

# Paulsboro Schools

## Curriculum

---

Trigonometry

Grade 10 - 12

June 2010

\* For adoption by all regular education programs as specified and for adoption or adaptation by all Special Education Programs in accordance with Board of Education Policy.

Board Approved: <Month Year>

# PAULSBORO SCHOOL DISTRICT

## Superintendent

Dr. Frank Scambia, Superintendent

## BOARD OF EDUCATION

Ms. Sharon Downs, President

Ms. Dolores Burzichelli, Vice President

Mrs. Barbara Dunn

Ms. Bonnie Eastlack

Mr. Louis Fabiani \*

Mr. Gerald D. Hodges, Sr.

Mr. Joseph L. Lisa

Mr. Joseph M. Quinn

Mr. Thomas C. Ridinger

Mr. John H. Vogeding Jr.

Greenwich Township Board of Education Representative

Curriculum Writing Team Member(s): Christopher Costenbader

# **Paulsboro Schools**

## Mission

The mission of the Paulsboro School District is to provide each student the educational opportunities to assist in attaining their full potential in a democratic society. Our instructional programs will take place in a responsive, community based school system that fosters respect among all people. Our expectation is that all students will achieve the New Jersey Core Curriculum Content Standards (NJCCCS) at every grade level.

# INTRODUCTION, PHILOSOPHY OF EDUCATION, AND EDUCATIONAL GOALS

## **Introduction/philosophy: MATHEMATICS**

Paulsboro Schools are committed to providing all students with a quality education resulting in life-long learners who can succeed in a global society. As students begin their mathematics education in Paulsboro, classroom instruction will reflect the best thinking of the day. Children will engage in a wide variety of learning activities designed to develop their ability to reason and solve complex problems. Calculators, computers, manipulatives, technology, and the Internet will be used as tools to enhance learning and assist in problem solving. Group work, projects, literature, and interdisciplinary activities will make mathematics more meaningful and aid understanding. Classroom instruction will be designed to meet the learning needs of all children and will reflect a variety of learning styles.

Paulsboro Schools are committed to providing all students with the opportunity and the support necessary to learn significant mathematics with depth and understanding. This curriculum guide is designed to be a resource for staff members and to provide guidance in the planning, delivery, and assessment of mathematics instruction.

## **Educational Goals: MATHEMATICS**

- (1)** Communicate mathematical ideas in clear, concise, organized language that varies in content, format and form for different audiences and purposes.
- (2)** Comprehend, understand, analyze, evaluate, critique, solve, and respond to a variety of real-life, meaningful problems.
- (3)** Investigate, research, and synthesize various information from a variety of media sources.

## New Jersey State Department of Education Core Curriculum Content Standards

### **A note about <Mathematics> Standards and Cumulative Progress Indicators:**

The New Jersey Core Curriculum Content Standards for **<Mathematics>** were revised in **2009**. The Cumulative Progress Indicators (CPI's) referenced in this curriculum guide refer to these new standards and may be found in the Curriculum folder on the district servers. A complete copy of the new Core Curriculum Content Standards for Mathematics may also be found at:

<http://www.nj.gov/education/aps/cccs/>

# Trigonometry

## Scope and Sequence / Curriculum MAP

Quarter I	
<p><b>Big Idea:</b></p> <p>I. Right Triangle Trigonometry and Trigonometric Functions of any Angle</p> <ol style="list-style-type: none"><li>Identify the appropriate trigonometric function to solve a right triangle</li><li>Solve right triangular statement problems</li><li>Identify reference angles in any quadrant and apply them to right triangle definitions to solve problems.</li></ol>	<p><b>Big Idea:</b></p> <p>II. Radian and Degree Measure and The Unit Circle</p> <ol style="list-style-type: none"><li>Identify radian and degree measure</li><li>Convert radian to degree and vice versa using proportions.</li><li>Convert radian to degree and vice versa using a calculator.</li><li>Identify and graph equation of the unit circle</li><li>State the value of the 6 trigonometric functions as it pertains to a point on the circle and vice versa</li></ol>
<p><b>Big Idea:</b></p> <p>III. Graphing Trigonometric Functions</p> <ol style="list-style-type: none"><li>Use appropriate terminology in describing trigonometric function graphs</li><li>Determine the amplitude, period, and phase shift of a trigonometric function given the equation</li><li>Match trigonometric functions to graphs, determine trigonometric functions from given graphs and determine graphs from given equations.</li><li>Notice significant differences between the graphs of the 6 trigonometric functions</li></ol>	
Quarter II	
<p><b>Big Idea:</b></p> <p>IV. Inverse Trigonometric Functions and Real Life Applications</p> <ol style="list-style-type: none"><li>Evaluate arc functions with and without a calculator</li><li>Solve application problems using trigonometry</li></ol>	<p><b>Big Idea:</b></p> <p>V. Trigonometric Identities</p> <ol style="list-style-type: none"><li>Use the fundamental identities to evaluate functions, simplify expressions, factor expressions, and verify identities</li><li>Identify appropriate equations from the list of the given task</li></ol>

