

CENSUS 101: WHAT YOU NEED TO KNOW

The 2020 Census is closer than you think!
Here's a quick refresher of what it is and why it's essential that everyone is counted.

Everyone counts.

The census counts every person living in the U.S. once, only once, and in the right place.

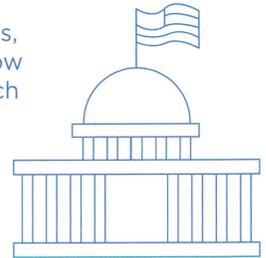

It's in the constitution.

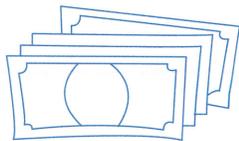

The U.S. Constitution mandates that everyone in the country be counted every 10 years. The first census was in 1790.

It's about fair representation.

Every 10 years, the results of the census are used to reapportion the House of Representatives, determining how many seats each state gets.

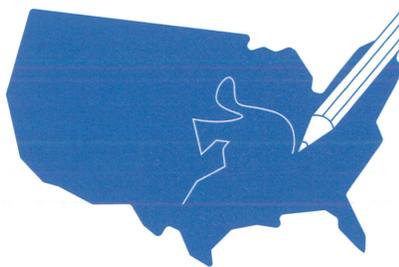

It's about \$675 billion.

The distribution of more than \$675 billion in federal funds, grants and support to states, counties and communities are based on census data.

That money is spent on schools, hospitals, roads, public works and other vital programs.

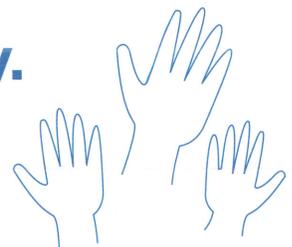

It's about redistricting.

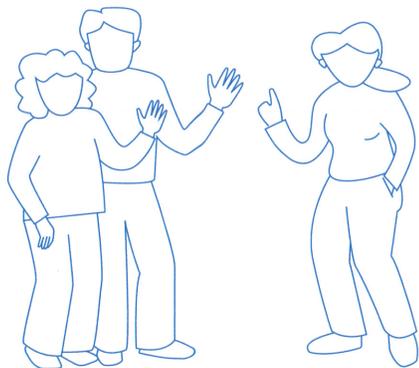

After each decade's census, state officials redraw the boundaries of the congressional and state legislative districts in their states to account for population shifts.

Taking part is your civic duty.

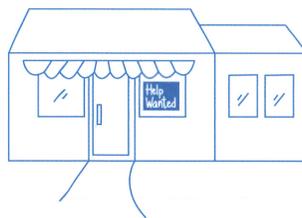

Completing the census is mandatory: it's a way to participate in our democracy and say "I COUNT!"

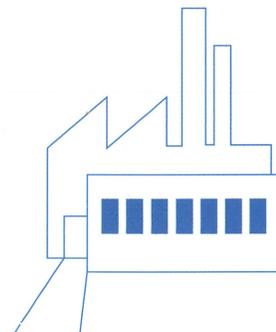

Census data are being used all around you.

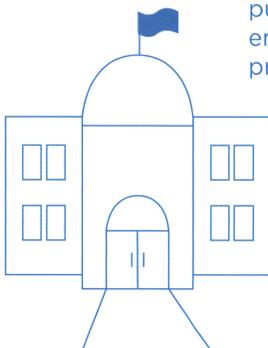

Residents use the census to support community initiatives involving legislation, quality-of-life and consumer advocacy.

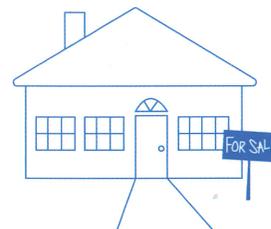

Businesses use census data to decide where to build factories, offices and stores, which create jobs.

Local governments use the census for public safety and emergency preparedness.

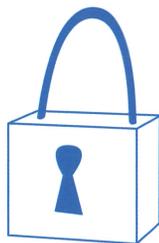

Real estate developers use the census to build new homes and revitalize old neighborhoods.

Your privacy is protected.

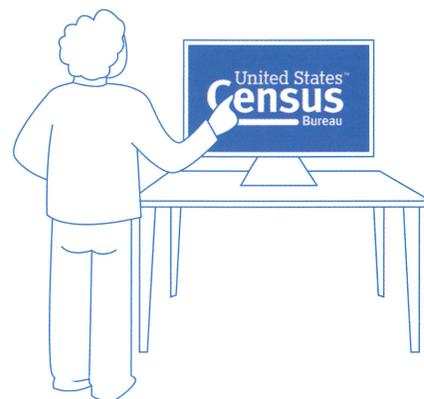

It's against the law for the Census Bureau to publicly release your responses in any way that could identify you or your household.

By law, the Census Bureau cannot share your answers with any other government agency.

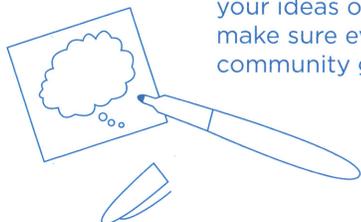

2020 will be easier than ever.

