of course, of the heightened security around them for their "protection." But it didn't change their lives much. It wasn't as if any of them had ever had time to go frolicking in downtown Hyderabad, or fraternizing with officers twice or three times their age on the base.

Petra was skeptical of the reward offer, though. She knew Achilles well enough to know that he was perfectly capable of offering a reward for the capture of someone he had already killed. What safer cover could he have? Still, if that were the case it would imply that he did not have carte blanche from Mal Chapekar- if he had to hide things from the Indian government, it meant Achilles was not yet running everything.

When he did return, there was no sign of a bruise on his face. Either Petra's kick had not left a mark, or it took two weeks for it to heal completely. Her own bruises were not yet gone, but no one could see them, since they were under her shirt. She wondered if he had any testicular pain. She wondered if he had had to see a urologist. She did not allow any trace of her gloating to appear on her face.

Achilles was full of talk about how well the war was going and what a good job they were doing in Planning. The army was well supplied and despite the harassment of the cowardly Thai military, the campaign was moving forward on schedule. The revised schedule, of course.

Which was such greenez. He was talking to the planners. They knew perfectly well that the army was bogged down, that they were still fighting the Burmese in the Irrawaddy plain because the Thai Army's harassment tactics made it impossible to mount the crushing offensive that would have driven the Burmese into the mountains and allowed the Indian Army to proceed into Thailand. Schedule? There was no schedule now.

What Achilles was telling them was: This is the party line. Make sure no memo or email from this room gives anyone even the slightest hint that events are not going according to plan.

It did not change the fact that everyone in Planning could smell defeat. Supplying a huge army on the move was taxing enough to India's limited resources. Supplying it when half the supplies were likely to disappear due to enemy action was chewing through India's resources faster than they could hope to replenish them.

At current rates of manufacture and consumption, the army would run out of munitions in seven weeks. But that would hardly matter unless some miracle happened, they would run out of nonrenewable fuel in four.

Everyone knew that if Petra's plan had been followed, India would have been able to continue such an offensive indefinitely, and attrition would already have destroyed Burmese resistance. The war would already be on Thai soil, and the Indian Army would not be limping along with a relentless deadline looming up behind them.

They did not talk in the planning room, but at meals they carefully, obliquely, discussed things. Was it too late to revert to the other strategy? Not really-but it would require a strategic withdrawal of the bulk of India's army, which would be impossible to conceal from the people and the media. Politically, it would be a disaster. But then, running out of bullets or fuel would be even more disastrous.

"We have to draw up plans for withdrawal anyway," said Sayagi. "Unless some miracle happens in the field-some brilliance in a field commander that has hitherto been invisible, some political collapse in Burma or Thailand-we're going to need a plan to extricate our people."

"I don't think we'll get permission to spend time on that," someone answered.

Petra rarely said anything at meals, despite her new custom of sitting at table with one or another group from Planning. This time, though, she spoke up. "Do it in your heads," she said.

They paused for a moment, and then Sayagi nodded. "Good plan. No confrontation."

From then on, part of mealtime consisted of cryptic reports from each member of the team on the status of every portion of the withdrawal plan.

Another time that Petra spoke had nothing to do with military planning, per se. Someone had jokingly said that this would be a good time for Bose to return. Petra knew the story of Subhas Chandra Bose, the Netaji of the Japanese-backed anti-British-rule Indian National Army during World War II. When he died in a plane crash on the way to Japan at the end of the war, the legend among the Indian people was that he was not really dead, but lived on, planning to return someday to lead the people to freedom. In the centuries since then, invoking the return of Bose was both a joke and a serious comment-that the current leadership was as illegitimate as the British Raj had been.

From the mention of Bose, the conversation turned to a discussion of Gandhi. Someone started talking about "peaceful resistance"-never implying that anyone in Planning might contemplate such a thing, of course-and someone else said, "No, that's passive resistance."

That was when Petra spoke up. "This is India, and you know the word. It's satyagraha, and it doesn't mean peaceful or passive resistance at all."

"Not everyone here speaks Hindi," said a Tamil planner.

"But everyone here should know Gandhi," said Petra.

Sayagi agreed with her. "Satyagraha is something else. The willingness to endure great personal suffering in order to do what's right."

"What's the difference, really?"

"Sometimes," said Petra, "what's right is not peaceful or passive. What matters is that you do not hide from the consequences. You bear what must be borne."

"That sounds more like courage than anything else," said the Tamil.

"Courage to do right," said Sayagi. "Courage even when you can't win."

"What happened to 'discretion is the better part of valor'?"

"A quotation from a cowardly character in Shakespeare," someone else pointed out.

"Not contradictory anyway," said Sayagi. "Completely different circumstances. If there's a chance of victory later through withdrawal now, you keep your forces intact. But personally, as an individual, if you know that the price of doing right is terrible loss or suffering or even death, satyagraha means that you are all the more determined to do right, for fear that fear might make you unrighteous."

"Oh, paradoxes within paradoxes."

But Petra turned it from superficial philosophy to something else entirely. "I am trying," she said, "to achieve satyagraha."

And in the silence that followed, she knew that some, at least, understood. She was alive right now because she had not achieved satyagraha, because she had not always done the right thing, but had done only what was necessary to survive. And she was preparing to change that. To do the right thing regardless of whether she lived through it or not. And for whatever reason-respect for her, uncomfortableness with the intensity of it, or serious contemplation-they remained silent until the meal ended and they spoke again of quotidian things.

Now the war had been going for a month, and Achilles was giving them daily pep talks about how victory was imminent even as they wrestled privately with the growing problems of extricating the army. There had been some victories, and at two points the Indian Army was now in Thai territory-but that only lengthened the supply lines and put the army into mountainous country again, where their large numbers could not be brought to bear against the enemy, yet still had to be supplied. And these offensives had chewed through fuel and munitions. In a few days, they would have to choose between fueling tanks and fueling supply trucks. They were about to become a very hungry all-infantry army.

As soon as Achilles left, Sayagi stood up. "It is time to write down our plan for withdrawal and submit it. We must declare victory and withdraw."

There was no dissent. Even though the vids and the nets were full of stories of the great Indian victories, the advance into Thailand, these plans had to be written down, the orders drawn up, while there was still time and fuel enough to carry them out.

So they spent that morning writing each component of the plan. Sayagi, as their de facto leader, assembled them into a single, fairly coherent set of documents. In the meantime, Petra browsed the net and worked on the project she had been assigned by Achilles, taking no part in what they were doing. They didn't need her for this, and it was her desk that was most closely monitored by Achilles. As long as she was being obedient, Achilles might not notice that the others were not.

When they were almost done, she spoke up, even though she knew that Achilles would be notified quickly of what she said-that he might even be listening through that hearing aid in his ear. "Before you email it," she said, "post it."

At first they probably thought she meant the internal posting, where they could all read it. But then they saw that, using her fingernail on a piece of rough tan toilet paper, she had scratched a net address and was now holding it out.

It was Peter Wiggin's "Locke" forum.

They looked at her like she was crazy. To post military plans in a public place?

But then Sayagi began to nod. "They intercept all our emails," he said. "This is the only way it will get to Chapekar himself."

"To make military secrets public," someone said. He did not need to finish. They knew the penalty.

"Satyagraha," said Sayagi. He took the toilet paper with the address and sat down to go to that netsite. "I am the one doing this, and no one else," he said. "The rest of you warned me not to. There is no reason for more than one person to risk the consequences." Moments later, the data was flowing to Peter Wiggin's forum.

Only then did he send it as email to the general command-which would be routed through Achilles' computer.

"Sayagi," someone said. "Did you see what else is posted here? On this netsite?"

Petra also moved to the Locke forum and discovered that the lead essay on Locke's site was headed, "Chinese treachery and the fall of India." The subhead said, "Will China, too, fall victim to a psychopath's twisted plans?"

Even as they were reading Locke's essay detailing how China had made promises to both Thailand and India, and would attack now that both armies were fully exposed and, in India's case, overextended, they received emails that contained the same essay, pushed into the system on an urgent basis. That meant it had already been cleared at the top-Chapekar knew what Locke was alleging.

Therefore, their emailed plans for immediate withdrawal of Indian troops from Burma had reached Chapekar at exactly the time when he knew they would be necessary.

"Toguro," breathed Sayagi. "We look like geniuses."

"We are geniuses," someone grumbled, and everyone laughed.

"Does anyone think," asked the Tamil, "we'll hear another pep talk from our Belgian friend about how well the war is going?"

Almost as an answer, they heard gunfire outside.

Petra felt a thrill of hope run through her: Achilles tried to make a run for it, and he was shot.

But then a more practical idea replaced her hope: Achilles foresaw this possibility, and has his own forces already in place to cover his escape.

And finally, despair: When he comes for me, will it be to kill me, or take me with him?

