

## **Addendum 2 19NYE-470-C2 - #190014800**

Question: "I was reviewing your RFP and although it states Aruba or equivalent, I wanted to be sure you were interested in seeing proposals from other manufactures equipment. We are a Ruckus reseller and would be proposing that.

The reason I ask is that we meet with NYE County School District a few years ago and they were not open to any new vendors at that time. So, we were wondering if you may be open to a new vendor now, or is your current standard going to remain Aruba."

Answer: As the Narrative States "or equivalent" and as the RFP States: "Entire NCSD wireless infrastructure is Aruba and Aruba Instant controller is used for management. If proposing a product other than our existing infrastructure, please provide an explanation of how this will be implemented and work with our existing deployment and provide a single unified interface for management at each specific site. If certification or training is required to utilize the new equipment, please provide a cost per employee for training and certification."