In 2020, you will be able to respond to the census online.

You can help.

You are the expert—we need your ideas on the best way to make sure everyone in your community gets counted.

How the 2020 Census will invite everyone to respond

What to Expect in the Mail

When it's time to respond, most households will receive an invitation in the mail.

Every household will have the option of responding online, by mail, or by phone.

Depending on how likely your area is to respond online, you'll receive either an invitation encouraging you to respond online or an invitation along with a paper questionnaire.

Letter Invitation

- Most areas of the country are likely to respond online, so most households will receive a letter asking you to go online to complete the census questionnaire.
- We plan on working with the U.S. Postal Service to stagger the delivery of these invitations over several days. This way we can spread out the number of users responding online, and we'll be able to serve you better if you need help over the phone.

Letter Invitation and Paper Questionnaire

- Areas that are less likely to respond online will receive a paper questionnaire along with their invitation. The invitation will also include information about how to respond online or by phone.

WHAT WE WILL SEND IN THE MAIL	
On or between	You'll receive:
March 12-20	An invitation to respond online to the 2020 Census. (Some households will also receive paper questionnaires.)
March 16-24	A reminder letter.
	If you haven't responded yet:
March 26-April 3	A reminder postcard.
April 8-16	A reminder letter and paper questionnaire.
April 20-27	A final reminder postcard before we follow up in person.

We understand you might miss our initial letter in the mail.

- Every household that hasn't already responded will receive reminders and will eventually receive a paper questionnaire.
- It doesn't matter which initial invitation you get or how you get it—we will follow up in person with all households that don't respond.

How the 2020 Census will invite everyone to respond

Every household will have the option of responding online, by mail, or by phone.

Nearly every household will receive an invitation to participate in the 2020 Census from either a postal worker or a census worker.

95% of households will receive their census invitation in the mail.

Almost 5% of households will receive their census invitation when a census taker drops it off. In these areas, the majority of households may not receive mail at their home's physical location (like households that use PO boxes or areas recently affected by natural disasters).

Less than 1% of households will be counted in person by a census taker, instead of being invited to respond on their own. We do this in very remote areas like parts of northern Maine, remote Alaska, and in select American Indian areas that ask to be counted in person.

Note: We have special procedures to count people who don't live in households, such as students living in university housing or people experiencing homelessness.

A Message from the Census Bureau Director

We pledge to keep your answers confidential. This commitment means you can provide honest answers to our questions knowing that they will only be merged into thousands of others to paint a portrait of the country. The Census Bureau knows that our pledge of confidentiality is key in obtaining accurate data.

Without you, the country doesn't have timely statistical information about how we are doing economically, educationally, or socially. This is a fundamental way that the American public can make sure that our democracy is well informed.

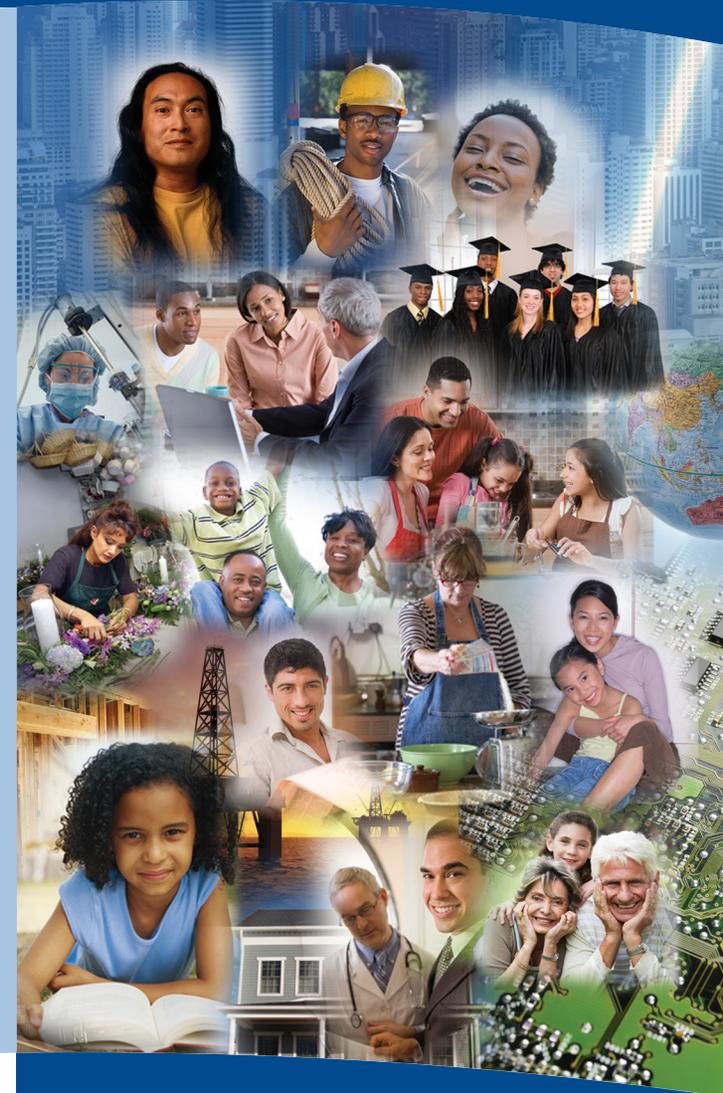

For statistical surveys to work, those chosen at random to be surveyed must respond. We want you to feel safe doing this. The Census Bureau has successfully protected respondents' answers for more than 100 years.