More gunfire.

"Maybe," said Sayagi, "we ought to disperse."

He was walking toward the door when it opened and Achilles came in, followed by six Sikhs carrying automatic weapons. "Have a seat, Sayagi," said Achilles. "I'm afraid we have a hostage situation here. Someone made some libelous assertions about me on the nets, and when I declined to be detained during the inquiry, shooting began. Fortunately, I have some friends, and while we're waiting for them to provide me with transportation to a neutral location, you are my guarantors of safety."

Immediately, the two Battle School grads who were Sikhs stood up and said, to Achilles' soldiers, "Are we under threat of death from you?"

"As long as you serve the oppressor," one of them answered.

"He is the oppressor!" one of the Sikh Battle Schoolers said, pointing to Achilles.

"Do you think the Chinese will be any kinder to our people than New Delhi has?" said the other.

"Remember how the Chinese treated Tibet and Taiwan! That is our future, because of him!"

The Sikh soldiers were obviously wavering.

Achilles drew a pistol from his back and shot the soldiers dead, one after another. The last two had time to try to rush at him, but every shot he fired struck home.

The pistol shots still rang in the room when Sayagi said, "Why didn't they shoot you?"

"I had them unload their weapons before entering the room," Achilles said. "I told them we didn't want any accidents. But don't think you can overpower me because I'm alone with a half-empty clip. This room has long been wired with explosives, and they go off when my heart stops beating or when I activate the controller implanted under the skin of my chest."

A pocket phone beeped and, without lowering his gun, Achilles answered it. "No, I'm afraid one of my soldiers went out of control, and in order to keep the children safe, I had to shoot some of my own men. The situation is unchanged. I am monitoring the perimeter. Keep back, and these children will be safe."

Petra wanted to laugh. Most of the Battle Schoolers here were older than Achilles himself.

Achilles clicked off the phone and pocketed it. "I'm afraid I told them that I had you as my hostages before it was actually true."

"Caught you with your pants down, ne?" said Sayagi. "You had no way of knowing you'd need hostages, or that we'd all be here. There are no explosives in this room."

Achilles turned to him and calmly shot him in the head. Sayagi crumpled and fell. Several of the others cried out. Achilles calmly changed clips.

No one charged him while he was reloading.

Not even, thought Petra, me.

There's nothing like casual murder to turn the onlookers into vegetables.

"Satyagraha," said Petra.

Achilles whirled on her. "What was that? What language?"

"Hindi," she said. "It means, 'One bears what one must.'"

"No more Hindi," said Achilles. "From anyone. Or any other language but Common. And if you talk, it had better be to me, and it had better not be something stupid and defiant like the words that got Sayagi killed. If all goes well, my relief should be here in only a few hours. And then Petra and I will go away and leave you to your new government. A Chinese government."

Many of them looked at Petra then. She smiled at Achilles. "So your tent door is still open?"

He smiled back. Warmly. Lovingly. Like a kiss.

But she knew that he was taking her away solely in order to relish the time in which she would have false hopes, before he pushed her from a helicopter or strangled her on the tarmac or, if he grew too impatient, simply shot her as she prepared to follow him out of this room. His time with her was over. His triumph was near-the architect of China's conquest of India, returning to China as a hero. Already plotting how he would take control of the Chinese government and then set out to conquer the other half of the world's population.

For now, though, she was alive, and so were the other Battle Schoolers, except Sayagi. The reason Sayagi died, of course, was not what he said to Achilles. He died because he was the one who posted the withdrawal plans on Locke's forum. Being plans for a retreat under unpredictable fire, they were still usable even with Chinese troops pouring down into Burma, even with Chinese planes bombing the retreating soldiers. The Indian commanders would be able to make a stand. The Chinese would have to fight hard before they won.

But they would win. The Indian defense could last no more than a few days, no matter how bravely they fought. That was when the trucks would stop rolling and food and munitions would run out. The war was already lost. There was only a little time for the Indian elite to attempt to flee before the Chinese swept in, unresisted, with their behead-the-society method of controlling an occupied country.

While these events unfolded, the Battle School graduates who would have kept India out of this dangerous situation in the first place, and whose planning was the only thing keeping the Chinese temporarily at bay, sat in a large room with seven corpses, one gun, and the young man who had betrayed them all.

More than three hours later, gunfire began again, in the distance. The booming sound of anti-aircraft guns.

Achilles was on the phone in an instant. "Don't fire at the incoming aircraft," he said, "or these geniuses start dying."

He clicked off before they could say anything in reply.

The shooting stopped.

They heard the rotors-choppers landing on the roof.

What a stupid place for them to land, thought Petra. Just because the roof is marked as a heliport doesn't mean they have to obey the signs. Up there, the Indian soldiers surrounding this place will have an easy target, and they'll see everything that happens. They'll know when Achilles is on the roof. They'll know which chopper to shoot down first, because he's in it. If this is the best plan the

Chinese can come up with, Achilles is going to have a harder time using China as a base to take over the world than he thinks.

More choppers. Now that the roof was full, a few of them were landing on the grounds.

The door burst open, and a dozen Chinese soldiers fanned out through the room. A Chinese officer followed them in and saluted Achilles. "We came at once, sir."

"Good work," said Achilles. "Let's get them all up on the roof."

"You said you'd let us go!" said one of the Battle Schoolers.

"One way or another," said Achilles, "you're all going to end up in China anyway. Now get up and form into a line against that wall."

More choppers. And then the whoosh, whump of an explosion.

"Those stupid eemos," said the Tamil, "they're going to get us all killed."

"Such a shame," said Achilles, pointing his pistol at the Tamil's head.

The Chinese officer was already talking into his satrad. "Wait," he said. "It's not the Indians. They've got Thai markings."

Bean, thought Petra. You've come at last. Either that or death. Because if Bean wasn't running this Thai raid, the Thai could have no other objective than to kill everything that moved in Hyderabad.

Another whoosh-whump. Another. "They've taken out everything on the roof," the Chinese officer said. "The building's on fire, we've got to get out."

"Whose stupid idea was it to land up there anyway?" asked Achilles.

"It was the closest point to evacuate them from!" answered the officer angrily. "There aren't enough choppers left to take all these."

"They're coming," said Achilles, "even if we have to leave soldiers behind."

"We'll get them in a few days anyway. I don't leave my men behind!"

Not a bad commander, even if he's a little dim about tactics, thought Petra.

"They won't let us take off unless we've got their Indian geniuses with us."

"The Thai won't let us take off at all!"

"Of course they will," said Achilles. "They're here to kill me and rescue her" He pointed at Petra.

So Achilles knew it was Bean that was coming.

Petra showed nothing on her face.

If Achilles decided to leave without the hostages, there was a good chance he would kill them all. Deprive the enemy of a resource. And, more important, take away their hope.

"Achilles," she said, walking toward him. "Let's leave these others and get out. We'll be taking off from the ground. They won't know who's in what chopper. As long as we go now."

As she approached him, he swung his pistol to point at her chest.

She did not even pause, merely walked toward him, past him, to the door. She opened it. "Now, Achilles. You don't have to die in flames today, but that's where you're headed, the longer you wait."

"She's right," said the Chinese officer.

Achilles grinned and looked from Petra to the officer and back again. We've shamed you in front of the others, thought Petra. We've shown that we knew what to do, and you didn't. Now you have to kill us both. This officer doesn't know he's dead, but I do. Then again, I was dead anyway. So now let's get out of here without killing anybody else.

"Nothing in this room matters but you," said Petra. She grinned back at him. "Soak a noky, boy."

Achilles turned back to point the gun, first at one Battle Schooler, then another. They recoiled or flinched, but he did not fire. He dropped his gun hand to his side and walked from the room, grabbing Petra by the arm as he passed her. "Come on, Pet," he said. "The future is calling."

Bean is coming, thought Petra, and Achilles is not going to let me get even a meter away from him. He knows Bean is here for me, so I'm the one person he'll make sure Bean never rescues.

Maybe we'll all kill each other today.

She thought back to the airplane ride that brought her and Achilles to India. The two of them standing at the open door. Maybe there would be another chance today-to die, taking Achilles with her. She wondered if Bean would understand that it was more important for Achilles to die than for her to live. More important, would he know that she understood that? It was the right thing to do, and now that she really knew Achilles, the kind of man he was, she would gladly pay that price and call it cheap.

RESCUE

To:Wahabi%inshallah@Pakistan.gov From:Chapekar%hope@India.gov Re:For the Indian people

My Dear Friend Ghaffar,

I honor you because when I came to you with an offer of peace between our two families within the Indian people, you accepted and kept your word in every particular.

I honor you because you have lived a life that places the good of your people above your own ambition.

I honor you because in you rests the hope for my people's future.

I make this letter public even as I send it to you, not knowing what your response will be, for my people must know now, while I can still speak to them all, what I am asking of you and giving to you.

