Local School Wellness Policy

*The purpose of this guide is to provide sample language for schools to use in developing their own local policies. It is based on existing state requirements and USDA guidance as of June 2013, and on the experiences of successful schools in Mississippi and around the United States. This guide contains both minimum requirements and optional policy statements. **The minimum requirements, based on federal and state legislation and standards, must be included in any School Wellness Policy adopted by Mississippi schools.** Schools are encouraged to review the optional policy statements, based on the best practices from other schools, and to adopt those that meet the goals of their schools and communities. **This guide is not intended for adoption in its entirety by schools, unless they so choose. It is intended for schools to use as a tool in drafting their own policies. With the exception of the minimum requirements, schools may choose to alter this guide, based on community input, to address local concerns and meet local needs.** This eight-component model of a coordinated approach to school health, developed by the Centers for Disease Control and Prevention, depicts the importance of leadership, coordination, and partnerships to successfully implement quality school health programs that provide opportunities for all children to be fit, healthy, and ready to succeed.*

Rationale:

The link between health of students and learning is well documented. If children are to be successful in school they cannot be tired, hungry, sick, suffering from drug abuse, or worried that school is an unsafe environment in which they could become a victim of a violent act. It has become apparent that problems such as poor nutrition, lack of physical activity, substance abuse, depression, teen pregnancy, obesity, bullying, and more – can adversely affect not only a child’s health, but also his or her *ability to learn!* And that is precisely why a coordinated approach to school health can make a difference! A coordinated approach to school health improves kids’ health and their capacity to learn through the support of families, schools, and communities working together. At its very core, a coordinated approach to school health is about keeping students healthy over time, reinforcing positive healthy behaviors throughout the school day, and making it clear that *good health and learning go hand in hand.*

Goal:

All students in Choctaw County High School shall possess the knowledge and skills necessary to make healthy choices that promote healthy lifestyles. All staff members in Choctaw County High School are encouraged to model a lifestyle of healthy eating patterns and moderate physical activity as a valuable part of their daily lives.

To meet this goal, the Choctaw County High School adopts this school wellness policy with the following commitments to implementing a coordinated approach to school health. This policy is designed to effectively utilize school and community resources and to equitably serve the needs and interests of all students and staff, taking into consideration differences in culture.