Our highest priority at the Census Bureau is using your answers only for determining how the country is doing. By law, we cannot share your answers with anyone—including other federal agencies and state and local law enforcement agencies. In 2010, the Justice Department determined that no provision of the U.S. Patriot Act overrides the provisions of Title 13 that protects the confidentiality of Census Bureau data.

The U.S. Census Bureau Respects Your Privacy and Protects Your Personal Information

For More Information

United States™
Census
Bureau
Measuring America

We Protect Your Information.

It's Safe

Participating in Census Bureau censuses and surveys is safe. Your answers are protected by law and are not shared with anyone.

The Laws

Title 13 of the U.S. Code ensures that all information collected by the Census Bureau is used for statistical purposes only.

The Confidential Information Protection and Statistical Efficiency Act of 2002 (CIPSEA) also provides strong confidentiality protections for statistical information collections.

The Oath

All Census Bureau employees take an oath of nondisclosure and are sworn for life to protect the confidentiality of all data collected by the agency.

The Penalties

The penalty for unlawful disclosure of information protected by Title 13 of the U.S. Code and CIPSEA is a fine of up to \$250,000 or imprisonment of up to 5 years, or both.

Safety in the Digital Age

The Census Bureau protects your information through passwords, firewalls, encryption and other technological safeguards.

It's Confidential

The Census Bureau is bound by strict laws and solemn commitment to protect the confidential information we collect.

- We protect the identity of individuals and businesses, starting from the point at which the data are collected and continuing decades after statistics are published.
- Only authorized Census Bureau employees who have a business need to know can see your personal identifiable information.
- No authority can obtain your personal information from the Census Bureau—not even the White House.
- Copies of census questionnaires cannot be subpoenaed for use in a court of law nor released to anyone until after 72 years.
- Data collected on individuals or establishments may not be disclosed under the Freedom of Information Act.
- Statistical totals are even withheld if they represent a geographic area so small that someone might be identified.

It's Important

The Census Bureau measures the nation's people, places, and economy. By participating in a census or survey, you help shape the future for yourself, your community, and the country.

Your Community

The Census Bureau is often the only source of statistics at the local level every year, giving even the smallest communities accurate, timely information that is essential for decision-making.

The data that you provide tells us vital information about emerging trends, such as the condition of education, hospital care, retail sales, and crime.

Our Economy

The Census Bureau provides critical, timely information on the health of the U.S. and local economy.

Economic data collected by the Census Bureau form the basis for the national unemployment rate, official income and poverty statistics, Consumer Price Index, monthly housing statistics, and other economic indicators.

Why We Ask

The 2020 Census is easy. The questions are simple.

The census asks questions that provide a snapshot of the nation. Census results affect your voice in government, how much funding your community receives, and how your community plans for the future.

When you fill out the census, you help:

- Determine how many seats your state gets in Congress.
- Guide how **more than \$675 billion** in federal funding is distributed to states and communities each year.
- Create jobs, provide housing, prepare for emergencies, and build schools, roads and hospitals.

Population Count (Number of People Living or Staying)

We ask this question to collect an accurate count of the number of people at each address on Census Day, April 1, 2020. Each decade, census results determine how many seats your state gets in Congress. State and local officials use census counts to draw boundaries for districts like congressional districts, state legislative districts and school districts.

Any Additional People Living or Staying

Our goal is to count people once, only once and in the right place according to where they live on Census Day. Keeping this goal in mind, we ask this question to ensure that everyone living at an address is counted.