As the treacherous Chinese violate their promises and threaten to destroy our army, which has been weakened by the treachery of the one called Achilles, whom we treated as a guest and a friend, it is clear to me that without a miracle, the vast expanse of the nation of India will be defenseless against the invaders pouring into our country from the north. Soon the ruthless conqueror will work his will from Bengal to Punjab. Of all the Indian people, only those in Pakistan, led by you, will be free.

I ask you now to take upon yourself all the hopes of the Indian people. Our struggle over the next few days will give you time, I hope, to bring your armies back to our border, where you will be prepared to stand against the Chinese enemy.

I now give you permission to cross that border at any point where it is necessary, so you can establish stronger defensive positions. I order all Indian soldiers remaining at the Pakistani border to offer no resistance whatsoever to Pakistani forces entering our country, and to cooperate by providing full maps of all our defenses, and all codes and codebooks. All our materiel at the border is to be turned over to Pakistan as well.

I ask you that any citizens of India who come under the rule of the Pakistani government be treated as generously as you would wish us, were our situations reversed, to treat your people. Whatever past offenses have been committed between our families, let us forgive each other and commit no new offenses, but treat each other as brothers and sisters who have been faithful to different faces of the same God, and who must now stand shoulder to shoulder to defend India against the invader whose only god is power and whose worship is cruelty.

Many members of the Indian government, military, and educational system will flee to Pakistan. I beg you to open your borders to them, for if they remain in India, only death or captivity will be in their future. All other Indians have no reason to fear individual persecution from the Chinese, and I beg you not to flee to Pakistan, but rather to remain inside India, where, God willing, you will soon be liberated.

I myself will remain in India, to bear whatever burden is placed upon my people by the conqueror. I would rather be Mandela than de Gaulle. There is to be no government-in-exile. Pakistan is the government of the Indian people now. I say this with the full authority of Congress.

May God bless all honorable people, and keep them free.

Your brother and friend, Tikal Chapekar

Jetting over the dry southern reaches of India felt to Bean like a strange dream, where the landscape never changed. Or no, it was a vidgame, with a computer making up scenery on the fly, recycling the same algorithms to create the same type of scenery in general, but never quite the same in detail.

Like human beings. DNA that differed by only the tiniest amounts from person to person, and yet those differences giving rise to saints and monsters, fools and geniuses, builders and wreckers, lovers and takers. More people live in this one country, India, than lived in the whole world only three or four centuries ago. More people live here today than lived in the entire history of the world up to the time of Christ. All the history of the Bible and the Iliad and Herodotus and Gilgamesh and everything that had been pieced together by archaeologists and anthropologists, all of those human relationships, all those achievements, could all have been played out by the people we're flying over right now, with people left over to live through new stories that no one would ever hear.

In these few days, China would conquer enough people to make five thousand years of human history, and they would treat them like grass, to be mown till all were the same level, with anything that rose above that level discarded to be mere compost.

And what am I doing? Riding along on a machine that would have given that old prophet Ezekiel a heart attack before he could even write about seeing a shark in the sky. Sister Carlotta used to joke that Battle School was the wheel in the sky that Ezekiel saw in his vision. So here I am, like a figure out of some ancient vision, and what am I doing? That's right, out of the billions of people I might have saved, I'm choosing the one I happen to know and like the best, and risking the lives of a couple of hundred good soldiers in order to do it. And if we get out of this alive, what will I do then? Spend the few years of life remaining to me, helping Peter Wiggin defeat Achilles so he can do exactly what Achilles is already so close to doing-unite humanity under the rule of one sick, ambitious marubo?

Sister Carlotta liked to quote from another biblical git-vanity, vanity, all is vanity. There is nothing new under the sun. A time to scatter rocks and a time to gather rocks together.

Well, as long as God didn't tell anybody what the rocks were for, I might as well leave the rocks and go get my friend, if I can.

As they approached Hyderabad, they picked up a lot of radio chatter. Tactical stuff from satrads, not just the net traffic you'd expect because of the Chinese surprise attack in Burma that had been triggered by Peter's essay. As they got closer, the onboard computers were able to distinguish the radio signatures of Chinese troops as well as Indian.

"Looks like Achilles' retrieval crew got here ahead of us," said Suriyawong.

"But no shooting," said Bean. "Which means they've already got to the planning room and they're holding the Battle Schoolers as hostages."

"You got it," said Suriyawong. "Three choppers on the roof."

"There'll be more on the ground, but let's complicate their lives and take out those three."

Virlomi had misgivings. "What if they think it's the Indian Army attacking and they kill the hostages?"

"Achilles is not so stupid he won't make sure who's doing the shooting before he starts using up his ticket home."

It was like target practice, and three missiles took out three choppers, just like that.

"Now get us onto blades and show the Thai markings," said Suriyawong.

It was, as usual, a sickening climb and drop before the blades took over. But Bean was used to the sense of clawing nausea and was able to notice, out the windows, that the Indian troops were cheering and waving.

"Oh, suddenly now we're the good guys," said Bean.

"I think we're just the not-quite-so-evil guys," said Suriyawong.

"I think you're taking irresponsible risks with the lives of my friends," said Virlomi.

Bean sobered at once. "Virlomi, I know Achilles, and the only way to keep him from killing your friends, just for spite, is to keep him worried and off balance. To give him no time to display his malice."

"I meant that if one of those missiles had gone astray," she said, "it could have hit the room they're in and killed them all."

"Oh, is that all you're worried about?" Bean said. "Virlomi, I trained these men. There are situations in which they might miss, but this was not one of them."

Virlomi nodded. "I understand. The confidence of the field commander. It's been a long time since I had a toon of my own."

A few choppers stayed aloft, watching the perimeter; most set down in front of the building where the planning room was located. Suriyawong had already briefed the company commanders he was taking into the building by satrad as they flew. Now he jumped from the chopper as soon as the door opened and, with Virlomi running behind him, he got his group moving, executing the plan.

At once, Bean's chopper lifted back up and, with another chopper, hopped the building to come down on the other side. This was where they found the two remaining Chinese helicopters, blades spinning. Bean had his pilot set down so the chopper's weapons were pointed at the sides of the two

Chinese machines. Then he and the thirty men with him went out both doors as Chinese troops across the open space between them did the same.

Bean's other chopper remained airborne, waiting to see whether its missiles or the troops inside would be needed first.

The Chinese had Bean's troops outnumbered, but that wasn't really the issue. Nobody was shooting, because the Chinese wanted to get away alive, and there was no hope of that if shooting broke out, because the airborne chopper would simply destroy both the remaining Chinese machines and then it wouldn't matter what happened on the ground, they'd never get home and their mission would be a failure.

So the two little armies formed up just like regiments in the Napoleonic wars, neat little lines. Bean wanted to shout something like "fix bayonets" or "load"-but nobody was using muskets and besides, what interested him would be coming out the door of the building....

And there he was, rushing straight for the nearest chopper, gripping Petra by the arm and half-dragging her along. Achilles held a pistol down at his side. Bean wanted to have one of his sharpshooters hit him out, but he knew that then the Chinese would open fire and take Petra would certainly be killed. So he called out to Achilles.

Achilles ignored him. Bean knew what he was thinking-get inside the chopper while everybody's holding their fire, and then Bean would be helpless, unable to do anything to Achilles without also harming Petra.

So Bean spoke into his satrad and the hovering chopper did what the gunner was trained to do-fired a missile that blew up just beyond the nearer Chinese chopper. The machine itself blocked the blast so Petra and Achilles weren't hurt-but the chopper was rocked over onto its side and then, as the blades chewed to bits against the ground, it flipped over and over and smashed up against a barracks. A few soldiers slithered out, trying to drag out others with broken limbs or other injuries before the machine went up in flames.

Achilles and Petra now stood in the middle of the open space. The only remaining Chinese chopper was too far for him to run to. He did the only thing he could do, under the circumstances. He held Petra in front of him with a gun pointed to her head. It wasn't a move they taught you in Battle School. It was straight from the vids.

In the meantime, the Chinese officer in charge-a colonel, if Bean remembered correctly how to translate the rank insignia, which was a very high rank for a small-scale operation like this one-strode out with his men. Bean did not have to instruct him to stay far away from Achilles and Petra. The colonel would know that any move to get between Achilles and Bean's men would lead to shooting, since there was only a stalemate as long as Bean had the ability to kill Achilles the moment he harmed Petra.

Without looking at the soldiers near him, Bean said, "Who has a trunk pistol?"

One was slapped into his open hand. Someone murmured, "Keep your hand on a real gun, too."

And someone else said, "I hope the Indian Army doesn't realize that Achilles doesn't have any Indian kids with him. They couldn't care less about an Armenian." Bean appreciated it when his men thought through the whole situation. No time for praise now, though.