<p><b>Big Idea:</b> VI. Solving Trigonometric Equations</p> <ul style="list-style-type: none"> <li>a. Solve any type of trigonometric equations</li> </ul>	
<b>Quarter III</b>	
<p><b>Big Idea:</b> VII. Law of Sine and Law of Cosines</p> <ul style="list-style-type: none"> <li>a. Given an oblique triangle with AAS or ASA, calculate the missing part</li> <li>b. Given an oblique triangle with SSA, determine the number of solutions and calculate the missing part</li> <li>c. Given an oblique triangle with SAS or SSS, calculate the area</li> </ul>	<p><b>Big Idea:</b> VIII. Vectors in a Plane</p> <ul style="list-style-type: none"> <li>a. Given a vector, determine its magnitude, direction, the unit vector and components</li> <li>b. Understand the definitions of vector addition and scalar multiplication.</li> <li>c. Given two vectors, find the angle between them as well as the resultant vector</li> <li>d. Apply vector knowledge to statement problems</li> </ul>
<p><b>Big Idea:</b> IX. Vectors and Dot Products</p> <ul style="list-style-type: none"> <li>a. Given two vectors, find their dot products and the angle between them</li> <li>b. Determine if two vectors are orthogonal</li> <li>c. Given two vectors, determine the projection of the resultant vector</li> <li>d. Given rates in force and direction, calculate work.</li> </ul>	
<b>Quarter IV</b>	
<p><b>Big Idea:</b> X. Complex Numbers and Complex Solutions of Equations</p> <ul style="list-style-type: none"> <li>a. Understand imaginary numbers and their operations</li> <li>b. Understand imaginary numbers and their standard form.</li> <li>c. Given a polynomial equation, find the number of solutions and its zeros.</li> </ul>	<p><b>Big Idea:</b> XI. Complex Numbers in Trigonometric Form</p> <ul style="list-style-type: none"> <li>a. Convert complex numbers in polar form to standard form and vice versa.</li> <li>b. Given two complex numbers, find their product and quotient.</li> <li>c. Raise a complex number to a power</li> <li>d. Given a number, find its <math>n^{\text{th}}</math> root and state how many roots there are</li> </ul>

Suggested days of Instruction	Curriculum Management System <u>Subject/Grade Level:</u> Trigonometry Grade 10-12	<b>Big Idea: Right Triangle Trigonometry and Trigonometric Functions of any Angle</b>	
		Topic: Solving Right Triangle Problems	
		<b>Overarching Goals:</b> (1) Communicate mathematical ideas in clear, concise, organized language that varies in content, format and form for different audiences and purposes. (2) Comprehend, understand, analyze, evaluate, critique, solve, and respond to a variety of real-life, meaningful problems. (3) Investigate, research, and synthesize various information from a variety of media sources.	
		<b>Goal 1: The student will be able to use fundamental trigonometric identities to evaluate basic trigonometric functions.</b>	
	Objectives / Cluster Concepts / Cumulative Progress Indicators (CPI's) The student will be able to:	Essential Questions, Enduring Understandings, Sample Conceptual Understandings	Instructional Tools / Materials / Technology / Resources / Learning Activities / Interdisciplinary Activities / Assessment Model
15	<p><b>G-SRT.6.</b> Understand that by similarity, side ratios in right triangles are properties of the angles in the triangle, leading to definitions of trigonometric ratios for acute angles.</p> <p><b>G-SRT.7.</b> Explain and use the relationship between the sine and cosine of complementary angles.</p> <p><b>G-SRT.8.</b> Use trigonometric ratios and the Pythagorean Theorem to solve right triangles in applied problems.</p>	<p><b>Essential Questions:</b></p> <ul style="list-style-type: none"> <li>• What are the six trigonometric ratios and how do they apply to solving right triangles?</li> <li>• What is a reference angle and how is it applied to right triangle definitions to solve problems?</li> <li>• What does the acronym SOH-CAH-TOA stand for?</li> </ul> <p><b>Enduring Understandings:</b></p> <ul style="list-style-type: none"> <li>• Redefine six trigonometric ratios as they apply to a right triangle</li> <li>• Use fundamental trigonometric identities to evaluate basic trigonometric functions</li> <li>• Evaluate trigonometric functions with a calculator</li> <li>• Solve a right triangle</li> <li>• Draw and label reference angles in any angle</li> </ul> <p><b>Sample Conceptual Understandings:</b></p> <p>Pythagorean Theorem: <math>a^2 + b^2 = c^2</math></p>	<p><b>NOTE: The assessment models provided in this document are suggestions for the teacher. If the teacher chooses to develop his/her own model, it must be of equal or better quality and at the same or higher cognitive levels (as noted in parentheses).</b></p> <p><b>Depending upon the needs of the class, the assessment questions may be answered in the form of essays, quizzes, mobiles, PowerPoint, oral reports, booklets, or other formats of measurement used by the teacher.</b></p> <p><b>Learning Activities:</b></p> <ul style="list-style-type: none"> <li>• Students will use Pythagorean theorem to find the missing side of a right triangle.</li> <li>• Students will use corresponding parts of pairs of triangles to solve problems.</li> <li>• Students will solve applied right- triangle problems.</li> <li>• Students will calculate the height of a tree given the length of its shadow and its angle of elevation.</li> </ul> <p><b>Assessment Models:</b></p> <ol style="list-style-type: none"> <li>1. Find the missing side and the missing angles of the given triangle where <math>c = 15</math> and <math>b = 7</math>.</li> </ol>

# Trigonometry

## COURSE BENCHMARKS

1. The student will be able to use fundamental trigonometric identities to evaluate basic trigonometric functions.
2. The student will be able to interchange between degree and radian measure and evaluate any trigonometric function.
3. The student will be able to create graphs given various trigonometric equations.
4. The student will be able to calculate and graph the six inverse trigonometric functions.
5. The student will be able to use the fundamental trigonometric identities to evaluate, simplify expressions, factor expressions, and verify other identities.
6. The student will be able to solve trigonometric equations using numerous methods.
7. The student will be able to solve oblique triangles using various techniques and methods.
8. The student will be able to solve and construct vectors based on missing sides and/or angles.
9. The student will be able to find the components of vectors and the angle between those vectors.
10. The student will be able to comprehend the imaginary unit  $i$  and the operations associated with the imaginary unit  $i$ .
11. The student will be able to interchange between polar and rectangular coordinates.
