M. Norman Oliver, MD, MA
State Health Commissioner

March 4, 2019

Dear Parents of Rising Sixth Graders:

The 2007 General Assembly passed legislation that requires sixth grade girls to receive the Human Papillomavirus (HPV) vaccine series. The law also requires the Virginia Department of Health (VDH) to provide parents/guardians of rising sixth-graders with information about the vaccine. In 2011 the Centers for Disease Control and Prevention (CDC) made an additional recommendation that boys of the same age routinely receive HPV vaccine.

Healthcare providers diagnose about 40,000 new cases of cancer related to HPV each year. As State Health Commissioner, I know that you make many decisions to protect your child from disease. We share this goal. The HPV vaccine can help protect your child from the nine strains of HPV most associated with cancer. This includes cervical cancer in women and cancers found in the mouth and back of the throat in men. The HPV vaccine works best when it is given to a child *prior* to exposure to the virus. Just as having your child buckle up when riding in the car or wearing a helmet when biking protects their health, the HPV vaccine protects children from HPV-associated cancer that may develop later in life.

Please review the information provided with this letter. The HPV vaccine is safe and can help protect your child from cancer. After reading this information, as the parent or guardian you may choose for your child not to receive the HPV vaccine. VDH strongly recommends that children be vaccinated per CDC recommendations. Please contact your health care provider to determine when your child can receive the vaccine series and discuss any questions you have. HPV vaccine is available from your healthcare provider, local health departments or at military clinics. Please provide documentation to your child's school in order to update your child's school immunization record.

Should you have any questions please contact Janaye Oliver, Adolescent Immunization Coordinator at the Virginia Department of Health, by telephone at (804) 864-8073 or by email at Janaye.Oliver@vdh.virginia.gov. You may also contact Tracy White, School Health Nurse Specialist at the Virginia Department of Education, by telephone at (804) 786-8571, or by email at Tracy.White@doe.virginia.gov.

Sincerely,

A handwritten signature in black ink, appearing to read "M. Norman Oliver" with a stylized flourish at the end.

M. Norman Oliver, MD, MA
State Health Commissioner

TAKE A SHOT AT CANCER!

Protect your child from HPV-related cancers by vaccinating.

Human Papillomavirus (HPV) is easily spread and most people don't know they have it. HPV causes several types of cancer.

90%

of cervical cancers are caused by HPV

70%

of mouth & throat cancers may be linked to HPV

DID YOU KNOW?
4 out of 5
PEOPLE WILL GET HPV IN THEIR LIVES

The HPV vaccine protects your child's future. The vaccine...

Prevents

6

types of cancer

Data continues to show it is

Is recommended with other routine adolescent vaccinations

Meningitis

HPV Cancers

Tdap

HPV can be prevented in both girls and boys through vaccination. Both should complete the vaccine series by age 13.

75.6%

of VA teens have started the HPV series

Most Virginians are taking the step to protect their families!

Talk to your child's provider today about preventing cancer!
