Opt.2 = DIY (Do It Yourself)

Opt. 3 = Handyman/woman Skills

Subjects: (?)

Basic drywall installation and/or repair.

Basic electrical, troubleshoot, replace switches/outlets.

Basic Plumbing, replace/repair.

Basic tools and uses, necessary tools in a tool box.

Basic difference in paint types, preparation, etc.

Basic principles in apply stucco.

Practical, hands-on training courses are ideal for beginners looking to learn home maintenance for DIY or handyman skills, or experienced people looking to extend their skills or perfect their skills, or those looking for a new career.

You will be learning DIY skills to maintain your home from day one and you will be amazed at what you can learn within a short period of time.

This hands on practical course is ideal for those with no experience looking to learn some of the general skills required to keep your home in good repair or for a basic introduction into the various building trades. This course will teach you the basic DIY skills required to tackle most household tasks.

This course will enable men and women to tackle a wide range of common DIY repair and improvement tasks around the house. This course can enable people to save money on common repairs for which it would be expensive to pay; enable them to take preventive action before problems such as leaks or breaks become serious and expensive; realize their own home improvement plans rather than wait for a “DIY” friend to be free.

You will learn as much as possible in the time allocated and will include, but not limited to, the following subjects:

What practical skills will you learn on this course?

- The correct use of power tools, such as drills.
- Correct use of basic hand tools such as saws, screwdrivers and levels.
- Use of joining mediums such as nails and screws (sizes and types).
- Refreshing grout in tile.
- Replacing a damaged tile.
- Repairing silicon sealants around baths and showers.

- Repairing or replacing a faucet.
- Correct use of paint types.
- How a domestic plumbing system works.
- How a domestic electrical system works.
- How to fix a dripping tap for less than a plumber call out.
- How to unblock sinks.
- How to change light switches, fixtures and electrical sockets.
- How to change door handles, knobs and locks.
- How to hang pictures, shelves level and vertical.
- How to patch, repair small plaster areas in solid or plasterboard walls.

Who will this course suit?

- Men and women looking to extend a very basic DIY knowledge in order to complete common DIY repair and maintenance tasks in the home.
- Single living individuals looking to maintain or acquire DIY independence in home maintenance and improvements.
- Individuals looking to save money on property development and DIY projects.
- Landlords and property developers looking to save money and respond faster to faults and breakages.

Why we chose the topics for the DIY course?

- The skills are useful and in demand around the home.
- They are tasks that teach skills that can be formed without extensive training yet can save time and money.

Suggestions for the ideal toolbox, recommendations for specific types of tools to maintain a basic toolbox to accomplish basic repairs around the house. Full instruction will be provided in the use of tools, and a wide selection of tools will be recommended for purchase from any store at any time during or after your course.
