

6.4 Prove Triangles Similar by SSS and SAS

Before You used the AA Similarity Postulate to prove triangles similar.
Now You will use the SSS and SAS Similarity Theorems.
Why? So you can show that triangles are similar, as in Ex. 28.

SSS (Side-Side-Side) Similarity Theorem

If the three Sides of one triangle are proportional to the three Sides of another triangle, then the triangles are similar.

EXAMPLE 1:

Is either $\triangle DEF$ or $\triangle GHJ$ similar to $\triangle ABC$?

$\triangle ABC \stackrel{?}{\sim} \triangle DEF$

$$\frac{8}{6} = \frac{4}{3}$$

$$\frac{12}{9} = \frac{4}{3}$$

$$\frac{16}{12} = \frac{4}{3}$$

Same $\therefore \sim$

$\triangle ABC \stackrel{?}{\sim} \triangle GHJ$

$$\frac{8}{10} = \frac{4}{5}$$

$$\frac{12}{8} = \frac{3}{2}$$

NOT THE SAME $\therefore \not\sim$

Example 2:

Are the triangles similar?

$\frac{4}{11} = \frac{2}{24}$

NOT THE SAME $\therefore \not\sim$

Example 3:

Find the value of x that makes $\triangle ABC \sim \triangle DEF$.

$\frac{12}{4} = \frac{18}{x-1}$

$$12(x-1) = 72$$

$$12x - 12 = 72$$

$$12x = 84$$

$$x = 7$$

SAS (Side-Angle-Side) Similarity Theorem

If two Sides of one triangle are proportional to two Sides of another triangle and their "included" ∠s are congruent, then the triangles are similar.

Example 4:

Are the triangles similar?

$$\frac{2}{3} = \frac{3.6}{5.4}$$

Same

and

the included \angle s are \cong

$$\therefore \triangle XYZ \sim \triangle GFH$$

Example 5:

Are the triangles similar?

$$\triangle ABC \not\sim \triangle DEF$$