Owner/Renter

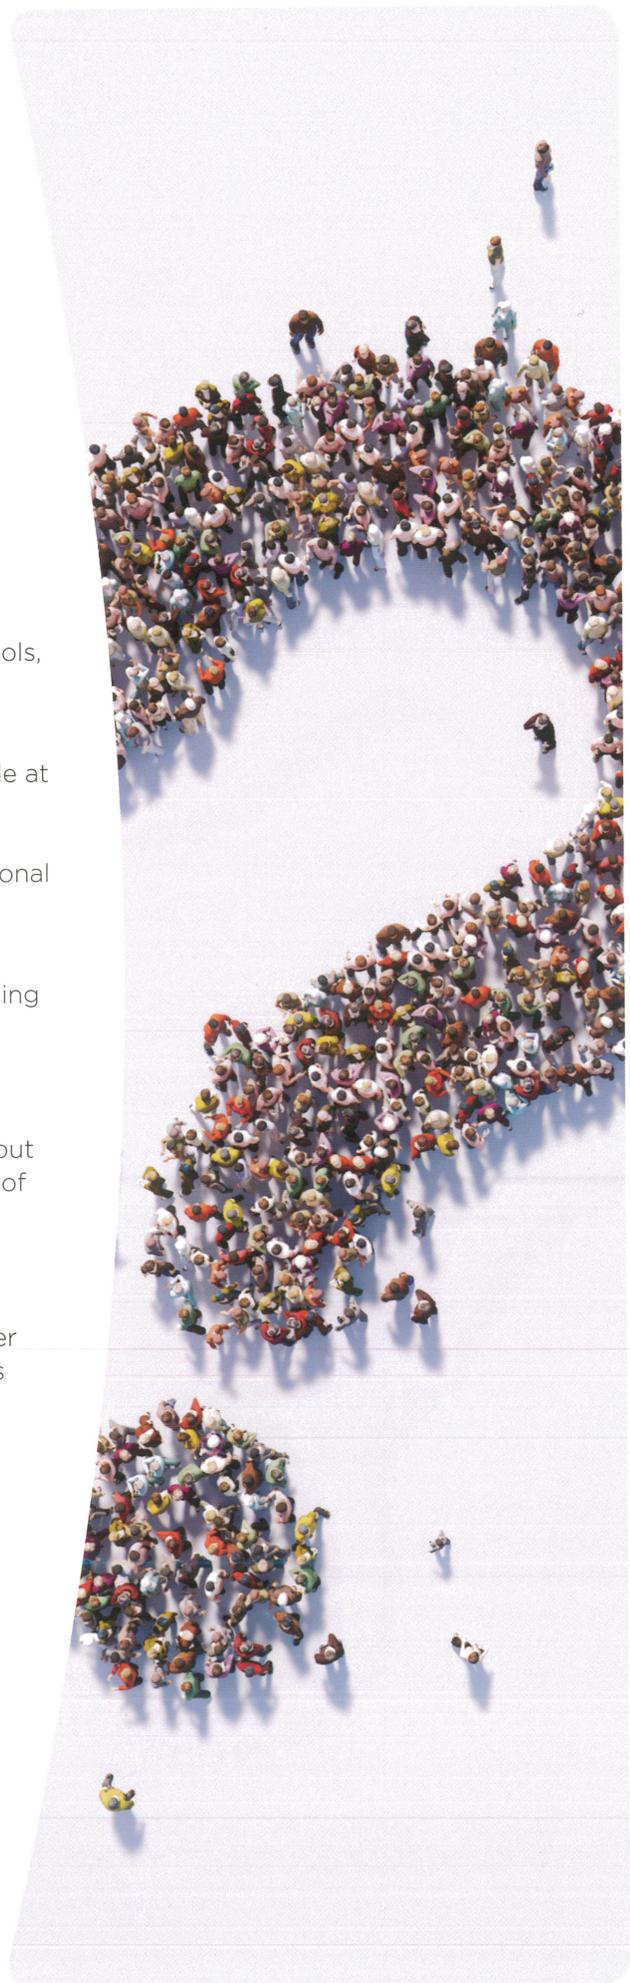

We ask about whether a home is owned or rented to create statistics about homeownership and renters. Homeownership rates serve as an indicator of the nation's economy and help in administering housing programs and informing planning decisions.

Phone Number

We ask for a phone number in case we need to contact you. We will never share your number and will only contact you if needed for official Census Bureau business.

Name

We ask for names to ensure everyone in the house is counted. Listing the name of each person in the household helps respondents include all members, particularly in large households where a respondent may forget who was counted and who was not.

Sex

We ask about the sex of each person to create statistics about males and females. Census data about sex are used in planning and funding government programs, and in evaluating other government programs and policies to ensure they fairly and equitably serve the needs of males and females. These statistics are also used to enforce laws, regulations and policies against discrimination in government programs and in society.

Age and Date of Birth

We ask about age and date of birth to understand the size and characteristics of different age groups and to present other data by age. Local, state, tribal and federal agencies use age data to plan and fund government programs that provide assistance or services for specific age groups, such as children, working-age adults, women of childbearing age, or the older population. These statistics also help enforce laws, regulations and policies against age discrimination in government programs and in society.

Hispanic, Latino or Spanish Origin

We ask about whether a person is of Hispanic, Latino or Spanish origin to create statistics about this ethnic group. The data collected in this question are needed by federal agencies to monitor compliance with anti-discrimination provisions, such as under the Voting Rights Act and the Civil Rights Act.

Race

We ask about a person's race to create statistics about race and to present other statistics by race groups. The data collected in this question are needed by federal agencies to monitor compliance with anti-discrimination provisions, such as under the Voting Rights Act and the Civil Rights Act. State governments use the data to determine congressional, state and local voting districts.

