MCS Server and Storage Virtualization Questions and Responses

1. What platform is your Microsoft System Center on today? 2008 or 2012? We don't use System Center currently. Computers are patched manually. Imaging is achieved with stand alone WDS server. MCS would want whatever version comes free with the EES agreement from Microsoft.

2. On top of that – what components are installed on your System Center?

    § Operating Manager

    § Configuration Manager- I understand this is free with EES

    § Virtual Machine Manager

    § Service Manager

    § Data Protection Manager

    § Orchestrator

3. Will you need any additional PDUs? No

4. Will you need any additional cabling? No patching cables will needed. Any cables needed outside of patch cables will need to be included in the bid

5. What version of Veeam v8 were you looking for? Essentials or Enterprise? Not knowing the features of either one, pricing on both should be submitted

6. How everything is going to connect to your current core switch besides the VLAN's. The group decided to include in the bid price a 24 port HP module for 5406Z core switch.
