<b>1. NATURE OF SCIENCE (NOS)</b>	<p>S(SPS2)-6-1.1 Scientists do not pay much attention to claims about how something works unless they are backed up with evidence that can be confirmed and with a logical argument.</p> <p>S(SPS2)-6-1.2 Describe how results of similar and repeated investigations may vary and suggest possible explanations for variations.</p> <p>S(SPS2)-6-1.3 Sometimes similar investigations get different results because of unexpected differences in the things being investigated, the methods used, or the circumstances in which the investigation is carried out, and sometimes just because of uncertainties of observations.</p> <p>S(SPS2)-6-1.4 If more than one variable changes at the same time in an experiment, the outcome of the experiment may not be clearly attributable to any one of the variables.</p>	<p>S(SPS2)-8-1.1 Scientific investigations usually involve the collection of relevant evidence, the use of logical reasoning, and the application of imagination in devising hypotheses and explanations to make sense of the collected evidence.</p> <p>S(SPS2)-8-1.2 When similar investigations give different results, the scientific challenge is to judge whether the differences are trivial or significant, and this often requires more investigations.</p> <p>S(SPS2)-8-1.3 Knowledge, based on science, is subject to modification as new information challenges prevailing theories and as a new theory leads to looking at old observations in a new way.</p> <p>S(SPS2)-8-1.4 Some scientific knowledge is very old and yet is still applicable today.</p> <p>S(SPS2)-8-1.5 Some matters cannot be examined usefully in a scientific way. Among them are matters that by their nature cannot be tested objectively and those that are essentially matters of morality.</p> <p>S(SPS2)-8-1.6 Science can sometimes be used to inform ethical decisions by identifying the likely consequences of particular actions but cannot be used to establish that some action is either moral or immoral.</p> <p style="text-align: right;"><u>TRI-STATE SCIENCE TARGETS:</u> NH CODE [ TRI-STATE CODE] S(ESS2) – 8 - 4.1 [ESS2(5-8)NOS-7]</p>

<b>2.