Whether a Person Lives or Stays Somewhere Else

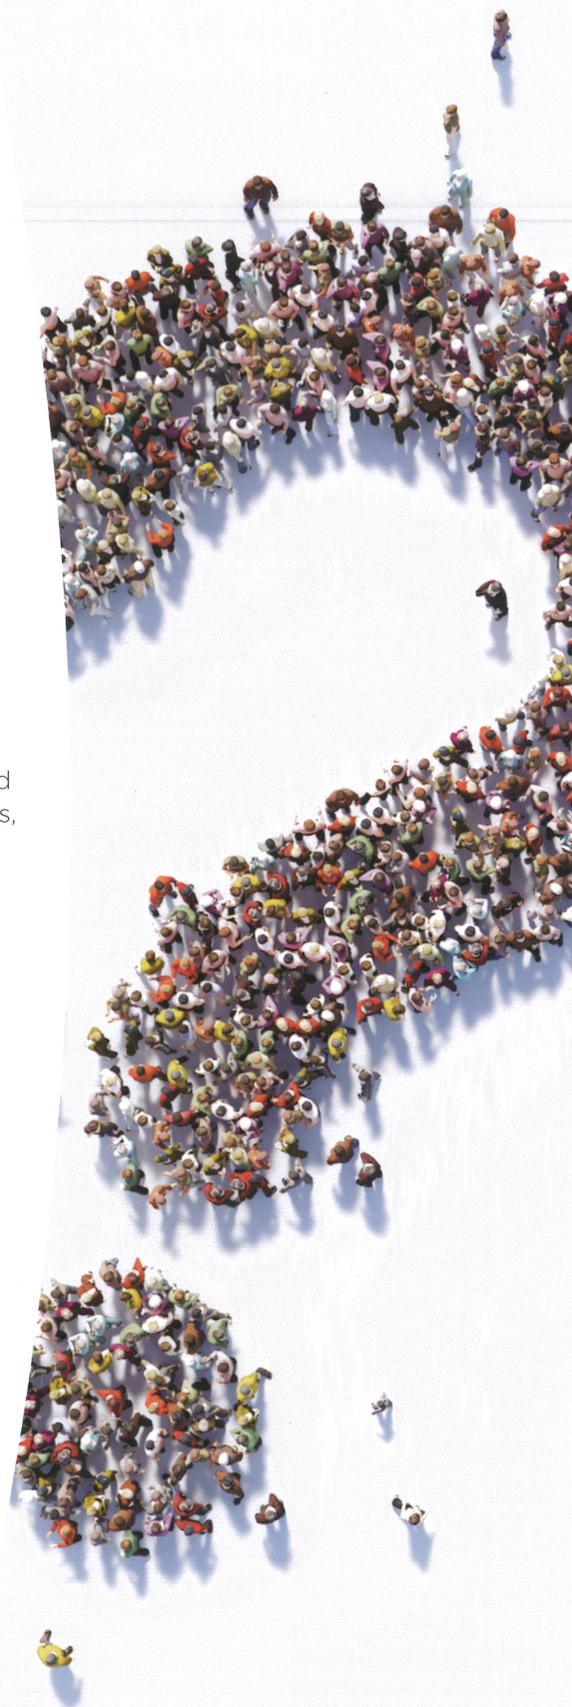

Our goal is to count people once, only once and in the right place according to where they live on Census Day. Keeping this goal in mind, we ask this question to ensure individuals are not included at multiple addresses.

Relationship

We ask about the relationship of each person in a household to one central person to create estimates about families, households and other groups. Relationship data are used in planning and funding government programs that provide funds or services for families, people living or raising children alone, grandparents living with grandchildren, or other households that qualify for additional assistance.

Citizenship

A question about a person's citizenship is used to create statistics about citizen and noncitizen populations. These statistics are essential for enforcing the Voting Rights Act and its protections against voting discrimination. Knowing how many people reside in the community and how many of those people are citizens, in combination with other information, provides the statistical information that helps the government enforce Section 2 of the Voting Rights Act and its protections against discrimination in voting.

The 2020 Census and Confidentiality

Your responses to the 2020 Census are safe, secure, and protected by federal law. Your answers can only be used to produce statistics—they cannot be used against you in any way. By law, all responses to U.S. Census Bureau household and business surveys are kept completely confidential.

Respond to the 2020 Census to shape the future.

Responding to the census helps communities get the funding they need and helps businesses make data-driven decisions that grow the economy. Census data impact our daily lives, informing important decisions about funding for services and infrastructure in your community, including health care, senior centers, jobs, political representation, roads, schools, and businesses. More than \$675 billion in federal funding flows back to states and local communities each year based on census data.

Your census responses are safe and secure.

The Census Bureau is required by law to protect any personal information we collect and keep it strictly confidential. The Census Bureau can only use your answers to produce statistics. In fact, every Census Bureau employee takes an oath to protect your personal information for life. Your answers cannot be used for law enforcement purposes or to determine your personal eligibility for government benefits.

By law, your responses cannot be used against you.

By law, your census responses cannot be used against you by any government agency or court in any way—not by the Federal Bureau of Investigation (FBI), not by the Central Intelligence Agency (CIA), not by the Department of Homeland Security (DHS), and not by U.S. Immigration and Customs Enforcement (ICE). The law requires the Census Bureau to keep your information confidential and use your responses only to produce statistics.