He stepped away from his men and walked toward Achilles and Petra. As he did, he saw Suriyawong and Virlomi come out the door through which the Chinese colonel had just come. Suriyawong called out, "All secure. Loading. Achilles murdered only one of ours."

"One of 'ours'?" said Achilles. "When did Sayagi become one of yours? You mean that I can kill anybody else and you don't care, but touch a Battle School brat and I'm a murderer?"

"You're never taking off in that chopper with Petra," said Bean.

"I know I'm never taking off without her," said Achilles. "If I don't have her with me, you'll blow that chopper into bits so small they'd have to use a comb to gather them up."

"Then I guess I'll just have one of my sharpshooters kill you."

Petra smiled.

She was telling him yes, do it.

"Colonel Yuan-xi will then regard his mission as a failure, and he will kill as many of you as he can. Petra first."

Bean saw that the colonel had gotten his men on board the chopper-those who had come with him from the building and those who had deployed from the choppers when Bean first landed. Only he, Achilles, and Petra remained outside.

"Colonel," said Bean, "the only way this doesn't end in blood is if we can trust each other's word. I promise you that as long as Petra is alive, uninjured, and with me, you can take off safely with no interference from me or my strike force. Whether you have Achilles with you is of no importance to me."

Petra's smile vanished, replaced with a face that was an obvious mask of anger. She did not want Achilles to get away.

But she still hoped to live-that was why she was saying nothing, so Achilles wouldn't know that she was demanding his death, even at the cost of her own.

What she was ignoring was the fact that the Chinese commander had to meet the minimum conditions for mission success-he had to have Achilles with him when he left. If he didn't, a lot of people here would die, and for what? Achilles' worst deeds were already done. From here on, no one would ever trust his word on anything. Whatever power he got now would be by force and fear,

not by deception. Which meant that he would be making enemies every day, driving people into the arms of his opponents.

He might still win more battles and more wars and he might even seem to triumph completely, but, like Caligula, he would make assassins out of the people closest to him. And when he died, men just as evil but perhaps not as crazy would take his place. Killing him now would not make that much difference to the world.

Keeping Petra alive, however, would make all the difference in the world to Bean. He had made the mistakes that killed Poke and Sister Carlotta. But he was going to make no mistakes today. Petra would live because Bean couldn't bear any other outcome. She didn't even get a vote on the matter.

The colonel was weighing the situation.

Achilles was not. "I'm moving to the chopper now. My fingers are pretty tight on this trigger. Don't make me flinch, Bean."

Bean knew what Achilles was thinking: Can I kill Bean at the last moment and still get away, or should I leave that pleasure for another time?

And that was an advantage for Bean, because his thinking was not clouded by thoughts of personal vengeance.

Except, he realized, that it was. Because he, too, was trying to think of some way to save Petra and still kill Achilles.

The colonel walked up closer behind Achilles before calling out his answer to Bean. "Achilles is the architect of a great Chinese victory, and he must come to Beijing to be received in honor. My orders say nothing about the Armenian."

"They'll never let us take off without her, you fool," said Achilles.

"Sir, I give you my word, my parole. Even though Achilles has already murdered a woman and a girl who did nothing but good for him, and deserves to die for his crimes, I will let him go and let you go."

"Then our missions do not conflict," said the colonel. "I agree to your terms, provided you also agree to care for any of my men who remain behind according to the rules of war."

"I agree," said Bean.

"I'm in charge of our mission," said Achilles, "and I don't agree."

"You are not in charge of our mission, sir," said the colonel.

Bean knew exactly what Achilles would do. He would take the gun away from Petra's hand long enough to shoot the colonel. Achilles would expect this move to surprise people, but Bean was not surprised at all. His hand with the trunk gun was already rising before Achilles even started to turn to the colonel.

But Bean was not the only one who knew what to expect from Achilles. The colonel had deliberately moved close enough to Achilles that as he swung the gun around, the colonel slapped the weapon out of Achilles' hand. At the same moment, with his other hand the colonel slapped Achilles' arm close to the elbow, and even though there seemed to be almost no force behind the blow, Achilles' arm bent sickeningly backward. Achilles cried out in pain and dropped to his knees, letting go of Petra. She immediately launched herself to the side, out of the way, and at that moment Bean fired the trunk gun. He was able to adjust the aim at the last split second, and the tiny pellet struck Achilles' shirt with such force that even though the casing collapsed against the cloth, the tranquilizer blew right through the fabric and penetrated Achilles' skin. He collapsed immediately.

"It's only a tranquilizer," said Bean. "He'll be awake in six hours or so, with a headache."

The colonel stood there, not bending yet to even notice Achilles, his eyes still fixed on Bean. "Now there is no hostage. Your enemy is on the ground. How good is your word, sir, when the circumstance in which it was given goes away?"

"Men of honor," said Bean, "are brothers no matter what uniform they wear. You may put him aboard, and take off. I recommend that you fly in formation with us until we are south of the defenses around Hyderabad. Then you may fly your own course, and we'll fly ours."

"That is a wise plan," said the colonel.

He knelt and started to pick up Achilles' limp body. It was tricky work, and so Bean, small as he was, stepped forward to help by taking Achilles' legs.

Petra was on her feet by then, and when Bean glanced at her he could see that she was eyeing Achilles' pistol, which lay on the ground near her. Bean could almost read her mind. To kill Achilles with his own gun had to be tempting-and Petra had not given her word.

But before she could even move toward the pistol, Bean had his trunk gun pointed at her. "You could also wake up in six hours with a headache," he said.

"No need," she said. "I know that I'm also bound by your word." And, without stooping for the gun, she came and helped Bean carry his end of Achilles' body.

They rolled Achilles through the wide door of the chopper. Soldiers inside the machine took him and carried him back, presumably to a place where he could be secured during flight maneuvers. The chopper was grossly overcrowded, but only with men-there were no supplies or heavy munitions, so it would fly as well as normal. It would simply be uncomfortable for the passengers.

"You don't want to ride home on that chopper," said Bean. "I invite you to ride with us."

"But you're not going where I'm going," said the colonel.

"I know this boy you have just taken aboard," said Bean. "Even if he doesn't remember what you did when he wakes up, someone will tell him someday, and once he knows, you'll be marked. He never forgets. He will certainly kill you."

"Then I will have died obeying my orders and fulfilling my mission," said the colonel.

"Full asylum," said Bean, "and a life spent helping liberate China and all other nations from the kind of evil he represents."

"I know that you mean to be kind," said the colonel, "but it hurts my soul to be offered such rewards for betraying my country."

"Your country is led by men without honor," said Bean. "And yet they are sustained in power by the honor of men like you. Who, then, betrays his country? No, we have no time for arguments. I only plant the idea so it will fester in your soul." Bean smiled.

The colonel smiled back. "Then you are a devil, sir, as we Chinese always knew you Europeans to be."

Bean saluted him. He returned the salute and got on board.

The chopper door closed.

Bean and Petra ran out of the downdraft as the Chinese machine rose up into the air. There it hovered as Bean ordered everyone into the one chopper that remained on the ground. Less than two minutes later, his chopper, too, rose up, and the Thai and Chinese machines flew together over the building, where they were joined by the other helijets of Bean's strike force as they rose up from the ground or converged from their watching points at the perimeter.

They flew together toward the south, slowly, on blades. No Indian weapon was fired at them. For the Indian officers no doubt knew that their best young military minds were being taken to far more safety than they could possibly have in Hyderabad, or anywhere in India, once the Chinese came in force.

Then Bean gave the order, and all his choppers rose up, cut the blades, and dropped as the jets came on and the blades folded back for the quick ride back to Sri Lanka.

Inside the chopper, Petra sat glumly in her straps. Virlomi was beside her, but they did not speak to each other.

"Petra," said Bean.

She did not look up.

"Virlomi found us, we did not find her. Because of her, we were able to come for you."

Petra still did not look up, but she reached out a hand and laid it on Virlomi's hands, which were clasped in her lap. "You were brave and good," said Petra. "Thank you for having compassion for me."

Then she looked up to meet Bean's gaze. "But I don't thank you, Bean. I was ready to kill him. I would have done it. I would have found a way."

"He's going to kill himself in the end," said Bean. "He's going to overreach himself, like Robespierre, like Stalin. Others will see his pattern and when they realize he's finally about to put them to the guillotine, they'll decide they've had enough and he will, most certainly, die."

"But how many will he kill along the way? And now your hands are stained with all their blood, because you loaded him onto that chopper alive. Mine, too."

"You're wrong," said Bean. "He is the only one responsible for his killings. And you're wrong about what would have happened if we had let him take you along. You would not have lived through that ride."

"You don't know that."

"I know Achilles. When that chopper rose to about twenty stories up, you would have been pushed out the door. And do you know why?"

"So you could watch," she said.

