

# Seasonal Influenza (Flu) Fact Sheet for Parents

## In your child's school

Some cases of influenza (flu) have been reported from your child's school. Flu is different from the common cold. It can cause fever, cough, sore throat, headache, muscle aches, and vomiting. Flu can be very serious and may even cause death in some people with chronic health conditions, young children, pregnant women, or elderly persons.

## How does the flu spread?

Flu spreads between people when those sick with the flu cough, sneeze, or even talk. The flu virus can be spread to people up to six feet away. Flu can also spread when people touch their face or eyes after touching something that a sick person has touched.

## How to prevent the flu?

Use the Centers for Disease Control and Prevention's **"Take 3 Actions"**

- 1.** Flu vaccination is the best way to prevent the flu. DHEC strongly recommends all South Carolina residents older than 6 months old get the flu vaccine as soon as possible to prevent the flu, unless they have a medical reason not to be vaccinated.
- 2.** Take everyday preventive actions. Avoid close contact with ill persons. Keep child home if they have a fever (100°F or higher), until the fever has resolved without the use of medicines for a duration of 24 hours. Cover your nose and mouth with a tissue or upper sleeve when you cough or sneeze. Frequently, wash hands with soap and water or alcohol-based hand rub. Clean and disinfect surfaces high touch areas frequently.
- 3.** Take influenza antiviral medicines, if prescribed.

## Quick Stats

In the US every day, an estimated 55 million students and 7 million staff attend over 130,000 public and private schools. Implementing the CDC "Take 3 Actions" would aid in preventing influenza infection among one-fifth of the total US population (CDC, 2016).

According to a recently published CDC study, flu vaccination reduced the risk of a flu-associated death by 65% among healthy children and 51% among children with high-risk medical conditions (CDC, 2017).