The law is clear—no personal information can be shared.

Under Title 13 of the U.S. Code, the Census Bureau cannot release any identifiable information about individuals, households, or businesses, even to law enforcement agencies.

The law states that the information collected may only be used for statistical purposes and no other purpose.

To support historical research, Title 44 of the U.S. Code allows the National Archives and Records Administration to release census records only after 72 years.

All Census Bureau staff take a lifetime oath to protect your personal information, and any violation comes with a penalty of up to \$250,000 and/or up to 5 years in prison.

There are no exceptions.

The law requires the Census Bureau to keep everyone's information confidential. By law, your responses cannot be used against you by any government agency or court in any way. The Census Bureau will not share an individual's responses with immigration enforcement agencies, law enforcement agencies, or allow that information to be used to determine eligibility for government benefits. Title 13 makes it very clear that the data we collect can only be used for statistical purposes—we cannot allow it to be used for anything else, including law enforcement.

It's your choice: you can respond securely online, by mail, or by phone.

You will have the option of responding online, by mail, or by phone. Households that don't respond in one of these ways will be visited by a census taker to collect the information in person. Regardless of how you respond, your personal information is protected by law.

Your online responses are safe from hacking and other cyberthreats.

The Census Bureau takes strong precautions to keep online responses secure. All data submitted online are encrypted to protect personal privacy, and our cybersecurity program meets the highest and most recent standards for protecting personal information. Once the data are received, they are no longer online. From the moment the Census Bureau collects responses, our focus and legal obligation is to keep them safe.

We are committed to confidentiality.

At the U.S. Census Bureau, we are absolutely committed to keeping your responses confidential. This commitment means it is safe to provide your answers and know that they will only be used to paint a statistical portrait of our nation and communities.

Learn more about the Census Bureau's data protection and privacy program at www.census.gov/privacy.

Laws protecting personal census information have withstood challenges.

In 1982, the U.S. Supreme Court confirmed that even addresses are confidential and cannot be disclosed through legal discovery or the Freedom of Information Act (FOIA). In 2010, the U.S. Justice Department determined that the Patriot Act does not override the law that protects the confidentiality of individual census responses. No court of law can subpoena census responses.

Counting Young Children in the 2020 Census

Counting everyone once, only once, and in the right place

An estimated 5 percent of kids under the age of 5 weren't counted in the 2010 Census. That's about 1 million young children, the highest of any age group.

We need your help closing this gap in the 2020 Census. Here's what our research tells us about why young children are missed and what you can do to help make sure they are counted.

Common situations where young children aren't counted

The **child splits time between two homes**.

The child lives or stays with **another family or with another relative such as a grandparent**.

How you can help?

- Emphasize that the census counts **everyone where they live** and sleep most of the time, even if the living arrangement is temporary or the parents of the child do not live there.
- If the child truly spends equal amounts of time between two homes, count them where they stayed on **Census Day, April 1**. Coordinate with the other parent or caregiver, if possible, so the child is not counted at both homes.
- If it's not clear where the child lives or sleeps most of the time, count them where they stayed on Census Day, April 1.

The child lives in a **lower income household**.

- Explain to service providers and families that responding to the census helps determine **\$675 billion in local funding** for programs such as food stamps (also called the Supplemental Nutritional Assistance Program or SNAP), the National School Lunch Program, and the Children's Health Insurance Program (CHIP). When children are missed in the census, these programs miss out on funding that is based on the number of children counted.

The child lives in a household with **young parents or a young, single mom**.

- Explain that filling out the census yourself, on your own schedule, is easier than having to respond when a census worker knocks on your door. Remind these households that the form should **only take about 10 minutes** to fill out and can be done online or over the phone, in addition to mailing it back.
- Encourage moms with young children to ask other household members to count them and their children on the form if others live in the household.

The child is a **newborn**.

- Emphasize that parents should **include babies** on census forms, even if they are still in the hospital on April 1.
- **Encourage facilities** providing services to newborns to remind parents about the importance of counting their children on the census form.
- Highlight the fact that the census form only takes about 10 minutes to complete, and parents can **fill it out online or over the phone in addition to paper** at a time that works best for them.

Common situations where young children aren't counted

How you can help?

The child lives in a household that is **large, multigenerational, or includes extended or multiple families.**

- Remind the person filling out the form to count all children, including nonrelatives and children with no other place to live, even if they are only living at the address temporarily on April 1.
- Spread the word that the census **counts all people living or staying** at an address, not just the person or family who owns or rents the property.

The child lives in a household that **rents or recently moved.**

- Encourage renters and recent movers to complete their census forms **online or over the phone**, right away. That way they don't need to worry about paper forms getting lost in the move.
- **Focus efforts** on multiunit buildings that are likely to have renters.

The child lives in a household where they're **not supposed to be**, for one reason or another.