"No, he would have waited till I was gone," said Bean. "He's not stupid. He regards his own survival as far more important than your death."

"Then why would he kill me now? Why are you so sure?"

"Because he had his arm around you like a lover," said Bean. "Standing there with the gun to your head, he held you with affection. I think he meant to kiss you before he took you on board. He'd want me to see that."

"She would never let him kiss her," said Virlomi with disgust.

But Petra met Bean's gaze, and the tears in her eyes were a truer answer than Virlomi's brave words. She had already let Achilles kiss her. Just like Poke.

"He marked you," said Bean. "He loved you. You had power over him. After he didn't need you anymore as the hostage to keep me from killing him, you could not go on living."

Suriyawong shuddered. "What made him that way?"

"Nothing made him that way," said Bean. "No matter what terrible things happened in his life, no matter what dreadful hungers rose up from his soul, he chose to act on those desires, he chose to do the things he did. He's responsible for his own actions, and no one else. Not even those who saved his life."

"Like you and me today," said Petra.

"Sister Carlotta saved his life today," said Bean. "The last thing she asked me was to leave vengeance up to God."

"Do you believe in God?" asked Suriyawong, surprised.

"More and more," said Bean. "And less and less."

Virlomi took Petra's hands between hers and said, "Enough of blame and enough of Achilles. You're free of him. You can have whole minutes and hours and days in which you don't have to think of what he'll do to you if he hears what you say, and how you have to act when he might be watching. The only way he can hurt you now is if you keep watching him in your own heart."

"Listen to her, Petra," said Suriyawong. "She's a goddess, you know."

Virlomi laughed. "I save bridges and summon choppers."

"And you blessed me," said Suriyawong.

"I never did," said Virlomi.

"When you walked on my back," said Suriyawong. "My whole body is now the path of a goddess."

"Only the back part," said Virlomi. "You'll have to find someone else to bless the front."

While they bantered, half-drunk with success and liberty and the overwhelming tragedy they were leaving behind them, Bean watched Petra, saw the tears drop from her eyes onto her lap, longed to be able to reach out and touch them away from her eyes. But what good would that do? Those tears had risen up from deep wells of pain, and his mere touch would do nothing to dry them at their source. It would take time to do that, and time was the one thing that he did not have. If Petra knew happiness in her life-happiness, that precious thing that Mrs. Wiggin talked about-it would come when she shared her life with someone else. Bean had saved her, had freed her, not so he could have her or be part of her life, but so that he did not have to bear the guilt of her death as he bore the deaths of Poke and Carlotta. It was a selfish thing he did, in a way. But in another way, there would be nothing for himself at all from this day's work.

Except that when his death came, sooner rather than later, he might well look back on this day's work with more pride than anything else in his life. Because today he won. In the midst of all this

terrible defeat, he had found a victory. He had cheated Achilles out of one of his favorite murders. He had saved the life of his dearest friend, even though she wasn't quite grateful yet. His army had done what he needed it to do, and not one life had been lost out of the two hundred men he had first been given. Always before he had been part of someone else's victory. But today, today he won.

Re: Confirmation

Dear Polemarch Chamrajnagar,

Thank you for allowing me to reconfirm your appointment as Polemarch as my first official act. We both know that I was giving you only what you already had, while you, by accepting that reconfirmation as if it actually meant something, restored to the office of Hegemon some of the luster that has been torn from it by the events of recent months. There are many who feel that it is an empty gesture to appoint a Hegemon who leads only about a third of the human race and has no particular influence over the third that officially supports him. Many nations are racing to find some accommodation with the Chinese and their allies, and I live under the constant threat of having my office abolished as one of the first gestures they can make to win the favor of the new superpower. I am, in short, a Hegemon without hegemony.

And it is all the more remarkable that you would make this generous gesture toward the very individual that you once regarded as the worst of all possible Hegemons. The weaknesses in my character that you saw then have not magically vanished. It is only by comparison with Achilles, and only in a world where your homeland groans under the Chinese lash, that I begin to look like an attractive alternative or a source of hope instead of despair. But regardless of my weaknesses, I also have strengths, and I make you a promise:

Even though you are bound by your oath of office never to use the International Fleet to influence the course of events on Earth, except to intercept nuclear weapons or punish those who use them, I know that you are still a man of Earth, a man of India, and you care deeply what happens to all people, and particularly to your people. Therefore I promise you that I will devote the rest of my life to reshaping this world into one that you would be glad of, for your people, and for all people. And I hope that I succeed well enough, before one or the other of us dies, that you will be glad of the support you gave to me today.

Sincerely,  
Peter Wiggin, Hegemon

Over a million Indians made it out of India before the Chinese sealed the borders. Out of a population of a billion and a half, that was far too few. At least ten times that million were transported over the next year, from India to the cold lands of Manchuria and the high deserts of Sinkiang. Among the transported ones was Tikal Chapekar. The Chinese gave no report to outsiders about the fate of him or any of the other "former oppressors of the Indian people." The same, on a far smaller scale, happened to the governing elites of Burma, Thailand, Vietnam, Cambodia, and Laos.

As if this vast redrawing of the world's map were not enough, Russia announced that it had joined China as its ally, and that it considered the nations of eastern Europe that were not loyal members of the New Warsaw Pact to be provinces in rebellion. Without firing a shot, Russia was able, simply by promising not to be as dreadful an overlord as China, to rewrite the Warsaw Pact until it was more or less the constitution of an empire that included all of Europe east of Germany, Austria, and Italy in the south, and east of Sweden and Norway in the north.

The weary nations of western Europe were quick to "welcome" the "discipline" that Russia would bring to Europe, and Russia was immediately given full membership in the European Community. Because Russia now controlled the votes of more than half the members of that community, it would require a constant tug of war to keep some semblance of independence, and rather than play that game, Great Britain, Ireland, Iceland, and Portugal left the European Community. But even they took great pains to assure the Russian bear that this was purely over economic issues and they really welcomed this renewed Russian interest in the West.

America, which had long since become the tail to China's dog in matters of trade, made a few grumpy noises about human rights and then went back to business as usual, using satellite cartography to redraw the map of the world to fit the new reality and then sell the atlases that resulted. In sub-Saharan Africa, where India had once been their greatest single trading partner and cultural influence, the loss of India was much more devastating, and they loyally denounced the Chinese conquest even as they scrambled to find new markets for their goods. Latin America was even louder in their condemnation of all the aggressors, but lacking serious military forces, their bluster could do no harm. In the Pacific, Japan, with its dominant fleet, could afford to stand firm; the other island nations that faced China across various not-so-wide bodies of water had no such luxury.

Indeed, the only force that stood firm against China and Russia while facing them across heavily defended borders were the Muslim nations. Iran generously forgot how threateningly Pakistani troops had loomed along their borders in the month before India's fall, and Arabs joined with Turks in Muslim solidarity against any Russian encroachment across the Caucasus or into the vast steppes of central Asia. No one seriously thought that Muslim military might could stand for long against a serious attack from China, and Russia was only scarcely less dangerous, but the Muslims laid aside their grievances, trusted in Allah, and kept their borders bristling with the warning that this nettle would be hard to grasp.

This was the world as it was the day that Peter "Locke" Wiggin was named as the new Hegemon. China let it be known that choosing any Hegemon at all was an affront, but Russia was a bit more tolerant, especially because many governments that cast their vote for Wiggin did so with the public declaration that the office was more ceremonial than practical, a gesture toward world unity and peace, and not at all an attempt to roll back the conquests that had brought "peace" to an unstable world.

But privately, many leaders of the very same governments assured Peter that they expected him to do all he could to bring about diplomatic "transformations" in the occupied countries. Peter listened

to them politely and said reassuring things, but he felt nothing but scorn for them—for without military might, he had no way of negotiating with anyone about anything.

His first official act was to reconfirm the appointment of Polemarch Chamrajnagar—an action which China officially protested as illegal because the office of Hegemon no longer existed, and while they would do nothing to interfere with Chamrajnagar's continued leadership of the Fleet, they would no longer contribute financially either to the Hegemony or the Fleet. Peter then confirmed Graff as Hegemony Minister of Colonization—and, again, because his work was offworld, China could do nothing more than cut off its contribution of funds.

But the lack of money forced Peter's next decision. He moved the Hegemony capital out of the former Netherlands and returned the Low Countries to self-government, which immediately put a stop to unrestricted immigration into those nations. He closed down most Hegemony services worldwide except for medical and agricultural research and assistance programs. He moved the main Hegemony offices to Brazil, which had several important assets:

First, it was a large enough and powerful enough country that the enemies of the Hegemony would not be quick to provoke it by assassinating the Hegemon within its borders.

Second, it was in the southern hemisphere, with strong economic ties to Africa, the Americas, and the Pacific, so that being there kept Peter within the mainstream of international commerce and politics.

