The Pacific Coast region is in the western United States. There are five states in this (region). California, Oregon, and Washington are three (of) the states. They are also part (of) the continental United States. In fact, (these) adjoining states share a common coastline. (They) have two natural borders: the Pacific (Ocean) on the west and mountain ranges (on) the east.

The other two Pacific (Coast) states, Alaska and Hawaii, are separate. (Alaska) is a large peninsula in the (far) northwest corner of North America. It (is) completely separated from the continental Untied (States) by Canada. Hawaii is a chain (of) island halfway across the Pacific Ocean.

(Unlike) states in the other United States (regions), the Pacific Coast states are vastly (different) from one another. One big difference (is) in their geography. For example, Hawaii’s (s) lush tropical islands are in direct (contrast) to Alaska’s frozen tundra and (vast) wilderness. The three other Pacific Coast (states) have striking, but different, landscapes. Another (difference) can be found in the residents. (The) region is home to a richly (diverse) population. In California, for example, Hispanics, (Asians), and African Americans make up almost (half) of the population. One-sixth of the (population) of Alaska are Eskimos or Native (American) people. In Hawaii, there are many (people) of Asian and indigenous descent.

The (Pacific) Coast region is rich in natural (resources). California grows much of the country’s (s) fruits and vegetables. Most of the (timber) in the United States comes from (Washington) and Oregon. Alaska has natural oil (and) gas. Hawaii grows much of the (world)’s sugar cane and pineapple. Much (diversity) and many natural treasurers can be (found) in the Pacific Coast region.
Pacific Coast: The Last Frontier 818
The Six-Minute Solution, Sopris West

The Pacific Coast region is in the western United States. There are five states in this (timber, and, region). California, Oregon, and Washington are three (landscapes, of, diversity) the states. They are also part (of, americans, sugar) the continental United States. In fact, (these, many, in) adjoining states share a common coastline. (One, On, They) have two natural borders: the Pacific (can, for, Ocean) on the west and mountain ranges (northwest, on, american) the east.

The other two Pacific (geography, Coast, s) states, Alaska and Hawaii, are separate. (Diverse, Share, Alaska) is a large peninsula in the (another, far, wilderness) northwest corner of North America. It (pineapple, asians, is) completely separated from the continental Untied (States, indigenous, adjoining) by Canada. Hawaii is a chain (completely, of, united) island halfway across the Pacific Ocean.

(Across, Continental, Unlike) states in the other United States (descent, regions, peninsula), the Pacific Coast states are vastly (different, hawaii, half) from one another. One big difference (gas, western, is) in their geography. For example, Hawaii’(african, native, s) lush tropical islands are in direct (vastly, three, contrast) to Alaska’s frozen tundra and (residents, vast, vegetables) wilderness. The three other Pacific Coast (resources, cane, states) have striking, but different, landscapes. Another (west, asian, difference) can be found in the residents. (The, Islands, Part) region is home to a richly (direct, of, diverse) population. In California, for example, Hispanics, (be, also, Asians), and African Americans make up almost (comes, another, half) of the population. One-sixth of the (population, most, eskimos) of Alaska are Eskimos or Native (vast, American, oil) people. In Hawaii, there are many (fact, oregon, people) of Asian and indigenous descent.

The (Pacific, but, big) Coast region is rich in natural (have, resources, america). California
grows much of the country’s, or, north) fruits and vegetables. Most of the (timber, large, halfway) in the United States comes from (Washington, almost, borders) and Oregon. 
Alaska has natural oil (alaska, and, these) gas. Hawaii grows much of the (tundra, ocean, world)’s sugar cane and pineapple. Much (separated, diversity, this) and many natural treasurers can be (found, unlike, coast) in the Pacific Coast region.