- Please explain to those that have children living in places where they aren't allowed (for example, grandparents in a seniors-only residence that have a grandchild living with them, a family with more people, including children, than the lease allows) that they should include the children because the **Census Bureau does not share information** so it can't be used against them.
- Emphasize the Census Bureau's legal commitment to keep census **responses confidential.**
- Explain that the Census Bureau **will never share information** with immigration enforcement agencies like Immigration and Customs Enforcement (ICE), law enforcement agencies like the police or Federal Bureau of Investigation (FBI), or allow this information to be used to determine eligibility for government benefits.

The child lives in a **non-English or limited-English speaking** household.

- **Conduct outreach** and create resources in non-English languages that highlight the importance of counting young children.
- **Encourage non-English speakers to self-respond** to the census and let them know that for the 2020 Census, the online form and telephone line will be available in 13 languages, including English. Language guides will be available in 59 languages other than English.

The child lives in a household of **recent immigrants or foreign-born adults.**

- Work with community members to conduct outreach in neighborhoods with recent immigrants. **Focus efforts** on the **community's gathering places** like local grocery stores, places of worship, and small restaurants.
- Emphasize the **Census Bureau's legal commitment** to keep census responses confidential. Explain that the Census Bureau will never share information with immigration enforcement agencies like Immigration and Customs Enforcement (ICE), law enforcement agencies like the police or Federal Bureau of Investigation (FBI), or allow this information to be used to determine eligibility for government benefits.

How census data is used

- 1 Decision making at all levels of government.
- 2 Drawing federal, state, and local legislative districts.
- 3 Attracting new businesses to state and local areas.
- 4 Distributing over \$675 billion annually in federal funds and even more in state funds.
- 5 Forecasting future transportation needs for all segments of the population.
- 6 Planning for hospitals, nursing homes, clinics, and the location of other health services.
- 7 Forecasting future housing needs for all segments of the population.
- 8 Directing funds for services for people in poverty.
- 9 Designing public safety strategies.
- 10 Development of rural areas.
- 11 Analyzing local trends.
- 12 Estimating the number of people displaced by natural disasters.
- 13 Developing assistance programs for American Indians and Alaska Natives.
- 14 Creating maps to speed emergency services to households in need of assistance.
- 15 Delivering goods and services to local markets.
- 16 Designing facilities for people with disabilities, the elderly, or children.
- 17 Planning future government services.
- 18 Planning investments and evaluating financial risk.
- 19 Publishing economic and statistical reports about the United States and its people.
- 20 Facilitating scientific research.
- 21 Developing “intelligent” maps for government and business.
- 22 Providing proof of age, relationship, or residence certificates provided by the Census Bureau.
- 23 Distributing medical research.
- 24 Reapportioning seats in the House of Representatives.
- 25 Planning and researching for media as backup for news stories.
- 26 Drawing school district boundaries.
- 27 Planning budgets for government at all levels.
- 28 Spotting trends in the economic well-being of the nation.
- 29 Planning for public transportation services.
- 30 Planning health and educational services for people with disabilities.
- 31 Establishing fair market rents and enforcing fair lending practices.
- 32 Directing services to children and adults with limited English-language proficiency.
- 33 Planning urban land use.
- 34 Planning outreach strategies.
- 35 Understanding labor supply.
- 36 Assessing the potential for spread of communicable diseases.
- 37 Making business decisions.
- 38 Understanding consumer needs.
- 39 Planning for faith-based organizations.
- 40 Locating factory sites and distribution centers.
- 41 Distributing catalogs and developing direct mail pieces.
- 42 Setting a standard for creating both public and private sector surveys.
- 43 Evaluating programs in different geographic areas.
- 44 Providing genealogical research.
- 45 Planning for school projects.
- 46 Developing adult education programs.
- 47 Researching historical subject areas.
- 48 Determining areas eligible for housing assistance and rehabilitation loans.

U.S. Census Bureau at a Glance

How well do you know the 50 states?

The Census Bureau is the federal government's largest statistical agency. We are dedicated to providing current facts and figures about America's people, places, and economy. Federal law protects the confidentiality of all the information the Census Bureau collects.

OUR STATISTICAL PROGRAMS

Censuses

- The **Decennial Census** is the once-a-decade population and housing count required by the U.S. Constitution. The Census Bureau counts all 50 states, the District of Columbia, Puerto Rico, and the Island Areas. The results of the decennial census determine the number of seats for each state in the U.S. House of Representatives and are used to draw congressional and state legislative districts and to distribute more than \$675 billion in federal funds each year.
- The **Economic Census** measures the nation's economy every five years, providing vital statistics for virtually every industry and geographic area in the country.
- The **Census of Governments** provides comprehensive data about the nearly 90,000 state and local governments in the nation every five years.