And third, Brazil invited Peter Wiggin to come there. No one else did.

Peter had no delusions about what the office of Hegemon had become. He did not expect anyone to come to him. He went to them.

Which is why he left Haiti and crossed the Pacific to Manila, where Bean and his Thai army and the Indians they rescued had found temporary refuge. Peter knew that Bean was still angry at him, so he was relieved that Bean not only agreed to see him, but treated him with open respect when he arrived. His two hundred soldiers were crisply turned out to greet him, and when Bean introduced him to Petra, Suriyawong, and Virlomi and the other Indian Battle Schoolers, he phrased everything as if he were presenting his friends to a man of higher rank.

In front of all of them, Bean then made a little speech. "To His Excellency the Hegemon, I offer the service of this band of soldiers—veterans of war, former opponents, and now, because of treachery, exiles from their homeland and brothers- and sisters-at-arms. This was not my decision, nor the decision of the majority. Each individual here was given the choice, and chose to make this offer of our service. We are few, but nations have found our service valuable before. We hope that we now can serve a cause that is higher than any nation, and whose end will be the establishment of a new and honorable order in the world."

Peter was surprised only by the formality of the offer, and the fact that it was made without any sort of negotiation beforehand. He also noticed that Bean had arranged to have cameras present. This would be news. So Peter made a brief, soundbite-oriented reply accepting their offer, praising their

achievements, and expressing regret at the suffering of their people. It would play well-twenty seconds on the vids, and in full on the nets.

When the ceremonies were done, there was an inspection of their inventory-all the equipment they had been able to rescue from Thailand. Even their fighter-bomber pilots and patrol boat crews had managed to make their way from southern Thailand to the Philippines, so the Hegemon had an air force and a fleet. Peter nodded and commented gravely as he saw each item in the inventory-the cameras were still running.

Later, though, when they were alone, Peter finally allowed himself a rueful, self-mocking laugh. "If it weren't for you I'd have nothing at all," he said. "But to compare this to the vast fleets and air forces and armies that the Hegemon once commanded. . ."

Bean looked at him coldly. "The office had to be greatly diminished," he said, "before they'd have given it to you."

The honeymoon, apparently, was over. "Yes," Peter said, "that's true, of course."

"And the world had to be in a desperate condition, with the existence of the office of Hegemon in doubt."

"That, too, is true," said Peter. "And for some reason you seem to be angry about this."

"That's because, apart from the not-trivial matter of Achilles' penchant for killing people now and then, I fail to see much difference between you and him. You're both content to let any number of people suffer needlessly in order to advance your personal ambitions."

Peter sighed. "If that's all the difference that you see, I don't understand how you could offer your service to me."

"I see other differences, of course," said Bean. "But they're matters of degree, not of kind. Achilles makes treaties he never intends to keep. You merely write essays that might have saved nations, but you delay publishing them so that those nations will fall, putting the world in a position desperate enough that they would make you Hegemon."

"Your statement is true," said Peter, "only if you believe that earlier publication would have saved India and Thailand."

"Early in the war," said Bean, "India still had the supplies and equipment to resist Chinese attack. Thailand's forces were still fully dispersed and hard to find."

"But if I had published early in the war," said Peter, "India and Thailand would not have seen their peril, and they wouldn't have believed me. After all, the Thai government didn't believe you, and you warned them of everything."

"You're Locke," said Bean.

"Ah yes. Because I had so much credibility and prestige, nations would tremble and believe my words. Aren't you forgetting something? At your insistence, I had declared myself to be a teenage college student. I was still recovering from that, trying to prove in Haiti that I could actually govern. I might have had the prestige left to be taken seriously in India and Thailand-but I might not. And if I published too soon, before China was ready to act, China would simply have denied everything to both sides, the war would have proceeded, and then there would have been no shock value at all to my publication. I wouldn't have been able to trigger the invasion at exactly the moment you needed me to."

"Don't pretend that this was your plan all along."

"It was my plan," said Peter, "to withhold publication until it could be an act of power instead of an act of futility. Yes, I was thinking of my prestige, because right now the only power I have is that prestige and the influence it gives me with the governments of the world. It's a coin that is minted very slowly, and if spent ineffectively, disappears. So yes, I protect that power very carefully, and use it sparingly, so that later, when I need to have it, it will still exist."

Bean was silent.

"You hate what happened in the war," said Peter. "So do I. It's possible-not likely, but possible-that if I had published earlier, India might have been able to mount a real resistance. They might still have been fighting now. Millions of soldiers might have been dying even as we speak. Instead, there was a clean, almost bloodless victory for China. And now the Chinese have to govern a population almost twice the size of their own, with a culture every bit as old and allabsorbing as their own. The snake has swallowed a crocodile, and the question is going to arise again and again-who is digesting whom? Thailand and Vietnam will be just as hard to govern, and even the Burmese have never managed to govern Burma. What I did saved lives. It left the world with a clear moral picture of who did the stabbing in the back, and who was stabbed. And it leaves China victorious and Russia triumphant-but with captive, angry populations to govern who will not stand with them when the final struggle comes. Why do you think China made a quick peace with Pakistan? Because they knew they could not fight a war against the Muslim world with Indian revolt and sabotage a constant threat. And that alliance between China and Russia-what a joke! Within a year they'll be quarreling, and they'll be back to weakening each other across that long Siberian border. To people who think superficially, China and Russia look triumphant. But I never thought you were a superficial thinker."

"I see all that," said Bean.

"But you don't care. You're still angry at me."

Bean said nothing.

"It's hard," said Peter, "to see how all of this seems to work to my advantage, and not blame me for profiteering from the suffering of others. But the real issue is, What am I going to be able to do, and what will I actually do, now that I'm nominally the leader of the world, and actually the administrator of a small tax base, a few international service agencies, and this military force you gave to me today? I did the few things that were in my power to shape events so that when I got this office, it would still be worth having."

"But above all, to get that office."

"Yes, Bean. I'm arrogant. I think I'm the only person who understands what to do and has what it takes to do it. I think the world needs me. In fact, I'm even more arrogant than you. Is that what this comes down to? I should have been humbler? Only you are allowed to assess your own abilities candidly and decide that you're the best man for a particular job?"

"I don't want the job."

"I don't want this job, either," said Peter. "What I want is the job where the Hegemon speaks, and wars stop, where the Hegemon can redraw borders and strike down bad laws and break up international cartels and bring all of humanity a chance for a decent life in peace and whatever freedom their culture will allow. And I'm going to get that job, by creating it step by step. Not only that, I'm going to do it with your help, because you want somebody to do that job, and you know, just as surely as I do, that I'm the only one who can do it."

Bean nodded, saying nothing.

"You know all that, and you're still angry with me."

"I'm angry with Achilles," said Bean. "I'm angry with the stupidity of those who refused to listen to me. But you're here, and they're not."

"It's more than that," said Peter. "If that's all it was, you would have talked yourself out of your wrath long before we had this conversation."

"I know," said Bean. "But you don't want to hear it."

"Because it will hurt my feelings? Let me make a stab at it, then. You're angry because every word from my mouth, every gesture, every expression on my face reminds you of Ender Wiggin. Only I'm not Ender, I'll never be Ender, you think Ender should be doing what I'm doing, and you hate me for being the one who made sure Ender got sent away."

"It's irrational," said Bean. "I know that. I know that by sending him away you saved his life. The people who helped Achilles try to kill me would have worked day and night to kill Ender without any prompting from Achilles at all. They would have feared him far more than they feared you or me. I know that. But you look and talk so much like him. And I keep thinking, if Ender had been here, he wouldn't have botched things the way I did."

"The way I read it, it's the other way around. If you hadn't been there with Ender, he would have botched it at the end. No, don't argue, it doesn't matter. What does matter is, the world's the way it is right now, and we're in a position where, if we move carefully, if we think through and plan everything just right, we can fix this. We can make it better. No regrets. No wishing we could undo the past. We just look to the future and work our zhupas off."

"I'll look to the future," said Bean, "and I'll help you all I can. But I'll regret whatever I want to regret."

"Fair enough," said Peter. "Now that we've agreed on that, I think you should know. I've decided to revive the office of Strategos."

Bean gave one hoot of derision. "You're putting that title on the commander of a force of two hundred soldiers, a couple of planes, a couple of boats, and an overheated company of strategic planners?"

"Hey, if I can be called Hegemon, you can take on a title like that."

"I notice you didn't want any vids of me getting that tide."

"No, I didn't," said Peter. "I don't want people to hear the news while looking at vids of a kid. I want them to learn of your appointment as Strategos while seeing stock footage of the victory over the Formics and hearing voice-overs about your rescue of the Indian Battle Schoolers."

"Well, fine," said Bean. "I accept. Do I get a fancy uniform?"

"No," said Peter. "At the rate you're growing lately, we'd have to pay for new ones too often, and you'd bankrupt us."

A thoughtful expression passed across Bean's face.

"What," said Peter, "did I offend again?"

"No," said Bean. "I was just wondering what your parents said, when you declared yourself to be Locke."

Peter laughed. "Oh, they pretended that they'd known it all along. Parents."

At Bean's suggestion, Peter located the headquarters of the Hegemony in a compound just outside the city of Ribeirao Preto in the state of Sao Paulo. There they would have excellent air connections anywhere in the world, while being surrounded by small towns and agricultural land. They'd be far from any government body. It was a pleasant place to live as they planned and trained to achieve the modest goal of freeing the captive nations while holding the line against any new aggressions.

The Delphiki family came out of hiding and joined Bean in the safety of the Hegemony compound. Greece was part of the Warsaw Pact now, and there was no going home for them. Peter's parents also came, because they understood that they would become targets for anyone wanting to get to Peter. He gave them both jobs in the Hegemony, and if they minded the disruption of their lives, they never gave a sign of it.

The Arkanians left their homeland, too, and came gladly to live in a place where their children would not be stolen from them. Suriyawong's parents had made it out of Thailand, and they moved the family fortune and the family business to Ribeirao Preto. Other Thai and Indian families with ties to Bean's army or the Battle School graduates came as well, and soon there were thriving neighborhoods where

Portuguese was rarely heard.

As for Achilles, month after month they heard nothing about him.

Presumably he got back to Beijing. Presumably, he was worming his way into power one way or another. But they allowed themselves, as the silence about him continued, to hope that perhaps the Chinese, having made use of him, now knew him well enough to keep him away from the reins of power.

On a cloudy winter afternoon in June, Petra walked through the cemetery in the town of Araraquara, only twenty minutes by train from Ribeirao Preto. She took care to make sure she approached Bean from a direction where he could see her coming. Soon she stood beside him, looking at a marker.

"Who is buried here?" she asked.

"No one," said Bean, who showed no surprise at seeing her. "It's a cenotaph."

Petra read the names that were on it.

Poke.

Carlotta.

There was nothing else.

"There's a marker for Sister Carlotta somewhere in Vatican City," said Bean. "But there was no body recovered that could actually be buried anywhere. And Poke was cremated by people who didn't even know who she was. I got the idea for this from Virilomi."

Virilomi had set up a cenotaph for Sayagi in the small Hindu cemetery that already existed in Ribeirao Preto. It was a bit more elaborate-it included the dates of his birth and death, and called him "a man of satyagraha."

"Bean," said Petra, "it's quite insane of you to come here. No bodyguard. This marker standing here so that assassins can set their sights before you show up."

"I know," said Bean.

"At least you could have invited me along."

He turned to her, tears in his eyes. "This is my place of shame," he said. "I worked very hard to make sure your name would not be here."

"Is that what you tell yourself? There's no shame here, Bean. There's only love. And that's why I belong here-with the other lonely girls who gave their hearts to you."

Bean turned to her, put his arms around her, and wept into her shoulder. He had grown, to stand tall enough for that. "They saved my life," he said. "They gave me life."

"That's what good people do," said Petra. "And then they die, every one of them. It's a damned shame."

He gave one short laugh-whether at her small levity or at himself, for weeping, she did not know. "Nothing lasts long, does it," said Bean.

"They're still alive in you."

"Who am I alive in?" said Bean. "And don't say you."

"I will if I want. You saved my life."

"They never had children, either one of them," said Bean. "No one ever held either Poke or Carlotta the way a man does with a woman, or had a baby with them. They never got to see their children grow up and have children of their own."

"By Sister Carlotta's choice," said Petra.

"Not Poke's."

"They both had you."

"That's the futility of it," said Bean. "The only child they had was me."

"So ... you owe it to them to carry on, to marry, to have more children who'll remember them both for your sake."

Bean stared off into space. "I have a better idea. Let me tell you about them. And you tell your children. Will you do that? If you could promise me that, then I think that I could bear all this, because they wouldn't just disappear from memory when I die."

"Of course I'll do that, Bean, but you're talking as if your life were already over, and it's just beginning. Look at you, you're getting along, you'll have a man's height before long, you'll-"

He touched her lips, gently, to silence her. "I'll have no wife, Petra. No babies."

"Why not? If you tell me you've decided to become a priest I'll kidnap you myself and get you out of this Catholic country."

"I'm not human, Petra," Bean replied. "And my species dies with me."

She laughed at his joke.

But as she looked into his eyes, she saw that it wasn't a joke at all. Whatever he meant by that, he really thought that it was true. Not human. But how could he think that? Of all the people Petra knew, who was more human than Bean?

"Let's go back home," Bean finally said, "before somebody comes along and shoots us just for loitering."

"Home," said Petra.

Bean only halfway understood. "Sorry it's not Armenia."

"No, I don't think Armenia is home either," she said. "And Battle School sure wasn't, nor Eros. This is home, though. I mean, Ribeirao Preto. But here, too. Because ... my family's here, of course, but. . ."

And then she realized what she was trying to say.

"It's because you're here. Because you're the one who went through it all with me. You're the one who knows what I'm talking about. What I'm remembering. Ender. That terrible day with Bonzo. And the day I fell asleep in the middle of a battle on Eros. You think you have shame." She laughed. "But it's OK to remember even that with you. Because you knew about that, and you still came to get me out."

"Took me long enough," said Bean.

They walked out of the cemetery toward the train station, holding hands because neither of them wanted to feel separate right now.

"I have an idea," said Petra.

"What?"

"If you ever change your mind-you know, about marrying and having babies-hang on to my address. Look me up."

Bean was silent for a long moment. "Ali," he finally said, "I get it. I rescued the princess, so now I can marry her if I want."

"That's the deal."

"Yeah, well, I notice you didn't mention it until after you heard my vow of celibacy."

"I suppose that was perverse of me."

"Besides, it's a cheat. Aren't I supposed to get half the kingdom, too?"

"I've got a better idea," she answered. "You can have it all."

## AFTERWORD

Just as Speaker for the Dead was a different kind of novel from Ender's Game, so also is Shadow of the Hegemon a different kind of book from Ender's Shadow. No longer are we in the close confines of Battle School or the asteroid Eros, fighting a war against insectoid aliens. Now, with Hegemon, we are on Earth, playing what amounts to a huge game of Risk-only you have to play politics and diplomacy as well in order to get power, hold onto it, and give yourself a place to land if you lose it.

Indeed, the game that this novel most resembles is the computer classic *Romance of the Three Kingdoms*, which is itself based on a Chinese historical novel, thus affirming the ties between history, fiction, and gaming. While history responds to irresistible forces and conditions (pace the extraordinarily illuminating book *Guns, Germs, and Steel*, which should be required reading by everyone who writes history or historical fiction, just so they understand the ground rules), in the specifics, history happens as it happens for highly personal reasons. The reasons European civilization prevailed over indigenous civilizations of the Americas consist of the implacable laws of history; but the reason why it was Cortez and Pizarro who prevailed over the Aztec and Inca empires by winning particular battles on particular days, instead of being cut down and destroyed as they might have been, had everything to do with their own character and the character and recent history of the emperors opposing them. And it happens that it is the novelist, not the historian, who has the freer hand at imagining what causes individual human beings to do the things they do.

Which is hardly a surprise. Human motivation cannot be documented, at least not with any kind of finality. After all, we rarely understand our own motivations, and so, even when we write down what we honestly believe to be our reasons for making the choices we make, our explanation is likely to be wrong or partly wrong or at least incomplete. So even when a historian or biographer has a wealth of information at hand, in the end he still has to make that uncomfortable leap into the abyss of ignorance before he can declare why a person did the things he did. The French Revolution inexorably led to anarchy and then tyranny for comprehensible reasons, following predictable paths. But nothing could have predicted Napoleon himself, or even that a single dictator of such gifts would emerge.

Novelists who write about Great Leaders, however, too often fall into the opposite trap. Able to imagine personal motivations, the people who write novels rarely have the grounding in historical fact or the grasp of historical forces to set their plausible characters into an equally plausible society. Most such attempts are laughably wrong, even when written by people who have actually been involved in the society of movers and shakers, for even those caught up in the maelstrom of politics are rarely able to see through the trees well enough to comprehend the forest. (Besides, most political or military novels by political or military leaders tend to be self-serving and self-justifying, which makes them almost as unreliable as books written by the ignorant.) How likely is it that someone who took part in the Clinton administration's immoral decision to launch unprovoked attacks on Afghanistan and the Sudan in the late summer of 1998 would be able to write a novel in which the political exigencies that led to these criminal acts are accurately recounted? Anyone in a position to know or guess the real interplay of human desires among the major players will also be so culpable that it will be impossible for him to tell the truth, even if he is honest enough to attempt it, simply because the people involved were so busy lying to themselves and to each other throughout the process that everyone involved is bound to be snow-blind.