Surveys

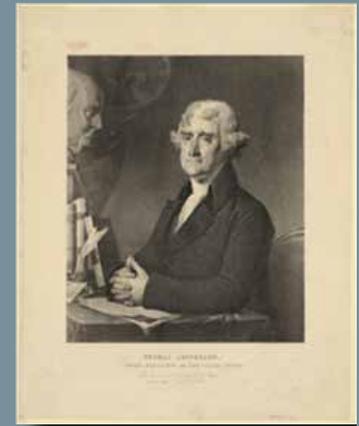

- The **American Community Survey (ACS)** is an ongoing annual survey that shows what the U.S. population looks like and how it lives. The ACS helps communities decide where to target services and resources.
- **Demographic surveys** measure income, poverty, education, health insurance coverage, housing quality, crime victimization, computer usage, and many other subjects.
- **Economic surveys** are conducted monthly, quarterly, and yearly. They cover selected sectors of the nation's economy and supplement the Economic Census with more-frequent information about the dynamic economy. These surveys yield more than 400 annual economic reports, including principal economic indicators.
- **Sponsored surveys** are demographic and economic surveys that we conduct for other government agencies. They include the Current Population Survey, the National Health Interview Survey, and the National Survey of College Graduates.

U.S. Department of Commerce
Economics and Statistics Administration
U.S. CENSUS BUREAU
[census.gov](https://www.census.gov)

Our Mission

The U.S. Census Bureau's mission is to serve as the nation's leading provider of quality data about its people and economy.

Our History

Thomas Jefferson directed the first census in 1790. As required by the U.S. Constitution, a census has been taken every 10 years thereafter. In 1840, the Census Act authorized the establishment of a centralized Census Office. In 1902, the Census Office became a permanent organization within the Department of Interior. A year later, it was renamed the Bureau of the Census and moved to the new Department of Commerce and Labor.

Population Estimates and Projections

- Every year, the Census Bureau publishes population estimates and demographic components of change, such as births, deaths, and migration. This data can be sorted by characteristics such as age, sex, and race, as well as by national, state, and county location.
- The Census Bureau estimates population size and characteristics. Population projections are based on future demographic trends, including births, life expectancy, and migration patterns.

Data Tools and Apps at census.gov

- **QuickFacts** provides easy access to facts about people, business, and geography.
- **American FactFinder** helps search a massive amount of data at multiple levels of geography over time periods.
- **My Congressional District** has key stats by Congressional district.

In addition, explore the **population clock**, **economic indicators**, topical **data visualizations**, and **infographics**.

Go to **census.gov/developers** for access to datasets via APIs. Developers should check out the **Discovery Tool**, sign up for e-mail newsletters and information exchanges, and make requests for features and data via the **Developer Forum**.

Contact Us

There are many reasons you may want to contact the Census Bureau. Please see our list of contacts to help decide which is best for you.

Call Center: 301-763-INFO (4636) or 800-923-8282

TDD: TTY users can dial 800-877-8339 to use the Federal Relay Service.

U.S. Census Bureau
4600 Silver Hill Road
Suitland, MD 20746

Social Media: Connect with the U.S. Census Bureau using social media.

Follow Us @uscensusbureau

Explore the U.S. Census Bureau's statistics about America's people, places, and economy at census.gov.

Research

The Census Bureau engages in a range of scientific and statistical activities. We actively research survey and questionnaire design as well as different modes of data collection, processing, and dissemination.

Geography

The Census Bureau maintains a nationwide geographic database that includes boundary information for legal, statistical, and administrative areas. We also track physical features such as streets and rivers for geographic area delineation.

The Census Bureau maintains a national address file to support censuses and surveys.

International Stats

The Census Bureau produces international demographic data, estimates, projections, and reports. The Census Bureau also provides technical advisory services for foreign governments.

Regional Offices

We have regional offices in Atlanta, Chicago, Denver, Los Angeles, New York, and Philadelphia. For more information, visit census.gov/regions.

Shape our children's future. Start with the 2020 Census.

Young children experience new adventures each day, and little ones need all of the support they can get during these early years.

Filling out the 2020 Census is one easy way to provide resources for children and their communities for the next 10 years. The 2020 Census counts everyone living in the United States and its territories.

While all children need to be counted, those under the age of 5 are often missed. When newborn babies and children are not counted, support for programs such as health insurance, hospitals, childcare, food assistance, schools, and early childhood development is impacted.

Right now, students across the country are learning all about the 2020 Census through the Statistics in Schools program. This program offers free materials and resources to schools for grades pre-K through 12. The resources help students understand the value of real-life data and prepare them for an increasingly data-driven world. You can find materials such as activities, a storybook, and a song that can be used with children ages 2-5 at **[CENSUS.GOV/SCHOOLS](https://www.census.gov/schools)**.

Shape
your future
START HERE >

United States®
Census
2020

Make sure you do your part to count all children. In March 2020, when you respond to the census, here is what you need to know:

- Count all children who live in your home whether they are related to you or not.
- If a child's time is evenly divided between two households, count where the child is on Census Day—April 1, 2020.
- Count children who are living in your home on April 1, 2020, even if they are only staying with you temporarily.
- Count newborn babies, even if they are still in the hospital on April 1, 2020.

Responding to the census is easy, safe, and important. You can complete the form online, by phone, or by mail.

And remember: Just like you protect the children in your care, the U.S. Census Bureau protects your privacy. The law requires the Census Bureau to keep your information confidential, and your responses cannot be used against you.

Help shape their future by going to 2020CENSUS.GOV.