In *Shadow of the Hegemon*, I have the advantage of writing a history that hasn't happened, because it is in the future. Not thirty million years in the future, as with my *Homecoming* books, or even three thousand years in the future, as with the trilogy of *Speaker for the Dead*, *Xenocide*, and *Children of the Mind*, but rather only a couple of centuries in the future, after nearly a century of international stasis caused by the Formic War. In the future history posited by *Hegemon*, nations and peoples of today are still recognizable, though the relative balance among them has changed. And I have both the perilous freedom and the solemn obligation to attempt to tell my characters'

highly personal stories as they move (or are moved) amid the highest circles of power in the governing and military classes of the world.

If there is anything that can be called my "life study," it is precisely this subject area: great leaders and great forces shaping the interplay of nations and peoples throughout history. As a child, I would put myself to sleep at night imagining a map of the world as it existed in the late fifties, just as the great colonial empires were beginning to grant independence, one by one, to the colonies that had once made up those great swathes of British pink and French blue across Africa and southern Asia. I imagined all those colonies as free countries, and, choosing one of them or some other relatively small nation, I would imagine alliance, unifications, invasions, conquests, until all the world was united under one magnanimous, democratic government. Cincinnatus and George Washington, not Caesar or Napoleon, were my models. I read Machiavelli's *The Prince* and Shirer's *Rise and Fall of the Third Reich*, but I also read Mon-non scripture (most notably the Book of Mormon stories of the generals Gideon, Moroni, Helaman, and Gidgiddoni, and Doctrine and Covenants section 121) and the Old and New Testaments, all the while trying to imagine how one might govern well when law gives way to exigency, and the circumstances under which war becomes righteous.

I don't pretend that the imaginings and studies of my life have brought me to great answers, and you will find no such answers in *Shadow of the Hegemon*. But I do believe I understand something of the workings of the world of government, politics, and war, both at their best and at their worst. I have sought the borderline between strength and ruthlessness, between ruthlessness and cruelty, and at the other extreme, between goodness and weakness, between weakness and betrayal. I have pondered how it is that some societies are able to get young men to kill and die with fervor trumping fear, and yet others seem to lose their will to survive or at least their will to do the things that make survival possible. And *Shadow of the Hegemon* and the two remaining books in this long tale of Bean, Petra, and Peter are my best attempt to use what I have learned in a tale in which great forces, large populations, and individuals of heroic if not always virtuous character combine to give shape to an imaginary, but I hope believable, history.

I am crippled in this effort by the factor that real life is rarely plausible—we believe that people would or could do these things only because we have documentation. Fiction, lacking that documentation, dares not be half so implausible. On the other hand, we can do what history never can—we can assign motive to human behavior, which cannot be refuted by any witness or evidence. So, despite doing my utmost to be truthful about how history happens, in the end I must depend on the novelist's tools. Do you care about this person, or that one? Do you believe such a person would do the things I say they do, for the reasons I assign?

History, when told as epic, often has the thrilling grandeur of Dvorak or Smetana, Borodin or Mussorgsky, but historical fiction must also find the intimacies and dissonances of the delicate little piano pieces of Satie and Debussy. For it is in the millions of small melodies that the truth of history is always found, for history only matters because of the effects we see or imagine in the lives of the ordinary people who are caught up in, or give shape to, the great events. Tchaikowsky can carry me away, but I tire quickly of the large effect, which feels so hollow and false on the second hearing. Of Satie I never tire, for his music is endlessly surprising and yet perfectly satisfying. If I can bring off this novel in Tchaikowsky's terms, that is well and good; but if I can

also give you moments of Satie, I am far happier, for that is the harder and, ultimately, more rewarding task.

Besides my lifelong study of history in general, two books particularly influenced me during the writing of *Shadow of the Hegemon*. When I saw *Anna and the King*, I became impatient with my own ignorance of real Thai history, and so found David K. Wyatt's *Thailand: A Short History* (Yale, 1982, 1984). Wyatt writes clearly and convincingly, making the history of the Thai people both intelligible and fascinating. It is hard to imagine a nation that has been more lucky in the quality of its leaders as Thailand and its predecessor kingdoms, which managed to survive invasions from every direction and European and Japanese ambitions in Southeast Asia, all the while maintaining its own national character and remaining, more than many kingdoms and oligarchies, responsive to the needs of the Thai people. (I followed Wyatt's lead in calling the pre-Siamese language and the people who spoke it, in lands from Laos to upper Burma and southern China, "Tai," reserving "Thai" for the modern language and kingdom that bear that name.)

My own country once had leaders comparable to Siam's Mongkut and Chulalongkorn, and public servants as gifted and selfless as many of Chulalongkorn's brothers and nephews, but unlike Thailand, America is now a nation in decline, and my people have little will to be well led. America's past and its resources make it a major player for the nonce, but nations of small resources but strong will can change the course of world history, as the Huns, the Mongols, and the Arabs have shown, sometimes to devastating effect, and as the people of the Ganges have shown far more pacifically.

Which brings me to the second book, Lawrence James's *Raj: The Making and Unmaking of British India* (Little, Brown, 1997). Modern Indian history reads like one long tragedy of good, or at least bold, intentions leading to disaster, and in *Shadow of the Hegemon* I consciously echoed some of the themes I found in James's book.

As always, I relied on others to help me with this book by reading the first draft of each chapter to give me some idea whether I had wrought what I intended. My wife, Kristine; my son Geoffrey; and Kathy H. Kidd and Erin and Phillip Absher were my most immediate readers, and I thank them for helping prevent many a moment of inclarity or ineffectiveness.

The person most influential in giving this book the shape it has, however, is the aforementioned Phillip Absher, for when he read the first version of a chapter in which Petra was rescued from Russian captivity and united with Bean, he commented that I had built up her kidnapping so much that it was rather disappointing how easily the problem turned out to be resolved. I had not realized how high I had raised expectations, but I could see that he was right—that her easy release was not only a breaking of an implied promise with the reader, but also implausible under the circumstances. So instead of her kidnapping being an early event in a very involved story, I realized that it could and should provide the overarching structure of the entire novel, thus splitting what was to be one novel into two. As the story of Han Qing-jao took over *Xenocide* and caused it to become two books, so also the story of Petra took over this, Bean's second book, and caused there to be a third, *Shadow of Death* (which I may extend to the longer phrase from the Twenty-third Psalm, *The Valley of the Shadow of Death*; it would never do to become tied to a title too early). The book originally planned to be third will now be the fourth, *Shadow of the Giant*. All because

Phillip felt a bit disappointed and, just as importantly, said so, causing me to think again about the structure I had unconsciously created in subversion of my conscious plans.

I rarely write two novels at once, but I did this time, going back and forth between *Shadow of the Hegemon* and *Sarah*, my historical novel about the wife of Abraham (*Shadow Mountain*, 2000). The novels sustained each other in odd ways, each of them dealing with history during times of chaos and transformation-like the one the world is embarking upon at the time of this writing. In both stories, personal loyalties, ambitions, and passions sometimes shape the course of the history and sometimes surf upon history's wave, trying merely to stay just ahead of the breaking crest. May all who read these books find their own ways to do the same. It is in the turmoil of chaos that we discover what, if anything, we are.

As always, I have relied upon Kathleen Bellamy and Scott Allen to help keep communications open between me and my readers, and many who visited and took part in my online commun (<http://www.hatrack.com>, <http://www.frescopix.com>, and <http://www.nauvoo.com>) helped me, often in ways they did not realize.

Many writers produce their art from a maelstrom of domestic chaos and tragedy. I am fortunate enough to write from within an island of peace and love, created by my wife, Kristine, my children, Geoffrey, Emily, Charlie Ben, and Zina, and good and dear friends and family who surround us and enrich our lives with their good will, kind help, and happy company. Perhaps I would write better were my life more miserable, but I have no interest in performing the experiment.

In particular, though, I write this book for my second son, Charlie Ben, who wordlessly has given great gifts to all who know him. Within the small community of his family, of school friends at Gateway Education Center, and of church friends in the Greensboro Summit Ward, Charlie Ben has given and received much friendship and love without uttering a word, as he patiently endures his pain and limitations, gladly receives the kindness of others, and generously shares his love and joy with all who care to receive it. Twisted by cerebral palsy, his body movements may look strange and disturbing to strangers, but to those willing to look more closely, a young man of beauty, humor, kindness, and joy can be found. May we all learn to see past such outward signs, and show our true selves through all barriers, however opaque they seem. And Charlie, who will never hold this book in his own hands or read it with his own eyes, will nevertheless hear it read to him by loving friends and family members. So to you, Charlie, I say: I am proud of all you do with your life, and glad to be your father; though you deserved a better one, you have been generous enough to love the one you have.
